A NEW

SYSTEM

OF

GEOGRAPHY:

OR,

A General Deſcription of the World.

CONTAINING

A Particular and Circumſtantial ACCOUNT of all the COUNTRIES, KINGDOMS, and STATES of

EUROPE, ASIA, AFRICA, and AMERICA.

Their Situation, Climate, Mountains, Seas, Rivers, Lakes, &c.

The Religion, Manners, Cuſtoms, Manufactures, Trade, and Buildings of the Inhabitants.

WITH

The Birds, Beaſts, Reptiles, Inſects, the various Vegetables, and Minerals, found in different REGIONS.

EMBELLISHED WITH

A New and Accurate Set of MAPS, by the beſt GEOGRAPHERS;

And Great Variety of COPPER-PLATES, containing PERSPECTIVE VIEWS of the Principal Cities, Structures, Ruins, &c.

By D. FENNING,

(Author of the Royal Engliſh Dictionary, the Uſe of the Globes, the Young Algebraiſt's Companion, &c.)

J. COLLYER,

(Author of the Letters from Felicia to Charlotte; and Tranſlator of the Meſſiah, from the German of Mr. Klopſtock.)

AND OTHERS.

There is not a Son or a Daughter of Adam but has ſome Concern in GEOGRAPHY. Dr. WATTS.

VOL. II.

LONDON:

Printed for S. CROWDER, at the Looking-Glaſs, in Pater-noſter-Row; and ſold by Mr. JACKSON, at Oxford; Mr. MERRIL, at Cambridge; Meſſ. SMITH, in Dublin; and all other Bookſellers in Great Britain and Ireland.

A NEW SYSTEM OF GEOGRAPHY.

BOOK III.

Of EUROPE in general.

THIS part of the globe was called Europa by the Romans, as it is ſtill by the Spaniards and Italians, and Europe by the Engliſh and French; but the Turks give it the name of Alfrank, or Rumeli, the Georgians of Aſia call it Frankoba, and the reſt of the people of Aſia give it the name of Frankiſtan. It is bounded on the north by the Frozen ſea; on the eaſt by Aſia, from which it is parted by the Archipelago, the Euxine or Black ſea, and the Palus Mæotis, and thence by a line drawn from the river Tanais, or Don, almoſt to the river Oby; on the ſouth by the Mediterranean ſea, which divides it from Africa; and on the weſt by the Atlantic Ocean.

This grand diviſion of the earth is ſituated between the tenth degree weſt, and the ſixty-fifth degree eaſt longitude from London, and between the thirty-ſixth and ſeventy-ſecond degrees of north latitude, extending three thouſand miles in length, and two thouſand five hundred in breadth.

Though Europe is the leaſt of the four parts into which the earth is divided, it enjoys many advantages. No part of it is in the torrid zone; and though ſome countries to the north partake of the coldeſt climate, yet the greateſt part of this diviſion enjoys a mild air, and great fertility of ſoil. It has a multitude of navigable rivers, and abounds in corn, cattle, wine, and oil, at once poſſeſſing all the neceſſaries and moſt of the luxuries of human life.

Europe has for many ages been exceeding populous, and her inhabitants are diſtinguiſhed by their valour, wiſdom, and virtue; the excellence of their governments, the equity of their laws, the freedom of the ſubjects, and for the purity and ſanctity of their religion.

The Europeans have been the moſt celebrated for learning and arts. All the ſcholaſtic ſciences are here brought to much greater perfection than ever they were carried by the Aſiatics and Africans; and the invention and improvement of numberleſs uſeful and ingenious arts, particularly that of navigation, on which the intercourſe with foreign nations, and all the advantages of commerce depends, is entirely owing to the genius and induſtry of the inhabitants of this part of the earth.

The Chriſtian religion is eſtabliſhed throughout every part of Europe, except Turky; but, from the various capacities of the human mind, and the different lights in which ſpeculative opinions are apt to appear when viewed by perſons of different education and paſſions, that religion is divided into a number of different ſects. In Ruſſia, ſome parts of Poland, in Walachia, Moldavia, Podolia, Volhinia, and Greece, the doctrine of the eaſtern or Greek church is eſtabliſhed. In Italy, part of Swiſſerland, Spain, Portugal, France, Poland, part of Germany, and the Netherlands, the inhabitants ſtill follow the doctrines of the church of Rome; while Great Britain, Ireland, Denwark, Sweden, Norway, great part of Germany, the United Provinces, and part of Switzerland, have embraced the doctrines of the Reformation, and profeſs the Proteſtant religion.

The languages of Europe are derived from the ſix following: the Greek, Latin, Teutonic, or Old German, the Celtic, Sclavonic, and Gothic. From the different dialects and intermixtures of theſe, are formed the languages of the moſt conſiderable parts of Europe, except that of Turky and Tartary.

The principal ſovereignties, beginning at the eaſt, are the empires of Turky, Ruſſia, and Germany.

The kingdoms of Poland, Hungary, Bohemia, Pruſſia, Sweden, Denmark, Naples and Sicily, Sardinia, France, Spain, Portugal, Great Britain and Ireland.

The popedom of Rome.

The republics of Venice, Genoa, Lucca, the Griſons, St. Marino, Swiſſerland, Geneva, Raguſa, and the United Provinces.

Beſides theſe there are the electorates of Germany, and near three hundred other ſovereignties in Germany, Italy, &c. whoſe profeſſors are either ſpiritual, as archbiſhops and biſhops, or temporal, as princes, landgraves, dukes, marquiſſes, counts, &c.

Beſides theſe there are the Cham of European Tartary, the hoſpodars of Walachia, Moldavia, &c.

The principal iſlands, beginning at the eaſt, are Candia, and thoſe of the Archipelago.

Thoſe in the Adriatic and Ionian ſea, viz. Leucadia, which belongs to the Turks and Lieſiena, Corfu, Cephalonia, and Zant, which are ſubject to Venice.

In the Mediterranean ſea are Sicily, ſubject to the king of Naples; Sardinia, ſubject to the king of Sardinia; Corſica, ſubject to Genoa; Minorca, to Great Britain; Majorca and Ivica, to Spain.

The iſlands in the Baltic ſea are Uſedom and Wollin, ſubject to Pruſſia; Oſel and Dagho, ſubject to Ruſſia; Gothland, Aland, and Rugen, which belong to Sweden; and Zealand, Funen, Alſen, Longland, Laland, Falſter, Mona, and Bornholm, ſubject to Denmark.

In the North ſea is Iceland, ſubject to Denmark.

And farther to the ſouth are Great Britain and Ireland, with the adjacent iſlands, ſubject to his Britannic majeſty.

CHAP.

CHAP. I.

Of TURKY in EUROPE.

SECT. I.

Its Boundaries, Climate, Diviſions, Seas, Straights, and Rivers.

TURKY in Europe, a part of the antient Chriſtian empire of the Eaſt, is at preſent bounded on the north by Croatia, Sclavonia, and Tranſylvania; on the eaſt by Poland, Ruſſia, and Aſia; on the ſouth by the Mediterranean ſea; and on the weſt by the Adriatic and Dalmatia. The extent is not to be aſcertained with any preciſion.

The air of Turky in Europe is in itſelf healthy, but the peſtilence is often brought there from Egypt and the neighbouring countries, and has ſeveral times ſwept away above one-fifth of the inhabitants of Conſtantinople; yet from the prevalence of cuſtom, and of the Turkiſh doctrine of fatality, they give themſelves no great concern about it. The provinces are univerſally fruitful, though with ſome difference; whence agriculture and grazing turn to great profit there, prodigious quantities of all kinds of excellent grain and fruit being annually exported. But of this we ſhall give a particular account in the ſeparate deſcription of each province, only it may be neceſſary to add here, that all the neceſſaries of life are equally good and cheap in Turky.

It contains the following provinces: to the ſouth are the Morea, or Peloponneſus, Achaia, Theſſaly, Epirus, Albania, and Macedonia; and towards the north, Romania, Bulgaria, Beſſarabia, part of Podolia, Servia, part of Hungary, part of Croatia, Boſnia, and part of Dalmatia.

Its ſeas are the Euxine or Black ſea, the Palus Mæotis, the ſea of Marmora, the Archipelago, the Ionian ſea, and the Levant.

Its ſtraights are thoſe of the Helleſpont and the Boſphorus.

The chief rivers of Turky in Europe are the Save, the Danube, the Nieſter, the Nieper, the Don, and the Theis.

SECT. II.

Of the Inhabitants of Turky in Europe, with a more particular Account of the European Turks and Greeks.

WE have already given a very particular account of the perſons, dreſs, manners, and cuſtoms of the Turks, in treating of Turky in Aſia, ſee vol. I. from page 265 to 273; and as the Turks are every where the ſame, we ſhall here be very concife, and ſhall only add ſome particulars which were there ſlightly touched upon, and a ſhort ſummary of ſome of the moſt conſiderable circumſtances relating to that people.

The number of its inhabitants has not the leaſt proportion to the extent and fertility of the country, which may be chiefly attributed to peſtilence, polygamy, war, and the avarice of the governors.

The inhabitants conſiſt of various nations, as Turks, Greeks, Armenians, Servians, Boſnians, Bulgarians, Walachians, and Tartars; with a conſiderable number of Jews, eſpecially in Conſtantinople and Sclavonia.

The Turks are ſtigmatized by the Chriſtians as a ſlothful and inhuman people; but they are far from being ſo wicked and dreadful a ſet of creatures as popiſh writers have endeavoured to repreſent them. Turky is not without men of parts, probity, and honour; and has many benevolent, liberal, temperate, converſible, and ingenious people. In ſhort, there is here, as in all other countries, a mixture of good and bad. Driceſch maintains, that in compaſſion and love towards their neighbours, the Turks excel all the reſt of mankind; and this aſſertion is confirmed by ſeveral other travellers.

One remarkable inſtance of their charity may be ſeen in their hans, called by the Aſiatics caravanſeras, which are to be found in almoſt every little village. In theſe a traveller, of whatever religion or country, may continue three days gratis, and in many of them he is alſo found in victuals. The Turks are very fond of erecting theſe buildings, which they juſtly eſteem a work of charity acceptable to the Moſt High. They behave very commendably to their ſlaves and ſervants, and frequently better than the Chriſtians do to theirs. Indeed, in the firſt years of their ſervitude, theſe people ſuffer moſt, eſpecially if young, the Turks endeavouring, partly by blandiſhments, and partly by ſeverity, to bring them over to their religion; but theſe trials being happily over, captivity is no where more tolerable; ſo that if a ſervant underſtands any art or trade, the only thing he can want is his freedom, he being well ſupplied with every thing elſe.

The Turks are generally robuſt and well-ſhaped, of a good mien, and patient under hardſhips, which renders them fit for war, to which they early inure themſelves. Perſons of rank ſeldom train up their children to any other employment, from the opinion that no glory is comparable to that acquired in war.

They are very particular in their dreſs, manner of living, and cuſtoms. They ſhave their heads, but wear long beards, of which they are extremely careful; except thoſe in the ſeraglio, and military men, who wear only whiſkers. The turban, or Turkiſh band, worn by the men is white, and conſiſts of long pieces of thin linen made up together in ſeveral folds; and none but a Turk muſt preſume to wear a white turban. Their clothes are long and full.

Agreeably to the cuſtom of the orientals, they ſit, eat, and ſleep on the floor on cuſhions, or ſophas, mattreſſes, and carpets. Rice is their general food, and coffee their uſual drink, wine being forbidden.

They ſpend great ſums of money on fountains, and no country affords finer; theſe are not only in the towns, but in the country, and other ſolitary places, for the refreſhment of travellers and labourers.

Their uſual ſalutation is bowing the head a little, laying the right hand on their breaſt; but to perſons of rank they ſtoop ſo low as to touch and kiſs the border of their veſt. In war-time the left hand is the place of honour among military men, but this diſtinction ceaſes in time of peace among the officers of ſtate and relations. The nobility among the Turks are the chief military officers, judges, and eccleſiaſtics. The Turkiſh commonalty enjoy the greateſt liberty, and thoſe only are expoſed to the tickliſh orders of the Porte, which muſt be anſwered with the head, who hold conſiderable poſts.

The Greeks, who are the antient inhabitants of the country, are intermixed with the Turks, and in ſeveral places, particularly the iſlands, out-number them. Even in Conſtantinople alone there are computed to be no leſs than four hundred thouſand. Theſe people are accuſtomed to ſervitude, and prefer living under the exactions of the Turks to the ſpiritual tyranny of the pope; but they are obliged to be very cautious of not giving even the leaſt colour for ſuſpicion of their holding a correſpondence with the enemies of the Ottoman Porte, or of meditating a ſedition. Hence, in caſe of a war with any of the Chriſtian powers, the Turks uſually diſarm them.

All the Greeks, from the age of fourteen, pay annually at the beginning of the Turkiſh feaſt of Bairam a poll-tax of about a ducat; but the eccleſiaſtics are aſſeſſed higher, a deacon paying two ducats; an archimandrite, four;

four; and the biſhops, archbiſhops, and patriarchs, pay large ſums, and as much as the arbitrary avarice of the grand vizier and baſhas think proper to require; for the Turks every where lay hold of all opportunities of extorting money from the Greeks; but eſpecially from their clergy. In return for this tribute, they enjoy the protection of the Ottoman Porte, and are maintained in the quiet poſſeſſion of their properties; ſo that no Turk is to inſult them, take their property, or intrude themſelves into their houſes againſt their will; and, in any of theſe caſes, they are certain of juſtice being ſpeedily executed on the offenders.

The Greek women are exempt from all taxes, as are likewiſe great numbers of other Greeks who ſerve in the navy, or elſewhere. Indeed it ſometimes happens that a Greek girl of diſtinguiſhed beauty is ſeized and carried to the ſeraglio; but it is a miſtake that Chriſtian children are in general forced away from their parents to be brought up in Mahometiſm; and when any thing of this kind is done, it is only in the diſtant provinces.

Foreign Chriſtians, who are under the protection of an envoy, are included under the general title of Franks, and pay no poll-tax. We ſhall give an account of the other nations in the deſcription of the particular provinces.

The principal language in Turky in Europe is the Turkiſh; but the Greeks alſo ſpeak the modern Greek; the Servians, Boſnians, and Bulgarians ſpeak the Sclavonian; the Walachians and Moldavians, the Walachian; and the Tartars, the Tartarian language, which nearly reſembles the Turkiſh. The literati commonly uſe the Arabic.

SECT. III.

Of the Religions in Turky in Europe; their Schools and Learning.

THE Turks appropriate to themſelves the name of Moſlemim, which has been corrupted into Muſſelman, ſignifying perſons profeſſing the doctrine of Mahomet. They alſo term themſelves Sonnites, or obſervers of the oral traditions of Mahomet and his three ſucceſſors; and likewiſe call themſelves True Believers, in oppoſition to the Perſians and others, the adherents of Ali, whom they call a wicked and abominable ſect. Their rule of faith and practice is the Koran. Some externals of their religion are the preſcribed ablutions, which are always to be performed before their devotions; prayers, which are to be ſaid five times every twenty-four hours, with the face turned towards Mecca; alms, which are both enjoined and voluntary ones; the former conſiſts of paying two and a half per cent. to charitable uſes out of their whole income. Their feaſts are either indiſpenſable or voluntary ones; of the former is that of the whole month of Ramadan, which is followed by the Bairam, a time of feſtivity; and every Mahometan muſt, at leaſt once in his life-time, go in pilgrimage, either perſonally or by proxy, to the Caba, or houſe of God, at Mecca.

Among the binding traditions not mentioned in the Koran is circumciſion, which is performed betwixt the ſixth and ſeventeenth year, but generally on the thirteenth. Indeed drinking wine is evidently prohibited in the Koran, yet the Turks make uſe of it occaſionally without any ſcruple; but generally uſe inſtead of it ſherbet, a liquor made of honey, ſpices, and the juice of fruits. Other things interdicted are games of chance, propheſying with arrows, and certain foods, as blood, pork; or the fleſh of any beaſt that has died of ſickneſs, or been killed by a wild beaſt, or by a fall or a ſtroke. Likewiſe the worſhipping of idols, uſury, and ſome ſuperſtitious and pagan practices. Polygamy is indeed permitted; but the Koran allows no man to have more than four wives and concubines, and to exceed that number is the particular privilege of the prophet and his ſucceſſors: indeed few of the people have more wives than one. Divorces are alſo allowed; but no man may take back again the wife he has once repudiated, till ſhe has been married to another, and afterwards divorced by him.

The chief eccleſiaſtic is the muſti, which name ſignifies an expounder of the law, and his office is of ſuch dignity, that when he comes to court, the emperor himſelf riſes from his ſeat, and advances ſeven ſteps to meet him. He alone has the honour of kiſſing the ſultan's left ſhoulder; while the grand vizier, with a more profound inclination of the body, kiſſes only the edge of the emperor's veſt, who advances no more than three ſteps to meet him. The law requires, that the muſti ſhould be conſulted on all emergencies, particularly in thoſe relating to peace and war; but the peculiar regard now ſhown to him is little more than mere form; for were he either to give a diſagreeable interpretation of the law, or, while in council, to preſume to traverſe the emperor's deſigns, he would be inſtantly depoſed, and his place ſupplied by one of a more compliable diſpoſition. On conviction of treaſon, or any other capital crime, he is put into a mortar, kept for that purpoſe in one of the ſeven towers at Conſtantinople, and pounded to death.

The Rev. Dr. Buſching obſerves, that as the muſti of the Turks may be compared to the pope, ſo a cadaliſker, who is a ſecular perſon, is not unlike a patriarch; a mola is an archbiſhop; a cady, who is alſo a layman, may be accounted a biſhop; and an iman, a prieſt, whoſe chief employment is praying.

The Turks have alſo their convents and monks, under the general name of derviſes, the chief of which are the Bektaſhi, Mebelevi, Cadri, and Segati; whoſe forms of worſhip chiefly conſiſts in certain religious dances.

The Turks at preſent avoid all appearance of propagating their religion by fire and ſword; and the Chriſtians of various ſects, who reſide amongſt them, enjoy full liberty of conſcience, and live in much greater tranquility than among ſome who ſtile themſelves Chriſtians.

The Greek church in this part of the world has at its head the patriarch of Conſtantinople, who is choſen by the neighbouring archbiſhops and metropolitans, and confirmed by the emperor or the grand vizier. This is a perſon of great dignity, he being the principal of all the Greek patriarchs, and the head and director of the Eaſtern church. His revenue amounts to no leſs than a hundred and twenty thouſand guilders, one half of which he pays by way of annual tribute to the Ottoman Porte, adding ſix thouſand guilders beſides, by way of preſent at the feaſt of Bairam.

Subordinate to him are ſeventy archbiſhops and metropolitans, and a much greater number of biſhops.

An archimandrite is the director of one or more convents, which are called mandren, and ranks above an abbot, of which each convent has one. The monks are obliged to follow ſome handicraft buſineſs, and lead a very auſtere life; but this is not the caſe with reſpect to the prieſts and ſtudents. The moſt celebrated monaſteries are thoſe on Mount Athos; but the Greeks have at preſent few nunneries.

The ſecular clergy are obliged to ſubmit to no rules, though the regulars are, who perform divine worſhip. The firſt is the lecturer, the ſecond the chanter, the third the under deacon, the fourth the deacon, the fifth the prieſt, and the ſixth the archprieſt. They are allowed to marry; but this muſt be done before ordination, and then only once, and that with a virgin. Theſe ſecular eccleſiaſtics never riſe higher than an archprieſt; the biſhops, metropolitans, archbiſhops, and patriarchs being choſen from among the monks.

The Armenians have many churches in this country; the Jews and Roman catholics have alſo the free exerciſe of their religion, and the Swedes have been permitted to build a Lutheran church at Conſtantinople.

The Turks are not without all kinds of learning, having ſome ſchools, colleges, and academies, by them called medaris; but theſe are generally inferior to thoſe among the Chriſtians, and their management of them alſo very different. Lately a Turkiſh printing-office has been ſet up at Conſtantinople by Abrahim Effendi, who, after great oppoſition, obtained leave to print all kinds of books, except on matters of religion. He alſo publiſhed ſome maps, and books of hiſtory and geography, and is ſaid to have had a conſiderable knowledge of the Latin tongue.

Literature, however, is not ſo rare among the Greeks, who have not only ſchools for inſtructing children in the principles of religion, as reading, writing, and learning by heart the Pſalms and paſſages of Scripture; but have alſo univerſities, in which are taught grammar, Latin, and the mathematics, with the Ariſtotelian philoſophy, both natural and moral. Theſe are ſaid to be at Demotica, in the iſland of Patmos, Jannina, and other places. Divinity is taught at the patriarch's palace at Conſtantinople, by a chaplain of the patriarch's and ſome aſſiſtants; but particularly on Mount Athos, which ſeems to be the pillar of the Greek church, and in other parts by the biſhops, who are men of capacity, and take this trouble voluntarily upon them.

The ſtate of learning, indeed, among the Greeks is at preſent at a very low ebb, in compariſon of what it is among us; but it ought to be remembered, that they are deſtitute of the ſame means and opportunities of mental improvement. As to phyſic, the Greeks either learn from the Arabic, Jewiſh, or Chriſtian phyſicians reſiding among them; or elſe ſtudy in the univerſities in Germany, Holland, or England.

SECT. IV.

The Name, Origin, and Hiſtory of the Turks, with a particular Account of their Government; the Power and Splendor of the Sultan, or Grand Seignior; his Titles, Officers of State, Janizaries, and other Troops. A Deſcription of the Turkiſh Camp, and of the Proceſſion made by the Tradeſmen when they go to make their Preſents, on the Sultan's commanding the Army in Perſon.

THE Turks are of Tartarian or Scythian extraction; and this appellation was firſt given them in the middle ages as a proper name; it being a general title of honour to all the nations comprehended under the two principal branches of Tartar and Mongul, who therefore never uſe it as a proper name of any Scythian or Tartarian nation. The word tur, as an adjective, ſignifies ſublime and pre-eminent; and, as a ſubſtantive, a governor. The Scythian or Tartarian nation, to which the name of Turks has been peculiarly given, dwelt betwixt the Black and Caſpian ſeas, and became firſt known in the ſeventh century, when Heraclius, emperor of the Eaſt, took them into his ſervice; upon which they ſo diſtinguiſhed themſelves by their fidelity and bravery in the conqueſt of Perſia, that the Arabian and Saracen caliphs had not only particular bodies of them for guards, but their armies were filled with them. Thus gradually getting the power into their hands, they ſet up and dethroned caliphs at pleaſure. By this ſtrict union of the Turks with the Saracens or Arabs, the former were brought to embrace the Mahometan religion, ſo that they are now become intermixed, and have jointly enlarged their conqueſts: but as the Turks became ſuperior to the Saracens, they ſubdued them.

Prince Cantemir gives the following account of the origin of the Ottoman empire.

Genghiſkan, at the head of his horde, iſſued out of Great Tartary, and made himſelf maſter of a vaſt tract of land near the Caſpian ſea, and even of all Perſia and Aſia Minor. Incited by his example and ſucceſs, Schah Solyman, prince of the town of Nera, on the Caſpian ſea, in the year 1214, paſſed Mount Caucaſus with fifty thouſand men, and penetrated as far as the borders of Syria; and though his career was ſtopped there by the Genghiſkan Tartars, yet in the year 1219 he penetrated a ſecond time into Aſia Minor as far as the Euphrates. Othman, his grandſon, made himſelf maſter of ſeveral countries and places in Leſſer Aſia belonging to the Grecian empire; and having, in the year 1300, at the city of Carachiſer, aſſumed the title of emperor of the Othmans, called his people after his own name. This prince, among many other towns, took, in the year 1326, Pruſa, in Bithynia, now called Burſa; which Orchan, his ſon and ſucceſſor, made the ſeat of his empire. Orchan ſent Solyman and Amurath, his two ſons, on an expedition into Europe; the former of whom reduced the city of Callipolis, and the latter took Tyrilos. Amurath ſucceeding his father in the government in 1360, took Ancyra, Adrianople, and Philippopolis; and in 1632 inſtituted the janizaries, over-run Servia, and invaded Macedonia and Albania. Bajazet, his ſon and ſucceſſor, was very ſucceſsful both in Europe and Aſia, defeating the Chriſtians near Nicopolis; but, in 1401, he was routed and taken priſoner by Tamerlane. His ſons diſagreed; but Mahomet I. enjoyed the ſovereignty, and his ſon Amurath II. diſtinguiſhed himſelf by ſeveral important enterprizes, and particularly in the year 1444 gained a ſignal victory over the Hungarians near Varna. Mahomet II. the greateſt of all the emperors, in 1453, made himſelf maſter of Conſtantinople, and reduced the whole Grecian empire under his dominion, ſubduing twelve kingdoms and two hundred towns. After this Bajazet II. and Selim I. enlarged the Turkiſh empire in Europe, Aſia, and Africa; and Solyman I. became leſs famous for his victory over the Hungarians than his body of laws.

In ſhort, the ſucceeding emperors were leſs ſucceſsful; for though Mahomet IV. ſubdued Candia, and laid ſiege to Vienna, he met with ill ſucceſs in Hungary; and in the reigns of Solyman II. Achmet II. and Muſtapha, the Hungarians and Venetians were ſo ſucceſsful againſt the Turks, that Muſtapha II. in 1699, was glad to conclude the peace of Carlowitz. Mahomet III. in 1718, agreed to the peace of Paſſarowitz; but Achmet V. by the peace of Belgrade, in 1739, re-annexed Servia, a part of Walachia, and Chozim to the empire.

The firſt ſultans, or emperors, owing their ſucceſs purely to their own valour, and being filled with maxims of war, would have a blind obedience paid them; they puniſhed with ſeverity, and laboured to keep their ſubjects under an inability to revolt; and, in ſhort, would be ſerved only by perſons who ſtood indebted to them for their fortunes, whom they could advance without jealouſy, and cruſh without being charged with injuſtice. Theſe maxims which have continued amongſt them above five centuries, render the ſultan abſolute maſter of the empire.

When there is a new emperor, or ſultan, it is the cuſtom to conduct him with great pomp and triumph to a place in the ſuburbs of Conſtantinople, called Job, where is an antient monument of one of their holy men of that name. At this place ſolemn prayers are made that God may proſper the ſultan, and infuſe wiſdom into him who is to manage ſo great a charge. The mufti then embracing him beſtows his bleſſing, and the emperor ſolemnly ſwears to maintain the laws of the prophet Mahomet. Then the viziers of the bench, and other baſhas, with profound humility, kiſs the ground and the hem of his veſt, acknowledging him their lawful emperor. After this form of inauguration, he returns with the like ſolemnity to the ſeraglio. Thus he obliges himſelf to govern within the compaſs of the law; but the Turkiſh doctors reſtrain the imperial oath only to the obſervation of the religious part of the Mahometan law, and ſay, that in civil matters it is ſo arbitrary, as to need no other judge than his will.

The ſultan's cloaths differ little in faſhion from thoſe of other men, only they exceed them in length and richneſs. His turban reſembles thoſe of the baſhas; but he wears plumes with gold claſps, which they do not. He ſleeps upon mattreſſes of velvet and cloth of gold, covered in ſummer with ſheets embroidered with ſilk, and in winter with ſables.

When he goes by water, he is carried in his barge, covered with a canopy of crimſon velvet richly embroidered, under which he ſits, while his agas ſtand about him. The veſſel is rowed by the Aglaim Oglans, and ſteered by the Boſtangee Baſha. When he goes by land, he always rides on horſeback, and commonly proceeds out of the great gate of the palace. On his going to the moſque on Fridays, he is accompanied through the city by all the baſhas and grandees of the Porte. The lady Wortley Montague ſays, that when ſhe ſaw the Grand Seignior in his paſſage to the moſque, he was preceded by a numerous guard of janizaries, with vaſt white feathers on their heads; as alſo by the ſpahis and boſtangees, who are foot and horſe guards, and the royal gardeners, which are a very conſiderable body of men, dreſſed in different habits

habits of fine lively colours, ſo that at a diſtance they appeared, ſays ſhe, like a parterre of tulips. After them the aga of the janizaries, in a robe of purple velvet, lined with ſilver tiſſue, his horſe led by two ſlaves richly dreſſed. Next him the kiſler-aga, who is the chief guardian of the ladies of the ſeraglio, in a deep yellow cloth, (which ſuited well with his black face) lined with ſables. Laſt came the ſultan himſelf, arrayed in green, lined with the furs of black Muſcovite foxes, ſuppoſed worth about a thouſand pounds ſterling, and mounted on a fine horſe, with furniture embroidered with jewels. Six more horſes richly capariſoned were led after him; and two of his principal courtiers bore, one his gold, and the other his ſilver coffee-pot, on a ſtaff; another carried a ſilver ſtool on his head, for him to ſit on. It would be too tedious, ſays that lady, to deſcribe the various dreſſes and turbans by which they are diſtinguiſhed; but they were all extremely rich and gay, to the number of ſome thouſands; ſo that, perhaps, there cannot be ſeen a more beautiful proceſſion.

The titles of the emperor, according to the cuſtom of the Eaſt, are very prolix and magnificent, as will appear from the following ſpecimen. We, the ſervant and lord of the moſt honoured and bleſſed cities, the venerable houſes, and ſacred places, before which all nations bow; of Mecca, which God delights to honour; of the reſplendid Medina, and the holy city of Jeruſalem; of the imperial and deſirable cities of Conſtantinople, Adrianople, and Burſa, emperor; alſo of Babylon, Damaſcus, of the fragrant Paradiſe, and the incomparable Egypt; of all Arabia, Aleppo, Antioch, and many other highly celebrated and memorable places, cities, and faithful vaſſals, emperor; emperor of emperors, the moſt gracious and all-powerful ſultan, &c.

The Turkiſh arms are a creſcent.

In the ſucceſſion to the empire no regard is paid to age or birth-right, the Turks eſteeming it ſufficient, if, in their elections, they keep to the Ottoman family: but women are excluded from the throne. Though the government is purely monarchical and deſpotic, yet if the emperor takes no care to indulge the humours of the people, and eſpecially of the mutinous janizaries, he is not only in danger of being depoſed, but alſo of being murdered.

The emperor's divan, or council of ſtate, meets twice a week in the emperor's palace, that is on Sundays and Thurſdays. The grand vizier, who ſits as preſident, has on his right hand the cadinlaſkier of Romelia, and on his left that of Natolia. The mufti alſo aſſiſts when expreſsly ſummoned. All the other viziers have likewiſe a ſeat here, and next to them ſtand on one ſide the teſterdar, or high-treaſurer, the reis-effendi, or ſecretary of ſtate, and other commiſſioners of the exchequer; but the military officers, as the aga of the janizaries, the aga of the ſpahis, the aga of the ſiluds, &c. ſit within the divan. Theſe ſeveral members wear a particular habit. The ſultan does not enter the room; but hears what paſſes from an adjoining chamber, which looks into the divan.

When he convenes a general council, to which all the great perſons of the empire are ſummoned, as the clergy, the military and other officers, and even the old and moſt experienced ſoldiers, ſuch a divan is called ajak divani, the whole aſſembly ſtanding.

The higheſt office, next to the ſultan, is the vizier azem, or grand vizier, who has the care of the whole empire, and is not only entruſted with the management of the revenue, with foreign affairs, and the adminiſtration of juſtice in civil and criminal concerns; but alſo with the conduct of wars, and the command of armies. When the ſultan nominates this great officer, he puts into his hand the ſeal of the empire, upon which is engraven his name. This is the badge of his office, and he always carries it in his boſom. With this ſeal he diſpatches all his orders, without conſulting any one. His power is unlimited, except with reſpect to the troops, which he cannot puniſh without the conſent of the commanders. All affairs are decided by his judgment; and he diſpoſes of all the poſts in the empire, except thoſe of judicature.

The grand vizier lives in the utmoſt ſplendor; he has above two thouſand officers and domeſtics in his palace, and when he appears in public has his turban adorned with two plumes of feathers, charged with diamonds and precious ſtones; the harneſs of his horſe is uſually ſet with rubies and turquoiſes, and his houſing richly embroidered with gold and pearls. His guard is compoſed of about four hundred Boſnians, or Albanians, ſome of whom attend him on foot when he goes to the divan; but when he marches into the field, they are all well mounted, and carry a lance, a ſword, a hatchet, and a brace of piſtols. He is preceded by three horſe tails, on the top of which is a gold ball. This is the military enſign of the Ottomans; for one of their generals being at a loſs how to rally his troops, who had loſt all their ſtandards, cut off a horſe's tail, and erecting it on the point of a lance, the ſoldiers flocked to this new enſign, renewed their attack, and came off with victory.

When the ſultan honours the grand vizier with the command of an army, he takes out one of the plumes of his own turban, and delivers it to him to place in his own. Upon his receiving this mark of diſtinction, the ſoldiers acknowledge him for their general. The grand vizier's income, without his being guilty of any injuſtice, amounts to about ſix hundred thouſand dollars a year, excluſive of preſents and other perquiſites. But, notwithſtanding the greatneſs of his revenue, and the ſplendour in which he lives, he is in continual danger, it being the uſual policy of the emperors to ſcreen themſelves from the clamours of the people, by throwing the whole blame of any inſtance of male-adminiſtration on this officer, and giving him up to the public reſentment.

While the emperor reſides at Conſtantinople, or Adrianople, he is without any power; but if he be only eight hours diſtant from the city, his authority is little leſs than that of the grand vizier.

When the emperor takes the field in perſon, he nominates a kaimakan out of ſuch viziers as are permitted to carry three horſe tails. This officer, in caſe the grand vizier be at the diſtance of eight hours from the emperor, has the full power and management of all affairs; but is not to act contrary to the grand vizier's inſtructions. This kaimakan ought not to be confounded with the governor of Conſtantinople, or Adrianople, who bears the ſame title.

Next to the grand vizier are ſix others, ſtiled viziers of the bench, or council, and baſhas of the three horſe tails; becauſe, when they march, three horſe tails are carried before them, while only one is carried before the ordinary baſhas. Theſe viziers ought to be men diſtinguiſhed by their wiſdom, and their knowledge of the laws. They aſſiſt at the divan, but never deliver their opinion upon the affairs which are treated there, unleſs required by the grand vizier. Theſe have each two thouſand crowns a year, and the grand vizier often refers matters of ſmall conſequence to them, as well as to the ordinary judges. Cady is a word uſed for all judges of a province or particular place.

A beglerbeg is a viceroy, with ſeveral provinces under his command, the name itſelf ſignifying a prince of princes. The three principal are the beglerbeg of Rumili, who reſides at Sophia; the beglerbeg of Natolia, the ſeat of whoſe government is at Cutahia, and the beglerbeg of Damaſcus, who keeps his court in that city. Under theſe are the baſhas or governors, whoſe poſts are very conſiderable, but precarious; and ſubordinate to theſe are the ſangiacs, who may be termed deputy-governors. Theſe are all military officers.

The reis-effendi, alſo called the reis-kital, is lord chancellor and ſecretary of ſtate. His name ſignifies chief of the writers. He attends on the vizier, to paſs orders, decrees, patents and commiſſions, into all parts of the empire, which are daily diſpatched in incredible numbers, and therefore he employs a multitude of clerks in his office.

With reſpect to the national revenues, they are returnable to two treaſuries; the public treaſury, and the treaſury of the muſſelmans. The public treaſury is under the management of the teſterdar, or high treaſurer, who has under him twelve offices, to which all the revenues of the empire, ariſing from tributes, cuſtoms, &c. are returnable, and out of theſe the army is paid. The treaſurer is allowed five per cent. of all the money brought

brought into the treaſury, which muſt bring him in at leaſt two hundred thouſand dollars annually. One fourth of the money he receives he pays to the kietchudabeg, or kahya, who is the grand vizier's commiſſary, and above the teſterdar. The money of this treaſury, called the public money of the muſſelmans, is not to be touched by the emperor but in the greateſt exigency, much leſs for private occaſions. The ſultan's private treaſury, which he diſpoſes of according to his own pleaſure, is under the care of the haſnadar baſchi, who is the next perſon in rank to the kiſlar in the ſeraglio. Prince Cantemir ſays, that in his time, twenty-ſeven thouſand purſes, amounting to thirteen millions and a half of rix-dollars, were annually returned to both treaſuries. The confiſcations of the eſtates and effects of the baſhas, and other officers, together with the money ariſing from the eſcheats of Turks dying without male iſſue, make alſo a very conſiderable article.

The janizaries are the flower of the Turkiſh forces, they are all infantry, and were firſt formed of captive Chriſtians by the emperor Amurath I. Their number generally amounts to forty thouſand, divided into a hundred and ſixty-two companies, or chambers, called odas, in which they live together at Conſtantinople, as in a convent. The janizaries are of a ſuperior rank to all other ſoldiers; but are alſo more arrogant and factious, and it is by them the public tranquility is moſtly diſturbed. "The government, ſays the lady Wortley Montague, "is entirely in the hands of the army. The grand "ſignior with all his abſolute power, is as much a ſlave "as any of his ſubjects, and trembles at a janizary's "frown. Here is, indeed, a much greater appearance "of ſubjection than amongſt us: a miniſter of ſtate is "not ſpoke to but upon the knee; ſhould a reflection "on his conduct be dropped in a coffee-houſe (for they "have their ſpies every where) the houſe would be ra-"zed to the ground, and perhaps the whole company "put to the torture. No huzzaing mobs, ſenſeleſs "pamphlets, and tavern diſputes about politics. When "a miniſter here diſpleaſes the people, in three hours "time he is dragged even from his maſter's arms. They "cut off his hands, head and feet, and throw them be-"fore the palace gate, with all the reſpect in the world; "while the ſultan, to whom they all profeſs an unli-"mited adoration, ſits trembling in his apartment, and "dare neither defend, nor revenge his favourite."

The janizaries have, however, ſome good qualities; they are employed to eſcort travellers, and eſpecially ambaſſadors, and perſons of high rank, on the road, in which caſe they behave with the utmoſt zeal and fidelity. The ingenious and learned lady, whom we have juſt mentioned, happening to beſpeak ſome pigeons for ſupper at a village near Philippopolis, one of the janizaries went immediately to the cady, the chief civil officer of the town, and ordered him to ſend in ſome dozens. The poor man anſwered, that he had already ſent about, but could get none; upon which the janizary, in the height of his zeal for that lady's ſervice, immediately locked him up priſoner in his room, telling him he deſerved death for his impudence, in offering to excuſe his not obeying her commands; but out of reſpect to the lady, he would not puniſh him but by her order. Accordingly he came very gravely to her, to aſk what ſhould be done to him; adding by way of compliment, that, if ſhe pleaſed, he would bring her his head. "This, ſays "the lady Montague, may give ſome idea of the unli-"mited power of theſe fellows, who are all ſworn bro-"thers, and bound to revenge the injuries done to one "another, whether at Cairo, Aleppo, or any other part "of the world. This inviolable league makes them ſo "powerful, that the greateſt man at court never ſpeaks "to them, but in a flattering tone."

The capis are alſo infantry; the ſpahis light horſe; but the timar ſpahi, or, the old and preferred ſpahis, inſtead of pay, have villages in ſeveral of the provinces, and are obliged, according to their income, to bring at leaſt three ſlaves with them into the field.

The tributary princes, as the cham of the Crim Tartars, and the princes of Moldavia and Walachia, are obliged to ſend auxiliaries. In ſhort, the whole Turkiſh army is compoſed of above three hundred thouſand men.

When the Turks are encamped, the tents make a very magnificent appearance. Thoſe of the great men are rather like palaces than tents, taking up a great compaſs of ground, and being divided into a great number of apartments. They are all green, and the baſhas of three tails have thoſe enſigns of their power placed in a very conſpicuous manner before their tents, which are adorned on the top with gilded balls, more or leſs, according to their different ranks.

When the ſultan is reſolved to lead his army in perſon, all the companies of tradeſmen are obliged to make him a preſent according to their ability; and, on this occaſion, they make a very ſplendid proceſſion through the principal ſtreets, while the ſultan views them from one of the windows of his ſeraglio. When our author ſaw this cavalcade, it was preceded by an effendi, mounted on a camel, reading aloud the Koran, finely bound, and placed upon a cuſhion. He was ſurrounded by a parcel of boys in white, ſinging ſome verſes of it, followed by a man dreſſed in green boughs, repreſenting a huſbandman ſowing ſeed. After him ſeveral reapers, crowned like Ceres, with ears of corn; they had alſo ſcythes in their hands, and ſeemed to mow. Then a little machine drawn by oxen, in which was a windmill, and boys employed in grinding corn, followed by another machine drawn by buffaloes carrying an oven, and two more boys, one employed in kneading bread, and the other in drawing it out of the oven. Theſe boys alſo threw little cakes on both ſides amongſt the crowd, and were followed by the whole company of bakers, marching on foot two by two, in their beſt cloaths, with cakes, loaves, paſties and pies of all ſorts on their heads, and after them two buffoons, with their faces and cloaths ſmeared with meal, who diverted the mob with their antic geſtures. In the ſame manner followed all the other trading companies; the jewellers, mercers, &c. finely mounted, and many of the pageants repreſenting their trades, truly magnificent; amongſt which that of the furriers made one of the beſt figures, it being a very large machine ſet round with the ſkins of ermines, foxes, &c. ſo well ſtuffed, that the animals ſeemed alive, and were followed by muſic and dancers. The rear was cloſed by the volunteers, who came to beg the honour of dying in the ſultan's ſervice; they were all naked to the middle. Some had their arms pierced through with arrows left ſticking in them. Others had them ſticking in their heads, the blood trickling down their faces. Some ſlaſhed their arms with ſharp knives, making the blood ſpring out upon the by-ſtanders; which is looked upon as an expreſſion of their zeal for glory. 'Tis ſaid that ſome make uſe of theſe arrows and knives to advance their love, and when they are near the window where their miſtreſs ſtands, (for all the women are veiled to ſee this ſpectacle) they ſtick another arrow for her ſake, who gives ſome ſign of approbation and encouragement to this gallantry.

SECT. V.

The Officers of the Seraglio, and the Regulations obſerved there with reſpect to the Women; the Splendor of their Dreſs, and the Magnificence in which they live.

THE principal officers of the ſeraglio are the eunuchs, who are in the higheſt confidence; for being entirely diſengaged from love intrigues, they reſign themſelves wholly to ambition and the care of obliging their ſovereign. The white eunuchs are employed in the ſervice of the ſultan, and the black wait upon and guard the women. Theſe are forced to uſe a ſilver pipe in making water; they being deprived of the natural conveniency in their infancy; for the ſultans were jealous of them, while they were made eunuchs in the ordinary manner, and on this account they are cut ſmooth cloſe to the belly; a dangerous operation, that coſts many of them their lives.

The capi-aga, or chief of the white eunuchs, is treated in the ſame manner in his youth, and is the great maſter of the ſeraglio. He has the inſpection of all the pages of the palace, and all petitions which are to be preſented

Lady Mary Wortley Montague visits the Sultana Hafiten.

preſented to the prince are delivered to him. He is in the ſecret of the cabinet, and has the command of all the eunuchs of his own complexion. The principal of theſe eunuchs are, the great chamberlain, who has forty pages under him, that wait on the ſultan: the deputy-ſupervifor of the pages apartment, and other buildings of the palace, who particularly takes care of their linen and wearing appafel: the ſultan's privy-treaſurer, who keeps the jewels of the crown, and one of the keys of the ſacred treaſure: the kilargi baſhi, or grand expenditor of the ſeraglio, who is alſo great maſter of the wardrobe; it is his office alſo to look after the ſultan's ſweet-meats and drinks, the ſyrups, ſherbet, and counter-poiſons; he alſo takes care of the ſultan's china-ware: the other white eunuchs are, the preceptors to the pages, the overſeer of the infirmary, the great falconer, the overſeer of the baths, and other officers who wait on the ſultan's perſon.

The kyſler-aga is the chief of the black eunuchs, and has the abſolute command of the women's apartments, and all the other black eunuchs placed there pay him an implicit obedience. He has the ſuperintendence of all the royal moſques of the empire, and diſpoſes of all the offices that belong to them. The principal of the other black eunuchs are, the eunuch of the queen mother, the governor of the princes of the blood, the comptroller of the queen mother's treaſury, the ſteward of her perfumes, ſweet-meats, and liquors, the two chiefs of the great and little chamber of the women, with ſome others.

In the ſeraglio there are alſo muſicians, buffoons, tumblers, dwarfs, and mutes.

All who live in the ſeraglio are the ſultan's ſlaves, as indeed are all the ſubjects of his empire; for they acknowledge, that whatever they enjoy proceeds from his bounty, and that their eſtates and lives are abſolutely at his diſpoſal.

The women in the ſultan's court, including the old and the young, amount to about twelve hundred. His concubines are beautiful and accompliſhed virgins, who have been ſtolen or purchaſed when children from Georgia, Circaſſia, or the neighbouring countries, and received an education that renders them well qualified in the arts of pleaſing, ſuch as ſinging, playing upon muſical inſtruments, dancing, dreſſing to the beſt advantage, an engaging behaviour, and great ſkill in curious needle-work, particularly embroidery.

It is generally ſaid, that the firſt of theſe ladies who conceives by the ſultan, and brings forth a child, is ſtiled ſultana queen; and, if it be a ſon, is confirmed and eſtabliſhed by great feſtivals: thenceforward ſhe has magnificent apartments, a great number of ſervants, with a large revenue, and all perſons in the ſeraglio muſt pay her the reſpect due to a queen. The other women who bear him children are called ſultanas, but not queens, yet live in ſeparate apartments, which are extremely ſplendid; they are well ſerved and attended, and are in no want of money, jewels, or the richeſt apparel: but if it happens that the heir of the empire dies, and another of the ſultanas has a ſon to ſucceed the deceaſed heir, it is ſaid that the ſultana queen loſes her title and rank, and another becomes queen in her ſtead; ſo that the title runs from one ſultana to another, in virtue of the ſon's right to the ſucceſſion.

The ſultan was formerly married to the queen, but ſhe now poſſeſſes that title without the celebration of any nuptial rites, and yet enjoys all the prerogatives of royalty, with a guard of thirty or forty black eunuchs, under the command of the kyſler-aga.

The ſons of the ſultan, by the ſultana queen, are all brought up by themſelves, and have nurſes provided for them. His ſons by the other ſultanas are alſo brought up by themſelves; but they may play with each other till they are ſix or ſeven years of age. They live nine or ten years with the women, and at about fourteen are circumciſed with great pomp. When the ſultan's eldeſt ſon is circumciſed, he is ſometimes ſent with a ſuitable equipage, under the care of a truſty eunuch, to be governor of Magneſia, in Natolia; but the eunuch is bound to ſend continual advice to the ſultan of his ſon's behaviour; ſo that if he exceeds the limits of his commiſſion, he ſoon falls into diſgrace.

The daughters, ſiſters, and aunts of the emperor lodge in the ſame ſeraglio; and, being richly dreſſed and royally attended, live by themſelves in continual pleaſures, till the ſultan gives them in marriage to the great officers of his court, or the governors of provinces. They are ſaid to carry out with them a cheſt, preſented by the ſultan, filled with rich cloaths, jewels, and money, to the value of about thirty thouſand pounds ſterling, beſides what they have ſaved, which ſometimes amounts to a great ſum: and if the Grand Seignior has a particular reſpect for them, he even continues their allowance of a thouſand or fifteen hundred aſpers a day. As for the huſband, he is to make her a bill of dowry of at leaſt a hundred thouſand chequins in money, beſides cloaths, jewels, and other ornaments. They, however, converſe with no other men beſides their huſbands; and, with the ſultan's leave, are allowed to viſit their old acquaintance in the ſeraglio. Theſe are the only women in Turky who claim the privilege of having a man to themſelves. They aſſume the ſtate of queens, and have their huſbands in the ſame ſubjection as other Turkiſh huſbands have their wives; and they are ſaid to oblige them to put away the reſt of their women, how long ſoever they have lived with them.

Authors have given very incredible deſcriptions of the manner in which theſe ladies live in the ſeraglio, and of the treatment they receive from the ſultan; but as it is evident, even from their own account, that they never ſo much as ſaw one of theſe ladies, and that they had no poſſible means of coming at the knowledge of what they deſcribe, we ſhall paſs them over as the fictions of travellers; and conclude this ſection with part of a letter wrote by an Engliſh ambaſſadreſs on this ſubject, who writes from her own knowledge, and, from her rank and ſex, had an opportunity of ſeeing what is carefully concealed from every man. Though the lady ſhe deſcribes had left the ſeraglio, yet ſhe ſtill ſeems to have kept up the way of life ſhe led there; and, indeed, all that is ſaid of her will give the reader a better idea of the ſplendor in which thoſe ladies live, than any thing that has been written on the ſubject.

"I went, ſays this learned and polite writer, to ſee "the ſultana Hafiten, favourite of the late emperor Muſ-"tapha, who was depoſed by his brother, the reigning "ſultan, and died a few weeks after, being poiſoned, as "it was generally believed. This lady was, immediate-"ly after his death, ſaluted with an abſolute order to "leave the ſeraglio, and chooſe herſelf a huſband among "the great men of the Porte. I ſuppoſe you may ima-"gine her overjoyed at this propoſal.—Quite the con-"trary.—Theſe women, who are called, and eſteem "themſelves queens, look upon this liberty as the great-"eſt diſgrace and affront that can happen to them. She "threw herſelf at the ſultan's feet, and begged him to "poniard her, rather than uſe his brother's widow with "that contempt. She repreſented to him, in agonies of "ſorrow, that ſhe was privileged from this misfortune "by having brought five princes into the Ottoman fa-"mily; but all the boys being dead, and only one girl "ſurviving, this excuſe was not received, and ſhe was "compelled to make her choice. She choſe Bekir Ef-"fendi, then ſecretary of ſtate, and above fourſcore "years old, to convince the world that ſhe firmly in-"tended to keep the vow ſhe had made, of never ſuffer-"ing a ſecond huſband to approach her bed; and ſince "ſhe muſt honour ſome ſubject ſo far as to be called "his wife, ſhe would chooſe him as a mark of her gra-"titude, ſince it was he that had preſented her at the "age of ten years to her laſt lord. But ſhe never per-"mitted him to pay her one viſit; though ſhe has been "fifteen years in his houſe, where ſhe paſſes her time "in uninterrupted mourning, with a conſtancy very "little known in Chriſtendom, eſpecially in a widow "of one and twenty; for ſhe is now but thirty-ſix. She "has no black eunuchs for her guard, her huſband being "obliged to reſpect her as a queen, and not to enquire "at all into what is done in her apartment.

"I was led into a large room, with a ſopha the whole "length of it, adorned with white marble pillars, cover-"ed with pale blue figured velvet, on a ſilver ground,

" with cuſhions of the ſame, where I was deſired to re-
" poſe till the ſultana appeared, who had contrived this
" manner of reception to avoid riſing up at my entrance,
" though ſhe made me an inclination of the head when
" I roſe up to her. I was very glad to obſerve a lady that
" had been diſtinguiſhed by the favour of an emperor, to
" whom beauties were every day preſented from all parts
" of the world. She had the remains of a fine face, more
" decayed by ſorrow than time. But her dreſs was ſome-
" thing ſo ſurpriſingly rich, that I cannot forbear de-
" ſcribing it to you. She wore a veſt called a dualma,
" which differs from a caftan by its having longer
" ſleeves, and folding over at the bottom. It was of
" purple cloth ſtraight to her ſhape, and thick-ſet on
" each ſide down to her feet and round her ſleeves, with
" pearls of the beſt water, of the ſame ſize as their but-
" tons are; that is, about the bigneſs of a pea, and to
" theſe buttons large loops ſet with diamonds. This
" habit was tied at the waiſt, with two large taſſels of
" ſmaller pearls, and round the arms embroidered with
" large diamonds. Her ſhift was faſtened at the bottom
" with a great diamond, ſhaped like a lozenge; her girdle
" as broad as the broadeſt Engliſh ribbon, entirely co-
" vered with diamonds. Round her neck ſhe wore three
" chains, which reached to her knees; one of large pearls,
" at the bottom of which hung a fine coloured emerald
" as big as a turkey egg; another conſiſting of two
" hundred emeralds cloſe joined together, of the moſt
" lively green, perfectly matched, every one as large as
" a half-crown piece, and as thick as three crown pieces;
" and another of ſmall emeralds perfectly round. But
" her ear-rings eclipſed all the reſt. They were two
" diamonds ſhaped exactly like pears, as big as a large
" hazle-nut. Round her talpoche ſhe had four ſtrings
" of pearl, the whiteſt and moſt perfect in the world,
" faſtened with two roſes, each conſiſting of a large ruby
" for the middle ſtone, encircled with diamonds. Be-
" ſides this, her head-dreſs was covered with bodkins of
" emeralds and diamonds. She wore large diamond
" bracelets, and had five rings on her fingers, with the
" largeſt diamonds (except Mr. Pitt's) I ever ſaw in my
" life. 'Tis for jewellers to compute the value of theſe
" things; but, according to the common eſtimation of
" jewels in our part of the world, her whole dreſs muſt
" be worth a hundred thouſand pounds ſterling. This
" I am ſure of, that no European queen has half the
" quantity; and the empreſs's jewels, tho' very fine,
" would look very mean near hers.

" She gave me a dinner of fifty diſhes of meat, which,
" after their faſhion, were placed on the table but one
" at a time, and was extremely tedious. But the mag-
" nificence of her table anſwered very well to that of
" her dreſs: the hafts of the knives being of gold ſet
" with diamonds. But the piece of luxury which griev-
" ed my eyes was, the table-cloth and napkins, which
" were all tiffany embroidered with ſilk and gold, in the
" fineſt manner in natural flowers. It was with the ut-
" moſt regret that I made uſe of theſe coſtly napkins,
" which were as finely wrought as the fineſt handker-
" chiefs that ever came out of that country. You may
" be ſure they were entirely ſpoiled before dinner was
" over. The ſherbet was ſerved in china bowls, but the
" covers and ſalvers maſſy gold. After dinner water
" was brought in gold baſons, and towels of the ſame
" kind with the napkins, which I very unwillingly wip-
" ed my hands upon, and coffee was ſerved in china,
" with gold ſaucers.

" The ſultana ſeemed in a very good humour, and
" talked to me with the utmoſt civility. I did not omit
" this opportunity of learning all that I poſſibly could of
" the ſeraglio, which is ſo entirely unknown among us.
" She aſſured me that the ſtory of the ſultan's throwing
" a handkerchief, is altogether fabulous; and the man-
" ner upon that occaſion no other than this: he ſends
" the kyſler aga to ſignify to the lady the honour he
" intends her. She is immediately complimented upon
" it by the others, and led into the bath, where ſhe is
" perfumed and dreſſed in the moſt magnificent and be-
" coming manner. The emperor precedes his viſit by
" a royal preſent, and then comes into her apartment.
" Neither is there any ſuch thing as her creeping in at
" the bed's foot. She ſaid, that the firſt he made choice
" of, was always after the firſt in rank, and not the mo-
" ther of the eldeſt ſon, as other writers would make
" us believe. Sometimes the ſultan diverts himſelf in
" the company of all his ladies, who ſtand in a circle
" round him. And ſhe confeſſed they were ready to die
" with envy and jealouſy of the happy ſhe, that he di-
" ſtinguiſhed with any appearance of preferment. But
" this ſeemed to me neither better nor worſe than the
" circles in moſt courts, where the glance of the mo-
" narch is watched, and every ſmile waited for with im-
" patience, and envied by thoſe who cannot obtain it.

" She aſked me to walk in her garden, and one of
" her ſlaves immediately brought her a pellice of rich
" brocade lined with ſables. I waited on her into the
" garden, which had nothing in it remarkable but the
" fountains, and from thence, ſhe ſhewed me all her
" apartments. In her bed-chamber her toilet was diſ-
" played, conſiſting of two looking-glaſſes; the frames
" covered with pearls, and her night talpoche ſet with
" bodkins of jewels, and near it three veſts of fine ſables,
" every one of which is at leaſt worth two hundred
" pounds Engliſh money. I don't doubt but theſe rich
" habits were purpoſely placed in ſight, though they
" ſeemed negligently thrown on the ſopha. When I
" took my leave of her, I was complimented with per-
" fumes, and preſented with a very fine embroidered
" handkerchief. Her ſlaves were to the number of thirty,
" beſides ten little ones, the eldeſt not above ſeven years
" old. Theſe were the moſt beautiful girls I ever ſaw,
" all richly dreſſed, and I obſerved that the ſultana took
" a great deal of pleaſure in theſe lovely children, which
" are a vaſt expence; for there is not a handſome girl of
" that age, to be bought under a hundred pounds ſter-
" ling. They wore little garlands of flowers, and their
" own hair braided, which was all their head-dreſs; but
" their habits are all of gold ſtuffs. Theſe ſerved her
" coffee kneeling; brought water when ſhe waſhed, &c.
" 'Tis a great part of the buſineſs of the older ſlaves to
" take care of theſe young girls, to teach them to em-
" broider, and to ſerve them as carefully as if they were
" children of the family."

SECT. VI.

Of the Manufactures, Trade, and Coin of Turky in Europe.

THE Turks have very curious and beautiful manufactures. The inland trade too, which the provinces, towns, and inhabitants carry on with each other, and with foreign nations, is very conſiderable; though it is chiefly through the channel of the Jews and Armenians. The Turks, indeed, convey both by land and water the products of the country and other goods from one province to another; but not to foreign Chriſtian countries: great numbers of Engliſh, Dutch, French, Italian, and Spaniſh ſhips, as well as thoſe of other trading nations, repairing in great numbers to the harbours in Turky, where they import their goods, and purchaſe thoſe of the country. They have alſo their envoys and reſidents at Conſtantinople, and their conſuls in other ports.

The exports from Turky are ſilks, beautiful carpets, goats hair and wool, camels hair, cotton yarn, burdets, dimity, waxed linen, ſhagreen ſkins, blue, red, and yellow leather, coffee, rhubarb, turpentine, ſtorax, gums, ſaffron, opium, galls, maſtich, emery, Lemnian bole, pomegranate ſhells, ſponges, dates, almonds, wine, oil, figs, raiſins, mother of pearl, box-wood, wax, &c. The traffic of the human ſpecies, however ſhocking it may appear at firſt ſight, is infinitely leſs cruel than that carried on by the Chriſtians on the coaſt of Guinea: this is a conſiderable part of their commerce; for they not only ſell ſlaves of both ſexes, but alſo beautiful young girls, who are bought up, particularly by the Jews in Circaſſia, Georgia, Greece, and other countries; their parents and relations readily parting with them, in hopes of raiſing their fortune.

The Engliſh Turky merchants export thither broad cloth, long ells, tin, iron, ſugar, watches, ſome bullion, and many other articles.

The

The gold and large ſilver coin of all countries are current in Turky, more eſpecially the croſs dollars of Burgundy, and the Dutch lion dollars, which they term aſlem.

The proper coins of the country are, firſt thoſe of gold; namely, the altines, or ducats, which are worth about ſeven ſhillings; and the zechinos, worth about nine ſhillings. Large ſums are reckoned by purſes; a purſe being one hundred and eight pounds ſix ſhillings and eight pence.

The ſilver coin conſiſts of the ſolato, worth about two ſhillings and two pence farthing; the krip, of the value of about eleven pence; the groſh, about three pence; the para, worth three aſpers; an aſper is of the value of about three half pence.

SECT. VII.

Of the MOREA, *anciently called the* PELOPONNESUS.

Its Situation, Extent, Name, Rivers, Lakes, Soil, and Produce. With a Deſcription of all the principal Cities and Towns in that Peninſula.

THE Morea is a large peninſula on the ſouthern part of Greece, to which it is joined by the iſthmus of Corinth, which extends between the gulphs of Lepanto and Engia, and in its narroweſt part is not above four or five miles over. It lies between the thirty ſixth degree twenty-three minutes, and the thirty-eighth degree ſeventeen minutes latitude; and between the twenty-firſt degree twenty minutes, and the twenty-fourth degree eight minutes eaſt longitude from London. Its greateſt breadth from ſouth to north, or from Cape Matapan to the ſtreights of Lepanto, is about one hundred and fifteen miles, and its greateſt length eaſt and weſt one hundred and twenty: but in many places it is much narrower and ſhorter, on account of the many gulphs, bays, and inlets all round the coaſt.

Its preſent name of Morea is ſaid to be derived from Morus, a mulberry-tree, either from its reſembling in its form the mulberry leaf, or from the great number of mulberry-trees it produces.

Its chief rivers are the Carbon, anciently the Alpheus; the Pirnaza, anciently the Paniſus; and the Eurotas, now called the Baſilipotama. Of the lakes, the moſt celebrated among the ancients was the Stymphalus, famous for the many ravenous birds which reſorted to it; and the Phineus, for being the ſource of the river Styx, whoſe water is ſaid to be ſo cold as to freeze thoſe to death who drink it, and to corrode iron and copper, for which extraordinary qualities the poets have made it one of the rivers of hell.

This peninſula, notwithſtanding its ſmall extent, contained the kingdoms of Sicyon, Argos, and Mycene, Corinth, Proper Achaia, Arcadia, and Sparta, and was diſtinguiſhed by the ſplendor of its cities, the courage and virtue of its ancient inhabitants, and the power of the ſeveral ſtates; as well as by the fertility of its ſoil, which produces plenty of corn, wine, oil, moſt delicious fruits, and every thing that can contribute to the delight, as well as the neceſſaries of life. Indeed the middle part, which contained the ancient Arcadia, being more mountainous, is not ſo fruitful, and therefore moſt of the inhabitants were formerly ſhepherds, the ſoil being more proper for paſture than agriculture. However, even in that part there are ſeveral fertile valleys, that would produce plentiful crops, were they well cultivated.

The country is divided into four parts, Belvedera, Chiarenza, Brazzo di Maina, and Saccaria.

Belvedera, the moſt ſouthern part, contains the ancient Elis and Meſſenia; and has the following places of note.

Coron, one of the moſt conſiderable towns in the Morea, is ſituated on the ſouth ſide of a gulph to which it gives its name, about ſeventeen miles from Cape Gallo. It is ſtrong both by nature and art. The city is of a triangular form, and oppoſite one of its angles is a large tower built on a rock. The town, where it is not waſhed by the ſea, is defended by a fortreſs, encompaſſed by old thick walls, flanked with large towers. At a ſmall diſtance from the town is a ſuburb, conſiſting of about five hundred houſes. The adjacent country affords plenty of fruit, corn, oil, and ſilk, which the inhabitants export with great advantage.

Modon, the ancient Methone, is ſeated on the ſouthern ſhore, oppoſite the iſle of Sapienza, and ſtands on a hill which projects into the ſea, at the foot of which is a good harbour. It is a ſtrong, rich, and trading city, the reſidence of the governor of the Morea, and a biſhop's ſee.

Navarino, the ancient Pylus, ſtands on a riſing ground, at the foot of which is the harbour, which is eſteemed the beſt and moſt capacious of all the Morea, it being able to contain two thouſand veſſels. It is defended by two caſtles, one of which ſtands on a high mountain, and commands the entrance into the harbour on the north ſide, the other defends the entrance on the ſouth, and at ſame time defends the city.

Arcadia, formerly Cypariſſa, is now a mean place, from which a bay takes its name.

Langanico, the ancient Olympia, is ſeated on the river Carbon, and was once famous for the games celebrated on the neighbouring plains, every fifth year, from which the computation of time by olympiads took its riſe. In this city was alſo a fine temple of Jupiter Olympius, in which the image of that god, which was of an amazing ſize and beauty, and eſteemed one of ſeven wonders of the world. This city is now but a ſmall and inconſiderable town.

Belvedere, by the Greeks called Calloſcopium, is ſituated on the ſpot where the ancient capital of Elis ſtood. The town received its name from the delightful places round it.

The next diviſion called Chiarenza or Clarenza, contains Achaia, properly ſo called, together with the following places, viz.

Chiarenza, or Clarenza, a pretty good town, ſeated at the bottom of a gulph on the weſtern ſhore of the Morea; but it ſuffered much in the laſt Venetian war.

Patras, Patraſſo, by the Turks called Badra, or Balubathra, is ſituated upon a hill at the foot of a high mountain, not a mile from the ſea. This city is governed by a cady, who determines all controverſies: here is alſo a waywode, who executes the determinations of the cady, and gathers the taxes and duties upon merchandize and proviſions. The Turks, who are about a third part of the inhabitants, have ſix moſques here, one of which was formerly a cathedral church. The Jews, who make alſo another third part, have four ſynagogues, and a kind of policy among themſelves; for they chooſe ancient men or elders to decide all the differences that ariſe amongſt them. The whole number of Chriſtians, Jews, and Turks, is computed to amount to about four or five thouſand perſons. It is the reſidence of a Greek archbiſhop, and gives name to the gulph which runs between the coaſt of the Morea, and the iſland of Cephalonia.

The currants of Patras are eſteemed the beſt in thoſe parts; but there are no great quantities of them. The trade of the inhabitants chiefly conſiſts of raw ſilk, made in great quantities in the Morea. Leather is alſo cheap, as are alſo honey, wax, wood, and cheeſe.

Braccio di Mania, or Takonia, comprehends the antient Arcadia and Laconia, and contains the following places, viz.

Miſitra, the antient Sparta, is ſituated on the river Eurotas, now called Baſilopotamus. It conſiſts of a caſtle, the city properly ſo called, and below it two large ſuburbs. The town and caſtle have each their diſtinct walls. The former is advantageouſly ſituated on the top of a mountain, and its walls are ſtrong and kept in good repair. It is defended by eight or ten pieces of ordnance, and the whole garriſon conſiſts of eighteen or twenty janizaries, commanded by a governor, who ſeldom reſides in the caſtle. The Turks imagine, that it can only be taken by famine, and have therefore provided it with magazines conſtantly filled with corn. Within the place are alſo ciſterns kept full of water.

The town ſtands at the foot of the caſtle, which covers it to the north, and conſiſts of two ſpacious ſtreets, and ſeveral narrow lanes croſſing them. The old market-

place

place has a curious fountain, which throws up water from three brazen pipes, and near it is a church built out of the ruins of Minerva's temple. There are alſo the remains of four magnificent marble buildings, the Perſian gallery, or portico, erected in memory of the victory gained by the Greeks at the battle of Platæa, the temple of Helena, the temple of Hercules, and that of Venus. In the town ſtands alſo the cathedral, which is a very noble building. The roof is ſupported by marble pillars; it has ſeven domes, and the pavement is a curious piece of Moſaic work. This is the ſee of a Greek archbiſhop, who is ſtiled metropolitan, and has a handſome and commodious palace, in which are lodgings for ten or twelve coloyers, or monks, who are dignitaries of the cathedral.

Towards the ſouth-eaſt part of the town is a convent of nuns, whoſe church, though not ſo large, is more beautiful than the cathedral. In one of the ſuburbs is another church, far more magnificent than the two already mentioned. The inſide is adorned with very fine paintings; the marble of its columns is very beautiful, and adorned with the moſt curious workmanſhip, and both the portico and the domes are admirable. In each of theſe churches is a particular incloſure, within which the Greek women are placed ſeparate from the men. In the ſame ſuburb ſtands the fineſt moſque the Turks have at Miſitra; it was built out of the ruins of antient Sparta. The domes are extremely noble, and its minorets moſt curiouſly wrought. Adjoining to it is the beſt endowed hoſpital of any in Turky; proviſions are there daily diſtributed to the poor, and extraordinary care is taken of the ſick; and both Jews, Moors, Turks, and Chriſtians are equally welcome. There are alſo at Miſitra two hans, or caravanſeras, for travellers; both of which are fine buildings, particularly the new one, where there are chambers for the merchants, with ſtables underneath for their horſes and other beaſts of burthen.

They reckon near two thouſand houſes at Miſitra, and near as many in the above ſuburb; but the latter are by far the fineſt, and therefore the moſt conſiderable of the Turks live there; where they have pleaſant gardens. The other village contains about a thouſand houſes, moſt of them inhabited by Jews, who have a ſynagogue there, as they have alſo at Miſitra and in the other village; the Sadducees have alſo particular ſynagogues and burying-places, and never intermarry with the other Jews.

The city of Malveſia, by the modern Greeks called Monembaſia, and by the Turks Menewtſche, is ſeated on a little iſland, on the eaſtern coaſt of the Morea, near the mouth of the gulph of Neapoli, thirty-nine miles to the ſouth-eaſt of Miſitra. The iſland on which it ſtands is not above a piſtol-ſhot from the continent, and is joined to it by a handſome ſtone bridge. The town is built at the foot of a ſteep rock, on the top of which is a good fortreſs. The walls of the city are towards the ſea-ſhore, and in very good repair; thoſe of the fortreſs are very indifferent; but its ſituation renders it in a manner impregnable, there being no aſcent to it but by a very dangerous path. It has a pretty good harbour, and is the ſee of a Greek biſhop.

The iſland on which the city is built is planted with fine gardens and vineyards, which produce that excellent wine called malmſey: but, as the iſland is ſmall, it cannot produce a ſufficient quantity of it to anſwer the demands of the public; they have therefore planted on the oppoſite ſhore a ſpace of ground about eight leagues in extent, with vines from this iſland; the wine they produce is generally ſold for malmſey, and is little inferior to it.

Maina is a town with a diſtrict belonging to it on the ſouth part of the iſland. Its inhabitants, and thoſe in the neighbourhood called Mainotti, are the deſcendants of the antient Lacedemonians, and are ſtill diſtinguiſhed as the braveſt of all the Greeks. Though their whole military force is ſaid not to exceed ten thouſand men, they have never been conquered, nor even rendered tributary to the Turks. Their country is on all ſides ſurrounded with mountains. Their modern name is derived from μανία, or madneſs, from their cuſtom of ruſhing upon the enemy, as if actuated by a phrenzy.

The fourth diſtrict is Sacconia, or Romania Minor, which contains the antient cities of Corinth, Sicyon, and Argos.

Corinth, firſt called Ephyra, and now by the Turks Gerame, was built at the foot of a very high rock, on which ſtands a caſtle, that has a moſt beautiful proſpect on every ſide. It was antiently one of the fineſt cities of all Greece, and abounded in magnificent buildings, ſuch as temples, palaces, amphitheatres, monuments, baths, and other works, adorned with ſtatues by the greateſt maſters, and beautiful porticos of columns, whoſe ſingular decorations and elegant capitals gave riſe to the appellation of the Corinthian order. But theſe ſuperb edifices are demoliſhed, and all this magnificence buried in the duſt; and the ſpot on which Corinth ſtood being filled up with fields and gardens, it rather reſembles a village than a city. The buildings are not contiguous, but in cluſters of half a dozen, ten, or ſometimes twenty together, but ſeldom more, with gardens of orange, lemon, and cypreſs trees about them. This town has two moſques, and is ſtill the ſee of a Greek archbiſhop, who lives in the cathedral, which is the only church here.

Nemea, a village famed for the antient Nemæan games, celebrated in honour of Hercules.

Sicyon, now called Baſilica, was once a very conſiderable city, the capital of the antient kingdom of Sicyona, which ſtood upon a hill by the river Aſopus, about eight miles to the weſt of Corinth; but is now only a heap of ruins.

Argos, a mean place on the river Najo, or Inachus, formerly a ſplendid capital, is the ſee of a biſhop, and is defended by a citadel.

Mycene, a village, once the capital of a kingdom.

Napoli di Romania, in Latin Neapolis, was antiently called Nauplia. It ſtands on the top of a ſmall promontory, thirty-ſix miles to the ſouth of Corinth. The port, which is one of the beſt in the Morea, is ſecured againſt pirates by a little caſtle built on a rock, that defends the entrance into the harbour; which is ſo narrow, that only one galley can paſs at a time, though the harbour is ſo ſpacious as to be able to contain a large fleet. There is but one avenue, and only one gate to get into the town on the land ſide; every where elſe the ſea waſhes the walls, which are pretty ſtrong, and flanked with old towers. Beſides the above-mentioned caſtle, there is another on the north ſide. As the harbour is more ſecure, and has better anchorage than any other on the weſt coaſt, the inhabitants carry on a conſiderable trade in corn, wine, oil, ſilks, cotton, and tobacco. The city is inhabited by Chriſtians, Turks, and Jews, and is the ſee of an archbiſhop.

SECT. VIII.

Of LIVADIA, *or* GREECE PROPER.

Its Situation, Extent, Mountains, Rivers, with an Account of the moſt remarkable Places now in that Country.

UNDER the name of Livadia is at preſent comprized antient Greece, properly ſo called, to which belonged the little kingdoms of Acarnania, Ætolia, Ozolœa, Locris, Phocis, Doris, Epicnemedia, Bœtica, Megara, and Attica. This province reaches from the Ionian ſea to the Archipelago, and is bounded on the north by Epirus, now the ſtreight of Negropont, and by Theſſaly, now called Janna; on the eaſt by the Archipelago; on the ſouth by the gulph of Engia, or Egina, the iſthmus of Corinth, and the gulph of Lepanto; and on the weſt by the Ionian ſea, and part of Albania.

It is a pleaſant and fruitful country, extending about a hundred and thirty miles from the ſouth-eaſt to the north-weſt, and is for the moſt part mountainous, containing Mount Oeta, in Bœotia, famous for the paſs of Thermopyle, which was not above twenty-five feet broad, and derived its name from the warm baths in its neighbourhood; and for Mount Parnaſſus, ſacred to Apollo; with Mount Helicon and Cytheron, conſecrated to the Muſes; all of them celebrated by the poets.

The principal rivers of this country are the Sionapro, the antient Achelous, which ſeparated the Arcananians from the Ætolians; the Cephiſſus, that falls into the lake of Copai, which it properly forms; and the Iſmenus, which probably ran into the Aſopus, a river that diſcharges itſelf into the Archipelago.

The following places are at preſent the moſt remarkable:

Lepanto, the antient Naupactus, a town on a mountain that runs along the ſhore of the gulph of Lepanto, formerly termed the gulph of Corinth. On the ſummit of the mountain ſtands a ſmall caſtle. The town is ſurrounded by a fertile country, covered with olive trees and vineyards, corn-fields, and plantations of oranges, lemons, and citrons.

The Dardanels, are two caſtles that defend the entrance of the gulph of Lepanto. Here the Venetians, in the year 1571, gained a moſt ſignal victory over the Turkiſh fleet.

Caſtri, the antient Delphi, or Delphos, is ſituated two Turkiſh miles to the north of the gulph of Lepanto, and ſtands on a bare mountain. It was antiently very famous for its temple and oracle of Apollo; but is now only a poor place, conſiſting of about two hundred houſes.

Livadia, the capital of the province to which it gives name, is ſituated twenty-two miles to the north of the iſthmus of Corinth, and built round a mountain which, terminates in a peak, on the top of which is an old caſtle. The river Hercyna riſes out of the mountain by the caſtle with ſuch a plentiful ſtream, that it turns a conſiderable number of mills in its paſſage through the town. This place is large and populous; it is inhabited by many rich Turks, who are here more numerous than the Chriſtians, and have fine moſques. The Chriſtians have four or five old ruinous churches; but there are but few Jews. The city is governed by a vaivode and a cady, and carries on a pretty good trade in woollen ſtuffs and rice. This town was antiently celebrated for the oracle of Tryphonius, which was in a cave in the hill above the town.

The lake of Livadia is five or ſix miles to the eaſt of the city, on the north ſide of a large plain, entirely encompaſſed with high hills.

Megara, antiently the ſeat of a monarch, and afterwards the capital of a republic, ſo formidable as to be able to carry on a war againſt the Athenians and others, and to plant a colony in Sicily, is now but a poor village, and conſiſts of about three or four hundred pitiful cottages, inhabited only by Chriſtians, who get their living chiefly by tilling the earth, for which they have half the crop, the reſt being paid to their Turkiſh landlords. They alſo make pitch, and ſaw boards and planks, out of the pines and firs that grow in great abundance on the neighbouring mountains.

Salona is ſeated upon a rock in the inmoſt receſs of a fruitful valley, under an high mountain which riſes to the northward, about twelve miles to the north-weſt of Livadia. It is defended by a caſtle on the top of the rock, and is a biſhopric ſubject to the metropolitan of Athens. The number of Chriſtians and Turks are about equal, the former having ſix churches, and the latter ſeven moſques; but no Jews are permitted here. The trade conſiſts in ſome cotton, but chiefly in tobacco.

Athens, now Setines, the ancient capital of Attica, was at firſt called Cecropia, from Cecrops its founder; but afterwards was known by the name of Athens, which is derived from the goddeſs Minerva. Excluſive of its power, amazing grandeur, and opulence, it was highly celebrated for being the nurſery of the moſt eminent philoſophers, ſtateſmen, orators, and great commanders. It was at firſt governed by kings, then by archons, but afterwards fell ſucceſſively under the power of the Perſians, Macedonians, and Romans. In later times it came under the dominion of the Turks, from whom it was taken by the Venetians. In the year 1455 the Turks retook it. In 1687 the Venetians again recovered it; but in the laſt wars between thoſe two powers, it again fell into the hands of the Turks.

This city, once juſtly celebrated for the magnificence of its buildings, has no walls; but the avenues to it being ſhut by gates, are a ſufficient ſecurity againſt the corſairs, which ſometimes frequent the coaſt. The houſes are built cloſe together, and the ſtreets are very narrow. The town, which is defended by a citadel, is divided into eight quarters. The inhabitants are computed to amount to about eight or ten thouſand, three parts of whom are Chriſtians, and the reſt Turks; for no Jews are permitted to live amongſt them. It is the ſee of an archbiſhop, whoſe revenue amounts to four hundred thouſand dollars a year. There are ſaid to be two hundred churches and little chapels in and about Athens, fifty-two of which have their peculiar prieſts; the reſt are ſeldom uſed, except on the days of their founders, and are indeed only little oratories. The catholican, or cathedral, is the beſt kept in repair, and the beſt adorned of any of them; but in reality is but a mean building, and, in point of magnificence, exceeds very few of the ordinary pariſh churches in England. Here are alſo ſeveral convents of monks and nuns. The Turks have five moſques; one in the caſtle was the Parthenion, or the ſtately temple of Minerva, and is now accounted the fineſt piece of antiquity in the whole world; but in the laſt Venetian war this building ſuffered much by the cannon.

The Acropolis, which is the citadel above-mentioned, is ſituated upon the ſummit of a rock, in a very conſiderable elevation above the circumjacent plains. The top of this rock is flat, and about three quarters of a mile in circumference, to which there is an almoſt perpendicular aſcent on all ſides, except to the north-weſt. Its figure is an oblong ſquare, and it is flanked all round with a tolerable good wall. This fortreſs might be rendered almoſt impregnable. Beſides the temple of Minerva, now a moſque, there is on the ſouth ſide of the caſtle the theatre of Bacchus; the magnificent pillars, gate, and aqueduct of the emperor Adrian; the ſtadium, where the public games, called panathenæa, were exerciſed; the ruins of the areopagus; the odeum, or muſic-theatre; the temples of Theſeus, Auguſtus, and Jupiter Olympius; the temple of the winds; the Pharari, or lanthern of Demoſthenes: all theſe are ſtill to be ſeen, either entire or in part.

The two rivers, Iliſſus and Eridanus, that water the plain in which Athens now ſtands, are very ſmall; the former being diverted into ſeveral canals for watering the olive yards, and the latter loſt amidſt the many branches into which it is conveyed over the country. Athens had antiently three harbours, of which thoſe named Phalareus and Munichia lay to the eaſtward, and Pyræus to the weſt of a ſmall cape. The latter being an incloſed ſpacious harbour, with a narrow entrance, is ſtill much reſorted to, and by the Greeks called Porto Drago, but by the Italians Porto Leone, from a pillar there in memory of a lion which was carried from thence to Venice.

Lepſina, the antient Eleuſis, now lies in ruins, and is in a manner deſtitute of inhabitants; but the remains of the magnificent temple of Ceres ſtill invite travellers to viſit this place, there being viſible marks of a moſt ſuperb ſtructure, all of very fine white marble, adorned with excellent carvings and ſtatues.

Stibes, or Stives, the antient Thebes, diſtinguiſhed for its ſumptuous temples, palaces, and other noble ſtructures, has at preſent no remains of its antient grandeur, except its being the ſee of a biſhop. Its preſent walls ſeem very antient, and it has a caſtle of an oval figure. It is ſaid to contain three or four thouſand ſouls. The Turks, who appear to be the leaſt part of the inhabitants, have two moſques, and the Chriſtians ſeveral churches.

SECT. VIII.

Of JANNA, *the antient* THESSALY.

Its Situation, Extent, Mountains, Rivers, Fertility, and principal Towns.

THIS country derived its antient name from king Theſſalus, and is bounded on the north by Macedonia, on the weſt by Epirus, on the ſouth by Livadia, and on the eaſt by the Ægean ſea and the gulph of Salonica, extending about a hundred miles where longeſt, from eaſt to weſt, and its greateſt breadth from north to ſouth, ninety. It was ſometimes annexed to Macedonia,

ſometimes divided from it, and then united to it again.

Among its once celebrated twenty-four mountains the moſt remarkable is Olympus, now called Lacha, which, from its uncommon height, was celebrated by the antients as the reſidence of the gods; for they ſuppoſed it to reach up to heaven, though it is not much above an Engliſh mile in perpendicular height. Mount Oſſa, together with Nephele, was, according to the fabulous accounts of antiquity, inhabited by the Centaurs, whom Hercules ſlew or drove out. Here alſo are ſituated the plains of Pharſalia, and between the mountains Olympus, Pelion, and Oſſa, is the delightful valley of Tempe, which was ſo adorned with the gifts of nature, and ſo delightfully watered by the gently winding ſtreams of the tranſparent Peneus, now the Salampria, that it was eſteemed the garden of the muſes.

The principal rivers in Theſſaly are the Salambria, or Selampria, the Peneus of the antients. It ſprings from the mountains that divide Epirus from Theſſaly, runs acroſs the latter from eaſt to weſt, and, having watered the cities of Janna and Lariſſa, diſcharges itſelf into the gulph of Salonichi. Beſides this, there is no other river worthy of notice but the Agriomela, called by the antients the Sperchius, which ſprings from Mount Pindus, now Mezzovo, runs eaſtward through Theſſaly, and falls into the gulph of Zeyton.

This country, in its amazing fertility, ſeems to exceed all other parts of Greece. It produces citrons, oranges, lemons, pomegranates, grapes of an uncommon ſweetneſs, excellent figs and melons, almonds, olives, cheſnuts, cotton, and all ſorts of grain. It was antiently famous for its breed of cattle and horſes, from which, and the extraordinary ſkill of the Theſſalians in horſemanſhip, the fable of the Centaurs is ſuppoſed to take its riſe.

The moſt remarkable towns in this country are,

Lariſſa, or Larſo, by the Turks called Jengiſhair, the capital, ſtands on the river Pineus, in a hilly and delightful part of the country. It is ſeated on a riſing ground, with a large plain on the ſouth, and Mount Olympus on the north. Over the river is a handſome ſtone bridge of nine arches; but the town has loſt much of its antient grandeur, though it is ſtill one of the moſt powerful cities in Greece. It is the ſee of a Greek archbiſhop, and yet the Chriſtians are ſaid to have but one church here. There are above two hundred Jewiſh families, moſt of them very rich, and a conſiderable trade is carried on, particularly in leather.

Tornovo is a ſpacious and pleaſant city, in which are eighteen Greek churches, and three Turkiſh moſques. The preſent biſhop is under the archbiſhop of Lariſſa.

Janna, or Jannina, from which the country receives its name, is ſeated in a little iſland formed by the river Peneus. It is inhabited by rich Greek merchants.

Zeyton ſtands on the bey of the ſame name, fifty miles to the ſouth of Lariſſa, and was formerly defended by two large caſtles. Before the city is a beautiful and fertile plain, which abounds with corn-fields, kitchen-gardens, and orchards; and is ſurrounded by ſeveral villages, which, together with the many windings of the river Agriomela, afford a moſt delightful proſpect. The city is inhabited both by Chriſtians and Turks.

Armira, a town on the gulph of the ſame name, thought to be the Eretria of the antients.

SECT. IX.

Of Macedonia.

Its Situation, Climate, Soil, Gulphs, Rivers, and Mountains; with a particular Deſcription of Mount Athos and its Inhabitants, and of the principal Towns in Macedonia; particularly Salonichi, the antient Theſſalonica, and Philippi.

MACEDONIA is of a very irregular figure; it is bounded on the north by Servia and Bulgaria, on the eaſt by the Archipelago and Romania, on the ſouth by Theſſaly and Epirus, and on the weſt by Albania.

Its ſituation is advantageous, and the air clear, ſharp, and wholeſome. The ſoil is for the moſt part fertile, particularly on the maritime coaſts, which abound in corn, wine, oil, and whatever can be deſired for uſe and pleaſure; but in the inland parts are ſeveral uninhabited waſtes. It had formerly mines of almoſt all kinds of metals, particularly gold. Here is great plenty of wood, and all kinds of timber; and its many fine bays are of great advantage to trade. The moſt remarkable of theſe are the Conteſſa, or the Sinus Strymonicus, Monte Santo, or the Sinus Singiticus, and the Salonichi, or the Sinus Thermæus.

The principal rivers are the Platamone, the antient Aliacmon, which runs into the bay of Salonichi; the Viſtriza, the antient Erigon, which runs into the Vardar, the antient Axius, the greateſt river in all Macedonia; and the Strymon, which riſes in Romania, or Thrace, and diſcharges itſelf into the gulph of Conteſſa.

Among the many large mountains in this country is the chain of the Scardi, which traverſes the northern part of it. Pangæus, formerly famed for its rich gold and ſilver mines. The mountain of Hæmus joins the Scardi, ſeparating this country from Romania. Mount Athos is one of the moſt celebrated mountains in the whole world, and therefore deſerves a particular deſcription, which we ſhall give from that accurate geographer Dr. Buſching.

Mount Athos, commonly called Monto Santo, lies on a peninſula which extends into the Ægean ſea, and is indeed a chain of mountains, reaching the whole length of the peninſula, ſeven Turkiſh miles in length, and three in breadth; but it is only a ſingle mountain that is properly called Athos. Its uncommon height appears from the accounts of Pliny and Plutarch, who affirm, that when the ſun is at the ſummer ſolſtice, probably a little before its ſetting, the mountain caſts its ſhadow as far as the market-place of Myrrhina, in the iſle of Lemnos, which, in the beſt maps, is fifty-five Italian miles diſtant; whence the height of Mount Athos may be inferred to be about eleven ſtadia.

It is evident from Ælian, that antiently the mountain in general, and particularly the ſummit, was accounted very healthy, and conducive to long life; whence the inhabitants were called Macrobii, or long lived. We are farther informed by Philoſtratus, in the life of Apollonius, that numbers of philoſophers uſed to retire to this mountain for the better contemplation of the heavens, and of nature; and after their example the monks doubtleſs built their cells.

On it are twenty-two convents, beſides a great number of cells and grottos, with the habitations of no leſs than ſix thouſand monks and hermits; though the proper hermits, who live in grottos, are not above twenty: the other monks are anchorites, or ſuch as live in cells.

Theſe Greek monks, who call themſelves the inhabitants of the holy mountain, are ſo far from being a ſet of ſlothful people, that, beſides their daily offices of religion, they perform all manner of work, cultivate the olive and vineyards, are carpenters, maſons, ſtone-cutters, cloth-workers, taylors, &c. They alſo live a very auſtere life; their uſual food, inſtead of fleſh, being vegetables, dried olives, figs, and other fruit, onions, cheeſe, and on certain days, Lent excepted, fiſh. Their faſts are many and ſevere, which, with the healthfulneſs of the air, renders longevity ſo common there, that many of them live above a hundred years.

In every convent are two or three ſtudying monks, who are exempted from labour; but uſe exemplary diligence among the many writings to be found in their libraries; theſe are highly eſteemed for the orthodoxy of their doctrines, and the ſanctity of their lives; and here it is that the Greeks properly and chiefly learn their divinity. Theſe convents and churches have bells, which are no where elſe allowed the Greeks; and are alſo ſurrounded with high and ſtrong walls, planted with cannon, as a ſecurity from any ſurprize from Corſairs.

Beſides churches and monaſteries, the mountain has alſo a town called Kareis, inhabited by monks, and the reſidence of a Turkiſh aga, who commands here in the name of the boſtangi baſha, to defend the place againſt the corſairs, it being under the protection of that baſha, to whom it annually pays twelve thouſand dollars, and

near as much more is paid at Salonichi for the uſe of the ſultan. This heavy tribute is diſcharged by alms, and the liberal contributions of Ruſſia, and the princes of Walachia and Moldavia. In this town a market is held every Saturday among the monks and anchorites, which laſt bring hither knives and little pictures of ſaints, and with the money they thus earn, they purchaſe bread; but the monks carry them about every where, and receive alms for them. No fowls or cattle are kept by the inhabitants of this mountain; but graziers on paying a conſideration are allowed to fatten their cattle there. On this chain of hills formerly ſtood five cities.

The principal towns of Macedonia are Salonichi, the ancient Theſſalonica, a celebrated trading city in the bay of the ſame name, and at preſent the moſt conſiderable city in Macedonia. It was once called Halia, and Therma; but Caſſander rebuilt it, and in honour of his wife Theſſalonica, the ſiſter of Alexander the Great, gave it her name. To its admirable ſituation for trade is probably owing the regard which the ſeveral conquerors of Macedonia have ſhewn it. The advantages derived from it are ſuch as are ſcarcely to be met with elſewhere; and as it attracted the encomiums of the ancients, ſo it has the admiration of the moderns.

This city, which is ſituated in twelve degrees twenty-three minutes eaſt longitude from London, and in forty degrees forty minutes latitude, is one hundred and ſixty miles to the north-weſt of the iſthmus of Corinth, and ſtands partly on a hill, and partly on its declivity. In its neighbourhood runs the river Vardar, which abounds with fiſh, and its banks are adorned with beautiful trees. The city is ſaid to be ten miles in compaſs; its walls are flanked with ſeveral towers, and it is defended by three caſtles: the firſt, which is the ſmalleſt, ſtands where people land from the ſea, at ſome diſtance from the walls, and is furniſhed with twenty pieces of ordnance. The two others are within ſight of the ſea, on the higheſt parts of the wall, and are provided with forty heavy cannon. On the land-ſide is a fortreſs which commands the city, it being ſeated on a hill, at the foot of which is a large ſuburb encompaſſed by its own walls; but yet contiguous to the town. It is extremely populous; but moſt of thoſe houſes in the plain are too low, and hardly ſufficient for the great number of Jews who inhabit them; nor are they leſs inconvenient on account of the offenſive ſmell cauſed by the narrowneſs of the ſtreets. In this city a great quantity of ſilk, wool, leather of all ſorts, wax, powder, grain, cotton, and iron are continually worked. The trade is chiefly managed by the Jews, who have the monopoly of the manufactures of all the ſtuffs made for the uſe of the janizaries. The Jews have thirty-ſix large ſynagogues here, beſides ſeveral ſmall ones; and two colleges, to which youth flock from all parts to ſtudy. The Greeks have thirty churches, and the Turks forty-eight moſques, among which is one that was formerly a chriſtian church, dedicated to St. Demetrius. This is diſtinguiſhed by its beauty and magnificence, it conſiſting of one church built over another, and having in it above a thouſand columns of marble, jaſper and porphyry. Among other ſtately remains of the ancient grandeur of this city are triumphal arches, one of which is almoſt entire, erected in honour of the emperor Antoninus, and without the city are a great number of antique fragments with inſcriptions. Numbers of coins too are alſo found here.

This city is the reſidence of a Turkiſh baſha, and likewiſe of a Greek archbiſhop, who has eight ſuffragans under him. The Chriſtians were formerly ſo conſiderable, that St. Paul addreſſed two of his epiſtles to them. In the year 1313, the city was ſold to the Venetians; but they were diſpoſſeſſed of it about eight years after by Amurath II.

Philippi now an inconſiderable village, ſeventy miles to the north-eaſt of Salonichi, ſtood on a hill betwixt the rivers Neſſus and Strymon, on the borders of Thrace, to which in its moſt ancient times it belonged. It was at firſt called Crenides, or Spring-town, from the many ſprings iſſuing from the hill on which it ſtood; afterwards Daſos or Thaſus, from the Thaſii who built it, and laſtly Philippi, from Philip of Macedon, who, after reducing it, rebuilt it with conſiderable improvements, and from thenceforward it belonged to Macedonia. Near this place Brutus and Caſſius were defeated by Octavius and Mark Antony. Under Julius Cæſar and Auguſtus it was a Roman colony. Here the apoſtle Paul preached, and wrote one of his epiſtles to the Chriſtians of this city.

On approaching the place you firſt ſee the caſtle ſeated on the hill; it is very large, and its walls almoſt entire. On the ſeveral hills that ſurround the caſtle ſtand ſeveral other fortreſſes, which have a communication with it, encompaſſed by large walls that extend into the plain. Within the place are heaps of free-ſtone, and pieces of marble, but no footſteps of any buildings. Farther up you ſee a great number of edifices half demoliſhed. It is eaſily perceived that there were here magnificent temples built of white marble, and noble palaces, the broken remains of which give the beholder the higheſt idea of the beauty of the ancient architecture. There are, however, only a few houſes near the ruins of this celebrated city; and its inhabitants conſiſt of a ſmall number of poor Greeks, notwithſtanding which it is the reſidence of a Grecian biſhop, who ſtiles himſelf metropolitan of Philippi and Drama.

Conteſſa is a ſmall town twenty miles diſtant from the ruins of Philippi, and gives name to the gulph into which the river Strymon runs.

Cavalla is ſituated alſo on the ſame gulph between Conteſſa and Philippi. Its caſtle is ſtill entire; but what appears more remarkable is, there being ſtill in the neighbouring mountains long and thick walls, and ſeveral fortifications, which were probably built for the defence of the city. The walls extend to the top of the higheſt mountains, and ſeem to have been deſigned for ſhutting up the paſſes. There are at Cavalla the remains of an aqueduct, with a double row of arches, one over the other, which ſerved to convey water into the city and caſtle. This place has ſome trade, and alſo gives its name to the gulph, which is ſometimes called the gulph of Cavalla.

Emboli, the ancient Amphipolis, is ſeated upon the river Strymon, about ſix miles above its mouth, and was once famous as an Athenian colony; but is now a very inconſiderable place.

Pirlipe, a town ſituated among high mountains, which glitter like ſilver, and beſides talc, abound alſo in metals and minerals.

SECT. X.

Of ROMANIA, *by the Turks called* RUMILI.

Its Name, Situation, Mountains, Rivers, and Climate, with an Account of the principal Towns, and a particular Deſcription of Adrianople.

THIS country, which received the name of Romania, either from the Romans, or from New Rome, or Conſtantinople, the ſeat of the eaſtern part of the Roman empire, is the ancient Thrace ſo often mentioned by the Greek and Roman hiſtorians. It is a ſpacious country, bounded on the north by mount Hæmus; on the eaſt by the Red-Sea, the Helleſpont, and Propontis, or Sea of Marmora; on the ſouth by the Archipelago; and on the weſt by Macedonia, and the river Strymon.

It is ſituated between the thirty-ninth and forty-third degrees of latitude, and its utmoſt extent from the ſouth-eaſt to the north-weſt, that is from the city of Conſtantinople to the extremity of Macedonia, is about two hundred and eighty miles, and its breadth from north to ſouth one hundred and eighty.

The country is moſtly level, though interſperſed with ſome large and remarkable mountains, the moſt conſiderable of which is mount Hæmus, which on the north ſeparates Rumili from Bulgaria. The next in bigneſs is Rhodope, celebrated by the ancient poets for the cataſtrophe of Orpheus. Mount Pangæus ſeparates this country from Macedonia, and Orbelus lies at no great diſtance from the river Neſtus. Hæmus and Rho-

dope

dope are two long ridges of mountains, that extend from the frontiers of Macedonia to the Black-Sea.

The rivers worthy of notice are;

The Maritz, called by the ancients the Hebrus, which riſes in mount Hæmus, and traverſing Romania, falls into the Ægean ſea. The Caraſu, Meſtro, or Neſſus, riſes in mount Rhodope, from whence it diſcharges itſelf into the Ægean ſea; and the Strymon which riſes in mount Pangæus, and alſo falls into the Ægean Sea.

The territories ſituated among the mountains are cold and barren; but thoſe nearer the ſea are pleaſant and fertile, producing all kinds of grain, and other neceſſaries, particularly rice, which grows there in great plenty, and is remarkably good.

The country was anciently divided into many independent kingdoms; but the preſent inhabitants are Greeks, deſcended from the ancient Thracians, with a mixture of Turks. The flouriſhing ſtate of the ſciences and polite arts was chiefly owing to the Thracians; but at preſent there is ſcarce a perſon of any remarkable eminence in literature in all Romania.

The country is divided into three ſangiackſhips, and is therefore governed by three ſangiacks.

The ſangiackſhip of Kirkeli lies to the north, near Mount Hæmus, and contains, among others, the following places:

Baſartſhick, a conſiderable town ſeated on the river Maritz, into which falls at this place another ſtream, which runs round the town. It is delightfully ſituated, and univerſally well built; the ſtreets are broad and clean, and its inhabitants carry on a great trade.

Philippopoli, a very antient city, firſt founded by Philip, the father of Alexander the Great, from whom it received its name, is ſtill a pretty large town. It is built on three little hills, which in a manner join. Upon one of theſe hills ſtands a quadrangular tower, which was once a fortification, but at preſent is only uſed for a watch tower. The Maritz, which begins here to be navigable, ſeparates the town from the lower ſuburb, which is joined to the town by a good wooden bridge. There are here about a hundred and twenty Jewiſh families; but moſt of the citizens are Greeks, who have ſix churches, and it is the reſidence of a Greek archbiſhop.

Muſtapha Baſha Kiuperi, a town which takes its name from a very beautiful bridge erected there over the Maritz, by Muſtapha Baſha. This bridge conſiſts of twenty arches, all of free-ſtone, and is ſaid to have coſt four hundred purſes, or two hundred thouſand rix-dollars.

The ſangiackſhip of Byzia extends from the foot of Mount Hæmus to the ſea of Marmora, and contains the following places:

Adrianople, called by the Turks Edrene, takes its name from Adrian, who founded or reſtored it. In the year 1360 ſultan Amurath I. took it from the Chriſtians, from which time it became the ſeat of the Turkiſh emperors, till they took Conſtantinople. It is of a circular form, ſurrounded with a wall and towers, and is ſaid to be eight miles in compaſs. It has good houſes, but narrow and unequal ſtreets. The ſeraglio ſtands in a moſt delightful ſituation, the country all round being very beautiful; but the air is bad, and the river Maritz, on which it is ſituated, being dried up every ſummer, greatly contributes to render it unwholeſome: but during the reſt of the year it is a very pleaſant ſtream, over which are two noble bridges. The bazar, or exchange, founded by Ali Baſha, extends half a mile in length; the roof is arched, and kept extremely neat. It holds three hundred and ſixty-five ſhops, furniſhed with all ſorts of rich goods, which are expoſed to ſale in the ſame manner as in Exeter Exchange, in London. The pavement is kept remarkably neat, and the ſhops as clean as if juſt painted. Idle people of all ſorts walk here for their diverſion, or amuſe themſelves with drinking coffee or ſherbet, which are cried about as oranges and apples are in our play-houſes. Moſt of the rich tradeſmen here are Jews. Near it is the Sherſki, a narrow ſtreet a mile in length, covered on the top with boards to keep out the rain, that merchants may meet conveniently in all weathers. The Beſiſten near it is another exchange, built upon pillars, where all ſorts of horſe furniture is ſold, and is ſeen every where glittering with gold, rich embroidery, and jewels, eſpecially when the court is there.

The moſque of Sultan Selim I. is a building well worth the curioſity of a traveller. It is advantageouſly ſituated in the midſt of the city, and in the higheſt part of it, whence it is ſeen on every ſide to great advantage. The firſt court has four gates, and the innermoſt three. They are both of them ſurrounded with cloiſters, with marble columns of the Ionic order, finely poliſhed, and of very lively colours. The whole pavement is of white marble, and the roof of the cloiſters divided into ſeveral cupolas, or domes, headed with gilt balls on the top. In the midſt of each court are fountains of white marble; and before the great gate of the moſque is a portico, with columns of green marble, and five gates. The moſque is covered by one prodigious dome of a vaſt height.

The lady Wortley Montague, who has given the only intelligible and conſiſtent diſcription of this moſque, and was perhaps the only Chriſtian that ever entered it, ſays, ſhe thought it the nobleſt building ſhe ever ſaw. On the inſide it has two rows of galleries, ſupported by columns of red and white marble, with marble baluſtrades; the pavement is alſo marble, covered with Perſian carpets. The walls are encruſted with Japan china, in flowers of the moſt lively colours. In the middle of this ſtructure hangs a vaſt lamp of ſilver gilt, and about two thouſand of a ſmaller ſize, which muſt have a glorious effect when all are lighted. Under the large lamp is a great pulpit of carved wood gilt, and juſt by it a fountain to waſh. In one corner is a little gallery encloſed with gilded lattices for the ſultan; and at the upper end is a large niche, very like an altar, raiſed two ſteps, and covered with gold brocade. Before it ſtands two ſilver gilt candleſticks the height of a man, and in them were wax candles as thick as a man's waiſt.

The outſide of the moſque is adorned with towers of a prodigious height, gilt on the top, from whence the imaums call the people to prayers. To each of theſe towers there is but one door, which leads to three different ſtair-caſes, riſing to the three different ſtories of the tower, in ſuch a manner that three prieſts may aſcend, rounding, and deſcend, without meeting each other; a contrivance very much admired.

Behind the moſque is another exchange full of ſhops, where poor artificers are lodged gratis.

There are ſome other moſques built much after the ſame manner, but not comparable in point of magnificence, to that juſt deſcribed.

Selivrea, the antient Selimbria, is a celebrated port on the ſea of Marmora. It has an old ruinous caſtle, which ſtands on an eminence, and was formerly very ſtrong. The town is neatly built, and has a bridge of thirty-two arches. In the ſuburbs is an imperial granary, into which the grain of the province is brought. Here is a famous antient Greek church; but it is an ill built edifice, ſet out with the ſame ſort of ornaments as the Romiſh churches, but theſe are leſs rich. They here pretend to ſhew a ſaint's body, and a picture of the Virgin Mary, drawn by the hand of St. Luke, very little to the credit of his painting; but no picture among the papiſts is more famous for its miracles. The Greeks have indeed a monſtrous taſte in their paintings, which, for more finery, are always done upon a gold ground; and they have no notion of either ſhade or proportion. This town is the ſee of a biſhop.

Heraclea, antiently Perinthus, was formerly a large city; though now it is but a mean palace. It has a good harbour, and is the reſidence of an archbiſhop. Here are abundance of fragments of ſtatues, entablatures, columns, and there are ſtill to be ſeen the remains of an amphitheatre built in the time of the emperor Severus.

Rodoſto is a large and populous trading town, lying on the ſea of Marmora. It is ſituated upon the brow of a hill, at the bottom of a bay, and makes a handſome appearance towards the ſea.

Belgrade, a village near Conſtantinople, ſituated in the midſt of a wood, conſiſting chiefly of fruit trees, watered by a great number of fountains, famous for the excellence

of

of their water, and divided into many ſhady walks, within view of the Black ſea, from whence a cool breeze perpetually ariſes that make the inhabitants inſenſible of the heat of ſummer. This village is only inhabited by the richeſt among the Chriſtians.

We might here give a deſcription of Conſtantinople, which is ſituated in this ſangiackſhip; but, as that will take up a conſiderable length, we chooſe to defer it till the next ſection.

The third ſangiackſhip is that of Gallipoli, which extends from Mount Rhodope to the Archipelago. To it belongs,

Trajanopolis, antiently called Zernis, but being repaired and beautified by the emperor Trajan, about the end of the firſt century, was called by his name. It is ſtill the ſee of a biſhop, though the town is but ſmall, and very thinly peopled.

Dematica, a town on the Maritz, the reſidence of a Greek biſhop. Here Charles XII. king of Sweden, ſpent ſome time in the year 1713.

The Thracian Cherſoneſus, which is in this diviſion, is a peninſula waſhed on the eaſtward by the ſea of Marmora and the Helleſpont, on the ſouth by the Archipelago, on the weſtward by a gulph into which falls the ſmall river of Melas, and on the north it is joined to the continent by a tract of land, the breadth of which was reckoned by the antients to be about thirty-ſeven ſtadia. It formerly contained eleven towns, but at preſent the following are the principal of note:

Gallipoli, the antient Callipolis, was built by Callias, prince of the Athenians, from whom it received its name, and is ſtill a large town, ſituated on the celebrated ſtreight by the antients called the Helleſpont, which divides Europe from Aſia, and is ſaid to contain ten thouſand Turks, three thouſand five hundred Greeks, and not quite ſo many Jews. The inhabitants are famed for making excellent arrows. The Bazar is a handſome building, with ſeveral domes covered with lead. The town has no walls, and is only defended by a caſtle and an old tower.

At the entrance of this ſtreight, next the Archipelago, are the celebrated Dardanells, two caſtles which command the whole ſtreight, and are the key of Conſtantinople. One of them ſtands in Europe, on the moſt ſouthern point of the Thracian Cherſoneſus, where the ſtreights begin, and the other oppoſite to it in Aſia. That in Europe only conſiſts of one round tower, with ſome outworks; cloſe to which ſtands a village. Both theſe caſtles were built by Mahomet II. in 1452; but, in the year 1656, the Venetian fleet forced their way through, and drove the Turkiſh fleet aſhore. On a rock in the middle of this ſtraight ſtands a tower, on which the Turks have ſome ſmall cannon; this ſerves the mariners as a mark to ſteer by, and is only uſed by the Turks as a watch-tower. "Since I have ſeen this ſtreight, ſays the ingenious lady Wortley Montague, I ſee nothing improbable in the adventure of Leonidas, or very wonderful in the bridge of boats of Xerxes. 'Tis ſo narrow, 'tis not ſurpriſing a young lover ſhould attempt to ſwim, or an ambitious king try to paſs his army over it. But then 'tis ſo ſubject to ſtorms, 'tis no wonder the lover periſhed, and the bridge was broken."

SECT. XI.

Of the Names and Situation of Conſtantinople; with a conciſe Hiſtory of that City: its agreeable Climate, and a Deſcription of its principal Buildings.

THE city of Conſtantinople, the antient Byzantium, by the Turks called Iſtambol, the capital of the Turkiſh empire, is ſituated on the moſt eaſtern part of Romania, on a neck of land which projects towards Natolia, from which it is ſeparated by a ſtreight about a mile broad. It ſtands in the forty-firſt degree of latitude, and the twenty-eighth degree forty minutes eaſt longitude from London; and is alſo called the ſublime Porte, the ſublime ſultanian Porte, the Port of juſtice, majeſty, and felicity. The appellation of Porte is ſaid to be derived from the large and magnificent port or gate built by Mahomet II. at the principal entrance of the ſeraglio, or imperial palace.

The antient Byzantium was built by Pauſanias, king of Sparta, but afterwards becoming ſubject to the Romans, it was demoliſhed by the emperor Severus, in order to puniſh the rebellion of the inhabitants. It was, however, afterwards rebuilt by Conſtantine the Great, who called it New Rome, and removed the ſeat of the empire thither; but afterwards called it Conſtantinople, from his own name.

This city, after being the capital of the Eaſtern empire almoſt three hundred years, was firſt beſieged in the reign of the emperor Phocias by Chozroes, king of Perſia, who blocked it up for eight years together, till it was delivered by Heraclius in the year 611, who on this account obtained the empire.

In 672 it was beſieged in the reign of the emperor Conſtantine Pogonates by Yeſid, the ſon of Moavia, the firſt caliph of the family of the Ommiades; when the Greek emperor was ſo preſſed, as to be almoſt reduced to deſpair; for while the Saracen army lay before it on the land ſide, they blocked it up with a prodigious fleet at ſea. But Callinicus, a famous engineer, invented a kind of wild-fire, that would burn under water, and by this means is ſaid to have deſtroyed the whole fleet.

In 717 this city was again beſieged by Moſlemah, the brother of Solyman; but was relieved by Leo the Iſaurian, who cauſed the emperor to be ſhaven and confined in a cloiſter, and then ſeated himſelf on the throne.

In 780 Haroun Alraſchid, ſon of the caliph Matradi, inveſted Conſtantinople with a prodigious army, when the Greek empire being governed by Irene, as regent to her ſon Conſtantine VI. ſurnamed Porphyrogenetes, ſhe was ſo hard preſſed, as to be glad to deliver herſelf by a treaty, in which ſhe promiſed to pay an annual tribute of ſeventy thouſand pieces of gold to the caliph. Thus this part of the Roman empire became tributary to the Saracens.

The Greek empire now began to deline, and that of the Mahometans had greatly increaſed, when cruſades, produced by bigotry, began to be formed, under the pretence of recovering the Holy Land. Theſe cruſaders commited the greateſt barbarities in the Eaſtern empire; and in one of theſe expeditions Baldwin, earl of Flanders, in the year 1204, ſurpriſed Conſtantinople, notwithſtanding its being a Chriſtian city, and cauſed himſelf to be proclaimed emperor of the Eaſt; but dying in leſs than a year, he was ſucceeded by his brother Henry, earl of Flanders, who held the government ten years; and, at his death, Peter Courteney, of that noble family, which ſtill ſubſiſts in England, having married his daughter, ſucceeded to the throne; but was killed in the ſixth year of his reign. His ſon Philip reſigned the empire to his brother Robert, who was murdered, after a reign of ſeven years, when Robert's ſon, Baldwin II. though a child, ſucceeded, under the tutelage of John de Brenne, who ſtiled himſelf king of Jeruſalem.

At length, in the year 1232, Batu, grandſon to Gengiſkan, the founder of the Tartar empire, after overrunning Moſcovy, Poland, Sileſia, Bohemia, and Hungary, advanced through Bulgaria to beſiege Conſtantinople, when the Eaſtern and Weſtern Chriſtians uniting, gave him battle, defeated him, and obliged him to abandon his deſign.

In the year 1259, or, according to others, in 1262, Michael Paleologus recovered Conſtantinople from Baldwin Courteney; from which time it continued in the poſſeſſion of the Greek emperors, till the year 1453, when Mahomet, emperor of the Turks, laid ſiege to that city on the ninth of April, and took it by ſtorm on Tueſday the twenty-ninth of May, the Greek emperor being, as ſome ſay, killed in the breach, or, according to others, trampled to death by his own ſoldiers in their flight. From this time it has been the ſeat and capital of the Turkiſh empire.

The climate of Conſtantinople is extremely delightful; it would indeed be very hot in ſummer, were it not cooled by a breeze which blows every afternoon from the mouth of the port; and in winter the air is ſo moderate, that lady Wortley Montague, in one of her letters, mentions her being writing of it on the fourth of January

with the windows open, enjoying the warm ſun-ſhine; while her friends in England were freezing at a ſea-coal fire, and her chamber ſet out with carnations, roſes, and jonquils, freſh from her garden.

The city is of a triangular figure, and has the moſt agreeable and moſt advantageous ſituation in the world. It ſeems as if the canal of the Dardanells, and that of the Black ſea, were made to bring thither the riches of all the four quarters of the earth. Thoſe of the Mogul, the Indies, China, and the remoteſt parts of the north, come by the way of the Black ſea; and by the White ſea, or ſea of Marmora, come the merchandizes of Arabia, Egypt, the coaſt of Africa, the Weſt Indies, and whatever is produced in Europe.

To the north of the city lies its harbour, which is both convenient and of ſo large extent, that it is ſaid to be able to contain a thouſand ſhips, it being formed by an arm of the ſtreight which runs north-weſt up into the country, and is joined by a river. It is encompaſſed with walls, which have twenty-two gates, ſix towards the land, as many along the port, and ten on the ſtreight of the ſea of Marmora, antiently called the Propontis: theſe have all landing-places and ſtairs. The fortifications, however, are too antique and ruinous to make any tolerable reſiſtance againſt an enemy.

The city ſtands, like antient Rome, on ſeven hills, and makes a grand appearance from without, riſing gradually from the ſhore in the form of an amphitheatre. The unequal heights of the buildings make it ſeem as large again as it is, ſhowing an agreeable mixture of gardens, pine, and cypreſs-trees, palaces, moſques, and other public buildings, beautifully riſing one above another; but it is not equal within to the ideas formed of it when viewed from the Black ſea; for the ſtreets are narrow and ſlippery, running along a declivity, and moſt of the houſes are low, built only of wood and mortar; but are crowded with inhabitants. The beſt houſes ſtand in the places leaſt ſubject to any great concourſe of people, and where the city is moſt thinly inhabited; for the fineſt buildings are without the city near the harbour.

The caſtle of the Seven Towers joins the walls on the continent ſide to thoſe that lie upon the ſea of Marmora, but is only uſed as an honourable priſon. On the outſide it has two large figures in white marble, done in baſſo relievo, one of which ſeems to be Endymion, and the other Diana coming to viſit him. There are alſo the nine muſes, and the horſe Pegaſus, all done by a good hand. A ſquare tower ſtands in the ſea, at about two paces from the city walls, where it is ſaid Juſtinian impriſoned his brave general Beliſarius.

By this tower is a ſpring, for which the Greeks have a great veneration; and, upon the day of Chriſt's transfiguration, carry their ſick to it, give them ſome of the water, and cover their bodies for ſome time with the ſand; by which means they pretend that ſurpriſing cures have been performed.

Near this ſpring ſtands the kioſk, or pleaſure-houſe, of the overſeer of the gardens. This is a pavilion juſt without the walls of the ſeraglio, affording a view of the ſea of Marmora and the Thracian Boſphorus. Beyond this kioſk are many cannon planted level with the water, to ſecure the entrance into the port, and the ſeraglio, ſhould any attempt it by force; and in the center of the place where theſe cannon are fixed is one of the four poſterns of the ſeraglio, called the Gate of the Gardens; it has two large turrets, and is guarded by two companies of gardeners, who keep all from entering at this gate, except the officers of the ſeraglio.

On paſſing the cannon and doubling the cape, you come to two kioſks, built by Sultan Solyman, to take a view of the men of war as they ſail out and come in, and to divert himſelf with his women. Both of them are adorned with gilt cupolas and alcoves, with rich ſophas, and every thing fit for ſo great a prince. At theſe pleaſure-houſes ſome ſmall gallies and ſaics attend to receive the Grand Seignior and his train whenever he pleaſes to divert himſelf on the water.

The word ſeraglio ſignifies no more than a palace. This edifice is of a triangular figure; but is rather a collection of palaces and apartments joined together by the emperors, as their ſeveral fancies led them, than one ſingle building It is a mile and a half in compaſs, and is incloſed by a ſtrong wall that has ſeveral watch-towers, on which guard is kept day and night; and though it has many gates, both on the ſea and land ſide, only that towards the ſea is daily uſed, and the reſt never opened but upon ſome particular occaſions. The principal gate is of marble, and by the Turks called Capi, or the Porte; and from hence you enter the firſt court, in which are the mint, the infirmary, and other buildings. The ſecond court is called the Divan-Court, the great council-chamber being there, with the kitchen, the treaſury, and ſtables. To the north adjoining to the divan is the ſeraglio, properly ſo called, through which is a narrow paſſage that leads to the audience-chamber, which is of amazing magnificence, particularly the throne. Thus far ambaſſadors are permitted to come, and no farther dare any foreigners approach, though not a few travellers have had the boldneſs to ſay, that they have penetrated the apartments of the women, and have even deſcribed the bedchambers of the ſultan.

The gardens take in a large compaſs of ground full of high cypreſs trees. The buildings are all of white ſtone, and have gilded turrets and ſpires, which have a very magnificent appearance, and it is ſaid that the palace of no Chriſtian king is half ſo large. It has ſix large courts all built round, and ſet with trees for the uſe of the Sultan, and his officers; and on the ladies ſide, there are ſaid to be as many more.

As no credible author can give a juſt deſcription of the inner part of the imperial ſeraglio, we ſhall here give one of a grand vizier, who was killed at Peterwaradin, and which he built to receive his royal bride, the daughter of a late ſultan. This deſcription we ſhall take from the letters of the ingenious and learned lady, with extracts which we have already embelliſhed this work. "It is ſituated, ſays ſhe, on one of the moſt delightful "parts of the canal, with a fine wood on the ſide of a "hill behind it. The extent of it is prodigious, the "guardian aſſured me, there are eight hundred rooms in "it; I will not, however, anſwer for that number, ſince I "did not count them; but it is certain the number is "very large, and the whole adorned with a profuſion "of marble, gilding, and the moſt exquiſite painting "of fruit and flowers. The windows are all ſaſhed "with the fineſt glaſs brought from England, and here "is all the expenſive magnificence that you can ſuppoſe "in a palace founded by a vain luxurious young man, "with the wealth of a vaſt empire at his command. But "no part of it pleaſed me better than the apartments "deſtined for the bagnios. There are two built exactly "in the ſame manner, anſwering to one another; the "baths, fountains, and pavements all of white marble, "the roofs gilt, and the walls covered with Japan china. "Adjoining to them are two rooms, the uppermoſt of "which is divided into a ſofa; and in the four corners "are falls of water from the very roof, from ſhell to "ſhell of white marble, to the lower end of the room, "where it falls into a large baſon, ſurrounded with "pipes that throw up the water as high as the room. "The walls are in the nature of lattices, and on the out-"ſide of them, there are vines and woodbines planted, "that form a ſort of green tapeſtry, and give an agree-"able obſcurity to thoſe delightful chambers. I ſhall "only add, that the chamber deſtined for the ſultan "when he viſits his daughter is wainſcotted with mo-"ther of pearl, faſtened with emeralds like nails. There "are others of mother of pearl, and olive wood inlaid, "and ſeveral of Japan china. The galleries, which are "numerous and very large, are adorned with jars of "flowers, and porcelain diſhes of fruit of all ſorts, ſo "well done in plaiſter, and coloured in ſo lively a manner, "that it has an enchanting effect. The garden is ſuit-"able to the houſe, where arbours, fountains, and walks, "are thrown together in an agreeable confuſion. There "is no ornament wanting except that of ſtatues."

The next remarkable ſtructure is that of St. Sophia, which was formerly a Chriſtian church, built in the ſixth century by the emperor Juſtinian. This is a very noble edifice. The dome is ſaid to be one hundred and thirteen feet in diameter, built upon arches, ſupported by vaſt pillars of marble: the pavement and ſtair-caſe are

alſo of marble. There are two rows of galleries ſupported with pillars of a party colour marble, and the whole roof is covered with moſaic work, which decays very faſt, and part of it has fallen down. In this ſtructure they ſhow the tomb of the emperor Conſtantine, for which they have a high veneration. It was with great difficulty the lady Wortley Montague obtained permiſſion to ſee this ſtructure, and even the mufti was conſulted upon the occaſion.

Though the moſque juſt deſcribed is generally repreſented as the nobleſt building in Conſtantinople, there are others which ſeem ſtill more beautiful. That of Sultan Solyman is an exact ſquare, with four fine towers in the angles. In the midſt is a noble cupola ſupported by fine marble pillars, and two ſmaller at the end ſupported in the ſame manner. The pavement and gallery round the moſque is of marble. Under the great cupola is a fountain, adorned with pillars of ſuch beautiful colours, that they ſeem to exceed nature. On one ſide is the pulpit of white marble, and on the other a little gallery for the ſultan, which is aſcended by a fine ſtaircaſe, with gilt lattices. At the upper end is a kind of altar, where the name of God is written, and before it ſtand two candleſticks, as high as a man, with wax candles as thick as three flambeaux. The pavement is ſpread with fine carpets, and the moſque illuminated with a vaſt number of lamps. The court leading to it is very ſpacious, and encompaſſed with galleries ſupported by columns of green marble, and on two ſides covered with twenty-eight cupolas, with a fine fountain in the middle. In all the moſques are little chapels, where are the tombs of the founders and their families, with wax candles burning before them.

This deſcription may ſerve for all the moſques in Conſtantinople; for the model of all is exactly the ſame, and they differ only in ſize and the richneſs of the materials. That of the Sultana Valida is the largeſt, and built entirely of marble. It was founded by the mother of Mahomet IV. The lady we have juſt mentioned obſerves, that the ſize is prodigious; that it is the moſt beautiful ſtructure ſhe ever ſaw; and that St. Paul's church at London would make but a pitiful figure near it. She obſerves too, that this would be the caſe with any of our ſquares were they compared with the alterdan or place of horſes. This was the Hippodrome in the reign of the Greek emperors. In the middle of it is a brazen column of three ſerpents twiſted together, with their mouths gaping; for their heads are not broken off, as ſome travellers have pretended. It is impoſſible to learn the reaſon for which this pillar was erected: the Greeks can tell only fabulous legends in relation to it, and there is no ſign of its ever having had any inſcription. At the upper end of this ſquare is an obeliſk of porphyry, brought from Egypt; it is adorned with hieroglyphics, which are all entire, and is placed on four little brazen pillars upon a pedeſtal of ſquare free-ſtone filled with figures in baſs relief, on two of its ſides, one ſquare repreſenting a battle, the other an aſſembly. On the other ſides there are Greek and Latin inſcriptions.

The hiſtorical pillar mentioned by ſeveral authors is no more; it fell down about fifty years ago. Among the other antiquities are the aqueducts, which are prodigiouſly large, and as ancient as the Greek empire, tho' the Turks have cut upon them ſome Turkiſh inſcriptions, to give them the honour of having performed ſo great a work.

The Greeks have thirty churches, and the Armenians a great many. The Roman catholics have alſo more than one, and the Swedes have been permitted to build a Lutheran church here. The Greek patriarch has a palace, which ſtands on a hill about two hundred paces from the harbour near the patriarchal church, which is dedicated to St. George.

The exchanges are all noble buildings, conſiſting of fine alleys, the greateſt part with their roofs ſupported by pillars, and kept wonderfully neat. Every trade has its diſtinct alley, where the merchandize is diſpoſed in the ſame order as in Exeter-Exchange in London. The jewellers quarter is extremely rich, and ſhews ſuch a vaſt quantity of diamonds and precious ſtones of all kinds, that they dazzle the ſight. The embroideries are alſo very rich. The markets are moſt of them handſome ſquares, admirably well provided, and affording every thing in the greateſt plenty. The other public buildings are the hans and monaſteries of derviſes; the firſt are very large and numerous, the ſecond few in number, and not at all magnificent.

The number of people in Conſtantinople have been computed at eight hundred thouſand. The plague, which viſits the city every year, frequently makes dreadful havock: the city has alſo often ſuffered by fires, ſome of which have deſtroyed from fifty to ſeventy thouſand houſes at once. In the year 1754, it ſuffered much by an earthquake, a fire breaking out at the ſame time. In 1755 and 1756, two other dreadful conflagrations happened here.

On the weſt ſide of the city are the ſuburbs of Ejap, or St. Job. The country along the ſtreight into the Black-Sea is covered with towns and villages, noble ſeats, gardens, meadows, vineyards, and woods. The chief officers of the court generally reſide there in ſpring, ſummer, and the beginning of autumn, both for the benefit of the freſh air, and in order to be near the emperor, who ſpends the ſummer at Beſictaſh, where he has a ſeraglio.

Galata is a ſuburb ſurrounded with walls, towers, and moats. This and the following ſuburbs are ſituated on the oppoſite ſide of the harbour. The inhabitants of Galata are chiefly Greeks, Armenians, Franks, and Jews, who chooſe it for their reſidence, for the ſake of living more at liberty than in the city. The catholics have a few churches here, and the Greeks have ſix. Here alſo are the warehouſes of the merchants, and near them cloſe to the harbour is the dock.

At no great diſtance is Pera, which is alſo a handſome ſuburb ſtanding on an eminence, and is the quarter where the Chriſtian envoys reſide, though it is principally inhabited by wealthy Greeks. The air is healthy, and the proſpect extremely pleaſant.

Tophana, which is ſo called from its cannon foundery, may be conſidered as another of the ſuburbs of Conſtantinople, and lies directly fronting the imperial ſeraglio.

SECT. XII.

Of BULGARIA.

Its Situation, Extent, Name, Rivers, Mountains, hot Springs, and principal Towns.

THIS country, which was formerly called the Lower Myſia, is bounded on the north by the Danube; on the eaſtward by the Euxine or Black ſea; on the ſouth by Mount Hæmus, which ſeparates it from Romania, laſt deſcribed; and on the weſtward by Servia. Its greateſt length, from eaſt to weſt, is about two hundred and eighty miles; and its breadth, from north to ſouth, about a hundred and eighty.

It was antiently ſubject to Thrace; but being conquered by the Romans, it at length, on the diviſion of that empire, fell to the ſhare of the Eaſtern emperors. Upon the declenſion of the empire, it was ſubdued by a people from Aſiatic Sarmatia, ſuppoſed to have come from the banks of the Volga; from whence ſome derive the name Bulgaria, from a corruption of Volgaria. Others maintain, that the people who gave their name to this province were called Bulgar, or Bolgar, and the people originally called Bulgares. However, they rendered this country a part of the kingdom of Hungary, and poſſeſſed it till it was taken by Amurath II. emperor of the Turks, about the middle of the fifteenth century, ſince which it has continued under the government of that empire.

The Danube, which runs through this country for the ſpace of eighty miles, receives the Iſter of Axiopolis. There is here another river, called the Iſhar, which riſes in Mount Hæmus, and falls into the Danube near Nicopolis.

The country is in general very mountainous, but the valleys and plains are extremely rich and fruitful, producing

ducing wine and corn in the greateſt plenty. The mountains too are alſo far from being barren, and in particular afford excellent paſturage. Thus that of Stara Plamina, though bare and deſolate towards its ſummit, is extremely fertile in the middle and lower part.

At the foot of the mountain which divides Bulgaria from Servia is a warm bath, where the water guſhes out in a ſtream that is ſaid to be of the bigneſs of a man's body, and yet but ſixty paces from it is another ſpring in the ſame valley as cold as ice; but, from the ſmell, it evidently appears, that they both contain nitrous and ſulphureous particles. Upon this mountain is a Greek convent for monks of the order of St. Baſil. On the frontiers of Servia, between the mountain of Suha and the river Niſſava, are ſeveral warm baths, whoſe waters are of a ſulphureous quality, and iſſue from the mountain deeply tinged with red ſand and ſtones. At the foot of Mount Witoſcha, towards the borders of Romania, are likewiſe four warm baths of great repute, and the mountain has not only iron mines, but is covered with villages, corn-fields, vineyards, and paſtures.

Among the natural curioſities of this country are alſo the vaſt number of large eagles in the neighbourhood of the town of Babadagi, where the archers all over Turky and Tartary ſupply themſelves with feathers for their arrows, though each eagle has no more than twelve fit for their uſe, and thoſe only in the tail. Theſe feathers are commonly ſold for a lion dollar.

The inhabitants, who were antiently renowned for their martial atchievements, now apply themſelves to graziery, agriculture, and handicraft employments. Their language is Sclavonic, but differs a little from the Servian in pronunciation. Some of the inhabitants are Greeks, and others Mahometans. The Greek church has here a patriarch, though he is not acknowledged as ſuch by the other patriarchs, and alſo three archbiſhops.

The country, being governed by four ſangiacs, is conſequently divided into four ſangiacſhips. The ſangiacſhip of Sardic contains the following towns:

Sophia, called by the inhabitants Triaditza, is a very large and populous trading town, well built, but open. It is ſituated on a large beautiful plain, and ſurrounded with diſtant mountains. 'Tis hardly poſſible to ſee a more agreeable landſcape: but the ſtreets are narrow, uneven, and dirty, being paved only in the foot-ways. However, every houſe has a garden well planted with fruit-trees and ſhrubs. The Iſcha in ſome places runs along the ſkirts of the town, and in others paſſes through it. The principal part of the traders here are Greeks or Armenians. It is the reſidence of a beglerbeg, and was built by the emperor Juſtinian out of the ruins of the antient city Sardica. It is one of the greateſt thoroughfares in Turky, ſince all who travel from Conſtantinople to Raguſa, Venice, or into Hungary, muſt paſs through this town; but the air is ſo unwholeſome, from its being ſurrounded with marſhes, that it would be in a much leſs flouriſhing condition were it not for the reſidence of the beglerbeg. The mountains to the ſouth make the winter continue longer than the ſummer, and are the cauſe of frequent rain. This town is famous for its hot baths, and for their medicinal virtues.

Among the hills, where the ſteep rocks and dreadful precipices ſcarce admit of any acceſs, is Trajan's gate, which that emperor erected in commemoration of his marching with his army through this country, where he made a road through places before impaſſable. This gate conſiſts of two ſtone pillars, which ſupport an arch repreſenting a large open gate; but this building is now very ruinous: it conſiſts of hewn-ſtone and bricks; the curious in antiquity have been, however, too buſy in taking off the ſtones, which has greatly effaced this ſtately monument. In the mountains leading to this gate are ſeveral iron works, and a boiling ſpring.

Ternowa, the antient Ternobum, was formerly the capital of Bulgaria, a royal ſeat, and fortified, though at preſent it is but a mean place. It is ſituated about a hundred and twenty miles to the eaſt of Sophia, is the reſidence of a patriarch, and has ſtill an archbiſhop, who is ſtiled archbiſhop of Ternowa and all Bulgaria.

The ſangiacſhip of Bibin, or Widin, among other places, contains,

Widin, by the antients called Viminacium, a ſtrong fortification on the Danube, and a biſhop's ſee. In 1739 the Hungarians made a fruitleſs attempt upon this place.

Colombotz, or Golombotz, a well fortified caſtle ſeated on a mountain, at the foot of which is the ſtrong paſs of Urania.

This ſangiacſhip alſo contains ſeveral other fortreſſes, and ſome pretty good towns.

The ſangiacſhip of Nicopoli contains,

Nicopoli, or Nigepoli, a large town on the Danube, defended by a caſtle, and rendered famous in hiſtory by the firſt unfortunate battle fought there between the Chriſtians and Turks in the year 1396, when the emperor Sigiſmund was defeated by Sultan Bajazet, and loſt twenty thouſand men; though Bajazet is ſaid to have bought the victory ſo dear as to have ſixty thouſand ſlain.

Preſlaw, antiently called Marcianapolis, was built in honour of Marciana, ſiſter to the emperor Trajan; its preſent name ſignifies an eminent city.

The fourth and laſt ſangiacſhip is that of Siliſtria, which contains the following places:

Siliſtria, a large and fortified town, ſituated on the Danube. It is a biſhop's ſee, and ſtands at a ſmall diſtance from the remains of the wall erected by the Grecian emperors againſt the inroads of the barbarous nations, ſixty-ſix miles to the eaſtward of Nicopoli. Its great antiquity appears from the nature of its walls, which are evidently of Roman, and not Turkiſh architecture. Very few of the inhabitants are Turks.

There are ſeveral other towns, but as they are in general ſmall and inconſiderable places, and have nothing worthy of obſervation, we ſhall not trouble our readers with a repetition of their names.

The diſtrict of Drobrudſch, which extends to the mouth of the Danube, is an entire plain, interſperſed neither by woods nor rivers; though at the end of it is a wood called by the Turks Dali-Orman, or Fools-Wood. The inhabitants, who derive their origin from Tartarian emigrants, are famed for their ſingular hoſpitality, which is ſo great, that when a traveller of any religion or country paſſes through any of their villages, all the houſe-keepers of both ſexes come out to ſalute him, intreating him in the civileſt manner to take up his lodging with them, and kindly accept of what God has been pleaſed to beſtow. The perſon whoſe invitation the traveller accepts entertains him and his horſes, if they do not exceed three, for the ſpace of three days, with a cordiality and chearfulneſs that can ſcarce be paralleled. He ſets honey and eggs before him, in both of which this country abounds, and very fine bread baked in the embers. They alſo build a little houſe for the reception of ſtrangers in particular, with couches round the hearth for travellers to uſe as they think proper.

Having deſcribed the Turkiſh empire in Europe to the weſt of the Archipelago, the ſea of Marmora, and the Black ſea, we ſhall, before we proceed to deſcribe the more weſtern regions, give a deſcription of the European iſlands of the Archipelago, the Mediterranean, and the Ionian ſeas.

SECT. XIII.

Of the principal Iſlands of Greece, in the Archipelago; containing a conciſe Deſcription of whatever is moſt remarkable in each, with reſpect to their Antiquities and preſent State.

THE moſt natural method of claſſing the many iſland on the coaſts of the countries we have juſt deſcribed, ſeems to be dividing them according to the ſeas in which they lie; that is, into thoſe of the Archipelago, the parts about Candia, and in what was formerly called the Ionian ſea.

The iſlands of the Archipelago, antiently termed the Ægæan ſea, lie to the eaſt of Turky in Europe, and are comprized by antient geographers under two general names; thoſe called the Cyclades, or the Circle Iſlands, from their forming a kind of circle round Delos; and

thoſe

thoſe which lying ſcattered at a greater diſtance from Delos were called the Sporades, or Scattered Iſlands.

Samondrachi, the Electria and Dardania of the antients, lies near the coaſt of Romania, and was famous for the worſhip paid to certain deities called Cabiri, who were held in ſuch high veneration, that it was thought profane even to mention their name. The town of Samondrachi is ſituated on a mountain that commands a proſpect of its ſpacious harbour.

Embro, or Lembro, the antient Imbros, is a mountainous iſland over-grown with woods, harbouring wild beaſts and game. It has four villages, one of which bears the ſame name as the iſland, and is defended by a caſtle. It had formerly a town of the ſame name conſecrated to the Cabiri and to Mercury.

Thaſſus, the antient Aeria, or Aethria, lies in the gulph of Conteſſo, and was once famous, even to a proverb, for its gold mines, its fertility, excellent wine, and marble.

Stalimene, the antient Lemnos, is a fruitful and well cultivated iſland, ſeated oppoſite the ſtreight of the Dardanells. It is of a quadrangular form, about twenty-five miles over: but the eaſtern part of the iſland is dry and barren. It has two mountains, which were once volcanoes, and was formerly ſacred to Vulcan, whom the inhabitants worſhipped as their patron. This iſland has always been famous for a kind of earth, or bole, called from the place terria lemnia, and from the ſeals or marks ſtamped upon it terra ſigillata. It is thought an excellent remedy againſt poiſon, the bite of a ſerpent, wounds, and the dyſentery. It is dug up with many ceremonies, that were probably firſt introduced by the Venetians. The principal Turkiſh and Chriſtian inhabitants of the iſland meet on the ſixth of Auguſt, and on that day only, at a chapel called Sotira, half way between the village of Cochino and the mountain where the earth is found, and from thence proceed in proceſſion to the top of the mountain, where the Greek prieſts read the Liturgy; after which ſeveral perſons appointed for that purpoſe begin to dig, and as ſoon as they diſcover a vein of the deſired earth, give notice of it to the prieſts, who fill ſmall hair bags with it, which they deliver to the Turkiſh governor and other officers preſent. After they have taken up as much as they think proper, they fill up the place again, and return back in proceſſion as before. Some of the bags are ſent to the ſultan, and the reſt marked with his ſeal, or with theſe words, Tin imachton, or, The ſealed earth, and ſold by the ſangiac, or his deputies, to the inhabitants and foreign merchants. The ſangiac muſt ſend an account to the ſultan's treaſury of the money annually produced from it; and the inhabitants are puniſhed with death if they keep this earth in their houſes, export, or trade in it without his permiſſion. In this iſland was formerly a famous labyrinth, which conſiſted of a ſtately building, ſupported by forty pillars of an uncommon height and thickneſs. This iſland is the reſidence of a Greek biſhop; the principal places here are Cochino, the antient Hepheſtias, and Lemno, or Stalimene, formerly Myrina.

Sciro, antiently Sciros, is of a triangular or rather pyramidical form, with a ridge of mountains that croſs it two ways. It has a little town of the ſame name, which is the ſee of a Greek biſhop: beſides this town, which has a ſafe harbour, it has ſeveral villages. The country is ſtony and barren, and has ſome quarries of marble. The Greek families in the iſland are computed at about three hundred.

Negropont, antiently Eubœa, and afterwards from its capital called Egripos, is ſituated on the coaſt of Livadia, and extends in length from the ſouth-eaſt to the north-weſt above a hundred miles, but its greateſt breadth does not exceed twenty-five. It is, next to Candia, by far the largeſt iſland in theſe ſeas, and is ſuppoſed to have been antiently joined to the continent by an iſthmus, that was broke either by the violence of the waves, or by an earthquake. It is divided from the continent by a ſtreight called the Euripus. This iſland is very fertile, producing corn, wine, fruit, and cattle in ſuch abundance, that all ſorts of proviſions are extremely cheap. The mountain of Cariſto is famous for its excellent marble, and the ſtone amianthos, or aſbeſtos, of which incombuſtible cloth was made, was alſo found here. About the year 1470 this iſland was attacked by Sultan Mahomet II. with a fleet of two hundred ſail, and a hundred and twenty thouſand men; he took it, and the Turks have poſſeſſed it ever ſince. The chief towns in the iſland are,

Negropont, called by the Greeks Egripos, ſeated on the ſouth-weſt coaſt of the iſland on the narroweſt part of the ſtreight, over which is a ſmall ſtone bridge of four or five arches, that leads from the coaſt of Livadia, to a little tower in the middle of the channel, from whence to the town of Negropont is a draw-bridge, no larger than juſt to let a galley paſs through. The walls of the town do not exceed two miles in compaſs; but there are more buildings and people in the ſuburbs of the Chriſtians, without the walls than in the city, which is inhabited only by Turks and Jews. The number of inhabitants in both is computed to amount to fourteen or fifteen thouſand. The Turks have four moſques, one of which was the cathedral of St. Mark, and the Chriſtians have a biſhop, and ſeveral churches in the ſuburbs. This is the chief reſidence of the captain baſha, or admiral of the Turkiſh fleet, who is alſo governor of the iſland, and the adjacent parts of Greece, and the harbour is ſeldom without a fleet of gallies.

Caſtel Roſſo, the ancient Caryſtus, is a good city, with a commodious harbour on the ſouth-eaſt coaſt of the iſland, fifty-five miles to the ſouth-eaſt of Negropont. It is a biſhop's ſee, and very populous. In its neighbourhood were formerly ſome quarries of marble. Four or five miles to the north-eaſt of this city is Cape Doro, the ancient Caphareum, which is ſo ſurrounded with rocks, that it is dangerous to come near it.

The Euripus or ſtreight that divides this iſland from the continent, has been long celebrated for the ſtated irregularities of the tide. The jeſuit Babin obſerves, that in the firſt eight days of the month, and from the fourteenth to the twentieth incluſive, and alſo in the three laſt days, it is regular both in its ebb and flood; but on the other days of the lunar month very irregular; the ebb and flood returning ſometimes eleven, twelve, thirteen, and fourteen times within twenty-four or twenty-five hours. This irregularity has baffled the reſearches both of the ancients and moderns.

Andra, the ancient Andros, is eighty miles in circuit, and is one of the moſt pleaſant and fruitful iſlands in the Archipelago; it is watered by innumerable ſprings, and has prodigious plenty of wine, oil, barley, and all kinds of delicious fruits; but its greateſt riches conſiſt in its ſilk, in which the inhabitants carry on a great trade. The port is a pretty good one, and the town of Arna adjoining to it, has about two hundred houſes. It is the reſidence of a cady and aga, as alſo of a Romiſh and Greek biſhop. At ſome diſtance from the town may be ſeen the remains of a large and ſtrong wall, with ſeveral columns, entablatures, and pedeſtals, on which ſtood ſtatues, and various inſcriptions, ſome of which mention the ſenate and people of Andros, and the prieſts of Bacchus; whence it is ſuppoſed that here ſtood the city of Andros. In the iſland are alſo between thirty and forty villages, and four or five thouſand inhabitants, moſt of them Greeks, with a colony of Albanians. There are many Greek churches in the iſland, the Romans alſo have ſix churches, with a cathedral dedicated to St. Andrew, and the jeſuits have a church dedicated to St. Veneranda.

Engia, or rather Ægina, as it is ſtill called by the Greeks, is ſituated in the gulph of the ſame name, and is about thirty miles in circumference. There is only one town in the iſland, which is ſaid to conſiſt of above eight hundred houſes, and is defended by a caſtle, which ſtands above it, and is remarkable for the fine proſpect it affords of many of the iſlands, and the coaſt of the continent. In this caſtle are about eighty houſes, and two churches adjoining to each other, the one for the Greeks, and the other for the Latins. This iſland produces great plenty of corn, almonds, honey, wax, and cotton.

Colouri, the ancient Salamis, lies towards the bottom of the gulph of Engia, near a promontory, between which and this iſland runs a ſtreight, which in its narroweſt part is not above a mile over. This iſland is about fifty miles in compaſs, and has a ſpacious harbour

on the weſt ſide, of an oval figure, on which ſtands a town, which has the ſame name as the iſland; but is ſaid to have only about one hundred and fifty poor cottages, and about four hundred perſons. There are two villages, one of them named Metropis, ſeated on a hill, and the other called Ambelachi, ſituated near the ſtreight, where the ancient city of Salamis ſtood. This iſland is famous for the important victory gained there by the Greeks over the Perſians, in which the fleet of Xerxes was defeated by Themiſtocles.

Porus, the ancient Calabria, lies next to the ſhore of the Morea; it is about eight miles in compaſs, and is remarkable for being the place to which Demoſthenes was baniſhed.

Zia, or Cea, the ancient Ceos, was formerly famous for its fertility, paſtures and figs, and is fifty miles in compaſs. It now produces corn and wine, and the harbour is full of fiſh. The town of Zia, which gives name to the iſland, is ſituated upon an eminence, in the neighbourhood of the ancient city of Carthea, of the ruins of which, as well as of the ancient city of Zulis, ſome remains are ſtill viſible. Thoſe of the laſt take up a whole mountain. Near this place are to be ſeen the ruins of a magnificent temple. The houſes of Zia are built of ſtone and earth, with flat roofs, as are all the houſes in the Levant, and are ranged on the ſide of a hill, like the benches of an amphitheatre. On this iſland reſides a Greek biſhop.

Tine, the ancient Tenos, is very mountainous; but in many parts abounds with excellent fruit, and ſtill more in ſilk. The wine of this place was much admired by the ancients. Beſides the town, which is defended by a caſtle, this iſland contains between thirty and forty populous villages. Here are alſo a Greek and Latin biſhop, the former of whom is very rich, there being many churches and chapels, and five monaſteries of the Greeks in the iſland.

Mycone is thirty-ſix miles in compaſs, and produces wine, figs, and ſome olives, with barley enough to ſupply the inhabitants; but has little water and wood. The inhabitants are moſtly Greek Chriſtians, and have magiſtrates of their own religion; but a Turkiſh officer comes every year to collect the tribute paid to the Porte. A cady alſo ſometimes viſits them, and holds courts of juſtice there. In this iſland are upwards of fifty Greek churches, and ſeveral convents of monks and nuns, tho' they are not very well filled: among theſe the convent of nuns of Paleo Caſtro, which is ſituated in the midſt of the iſland, is the principal. The city of Micone is ſeated on a large harbour; but the number of its inhabitants is variouſly repreſented. This iſland is ſaid to produce the beſt ſailors in the Archipelago, and has at leaſt five hundred ſea-faring men, and above one hundred barks, beſides forty or fifty ſaics for the trade to Turky and the Morea; that of Turkey chiefly conſiſts in goat-ſkins, and the Morea trade is chiefly in wine.

Delos, once a celebrated iſland, but at preſent a deſart rock, is not above ſeven or eight miles in circuit; it is three times as long as it is broad, and is a ſecure retreat for the corſairs. This being the imaginary birth-place of Apollo and Diana, it was held in the higheſt veneration, and its oracle of Apollo was the moſt celebrated in the world. Here are ſtill to be ſeen the remains of the celebrated pillar of Apollo, and ſeveral noble fragments of the famous temple conſecrated to him.

Rhenæa, anciently called the great Deli, lies near the laſt mentioned iſland, and has fine paſtures; but from the dread of the corſairs it is now uninhabited, though it was anciently extremely populous, as appears from the many ſtately ruins to be found there.

Syra, the ancient Syros, is mountainous, but produces good wheat, and plenty of barley, wine, figs, olives, and cotton. The air is moiſt, and cooler than in the neighbouring iſlands. The inhabitants, except a few Greek families, are of the Romiſh religion. The town of Syra is built round a little ſteep hill, and between it and the harbour may be ſeen the remains of ſuperb buildings, which made a part of the ancient city of Syros.

Thermia receives its preſent name from the Thermæ, or hot ſprings found there: it is thirty-ſix miles in circumference, and is not ſo mountainous as the other iſlands. The ſoil, when well cultivated, produces large quantities of barley, wine, and figs; with plenty of honey, wax, ſilk, and as much cotton as the inhabitants require for their own uſe: it has alſo a vaſt number of partridges. The Greek Chriſtians in this iſland are computed at ſixteen thouſand. In the city of Thermia is a biſhop, with about fifteen or ſixteen churches, and ſeveral convents. The people are eſteemed very honeſt, and the women virtuous, handſome, and neatly dreſſed. The inhabitants are governed by a cady, and four procurators, choſen from among themſelves. On the iſland are ſtill viſible the ruins of two cities, one of which on the ſouth coaſt, muſt have been of extraordinary ſplendor.

Siphanto, the ancient Siphnus, is thirty-ſix miles in compaſs, and enjoys a wholeſome air, good water, and a fertile ſoil that produces great plenty of fine fruit, with grain ſufficient for the ſupport of its inhabitants: here is alſo no want of tame and wild fowl, and other game. It is ſaid to have once had rich gold and lead mines; but the inhabitants knew nothing of the former, and the latter are not worked. The number of people is computed at five thouſand, who inhabit five or ſix villages, and are chiefly Greeks, yet they are ſaid to have above five hundred chapels, four convents of monks, and two of nuns. The iſland has five ſecure harbours, and a caſtle in a rock near the ſea.

Milo, anciently called Melos, conſiſts almoſt entirely of one hollow porous rock, which is macerated, as it were, by the ſea water, and the heat of a continual ſubterraneous fire is felt by only putting the hand into the holes of the rock: a place in the iſland is always burning, and the earth around it ſmoaks like a chimney. Great quantities of allum and ſulphur are found; for here allum grows in ſome natural caverns in the form of flat ſtones, between nine and ten inches thick. The iſland alſo produces plume allum, which grows on the rock. Sulphur is found in one particular place perfectly pure, and as it were ſublimated; this is in a cavern, the bottom of which is full of ſulphur continually burning. The water in the lower grounds is unfit for common uſe, and at the foot of a mountain, between the town and the harbour, are baths and ſome ſprings, ſo hot as to ſcald one's finger. The iſland abounds in iron mines; but though its ſurface is in general mountainous and rocky, it has many delightful plains, where the ſoil is extremely fertile, and produces great plenty of corn, exquiſite fruits, eſpecially grapes, melons, and figs; with honey, fleſh, fowl, game, and fiſh. The inhabitants are Greeks, and are ſaid to be given up to voluptuouſneſs, and entirely inſenſible of the danger of their ſituation; and there is both a Greek and a Latin biſhop. The town of Milo has an excellent harbour, at about the diſtance of half a mile; it contains about five thouſand perſons, and was it not for its extraordinary filthineſs, it would make a tolerable appearance.

Paros, the antient Platea, is ſeventeen miles to the eaſt of Siphanto, and about thirty-ſix miles in compaſs. It is well cultivated, and the inhabitants feed abundance of flocks. Their trade conſiſts in corn, wine, pulſe, ſeſamums, and calicoes; and, before the Candian war, they had a great deal of oil; but the Venetian army burnt all the olive trees, during the nine or ten years in which they continued there. This iſland has always been famous for its fine white marble, known by the name of Parian marble, and had alſo moſt excellent artiſts for working it. It was once opulent and powerful; but now contains only fifteen hundred families. The celebrated antiques, called the chronicle of Paros, are marbles that have Greek inſcriptions performed on this iſland, and purchaſed in the year 1627, by Thomas Howard, earl of Arundel; who, in 1667, preſented them to the univerſity of Oxford, and they are now called the Arundelian marbles. Theſe inſcriptions form the moſt authentic piece of antient chronology, they being carved two hundred and ſixty-four years before the Chriſtian era;

era; and contain a ſpace of above three hundred years. The town of Parichia ſeems to ſtand on the ruins of the antient Paros, the walls and houſes being decorated with ſeveral fine remains of that city; and there are ancient monuments to be ſeen in the adjacent country. The Penagia, or Madonia, without the city, is the largeſt and moſt ſplendid church in the Archipelago. There are a great number of churches and chapels in this iſland, and alſo ſeveral conſiderable villages. A large fleet may lie conveniently and ſecurely in the harbour of St. Maria; but the uſual anchoring-place for the Turkiſh navy is Drio, on the weſt ſide of the iſland.

Antiparos, the antient Oliaros, ſtands about two miles to the weſt of Paros, and is only a rock about ſixteen miles in circuit; yet in ſome part of it is well cultivated, and produces as much barley as ſerves a ſmall village. The port is navigable only for ſmall barks. This iſland is remarkable for a grotto, which is one of the greateſt curioſities perhaps in nature, and ſeems to prove one of the moſt important truths in natural philoſophy, the vegetation of ſtones. This grotto appears to be about forty fathoms high, and fifty broad: the roof forms a pretty good arch, which every where entertains the eye with an infinite variety of figures of a white tranſparent cryſtaline marble, repreſenting vegetables, marble pillars, and a ſuperb marble pyramid; all which appear to be natural.

Nixia, the antient Naxos, is a hundred and twenty miles in compaſs. This is the moſt fertile iſland in all the Archipelago, and its wine ſtill maintains its former excellence. Its plains are covered with citron, orange, olive, pomegranate, apple, mulberry, cedar, and fig trees. It was alſo famed for a kind of marble called by the Greeks ophites, it being green ſpeckled with white like a ſnake, and ſome mountains on the weſtern coaſt afford emery, whence the Italians called the adjoining cape Cape Smerigli, or Cape Emery. It was taken from the Turks by the Venetians, and there are ſtill ſeveral noble families in it deſcended from the latter. All the people of the iſland do not exceed eight thouſand, and there is but little harmony between the Greeks and the Latins, who have each an archbiſhop here; the former of whom is rich, and has a handſome cathedral. The inhabitants have ſuch violent feuds among themſelves, that ſometimes they will not ſpeak to one another as long as they live; in this the women are ſaid to be more obſtinate than the men. The inhabitants, like thoſe of moſt of theſe iſlands, have the choice of their own magiſtrates; but ſometimes a cady takes a circuit among them, and to him appeals lie. The iſland contains between forty and fifty villages, and only one town, which is ſeated on the ſouth ſide of the iſland, and is defended by a caſtle. About a muſket ſhot from it ſtands, on a rock near the ſea, a beautiful marble portal, amidſt a heap of fragments of marble and granite, ſuppoſed to have been a temple of Bacchus. The inhabitants carry on a conſiderable trade in barley, figs, wine, cheeſe, ſalt, oxen, ſheep, mules, oil, cotton, ſilk, flax, and emery.

Patino, Palmoſa, or Palmora, the antient Patmos, is by ſome geographers placed in Aſia, and by others in Europe; it is about eighteen miles in compaſs, and has only one well built town, in the middle of which is the caſtle called the Monaſtery of St. John, inhabited by two hundred Greek monks. St. John the Evangeliſt being baniſhed into this iſland, is ſaid to have written here his Revelations. In their church they carefully keep a body ſhut up in a caſe, which they pretend to be that of St. John, and ſhew a cave where they ſay he wrote his Apocalypſe. There are about three thouſand perſons in the iſland, all of whom are Chriſtians, who pay tribute to the Grand Seignior; but the ſoil being dry and rocky, they find it difficult to live: though no Turks reſide in the iſland, the corſairs put in there to careen and take in freſh water.

Amorgo, antiently Amorgos, extends from north to ſouth, and does not exceed thirty-ſix miles in compaſs: it is exceeding ſteep towards the ſouth-eaſt, but enjoys a good ſoil, and produces excellent wine. The town is built in the form of an amphitheatre round a rock, with a caſtle upon it. At about three miles diſtance ſtands a large Greek convent. The iſland is well cultivated, and yields oil enough for the inhabitants, and great plenty of corn and wine.

Policandro is eight miles in compaſs: it is a pleaſant iſland; but has no port, and only a creek on the ſouth-eaſt ſide. It has but one village, in which there are three well built churches, two monaſteries of men, and a convent of women. There are no other houſes in the iſland beſides thoſe of this village. The iſland is rocky, and affords a ſcanty ſubſiſtence to its inhabitants, who are an honeſt, civil, and courteous people; and carry on ſome trade in cotton.

SECT. XIV.

Of Candia, and the Iſlands lying about it; with a very particular Account of the riſing of ſome new Iſlands by Means of Earthquakes.

CANDIA, the antient Crete, one of the largeſt and moſt celebrated iſlands in the Mediterranean, is ſituated between the thirty-fourth degree forty minutes and the thirty-fifth degree forty minutes of north latitude, and between the twenty-third degree fifty minutes and the twenty-ſeventh degree ſix minutes eaſt longitude from London; and being a long and narrow iſland, extending from eaſt to weſt, its greateſt length, from Cape Garabuſa to Cape Solomon, is about a hundred and ſixty miles; and its greateſt breadth, which is towards the middle, does not exceed forty-four miles; every where elſe it is much narrower. It lies ſouth-eaſt of the Morea, before the mouth of the Archipelago.

The people breathe a pure air; but the ſouth wind is dangerous, and ſometimes ſuffocates thoſe who are expoſed to it.

Above half the iſland is covered with rocky barren mountains, the moſt famous of which is Pſiloriti, the antient Ida, the higheſt in the iſland. This is now one continued barren rock, and, for the greateſt part of the year, its ſummit is covered with ſnow. The only thing it produces is the tragacantha, famous for its gum. This mountain commands a view of both ſeas.

This iſland has many ſprings and rivulets of excellent water, but no rivers proper for carrying boats.

It has many valleys and plains remarkably fertile; and though not half of theſe are cultivated, yet the country not only abounds in wine, but alſo ſupplies ſtrangers with oil, wool, cheeſe, ſilk, honey, wax, and opium. Their wine and wheat are excellent; their ſilk would be exceeding good, did they but know how to manage it; their honey is admirable, and ſmells of the thyme with which the whole country abounds. The quince-tree was firſt brought into Italy from the town of Cydonia, in this iſland, and was therefore called by the Romans the Cydonian apple.

In the iſland are abundance of cows, ſheep and ſwine, hares and rabbets. There is no want of poultry, and great plenty of pigeons, turtle-doves, woodcocks, red partridges, and wheat-ears.

The antient poets make frequent mention of the hundred cities of this iſland, on which account it was called Hecatompolis; but it had many more, a hundred and twenty occurring in antient writings; and under the emperor Valentinian I. above a hundred towns were overthrown and deſtroyed by an earthquake.

The iſland had originally its own kings; but the republican form was afterwards introduced. It was firſt ſubdued by the Romans, and continued ſubject to the Eaſtern emperors, till the year 823, when it was conquered by the Saracens; from whom it was recovered again in the year 962. It was afterwards taken by the Genoeſe, who ceded it to Boniface, marquis of Montferrat; and he, in 1204, ſold it to the Venetians. In 1644 the Turks made a deſcent, and, after a ſiege of twenty years, reduced the whole country, which, except a few forts, the Venetians were obliged to cede to them at the peace in 1669; and in 1715 the Turks made themſelves maſters alſo of the Venetian forts; ſince which time the iſland has been entirely in their poſſeſſion.

The inhabitants are Greeks, who have an archbiſhop; and Armenians, Turks, and Jews.

In

In moſt of the villages the houſes are built of rugged unhewn pieces of white marble, joined with mud inſtead of mortar: they have but one floor, which is divided into two or three apartments. The roof is formed of faggots placed upon joiſts, and covered with a kind of terraſs.

The city of Candia, the capital of the iſland, is ſeated about the middle of the northern coaſt. It ſtands on the ruins of Heraclea, which, with great probability, is ſuppoſed to have been the ſame with Matium. The city at preſent is, however, little better than a deſart, except the market-place and a few of the adjoining ſtreets, where the principal inhabitants reſide; in the reſt there is hardly any thing but rubbiſh, occaſioned by the laſt ſiege, which was one of the moſt conſiderable that was undertaken in the laſt century. The harbour is alſo choaked up, ſo that no other veſſels but boats can enter it. There are computed to be in this city about eight hundred Greeks, who pay the capitation or poll-tax, and their archbiſhop is the metropolitan of the whole iſland. The Armenians have but one church here, and are about two hundred in number; and the Jews amount to about a thouſand. The reſt of the inhabitants are Turks, among whom is a conſiderable body of janizaries. The country about Candia conſiſts of ſpacious and fruitful plains, enriched with all ſorts of grain; but the exportation of wheat is prohibited, without firſt obtaining leave from the beglerbeg.

The ſecond city in point of rank is Canea, the antient Cydonia, which ſtands on the northern coaſt, and is ſaid to contain above fifteen hundred Turks, two thouſand Greeks, fifty Jews, and about a dozen French merchants, who have a conſul. It is the ſee of a Greek biſhop, ſuffragan to the archbiſhop of Candia. This town is pretty ſtrong, it having a good wall faced with ſtone, and defended by a deep ditch. The entrance of the port is defended on the left by a ſmall fortreſs, where there is a light-houſe. The caſtle is on the left, beyond the firſt baſtion. The houſes are very indifferent, and the beſt of them never exceed two ſtories high; the firſt of which, or the ground-floor, has a parlour, warehouſe, cellar, and ſtable. The walls are of brick, with free-ſtone angles. The aſcent from the firſt floor to the ſecond is by a wooden ladder, ſet almoſt perpendicular. The ſecond floor is alſo divided into ſeveral apartments, and covered with deal boards, ſupported by joiſts of oak laid two or three feet aſunder. On the outſide it is covered with earth tempered like mortar, well beaten, and then paved with ſmall flint ſtones and pebbles. The terraſs is made a little ſloping for the rain to run off. In fine weather they walk on theſe terraſſes, and when it is very hot lie upon them. Every houſe has commonly beſides theſe flat roofs a ſmall terraſs on the ſame floor with the ſecond ſtory; but this is properly only an open room, adorned with pots of flowers. The country about Canea is extremely delightful, and the foreſts are diverſified with lofty olive-trees, pleaſant fields, vineyards, flower-gardens, and ſtreams ſhaded with myrtle and laurel.

The third city in point of rank is that of Retimo, which ſtands on the northern coaſt of the iſland, twenty-ſix miles to the weſt of Candia. The city is encompaſſed by a mean wall, and is defended by a citadel, which ſtands on a ſteep rock that ſtretches out into the ſea. The country about Retimo is all rock on the weſt ſide; but towards Candia it is very delightful, nothing being to be ſeen along the ſhore but gardens. Cherries are earlier here than in any other part of the iſland, and all the fruit is better taſted. Their ſilk, wool, honey, wax, and oil are preferred to all others. The water that ſupplies the town guſhes out of a narrow valley about a mile to the ſouthward, and they have cut a channel to bring it to Retimo; but they loſe one-half of it by the way. On the road leading to the valley is a handſome moſque, and in the court before it a han, or caravanſera, where travellers, who arrive after the gates of the town are ſhut, or deſign to ſet out before they are opened, may lodge and eat gratis.

The village of Gartina ſtands amidſt the ruins of a noble city, named Gortyna, about ſix miles diſtant from Mount Ida, at the foot of low hills, juſt at the entrance of the plain of Meſſaria, which is properly the granary of the iſland. Theſe ruins are an evident proof of the magnificence of that city, but it is impoſſible for a ſtranger accuſtomed to contemplation to behold them without concern. The people plough, ſow, and feed ſheep amidſt a prodigious quantity of marble, jaſper, and granite, wrought with the moſt admirable art; and, in room of the great men who once cauſed theſe ſtately edifices to be erected, are only to be ſeen ſhepherds and huſbandmen.

One of the greateſt curioſities of this iſland is a cave, called the labyrinth, which runs under a ſmall mountain at the foot of Mount Ida, in a thouſand intricate meanders, without any appearance of regularity, and is generally thought to be a work of nature. The entrance is a natural aperture, ſeven or eight paces broad; but in ſome places ſo low, that there is no going in without ſtooping. The ground is rugged and uneven; but the top level, conſiſting of a horizontal layer of ſtones. The principal paſſage, in which there is leſs danger of bewildering one's ſelf than in the others, is about twelve hundred paces in length, and reaches to the end of the maze, where are two ſpacious chambers. The moſt dangerous part of the main walk is about thirty paces diſtant from its mouth; for if a perſon happens to take any other courſe, he is immediately loſt, amidſt the innumerable windings of this maze, and then it is no eaſy matter for him to find his way out; on which account travellers always provide themſelves with guides and torches. There is little appearance of this place having ever been a ſtone-quarry, and whether it was ever the famous labyrinth of Crete, is far from being ſatisfactorily proved.

To the northward of Candia is the iſland of Santorini, that is Sant Erini, thus named from St. Irene being its patroneſs. This iſland, which was antiently called Caliſta, and afterwards Thera, is about thirty-ſix miles round; and the coaſt is ſo craggy and rugged as to be almoſt inacceſſible, and great part of the iſland is covered with pumice-ſtones; yet the inhabitants have, by their labour, rendered the iſland fruitful, particularly in barley and wine, which is of the colour of rheniſh, and cotton, which grows in great plenty. It alſo produces ſome wheat. The inhabitants, who are computed to amount to ten thouſand, are all Greeks, but one-third of them are of the Latin church, and ſubject to a popiſh biſhop. There are five populous villages in the iſland, and ſeveral caſtles erected on the coaſt.

Cerigo, the antient Cythera, is an iſland which was in a particular manner conſecrated to Venus, and is ſituated between Candia and the Morea; but being mountainous and rocky produces little corn, wine, or oil, it has therefore no great number of inhabitants, but does not want for ſheep and fowls, both tame and wild. The principal town, which is on the ſouth ſide of the iſland, has a caſtle on a very ſteep rock; but the harbour below it lies open to the ſouth winds.

Acroteri is an iſland famous in natural hiſtory; it ſeems to be compoſed of pumice-ſtones, incruſted with a ſurface of fertile earth, and the ancients repreſent it as riſing in a violent earthquake out of the ſea. Four other iſlands near Santorini had the ſame origin, and yet the ſea is here of ſuch a depth, as to be unfathomable by any ſounding line. The firſt, which is in the harbour of Apanormia, a port of Santorini, was anciently called Hiera; but is now named Megali Cammeni, that is, the Great Burnt iſland, roſe out of the ſea after a violent earthquake in the nine hundred and ſixth year before the birth of Chriſt; and in the beginning of the eighth century, a new iſland ſuddenly appeared with a terrible exploſion, and adhered to the iſland of Hiera, which by this means became conſiderably enlarged. The ſecond iſland, which lies a little without the harbour, was anciently called Therafia; but now from its whiteneſs, is named Aſproniſi, and ſprung from the ſea in the firſt century. In 1573, a ſudden fire burſting out of the ſea, ſoon produced a new iſland, to which was given the name of Micri Cammeni, or the Small Burnt iſland. Another iſland aroſe in the years 1707 and 1708, between this iſland and great Cammeni. The reader will not be diſpleaſed at ſeeing here a particular account of this

this extraordinary phenomenon; for no circumſtance can be more worthy of being preſerved in a ſyſtem of geography, than the birth of an iſland.

On the twenty-third of May 1707, after an earthquake that happened the night before, the laſt mentioned iſland was diſcovered early in the morning by ſome ſeamen, who taking it for a wreck, rowed immediately towards it; but finding rocks and earth inſtead of the remains of a ſhip, haſted back, and ſpread the news of what they had ſeen in Santorini. How great ſoever the apprehenſions of the inhabitants were at the firſt ſight, their ſurprize ſoon abated, and in a few days, ſeeing no appearance of fire or ſmoke, ſome of them ventured to land on the new iſland. Their curioſity led them from rock to rock, where they found a kind of white ſtone that cut like bread, which it nearly reſembled in its form, colour, and conſiſtence. They alſo found many oyſters ſticking to the rocks; but while they were employed in gathering them, the iſland moved and ſhook under their feet, upon which they ran with precipitation to their boats. With theſe motions and tremblings the iſland increaſed, not only in height, but in length and breadth; yet ſometimes while it was raiſed and extended on one ſide, it ſunk and diminiſhed on the other. Our author obſerved a rock riſe out of the ſea, forty or fifty paces from the iſland, which having continued four days, ſunk and appeared no more; but ſeveral others appeared and diſappeared alternately, till at laſt they remained fixed and unmoved. In the mean time the colour of the ſurrounding ſea was changed: at firſt it was of a light green, then reddiſh, and afterwards of a pale yellow, accompanied with a noiſome ſtench, which ſpread itſelf over part of Santorini.

On the ſixteenth of July the ſmoke firſt appeared, not indeed from the iſland, but from a ridge of black ſtones which ſuddenly roſe about ſixty paces from it, where the depth of the ſea was unfathomable. Thus there were two ſeparate iſlands, one called the White, and the other the Black iſland, from their different colour. This thick ſmoke was of a whitiſh colour, like that of a lime kiln, and was carried by the wind to Santorini, where it penetrated the houſes of the inhabitants.

In the night between the nineteenth and twentieth of July, flames began to iſſue with the ſmoke, to the great terror of the inhabitants of Santorini, eſpecially thoſe of the caſtle of Scaro, who were not above a mile and a half diſtant from the burning iſland, which now increaſed very faſt, large rocks daily ſpringing up, which ſometimes added to its length, and ſometimes to its breadth. The ſmoke alſo increaſed, and there being no wind, it aſcended ſo high as to be ſeen at Candia, and other diſtant iſlands. During the night, it reſembled a column of fire fifteen or twenty feet high, and the ſea was then covered with a ſcurf or froth, in ſome places reddiſh, and in others yellowiſh, from whence proceeded ſuch a ſtench, that the inhabitants throughout the whole iſland of Santorini burnt perfumes in their houſes, and made fires in the ſtreets, to prevent infection. This indeed did not laſt above a day or two, for a ſtrong gale of wind diſperſed the froth; but drove the ſmoke upon the vineyards of Santorini, by which the grapes in one night were parched up and deſtroyed. This ſmoke alſo cauſed violent head-achs, attended with reachings.

On the thirty-firſt of July, the ſea ſmoked and bubbled in two different places near the iſland, where the water formed a perfect circle, and looked like oil when ready to boil. This continued above a month, during which many fiſh were found dead on the ſhore of Santorini. The following night was heard a dull hollow noiſe, like the diſtant report of ſeveral cannon, which was inſtantly followed by flames of fire, ſhooting up to a great height in the air, where they ſuddenly diſappeared. The next day the ſame hollow ſound was ſeveral times heard, and ſucceeded by a blackiſh ſmoke, which, notwithſtanding there being a pretty freſh gale, roſe up in the form of a column to a prodigious height, and would probably in the night have appeared as if on fire.

On the ſeventh of Auguſt the noiſe was different, it reſembling that of large ſtones thrown all together into a deep well. This noiſe, having laſted ſome days, was ſucceeded by another much louder, ſo nearly reſembling thunder, as hardly to be diſtinguiſhed from three or four real claps, that happened at the ſame time.

On the twenty-firſt, the fire and ſmoke were conſiderably diminiſhed; but the next morning they broke out with greater fury than before. The ſmoke was red and very thick; and the heat was ſo intenſe, that all round the iſland, the ſea ſmoked and bubbled in a ſurpriſing manner. At night, our author viewing with a teleſcope a large furnace upon the higheſt part of the iſland, diſcovered ſixty ſmaller openings or funnels, all emitting a very bright flame, and he imagined there might be as many more on the other ſide of the great volcano. On the twenty-third of Auguſt in the morning, the iſland was much higher than the day before, and its breadth was encreaſed by a chain of rocks ſprung up in the night almoſt fifty feet above the water. The ſea was alſo again covered with reddiſh froth, which always appeared when the iſland received any conſiderable additions, and occaſioned an intolerable ſtench, till it was diſperſed by the wind, and the motion of the waves.

On the fifth of September, the fire opened another vent at the extremity of the Black Iſland, from whence it iſſued for ſeveral days, during which but little roſe from the large furnace: and from this new paſſage the aſtoniſhed ſpectators beheld the fire dart up three ſeveral times to a vaſt height, reſembling ſo many prodigious ſky-rockets of a glowing lively red. The following night the ſubterraneous fire made a terrible noiſe, and immediately after a thouſand ſheaves of fire flew up into the air, where, breaking and diſperſing, they fell like a ſhower of ſtars upon the iſland, which appeared all in a blaze, preſenting to the amazed ſpectators at once a moſt dreadful and beautiful illumination. To theſe natural fire-works ſucceeded a kind of meteor, which, for ſome time, hung over the caſtle of Scaro, which is ſeated on a high rock in the iſland of Santorini, a meteor not unlike a fiery ſword, and which ſerved to increaſe the conſternation of the inhabitants.

On the ninth of September the White and Black Iſlands united, after which the weſtern end of the iſland daily increaſed. There were now only four openings that emitted flames, which iſſued forth with great impetuoſity, ſometimes attended with a noiſe like that of a large organ pipe, and ſometimes like the howling of wild beaſts. On the twelfth the ſubterraneous noiſe became much augmented, having never been ſo frequent nor ſo dreadful as on that and the following day. The burſts of this ſubterranean thunder, like a general diſcharge of the artillery of an army, were repeated ten or twelve times within twenty-four hours, and immediately after each clap, the large furnace threw up huge red hot ſtones, which fell into the ſea at a great diſtance. Theſe claps were always followed by a thick ſmoke, which ſpread clouds of aſhes over the ſea and the neighbouring iſlands.

On the eighteenth of September an earthquake was felt at Santorini, but did no great damage, though it conſiderably enlarged the burning iſland, and in ſeveral new places gave vent to the fire and ſmoke. The claps were alſo more terrible than ever, and in the midſt of a thick ſmoke that appeared like a mountain, were ſeen and heard large pieces of rock thrown up with as much noiſe and force as balls from the mouth of a cannon, which afterwards fell upon the iſland, or into the ſea. One of the ſmall neighbouring iſlands was ſeveral times covered with theſe fiery ſtones, which being thinly cruſted over with ſulphur gave a bright light, and continued burning till that was conſumed.

On the twenty-firſt, after a dreadful clap of ſubterraneous thunder, very great lightnings enſued; and, at the ſame inſtant, the new iſland was ſo violently ſhaken, that part of the great furnace came tumbling down, and huge burning rocks were thrown to the diſtance of two miles and upwards. This ſeemed to be the laſt effort of the volcano, and to have exhauſted the combuſtible matter, as all was quiet for ſeveral days after. But on the twenty-fifth the fire broke out again with ſtill greater fury, and

among the claps was one ſo terrible, that the churches of Santorini were ſoon filled with crouds of people, expecting every moment would be their laſt; and the caſtle and town of Scaro ſuffered ſuch a ſhock, that the doors and windows of the houſes flew open. The volcano continued to rage during the remaining part of the year; and in the month of January, 1708, the large furnace, without one day's intermiſſion, throwed out ſtones and flames, at leaſt once or twice, but oftener five or ſix times a day.

On the tenth of February, in the morning, a pretty ſtrong earthquake was felt at Santorini, which the inhabitants conſidered as a prelude to greater commotions in the burning iſland: nor were they deceived; for ſoon after the fire and ſmoke iſſued in prodigious quantities, the claps like thunder were redoubled, and nothing appeared but horror and confuſion; rocks of an amazing ſize were raiſed up to a great height above the water, and the ſea raged and boiled to ſuch a degree, that it occaſioned a general conſternation. The ſubterraneous bellowings were heard without intermiſſion, and ſometimes in leſs than a quarter of an hour there were ſix or ſeven irruptions from the large furnace. The noiſe of the repeated claps, the quantity of huge ſtones that flew about on every ſide, the houſes tottering to their very foundations, and the fire, which now appeared in open day, ſurpaſſed all that had hitherto happened, and formed a ſcene aſtoniſhing beyond deſcription.

The fifteenth of April was rendered remarkable by the number and violence of the bellowings and irruptions, by one of which near a hundred large ſtones were thrown up all together into the air, and fell again into the ſea at about two miles diſtance. From this time to the twenty-third of May, which might be called the anniverſary of the birth of the new iſland, things continued much in the ſame ſtate; but afterwards the fire and ſmoke by degrees ſubſided, and the ſubterraneous thunders became leſs terrible.

On the fifteenth of July our author, accompanied by the Romiſh biſhop of Santorini, and ſome other eccleſiaſtics, hired a boat to take a near view of the iſland. They made directly towards it on that ſide where the ſea did not bubble, but where it ſmoaked very much. Being got into this vapour, they felt a cloſe ſuffocating heat, and found the water very hot; upon which they directed their courſe towards a part of the iſland at the fartheſt diſtance from the large furnace. The fires, which ſtill continued to burn, and the boiling of the ſea, obliged them to take a great compaſs; and yet they felt the air about them very hot and ſultry. Having encompaſſed the iſland, and ſurveyed it carefully from an adjacent one, they judged it to be two hundred feet above the ſea, about a mile broad, and five miles in circumference: but not being thoroughly ſatisfied, they reſolved to attempt to land, and accordingly rowed towards that part of the iſland where they perceived neither fire nor ſmoak; but when they had got within a hundred yards of it, the great furnace diſcharged itſelf with its uſual fury, and the wind blew upon them a thick ſmoke and a ſhower of aſhes, which obliged them to quit their deſign. Having retired a little, they let down a plummet, with a line ninety-five fathoms long; but it was too ſhort to reach the bottom. On their return to Santorini, they obſerved that the heat of the water had melted moſt of the pitch from their boat, which was therefore grown very leaky.

From this time, till the fifteenth of Auguſt, when our author left Santorini, the fire, ſmoke, and noiſe continued pretty moderate; and, by the accounts he received from thence for ſeveral years after, it appears that the iſland ſtill increaſed, but that the fire and ſubterraneous noiſe were much abated; and as the travellers who have ſince viſited the Levant give no account of its burning, it has doubtleſs long ceaſed.

Strange as this account may appear, it is allowed to be unqueſtionably true; and indeed theſe are not the only inſtances in which iſlands have been known to riſe from the bottom of the ſea, of which we have a recent inſtance in the Philoſophical Tranſactions, of an iſland near the Azores thus raiſed by ſubterraneous fires, in the year 1720.

SECT. XV.

Of the Iſlands in the Sea antiently called the Ionian.

ALL theſe iſlands lie on the weſtern coaſt of Turky in Europe, and therefore properly deſerve a place here. Theſe are,

Le Sapienze, antiently the Sphagi iſlands, which are three ſmall iſlands lying near the coaſt of the Morea. The largeſt was formerly called Sphacteria, and was famous in antient hiſtory for the victory obtained there by the Athenians over the Lacedemonians. The adjacent ſea is called the Sea of Sapienza, or of Wiſdom, becauſe the pilots are obliged to make uſe of a great deal of wiſdom and caution in getting through the rapid and dangerous currents near this iſland. The ſecond iſland is only ſeparated from the firſt by a channel, which does not exceed two or three miles over: this is called Fuſchella, or Catretra, by mariners; and the third, which lies to the eaſt of the former, is named San Venatica.

Strivali, the antient Plotæ, or the Floating Iſlands, are two ſmall iſlands, the largeſt of which is not above two leagues and a half in compaſs; but they have good ſprings of water, and the ſoil is very fruitful. The inhabitants, however, never marry, for they are ſaid to have no women amongſt them, and only conſiſt of three or fourſcore Greek monks, whoſe convent is built in the form of a fortreſs, and is well provided with cannon, in order to keep off the corſairs.

The following iſlands belong to the Venetians:

Zante, the antient Zacynthus, is ſituated near the ſtreight of the gulph which runs between the Morea and Livadia, already deſcribed, in thirty-ſeven degrees fifty-ſeven minutes latitude, and is ſuppoſed to be about twenty-four miles in length, twelve in breadth, and fifty in compaſs. The country is pleaſant, and fertile in corn, wine, oil, and all kinds of excellent fruits; eſpecially the fineſt muſcadine grapes, and currants of the ſort brought to England. The melons of this iſland are in particular requeſt, as are alſo their peaches, which are of a prodigious ſize, ſome weighing between eight and ten ounces, and are of an exquiſite taſte and flavour. On the ſouth and weſt ſide of the iſland is a large chain of mountains, with a mountain alſo towards the eaſt, and another at the north; ſo that it is in a manner ſurrounded by them. In the center is a delightful plain, and near Chieri, a ſea-port, is a reſinous ſpring. The iſland contains many towns and villages, and the Greeks, who conſtitute the majority of its inhabitants, have a biſhop, and above forty churches, beſides convents. Another part of the inhabitants are Roman catholics, who have a biſhop and three convents. The remainder of the inhabitants are Jews. The city of Zante is large and populous: it ſtands on the eaſt ſide of the iſland, and has a commodious and ſafe port to thoſe who are acquainted with its entrance; but has no walls, and is only defended by a ſtrong fortreſs, which is erected upon an eminence, and is well defended with cannon. The houſes of the city are built with large ſquare ſtones, but are very low, on account of the frequent earthquakes which generally happen in the ſpring, when it is ſaid that they ſeldom fail of feeling one or two, if not more, in a week. In the rock on which the city is built are abundance of fine ſprings of ſweet water. The city is governed by a proveditor and two counſellors, who reſide there; and both the Engliſh and Dutch have a factory and conſul, with a number of merchants and factors for the ſtaple commodities of this place, which are chiefly raiſins and currants; but the Engliſh are eſteemed the greateſt promoters of this trade, as they conſume more of the latter than perhaps half Europe beſides.

Cephalonia, antiently called Cephalenia and Samos, is ſituated in the thirty-eighth degree of latitude, and is a conſiderable iſland, extremely fertile, and producing currants, oil, red wine, muſcadine grapes, citrons, oranges, pomegranates, and grain. Moſt of the trees bear twice a year, that is in April and November; but the fruit of the laſt month is ſmaller than the other. It had formerly

four conſiderable towns; but has now only ſome large villages, with a city of its own name, defended by a fortreſs, ſeated upon a hill, about ſix miles diſtant from Argoſtoli, the principal port of the iſland. This port is large, and well ſheltered on all ſides; but the bottom is not ſecure, the anchors not ſticking faſt. At the entrance is a large village, where moſt of the merchants reſide. The iſland is chiefly inhabited by Greeks, who pay a tribute to the Venetians, who have here a proveditor and two counſellors.

The next iſland is Val di Compare, the name given to the iſland of Ithaca, famous for being the country of Ulyſſes.

Santa Maura, antiently called Neritis, and ſince Leucas, was in former ages a peninſula connected with the continent of Acarnania; but the Carthaginians, or, according to others, the Corinthians, ſevered it; ſo that there is at preſent a channel about fifty paces broad between the iſland and the continent. In this iſland were formerly three conſiderable towns, with a moſt magnificent temple of Venus. The beſt harbours are Santa Maura, Demata, and Englimeno. This iſland enjoys an uncommon plenty of corn, wine, oil, almonds, pomegranates, citrons, and other fruits, with fine paſtures. The inhabitants are Greeks, ſubject to a biſhop. The town of Santa Maura, which gives name to the iſland, contains about five or ſix thouſand inhabitants; and being ſituated in the water, and defended by walls and towers, is ſo fortified, that there is no convenient approach to it, either by land or water. Beyond its works, in a moraſs, are two well inhabited iſlands, or ſuburbs. The cluſter of little iſlands between this and the continent have a communication with each other by bridges. In 1473 the Turks diſpoſſeſſed the Grecian emperor of the town and iſland. In 1502 the Venetians made themſelves maſters of it; but afterwards ſurrendered it again to the Turks; and in 1684 recovered it from them. In 1715 the town and iſland fell a ſecond time into the hands of the Turks; but the following year the Venetians drove them out, and have ever ſince kept a proveditor there.

Corfu, antiently Phæacia, and afterwards Corcyra, takes its preſent name from the antient caſtle of Corypho, which ſtands on a mountain, and is ſo called from the Greek word κορυφὴ, a hill. It is ſeventy Italian miles in length, and, from Cape Barbaro to Cape Balacrum, thirty broad; but in moſt other places ſcarce twelve. It was famous in former ages for the beautiful gardens of king Alcinous. Its ſouthern parts are barren, mountainous, and deſtitute of water; but the northern coaſt is very fertile in all kinds of delicious fruits, excellent wine, grain, olives, &c. It has but two cities, Corfu, the capital, and Caſſopo, the Caſſiope of the antients. But, beſides theſe cities, it is ſaid to have about a hundred villages. The city of Corfu is very ſtrong, and conſtantly keeps between fifteen and twenty gallies, beſides other veſſels, for its defence. It has, beſides, two fortreſſes, the oldeſt of which is ſituated on a ſteep craggy rock, and ſurrounded below with good ſtrong baſtions; the other, though not ſo advantageouſly ſituated, has been fortified at an immenſe expence, and the city is now one of the ſtrongeſt places on all theſe coaſts: it is governed by a balio, proveditor, capitano, and caſtellano, who are all noble Venetians; as is alſo its archbiſhop, who is primate and metropolitan of all theſe iſlands. The cathedral is a fine building, as is alſo that which belongs to the Greeks, both of which are adorned with paintings and other expenſive ornaments. There are abundance of other handſome churches and ſtructures, both here and in other parts of the iſland: here is alſo an academy of the liberal arts and ſciences. The iſland is divided into four parts, called balias, or governments, under a balio. To the eaſtward is the government of Alefchimo, which contains twenty-eight villages, and twenty thouſand people. In the middle part is the government of Mezzo, which contains no leſs that twenty-five thouſand people. In this part is ſituated Corfu, the capital, and thirty towns. Agiru, the weſtern part, comprehends twenty villages, and about eight thouſand inhabitants; but the only remarkable place in it is the caſtle of St. Angelo. Oros, the north part, contains twenty-five towns, and about eighteen thouſand people.

SECT. XVI.

Of ALBANIA, *or* ARNAUT, *and* TURKISH DALMATIA.

Their Situation, Extent, Produce, and Rivers: the Perſons and Manners of the Natives; with an Account of the principal Towns.

THIS country, which comprehends the old Grecian Illyricum and Epirus, lies between Macedonia on the eaſt and the gulph of Venice and the Ionian ſea on the weſt, having on the north-eaſt and north a chain of mountains, called Monte Negro, or the Black Mountains, which divide it partly from Macedonia, and partly from Servia and Dalmatia, and on the ſouth is bounded by Livadia. Its greateſt length from north to ſouth is about two hundred and ninety miles, and its breadth from eaſt to weſt ninety-ſix, extending from latitude thirty-nine degrees to forty-three degrees thirty minutes.

The ſoil is fruitful, but more ſo towards the north than towards the ſouth, and produces flax, cotton, and excellent wine; as alſo wax, and ſalt dug out of the mountains.

The chief rivers of Albania are the Bojana, the Drino Nigro; the Argenta; the Siomini, antiently called Paniaſus; the Chrevaſta, the antient Apſus; the Pollonia, the antient Laous; and the Delichi, the antient Acheron, frequently mentioned by the poets.

The Albanians are generally tall, ſtrong, and highly eſteemed by the Turks on account of their valour. They are ſubject to the Grand Seignior, and have often diſtinguiſhed themſelves in the wars in Hungary. They are more courageous on horſeback than on foot, and their horſes are extremely ſwift. This was the country of the famous prince George Caſtriot, generally known by the name of Scanderbeg, who, with a ſmall army, oppoſed for many years all the power of Turky, and gained twenty-two battles. At his death he left his country to the Venetians; but they were unable to maintain the inland part of it, which was ſoon reduced by Mahomet II. and his ſucceſſors have held the whole country ever ſince.

The inhabitants make tapeſtry, which they export; but they have ſcarce any notion of learning, yet are very ſkilful in laying aqueducts, and without any mathematical inſtruments meaſure heights and diſtances with all the exactneſs of a geometrician. Thoſe of part of the country are Roman catholics, and moſt of the reſt follow the doctrines of the Greek church.

The principal towns of Albania are,

Scutari, called by the Turks Iſcodar, a large and fortified town near a lake of the ſame name, is well fortified, and defended by a ſtrong caſtle, ſeated on a hill: it enjoys a great trade, is the reſidence of a beglerbeg, and an archbiſhop. It was formerly the ſeat of the kings of Illyricum. In the years 1474 and 1478, it was in vain beſieged by the Turks; but the Venetians ſurrendered it to them in 1479.

Dulcigno, or Dolcigno, the ancient Ulcinium, is ſeated on the gulph of Venice, twenty miles to the ſouth-weſt of Scutari: it has a good harbour, and a ſtrong caſtle; it contains ſeven or eight thouſand people, and carries on a conſiderable trade.

Aleſſio, the ancient Lyſſus, is ſituated near the river Drin, two miles above its mouth, and ſixteen to the ſouth of Scutari. It ſtands on a ſteep coaſt, and is defended by a ſtrong caſtle. It is by ſome eſteemed the capital of Albania, and is particularly famous for being the place where Scanderbeg died, and was buried in the year 1467. It is ſaid the Turks have ſuch veneration for him, on account of his valour, that they carry away pieces of his tomb for relicks, and eſteem them as a charm to animate their courage in battle.

Durazzo, the ancient Epidamnus, and the Dyrrachium of the Romans, is a ſmall ſea-port on a peninſula in the gulph of Venice, thirty-five miles to the ſouth of Scutari. It has a pretty good harbour and caſtle.

La

La Valona, the ancient Aulon, ſtands on a bay at the mouth of the gulph of Venice, and was anciently fortified. It has a ſpacious, but not very ſecure harbour.

Chimera is ſeated near the coaſt of the Ionian ſea, on the banks of a little river, and has a good harbour. It is famous for its warm baths; but is at preſent only a mean place. It is, however, the capital of a ſmall country of the ſame name, the inhabitants of which are ſtiled Chimarioti, and are deſcended from the ancient Macedonians. Beſides their capital, they have a few inconſiderable towns on the ſea-coaſt; but the mountains of Chimera are ſo high, and of ſuch difficult acceſs, that they ſerve them inſtead of fortreſſes; and the people truſt ſo much to this advantage, that, according to Mr. Wheeler, they refuſe paying tribute to the Turks.

Larta, a large and well peopled town on a bay of the ſame name, containing ſeven or eight thouſand inhabitants, above half of which are Greeks, and the reſt Turks. It is the ſee of an archbiſhop, and has a very large cathedral, ſupported by above two hundred marble pillars, and ſaid to have as many doors and windows as there are days in the year.

Turkiſh Dalmatia extends from Albania through the country of Herzegowina, to Boſnia. A ſmall part of this country is, at its moſt ſouthern extremity, bounded on the weſt by the gulph of Venice; but firſt extending eaſt through Venetian Dalmatia, then turns to the north-eaſt, on the back of the territories of Raguſa and Venice. Thus it is bounded on the ſouth by a part of Venetian Dalmatia, and Albania, on the north-eaſt by Boſnia, and on the weſt by Venetian Dalmatia, Raguſa, and the Adriatic ſea, or gulph of Venice, extending about one hundred and forty miles from north to ſouth; but no more than forty-five miles from eaſt to weſt. The ſoil is in ſome parts mountainous; but is otherwiſe very fruitful in corn, wine, oil, honey, and wax.

Its principal towns are,

Great and Little Melanto, two ſea ports; but of ſmall importance.

Scardona, in the Sclavonian language Skardin, is ſituated on the river Kirka, ſurrounded with walls, and defended by two ſmall forts. It was anciently a conſiderable town. In the year 1120, the biſhopric was removed hither from Jaden. In 1352, it fell into the hands of the Venetians; but the Turks wreſted it from them, after which they were ſeveral times driven out; but as often recovered it.

Clinowo, or Kliuno, is a well built town, on a riſing ground, which the Turks in time of war have generally made their place of rendezvous, and the depoſitory of their magazines of proviſions and military ſtores.

Maſter, an open town on the Viſera, over which is ſtill to be ſeen an old Roman bridge of ſtone.

Herzegowina, or Arcegovina, a ſpacious and well fortified town, in which the Turkiſh beglerbeg reſides.

Popocco, a ſmall diſtrict, difficult of acceſs, on account of its ſituation between two long mountains; but remarkably fruitful in corn, wine, and excellent fruits, though the lands are generally over-flowed in autumn: but the inhabitants of this diſtrict in the year 1694, put themſelves under the protection of Venice.

SECT. XVII.

Of TURKISH ILLYRICUM, *including* BOSNIA *and* SERVIA.

Their Situation, Extent, and Produce. Of the Inhabitants, their Language, Religion, and Learning. With an Account of the principal Places in theſe Provinces; and a particular Deſcription of Belgrade.

THIS country extends from Sclavonia to Romania and Bulgaria, between Croatia, Dalmatia, and the Danube. It has ſeveral mountains, among which the Argentorato is particularly remarkable. Its navigable rivers are the Danube, which conſtitutes the northern boundary of Servia, the Morau, the Ibar, the Drino, the Boſna, the Verbas, and the Save.

The country is proper both for grazing and agriculture, producing grain, wine, and provender for every kind of cattle; and the mountains, particularly thoſe of Boſnia, contain ſilver.

The inhabitants are of Sclavonic extraction, and from the middle ages have been divided into Servians, Boſnians, and Ratzians; though without any remarkable difference in their ſpeech and manners. They ſpeak the Sclavonian language, which nearly reſembles that of the Ruſſian. As to their religion, they are of the Greek church; but Mahometaniſm has gained conſiderable ground among them, which is doubtleſs owing to their being almoſt abſolute ſtrangers to learning. Their letters for writing are the Ciruli, which are alſo uſed by the Ruſſians.

Both Boſnia and Servia were antiently united to Hungary, by what was then called a perpetual compact. The former was governed by a ban, and the latter by a deſpota, or prince; but now both form a province of the Turkiſh empire, which appoints beglerbegs and ſangiacs over them.

Boſnia, alſo called Rama, derives both theſe names from the rivers Boſna and Rama, or perhaps the former from the nation of the Boſſeni. This country is bounded on the north by the river Save, which ſeparates it from Sclavonia; to the eaſtward by the Drino, which divides it from Servia; on the ſouth by a chain of mountains which ſeparates it from Dalmatia; and to the weſtward by the river Verbas, which divides it from Croatia. It is forty Turkiſh miles in length, fifteen in breadth, and conſiſts of three ſangiacſhips, in which are ſeveral towns, of which little more is known than their names.

Servia is ſo called from the Serbii, and is ſixty Turkiſh miles in breadth, and thirty in length. At the treaty of Paſſarowitz, concluded in the year 1718, the greateſt part of it was ceded to the Roman empire; but at the peace of Belgrade, in 1739, the Imperialiſts were obliged to reſtore it to the Ottoman Porte. It was antiently divided into Proper Servia and Raſcia; and to the former, which is in the upper part towards the Danube, belongs the bannat of Maſovia; it at preſent conſiſts of four ſangiacſhips.

The ſangiacſhip of Belgrade lies between the rivers Drino, Save, and the Danube, and contains no other place worthy of notice but its capital of the ſame name.

The city of Belgrade, the antient Alba Græcorum, is a celebrated and important fortreſs, ſituated at the conflux of the Save and the Danube, two hundred and fifty miles from Vienna, and four hundred and fifty-five from Conſtantinople, in longitude twenty-one degrees eaſt of London, and in forty-five degrees ten minutes latitude. It was formerly accounted the barrier and key of Hungary, to which it was firſt annexed by the emperor Sigiſmund. In the years 1440, 1456, and 1494, it was in vain beſieged by the Turks; but in 1521 they took and kept it in their poſſeſſion till the year 1688, when the Hungarians recovered it. In 1690, it fell again under the Turkiſh yoke, from whence it was unſucceſsfully attempted to be wreſted in 1693; but in 1717 accompliſhed. The Hungarians were, however, again obliged to evacuate it in 1739, though not till they had demoliſhed all its outworks, leaving nothing ſtanding but the old walls, and ſome fortifications inſeparable from them.

This city is, however, ſtill large, ſtrong, and populous, and enjoys a conſiderable trade. It is built on a hill after the antient manner, and encompaſſed by a double wall, flanked with a prodigious number of towers. The only place not defended by either of the above rivers is fortified with a caſtle, built with ſquare ſtones, ſituated on a riſing ground. The ſuburbs are very extenſive, and extremely reſorted to by Turkiſh, Jewiſh, Greek, Hungarian, and Sclavonian merchants. The city is extremely well ſeated for commerce; for, beſides the Danube and the Sava, which waſh its walls, it is but a ſmall diſtance from the place where the Tibiſcas falls into the Danube; nor is it far from the Morawa to the eaſt, and the Drowa towards the weſt; and as the Danube falls into the Black ſea, this city may eaſily carry on a conſiderable trade with the moſt diſtant countries; accordingly it is the chief ſtaple town in theſe parts, it being

being traded to by the Raguſans, by the merchants of Vienna, who have factories here, by the Armenians, and the Jews, who are very numerous in this city. The former have a church, and the latter at leaſt one ſynagogue. The ſhops are ſmall, and the ſellers ſit upon tables, from whence they ſell their goods out of a window or door, the cuſtomers ſeldom going in. Here are two bazars for their richeſt commodities, and two exchanges, built with ſtone, crouded with merchandize. They have alſo a handſome caravanſera, built by a grand vizier, and a college for young ſtudents. This city is the ſee of a biſhop, formerly ſuffragan to the biſhop of Buda.

The ſecond ſangiacſhip is that of Cemender, among the remarkable places of which is,

Tachtali, a dangerous part of the Danube, where the water, after falling from a rocky precipice, forms a whirlpool. This is occaſioned by the nature of the two ſhores, a high rock on the Servian ſide projecting a great way into the ſtream, which ruſhing againſt it with great impetuoſity, recoils as it were againſt the oppoſite rocks on the ſhore of Walachia; ſo that a veſſel miſſing the right channel is in great danger of being overſet. Beyond this place the Danube, ſlackening its courſe, expands itſelf into a wide curve. At a ſmall diſtance farther lies Demikarpi, or Iron Gate, commonly called Cataractæ Danubii, which is likewiſe the name of the neighbouring country, where the Danube enters a ſtreight between mountains, and purſues its courſe over a rocky bottom. The waves and agitations cauſed by the frequent obſtructions of the ſtream, which is here very rapid, toſs a ſhip with ſuch violence, that unleſs the ſteerſman be very expert, and well acquainted with the place, the veſſel is in great danger, eſpecially in going upwards, which can only be done by the help of ſails. In 1737, the Imperialiſts were obliged to ſink their ſhips here for want of wind to waft them againſt the ſtream. In this narrow paſs the houſes ſtand within a paliſadoe, and are ſaid to have been formerly barricadoed with an iron chain, which firſt gave riſe to the appellation of the Iron Gate.

The next town we ſhall mention is Fetiſlan, called in the Raſcian tongue Kladowo, a conſiderable town on the Danube, within a little of which terminates the chain of mountains, and the Danube runs between two plains.

The ſangiacſhip of Kratowo contains the following places:

Niſſa, once the capital of Servia, is ſituated in a fine plain, on the river Niſſava, in a very good air, and ſo fruitful a ſoil, that the great plenty is hardly credible. There are ſeveral fine moſques, two public baths, and ſeveral fountains. The town is fortified with a wall and rampart; but in 1737, it was taken by the Hungarians, who loſt it the year following. The lady Wortley Montague, in a letter to queen Caroline, when ſhe was princeſs of Wales, gives a dreadful account of all that part of Servia through which ſhe paſſed; and obſerves, that the deſarts of Servia are almoſt overgrown with wood, though a country naturally fertile. The inhabitants are induſtrious; but the oppreſſion felt by the peaſants is ſo great, that they are forced to abandon their houſes, and neglect their tillage; all they have falling a prey to the janizaries, whenever they pleaſe to ſeize upon it. Mr. Wortley had a guard of five hundred of them, and ſhe was almoſt every day in tears at beholding their inſolence in the poor villages through which ſhe paſt. On ſpeaking of the fertility of the ſoil at Niſſa, ſhe ſays, "I was certainly aſſured, that the quantity of wine laſt "vintage was ſo prodigious, that they were forced to "dig holes in the earth to put it in, not having veſſels "enough in the town to hold it. The happineſs of this "plenty is ſcarce perceived by the oppreſſed people. I "ſaw here a new occaſion for my compaſſion: the "wretches that had provided twenty waggons for our "baggage from Belgrade hither, for a certain hire, be-"ing all ſent back without payment, ſome of their horſes "lamed, and others killed, without any ſatisfaction made "for them. The poor fellows came round the houſe "weeping and tearing their hair and beards, in a moſt "pitiful manner, without getting any thing but drubs "from the inſolent ſoldiers. I cannot expreſs how much "I was moved at this ſcene. I would have paid them "the money out of my own pocket with all my heart; "but it would only have been giving ſo much to the "aga, who would have taken it from them without "any remorſe."

Procupia, or Procopia, a pretty town thus named from the biſhop Procopius, is called by the Turks Urchup.

The fourth ſangiacſhip is that of Scupi, in which is Uſcup, Scupi, or Scopia, an open, but large, well-built town, on the confines of Albania and Boſnia, and is the reſidence of an archbiſhop. It is ſeated in a pleaſant and plentiful country, partly hills and partly plains, on the river Vardar, or Axius, fifteen miles to the weſt of Niſſa; it has a great trade, and is adorned with fine houſes, many moſques, and delightful walks near it. Among the moſques is one built upon a hill, and adorned with a ſpacious portico, ſupported by four marble pillars. There is here a fine bridge of twelve arches over the Vardar, and near the city is a noble aqueduct of ſtone conveyed over a valley between two hills, and ſupported by two hundred arches. This is ſuppoſed to be very antient, and performed by the Romans. The city carries on a conſiderable trade between Bulgaria, Macedonia, Belgrade, &c. particularly in tanned leather, which here employs above ſeven hundred tanners.

We ſhall now proceed to thoſe countries in Europe that are tributary to the ſultan, and under his ſubjection.

SECT. XVIII.

Of WALACHIA.

Its Situation, Extent, Climate, Soil, and Rivers. The Origin, Language, and Religion of the Inhabitants. Their Hiſtory, and a conciſe Account of the moſt conſiderable Places in the Country.

WALACHIA is a pretty large province, ſeparated from Moldavia by a chain of mountains and the river Sereth. It is about two hundred and ten miles from eaſt to weſt, and about a hundred and five from north to ſouth; but this country being of a triangular form, theſe dimenſions can only relate to a very ſmall part of it.

The air is temperate, the ſoil very fruitful, particularly in grain, wine, and melons: it is alſo fit for grazing, and the country is famed for excellent horſes.

Walachia is watered by a conſiderable number of large and ſmall rivers, moſt of which run from north to ſouth, diſcharging themſelves either immediately into the Danube, or doing it in conjunction with other rivers. The principal of theſe are the Aluta, which riſes in the mountains of Tranſylvania, dividing Walachia into two unequal parts, namely, the eaſt and weſt; the Jalonitz, which has alſo its ſource in the borders of Tranſylvania; and the Sereth, or Streeh, the boundary on the ſide of Moldavia.

The Walachians who inhabit this country are deſcended from an old Roman colony ſettled here by the emperor Trajan. This appears not only from their language, which is a barbarous Latin, but from their cuſtoms and manner of diet: as for inſtance, their thick pottages and onions, of which they are extremely fond, their dreſs, and their great regard for the Italians, their language, and whatever belongs to that country. They are, however, intermixed with the Sclavi and Pazinacitæ. But, to ſhew that they are deſcended from the Romans, they call themſelves Romunii.

Hiſtorians are far from being agreed about the derivation of the word Walachian; and we ſhall not here enter into their various opinions, but ſhall only obſerve, that the word Wlach in Sclavonic ſignifies an Italian, as does alſo the word Welcher.

The Walachians profeſs the Greek religion, and as in writing they uſe the ſame letters with the Ruſſians, ſo they agree with them in all their religious ceremonies. The common people are wretchedly ignorant; and even the higheſt attainments to which the eccleſiaſtics themſelves aſpire, are ſeldom more than preaching and ſinging well. They have a kind of univerſity at Buckereſt,

to which they go in order to learn a polite behaviour, the elegancies of the Walachian tongue, and the ceremonies of the church. People of rank are ſo fond of Italian, that they apply themſelves more to it than to their native language, and generally ſend their ſons to ſtudy at the univerſity of Padua. A great number of Mahometans live intermixed with the Walachians.

With reſpect to the hiſtory of theſe people, the Romans, after obtaining a deciſive victory over Decebalus, king of Dacia, made themſelves maſters of his kingdom. Afterwards Trajan ſent thither ſeveral Roman colonies, who not only cultivated their lands, but built towns, which they embelliſhed with noble edifices. His ſucceſſor, however, tranſplanted the greateſt part of them into the neighbouring countries, where mingling with the Bulgarians, Thracians, Servians, and Ligurians, they learned to ſpeak a new language, or jargon. Theſe kingdoms, which lie on the Danube, afterwards conſtituted part of the dominions of the emperors of the Eaſt. At length the Walachians moved farther to the north towards the borders of Podolia and Ruſſia, where they applied themſelves to agriculture and the breeding of cattle. The converſion of the Bulgarians and their neighbours to Chriſtianity was followed in the ninth century by that of the Walachians, who embraced the doctrines of the Greek church. Towards the beginning of the twelfth century a numerous colony of Walachians, under the conduct of one Nigers, or Negrovot, for the ſake of paſturage, religion, and other motives, quitting Tranſylvania, paſſed over the mountains, and ſettled in Modern Walachia, founding the towns of Tergoviſto, Buckereſt, Longenau, and Piteſto St. Georgi, where they choſe their own princes, whom they ſtiled waywodes, or deſpots. At length the kings of Hungary becoming powerful, made ſeveral attempts againſt the Walachians, and obliged them, in the fourteenth century, to become tributary to him. But in the year 1391, and 1394, they were greatly harraſſed by the Turks, who, in 1415, laid the whole country waſte with fire and ſword, and compelled the waywode to pay them an annual tribute, which was continued till the year 1608, when the Walachians put themſelves under the protection of the emperor of Germany, who at length, by the treaty of Carlowitz, reſigned them up again to the Turks. In the beginning of the preſent century, they ſuffered various calamities by the plague, war, and many revolutions among their princes. At the treaty of Paſſarowitz, in 1718, the weſtern part of Walachia, as far as the river Aluta, was ceded to the emperor, but in 1739 was loſt again.

This country is governed by a waywode, or prince, alſo ſtiled the hoſpodar, who is a vaſſal of the Ottoman Porte, and whoſe annual tribute generally amounts to fifty-eight or ſixty thouſand ducats.

The arms of Walachia are a black eagle ſtanding on a mount, and in its beak a croſs erect, with the ſun on one ſide, and on the other the moon, in a field, argent.

It has been already obſerved, that the river Aluta divides Walachia into two parts. In the weſtern part, called the bannat of Severin, are the following places:

Severin, a little town on the Danube, but formerly fortified, and the capital of a bannat, received its name from the emperor Severus, its founder.

Upon the Danube are ſeen the remains of the ſtone pillars of a bridge, which was probably that which the emperor Trajan built over the Danube, in order to attack Decebalus, king of the Dacians, with greater advantage. According to count Marſigli, the river here is not above a thouſand yards over, and the two firſt piers of the bridge ſtanding ſeventeen fathoms and a half aſunder, he concludes there muſt have been twenty-three in all; and that the whole length of the bridge was 443 fathoms. He alſo aſſerts, that the maſonry of the piers was of common quarry ſtone, lined with bricks; and that probably the twenty-two arches, with all the upper part of the bridge, were of oak. The emperor Adrian cauſed not only the upper part of the bridge to be removed, but demoliſhed all the maſonry above the water.

Walachia, on the other ſide of the river Aluta, contains the eaſtern part of the country, in which are,

Langenau, in Latin Campus Longus, a genteel populous town, which ſuffered greatly in the war with the Turks in 1737 and 1738.

Tergoviſto, or Tervis, the capital of Walachia, is ſituated on the river Jalonitz. It has ſome fortifications, with a fine palace belonging to the waywode, and is a town of good trade. It is, however, ſurrounded by marſhy grounds, which, while they render it of difficult acceſs, make the air unhealthful.

Buckereſt, a fortified city on the river Dembrovitz, is ſituated thirty miles to the ſouth-eaſt of Tergoviſto; it is the uſual reſidence of the waywode, and an archiepiſcopal ſee. Here is alſo an academy for the ſons of perſons of quality.

SECT. XIX.

Of Moldavia.

Its Name, Situation, Extent, Climate, Soil, Produce, and Rivers. Of the Inhabitants, their Hiſtory, Government, Arms, and principal Towns.

THIS country takes the name of Moldavia from the river Moldaw, which runs from the upper parts, and falls into the Sereth. It is bounded on the north by Poland, on the eaſt by Oczakow Tartary and Beſſarabia, on the ſouth by Walachia, and on the eaſt by Tranſylvania. It extends about a hundred and ſeventy miles from the river Sereth to the Nieſter; but its length, from ſouth to north, is only about two hundred and ninety.

The air of this province is wholeſome; but a conſiderable part of the eaſtern diviſion lies uncultivated, and chiefly conſiſts of deſarts, and the weſtern is very mountainous; but the middle part is fruitful in corn, pulſe, honey, wax, &c. but is chiefly remarkable for the great number of horſes bred there.

Its principal rivers are the Sereth; the Pruth, which has its ſource in the borders of Tranſylvania and Poland, running through Moldavia from north to ſouth; and the Nieſter, which forms the boundary towards the north and eaſt. Theſe three rivers receive ſeveral ſmall ſtreams in their courſe, and the two firſt fall into the Danube or Iſter, which is the boundary to the ſouthward; but the laſt diſcharges itſelf into the Black ſea.

The inhabitants are of Walachian extraction, and profeſs the religion of the Greek church; but many of them are Ruſſians, Poles, Raſcians, Armenians, and Mahometans.

Towards the cloſe of the twelfth century a Walachian colony from Tranſylvania ſettled in this country, under Bogden, their leader, who eſtabliſhed their civil and eccleſiaſtical government; and, for the ſupport of the latter, obtained an archbiſhop and other eccleſiaſtics from the patriarch of Conſtantinople. He was the firſt prince of Moldavia, and laid the foundation of the principal towns; for which reaſon the country was originally called from him Bogdania. The increaſe of the king of Hungary's power was a misfortune to this country, the inhabitants, after ſeveral reſolute ſtruggles, being made tributary to that monarch in the fourteenth century. But before that period they had been rendered tributary to the Turks, and ſoon became ſo again. In 1686 the Poles over-ran the country, and took the chief cities, which obliged the inhabitants to put themſelves under the protection of the German empire; and, at the treaty of Carlowitz, it was agreed, that the Poles ſhould retire, and this country again become tributary to the Ottoman Porte.

This country has a waywode, or prince, of its own, who is ſtiled hoſpodar, and is a vaſſal of the Grand Seignior, to whom he is obliged to pay an annual tribute.

The Moldavian arms are an ox's head, ſable, in a field, or.

Moldavia is divided into Upper and Lower.

Upper Moldavia is bounded towards the eaſt by the river Nieſter; on the north partly by that ſtream, and partly by Poland; and on the weſtward by Tranſylvania. In the northern part of this diviſion reſide the Lip Tartars.

In this diviſion are the following places:

Chotzin,

Chotzin, or Coczim, a town ſituated on the Nieſter, well fortified both by nature and art, and belonging to the Turks. In the years 1621 and 1674 the Turks were defeated here by the Poles. In 1739 the Ruſſians made themſelves maſters of it, having firſt beaten the Turks out of the intrenchments, which they had thrown up near the fort; but the Turks ſoon recovered it again.

Soczowa, or Sotſhowa, a ſmall town on the river Sereth, formerly the capital of the country, and the uſual reſidence of the hoſpodar.

Lower Moldavia borders to the weſt on the mountains of Tranſylvania, which run along the road called Tetras, and belong to Moldavia and Walachia. It is bounded on the ſouth by the Danube, on the ſouth-eaſt by Beſſarabia, and on the eaſt by the Nieſter.

This diviſion contains,

Jaſſy, the capital, which is a conſiderable city, and the reſidence of the hoſpodar, is ſeated on the river Pruth, and is a ſpacious well fortified place, defended by a caſtle; and is built in a country abounding with wine. In the years 1711, and 1739, it was taken by the Ruſſians; and, in 1753, the whole city, with the palace of the hoſpodar, ſome popiſh convents, and a Lutheran church, which had been newly built, were all deſtroyed by fire.

Faltſhii, a town ſituated alſo on the Pruth, is remarkable for having in its neighbourhood ruined walls and foundations of houſes, which run in ſtraight lines amidſt very thick woods. Theſe are ſuppoſed to be the ruins of the antient and large city of Taiphali mentioned by Herodotus, out of the ruins of which Faltſhii was built.

SECT. XX.

Of the ſeveral Colonies of Tartars tributary to the Turks, and their different Diſtricts; including an Account of the Tartars of Beſſarabia, the Oczakow, the Nojay, and the Crim Tartars; with an Account of their ſeveral Towns, and of the Peninſula of Crimea, or Crim Tartary.

FROM the northern branch, through which the Danube enters the Black ſea to the river Don, is a winding tract of land, which extends along the Black ſea and the ſea of Aſoph, and is inhabited by ſeveral tribes of Tartars, which are generally comprehended by geographers under the title of European Tartars; but there being many other Tartars in Europe, this term is by no means proper. The Tartars made themſelves maſters of this country in the beginning of the thirteenth century, and ſome of them ſtill wander about in hords or clans, while others are ſettled in towns and villages. Some are alſo immediately dependent on the Ottoman Porte, and others ſubject to the Crim, who is himſelf a vaſſal to the Grand Seignior. Geographers vary greatly in their diviſion and the extent they give to theſe Tartarian diſtricts; for the accounts we have of them are very imperfect. In deſcribing this country along the Black ſea, and the ſea of Aſoph, we ſhall begin at the weſt, at the mouth of the Danube, and proceed according to the principal rivers which interſect the country, mentioning what is moſt remarkable in the ſeveral diſtricts formed by thoſe large ſtreams, the Nieſter, the Nieper, and the Don. Thus tracing the country from the weſt, we meet with

Beſſarabia, which lies on the Black ſea, between the north branch of the Danube and the Nieſter, and is by the Turks called Bujack, or Budjiack. The inhabitants ſtill rove from place to place along the Nieſter. Their uſual food is the fleſh of their oxen and horſes, cheeſe, and milk, particularly that of mares.

The chief towns are,

Bender, a Turkiſh fortification on the Nieſter, formerly called Tizene; but being made over to thoſe Turks by one of the princes of Moldavia, they gave it the name of Bender, that is, a paſs; it is a ſmall town, but has always a baſha for its governor. Warnitz, near this town, is remarkable for being the place where Charles XII. of Sweden, broke up his camp in 1709, and continued till the year 1713, when the Turks were obliged to make uſe of force to get rid of him.

There are ſeveral other towns in this diſtrict; but being inconſiderable places, do not deſerve being particularly mentioned.

The country between the Nieſter and Nieper, by ſome called Oczakow Tartary, is inhabited only along thoſe two rivers, and near the ſea; the other parts being quite waſte, and are therefore called the Deſart Plains. This plain, however, affords good paſturage, but has not a ſingle tree. The moſt remarkable place in this diſtrict is,

Oczakow, a very ſtrong town, ſituated at the influx of the Nieper into the Black ſea. It lies on the declivity of a mountain, and has a caſtle above it. When it was inveſted by count Munich, in 1737, its fortifications were in excellent order, and its garriſon conſiſted of a large body of choſen Turkiſh troops; but the count, being compelled by want of fodder for the horſes and other cattle, riſked an aſſault, and carried it the third day after his opening the trenches. The Ruſſians held the place till the following year, when they evacuated it, after having demoliſhed the works.

The country between the Nieper and the efflux of the Don, contains,

The Leſſer Nogay Tartars, who inhabit the main land along the Black ſea and the ſea of Aſoph, and the reſt of them belong to Aſia. They wander from place to place, each hord or tribe keeping at thirty hours diſtance, and frequently not ſo far from each other. Theſe people ſeldom apply themſelves to agriculture. Among them, as well as the Crims, horſe-fleſh is a favourite food. But however ſavage this may make them appear, they are ſo hoſpitable, that the pleaſure they receive from entertaining a traveller and his horſe, is with them a ſufficient reward; and if they are preſented with a little tobacco, or any thing elſe, they receive it with abundance of thanks, and never fail to make a return. They profeſs the Mahometan religion, and are governed by murſes, or beys, of their own nation, or by ſuch as the kan of Crim Tartary, their ſovereign, appoints from among them. With reſpect to the limits of this diſtrict, which it has been ſaid extends from the Nieper to the Don, it was agreed at the treaty of Belgrade, in the year 1739, that a line ſhould be drawn from the river of Zalimy to the river Berda, which falls into the ſea of Aſoph. The diſtrict within this line continues under the kan of Tartary, who enjoys a much larger diſtrict northwards, but is dependent on Ruſſia.

In the firſt diſtrict on the Black ſea is Kinburn, a Turkiſh fortification, which lies oppoſite Oczakow, and eaſt of the Nieper, where it diſcharges itſelf into the Black ſea. The Ruſſians took this place, and blew up the fortifications in the year 1736; but the Turks thought it worth rebuilding. There are alſo ſeveral ſmall places between the Nieper and the Black ſea.

The Crim peninſula, the antient Cherſoneſus Taurica, is called in the Turkiſh maps Kiram Athaſi, or the Crim iſland, which is nearly of the ſame figure with the Morea, and was ſuppoſed by the antients to have almoſt the ſame extent. It is ſurrounded by the Black ſea and the ſea of Aſoph, except at the narrow neck of land by which it is joined to the continent. The ſoil in many parts produces all kinds of grain, wine, &c. but the Tartars ſeem to deſpiſe agriculture, and leave it to their ſlaves and to ſtrangers. The favourite food of theſe Tartars is horſe-fleſh, milk, and cheeſe; bread being little uſed among them. Of all the Mahometan Tartars, theſe have the neareſt reſemblance to the Calmucs.

The inland country of this peninſula was antiently poſſeſſed by the Scythians, who extended themſelves northwards beyond Perekop, weſtward to the Nieper, and eaſtward as far as the Don. The weſtern and ſouthern coaſts were antiently inhabited by ſome Greek colonies, of which the town of Cherſoneſus was the moſt powerful. The eaſt ſide of the Crim, as far as the Don, and the oppoſite country, or the tract from the Don along the ſea of Aſoph, antiently called the Palus Mæotis, to the Black ſea, and Mount Caucaſus, was under the kings of the Boſphori-Greeks, who were thus called from the ſtreight of Boſphorus. The Scythians proving troubleſome neighbours to the Greeks, they ſolicited the aſſiſtance

of

of Mithridates, king of Pontus, who at laſt drove the Scythians out of the peninſula, forming the kingdom of Boſphorus, which comprehended the whole peninſula and the country facing it eaſtward to Mount Caucaſus. In the reign of the emperor Dioclefian the Sarmatæ were ſolely poſſeſſed of this kingdom, except the Goths having ſeated themſelves on the weſt ſide of the peninſula, and along the tract of land which lies to the northward along the Don. This peninſula afterwards came under the dominion of the emperors of the Eaſt, though it was partly ſhared by the Huns, who were ſucceeded by the Cozars, as theſe were by the Polowzers. About the end of the twelfth century, the Genoeſe, after making themſelves maſters of the Black ſea, and all its harbours, alſo ſettled in this peninſula. In the thirteenth century, the Tartars diſpoſſeſſed the Polowzers of their country, and particularly of Crimea; but the Genoeſe forts and caſtles baffled their undiſciplined fury, and eſpecially the town of Coſta, which held out till the year 1471, when it was taken by the Turks, who alſo reduced the whole peninſula, and appointed a kan over it. In 1698 the Ruſſians made an attempt to conquer this peninſula, but gained only Perekop; and in 1736 they penetrated a ſecond time into Crimea, under the conduct of count Munich, marched over the line which the Perekop Tartars had thrown up acroſs the iſthmus, took Perekop, and opened a way into the peninſula. In the years 1737, 1738, and 1739, the Ruſſians renewed their enterprizes againſt Crimea with ſuch ſucceſs, that half of the peninſula was ravaged by them and the Tartars; while many of the inhabitants abandoned the country, and others periſhed by famine.

Crimea has its own kan, or prince, who ſtiles himſelf ſovereign kan of Leſſer Tartary, though he is really a vaſſal of the Ottoman Porte; and, on a proper ſummons, muſt take the field with a conſiderable body of auxiliaries. The eldeſt ſon, who is the kan's preſumptive heir, has the title of Sultan Galga; the ſecond ſon is called Or Beg, that is, lord of Or, or Perekop; the third is ſtiled Noradin Beg, &c.

The peninſula of Crim has many great and ſmall villages, and likewiſe contains ſeveral large but ill built towns; among theſe are,

Perekop, a fortified town on the iſthmus which joins the peninſula to the continent, and has always been eſteemed the key to the whole empire. Its name, which is Sclavonian, ſignifies a cut made through a place, and is derived from a ditch antiently dug acroſs the iſthmus for the ſecurity of the peninſula, which has been repaired from time to time, and of late fortified. It is defended by a caſtle, but the houſes are very mean. In the year 1638 and 1736, it was taken by the Ruſſians; at the laſt of which times the whole Turkiſh garriſon, conſiſting of two thouſand five hundred and fifty-four men, were made priſoners of war. Though the Ruſſians demoliſhed the place, the Tartars took the pains to rebuild it. In the year 1738, it was again taken by the Ruſſians, but they ſoon loſt it.

Koſlow, a town ſituated on a point of land which projects into the ſea of Aſoph on the weſtern ſide of the peninſula, and has a fine harbour; it is defended by a ſtone-wall, ſtrengthened by towers, and carries on a very conſiderable trade. The inhabitants conſiſt of Tartars, Turks, Greeks, Armenians, and Jews. The Turks import rice, coffee, dried figs, raiſins, dates, cloth, and ſilk ſtuffs; and, in return, receive corn and ſlaves. Both the garriſon and Turkiſh inhabitants abandoned the town in the year 1736, when the Ruſſians took it without oppoſition.

Bakſhiſarai is an open town, notwithſtanding its being the reſidence of the kan. It is ſituated on the weſt ſide of the peninſula near the ſea, between two hills, which ſerve the town inſtead of walls. Its inhabitants are Tartars, Armenians, Greeks, and Jews; and the houſes the beſt built of any in the whole country. The kan's palace is a large and irregular ſtructure. The Ruſſians made themſelves maſters of this town in the year 1736.

Karaſbazar is a large town that carries on a conſiderable trade; yet its houſes are low wooden buildings; but it has four moſques built with ſtone. The inhabitants are Tartars, Turks, Armenians, Greeks, and Jews. The horſe-fair held in this place is the moſt conſiderable in all Crimea. This town was laid in aſhes by the Ruſſians in the year 1737.

Kerſh, or Gerſh, the antient Panticapæum, ſince called the Boſphorus, is a conſiderable town, ſituated on a ſteep mountain near the ſtreight formerly called the Boſphorus, but now termed by ſailors the ſtreights of Caffa. It commands the entrance into the Black ſea; and is not only ſurrounded with a high wall, but defended on the ſouth-eaſt by a caſtle with ſeven towers; and at the harbour is a mole built with ſtone. The far greateſt part of the houſes are likewiſe built of ſtone, and have flat roofs. In this town are twenty-two Turkiſh moſques, and as many Greek churches.

The Turks have a caſtle on the ſtreight near Kerſh, with a harbour, but it is not fit for ſhips of burthen. They have alſo the town of Caffa, or Keffeh, the antient Theodoſia, a large trading ſea-port, ſituated on the eaſt of the peninſula, ſuppoſed to have been built by the Greeks in the fifth century. In 1226, the Genoeſe having got this place into their poſſeſſion, they enlarged and fortified it; but in 1297 the Venetians drove them from thence: they ſoon, however, recovered it again; but, in the year 1474, the Turks took it from them. While this town was in the poſſeſſion of the Genoeſe, its commerce roſe to ſuch a height, that it exceeded that of Conſtantinople itſelf; but, on its falling under the Turkiſh yoke, its trade greatly declined, and now only conſiſts in ſlaves brought hither for ſale by the Crim and Cuban Tartars, the Georgians, and Mingrelians. The inhabitants conſiſt of Turks, Jews, Greek, Catholic, and Armenian Chriſtians, &c. The Chriſtians conſtitute the majority of the inhabitants, and enjoy a moſt perfect freedom with reſpect to religion. Here are ſtill the deſcendants of ſeveral noble families of Genoa. The town, which is the largeſt in all Crimea, contains about five or ſix thouſand houſes, and is conſtantly well garriſoned. To the north-weſt are ſome high mountains, at the foot of which the town ſtands in a very delightful and convenient ſituation; but the harbour, beſides having a difficult bar, affords but little ſhelter in a ſouth-eaſt wind.

CHAP.

CHAP. II.

Of RUSSIA.

SECT. I.

Of the RUSSIAN EMPIRE *in general.*

Its amazing Extent: ſome general Obſervations on its Climate in different Parts; and the Progreſs of the Seaſons throughout the Year.

THE Ruſſian empire is of an amazing extent: towards the north and eaſt it is bounded by the main ocean, and towards the weſt and ſouth its limits are ſettled by treaties concluded with ſeveral far diſtant powers; with Sweden, the Poles, the Turks, with the Perſians, and with the Chineſe, by whoſe dominions this immenſe empire is bounded. Voltaire juſtly obſerves, that "it is of greater extent than all the reſt of Europe, "or than the Roman empire in the zenith of its power, "or the empire of Darius ſubdued by Alexander; for it "contains more than eleven hundred thouſand ſquare "leagues. Neither the Roman empire, nor that of the "Macedonian conqueror, comprized more than five "hundred and fifty thouſand each; and there is not a "kingdom in Europe the twelfth part ſo extenſive as "the Roman empire. In length, from the iſle of Dago "as far as its moſt eaſtern limits, it contains very near "a hundred and ſeventy degrees; ſo that when it is "noon-day in the weſt, it is very near mid-night in the "eaſtern part of this empire. In breadth it ſtretches "from ſouth to north three thouſand werſts, which "makes eight hundred leagues."

As this empire conſiſts of a great number of provinces, many of which are very extenſive, both the ſoil and temperature of the air muſt be extremely various in different parts. In thoſe which lie beyond the ſixtieth degree of latitude, there are few places where corn will grow to maturity; and in the northern parts of the empire, which reach beyond the ſeventieth degree, no garden-fruits are produced, except in the country about Archangel, where many buſhes and ſhrubs grow ſpontaneouſly, and yield ſeveral ſorts of berries: horned cattle are alſo bred, and there are plenty of wild beaſts and fowls, and ſeveral ſorts of fiſh in the neighbourhood of that city.

In the provinces ſituated in the middle of the empire, the ſoil produces moſt kinds of trees and garden-fruits, corn, honey, &c. They are likewiſe well-ſtocked with horned cattle; the woods abound with game; the rivers are navigable, and full of the beſt ſorts of fiſh.

In the ſouthern provinces the climate is hot; and though in ſome parts there are many barren waſtes, yet in others the land is covered with verdure and flowers. Tobacco, wine, and ſilk, might be there produced, as the two firſt are at Aſtracan and the Ukraine; and they are well watered with rivers, which afford plenty of fiſh; nor are they deſtitute of game in proportion to the extent and number of the woods.

In the middle, and more particularly in the northern parts of the empire, the cold is very ſevere, and the days extremely ſhort in winter; but the ſummers are warm and delightful, and even in the ſhorteſt nights the twilight is very luminous. At the winter ſolſtice, when the day is at the ſhorteſt, the ſun riſes at Archangel at twenty-four minutes after ten in the morning, and ſets at thirty-ſix minutes after one. At Peterſburgh the ſun riſes at fifteen minutes after nine, and ſets at forty-five minutes after two; but at Aſtracan the ſun riſes at forty-eight minutes after ſeven, and ſets at twelve minutes after four.

At the ſummer ſolſtice, when the day is at the greateſt length, this order is reverſed, and the ſun riſes at Aſtracan at twelve minutes after four, and ſets at about forty minutes after ſeven; and at Archangel riſes at thirty-ſix minutes after one, and ſets at twenty-four minutes after ten.

It is a common obſervation, that the eaſtern countries are much colder in winter, and hotter in ſummer, than the weſtern that lie in the ſame latitude: this is particularly true with reſpect to Ruſſia, for the river Neva, at Peterſburgh, is in ſome years covered with ice ſo early as the twenty-fourth of October; and in other years, when lateſt, about the twenty-ſecond of November; but it generally thaws by the twenty-ſixth of April, old ſtyle, which it is never known to exceed.

The reader cannot fail of being pleaſed with ſeeing here the progreſs of the ſeaſons at Peterſburg, which is ſituated in the fifty-ninth degree of latitude, from an author of ſuch acknowledged veracity as Jonas Hanway, Eſq. February generally brings with it a bright ſun and a clear ſky, every object ſeems to glitter with gems, and the nerves become braced by the cold. There is then no ſmall amuſement in riding in ſledges upon the ſnow, to thoſe who, from the length of the winter, have forgot the much ſuperior pleaſure which nature preſents when cloathed in all her verdure.

March is frequently attended with ſhowers, which with the heat of the ſun, penetrates the ice: this is generally three quarters of a yard thick on the Neva, and in ſome great rivers to the north-eaſt much thicker. This renders it like an honey-comb, and about the end of that month it uſually breaks up.

The month of April is frequently very warm; ſummer ſeems to precede the ſpring; for it is ſometimes the firſt of June before any conſiderable verdure appears, and then the intenſe heat brings it on ſo faſt, that the eye can diſcover its progreſs from day to day. Till the middle of July it ſeems to be one continued day, the ſun not intirely diſappearing above two hours in the twenty-four; but the delight which this ſeaſon naturally affords, is conſiderably abated by the extreme heat of the weather; however, a week ſeldom paſſes without the air being refreſhed by ſoutherly and weſterly winds, which often bring gentle ſhowers. Our author, who reſided about five years in this city, once experienced a delightful autumn to the end of September; but this rarely happens: Auguſt cloſes the ſcene, ſo that there are hardly above three months of ſummer.

September generally brings rain and froſt; the ſeverity of both is increaſed in October, and in November the Neva is always frozen. Then comes on the ſeaſon for the eaſy and ſpeedy conveyance on the ſnow, which brings freſh proviſions to market a thouſand Engliſh miles by land, and the beef of Archangel is often eaten at Peterſburg. In December and January the cold is ſo very intenſe, that the poor who are overtaken by liquor, or expoſed to the air in open places, are frequently frozen to death. But the abundance of birch and alders with which the Ruſſians are ſupplied, and the commodiouſneſs of their ſtoves, enable them to introduce any degree of heat into their houſes.

However, not one-tenth of the Ruſſian empire is ſufficiently peopled, and not a tenth part of it properly cultivated: for, notwithſtanding its prodigious extent, the number of inhabitants who pay the poll-tax, is computed only at five millions one hundred thouſand, and the reſt, including the females, amounts to about ten millions, excluſive of the inhabitants of the conquered provinces.

As the greateſt part of this empire is ſituated in Aſia, and has already been deſcribed in treating of Siberia and Ruſſia, the weſtern part of that empire, therefore, now only remains to be treated of.

SECT. II.

Of the Situation and Extent of Ruſſia, its Rivers and Lakes.

THE boundaries of this part of the Ruſſian empire towards the eaſt, are indeed the ſame with the limits between Europe and Aſia. It extends on the eaſt to the Wercoturian mountains, and to part of the Wolga, which ſeparate it from Siberia; on the ſouth it is bounded by the river Don, and a line drawn from the Nieper to the mouth of the Don, at its entrance into the ſea of Aſoph; on the weſt by the Nieper, which ſeparates it from Poland, the gulph of Riga, the gulph of Finland, Sweden, and Swediſh Lapland; and on the north by the Frozen Ocean.

The principal rivers of Ruſſia are as follow:

The Wolga, in Latin Volga, which has its ſource in the foreſt of Wolconſki, and is one of the largeſt rivers in the world; for it runs a courſe of above two thouſand miles before it falls into the Caſpian ſea. Its banks are generally fertile, and though not ſufficiently cultivated, on account of the frequent incurſions of the Tartars; yet the ſoil naturally produces all kinds of eſculent herbs, and in particular aſparagus of a very extraordinary ſize and goodneſs. It is obſervable, that moſt of the oaks in Ruſſia grow in the countries watered by this river. At Iwer, a town little more than one hundred and twenty miles from its ſource, the Wolga is navigable for large ſhips; and towards the end of the ſpring this river is ſo ſwelled by the melting of the ice and ſnow, as to cauſe great inundations; particularly in the months of May and June. The maſters of the veſſels which ſail down the Wolga to Aſtracan, carefully obſerve this ſeaſon, as at that time they have not only the opportunity of a ſafe paſſage over the ſhallows; but alſo over ſeveral flat iſlands which then lie at a conſiderable depth under water. Trees are often torn away by the roots from the banks of this river by the violence of the current, and the anchors of the veſſels are frequently ſo entangled amongſt them, that there is a neceſſity of cutting the cables, ſo that many anchors are ſuppoſed to lie at the bottom. The Wolga abounds with a fine fiſh called beluga, which is about eight or ten feet in length. It receives ſeveral conſiderable rivers, among which are the Occa and Cama, and diſcharges itſelf through ſeveral mouths into the Caſpian Sea, by which means it forms many iſlands.

The Don, the Tanais of the ancients, is called Tuna or Duna by the Tartars, and has its ſource not far from Tula in the Iwano Oſſero, or St. John's lake. It firſt runs from north to ſouth, and after its conflux with the Soſna, directs its courſe from weſt to eaſt, and in ſeveral large windings, again runs from north to ſouth; but at length dividing into three channels, falls into the ſea of Aſoph. The waters of the Don are thick and chalky, conſequently not very wholeſome to drink. This river is very ſhallow in ſummer, when it is alſo full of ſand-banks; it, however, affords plenty of large and ſmall fiſh. The Don in its courſe approaches ſo near the Wolga, that in one place the diſtance between them is but one hundred and forty werſts, or about eighty Engliſh miles.

The Dwina is a very large river, the name ſignifies Double, it being formed by the conflux of the Sukona and the Yug. This river divides itſelf into two branches or channels near Archangel, from whence it runs into the White Sea.

The Nieper, the ancient Boryſthenes, ariſes from a moraſs in the foreſt of Wolconſki, about one hundred and twenty miles above Smolenſki, and forms ſeveral windings through Lithuania, Little Ruſſia, the country of the Zaporo Coſſacs, and a tract inhabited by the Nagaian Tartars; and after forming a marſhy lake of ſixty werſts in length, and in many places two, four, or even ten werſts in breadth, diſcharges itſelf into the Black Sea. The banks on this river are on both ſides generally high, and the ſoil excellent; but in ſummer the water is not very wholeſome. The Nieper has no leſs than thirteen water-falls within the ſpace of ſixty werſts; yet in ſpring, during the land-floods, empty veſſels may be hauled over them. It abounds with ſturgeon, ſterled, carp, pike, karauſh, &c. There is but one bridge over this river, and that is a floating one at Kiew, one thouſand ſix hundred thirty-eight paces in length. This bridge is taken away about the end of September, to give the flakes of ice a free paſſage down the river, and is again put together in ſpring. There are to be ſeen on this river a great number of mills erected in boats.

We ſhall now mention the principal lakes in this part of the Ruſſian empire, which are,

The lake of Ladoga, ſituated between the gulph of Finland and the lake of Onega, is one hundred and fifty miles in length, and ninety in breadth. It is eſteemed the largeſt lake in Europe; and is ſuppoſed to exceed any other for its plenty of fiſh, among which are alſo ſeals. This lake is full of quick-ſands, which being moved from place to place by the frequent ſtorms to which it is ſubject, cauſe ſeveral ſhelves along its courſe, which often prove fatal to the flat-bottomed veſſels of the Ruſſians. This induced Peter the Great to cauſe a canal near ſeventy Engliſh miles in length, ſeventy feet in breadth, and ten or eleven deep, to be cut at a vaſt expence from the ſouth-weſt extremity of this lake to the ſea. This great work was begun in the year 1718, and though vigorouſly proſecuted, was not compleated till the year 1732, in the reign of the empreſs Anne. This canal has twenty-five ſluices upon it, and ſeveral rivers run into it. At the diſtance of every werſt along its banks, is a pillar marked with the number of werſts; and it is the conſtant employment of a regiment of ſoldiers to keep the canal in repair; for this purpoſe they are quartered in ſeveral places on its banks. In ſummer-time it is covered with floats and veſſels, which pay toll in proportion to the value of their cargo.

The lake of Onega is ſituated between the lake of Ladoga and the White Sea, and has a communication with the former by means of the river Swir. It is one hundred and eighty werſts in length, and about eighty in breadth; and though it has freſh water, ſeals are often ſeen in it.

The lake of Peipus in Livonia, is near ſeventy miles in length, and about forty miles in breadth. It abounds with fiſh, and runs into the gulph of Finland by the river Narva.

Medicinal and ſaline ſprings are not uncommon in Ruſſia. Fine ſilver, which alſo yields ſome gold, is dug out of the mines of this country, and alſo exceeding fine copper, iron, and many other minerals, as iſinglaſs and precious ſtones.

The moſt fertile part of Ruſſia is near the frontiers of Poland, where the inhabitants are able to ſupply their neighbours with corn. The northern parts are not only extremely cold, but marſhy, and over-run with foreſts, chiefly inhabited by wild beaſts. Beſides domeſtic animals, there are in Ruſſia wild beeves, rein-deer, martens, white and black foxes, ermines and ſables, whoſe ſkins make the beſt furs in the world; as alſo hyenas or gluttons, bears and wolves.

SECT. III.

Of the Perſons, Dreſs, and Manners of the Ruſſians; the Houſes of the common People, and their Furniture; their Food, and Fondneſs for ſtrong Liquors. Their Roads, Manner of travelling, and Language.

BEFORE the time of Peter the Great, the Ruſſians were little better than ſavages; but that wiſe prince, by incredible application, and a proper mixture of ſeverity and mildneſs, wrought ſo happy a change in their manners, as in a great meaſure ſets them on a level with the other civilized nations of Europe.

The Ruſſians are for the moſt part of the middle ſtature, though many of them are tall and comely. The common people are fond of their ancient cuſtoms; and though the majority of them have been gradually brought to

to ſubmit to modern improvements, many chooſe to ſuffer great inconveniencies, and to pay additional taxes, rather than cut off their beards, and conform to ſome regulations with reſpect to religion.

The Ruſſian women are extremely fond of paint, and conſider a ruddy complexion as the very eſſence of beauty; ſo that in the Ruſſian language, red and beautiful are ſynonimous terms. Even the poorer ſort among the women, in order to mend their complexion, will beg money to buy paint. By this means they daub themſelves ſo much, as to conceal the graces which nature may be preſumed to have beſtowed on them; for they generally profeſs, that if they had ſufficient plumpneſs, they can procure themſelves beauty. Perſons of diſtinction are very fond of ſtate and ſplendor. The dreſs of the common people in Ruſſia is mean; they are cloathed with long coats made of dreſſed ſheep-ſkins, with the wool towards their bodies; their legs and feet are ſwaddled with a coarſe cloth, ſecured by a cord of reeds, and their ſandals are of the ſame materials. Their caps are lined with fur, and cover the ears and neck, as well as the head: they wear ſaſhes round their waiſts, and double gloves, one of woollen, and the other of leather, which take in the hand without any diſtinction, except the thumb, and theſe are an eſſential part of their cloathing. However, people of any rank generally dreſs as we do in England, except wearing a full great coat lined with fur, with a deep quilted or fur-lined cap, when they go abroad. The women of the lower claſs, beſides their petticoats, wear ſheep-ſkins like the men; but thoſe who move in a higher ſphere, wear flowered ſilk cloaks, lined with furs, of which the moſt common ſort is white hares. Ladies of great diſtinction have them lined with rich furs, and almoſt conſtantly wear them. Perſons of both ſexes hang on their breaſt a croſs, which is put on when they are baptized, and this they never lay aſide as long as they live. The croſſes of the peaſants are of lead; but thoſe worn by perſons of wealth are of gold or ſilver. The Ruſſians ſeldom fail of bathing twice a week; for which purpoſe almoſt every houſekeeper is provided with a bath; and he that has none of his own, goes to thoſe that are public. It is remarkable, that they often ſally out naked from the warm bath, run about in the cold, roll themſelves in the ſnow, and then plunge again into the warm water; and this viciſſitude of heat and cold they conſider as beneficial to the conſtitution, by rendering them hardy and robuſt.

People even of the common rank ſalute each other with great civility; but before a Ruſſian welcomes his gueſt, his viſitor is obliged to make the ſign of the croſs, and at the ſame time to bow to a picture of ſome ſaint, which is ſo placed, as to be ſeen immediately at coming in. In viſits of ceremony, the men and women uſually welcome each other with a kiſs; but thoſe of the lower claſs ſhow their profound reſpect for perſons of high rank, by proſtrating themſelves on the ground before them.

The moſt uſual method of building, both in the towns and country villages, is to lay one beam of wood upon another, and faſtening them at the four corners, fill up the crevices between the beams with moſs. The houſe is afterwards covered with ſhingles, and holes are made in the timber for doors and windows. A brick ſtove or large oven is commonly made in the houſes of the peaſants, and takes up a fourth part of the area: this is flat at the top, and boarded; upon it, and on a kind of ſhelves round the room, the whole family ſleep without beds.

Their furniture conſiſts of three benches, an oblong table, and the picture of a ſaint or two. Inſtead of candles or lamps, the Ruſſian peaſants uſually burn long ſplinters of deal. The apartments are as black as ſo many chimnies; for the fire hearth being within the ſtove above-mentioned, which has no other vent for the ſmoke but into the room, the walls are covered with ſoot. It is no ſooner dark, than the houſes ſwarm with a ſpecies of inſects called tarakans, which are a kind of goat-chaffers. The beſt method of keeping them out is burning a light in the room till break of day. The houſes in the villages are contiguous, and built as cloſe together as in the towns.

The inſatiable eagerneſs of the common people after ſpirituous liquors and other ſtrong drink, eſpecially in the carnival time, is in a great meaſure owing to the ſeverity of the winter, the rigorous faſts they obſerve, and the ſlender diet they live upon throughout the year. Their food chiefly conſiſts of turnips, cabbage, peaſe, large cucumbers, onions, and coarſe ill-taſted fiſh. Their drink is quas, a kind of ſmall mead; and even among the gentry, brandy always makes a part of every repaſt. Among the lower claſs, it is generally the men who give themſelves up to theſe exceſſes, though it is not uncommon to ſee at Peterſburg a drunken woman ſtaggering along the ſtreets. Some authors indeed ſay, that drunkenneſs is ſo far from being conſidered as a crime, that they make it part of their religion, and that they do not think they have kept a holiday as they ought, if they are not drunk before night; and Mr. Perry affirms, that if you paſs through Moſcow on a holiday, you will ſee both prieſts and people lie drunk upon the ground; and if you go to help one of them up, he will tell you, by way of excuſe, "It is a holiday." He adds, that their ladies of quality are ſo little aſhamed of drinking to exceſs, that they will frankly acknowledge their having been very drunk, and return thanks for the favour to their friends who made them ſo.

Not only the common people, but the whole nation, are much more uſed to fiſh than fleſh; for their faſts take up near two-thirds of the year, during which they are abſolutely prohibited by their religion to taſte of fleſh: this is obſerved with the utmoſt ſtrictneſs; they will not even taſte of eggs, milk, or any thing that has even the leaſt relation to fleſh; but caviere is a great diſh among them. At the other times of the year, people of rank have at their tables a variety of fleſh-meat and fowl; but before they ſit down, the miſtreſs of the family preſents every one of the gueſts with a cup of brandy on a plate, or ſalver, with her own hands; and, among particular friends, all the company ſalute the lady. The firſt diſh uſually conſiſts of hams, tongues, and other ſavoury diſhes, with ſeveral made-diſhes dreſſed with oil, olives, onions, and garlic; which having remaind a conſiderable time on the table, the ſecond courſe, conſiſting of ſoups and roaſt and boiled meat, is brought in; after which follows the deſſert, and plenty of mead, beer, wine, and brandy.

A perſon may travel cheap and with great expedition in Ruſſia, both in ſummer and winter; the poſt-roads leading to the chief towns are very exactly meaſured, with the werſts marked, and the poſt-ſtages fixed at proper diſtances; for throughout the whole empire, and even in Siberia, a pillar, inſcribed with the number of werſts, is erected at the end of each. The expence of travelling in this manner is ſo eaſy, that between Riga and Peterſburgh the hire of a poſt-horſe for every werſt is no more than two copeiks and a half, which is one penny three farthings ſterling; between Novogrod and Peterſburgh only one copeik; and between Novogrod and Moſcow but half a copeik. Nothing can be more accommodated to eaſe and diſpatch than travelling in ſledges during the winter, when the earth is covered deep with ſnow, and impaſſable for wheel-carriages; for in the journey Mr. Hanway made in that ſeaſon from Moſcow to Peterſburgh, he ſlept in his ſledge, without waking, while he advanced a hundred werſts, or ſixty-ſix Engliſh miles. The whole road between thoſe two cities was marked out in the ſnow by young fir-trees planted on both ſides, at the diſtance of twenty yards, which, at a moderate computation, amount to 128,480 trees. At certain diſtances were alſo great piles of wood, to be ſet on fire, in order to give light to the empreſs and her court, if they paſſed by in the night. On theſe occaſions her imperial majeſty is drawn in a kind of houſe that contains her bed, a table, and other conveniencies, where four perſons may take a repaſt. This wooden ſtructure, which has a ſloping roof, and ſmall windows to keep out the cold, is fixed on a ſledge, and drawn by twenty-four poſt-horſes; and if any of them fail on the road, others are ready to ſupply their places. Our author obſerves, that the late empreſs was generally no more than three days and nights on the way, notwithſtanding

withſtanding her having ſeveral ſmall palaces at which ſhe ſometimes ſtopped to refreſh herſelf, though the diſtance is four hundred and eighty-eight Engliſh miles. Peter the Great once made the journey in forty-ſix hours, but did not travel in the ſame carriage. Mr. Buſching obſerves, that it is not uncommon to go it with poſt-horſes in ſeventy-two hours; and that a commodious ſledge, drawn by a pair of poſt-horſes for that journey, may be hired for fourteen or fifteen rubles.

The Ruſſian language derives its origin from the Sclavonian, but at preſent it is very different from it; and, with regard to religious ſubjects, is enriched with a great number of Greek words. The alphabet conſiſts of forty-two letters, moſt of them Greek characters, as they were written in the ninth century: but as the latter did not expreſs every particular ſound in the Sclavonian language, recourſe was had to ſeveral Hebrew letters, and to the invention of ſome arbitrary ſigns. In the different parts of the Ruſſian empire various dialects are uſed, as the Moſcovite, the Novogrodian, the Ukrainian, and that of Archangel. The dialect uſed in Siberia nearly reſembles the laſt.

SECT. IV.

Of the Religion of the Ruſſians.

THE Ruſſians profeſs the religion of the Greek church, which was firſt embraced by the great dutcheſs Ogla, ſovereign of Ruſſia, in the 955th year after the birth of Chriſt. The external part of their religion conſiſts in the number and ſeverity of their faſts, in which they far exceed the Romiſh church. Their uſual weekly faſts are on Wedneſdays and Fridays. In Lent, as hath been already obſerved, they neither eat fleſh, milk, eggs, nor butter; but confine themſelves to vegetables, bread, and fiſh fried in oil.

The great faſt of Lent is regulated by the moveable feaſt of Eaſter, and laſts till that feſtival begins.

St. Peter's faſt always begins on the firſt Monday after Whitſuntide; and ſometimes laſts ſix weeks; and at others only eight days, according as Eaſter happens to fall out early or late. The faſt of the Bleſſed Virgin annually begins on the firſt of Auguſt, and continues till the fifteenth of the ſame month. St. Philip's faſt begins on the fifteenth of November, and continues till the twenty-fifth of December.

The eighth week before Eaſter is called the butter week, and may be conſidered as the Ruſſian carnival, it being ſpent in all kinds of entertainments, and every ſpecies of licentiouſneſs. Among the diverſions exhibited at this time, one of the moſt ſingular is riding in ſledges down a ſteep declivity, twenty ells in height, made with boards, and covered with ice, by throwing water to freeze upon it. At this time of public diverſions they atone for their bad living in Lent, by feaſting and the free uſe of brandy. On Eaſter-day moſt of them eat to ſuch exceſs, as to throw themſelves into a fit of ſickneſs by overcharging their ſtomachs. On that joyful feſtival the Ruſſians kiſs one another in the moſt friendly manner, preſenting an egg coloured over, and ſometimes tolerably painted, with the following ſalutation: "Chriſt is "riſen;" to which the other anſwers, "He is indeed "riſen."

The Ruſſians are great enemies to the worſhip of graven images, and yet are ſo abſurdly inconſiſtent, that in their private devotions they kneel before a picture of our Saviour, the Virgin Mary, St. Nicholas, or ſome other ſaint, which is an indiſpenſible piece of furniture in their cloſet. To this they bow ſeveral times; making the ſign of the croſs with their thumb, fore-finger, and third finger, on the breaſt, forehead, and ſhoulders; at the ſame time repeating, in a low voice, the Lord's Prayer, and ſome ſhort ejaculations; particularly, "Lord be "merciful to me." Indeed they ſeldom paſs by a church without uttering of theſe words, at the ſame time bowing and croſſing themſelves, without paying the leaſt regard to any perſon who happens to be preſent. They likewiſe practiſe the ſame bowings and croſſings on ſeeing a church at a diſtance.

Many of the common people, and even ſome perſons of rank, either by way of penance, or from other motives of humiliation, proſtrate themſelves on their faces at the entrance of the churches; and thoſe who are conſcious of having contracted any impurity, forbear entering the church, but ſtand at the door. The church bells are often rung; and as ringing is counted a branch of devotion, the towns are provided with a great number of bells, which make as it were a continual chiming.

The divine ſervice is entirely performed in the Sclavonian tongue, which the people do not underſtand, as it is very different from the modern Ruſſian; and this ſervice conſiſts of abundance of trifling ceremonies, long maſſes, ſinging, and prayers; all which are performed by the prieſts, the congregation only repeating, "Lord "be merciful to me." They ſometimes add a lecture from one of the fathers; but there are few churches in which ſermons are ever delivered, and even in thoſe they preach but ſeldom.

In the Ruſſian churches there are neither ſeats or forms, but the whole congregation perform their devotions ſtanding. On feſtival days the clergy are adorned with very rich veſtments, ſomewhat reſembling thoſe of the Levitical prieſts deſcribed in the Old Teſtament. The people know very little of the Bible, which has never yet been tranſlated into their language. They have, however, one in the Sclavonian tongue, with annotations; nor are there any proper meaſures taken for the inſtruction of young people among the vulgar, in the principles of religion. The people never ſing pſalms or hymns, nor have any hymn books in their houſes; for none but the choiriſters are allowed to ſing pſalms in the churches, that office being conſidered as their peculiar province, on which account they are held in ſome eſteem.

Beſides the great feſtivals ordained by the Ruſſian church, there are every year others appointed by the civil power, when all public buſineſs and trades are ſuſpended with greater ſtrictneſs than even during the former; ſuch as the anniverſary of the birth, inauguration, and coronation of the perſon on the throne, and of the ſaint's day whoſe name he or ſhe bears; and likewiſe the feſtival of the birth and name-day of other perſons of the royal family; that of St. Alexander Neuſki, which is kept on the thirtieth of Auguſt; and the anniverſary of the battle of Pultowa, which is commemorated on the twenty-ſeventh of June.

There are a great number of convents for the religious of both ſexes in the Ruſſian empire; but Peter I. prudently ordered, that no perſon ſhould be allowed to enter on a monaſtic life before fifty years of age: but this regulation has been repealed ſince his death, it being thought proper to ſhew a greater condeſcenſion to the monaſteries; however, no man is permitted to turn monk till he is thirty, nor no woman to turn nun till ſhe is fifty; and even then not without the expreſs approbation and licence of the holy ſynod. The abbot, or head of an abbey, is here called archimandrite, and the prior of a convent, igumen; while an abbeſs is ſtiled igumenia.

Every large village has a church and a prieſt to officiate in it, and in the towns there is a church almoſt in every ſtreet. It is remarkable, that all the old churches have a creſcent under the croſs erected on the tops of the towers.

With reſpect to baptiſm, they acknowledge themſelves conceived and born in ſin, and therefore baptize their children immediately after they are born: if they are weak, this is done at home; but if well, in the church; the child being received at the church-door by the prieſt, who ſigning his forehead with the ſign of the croſs, ſays, "The Lord preſerve thy coming in and going out." He then faſtens nine wax-candles given him by the godfathers, ready lighted, round the font. Having incenſed the godfathers, and conſecrated the water, each of them takes a wax-candle, and they all walk three times round the font, which always ſtands in the middle of the church, the clerk carrying the picture of St. John before them, and the prieſt reading out of a book. The prieſt then aſks the godfathers the name of the child, which having given him in writing, he puts it upon a ſmall picture, which he holds upon the child's breaſt, while he mutters certain prayers; and then aſks, whether the child believes

in God the Father, the Son, and the Holy Ghoſt; and the godfathers having anſwered in the affirmative, they inſtantly turn their backs to the font, to ſhew their averſion to the three next queſtions, Whether the child forſakes the devil, his angels, and his works? To each queſtion the godfathers anſwer Yes, and as often ſpit on the ground. Then turning again to the font, the prieſt aſks, whether they promiſe that the child ſhall be brought up in the true Greek religion? and laying his hands upon him ſays, "Get out of this child thou unclean ſpirit, and make room for the Holy Ghoſt." He then blows upon the child three times to drive away the devil, by whom they ſuppoſe children are poſſeſſed before baptiſm. After this he cuts off a little of the child's hair, which he puts into a book; and having aſked the godfathers whether they deſire the child ſhould be baptized, he takes him naked into his arms, and, dipping him three times into the water, makes uſe of the uſual words: "I baptize thee in the name of the Father, and of the Son, and of the Holy Ghoſt." He then puts a corn of ſalt into the child's mouth, and making the ſign of the croſs on his forehead, hands, breaſt, and back, with conſecrated oil, puts him on a clean ſhirt, ſaying, "Thou art as clean from thy original ſin as this ſhirt." He hangs a ſmall croſs of gold, ſilver, or lead, according to every one's ability, about his neck, with a ſtrict charge to wear it all his life-time: in which they are ſo exact, that if no ſuch croſs be found about a deceaſed perſon, they will not allow him Chriſtian burial. He alſo aſſigns a peculiar ſaint, whom the child is hereafter to reverence as his patron; and having kiſſed the child and his godfathers, he exhorts them to mutual love. If more children are to be baptized at the ſame time, the font is emptied, becauſe they imagine the water to be defiled by the original ſin of the preceding child.

As they imagine that children are regenerated by baptiſm, they think they have a right to the Lord's ſupper, which is adminiſtered in the following manner: the prieſt going to the altar, attended by the clerk, ſays the office according to St. Baſil's liturgy; and then mixing warm water with the wine, ſteeps bits of bread in the chalice, and then conſecrates them together. The prieſt takes the bread out with a ſpoon, and gives it to the communicants, little babes having only half the quantity of grown people, till they are ſeven years of age.

Their proſelytes who are of age are baptized in a river, and three times plunged over head like the children, on mentioning the Father, Son, and Holy Ghoſt.

Perſons who are inclined to change their religion for that of the Moſcovites, are inſtructed for ſix weeks in ſome convent; and at their baptiſm are to abjure their former religion, to deſert it as heretical, and as often as it is named to ſhew their adhorrence, by ſpitting on the ground.

The metropolitans, who are only two, one at Kiow and the other at Tobolſki, differ from the biſhops only in their title: above theſe are the archbiſhops; and the deacons, popes, or prieſts, and protopes are exceeding numerous. In antient times the primate, or ſupreme biſhop of the Ruſſian church, was a ſuffragan to the patriarch of Conſtantinople; but the czar Feodor Iwanowitz appointed a Ruſſian patriarch to preſide over the church; yet as theſe patriarchs gradually aſſumed an exorbitant power, dangerous even to the ſtate, Peter I. on the death of the laſt patriarch, in 1701, ſuppreſſed that dignity, and declared himſelf head of the church of Ruſſia. In the year 1719, the ſame prince inſtituted a council that has the direction of eccleſiaſtical affairs, and is ſtiled, The moſt holy ſynod. Subordinate to this council are two others; the firſt called the œconomie, which has the management of all the eccleſiaſtical lands and revenues; the ſecond has power to execute the regulations made in relation to the ſeparatiſts, called Roſkolniki, and levies the tax impoſed on them for being permitted to wear their beards. This, however, is allowed to all eccleſiaſtics of the Ruſſian church, who likewiſe wear their own hair, and on their heads a high ſtiff black cap, from which a piece of the ſame ſtuff hangs down on their backs, or elſe a large flapped hat. They have over their ſhoulders a ſort of long cloak; but the ſecular prieſts, when out of the church, generally wear a blue or a brown long coat. The clergy are permitted to marry, but it muſt be to a virgin; and, on her death, he is neither allowed to marry again, nor to hold his benefice; but muſt either retire to a convent, or be degraded; and if he chooſes the latter, he is at full liberty to marry a ſecond time: hence no wives are better treated than thoſe of the eccleſiaſtics.

The Ruſſian ſeparatiſts are, by way of contempt, termed Roſkolniki; or ſchiſmatics; but they call themſelves Starowierzi, or antient believers. Their chief peculiarities conſiſt in having their own books, from the authority of which they make the uſual ſign of the croſs, only with the fore and middle finger, like the orthodox Ruſſian clergy, when they give the benediction, and conſequently differ from the laity of the national church, who make it with the thumb and the fore and middle finger. But this is not their only crime; they let their beards grow to the full length, though this privilege can only be procured, as hath been already intimated, by paying an exorbitant tax. They alſo entirely abſtain from ſpirituous liquors, never enter the national church, and will neither eat nor drink out of any veſſel that has been uſed by thoſe who ſtile themſelves orthodox Ruſſians. This ſect is not very numerous in Ruſſia, though it has ſpread over all Siberia.

The natives of thoſe provinces that have been conquered from Sweden profeſs Lutheraniſm; and both the proteſtants, of whom there are many among the Ruſſians, and thoſe of the Romiſh church, enjoy full liberty of conſcience, and the public exerciſe of their religion; ſo that they have churches and prieſts, or miniſters, at Moſcow, Peterſburgh, Cronſtadt, Archangel, and Aſtracan; but thoſe of the church of Rome have no longer the privilege of hanging bells in their churches. The Armenians have public places of worſhip only at Aſtracan. The Jeſuits and Jews have been baniſhed from the country; but it is thought that many who ſecretly adhere to Judaiſm ſtill remain there.

A conſiderable number of the Ruſſian ſubjects are Mahometans, and ſtill greater numbers are Pagans. In order to promote their converſion, the ſynod has inſtituted a peculiar ſociety for propagating Chriſtian knowledge, and it is ſaid many thouſands of them have been converted to Chriſtianity; but, on the other hand, it appears, from the writings of thoſe who have lately travelled thro' Siberia, that great violence and conſtraint have been uſed to bring them over; and, that as moſt of the people have been baptized againſt their will, they have very imperfect and contemptible ideas of the religion they are ſaid to profeſs.

In the thirteenth century ſeveral popes laboured hard to put the great duke of Ruſſia out of conceit with the Greek religion, but without ſucceſs. The doctors of the Sorbonne, at Paris, have ſince made the ſame attempt; for when Peter the Great ſuppreſſed the patriarchate, they endeavoured to perſuade him to bring about an union of the Ruſſian church with that of Rome; but this point they were unable to carry.

SECT. V.

Of their Marriages and Funeral Ceremonies.

THE marriage ceremonies of the Ruſſians, as deſcribed by the author of the Travels of the Holſtein ambaſſadors through Ruſſia to Perſia, were very particular; and, as it does not appear that any other alterations on thoſe occaſions have been made, than ſuch as neceſſarily aroſe from Peter the Firſt introducing a greater degree of familiarity between the ſexes, and permitting them to ſee and converſe with each other, we ſhall here give them to our readers.

When every thing is agreed upon between the parents, if they are of quality, a woman, called the ſuacha, is appointed by the friends of the bridegroom, and another by thoſe of the bride, to take joint care of the nuptials, who provides every thing fit for the chamber where the new-married couple are to lie. The bed is made of forty ſheaves of rye laid in good order, and encompaſſed with ſeveral barrels of wheat, barley, and oats. When all is ready the bridegroom goes late in the evening, accompa-

nied by his kindred; the prieſt who was to marry him leading the van on horſeback. They are received at the bride's door by her relations, invited to come in, and to ſit down at table; where only three diſhes of meat are ſerved up, and even theſe are not to be touched by any one preſent. At the upper end of the table a place is left for the bridegroom, which is taken up by a young lad appointed for that purpoſe, while the bridegroom is talking with the bride's friends: but at length he having prevailed on the youth by ſome preſents to reſign his place to him, takes his ſeat, and the bride, richly dreſſed, uſed to be brought in with a veil over her face, and placed next the bridegroom; two lads at the ſame time holding a piece of taffety between them, to prevent their ſeeing each other. The ſuacha then comes in, and paints her, ties up her hair in two knots, puts a coronet on her head, and all the ornaments of a married woman. The coronet is of gold or ſilver gilt, and lined with ſilk; having on both ſides, near the ears, five or ſix rows of pearls, hanging down in ſtrings on her breaſt. The upper garment, which has ſleeves an ell and a half wide, is embroidered at the edges with gold and ſilver, eſpecially about the neck, where it is ſtiff with embroidery for the breadth of three inches. They ſometimes beſtow a thouſand crowns upon this robe. The bridegroom is then painted by his ſuacha, whilſt the women who are preſent ſtand ſinging upon the benches.

At length they all go to church, where the young couple ſtand upon a piece of taffety, and have a canopy of the ſame ſilk over their heads. Here having made offerings of fried meats, fiſh, and paſtry, the prieſt gives them his benediction, and taking the man by his right hand, and the woman by her left, he aſks them three times, whether they are both willing to be married, and to love one another as they ought to do. To which having anſwered Yes, the whole company join hands, and the prieſt ſings the CXXVIIIth Pſalm; which being ended, he puts a garland of rue upon the heads of the young couple, and if one of them be a widow or widower, about their ſhoulders, ſaying, "Increaſe and "multiply. Whom God hath joined together, let no "men put aſunder." While the prieſt pronounces theſe words, each of the people invited to the wedding lights a wax-candle, and one of them gives a glaſs of wine to the prieſt, which he drinks; and the married-couple having pledged the ſame three times each, the bridegroom throws down the glaſs, and he and the bride treading it under their feet, ſaying, "May they thus fall under "our feet, and be trodden to pieces who ſhall endeavour "to ſow diviſion or diſcontent between us." The women then throw ſome flax or hemp-ſeed on the young couple, wiſhing them much proſperity; and ſome pull the bride by the robe, as if they would take her from the bridegroom, to whom ſhe ſticks cloſe, while they ſeem unable to remove her.

The nuptial ceremony being ended, the bride returns in a ſledge, or coach, by the light of ſix flambeaux, and the bridegroom on horſeback. The men immediately ſit down at the table, which is covered with proviſions; while the women conduct the bride into her chamber, undreſs her, and having put her to bed, come to the bridegroom, who riſing from the table, is conducted to the bride's chamber, by ſix or eight young men, each with a wax-candle in his hand, which they ſtick in the barrels of wheat, barley, and oats that ſtand round the bed: the bride no ſooner ſees the bridegroom than ſhe ſlips on a morning-gown, lined with fur, and riſing meets and ſalutes him with a low inclination of the head; and this uſed to be the firſt time of the bridegroom's ſeeing her face. They then ſit down to a table, where, among other proviſions, they have a roaſted fowl, which the bridegroom pulls aſunder, and throwing over his ſhoulder the part he lights on firſt, they eat the reſt, and then go to bed; while the gueſts employ themſelves in ſeveral charms to promote the happineſs of the new-married couple. Some time after an old ſervant of the houſe, who attends at the door, comes and aſks whether the buſineſs be done; and the bridegroom anſwering Yes, the word is given for the trumpets and timbrels to ſtrike up, and theſe ſound till the new-married couple are conducted to the ſtoves, where they bathe themſelves apart. After they have been well waſhed in the bath with water, mead, and wine, the bride ſends the bridegroom a ſhirt richly embroidered, eſpecially at the neck, and a rich habit. The two next days they ſpend in mirth and feſtivity.

Perſons of inferior rank are ſatisfied with fewer ceremonies, for the night before the wedding the bridegroom ſends ſome cloaths, a comb, and a looking-glaſs; and the next day the prieſt is brought in by two lads, carrying lighted wax-candles. As ſoon as he enters the houſe, he gives his benediction firſt to the lads, and then to the gueſts. The young couple being ſet down at the table, the lads holding a piece of taffety between them, the ſuacha dreſſes the bride's head, which being done, a looking-glaſs is brought, and the young couple joining their cheeks, look and ſmile one upon the other, while the two ſuachas caſt hops upon them; after which they go to church, where they are married with the ceremonies already mentioned.

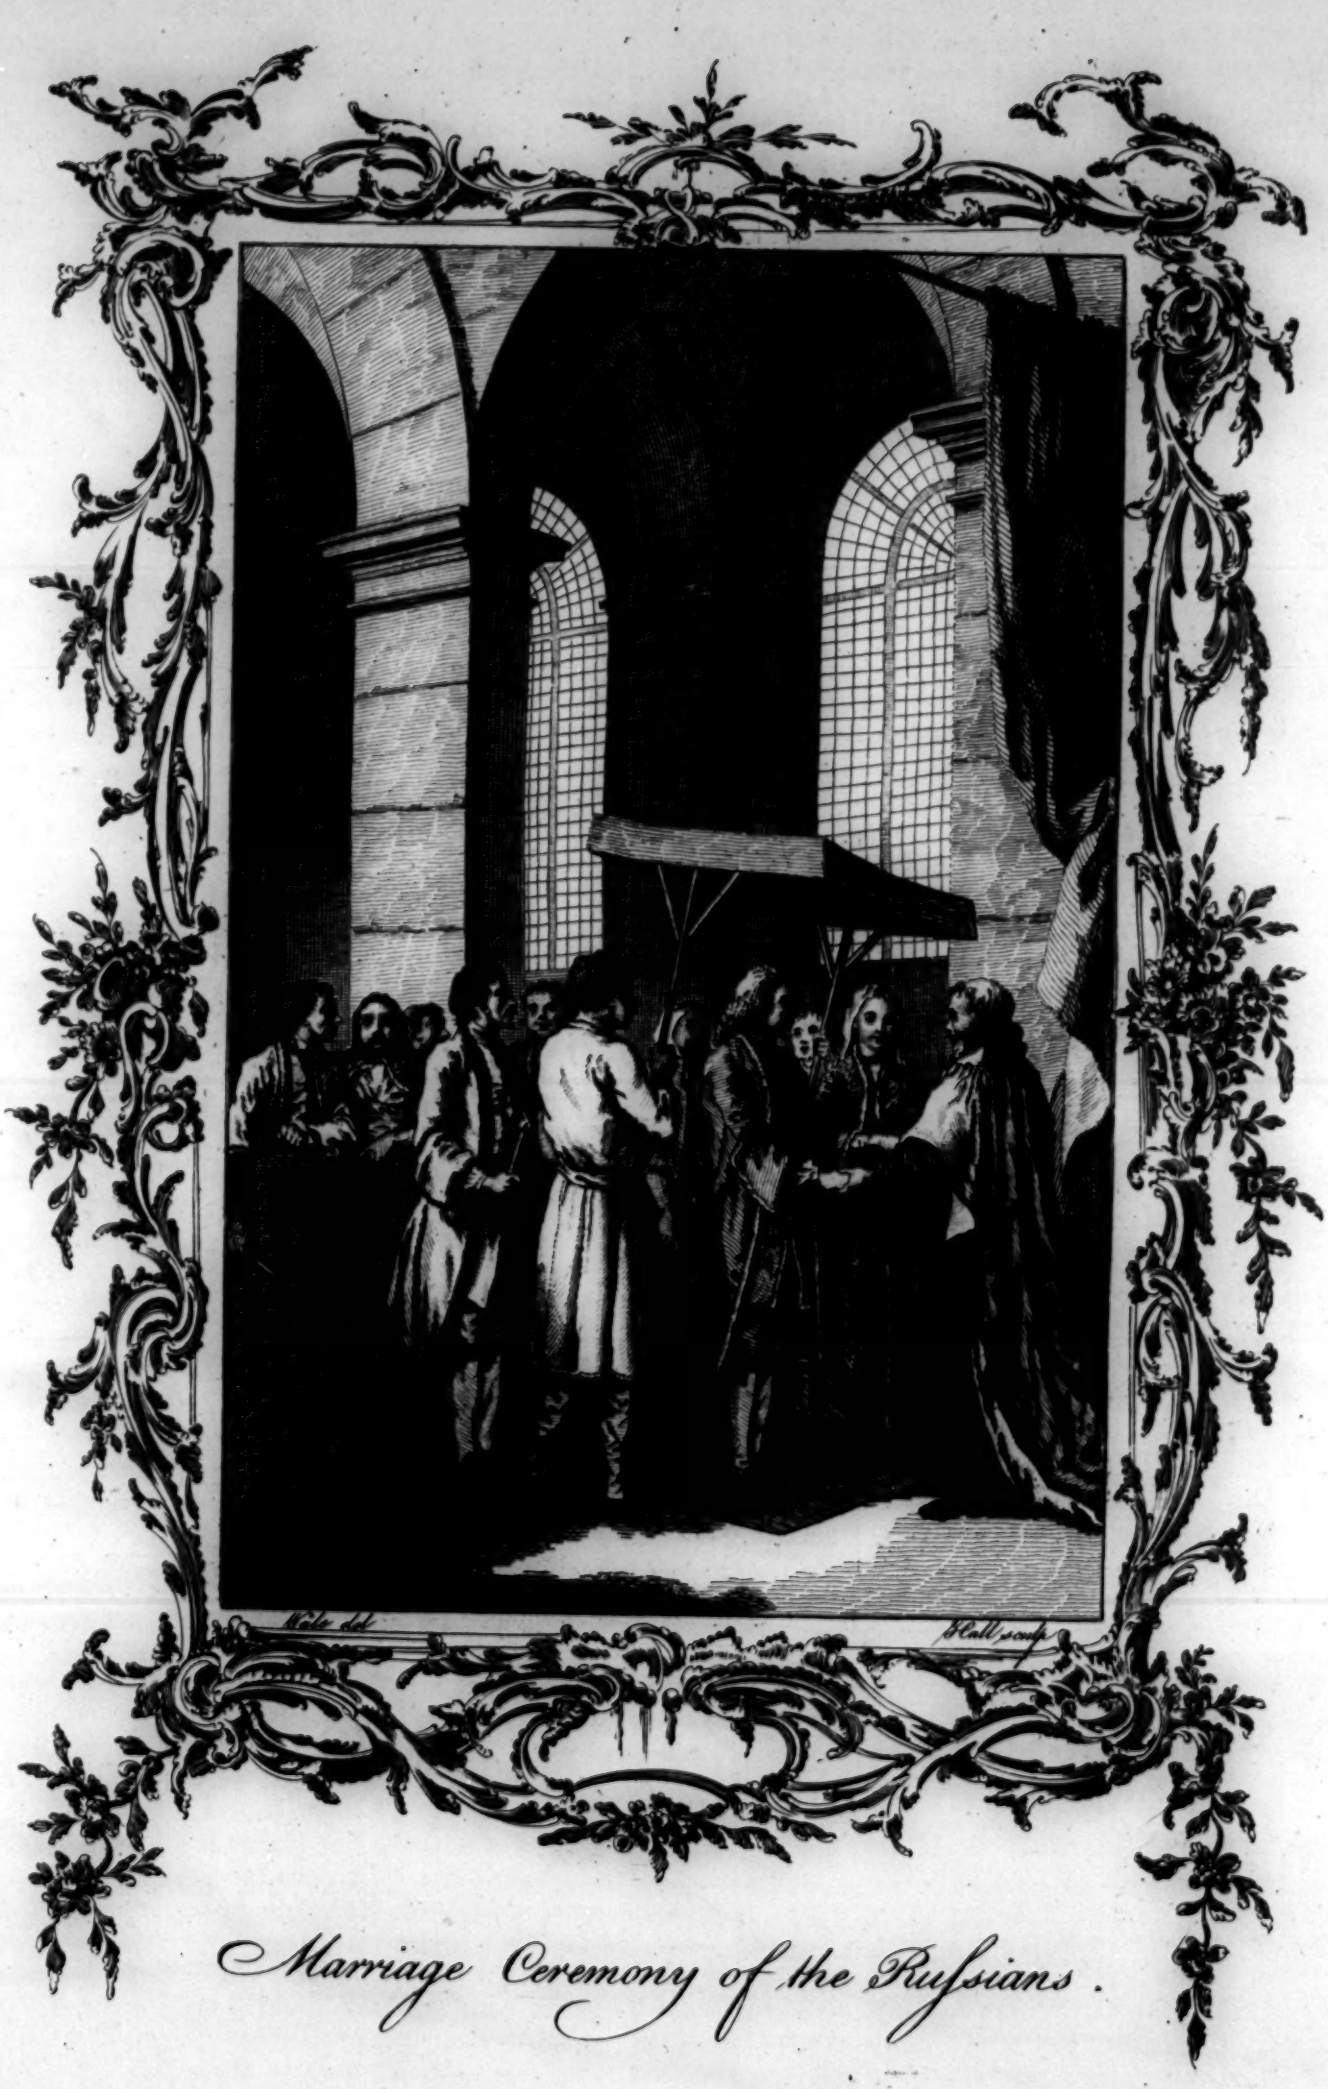
As the Ruſſians eſteem marriage a very ſacred thing, polygamy is forbidden under pain of death; the emperor himſelf being allowed only one wife at a time; though if ſhe proves barren, he may ſend her into a monaſtery, and marry another. Second marriages they conſider as allowable, but not very commendable: a third marriage is not to be undertaken but upon very weighty conſiderations; and a fourth is puniſhed with death.

Their funerals, like their other public actions, are performed with great ceremony; for the ſoul of the ſick perſon is no ſooner departed, than the widow ſends for their kindred and friends, who ſtanding round the corpſe break out into lamentations. They then waſh the body, and having put a clean ſhirt or ſhroud about him, with a new pair of thin Ruſſia leather ſhoes on his feet, lay him with his arms acroſs his breaſt, in a coffin made of the trunk of a tree, and in the mean while ſend a preſent to the prieſt to pray for his ſoul. The coffin is covered with a piece of cloth, or the coat of the deceaſed. The richer ſort, if the ſeaſon will permit, keep the body eight or ten days, during which the prieſt comes every day to purify it with incenſe, and by ſprinkling it with holy water.

At length the prieſt proceeds with the picture of the patron ſaint of the deceaſed, followed by four virgins, who are neareſt related to the latter, and make very mournful lamentations, but begin and leave off exactly at a time. Then comes the dead body carried by ſix men upon their ſhoulders; but if the deceaſed be a monk, or a nun, this office is performed by thoſe of his own profeſſion. The corpſe is ſurrounded by ſeveral prieſts, who incenſe it, to keep off the evil ſpirits, all the while ſinging Pſalms; then follow the kindred and friends with wax-candles, but without any order. On their coming to the grave the coffin is uncovered, and the prieſt holding over it the picture of the patron ſaint, ſays ſeveral prayers, in which he often repeats, "Lord look upon this ſoul in righte-"ouſneſs." Mean while the widow continues her lamentations, and the relations and friends, after kiſſing either the deceaſed or his coffin, take their leave. The prieſt then takes a piece of paper, ſigned by the biſhop of the place and the confeſſor, and is a kind of ticket for his entrance into paradiſe. This he puts into the coffin, which is then ſhut and put into the grave, with the face turned towards the eaſt; while thoſe who return to the houſe of mourning, drown their ſorrow in good liquor.

Their whole time of mourning laſts forty days, during which three feaſts are made for the relations of the deceaſed, on the third, ninth, and twentieth day after the burial; during which the prieſt ſays certain prayers morning and evening over the grave, which for that purpoſe is covered with a ſmall hut of mats: for though the Ruſſians do not believe in purgatory, but maintain that there are two places to which the ſouls of men retire after their ſeparation from the body, there to wait till the day of judgment, ſome in a pleaſant and delightful abode, where they enjoy the converſation of angels; others in a gloomy and diſmal valley, where they ſee nothing but devils; and that while the ſoul is yet on its way, it may be diverted from the evil road by the prayers of the prieſts and monks.

SECT.



Marriage Ceremony of the Ruſsians.

SECT. VI.

Of the Learning of the Ruſſians, and their Skill in Arts and Manufactures. The Method of making Caviar. The Exports and Imports. The Trade carried on by Land; and the Manner in which it is conducted at Peterſburgh. The Weights, Meaſures, and Coins of Ruſſia.

LEARNING was but little known in Ruſſian before the reign of Peter the Great; but that illuſtrious monarch ſpared neither expence nor trouble to diſpel the clouds of ignorance which overſpread his empire, and to inſpire his ſubjects with a taſte for the arts and ſciences: he founded an academy of ſciences, an univerſity, and a ſeminary at Peterſburgh; beſides other ſchools in the different parts of his empire: invited perſons of learning from England, Germany, France, and Holland, to ſettle at Peterſburgh: collected a great number of books; and encouraged his ſubjects to travel into thoſe countries where the arts and ſciences flouriſhed. Theſe wiſe and laudable meaſures were continued after his death, and the empreſs Elizabeth erected an univerſity and two ſeminaries at Moſcow. Hence many men of genius among the Ruſſians have cultivated their minds, and made a conſiderable figure in the republic of letters. Indeed the number of learned Ruſſians is but ſmall; and as there are only three univerſities in that vaſt empire, thoſe of Peterſburgh, Moſcow, and Kiow, learning may juſtly be ſaid to be yet only in its infancy in that empire. The Ruſſians are, however, far from wanting talents and a diſpoſition for learning. The ſtudies to which they chiefly apply themſelves are hiſtory, geography, and the mathematics.

We find that the members of the academy of ſciences at Peterſburgh not only publiſh collections of their own memoirs, but compoſe a variety of books for the inſtruction of youth in the ſciences, and make tranſlations of the moſt uſeful books publiſhed in foreign countries. Peter the Great eſtabliſhed the myſtery of printing, that everlaſting guardian and friend of the arts, in Ruſſia. His types and other implements for that purpoſe were brought from Holland. Indeed a preſs, with letters, had been ſent from Poland to Moſcow, and a printing-houſe erected, by the approbation of one of the former czars; but the building was ſet on fire in the night, and burnt to the ground, by the procurement, as was generally ſuppoſed, of the ignorant and ſuperſtitious prieſts, who thought all books, and eſpecially ſuch as treated of their own hiſtory, and the miracles of their ſaints, to be no leſs dangerous than witchcraft.

All the mechanic arts and trades are continually improving in Ruſſia, and theſe improvements are far from being entirely owing to the foreigners who reſide among them; for the natives being ſpurred on by emulation, frequently equal, and ſometimes exceed their maſters. They were formerly almoſt ſolely employed in agriculture, feeding of cattle, hunting, and fiſhing. They excelled indeed in making Ruſſia leather, which had been long practiſed by them; but they were entirely unacquainted with the more ingenious methanic arts. Great numbers of excellent artificers, invited by Peter the Great, ſettling in his dominions, the Ruſſians ſhewed that, with proper inſtructions, they did not want the capacity of being taught; and they have now flouriſhing manufactures of velvet, ſilk, linen, and woollen ſtuffs; alſo copper, braſs, iron, ſteel, and tin, are wrought; and great guns, fire-arms, gunpowder, wire, cordage, ſail-cloth, paper, parchment, and glaſs, are made in Ruſſia. All theſe manufactures are, however, not brought to ſuch perfection as to be carried on without the aſſiſtance of foreigners, and additional ſupplies of thoſe commodities from abroad. Beſides, thoſe made by Ruſſian workmen are ſold for one-half or a third part leſs than thoſe made by foreigners at Peterſburgh and Moſcow; and indeed they will not do more than half or a third part of the ſervice: but ſhip-building is carried to great perfection in Ruſſia. As for the Ruſſian peaſants, they are their own artiſts, and make all the utenſils they want.

As caviar forms a conſiderable branch of their commerce, it will not be improper to give here the manner in which it is prepared. It is made of the roes of the fiſh called beluga and the ſturgeon. The beſt is made of the beluga roes, and is of two ſorts; the granulated and preſſed. The former, which is moſt eſteemed, is prepared in autumn and winter, but the latter is made in ſummer, and both ſorts are exported to the ſouthern parts of Europe. The granulated ſort is firſt ſalted, after taking away the ſtringy part, with ſalt well cleaned and made into brine; and, being drained from the oily parts, it is put into kegs for exportation. Caviar is moſt palatable when freſh and ſpread on bread with ſalt, leaks, and pepper, and is therefore ſent in the winter frozen to all parts of the empire; but, as it ſoon becomes tainted by warmth, it cannot well be exported freſh.

Ruſſia affords a variety of articles of commerce, that are of great uſe to foreigners; and, as the exports of this country far exceed its imports, the balance of trade is conſiderably in its favour. The other Ruſſian home commodities are ſables and black furs; the ſkins of blue and white foxes, ermines, hyenas, linxes, ſquirrels, bears, panthers, wolves, martins, wild cats, white hares, &c. Likewiſe Ruſſia leather, copper, iron, iſing-glaſs, tallow, pitch, tar, linſeed oil, train oil, roſin, honey, wax, potaſh, ſalt-fiſh, hemp, flax, thread, calimancoes, Ruſſia linen, ſail-cloth, mats, caſtor, Siberian muſk, mamonts teeth and bones, as they are called, ſoap, feathers, hogs briſtles, timber, &c. to which may be added the Chineſe goods, rhubarb, and other drugs, with which the Ruſſians partly furniſh the reſt of Europe.

The fiſhery of ſeals, of which about ten thouſand are annnually caught, yields five thouſand meaſures of oil. The ſkins and oil are ſent to England. Morſes, or ſea-horſes, from Nova Zembla, uſed to load thirty boats a year with blubber, and their teeth are eſteemed next to ivory: but this trade being monopolized by a company, daily decays. Of cod and ſtock-fiſh, about three ſhips lading are ſent yearly to Denmark: of ſalmon, ſalted and dried, a ſhip's loading to Bilboa.

The goods imported into Ruſſia are ſilk, cotton and other woollen ſtuffs, fine linen, chintz, toys, French brandy, wine, herrings and other fiſh, ſpices, hardware, &c. In 1749, the value of the goods exported from Peterſburgh amounted to three millions one hundred and eighty-four thouſand three hundred and twenty-two rubles, and that of the imports to two millions nine hundred and forty-two thouſand two hundred and forty-two rubles. Of theſe the value of two millions two hundred and forty-five thouſand five hundred and ſeventy-three rubles were exported to England; and the value of the commodities imported from thence amounted to one million twelve thouſand two hundred and nine rubles.

But it will not be improper to enter here more minutely into the ſtate of commerce in the Ruſſian empire. The trade of Ruſſia may be divided into domeſtic and foreign, or that by land and ſea. The land-trade chiefly conſiſts of,

1. The trade to China, which is chiefly carried on by caravans, and partly by private adventurers. The moſt valuable commodities, and thoſe in the greateſt quantity, carried by the Ruſſians to China are furs; in return for which they bring back gold, tea, ſilks, cotton, &c.

2. The trade to Perſia, by the way of Aſtracan and the Caſpian ſea, is pretty conſiderable; and the returns are made in raw ſilks and ſilk ſtuffs.

3. The trade with the Calmucs, which is entirely in private hands, conſiſts of all kinds of iron and copper utenſils; in return for which they receive cattle, proviſions, and ſometimes gold and ſilver; but this trade is of no great importance.

4. The trade to Bochara, one of the chief towns of Uſbec Tartary, is either for ready money or by bartering of goods for curled lamb ſkins, Indian ſilks, and ſometimes gems brought to the yearly fair of Samarkand.

5. The traders in the Ukraine ſell all kinds of proviſions to the Crim Tartars; and alſo carry on a trade with the Greek merchants at Conſtantinople.

The inhabitants of Kiow trade to Sileſia in cattle and Ruſſia leather.

The

The Ruſſians were ſtrangers to the courſe of exchange, till it was introduced among them in the year 1670. Money was then ſo very ſcarce in this empire, that foreigners were obliged to barter their goods for thoſe of Ruſſia. Moſt of the foreign merchants then reſided at Moſcow, but took a journey in the ſummer to Archangel, where they had their warehouſes and factors. This practice continued till 1721, when, by the order of Peter the Great, the ſeat of commerce was removed from Archangel to Peterſburgh; on which the foreign traders removed their factories thither, where they are not allowed to keep the goods conſigned to them in their own warehouſes, but are obliged to depoſit them in magazines built for that purpoſe by the government, to which they pay rent for warehouſe-room, in proportion to the quantity of their goods.

The merchants and traders of Peterſburgh, as in other countries, conſiſt of natives and foreigners. The former may ſell either by wholeſale or retail; but the latter by wholeſale only, and that to none but the natives: for they are not permitted to ſell any thing to one another, or to have any commercial dealings together. Moſt of the foreign traders at Peterſburgh are only factors, and the reſt, who trade on their bottoms, deal chiefly in grocery. The factors are intruſted with large capitals, and, without engaging in commerce for themſelves, may raiſe handſome fortunes. The Ruſſian traders, who bring goods to Peterſburgh and carry foreign commodities farther into the continent, do not reſide in that city, but annually bring their goods thither in May or June by water, and in September, October, and December, return with foreign commodities; but the wealthy ſave the fatigue of travelling, by ſending their factor to Peterſburgh.

All foreign merchandizes are generally ſold at a twelve months credit; but the Ruſſian commodities muſt be paid for at the delivery of the goods, except the natives find a difficulty in ſelling their ſtock; in which caſe they deal by way of exchange; yet will not barter goods for goods, but generally inſiſt on one-fourth, one-third, or one-half of the value of the whole in ſpecie; and of late foreign merchants deal for the Ruſſian commodities by contract, and even advance the money to the Ruſſians in winter, upon condition of their delivering in the goods at a ſettled price the following ſummer; but, for the greater ſecurity, theſe contracts are entered in the cuſtom-houſe books.

The Engliſh enjoyed conſiderable privileges in trade ſo early as the reign of the czar Iwan Baſilowitz, to whom captain Chancellor delivered a letter from Edward VI. in 1553, and received a licence to trade, which was renewed by Peter the Great. In 1742 a treaty of commerce was concluded between Ruſſia and England, by which it was ſtipulated, that the Engliſh ſhould be allowed the privilege of ſending goods through Ruſſia into Perſia; but captain Elton, an Engliſhman, having entered into the ſervice of Nadir Shah, and built ſhips on the Caſpian ſea for that monarch, the Ruſſians, together with the troubles in Perſia, put a ſtop to this trade. The Engliſh, however, ſtill carry on a conſiderable trade with Ruſſia, which exceeds that of any other nation.

The goods chiefly imported from England are all ſorts of woollen manufactures, lead, tin, pewter, dying woods, indigo, olibanum, brimſtone, and lignum-vitæ. The Hollanders and Hamburghers, beſides theſe, bring wines, paper, allum, glaſs-ware, ſpices, dollars, plate, gold and ſilver lace, brocades, Sileſia cloth, &c.

The exports of the Engliſh from Ruſſia are hemp, flax, linen, train oil, pot-aſh, rhubarb, iſinglaſs, wax, tar, red hides, and caviar. The Dutch and Hamburghers receive alſo from thence wood-aſhes, maſts, hides dried, tallow, ſables, hemp-ſeed, mats, and hogs briſtles.

The Dutch carry on the greateſt trade, next to the Engliſh, with the Ruſſians. Bills of exchange are drawn at Peterſburgh on Amſterdam only; on which account the traders of other countries, who give commiſſion for buying Ruſſian commodities at Peterſburgh, are obliged to procure credit, or to have proper funds at Amſterdam.

The trade to Peterſburgh is now carried to a great height, for the number of ſhips which entered that port in 1751 from England, Holland, France, Norway, Denmark, Lubec, Hamburgh, Stetin, Roſtoc, Kiel, Pruſſia, Sweden, and Dantzic, amounted to two hundred and ninety. Indeed there is no nation in the world more inclined to commerce than the Ruſſians are at preſent; but they are ſo full of chicanery and art, that a foreigner cannot be too much on his guard in his dealings with them.

The weights peculiar to Ruſſia are a ſolothnic, which is one-ſixth of an ounce, and is divided into halves, quarters, and eighths: a Ruſſian pound, equal to ninety-ſix ſolothnics: a pud, or pood, equal to thirty-ſix pounds avoirdupois: a berkowetz, equal to ten puds. The other weights are the ſame with thoſe of Germany.

The meaſures of length are the arſhine, or Ruſſian ell, equal to twenty-eight inches and one-tenth Engliſh meaſure: a werſoc, which is one-ſixteenth of an arſhine; and a faſhen, or fathom, contains three arſhines.

All the Ruſſian coins, ducats excepted, have inſcriptions in the Ruſſian tongue. The gold coins are imperial ducats; and the largeſt ſilver coin is the ruble, the value of which riſes and falls according to the courſe of exchange. A ruble in Ruſſia is equal to an hundred copeiks, or four ſhillings and ſix-pence ſterling. The other ſilver coins are half rubles, which are called poltinnics and quarter rubles. A gryphe, or griwe, is of the value of ten copeiks; and ten griwes are equal to a ruble.

The copper coins are a copeik, which is of the value of about a halfpenny. A denga, or denuſhka, two of which make a copeik; and a poluſhka, which is a quarter of a copeik.

There are no other foreign pieces current in Ruſſia than ducats, Holland rixdollars, and Albert dollars.

Beſides the Ruſſian coins, the following are alſo current in Livonia: a white ſchelling, which is worth two black ſchellings; three of the former make one groſh, which is ſeven-fifteenths of a penny: a farding, which is one groſh and a half: a Riga mark, which is ſix groſhes: a Poliſh guilder, which is five Riga marks: a kopa-ſhock, or lowenthaler, equal to twenty-five groſhes; and a rixdollar, valued at ſixty fardings.

SECT. VII.

Of the Coronation, Titles, Arms, Court, Revenues, and Forces of the Emperor, by Land and Sea.

AT the acceſſion of an emperor to the throne, the metropolitans, archbiſhops, and biſhops, with all the nobility and principal merchants throughout the empire, are ſummoned to Moſcow againſt the day of coronation; when the archbiſhop of Moſcow conducts the emperor to the church of Precheſte, or our Lady, where a ſcaffold is erected, three ſteps high, covered with rich Perſian tapeſtry, on which are ſet three chairs at equal diſtances from each other. One of theſe is for the emperor, another for the archbiſhop, and the third for the imperial cap and robe. The robe is of purple ſattin, lined with ſable, and on the top of the cap, which is embroidered with jewels, is a ſmall crown ſet as thick as poſſible with diamonds, and ſaid to be the ſame which the great duke Demetrius Monomach took at Caffa, in Tartary, and deſtined for the coronation of his ſucceſſors.

On the prince's entering the church, the clergy begin their hymns; after which the archbiſhop prays to God, to St. Nicholas, and the other ſaints, deſiring their preſence on that ſolemn day. The prayer being ended, the chief counſellor of ſtate takes the emperor by the hand, and preſenting him to the archbiſhop, ſays, "The "knez and bojars acknowledge the prince here preſent "to be lawful heir to the crown, and deſire that as "ſuch you immediately crown him." Upon this the archbiſhop leads the prince up to the ſcaffold, ſeats him on one of the three chairs, touches his forehead with a little croſs of diamonds, and bleſſes him. Then one of the metropolitans reads the following prayer:

"O Lord our God, King of Kings, who didſt chooſe "thy ſervant David, by thy prophet Samuel, and didſt "cauſe him to be anointed king over thy people Iſrael, "attend to our prayers, which, though unworthy, we "offer up to thee. Look down from thy ſanctuary up-"on this thy ſervant, whom thou haſt choſen and ex-

"alted

" alted for king over theſe thy holy nations: anoint him " with the oil of gladneſs; protect him with thy power; " ſet upon his head a precious diadem; grant him a long " and happy life; put into his hand a royal ſcepter, and " make him ſit upon the throne of juſtice; make ſubject " to him all barbarous nations; may his heart and un- " derſtanding always continue in thy fear, and thro' " the whole courſe of his life may he obey thy com- " mandments: ſuffer not any hereſy or ſchiſm to come " near his perſon or government; but ſhew him the " ſalvation of thy holy and univerſal church, that he " may judge thy people with juſtice, protect the chil- " dren of the poor, and finally attain everlaſting life; " for thine is the kingdom, the power and the glory. " God the Father, God the Son, and God the Holy " Ghoſt, be with us, and remain with us."

This prayer being ended, the archbiſhop orders the two metropolitans to take the cap and robe; and ſome of the bojars, whom he directs to come upon the ſcaffold, are bid to put them on the prince, whom he bleſſes a ſecond time, by touching his forehead with the little croſs of diamonds; and while they ſet the ducal cap upon his head, the archbiſhop ſays, In the name of the Father, Son, and Holy Ghoſt, and bleſſes him a third time.

The archbiſhop then bids all the prelates approach, and each of them gives the emperor his benediction. The emperor and the archbiſhop then ſit down, but immediately riſe again, to order the ſinging of the Litany, every verſe of which ends with " Lord have mercy upon us," and is frequently intermixed with the emperor's name. After the Litany they ſit down again, and one of the metropolitans goes up to the altar, and ſings, " God preſerve " the health of the emperor of all the Ruſſias, whom he " hath of his love beſtowed upon us, and grant him a " long and happy life." Theſe words are echoed round for ſome time by every one preſent, after which the archbiſhop alone goes up to the prince, and tells him, " That ſince, through the providence of God, all the " ſtates of the realm, as well eccleſiaſtical as temporal, " have eſtabliſhed and crowned him emperor of all the " Ruſſias, and entruſted him with a government of ſuch " importance, he ought to apply all his thoughts to love " God, keep his commandments, adminiſter juſtice, " and protect and maintain the true Greek religion." He then bows down to the ground before the emperor, as a token of his homage; and all the reſt, eccleſiaſtics, nobles, and others, in their reſpective ranks, do the ſame. They then go to the church of St. Michael the Archangel, and afterwards to that of St. Nicholas, both of which, as well as that of our Lady, are within the walls of the palace, and, after ſinging in each of them the ſame Litany as before, conclude the ceremonies with dining in the great hall of the Kremlin.

The antient ſovereigns of Ruſſia ſtiled themſelves great dukes, and afterwards czars; but Peter the Great aſſumed the title of emperor, and that title is now given him by all Europe. The titles of the emperor at full length are, Emperor and ſole ſovereign of all the Ruſſias, ſovereign lord of Moſcow, Kiow, Wlodimiria, Novogrod; czar in Caſan, Aſtracan, and Siberia; lord of Pleſkow; great duke of Smolenſko; duke of Eſthonia, Livonia, and Carelia; of Tweria, Ingria, Pernia, Wiatkia, Bulgaria, and lord of ſeveral other territories; great duke of Novogrod, in the low country of Tſhernickow, Reſan, Roſtow, Iaroſlaw, Bielo-ſero, Uldoria, Obdoria, Condinia; emperor of all the northern parts; lord of the territory of Juweria; of the Carthalinian, Grewzinian, and Georgean czars; of the Kabardinian, Circaſſian, and Gorian princes; and lord and ſupreme ruler of many other countries and territories.

Since the reign of Iwan Baſilowitz, the arms of Ruſſia have been, or, an eagle diſplayed ſable, holding a golden ſcepter and monde in his talons: over the eagle's head are three crowns, and on its breaſt it bears a ſhield, with the arms of Moſcow in the center, encompaſſed by ſix others, which are thoſe of Aſtracan, Siberia, Caſan, Kiow, and Wlodimiria.

The power of the Ruſſian emperor is as abſolute and unlimited as poſſible. Peter the Great publiſhed an ordinance, by which the ſucceſſion was entirely to depend on the will and pleaſure of the reigning ſovereign; and this is the only written fundamental law in relation to the ſucceſſion.

The Ruſſian court has always been very numerous and magnificent, it being filled, particularly on ſolemn occaſions, by the bojars or privy counſellors, and by the nobles and gentry, who are obliged to pay a conſtant attendance, by titles of honour and diſtinction, without any ſalary; as the carvers, who are always two of the firſt nobility, and whoſe employment is eſteemed extremely honourable; the ſewers, who carry meſſages of importance, receive ambaſſadors, &c. and the gentlemen of the bed-chamber. Theſe two laſt titles are given to a great number of perſons, and deſcend from father to ſon, though they are generally confirmed by the prince; and laſtly, the chief merchants. On public feſtivals and days of ceremony all theſe antiently received rich brocade gowns, lined with furs, from the treaſury, which they returned as ſoon as the appearance was over. Peter the Firſt, however, aboliſhed theſe formalities, without ſettling any other court, either to ſave the expence during the wars in which he was engaged, or from his particular temper, which was averſe to ſuch conſtraints. On any ceremony he was attended by the chief officers of his army, and only ſome of his nobility. The former pomp has, however, been ſince reſtored, and augmented by the addition of three orders of knighthood, created by the great prince we have juſt mentioned.

The firſt and moſt honourable is that of St. Andrew, or the blue ribbon, inſtituted by Peter the Great in 1698, in honour of St. Andrew, the patron of Ruſſia. The empreſs Catharine gavè the ſtatutes, and aſſigned proper habits for this order, which hath its enſigns, motto, and collar.

The ſecond is the order of St. Alexander Newſki, or the red ribbon, which was inſtituted by Peter I. but the czarina Catharine firſt conferred it in the year 1725. This order has alſo its badge and motto.

There is likewiſe a female order founded by Peter in 1714, in honour of his conſort Catharine, and from her called the order of St. Catharine. Theſe honours, as Voltaire obſerves, command reſpect, coſt the ſovereign nothing, and flatter thoſe who receive them, without adding to their power.

The chief officer under the emperor is the chancellor, after whom is the grand maſter of the houſhold, the maſter of the horſe, the treaſurer, comptroller, chamberlain, taſters, harbingers, &c.

An hundred and fifty tables are now ſpread twice a day at the Ruſſian court, and ſerved with eighteen hundred diſhes; for this purpoſe the court-purveyor receives two thouſand rubles every three days, excluſive of the produce of the crown eſtates, and the proper quantities of wine, ſugar, and ſpices. The daily conſumption of coffee amounts to one pud, or thirty-ſix pounds weight, and ſeven thouſand puds of ſalt are expended every month.

The revenues of the Ruſſian empire are variouſly computed, ſome reckoning that they amount to ſixty millions of rubles, others to twenty millions, and others again to no more than eight millions a year: but Mr. Voltaire ſays, that, according to the Ruſſian finances in 1725, they amounted to thirteen millions of rubles, reckoning only the taxes and duties paid in money, excluſive of what is paid in kind; and adds, that this ſum was then ſufficient to maintain three hundred and thirty-nine thouſand five hundred ſoldiers and ſailors; and that both the revenue and troops have increaſed ſince. It is, however, very certain that the imperial revenues bear no proportion to the vaſt extent of the Ruſſian dominions; that they do not all conſiſt of ready money, the country in many places furniſhing recruits for the army inſtead of it; and moſt of the inhabitants of Siberia pay their tribute in furs.

Theſe revenues ariſe from the annual capitation, or poll-tax, to which the vaſſals of noblemen pay ſeventy copeiks, the burghers a hundred and twenty copeiks, and the Tartars and other nations in the territory of Caſan pay a hundred and ten copeiks a man. This tax, according to Dr. Buſching, amounts to five millions of rubles.

From the demeſne lands, occupied by three hundred and ſixty thouſand peaſants, each of whom pays a hundred and ten copeiks a year, amounting in all to three hundred and ninety-ſix thouſand rubles.

From the inns and drinking-houſes, which are about two millions; the privilege of ſelling beer, mead, and malt-ſpirits being monopolized by the crown.

From the tolls and cuſtoms by land and ſea, which produce about one million one hundred and fifty thouſand rubles.

From the trade carried on by the crown in iron, potaſh, aſhes of the willow tree, rhubarb, tar, and train oil.

From the ſalt-works, which yearly bring into the treaſury ſeven hundred thouſand rubles.

From the duty on ſtampt paper, amounting to one hundred and twenty thouſand rubles.

From a tax on law-ſuits, which pay ten per cent. of the value conteſted; from hearth-money and Bath-ſtoves; and from all hackney-horſes and carriages.

From the abbey-lands, ſince their being managed by a ſecular commiſſion, for the benefit of the crown.

From the caravans to China, which is never leſs than a hundred thouſand rubles.

The produce of the public ſhows of tumblers and rope-dancers, of which multitudes are exhibited at Eaſter for the diverſion of the people, who are paſſionately fond of them, is allotted for paying the expence of the police, paving the ſtreets, &c. Beſides this, every houſe-keeper pays an aſſeſſment for his houſe and court-yard, according to the extent of the ground, which is applied to the ſame purpoſes.

The ſalaries of all civil officers are paid out of the money received by the offices belonging to their departments; and thoſe of the governors, by the offices of their reſpective governments. The ſurplus that remains in the inferior offices is ſent to the treaſury.

According to the ſtate of the Ruſſian forces drawn up by Van Hoven, in the year 1746, the army then conſiſted of two hundred and forty-ſix thouſand four hundred and ninety-four regulars, and a hundred and twenty thouſand irregulars. The fleet conſiſted of twenty-four ſhips of the line, ſeven frigates, three bomb-ketches, and two flat boats, beſides the galley fleet at Peterſburgh, conſiſting of a hundred and two gallies. The complement of the whole fleet amounted to ten thouſand five hundred and ſeventy men, of whom ſeven thouſand ſeven hundred and one were ſailors. The fleet has continued pretty nearly the ſame ſince that time; for though ſome new ſhips have been built, others have become unfit for ſervice. The men of war are laid up at Revel and Cronſtadt, and the gallies at Peterſburgh. The Ruſſians indeed have no very good harbour in the Baltick; the water at Cronſtadt, by being too freſh, does conſiderable damage to the ſhips that lie there; beſides, the mouth of the harbour is too narrow, and ſurrounded with rocks and dangerous ſands, and is ſeldom clear of ice before the end of May: nor have they now any conſtant fleet in the Caſpian ſea.

The high-admiral of Ruſſia has the rank and pay of a general field-marſhal; and the Ruſſian fleet is divided into three ſquadrons, commanded by an admiral-general in the center, who bears a white flag, with a crimſon croſs: the van has an admiral, who bears a blue flag, with a white croſs; and the rear has another admiral, who bears a red flag, with a white croſs. Each of theſe three ſquadrons has a vice-admiral, a rear-admiral, and three commodores. The gallies are commanded by an admiral, two vice-admirals, three rear-admirals, and three commodores. Their flags are of the ſame colour as thoſe of the ſquadrons to which they belong, but of a different form. When the emperor commands his fleet in perſon, his ſhip bears the royal ſtandard of the empire, which is yellow, and in the middle of it are the arms of Ruſſia.

SECT. VIII.

Of the ſeveral Colleges, or Offices for the Adminiſtration of the Affairs of Government; the Laws and Puniſhment of Malefactors.

WE ſhall now take a view of the executive part of the government, which was regulated by Peter I. by whoſe direction all the affairs of the Ruſſian empire were managed by the following councils, offices, colleges, or chanceries, as they are called.

The ſenate, or directing council, which takes care of all domeſtic affairs, receives accounts from all the colleges, iſſues out orders to them all, and is the ſupreme court of judicature, to which all proceſſes are brought by appeal as the laſt reſort.

The holy ſynod, or eccleſiaſtical council, which regulates all affairs relating to the church.

The war-college, which has the care of recruiting and exerciſing the whole Ruſſian army, except the guards, who are under the direction of the ſovereign. This office alſo receives the taxes appointed for the maintenance of the troops, and nominates the officers as high as the lieutenant-colonels. Under the war-college are the office of the general commiſſary at war, the office of ordnance, that of the under commiſſary of war, the military cheſt, the office for cloathing the army, the victualling-office, and the accompting-office.

The admiralty-college has the management of all naval concerns, without exception; and ſuch foreſts as are near navigable rivers are under its inſpection. Subordinate to it are the office of the general commiſſary of the navy, which pays and victuals the fleet, and keeps the money aſſigned for thoſe ſervices: the ſtore-office, which has the direction of the magazines, and every thing that belongs to the equipment of ſhips of war: the office which directs the building of ſhips, provides the neceſſary materials, and has alſo the inſpection of the foreſts; and the artillery-office.

The college for foreign affairs, which pays the ſalaries of the Ruſſian miniſters at foreign courts, and the expences and penſions of foreign envoys, which are always defrayed. This college alſo makes out paſſports, and decides the difficulties and diſputes that ariſe in relation to foreign miniſters. The members of this college are the chancellor and vice-chancellor of the empire, who, when any momentous affairs come under their conſideration, are aſſiſted by ſome of the counſellors of ſtate.

The college of the treaſury, which has the direction of levying all the public revenues, except the poll-tax and the produce of the ſalt-works. The office that has the care of the money ariſing from the conquered provinces is at preſent held at Peterſburgh; but all the other departments belonging to the treaſury are at Moſcow.

The ſtate-office iſſues out the public money, and gives the neceſſary directions to the chamber of accounts; hence the revenue-chambers at Peterſburgh and Moſcow are dependant on this office.

The reviſion-college is a ſort of check on the other colleges, and therefore receives and examines their accompts.

The ſalt-office has the direction of the revenues ariſing from the ſalt-works, which are appropriated to the empreſs's purſe.

The confiſcation chancery directs the ſale of all forfeited eſtates, and the levying of all fines impoſed by the other colleges.

The colleges for trade, mines, and manufactures, are diſtinct offices; and, beſides the departments from which they take their names, have alſo the management of the naval cuſtoms and tolls, and decide all diſputes in relation to commerce between merchants and traders.

The college of juſtice at Moſcow, ſome of the members of which conſtitute a college at Peterſburgh, which determines ſuits brought thither by appeal from the conquered provinces; and has likewiſe a conſiſtorial juriſdiction over the proteſtants and papiſts in that city; but on this occaſion the miniſter of the church to which the plaintiff belongs, is ſummoned to attend.

They have alſo a feudal chancery at Moſcow, that has the care of every thing relating to the eſtates of private perſons, their boundaries, or limits.

Beſides theſe, there is a college of the magiſtracy, to which all the magiſtrates in the empire are accountable for their conduct; and a privy-chancery, as it is called, that takes cognizance of all hoſpitals, diſpenſaries, medicines, &c.

In order to give a more perfect idea of this government, it is proper to obſerve, that formerly the Ruſſian nobility conſiſted ſolely of kneſes, or princes, and gentlemen; and

and that bojar, or boyar, is not a title of nobility, but antiently denoted a poſt or office, as a privy-counſellor, &c. Peter the Great added the titles of counts and barons to the former: but no birth or title, according to the wiſe regulations made by Peter I. gives a perſon rank, unleſs he merits it by his ſervices and abilities; by which means many foreigners of mean extraction have riſen to very great honours in Ruſſia: for in regard to unlimited ſubjection to their ſovereign, the nobility are on a level with the reſt of the people. Even the greateſt of them uſed formerly to glory in ſtiling themſelves the ſlaves of the czar, whenever they either ſpoke or wrote to him; but Peter I. aboliſhed this harſh term, and ordered them to uſe inſtead of it, the word ſubject.

Yet the peaſants are ſtill perfect ſlaves, and abſolutely ſubject to the arbitrary power of their lords, who may treat them as they pleaſe, provided they do not kill them; and are liable to be transferred, with all their goods, from one maſter to another. The government itſelf is in the laſt degree abſolute; and, notwithſtanding Peter's giving them the name of ſubjects, the people of all ranks may juſtly be termed ſlaves, as their lives and fortunes depend ſolely on the will of their ſovereign. Even ſuch as are employed in the ſtate have their ſhare of arbitrary power; for their proceedings being without appeal, and in the emperor's name, they often abuſe their authority, in order to ſatisfy their avarice, revenge, or other guilty paſſions. For deciding caſes between private men, they have precedents and written laws, particularly a code called Subornoe Uloſhenie, an Uniform and Univerſal Law, which Alexius Michaelowitz publiſhed in 1649, and has been enlarged by the edicts of the ſucceeding czars. The proceſs is ſummary, and the puniſhment inflicted very ſevere, though not quite ſo rigorous as formerly.

In diſputes between private perſons, where the parties are not agreed as to a matter of fact, and have no evidence on either ſide, the judge aſks the plaintiff, whether he will take his oath, that the affair was as he hath repreſented it, or refer it to the oath of the defendant. Formerly, he who offered to take his oath was once a week, for three weeks running, brought before the judge, who every day repreſented to him the importance of an oath, and the dreadful ſin of ſwearing falſely; and if after this he ſtill perſiſted in his readineſs to take his oath, though he ſwore nothing but the truth, the people would conſider him as an infamous perſon, ſpit in his face, and turn him out of church; and he was never after admitted to the communion, till his being at the point of death. They now proceed with leſs rigour: he who is to take his oath is brought before a picture of one of their ſaints, where he is aſked, whether he will ſwear upon the ſalvation of his ſoul? If he perſiſts, they give him a little crucifix to kiſs, and afterwards the picture of the ſaint, which is taken down from the wall for that purpoſe. Though the oath be indiſputably true, the perſon who takes it is not admitted to the communion for three years; and though he is not treated as infamous, people of any rank will not eaſily ſuffer him in their company; but the perjured is puniſhed with the knute, and then baniſhed. Hence the Ruſſians endeavour as much as poſſible to avoid taking an oath, though they are very guilty of prophane ſwearing, and particularly the traders have inceſſantly in their mouths po Chreſtum, by Chriſt, making the ſign of the croſs at the ſame time. Strangers are permitted to take their oaths, according to the rules of their ſeveral religions.

The office of an executioner was formerly eſteemed very honourable; but this officer is now eſteemed infamous, and the executioner is not permitted to ſell his office; for it muſt continue in his family, on failure of which, the butchers are obliged to chooſe one out of their body.

The ordinary puniſhments in Ruſſia are, the battogen, katze, and knute. The battogen is thus inflicted; he who is to receive this chaſtiſment, is ſtripped to his ſhirt, and laid upon the ground on his belly, when two men ſitting upon him, one upon his neck, and the other upon his feet, beat him on the back with little wands, or ſwitches, during the time ordered by the judge.

The katze is ſlitting the noſtrils, which was formerly inflicted on thoſe who, contrary to an old prohibition, took tobacco in ſnuff.

The knute, as given in Ruſſia, is a moſt barbarous puniſhment. Olearius deſcribes the manner in which he ſaw it executed on eight men and one woman, for ſelling brandy and tobacco without a licence. The executioner's man after ſtripping them down to the waiſt, tied their feet, and took one at a time upon his back. The executioner ſtood at three paces diſtant with a bull's pizzle, to the end of which were faſtened three thongs of an elk's ſkin untanned, with which ſpringing forward, whenever he ſtruck, he laſhed their backs with all his ſtrength, ſo that the blood guſhed out at every blow. The men had twenty-five or twenty-ſix laſhes each, till an officer who had in writing the number of ſtripes they were to receive, cried enough. The woman, who had only ſixteen, fainted away. After their backs were thus dreadfully mangled, they were all tied together by the arms, two and two; thoſe who ſold tobacco having a little horn full of it, and thoſe who had ſold brandy, a little bottle about their necks, and whipped through the city for about half a league, after which they were brought back to the place of their firſt puniſhment, and then diſmiſſed.

Many die of this cruel flagellation. But horrid as it muſt appear to every perſon of humanity, M. de la Motraye ſays, that this is only what is called the moderate knute; for when the ſentence orders it between the moderate and ſevere, pieces of fleſh are taken off at every ſtroke of the executioner; and when it is ordered to be given with the utmoſt ſeverity, the executioner ſtriking the flank, under the ribs, cuts the fleſh to the very bowels.

Offenders are ſometimes baſtinadoed on their ſoles of their feet in a moſt cruel manner.

Thieves are tortured to make them diſcover their accomplices, and confeſs their other crimes; theſe tortures are as dreadful as can be conceived. The thief for the firſt offence is only whipt from the priſon to the market-place, where he has his ears cut off, and is ſent back to priſon for two years. If he offends a ſecond time, he is whipped as before, and afterwards baniſhed into Siberia. Theft is never puniſhed with death in Ruſſia; but the receivers and concealers of ſtolen goods are puniſhed equally with the thief.

Murder is puniſhed with death. The criminal is kept ſix weeks in a very cloſe priſon, upon bread and water alone; after which he receives the communion, and is beheaded.

Merciful as they appear in caſe of murder, they ſeem deſtitute of all humanity, where a man is ſo unhappy as to be unable to ſatisfy his creditors. He who does not pay his creditor at the time agreed upon, is put into the houſe of an officer appointed for that purpoſe, and has a certain farther time allowed him to make ſatisfaction; but if he then fails, he is carried to priſon, from whence he is brought every day to a place before the chancery, where the common executioner beats him upon the ſhin bones with a wand about the thickneſs of a man's little finger, for an hour together. He is then returned to priſon, except he can procure ſecurity for his appearing again the next day at the ſame hour, to be treated in the ſame manner, till he has made ſatisfaction. This is rigorouſly executed upon perſons of all ranks, ſubjects and foreigners, men and women, prieſts and laymen; and if at laſt the debtor cannot find wherewith to pay, he with his wife and children are ſentenced to be bond ſlaves to the creditor.

SECT. IX.

Of the Government of Kiow or Kiew, with an Account of the Zaporog, the Bielogorod, and Don Coſſacs, the Haidamacs and Yaik Coſſacs; with a Deſcription of the Cities of Kiow, and Pultowa.

HAVING given a deſcription of Ruſſia in general, with the climate, manners, religion, and government of the inhabitants, we ſhall now give ſome account of the different provinces, and principal towns of the country, which contains Great, Little, and White Ruſſia, with the provinces that formerly belonged to Sweden.

den. It muſt here be obſerved, that White Ruſſia in this empire ought not to be confounded with the country of the ſame name in Lithuania, and that Red Ruſſia belongs to Poland. Dr. Buſching obſerves with reſpect to the origin of theſe names, that it is a cuſtom among theſe eaſtern people, to diſtinguiſh countries by the epithets white and black; and that by the former, they call the moſt extenſive and fertile, and by the latter, the ſmaller and leſs fruitful territories.

The Ruſſian empire in Europe is divided into governments, and every government conſiſts of certain provinces or circles. Theſe governments have been frequently altered, but according to the preſent diviſion, they are as follow: Kiew, Woraneſh and Aſow, Bielogorod, Smolenſk, Great Moſcow, Novogrod, Niſhnoy-Novogrod, Archangel, Wiburg, Peterſburg, Narva, Reval, and Riga. We ſhall begin with the countries bordering on Turky and Poland, and for the ſake of method, proceed from ſouth to north.

The government of Kiew conſiſts of part of Little Ruſſia, and is inhabited by the Coſſacs, which word ſignifies irregular troops of horſe. The European Coſſacs are, the Zaporog Coſſacs, who live below the cataract of the Nieper, ſome on the ſide next to Ruſſia, and others on the oppoſite ſide of the river; but moſt of them are ſubject to the Ruſſians: the Bielogorod Coſſacs, and a part of the Don Coſſacs, both of which are under the Ruſſian government.

The Coſſacs were known by that name ſo early as the year 948, when they lived on mount Caucaſus, and were reduced under the Ruſſian dominions in 1021. In the beginning of the ſixteenth century, the Zaporog Coſſacs fixed their habitations on the ſpacious plains along the banks of the Nieper. The Poles, ſenſible of the advantage they might receive from their defending them againſt the incurſions of the Tartars, took them under their protection in the year 1562, and engaged to pay them an annual ſubſidy, on condition of their keeping on foot a good body of troops, for the defence of the Poliſh dominions; and to bind them by ties of intereſt, gave up to them the whole country that lies between the rivers Nieper and Nieſter, and the borders of Tartary. The Coſſacs ſo induſtriouſly cultivated that fertile tract of land, that in a ſhort time it was interſperſed with large towns, and handſome villages. They continually harraſſed the Turks by their incurſions, and to prevent the latter from purſuing them, or making repriſals, ſeized on ſeveral ſmall iſlands on the Nieper, where they kept their magazines.

This alliance, though of ſuch advantage both to the Poles and Coſſacs, did not long ſubſiſt; for the former envying the latter the fine country they poſſeſſed, attempted to bring them into ſubjection; upon which the Coſſacs, fired with indignation, had recourſe to arms, and applied both to Ruſſia and the Ottoman Porte for protection. A very bloody war enſued, which, in the ſixteenth and ſeventeenth centuries, was from time to time renewed with the utmoſt fury and animoſity. The reſult of all was, that the Coſſacs remained under the protection of Ruſſia, and their former country being laid waſte in the late wars, they ſettled in the Ruſſian Ukraine; upon their receiving aſſurances from the Ruſſian court, that they ſhould be free from all taxes, and no alteration be made in their political conſtitution: in return for which, they were always to keep in readineſs a conſiderable body of troops for the ſervice of Ruſſia. But in 1708, Mazeppa their hettman, or chief, went over from the Ruſſians to the Swedes, under Charles XII. upon which Peter I. reſolved to prevent ſuch revolts for the future, and after the battle of Pultowa, ſent a ſtrong detachment into the little iſlands of the Nieper, to which the Coſſacs had fled with their wives, their children, and all their effects, and cruelly ordered them, without diſtinction, to be put to the ſword, and the plunder to be diſtributed among the ſoldiers. He alſo ſent a great number of his men into their country, and cauſed many thouſands of the Coſſacs to be conveyed to the coaſts of the Baltic, where they were put to all manner of hard labour.

Upon the death of their hettman in 1722, that office was aboliſhed, but was reſtored again in 1750, when they elected for their hettman count Raſumowſky, privy counſellor of the Ruſſian empire, preſident of the academy of ſciences, and lieutenant-colonel of the Iſhmailow regiment of life-guards; and this election was confirmed by the reigning empreſs Elizabeth.

The country of theſe Coſſacs is commonly called the Ukraine, which word properly ſignifies a frontier; it lying on the borders of Ruſſia, Poland, Little Tartary, and Turky. By virtue of a treaty concluded in 1693, between Ruſſia and Poland, the latter remains in poſſeſſion of all that part of the Ukraine that lies on the weſt ſide of the Nieper, which is but indifferently cultivated; while the country on the eaſt ſide, inhabited by the Coſſacs, is in a much better condition.

This country, which is ſubject to Ruſſia, extends about three hundred miles in length, and about as many in breadth. It is one continued fertile plain, watered by a great number of fine rivers, and diverſified with pleaſant woods. It produces all kinds of grain, pulſe, tobacco, honey, and wax, in ſuch quantities, as to ſupply a great part of the Ruſſian empire with thoſe commodities. The paſtures are extremely rich, and the cattle of an extraordinary ſize; the rivers alſo abound with excellent fiſh. This fine country, however, is very much infeſted by locuſts, which are a great plague to the inhabitants.

Moſt of the houſes of the Ukraine are built with wood, after the Ruſſian manner. The Coſſacs are tall, and well made; they have generally an aquiline noſe, and a good mien. They are vigorous, hardy, brave, and very jealous of their liberty; fickle and wavering: but ſociable, chearful, and ſprightly. Their forces entirely conſiſt of cavalry. Their dialect is a mixture of the Poliſh and Ruſſian language; but the latter is moſt predominant. They profeſs the Greek religion; but there are alſo ſome Proteſtants and Roman catholics among them; in ſhort, they are a very powerful people. Every town, with the diſtrict belonging to it, is governed by an officer called attaman, or ottoman.

The Don Coſſacs, who inhabit the banks of the river Don, greatly reſemble thoſe we have been deſcribing. In 1549 they voluntarily put themſelves under the protection of the czar Iwan Baſilowitz, and are at preſent nearly on an equal footing with the other Ruſſian ſubjects. Theſe Coſſacs have a great number of towns and villages along the banks of the Don; but the ſcarcity of wood, and in many places of freſh water, prevents their extending themſelves farther up the country. They chiefly ſubſiſt by grazing and agriculture, and occaſionally by robbing and plundering. Every town is governed by a magiſtrate, whom they call taman; and the tamans, with their towns, are under the juriſdiction of two attamans, who reſide at Tſherkaſky. The troops of theſe Coſſacs likewiſe conſiſt entirely of cavalry. Every town and village in this country is fortified and ſurrounded with paliſadoes, to ſecure them againſt the incurſions of the Calmucs and Kuban Tartars, with whom they are always at war. The Coſſacs in general are of great ſervice in garriſoning of towns and defending them, or in purſuing an enemy; but are not ſo good at regular attacks.

The Haidamacs have their particular hettman, and live in the Ruſſian, Poliſh, and Turkiſh dominions, along the banks of the Nieper.

The Yaik Coſſacs live on the ſouth ſide of the river Yaik, and on the ſucceſs of the Ruſſian arms in the kingdom of Aſtracan, voluntarily ſubmitted to them. In ſtature they much reſemble the other Coſſacs, though from their booriſh manner of living, and intermarrying with the Tartars, they have not the ſhape and air peculiar to the reſt of their countrymen; but reſemble them, however, in their natural diſpoſitions and cuſtoms. Their chief employments are agriculture, fiſhing, and feeding cattle; and, like the other tribes, they ſeldom let ſlip an opportunity of robbing their neighbours. Their continual wars with the Kara Kalpacs oblige them to keep their towns and villages in a ſtate of defence. They are indeed ſubject to Ruſſian waywodes, to whom they annually pay a tribute in cattle, corn, honey, and wax; but have their particular chiefs, who govern them according to their antient cuſtoms. The greateſt part of the Yaik Coſſacs profeſs the Greek religion; but many relics of Mahometiſm and Paganiſm are ſtill to be found amongſt

amongſt them. They are remarkable for their hardineſs and courage, and make excellent ſoldiers. They live in peace, and even carry on a commercial intercourſe with the Calmucs.

The government of Kiow conſiſts of ten circles, the moſt conſiderable cities of which are Kiow and Pultowa.

Kiow, or Kiew, the capital of this government, which is ſituated on the Nieper, is ſaid to have been founded by Kius, a Sclavonian prince, and, according to the Poliſh writers, was built in the year 430; but this account is not to be depended upon. However, in the year 1037, the great duke Jaroſlaw declared it the capital of all Ruſſia; and it continued to be the reſidence of the great dukes till the twelfth century. It afterwards fell into the hands of the Poles; but, in 1667, they reſtored it to the Ruſſians for a certain term of years, and in 1686 ceded it to Ruſſia for ever.

This city properly conſiſts of three ſmall towns, the caſtle of Petſherſky, with its ſuburbs; the old city of Kiow; and the town of Podol, which lies below the latter: theſe are partly incloſed with a common fortification, and in other parts have a communication by a large intrenchment, carried on as the inequality of the mountains would permit. The whole garriſon conſiſts of ſeven regiments of foot, and is governed by a ſtatthalter general, a deputy ſtatthalter, and a commandant.

The caſtle of Petſherſky ſtands on an eminence facing the ſouth, and, beſides magazines, barracks for the garriſon, officers houſes, and ſome churches, includes a rich and ſtately monaſtery, founded in the eleventh century, and called Petſherſky, from the monks formerly living in a petſhera, or cavern, in the mountain on which the convent now ſtands. In its ſubterraneous vaults, which reſemble a labyrinth, and contain chapels, cells, &c. are found a great number of undecayed bodies, ſuppoſed to be the remains of ſaints and martyrs; and here the bodies of the deceaſed monks are alſo depoſited. Oppoſite to this monaſtery formerly ſtood a nunnery, which is now converted into a magazine. The ſuburbs of Petſherſky are very large, conſiſting of houſes belonging to the above-mentioned convent; and alſo of ſeveral convents and churches, the principal of which is the convent of St. Nicholas.

Old Kiow is ſeated on an eminence facing the north, and is fortified, according to the mountainous nature of the country, with horn-works, &c. Here ſtands the cathedral of the Greek archbiſhop of Kiow, Halitſh, and Little Ruſſia, who reſides in the convent of St. Sophia. To this church and the convent of St. Michael belong moſt of the houſes in the city.

Podol is ſituated below Old Kiow, in a plain on the banks of the Nieper, and, except its churches and convents, conſiſts entirely of ſhops and tradeſmen's houſes. Its magiſtrates are independent of the colonels of the regiments in garriſon, and receive their orders immediately from the war-office at Glucow. The academy adjoining to the Bratſkoi monaſtery, near the town-houſe, is entirely built of ſtone, and is one of the nobleſt edifices in the city. The univerſity of Kiow has the archbiſhop for its principal, and under him are two officers, who have the care of the ſtudents. There are nine profeſſors, who live in a wooden building, to which belongs a delightful garden: theſe are all monks, and are not to taſte fleſh throughout the whole year; but are ſaid to make little ſcruple of tranſgreſſing this rule in ptivate. Their ſalaries are but ſmall, ſo that they are chiefly maintained by the ſtipends and preſents they receive from the ſtudents, who amount to about one hundred. Public lectures in all the ſciences are read to them, and they alſo perform ſeveral exerciſes, according to the cuſtom of other univerſities, as public diſputations, and the like, beſides ſome others peculiar to themſelves. While this city was ſubject to the Poles, the papiſts had a biſhop, a Dominican convent, a college of Jeſuits, and ſeveral churches there, which are all ſuppreſſed, and appropriated to the uſe of the profeſſors of the Greek religion.

Pultowa, or Pultawa, a town ſituated on the river Worſkla. This town, with the regular fort belonging to it, is ſubject to a commandant, and not to the colonel of the regiment of Coſſacs in garriſon there. The burghers carry on a conſiderable trade to the Crimea, and through Poland to Germany. It is but an indifferent town, built in the manner of thoſe of the Coſſacs; but was rendered famous by its being beſieged by the Swedes in 1709, and by its falling into the hands of the Ruſſians after the defeat of Charles XII. near this place. The king of Sweden had his head-quarters at a monaſtery which ſtands upon an eminence without the town.

SECT. X.

Of the Governments of Woroneſh and Aſow, Bielogorod, Smolenſk, and Niſhnei Novogrod; the Number of Circles into which each is divided; and a conciſe Deſcription of the principal Towns they contain.

THE government of Woroneſh and Aſow includes ſix diſtricts, the moſt remarkable places of which are,

Woroneſh, a large and populous provincial city, ſeated in a narrow, but very deep, river of the ſame name. It is ſurrounded with a wall, and is the reſidence of the ſtatthalter, or governor, and a biſhop's ſee. Moſt of the ſtreets, inſtead of ſtone pavements, are laid with beams of timber. Peter I. in order to maintain his ſovereignty over the Black ſea, cauſed a large dock to be made for building of ſhips, which drew many new inhabitants thither, among whom were ſeveral foreign artificers. This city carries on a conſiderable trade.

Bachmut, on a river of the ſame name, is ſituated partly on an eminence on its weſtern bank, and partly in a plain on the eaſt ſide of that river. The former is defended by a citadel, and indeed the whole town is fortified for the ſecurity of the ſalt-works. The imperial ſalt-office at Bachmut maintains a battalion of regular troops, and a company of Coſſacs, conſiſting of a hundred men. The country, which is ſituated between the Donez, the Don, the Black ſea, Mius, and Kalmius, exceeds all the reſt of Little Ruſſia in fertility; and has alſo ſeveral ſpots that are ſuppoſed to contain rich ore.

The Don Coſſacs who dwell in this government are poſſeſſed of many ſmall towns ſituated on the rivers Don and Donez. Their capital, named Tſherkaſk, is the reſidence of the attoman. It is built in the Turkiſh manner, and part of it encompaſſed with high paliſadoes fixed on the Don. This city is of large compaſs; it is inhabited by a great number of Aſiatics, and carries on a great trade.

At the diſtance of four werſts is the city of St. Anna, a new town, regularly built and fortified by the Ruſſians. It is but ſmall, and is ſeated low on the banks of the Don. It has ſix baſtions and the neceſſary out-works, with a garriſon conſiſting of two marching and two garriſon regiments. The houſes are well built, the ſtreets broad and ſtraight.

The government of Bielogorod contains part of Little Ruſſia, and is divided into five diſtricts.

The capital of the government is Bielogorod, which ſtands on the river Donez, and was built in the year 990. About an Engliſh mile from the town is a large chalk hill, where Bielogorod formerly ſtood, and from which it derives its name, which ſignifies a white town; but it was afterwards built in a valley between two mountains. It is divided into the Old and New Town; it has three ſuburbs, and is a biſhop's ſee. The Old Town is ſurrounded with a rampart and moat, and the New Town with paliſadoes.

The government of Smolenſk contains White Ruſſia, properly ſo called, which was ceded by Poland to Ruſſia by a treaty concluded in 1667, and confirmed in 1686.

The moſt remarkable place in this government is,

Smolenſk, a large and well fortified town on the Nieper, the reſidence of the governor, and a biſhop's ſee. It carries on a conſiderable trade, and is famous in hiſtory from its being the ſubject of many diſputes between the Poles and Ruſſians; during which it was often beſieged and taken by both parties.

The government of Niſhnei Novogrod is inhabited by the following tribes: the Morduans, whoſe language is ſaid to reſemble the Finlandiſh dialect; the Tſheremiſſians, diſtinguiſhed into the Logowoi, who inhabit the plain on

the left ſide of the Wolga; and the Nagornoi, who live among the mountains on the right ſide of that river. The former belong to this government; but the greateſt part of the latter to that of Caſan. The Tſhuwaſhians, who live diſperſed in this government and that of Caſan, are a numerous tribe. They worſhip one ſupreme God, whom they call Tora, and conſider the ſun as a kind of ſubordinate deity, to whom they pay their adorations; and they have ſeveral other inferior deities, which, they ſay, hold the ſame rank with the ſaints of the Ruſſians. Every village has its own idol erected in a ſquare, incloſed with paliſadoes. They perform their devotions to it near a fire, where they offer a ſheep to the idol, and hang up the ſkin for a trophy in honour of it. The perſon who performs this ſacrifice, to whom they have recourſe in every difficulty, is ſtiled Yumaſſe; and both ſexes are capable of this religious office. Great numbers of theſe Pagans have been baptized; and throughout all the Ruſſian towns in the diſtricts where they live ſchools have been erected, for inſtructing their youth in the principles of the Chriſtian religion, in order to qualify them for being miſſionaries among their own tribe. This government contains four circles, and the principal place in this juriſdiction is Niſhnei Novogrod, that is Lower Novogrod, which is a large provincial city ſeated on the Wolga, at the influx of the river Oka. It was built in the year 1222, and has two cathedrals, twenty-eight pariſh churches, moſt of which are built with ſtone, and five convents. It is an archbiſhop's ſee, and is defended by a caſtle ſurrounded with ſtone-walls. The trade of this city is very conſiderable, and the ſhops make a handſome appearance, from their being richly furniſhed with all kinds of foreign goods, as well as thoſe made in Ruſſia. In the year 1715 a great fire broke out here, in which ſome thouſands of the inhabitants loſt their lives.

SECT. XI.

Of the Government of Moſcow; with a particular Deſcription of the Capital of the ſame Name.

THE government of Moſcow is the beſt cultivated and the moſt populous in the whole empire, and may be called the garden of Ruſſia. It contains eleven provinces, the principal places in which are the city of Moſcow and Yaroſlawl.

Moſcow, the antient capital of the Ruſſian empire, and the reſidence of the czars, is ſituated in the circle ofits own name, in the fifty-fifth degree forty minutes latitude, and the thirty-eighth degree eaſt longitude; fourteen hundred and fourteen miles north-eaſt of London. It ſtands in a pleaſant plain on the bank of the river Moſkwa, from which it derives its name. Mr. Hanway ſays, that river runs through it, and, making many windings, adds a very ſtriking beauty to the city; but in ſummer it is in many places ſhallow and unnavigable. Several eminences, interſperſed with groves, gardens, and lawns, form the moſt delightful proſpects. It is built ſomewhat after the eaſtern manner, it having but few regular ſtreets, and a great number of houſes with gardens. The number of the churches in the city is computed at ſixteen hundred, among which are eleven cathedrals, and two hundred and ſeventy-one pariſh churches; the reſt either belong to convents, or may be conſidered as private chapels. Near the churches are hung up ſeveral large bells, which are kept continually chiming. One of theſe is of a ſtupendous ſize, and, our author obſerves, affords a ſurpriſing proof of the folly of thoſe who cauſed it to be made; but the Ruſſians have from time immemorial been extremely fond of great bells. This bell is four hundred and forty-three thouſand ſeven hundred and ſeventy-two pounds weight, and was caſt in the reign of the empreſs Anne: but the beam on which it hung being burnt, it fell, and a large piece is broke out of it. Many of the churches have gilt ſteeples, and are magnificently decorated within with paintings; but indeed moſt of theſe are miſerable daubings, without ſhade or perſpective.

The number of public edifices and ſquares at Moſcow amount to forty-three. The mean houſes are indeed much more numerous than thoſe that are well built; the latter are, however, daily increaſing; but, as only a part of the ſtreets is paved, they are very dirty.

The city is divided into four circles, one within another. The interior circle, or the Kremelin, which ſignifies a fortreſs, contains the following remarkable buildings: the old imperial palace, pleaſure-houſe, and ſtables, a victualling-houſe, the palace which formerly belonged to the patriarch, nine cathedrals, five convents, four pariſh churches, the arſenal, with the public colleges, and other offices. All the churches in the Kremelin have beautiful ſpires, moſt of them gilt, or covered with ſilver. The architecture is in the Gothic taſte; but the inſide of the churches is richly ornamented; and the pictures of the ſaints are decorated with gold, ſilver, and precious ſtones. In the cathedral called Sobor, which has no leſs than nine towers, covered with copper double gilt, is a ſilver branch, with forty-eight lights, ſaid to weigh two thouſand eight hundred pounds. Here are depoſited, in ſilver ſhrines, the remains of three archbiſhops; and in a gold box is a robe brought from Perſia, which is here looked upon as the identical garment worn by our Saviour. The remains of the ſovereigns of the Ruſſian empire, and their male deſcendants, are interred in St. Michael's church; and thoſe of their conſorts, and the princeſſes, are depoſited in the convent of Tſhudow. All theſe ſtructures are lofty, ſpacious, and built with ſtone. This circle is three hundred fathoms in diameter, and ſurrounded with very high and thick walls, flanked with ſix towers, planted with cannon, and alſo defended by deep moats and ramparts.

From the above circle you paſs over a handſome ſtone bridge into the ſecond, which is called Kitaigorod, or the Chineſe-town. There are here five ſtreets, two cathedrals, eighteen pariſh churches, four convents, thirteen noblemen's houſes, and nine public edifices: theſe are the chief diſpenſary, in which the medicines are kept in veſſels of China porcelain, decorated with the imperial arms; and from this place the whole empire is ſupplied with medicines: the mint, which is a ſuperb ſtructure: a magazine, or warehouſe, to which all goods are brought before they have paid duty: the cuſtom-houſe: the ambaſſador's palace, which is now converted into a ſilk manufactory: a printing-houſe: a court of judicature: the phyſic garden: and the exchange, in which are about ſix thouſand handſome ſhops; here all commercial affairs are tranſacted, particularly what relates to the trade with China, whence this circle contains many merchants. This part of the city is fortified with a pretty high wall, ſtrengthened with twelve towers and ſtrong bulwarks.

The third circle ſurrounds the former, and is named Belgorod, or the White Town, from a white wall with which it is encompaſſed. It is alſo called the Czar's Town. The Neglina runs through this part of the city, from north to ſouth; but though there are in this circle ſeveral kneſes, bojars, merchants, and tradeſmen, it is in many parts very dirty, and moſt of the houſes are very mean. It includes ſeventy-ſix pariſh churches, ſeven abbeys, eleven convents, and nine public edifices: theſe are two palaces, a cannon foundery, two markets, a brewhouſe, a magazine of proviſions, the ſalt-fiſh harbour, and the Baſil garden. At the timber-market are ſold new wooden houſes, which may be taken to pieces and put together again, where the purchaſer pleaſes.

The fourth circle, called Semlanoigorod, that is, a town ſurrounded with ramparts of earth, incloſes the three preceding parts, and its ramparts include an area of great extent. The entrance was formerly by thirty-four gates of timber, and two of ſtone; but at preſent only the two laſt are ſtanding. Over one of theſe gates is a mathematical ſchool, and an obſervatory. This circle contains a hundred and three pariſh churches, two convents, an imperial ſtable, an arſenal for artillery, a mint, a magazine for proviſions, and a cloth manufactory. Round theſe principal parts of the city lie the ſuburbs, which are of great extent, and contain ſixty pariſh churches and ten convents. Theſe ſuburbs reſemble the

villages

villages in other parts of the country, except the German quarter, which is the largeſt and handſomeſt, and contains two Luthearn churches, a grammar ſchool, a Calviniſt church, and a Romiſh church. This ſuburb is ſituated towards the eaſt on the river Yauſa; to the weſt of it lies the palace of Annenhof, which has a good garden; and towards the north is a large and ſtately hoſpital. Farther to the weſt ſtands the palace of the empreſs Elizabeth.

The number of inhabitants are ſuppoſed to amount to about a hundred and fifty thouſand. Theſe conſiſt of ſtateſmen, noble families, and their ſervants, merchants, prieſts, monks, and ſervants belonging to the churches, mechanics, labourers, carriers, and ſledge drivers.

Moſcow has greatly declined ſince the building of Peterſburgh, and its being made the ſeat of the empire. An univerſity and two gymnaſia, or ſeminaries, were founded here in the year 1755. Moſcow has often ſuffered by fires, and in 1737, 1748, and 1752 a conſiderable part of it was reduced to aſhes, eſpecially by the laſt fire, which conſumed above half the city, together with the noble diſpenſary and the czarina's ſtables. But the houſes are always ſoon rebuilt after ſuch a calamity, they being for the moſt part formed of very mean materials. The gardens in its neighbourhood yield a variety of fruit, and are particularly famous for the tranſparent apple, called by the Ruſſians naliwy.

In this government are ſeveral conſiderable places, among which is Garoſlawl, a large and well built town, the capital of a circle of the ſame name; it has a good trade, and is celebrated for its Ruſſian leather. The ſhops in the large exchange make a very grand appearance, and are well ſtocked both with home and foreign goods. Here is alſo a conſiderable manufacture of all kinds of linen and flowered woollen ſtuffs. The Ruſſian church, which ſtands near the manufactory, is built in the German taſte, and has few equal to it in this country.

One of the moſt remarkable places in the circle of Moſcow is the convent of the Holy Trinity, which is the largeſt and beſt endowed of any in Ruſſia; the number of peaſants who are its vaſſals being no leſs than twenty thouſand. It is ſituated at the diſtance of ſixty werſts from Moſcow, and is built in a quadrangular form, in the old Gothic taſte. It is incloſed with ſtrong walls, ramparts, and moats, and is always garriſoned by a company of ſoldiers. The convent itſelf is a ſpacious, lofty, and handſome ſtructure. The great church is very ſplendid, and has a fine tower, in which are ſeveral valuable bells. Beſides the principal church there are nine others, and a grammar ſchool, within the incloſure of the convent. The number of monks who reſide here is ſaid to amount to about ſix hundred. This was the place where Peter I. took ſhelter after he had narrowly eſcaped the hands of the Strelitzes, who had been ſpirited up againſt him by Sophia his half ſiſter. It has been an antient cuſtom for the ſovereign of the Ruſſian empire to go in pilgrimage to this place. Here are ſeveral dead bodies, which, from natural cauſes, remain undecayed. There is a ſmall town near the convent.

SECT. XII.

Of the Governments of Archangel and Novogrod; with an Account of the Samoiedes, in the former Government; and the principal Places in each.

THE government of Archangel includes a part of Lapland, of which we ſhall give a more particular account in treating of Sweden; but, as great numbers of the people called Samoiedes live in this government, it will be proper to take ſome notice of them.

The Samoiedes inhabit the coaſt of the northern ocean both in Europe and Aſia, and we have already given ſome account of them in treating of Siberia. The word Samoiede is ſaid to ſignify man-eater, it being imagined, without any foundation, that theſe people devoured their deceaſed friends and the priſoners taken in war. The Samoiedes that live in the government of Archangel are entirely ſeparated from the reſt of that nation, and as it were excluded from any intercourſe with them. They have alſo a different language; yet as to their religion and cuſtoms, they entirely agree. They are low of ſtature, and their feet, eſpecially thoſe of the females, are remarkably ſmall. Their tawny complexion, longiſh eyes, and puffed cheeks, give them a very diſagreeable appearance in the eyes of ſtrangers. They are poor, ſimple, and undeſigning.

Their winter-dreſs is made of the ſkins of rein-deer, with the hairy ſide outwards; and the cap, coat, gloves, breeches, and ſtockings, are generally ſewed together; ſo that the whole ſuit makes but one piece. In ſummer they wear fiſh-ſkins, and inſtead of thread uſe the nerves of wild beaſts cut into long filaments.

They all ſubſiſt by hunting and fiſhing: the fleſh of rein-deer, bears, ſeals, fowls, dried fiſh, and turnips, being their uſual food. The fleſh they eat partly raw and partly boiled. Their weapons for hunting are javelins, bows, and arrows pointed with bone; they have alſo ſome darts bearded with iron. When they find it difficult to ſubſiſt in one place, they remove to another. Their ſummer huts are covered with the bark of birch trees; but in winter, with the ſkins of rein-deer. Their whole riches, and all they poſſeſs conſiſts in tents, cloaths, and rein-deer. Both ſexes wear the ſame kind of dreſs, and as their features are equally diſagreeable, it is not eaſy to diſtinguiſh them.

Their marriages are attended with no other ceremony than merely an agreement between the parties; but tho' polygamy is not prohibited among them, few of them have more than one wife. The Samoiedes, like the Oſtiacs, call their new born children by the name of the firſt animal they meet, or if they firſt happen to meet a relation, he generally names the child.

Before they were brought into ſubjection to the Ruſſian government, the only puniſhment among them was to ſell the perpetrator of any heinous crime, as murder, &c. together with his whole family, for ſlaves. But the Ruſſian laws are now introduced into the principal places in this country.

They know very little of a Supreme Being, but pay their adorations to miſhapen wooden images of men, beaſts, birds, and fiſhes. They alſo pay a kind of worſhip to the heads of beaſts of prey, particularly thoſe of bears, which they put up in the woods, and fervently pray to. Their prieſts, whom they term ſhamans, or codeſnics, are choſen from among thoſe who are moſt advanced in years, and theſe they imagine can make known to them the will of their gods, foretel future events, and by their ſtrange geſtures, and ridiculous grimaces, perform all kinds of magical operations.

Before the reign of the czar Iwan Baſilowitz, the only magiſtrate among them was the oldeſt man in the family or village, to whom the reſt were ſubject. But in his reign, a perſon called Anica Stroganow, ſent his ſon to make diſcoveries in this country, who on his return made an ample report to the government. The Ruſſians were not a little fond of the fine furs it produced, and the czar immediately ordered ſeveral forts to be built in different parts of the country. The Samoiedes readily ſubmitted to pay a tribute of furs, which was impoſed on them, and by degrees the habitable places were peopled by Ruſſian colonies and governors. The Samoiedes made two attempts to ſhake off the Ruſſian yoke; but were ſoon reduced. They have the fineſt furs in all the Ruſſian empire, which they diſpoſe of to the Ruſſians for trifles, and when they meet with ill ſucceſs in hunting and fiſhing, they exchange them for meal; this they mix with water, and eat it out of a kettle which always hangs over the fire.

In this government are twelve circles, the moſt conſiderable places in which are:

Archangel, the capital of this government, which is ſituated in ſixty-four degrees thirty-four minutes north latitude, and in forty degrees twelve minutes eaſt longitude from London, on the banks of the river Dwina, about four miles from its entrance into the White Sea. This city is about three Engliſh miles in length, and one in breadth, and the houſes are all built of wood, after the Ruſſian manner, except the exchange of the merchants, which is of ſtone. The citadel, where the governor reſides, is ſurrounded with a kind of wall made of large

large pieces of timber. This city is a biſhop's ſee; but both the Lutherans and Calviniſts have their reſpective churches there.

The foundation of its commerce was laid by the Engliſh in the year 1553, and the advantages they reaped from the Ruſſia trade, ſoon prompted other nations to put in for a ſhare of it. Proviſions are there ſold very cheap; but the gradual increaſe and proſperity of Peterſburg has made this city decline in the ſame proportion. A poſt has, however, been eſtabliſhed for the convenience of trade between this town and Peterſburg.

Uſtiug Weliki, or Great Uſtiug, the principal town of a circle of its own name, is ſituated near the conflux of the rivers Sucſona and Jug; but formerly ſtood at the mouth of the latter, from which it derives its name. This city is about three werſts and a half in length, and half a werſt in breadth; it contains twenty-three churches, beſides five convents, and is an archbiſhop's ſee. Though it is ſituated in ſixty-one degrees fifteen minutes latitude, yet the fruits of the earth often come to maturity. It has a communication by water with Archangel and Wologda, which renders it ſo convenient for trade, that moſt of its inhabitants are merchants, and ſome of them are very wealthy. Thoſe who go from Archangel to Siberia, generally paſs through this city.

The laſt place we ſhall mention in this government is that of Wologda, which is alſo a provincial city, and ſtands on a river of the ſame name. It has ſeventeen hundred dwelling houſes, ſixty-eight churches, two convents, with four churches, and a German ſuburb, tho' very few of that nation at preſent live there. It has alſo two ſuburbs inhabited by ſledge drivers, in which are two churches, beſides a convent of monks, which has four chapels. This city, which is the ſee of an archbiſhop, was formerly in a flouriſhing condition, and carried on a conſiderable trade. Its commerce now conſiſts of hemp, hemp-ſeed, and matting, made of the bark of lime-trees, which the inhabitants ſend to Archangel in a few large barges that belong to the town: they alſo ſend Ruſſia leather and tallow by land to Peterſburg. Archangel, on the other hand, ſupplies Wologda with foreign commodities, which are ſold here very cheap. Moſt of the inhabitants of this town are traders: the Dutch and Germans have been ſettled here for a long time paſt, and upon the taking of Narva, the greateſt part of the inhabitants who were made priſoners, was ſent to this town, where they provided for themſelves ſo well by their induſtry, that they returned back with reluctance.

The government of Novogrod or Nowogrod, includes the dutchy of the ſame name, or the iſland of Great Novogrod, conquered by the Ruſſians in 1478. In this country lies the lake of Ilmen, from which the river Wolcow runs; and thoſe great rivers called the Wolga, Nieper, and the Poliſh Dwina, have alſo their ſources in this province. This government includes five circles or diſtricts, the moſt remarkable places in which are,

Great Novogrod, the capital of a circle, and a very ancient, large, and celebrated city, ſeated on the river Wolcow, juſt where it runs out of the lake of Ilmen. This is a place of conſiderable trade, and the ſeat of a governor. It was firſt built in the ninth century by the Sclavonians, and was a famous ſtaple of the Hanſe-towns, till the year 1494, when it grew ſo powerful, that it became a proverbial ſpeech, "Can any body with-"ſtand God and Novogrod?" But by frequently falling into the hands of its enemies, and the many conflagrations, which, from time to time, have happened in this city, it is ſo far reduced, as to have ſcarce any remains of its former grandeur. The churches and convents are alone worthy of notice, the reſt of the town conſiſting of ſmall wooden houſes; it is, however, an archbiſhop's ſee.

St. Anthony's convent is ſituated by the river Wolcow, about two werſts from Novogrod, and is the principal monaſtery in the country. St. Anthony, its founder, was buried there in 1147, and beſides his monument, here is ſhewn a mill-ſtone, on which his votaries firmly believe, and gravely aſſert, that he ſailed from Rome to this place. They have alſo ſome other curioſities of the ſame ridiculous kind.

Twer, which is alſo a provincial town, lies on both ſides the Wolga, at the influx of the river Twerza. It is large and populous; for it has ſeventy churches and convents, and carries on a conſiderable trade in corn. It is at preſent an archbiſhop's ſee, and was formerly the reſidence of ſeveral great dukes and princes.

SECT. XIII.

Of the Provinces conquered by the Ruſſians, and firſt of the Dutchies of Livonia and Eſthonia. Their Situation, Climate, Produce, and Inhabitants. Their Government and Hiſtory; with a Deſcription of Riga, the Iſland of Oeſel, and the Cities of Reval, Narva, and other conſiderable Places in theſe Dutchies.

WE now come to the provinces acquired by Ruſſia, in the preſent century: theſe are Livonia, Ingria, and Carelia. We ſhall begin with the dutchies of Livonia and Eſthonia, which were formerly inhabited by three different nations, the Livonians, Lettonians, and Eſthonians, whence it became divided into Liefland or Livonia, Lettland, or Lettonia, and Eſthland, or Eſthonia. In common converſation Livonia includes the country properly ſo called, together with Lettonia and Eſthonia; but, to ſpeak with greater preciſion, Livonia, or the ſouth part of the country, ought to be diſtinguiſhed from Eſthonia, or the north part.

Livonia and Eſthonia border on Courland, the Baltic, the gulph of Finland, Ingria, Ruſſia, and Poland; it extending in length from north to ſouth between two hundred and fifty and three hundred miles, and its breadth from eaſt to weſt, is from two hundred to two hundred and forty miles, excluſive of the iſlands belonging to it.

Livonia conſiſts partly of woods and moraſſes, and partly of a fertile ſoil, that yields the inhabitants great plenty of all the neceſſaries of life. The air is clear and ſalubrious; and though the winter be long and ſevere, and conſequently the ſummer ſhort, yet the heat of the climate, during the latter ſeaſon, is ſuch, that the grain ſown both in winter and ſummer ripens at the proper time. In a plentiful year the inhabitants export many thouſand laſts of barley and rye to Holland, Spain, and other foreign countries, whence Livonia has been termed the granary of the north. Before the corn is threſhed, it is dried and hardened in kilns, heated by large ſtoves built contiguous to their barns; yet this renders it neither unfit for ſowing, nor for making bread and malt, though it has the advantage of making it keep the better.

Formerly this country was over-run with vaſt woods of oak, fir, pine, and birch trees; but theſe are now too thin, partly from the method of building practiſed by the inhabitants, whoſe houſes and other edifices, both in the towns and villages, conſiſt almoſt entirely of wood, and partly by their clearing of the woods, in order to prepare the land for ſowing of corn. The country, however, has reaped one advantage from the want of trees, it being leſs infeſted with bears, wolves, elks, lynxes, martens, and other wild beaſts: yet Livonia ſtill abounds with the ſmaller wild quadrupeds, and other game; ſo that hares, which turn white here in winter, and wild fowl, are ſold very cheap; but there are neither deer nor wild boars in this country. The horned cattle, horſes, and goats of Livonia are, however, very numerous, and much eſteemed; but the ſheep are not extraordinary, their wool being coarſe, and reſembling goats hair.

Vaſt quantities of flax, hemp, linſeed, leather, and ſkins, are exported from hence in foreign bottoms.

The rivers which water this country are the Duna, the Aa, the Embac, the Pernaw, &c. It has likewiſe many ſtanding lakes, as that of Peipus, the lake of Werczer, which is thirty miles in length, and twelve in breadth, the lake of Luban, and ſome others. Both theſe lakes and rivers afford plenty of the fineſt ſalmon and other fiſh. Turbots are alſo taken in the gulph of Riga, and a conſiderable part of the inhabitants are ſupported by the fiſheries. Stromlings, a ſpecies of herrings, are found in vaſt ſhoals along theſe coaſts, and are the common

food of the peaſants, who ſalt great quantities of them. A Swede has in the preſent reign eſtabliſhed a pearl-fiſhery, and there are above forty-five rivulets and lakes in Livonia and Eſthonia where this fiſhery is carried on; but the latter yield more pearls than the former, and thoſe nearly equal the oriental pearls both in ſize and clearneſs.

The highways and roads in Livonia are in very good order, and at the end of every Ruſſian werſt a red pillar is erected, on which is marked the number of the werſts paſſed and remaining, in travelling from one capital to another.

This country was formerly interſperſed with a multitude of towns and villages; but moſt of them have been deſtroyed in the wars which Livonia has ſo often experienced; and the ruins of many of them are to be ſeen. Indeed a traveller paſſes through more towns in a journey of eighty or ninety miles in many countries, than in all this extent of land. To the ſame cauſe may be attributed the ſcarcity of money obſervable among the Livonian peaſants, who, amidſt all their affluence, find ſuch difficulty in turning the overplus of their ſubſtance into money, that it is ſaid they are obliged to give half of it away, and at the ſame time they buy whatever foreign commodities they have occaſion for at a very high price.

Livonia might doubtleſs afford ſubſiſtence to a much greater number of inhabitants than it has at preſent; for they have been extremely thinned by war, peſtilence, and famine. Their number may in ſome meaſure be determined by the following method: the eſtates are taxed according to the number of hakes, that is of men fit for labour from fifteen to fifty years of age, five of theſe being reckoned to a hake. The peaſants of Eſthonia are ſaid to conſiſt only of five thouſand hakes, which only amount to twenty-five thouſand labouring men, a number that muſt appear very inconſiderable for ſo large a province.

Beſides thoſe of the inhabitants who are of German extraction, this country contains a great number of Eſthonians and Lettonians, who are of a different race, and have a different language; but their manners and cuſtoms are nearly the ſame. The Eſthonians ſeem, from the affinity of the two languages, and other circumſtances, to have deſcended from the ſame origin as the Fins; but the Lettonians, both from their name and language, appear to be ſprung from the ſame ſtock as the Lithuanians, who are a mixture of ſeveral Sarmatian tribes. The ſtature of both ſeldom exceeds the middle ſize; but they are vigorous and hardy, enduring cold and heat, and chearfully undergoing the greateſt labour and fatigue. Their houſes are meanly built, and the rooms quite black with ſmoak. They are all vaſſals, or rather ſlaves, to their lords, who may treat them as they pleaſe; ſo that they do not kill them. Their chief employments are agriculture, grazing, and ſometimes fiſhing; yet they have a good natural genius for mechanics. They are, however, addicted to drunkenneſs, and ſtill practiſe in private many ſuperſtitious cuſtoms. The languages uſually ſpoken by the inhabitants are the German, the Lettonian, the Eſthonian, the Ruſſian, the Swediſh, and that of Finland.

The nobility of this country are very numerous, and are moſtly of foreign extraction; for their anceſtors were partly ſuch families as antiently came into Livonia with the king of Denmark; but for the moſt part removed hither from Germany. Here are alſo ſome noble families of Swediſh and Poliſh extraction. The greateſt part of the nobility have always applied themſelves to a military life; and the others who reſide on their eſtates, and make improvements in agriculture, are generally inveſted with civil employments. The nobility are far from being ſufferers by falling under the dominion of Ruſſia; for ſince that time all their rights and privileges have been confirmed to them, and the eſtates which the court of Sweden had reaſſumed have likewiſe been reſtored.

Artificers and mechanics are leſs common here than in other countries. The commerce of Livonia always flouriſhes in time of peace; however, the trading towns on the coaſt ſuffer greatly by the clandeſtine trade carried on by land; and, though it has been often prohibited, it ſtill increaſes. The gentry purchaſe corn both of their vaſſals and other peaſants: ſome of them diſtil ſpirits from it, while others ſend it to the ſea-ports, and ſell it there to great advantage. The peaſants are obliged to bring what corn they intend for ſale to the noblemen's ſeats, where, inſtead of having ready money for it, they generally receive iron, ſalt, tobacco, and other utenſils and commodities.

The inhabitants of Livonia chiefly profeſs Lutheraniſm; but the Calviniſts, Ruſſians, and Papiſts, are indulged with the free exerciſe of their religion. The Bible has been here publiſhed in the Lettonian and Eſthonian languages; and there is an annual allowance from the crown of twelve hundred rubles towards the ſupport of the national churches in this country; but the churches of the ſeparatiſts do not partake of this bounty.

All the country pariſhes in Eſthonia, together with the cathedral of Reval, with regard to eccleſiaſtical juriſdiction, are ſubject to the nobility, and are but forty in number; whence we may form a conjecture of the great extent of thoſe pariſhes. The conſiſtory of nobles is compoſed of a preſident, who is a provincial counſellor, provoſts, the preachers belonging to the cathedral of Reval, and ſome other aſſeſſors. Here is likewiſe a ſupreme court of appeals in ſpiritual cauſes, which conſiſts of ſome eccleſiaſtics, provincial counſellors, and noblemen. Livonia, or the general government of Riga, contains above a hundred and twenty pariſhes, which, together with St. James's church in Riga, are under the juriſdiction of the conſiſtory of nobles: over theſe preſides a general ſuperintendant, who reſides at Riga, where is alſo held the high conſiſtory. Every circle has a governor in civil and military affairs, who muſt be of the claſs of the nobility. The miniſters of Pernau, Dorpt, and other ſmall towns in Livonia, are ſubject to the general ſuperintendant; but the cities of Riga, Reval, and Narva, have their own conſiſtories, which, as well as the magiſtracy, are independant of the nobility.

The higheſt tribunal in Eſthonia is the ſupreme provincial court, called the government, which annually meets to adminiſter juſtice about the middle of January, and continues ſitting till Eaſter. It conſiſts of the governor, as preſident, and twelve provincial counſellors, who are all nobles, and have the rank of major-general. The provincial counſellors may fill up the vacancies in their college, without any licence from the crown, from among the nobility; and the ſenior provincial counſellors compoſe a government, in the abſence of the other governors.

Subordinate to this tribunal are inferior judges, who hold inferior courts. The inferior judge of every circle in Eſthonia has two aſſiſtants. His office is to take care of the roads and bridges; to levy the money granted by the nobility at the diet, for the public ſervice; and all diſputes about limits and other incidents have the firſt hearing before him. Subordinate to the ſupreme council is alſo another court, called man-gericht, which conſiſts of a judge, two aſſeſſors, and a notary. Theſe take cognizance of all criminal affairs, and diſputes of more importance. An appeal alſo lies from the former of theſe inferior courts to the man-gericht. The judge of both theſe courts muſt be of the claſs of nobles, and continues in office only three years.

In the general government of Livonia the chief tribunals are the ſupreme court of judicature appointed by the czarina, and alſo two inferior courts. But from all theſe courts there lies an appeal to the college of judicature eſtabliſhed at Peterſburgh, for the provinces of Eſthonia and Livonia, and from that again to the ſenate, which is the ſupreme tribunal for the whole Ruſſian empire.

With reſpect to the hiſtory of theſe countries, paganiſm prevailed till the twelfth century, when the Chriſtian religion was firſt introduced into Livonia. In 1158, ſome merchants of Bremen, bound to Gothland, were driven by ſtreſs of weather on the coaſt of Livonia; but the inhabitants at firſt oppoſed their landing, yet by degrees grew familiar, and traded with them. Of this the merchants of Bremen took advantage, by reſorting thither in greater numbers with commodities to trade with the natives; and, with their conſent, went about ſix miles up the Duna, where they pitched their tents.

Afterwards they built a ſtrong warehouſe of timber on an eminence, in which they depoſited their goods. The Germans increaſing in number, brought with them, about the year 1186, an Auguſtine monk, named Meinhard, who, having learned the language of the country, perſuaded ſome of the inhabitants to be baptized. By this time, inſtead of a ſingle warehouſe, the Germans had formed a town, which was named Uxkul, and this they now built with ſtone, and erected a caſtle at the foot of the hill. Meinhard founded a church and convent of Auguſtine monks in this town, which was ſoon erected into an epiſcopal ſee, of which he was the firſt biſhop.

About the year 1196, Canute VI. king of Denmark, entering Eſthonia, ſubdued that province, introduced Chriſtianity, erected churches in the country, and ſent prieſts to officiate in them. Biſhop Albert, in order to promote the conqueſt of Livonia, inſtituted the order of knighthood called the Knights of Chriſt, and pope Innocent III. granted them the ſame ſtatutes as the Knights Templars, with a croſs and ſword, as a badge to be worn on their coats; enjoining them, at the ſame time, to obey the biſhop of Riga. In the year 1206, biſhop Albert granted to the order the third part of Livonia, with all the privileges of ſovereignty, which was confirmed by pope Innocent III. who exempted the knights from tithes and other impoſts. In 1231 they were ſolemnly united with the knights of the Teutonic order, and, as their habit was a white mantle, with a black croſs, they ſtiled themſelves Brothers of the Croſs; a title which they afterwards changed to that of Lords of the Croſs. At length the king of Denmark ſold Eſthonia to this order, and in 1521 their general purchaſed from the grand maſter of the Teutonic knights in Pruſſia the chief juriſdiction in Livonia; at the ſame time they were diſcharged from their oath of obedience to the Teutonic grand maſter. Soon after the emperor Charles V. admitted them among the princes of the empire, by which they had a right of appealing from their high court of judicature to the Aulic council at Spires.

About the middle of the ſixteenth century the czar Iwan Baſilowitz formed the deſign of conquering this country, which induced the city of Reval and the dutchy of Eſthonia to put themſelves under the protection of Sweden, on which was grounded the claim of that crown to Livonia, and the ſuperior privileges enjoyed by Eſthonia above Livonia. Gotha Ketler, chief of the order, alſo gave up Livonia to the king of Poland, and having ſolemnly reſigned his command, was created firſt duke of Courland, which he was to hold as a fief of Poland. The Poles likewiſe got poſſeſſion of Riga and Lettonia; but now this country became the ſcene of the moſt bloody wars between Ruſſia, Sweden, and Poland, which laſted for a whole century; but by the peace of Oliva, concluded in 1660, Livonia was given to Sweden, and the Duna was agreed to be the boundary between the Swediſh and Poliſh dominions.

At length, in the famous war which broke out in the North in the beginning of the preſent century between Peter the Great and Charles XII. of Sweden, this country was miſerably ravaged, till by the treaty of Nyſtadt, concluded in 1721, Sweden ceded Livonia, Eſthonia, and Ingria, with a part of Carelia, &c. for ever to Ruſſia; when his czariſh majeſty engaged to preſerve and maintain the inhabitants in the enjoyment of all the rights and privileges they had poſſeſſed while under the dominion of Sweden, and to permit the Lutheran religion, with the churches, ſchools, and all the endowments, to continue on the ſame footing as under the Swediſh government; granting the profeſſors of the Greek religion only an entire liberty of conſcience, and the free exerciſe of their religious worſhip.

In 1741, Sweden attempted the recovery of part of theſe ceded countries; but this was only attended with a loſs of part of Finland; and by the peace of Abo, concluded in 1743, Ruſſia was not only confirmed in the poſſeſſion of all its conqueſts, but acquired ſome additional diſtricts in Finland.

Since this country became ſubject to Ruſſia, it has been divided into two general governments and one city; theſe governments are thoſe of Riga and Reval.

The general government of Riga contains Lettonia, to which the name of Livonia is given in a more limited ſenſe, and conſiſts of the circle of Riga, Windin, Pernau, Dorpt, and the province of Oeſel; the principal places of which are,

Riga, the capital of the whole country, ſeated in the fifty-ſixth degree fifty-three minutes north latitude, and in the twenty-fourth degree eaſt longitude from London, on the north-eaſt ſide of the Duna; and, tho' it is not of any great extent, it is populous, well fortified, and famed for its trade and opulence. The houſes are handſome, and for the moſt part built of ſtone. They are ſeldom above two ſtories high, and have ſteep roofs, for the better carrying off the water, which is very penetrating on the melting of the ſnow, wherein they have the advantage of the Ruſſians, who have ſtill greater occaſion to provide againſt the like inconvenience. The cellars are uſed as warehouſes for flax, and other goods; and the entrance or firſt apartment in many houſes is the coach-houſe, through which you muſt paſs to the parlour and dining-room. The ſtreets are narrow. The Lutheran churches, as the cathedral, St. James's, St. Mary Magdalene's, St. Peter's, and St. John's, are handſome ſtructures. The ſeminaries, called the imperial Lyceum, and the city Gymnaſium, are in a flouriſhing condition; and the maſters have very conſiderable ſalaries. Here are alſo an old caſtle, a ſtrong citadel, and two arſenals well ſtored with arms, one at the charge of the crown, and the other of the city. The fortifications both on the land and water ſide have been improved under its preſent maſters, and thoſe towards the ſea are enlarged by additional works. This city, by means of its excellent harbour, has, during the ſummer ſeaſon, a good trade with England and Holland, and in winter a trade with the Ruſſian provinces by ſledges.

The Duna is generally frozen about the end of November, and open again near the middle of March; ſo that it has the advantage of Peterſburgh, where the Neva is cloſed about ſix weeks longer. When the ice breaks up, it frequently comes down in ſuch large pieces, as to remove points of land, and form banks that ſometimes remain for ſeveral years. For this reaſon no ſtanding bridge can be built over the river, and there is only one of rafts and boards during the ſummer ſeaſon.

The chief commodities here are maſts, timber, flax, and hemp; great part of which is brought from the Poliſh Ukraine. Near five hundred ſhips have been annually loaded at Riga.

Its privileges, which are very conſiderable, were confirmed by the empreſs Anne. The ſupreme court of judicature for Livonia and the high conſiſtory was held in this city, which is alſo the reſidence of the governor and general ſuperintendant. This city was built in the year 1200, and ſoon after incloſed with a wall. It has ſuffered much by fires and ſieges: the moſt remarkable of the latter are thoſe it ſuſtained from the Ruſſians in 1656, the Saxons and Poles in 1700, and a ſecond time by the Ruſſians in 1710, when it was obliged to ſubmit to the victorious arms of Peter the Great.

Dunnamunde is a noble fortification, about twelve miles from Riga, ſituated at the mouth of the Duna, where the ſhips which ſail out of the Baltic into that river pay cuſtoms. This place was taken by the Swedes in 1609, and 1618, and by the Saxons in 1700, who gave it the name of Auguſtuſburg. In 1701, it ſurrendered a third time to the Swedes, and in 1710, was taken by the Ruſſians.

Dorpt, a town ſituated on a plain, watered by the river Embec, in the circle of the ſame name, in latitude fifty-eight degrees, was built in the year 1030, by the great duke of Ruſſia, from whom it was taken by the religious knights in 1191; afterwards it was rebuilt, and created a biſhop's ſee. It was formerly in a flouriſhing condition, being a member of the Hanſeatic confederacy, and by means of its communication with Pernau, by a canal which was deſtroyed in the laſt Ruſſian wars, carried on a conſiderable trade by ſea. An Engliſh ſtaple was alſo fixed in this town. It has undergone many remarkable ſieges, particularly in 1704, when it was taken and plundered by the Ruſſians, and the inhabitants

habitants treated with great cruelty. But its total ruin happened in 1708, when all the inhabitants were carried away by the Ruſſians as priſoners of war, and the caſtle and fortifications blown up; but theſe captives, being afterwards permitted to return, rebuilt it with mean timber houſes.

Since the peace of Nyſtadt, the number of its inhabitants have been conſiderably increaſed; many foreigners have ſettled there, which has rendered the town more populous than it was under the dominion of the Swedes; yet moſt of the buildings ſtill lie in ruins, and the fortifications, walls, and gates, with moſt of the public edifices, fallen to decay, make a melancholy appearance. There are yet but fifteen private houſes built of ſtone, and among the public buildings, none but the magazine and the German church. The preſent inhabitants though very numerous, are generally indigent, and its univerſity, which was for a time removed to Pernau, is quite fallen to decay. Its trade chiefly conſiſts in corn and flax.

Pernau is ſituated on a river of the ſame name, near the Baltic, and is a ſmall town moſtly built with timber; it has ſome trade, and is defended by a caſtle.

The province of Oeſel, includes the iſlands of Oeſel, Moon, and Runoe. The iſland of Oeſel is at the entrance of the gulph of Riga: it is eighty-four miles in length, and between ſixteen and eighteen in breadth, and contains ten pariſhes. The ſoil is ſtony but fertile; it was formerly ſubject to the grand maſter of the Teutonic order; but without prejudice to the crown of Denmark's pretenſions to it. At laſt the knights reſigned it up to the Danes, who ceded it to the Swedes, and the latter by the treaty of Nyſtadt, gave it up to Ruſſia. It has a deputy-governor, and a college of provincial counſellors. A light-houſe has been erected on the iſland. The little iſland of Moon, ſituated near Oeſel, conſtitutes a pariſh; and the iſland of Runoe, which is alſo ſituated in the gulph of Riga, has a light-houſe erected upon it.

We now come to the general government of Revel, or Reval, which includes the province of Eſthonia, or the ſmall diſtricts of Wyk. The principal town in this government is,

Revel, which is ſeated on the Baltic, in latitude fifty-nine degrees twenty-three minutes, and twenty-four degrees eaſt longitude, though not very large, is an opulent well fortified city, that has a conſiderable trade. The houſes are moſtly of brick, and well built; but the ſtreets are ſomewhat irregular. The only churches here, beſides thoſe of the Ruſſians, are thoſe of the Lutherans. The Germans, including the ſuperintendant, have four miniſters, which conſtitute the town clergy: but the cathedral, in which two biſhops officiate, belongs to the nobility, who have alſo their chapter of nobles. There is alſo a Swediſh congregation, and another of native Eſthonians. The imperial ſeminary has four profeſſors, and one teacher of the Ruſſian language. Here is alſo a ſchool for the uſe of the town, and another for the nobility. The tolls or cuſtoms are conſiderable, of which the magiſtracy have a part, and the reſt belongs to the crown. Reval has its own arſenal, and maintains a number of matroſſes, and a company of ſoldiers. It formerly made no inconſiderable figure among the hanſe-towns. Its harbour is convenient and ſpacious, and has uſually lying in it a part of the Ruſſian fleet. The town is ſurrounded with high walls, ſtrengthened with baſtions and a deep ditch, and is likewiſe defended by a caſtle, which ſtands on a rock, and has ſeveral towers. The citizens have very pleaſant gardens without the walls.

A quarter of a league from this city, near the ſea-ſide, is the fine imperial garden called Catharinen-Thal.

The city of Narva is ſituated on the borders of Ingria, on a riſing ground by the banks of the river Narva, which runs from the Lake Peipus, and diſcharges itſelf into the gulph of Finland, about twelve miles from the city. There is a high water-fall in this river, between the city and the lake; ſo that goods brought thither from the lake, muſt be taken out there and carried by land. This city ſtands in the latitude of fifty-nine degrees eight minutes, and in twenty-ſeven degrees twenty-five minutes eaſt longitude. It is not very large, but is commodiouſly ſituated for trade, and the houſes are handſomely built with ſtone. In the market-place ſtands an elegant triumphal arch, erected in 1746, in honour of the late empreſs Elizabeth. Beſides the Ruſſian churches, it has a Lutheran church for the Germans, and two other churches for the natives of Finland and the Swedes. It is well fortified, and has a ſtrong garriſon. The chief commodities exported from thence are flax and timber, and a great quantity of ſalt is imported.

This city has frequently felt the calamities of war, when it was cloſe preſſed by the Ruſſians in 1700, it was relieved by Charles XII. of Sweden, who, with a handful of men, defeated a hundred thouſand Ruſſians, with a very great ſlaughter, and raiſed the ſiege. But in 1704 it was again beſieged by the Ruſſians, and carried by aſſault; ſince which time it has been a part of the Ruſſian dominions; but with the full enjoyment of all its rights and privileges, the Ruſſians only reſerving the right of appeal to the ſenate at Peterſburgh.

SECT. XIV.

Of the Province of Ingria, or Peterſburgh: its Situation, Extent, Rivers, and principal Places; with a particular Account of Cronſtadt, Peterſburgh, and the neighbouring Palaces; and other Places moſt worthy of Notice.

THE province of Ingria, called by the Ruſſians Ingermanland, is ſituated between the gulph of Finland, Carelia, and Ruſſia properly ſo called, and extends in length a hundred and eighty miles, and in breadth almoſt as much. The country is fertile, producing both corn and paſture, and abounds in all kinds of game, particularly elks.

The principal rivers of Ingria are the Luga, the Siſta, the Cowaſſa, and the Neva. This laſt has its ſource on the lake of Ladoga, and is a broad, rapid, and navigable river. It runs throug Peterſburgh, where it divides itſelf into ſeveral branches, particularly into the Great and Little Neva, and the Newka; and, after a courſe of forty Engliſh miles, diſcharges itſelf into the gulph of Finland.

While the Swedes were in poſſeſſion of Ingria, Lutheraniſm was the only religion profeſſed in the country: but at preſent great numbers of the Ruſſians, who are of the Greek church, are mixed with the old inhabitants.

In the year 1702 this province was recovered by the Ruſſians, who had been maſters of it once before, ſo early as the thirteenth century, but had been obliged to give it up to Sweden. It was confirmed to Ruſſia, with their other conqueſts, by the treaty of Nyſtadt and Abo. Ingria at preſent conſtitutes the government of Peterſburgh, and has the following remarkable places:

Cronſtadt, a good town, and excellent fortification, is ſeated on the iſland of Retuſari, which is about ſix miles in length, and two in breadth. This iſland lies in the gulph of Finland, about eight leagues by water from Peterſburgh, and near two leagues from the coaſt of Ingria. This town was built by Peter I. and is pretty large and regular in thoſe parts that were firſt built; but the original plan has not been entirely executed. The ſtreets are broad; but only ſome parts of them are paved. The palace of Peter the Great, which is built of ſtone, is now uninhabited, and, together with other handſome ſtone buildings, which make a grand appearance on the ſide next to Ingria, is falling to decay. The other buildings are but mean. Beſides two principal, and ſeveral dependent Ruſſian churches, here is a ſmall Lutheran church; but the Engliſh congregation is no longer in being.

The wall round the town is planted with great guns, and defended by the citadel, and the fort of Cronſhloſs, which is at a ſmall diſtance from the town, on the Ingria ſide. Cronſtadt has three harbours, all of which are large, ſafe, and commodious: that for merchantmen lies to the weſtward, and is very convenient; but that for ſhips of war, in which the greateſt part of the Ruſſian fleet is laid up, is towards the eaſt. The powder magazine is erected in the water in this harbour. The mid-

dle harbour is for other ſhips and yachts belonging to the crown.

This place Peter the Great intended to fit up for repairing his large men of war, by cutting a ſtone canal of an extraordinary breadth and depth, with ſeveral docks in it: but this great work was not compleated till the reign of the late empreſs. The canal alone is two werſts and fifty fathoms in length, and from the outward ſluice of the dock to the ſea is four hundred and ſeventeen Engliſh fathoms. The water in it is raiſed to the depth of twenty-four feet, by means of the two large ſluices. The canal, when full, is a hundred feet on the ſurface of the water, and at the bottom from fifty-four to ſixty-ſeven in breadth: the outward and inward walls of the canal, and the mole, are hewn out of the ſolid rock. At the end of the canal is a deep baſon lined with ſtone, which interſects the former at right angles, and is deſigned for a reſervoir for the water of the canal, when the docks are to be cleared of it. At the firſt opening of the canal in the year 1752, it received the name of Peter the Firſt and the Great; and at its mouth were erected two pyramids. This great and uſeful work has not its equal in any part of the known world.

The caſtle of Cronſhloſs, juſt mentioned, is built on a ſand-bank in the ſea, at the diſtance of a cannon-ſhot from the harbour of Cronſtadt, towards Ingria, and was erected by Peter I. for the defence of his conqueſts; and ſuch improvements have been ſince added, that, like Cronſtadt, it may juſtly be eſteemed the bulwark of Peterſburgh. It is erected in the form of a round tower, with three galleries one above another, and is well provided with cannon on every ſide. All the ſhips that ſail to Peterſburgh are obliged to paſs between this caſtle and Cronſtadt, within reach of the cannon on both ſides.

Directly oppoſite to Cronſtadt, near the gulph of Finland, is the fine palace of Oranienbaum, built by prince Menzſhikow; and nothing can be more delightful than the garden adjoining to this ſeat.

Peterhoff is an imperial ſeat on the coaſt of Ingria, where the late empreſs uſually ſpent the ſummer ſeaſon. From the time of Peter the Great no expence has been ſpared in adding to the fine ſituation of this palace all the embelliſhments of art. The houſe indeed is far from being regular; but whoever views the elegance of the gardens, which are adorned with fountains that throw up vaſt columns of water to an extraordinary height, with the grottos, double caſcades, pleaſant groves, and many other ornaments, will not think them much inferior to thoſe of Verſailles, which they excel in the ſweetneſs of the water. The palace ſtands on a hill about ſixty feet high, and on one ſide has a moſt extentenſive proſpect, diverſified with noble objects, as the city of Peterſburg, Cronſtadt, and the gulph of Finland. Among the ſummer-houſes belonging to this palace is one diſtinguiſhed by the name of Mon Plaiſir, or My Delight, and is particularly remarkable for its curious paintings.

At no great diſtance is Strelenhoff, or Strelna-Muſa, an imperial palace built in the water, erected by Peter the Great, who employed many thouſand men in this work; for he intended to make it a ſuperb palace, and to form a garden with a labyrinth and other embelliſhments; but his plan has never been compleated.

Catharinehoff, Annenhoff, and Elizabethhoff are imperial palaces, or pleaſure-houſes, on the river Neva. The former was the favourite reſidence of the empreſs Catharine, and properly conſiſts of two edifices. It ſtands in a wood, on one ſide of the fineſt ſpots in the neighbourhood of Peterſburgh; but, from its low ſituation, is expoſed to frequent inundations.

We ſhall now give a particular deſcription of Peterſburgh, one of the capitals of the Ruſſian empire. The beginning and increaſe of this great city were very extraordinary; for, till the year 1703, the only buildings on the ſpot where it ſtands were two ſmall fiſhing-huts. But Peter the Great having in that year taken the town of Nyenſhanze, ſeated on the Neva, and made himſelf maſter of this country, its commodious ſituation for the Baltic trade induced him to build a town and fortreſs here, and he immediately began to put his project in execution.

It was indeed firſt deſigned only for a place of arms, to which all kinds of military ſtores might be conveniently brought from the interior parts of the empire, by which means the war with Sweden might be carried on with more vigour and diſpatch. Hence the public edifices and private houſes were built only with timber, and neither the dock nor the town had any other fortifications than a mean rampart of earth, nor were the ſtreets paved. But the victory at Pultowa, and the conqueſt of Livonia, inſpired Peter with the hopes of being able to preſerve his conqueſt, and to render Peterſburgh the capital of his empire. His fondneſs for maritime affairs, a deſire of perpetuating his name by having it called by that of St. Peter, and his averſion to Moſcow, where, in his younger years, he had received much ill treatment, were the chief motives that induced him to lay the foundation of a new city that was to become the capital of his dominions.

Peter had no ſooner formed this deſign, than he ordered the caſtle to be built of ſtone, the admiralty to be walled in with the ſame materials, and all the buildings to be erected in a more handſome and durable manner.

In 1714 he removed the council to Peterſburgh, and noble edifices were erected in a ſtraight line for the public offices, which, in 1718, were alſo removed thither. The principal families of Ruſſia were likewiſe ordered to reſide there, and build houſes according to their abilities. But this occaſioned ſome irregularity in the buildings; for the nobility and burghers had been directed to build their houſes on the iſland of Peterſburgh, and many public and private ſtructures were accordingly erected there; but, in 1721, the emperor determined that the whole town ſhould ſtand on the iſland of Waſili. The ſtreets were marked out, canals were dug, the iſland was fortified with fifty-ſeven baſtions, and the nobility were to begin their houſes a ſecond time: but the death of the emperor put a ſtop to the execution of his plan; and the ſtone buildings that had been erected went to ruin.

The Ruſſian nobility were naturally averſe to ſettle in Peterſburgh, as they could neither live there ſo cheap, nor ſo commodiouſly as at Moſcow. The country about Peterſburgh is not very fertile, ſo that proviſions are brought thither from a great diſtance, and muſt be paid for in ready money; which was no ſmall grievance to the nobility, who chiefly ſubſiſted on the produce of their eſtates; but ſeldom abounded in caſh. Beſides, Moſcow ſeemed much fitter for being the imperial ſeat, as it is in the center of the empire, from whence juſtice might be more eaſily adminiſtered, and the national revenue be received and diſburſed with more convenience and diſpatch. Beſides, Peterſburgh ſeemed to them to lie too near the frontiers of Sweden. However, this city in the time of Peter I. became large and ſplendid, and under his ſucceſſors received additional improvements, ſo that it is now ranked among the largeſt and moſt elegant cities in Europe.

Peterſburgh is partly ſeated on the continent of Ingria and Finland, among thick woods, and partly on ſeveral ſmall iſlands formed by the branches of the Neva, in the fifty-ninth degree fifty-ſeven minutes north latitude, and in the thirty-firſt degree of eaſt longitude from London. The low and marſhy ſoil on which it ſtands has been conſiderably raiſed with trunks of trees, earth, and ſtone. However, its ſituation is pleaſant, and the air ſalubrious. The city is about ſix Engliſh miles in length, and as many in breadth, and has neither a wall nor gates.

The river Neva is about eight hundred paces broad near Peterſburgh; but has not every where a proportionable depth of water, ſo that large merchant ſhips are cleared at Cronſtadt, and the men of war built at Peterſburgh are alſo conveyed thither by means of certain machines called camels. Beſides the Neva, the rivers Fontanca and Moica contribute to form the iſlands on which the city ſtands, which is alſo watered by ſeveral canals; for in this reſpect Peter took his model from Amſterdam. There is but one bridge over the Neva, which is conſtructed with large flat-bottomed boats, and joins the dock-yard to Baſili Oſtrow, or Baſil's Iſland. Theſe are laid acroſs the river in ſpring, ſo as to form a ſafe and convenient paſſage; but they are always removed in autumn, before the froſt begins. The only communi-

cation

cation between the other iſlands is either by boats or barks, which croſs the water at ſtated times; but bridges are built over the Moica and Fontanca, and likewiſe over the canals.

The number of houſes at Peterſburgh are computed at eight thouſand, about ſix hundred of which are of ſtone; but the reſt are built with timber, and for the moſt part in an irregular manner, after the Ruſſian taſte. There are about twenty Ruſſian churches in the city, beſides four Lutheran churches for the Germans, and ſeveral Calviniſtical for the Swedes, Fins, Germans, and French proteſtants; and likewiſe other places of worſhip for the Engliſh, Dutch, and Roman catholics. In giving a more particular deſcription of this city, we ſhall begin with Peterſburgh Iſland, including the ſmall iſland on which the fort, which is in the middle of the Neva, and alſo of the city, ſtands.

Peterſburgh Iſland is formed by the Great and Little Neva and the Newka. The above fort is of an hexagonal form, and built of ſtone, according to the modern improvements in fortification. It is planted with a great number of cannon, and additional works are continually made to it, which are all vaulted. In the middle of it ſtands an elegant church, where the remains of Peter the Great, his conſort Catharine, and ſeveral other perſons of the royal family, are depoſited in magnificent mauſoleums. In the high beautiful tower belonging to this church, which is covered with gilt copper, hangs a fine ſet of bells, with chimes, made in Holland, that always play at twelve o'clock. On one of the baſtions of the fort facing the imperial palace is always hung out a flag, which on ſtate holydays is exchanged for a finer that bears the Ruſſian eagle. As this fort ſtands in the center of the city, it is not only a defence but a very great ornament to it. It alſo ſerves for a ſecure priſon, and on any exigency might prove a convenient aſylum to the ſovereign. On ſtate holydays the baſtions and curtains of this fort are finely illuminated with lamps.

On the iſland of Peterſburgh, properly ſo called, is a horn-work that belongs to the caſtle. This iſland is above two leagues in circumference, and is extremely well peopled; but moſt of the houſes are mean buildings, and the five Ruſſian churches, the ſhambles, inns, and corn-market, have nothing worth notice. There is ſtill to be ſeen on this iſland the ſmall wooden houſe which Peter the Great ordered to be built, and lived in, the firſt time he arrived on the ſpot on which this city ſtands; and, that it may remain as a laſting monument of that circumſtance, it is kept in repair, and incloſed with a ſtone-wall.

From the iſland of Peterſburgh you croſs the Little Neva, and come to the iſland of Waſili, or Baſil's Iſland, which is the largeſt of them all. It lies towards Cronſtadt, and is ſurrounded by the Great and Little Neva. The greateſt part of it is covered with woods, and the reſt with buildings, it having twelve broad ſtreets of an uncommon length, running in a direct line, and interſected at right angles by ſix croſs ſtreets; but they are not paved. The viſtas from theſe ſtreet are very broad and beautiful at both extremities, the largeſt extending the whole length of the iſland as far as the Galley Harbour. Oppoſite to Peterſburgh Iſland, and adjoining to the hemp-warehouſe, are the exchange, the cuſtom-houſe, the pack-houſe, and the quay, where the merchant ſhips unload. Contiguous to theſe are ſeveral large ſtone buildings belonging to the imperial academy of ſciences, founded in 1724 by Peter the Great, and endowed with an annual revenue of twenty-four thouſand nine hundred and twelve rubles. That monarch alſo intended to erect an academy of polite arts; but as eſtimates of the neceſſary charges of ſuch an inſtitution were not made, the late empreſs Elizabeth increaſed the above endowment to fifty-three thouſand two hundred and ninety-eight rubles.

The academy is divided into two claſſes, the firſt conſtituting the academy properly ſo called, and the ſecond the univerſity. The members of the former are employed only in finding out new inventions, or improving the diſcoveries of others, and are under no obligation to inſtruct youth, unleſs particular pupils are recommended to them, or they do it voluntarily for their own advantage. The univerſity has its particular profeſſors, who read lectures in the ſciences, both in the Latin and Ruſſian languages. Difference of religion does not diſqualify a perſon from being a profeſſor; but they are enjoined not to inculcate to their pupils any thing contrary to the doctrines of the Greek church. In the buildings which belong to the academy are the imperial library; a muſeum, containing natural and artificial curioſities; the printing-houſe; the bookſeller's-ſhop; and apartments for binding, letter-founding, painting, engraving, and the room where mathematical inſtruments are made. Among theſe laſt curioſities is the famous copper globe of Gottorp, which ſtood on a tower of the academy, and was almoſt deſtroyed by fire when that tower was burnt in 1747; but has been repaired at a great expence, and with admirable ſkill: you aſcend a few ſteps, and enter into the globe through a ſmall door: within ſtands a table with benches round it, on which twelve perſons may conveniently ſit. The inſide contains the celeſtial globe, and the outſide the terreſtrial; its diameter is eleven feet, and it at preſent ſtands in a ſtone edifice by itſelf.

The next remarkable place is the fire-work theatre, built on piles oppoſite to the imperial winter palace. Here is a very long ſtone building appropriated for the ſtate colleges and offices. Juſt behind theſe ſtands a ſpacious and elegant ſtructure, formerly prince Menſhikow's palace, but now the academy of the corps of cadets of noble families, who are educated gratis, according to their rank. Near this academy is another for three hundred and ſixty ſea cadets.

The Admiralty Iſland is the moſt magnificent part of the city: here is the victualling-office; the galley dock, in which all the gallies are built; and vaſt ſtore-houſes for ſhip-building. Here are likewiſe a great number of handſome ſtone houſes and elegant palaces extending along the river ſide. The Engliſh factory have their place of worſhip in this part, and behind it is New Holland, with the Rope-walk. The admiralty, or dock-yard, is fortified with a wall and five baſtions, planted with many guns; and all ſhips that enter the harbour ſalute it. The top of the tower belonging to the admiralty is gilt, in the ſame manner as that of the great church in the caſtle.

The imperial winter-palace, near this place, is a large ſquare building three ſtories high; but the architecture is not extraordinary. Behind it, in a ſpacious area, ſtands a noble equeſtrian ſtatue of braſs gilt, erected in honour of Peter the Great. Adjoining to this, along the banks of the Neva, are ſeveral other palaces, among which is the old imperial winter palace; ſeveral elegant ſtone buildings; the new play-houſe, which is built of timber; and a delightful imperial ſummer palace, which is all of wood, and, being only one ſtory high, reſembles a pleaſure-houſe. Behind it are ſeveral ſtone buildings for the officers belonging to the court. It has a fine orangery, and a large beautiful garden, moſt admirably adorned with a grotto, fountains, and other water-works, with a great number of valuable marble and alabaſter ſtatues brought from Italy; but all of them are not executed with equal ſkill. Two of theſe ſtatues which ſtand near the grotto, repreſenting Faith and Religion, are greatly admired by the connoiſſeurs for the appearance of the faces through thin tranſparent veils, which ſeem to cover them. This garden is famous for a fine grove of oaks, that has not its equal in all the Ruſſian empire. The dock affords a double viſta, one to the Ruſſian church of the Aſcenſion, the other terminated by the convent of Alexander Newſki. The elegant buildings on both ſides the river Fontanca have alſo a beautiful appearance from hence.

The ſtreets that lie behind the admiralty, and behind the imperial ſummer palace, are very grand and magnificent; but thoſe are equalled, if not excelled, by Great and Little Million-ſtreet, which are embelliſhed with the moſt ſuperb buildings. At the end of Million-ſtreet, near the garden of the ſummer palace, the emperor has a curious diſpenſary. In this part alſo lie the imperial ſtables, and the dwellings of the officers who belong to them; the church of the Swediſh Fins; the German Lutheran church, dedicated to St. Peter, which is an

elegant ſtructure; the menagery; the park; and the elephant-yard, where ſeveral of thoſe animals are kept.

The Moſcovite ſide, which is properly the city, is on the continent, and part of it very well built. In this quarter are the private dock; the court victualling-office; a foundery on the Neva, in which are caſt a great number of mortars and cannon; the fire-work elaboratory; the aqueduct, which ſupplies the fountains in the emperor's garden; the German Lutheran church, dedicated to St. Anne; three Ruſſian churches; the barracks for the horſe-guards, with the ſtables for their horſes; a ſtructure called the Pleaſant-houſe; the Italian garden; the Moſcovite *Iemſkoi*; and the convent of St. Alexander Newſki, built in honour of that pious prince, in the form of an eagle, but not yet completed: it contains about two hundred apartments. In the middle of the building ſtands a very large and beautiful church, which repreſents the eagle's body, the two towers its neck and head, the ſpire the imperial crown, and two ſmall churches on each ſide the two wings. In this convent are ſaid to be depoſited the remains of that ſaint; for which the empreſs Elizabeth cauſed a ſilver ſhrine to be made, which is fixed on a ſuperb monument covered with ſilver plates of a conſiderable thickneſs.

Jonas Hanway, Eſq; obſerves, that, with reſpect to the modern palaces and other buildings, an Italian architect having ſettled in Ruſſia, notwithſtanding the difference of climate, the taſte of Italy is adopted; and though the ſeverity of the cold is ſo great in winter, they abound much more in windows than our houſes.

There is a great variety of curious manufactures in this city, as that of looking-glaſſes, gold and ſilver works, tapeſtry, &c. Its extenſive commerce alſo renders Peterſburgh of great importance; for a multitude of ſhips from all the maritime countries in Europe frequent this port, as the mart for buying all Ruſſian commodities; and find a vent for all the goods they import, and for which there is a demand in Ruſſia.

The inhabitants of Peterſburgh, beſides Ruſſians, conſiſt of all nations; ſo that a perſon hears a variety of languages, and ſees a ſurpriſing diverſity of faſhions and cuſtoms. The citizens, properly ſo called, do not exceed two hundred; but the city contains above a hundred thouſand perſons, or according to ſome authors, two hundred and fifty thouſand, including the garriſon. The inhabitants in general imitate the ſplendor of the court, though every thing belonging to dreſs, eſpecially if made by foreign artificers, is very dear; as is alſo furniture; and houſes in a good ſituation ſometimes bear a very high price. On the other hand, all kinds of proviſions, except wine, oranges, lemons, and ſome other foreign articles, are now ſold very cheap, and in winter are brought in great abundance from the diſtance of many hundred miles.

The morals of the people, as in all large cities, are much depraved, and the ſuſpicious vigilance of the Ruſſian government renders it neceſſary for a ſtranger to be very circumſpect in his words and behaviour. Foreigners, however, enjoy all poſſible liberty of conſcience, while they take care to ſay nothing againſt the Greek religion.

When a perſon intends to ſet out from the city, in order to travel into the country, he muſt be furniſhed with a paſs, and advertiſe his name and intention of travelling in the news-papers. No ſooner is the winter ſet in, than near three thouſand Ruſſians repair with their ſledges to Peterſburgh, where they ſtand in every ſtreet; and this method of carriage is ſo cheap and convenient, that few go on foot even about the town. A ſledge and a horſe may be hired for the value of about five-pence ſterling an hour, and within that time the horſe will go about ſeven or eight Engliſh miles. It is ſufficient for a ſtranger to know the place or houſe to which he would go, and to underſtand three or four Ruſſian words. Moſt houſe-keepers have their own ſledges and horſes, and perſons of diſtinction have alſo their poſtilions. In ſummer time thoſe who are not inclined to go on foot in this extenſive city, muſt either make uſe of their own carriage or hire boats.

About thirty werſts from Peterſburgh is Sarſkoe-Selo, a pleaſant imperial palace, with a park and garden. In the hermitage is a table which may be raiſed up by ſcrews into the apartment above, and let down again at pleaſure.

Beſides the fortifications already mentioned in this province, there is the ſtrong fort of Schluſſelburg, which ſtands on a ſmall iſland in the midſt of the Neva, where it runs out of the lake of Ladoga. It was formerly called Oreſhec, from the form of the iſland, which reſembles a nut; but Peter the Great having made himſelf maſter of it in 1702, changed its name to Schluſſelburg, or Key-town, that monarch eſteeming it the key of his conqueſt. It walls are two fathoms and a half thick, and built in the old manner; and in one angle of the fort is a ſmall ſtrong caſtle. The Ruſſians have improved this fort both within and without, and added new works to it; it has undergone many ſieges, and when Peter I. took it in 1702, he ordered two medals to be ſtruck in commemoration of his ſucceſs.

SECT. XV.

Of the late Acquiſitions in Carelia, or the Government of Wiburg; with a conciſe Account of the principal Places it contains.

WITHIN this province is included part of the great dutchy of Finland, which the Swedes ceded to Ruſſia, and contains three diſtricts, Finlandiſh, Carelia, Kexholm, and Sawolax.

Carelia has frequently proved a bone of contention between Ruſſia and Sweden. In 1293 it fell under the Swediſh dominion, but in 1338 part of it was yielded up to Ruſſia. By the peace of Nyſtadt, concluded in 1721, a ſtill greater part was reſigned to the Ruſſians, the weſtern part alone being left in the poſſeſſion of the Swedes. Afterwards Sweden was obliged to give up, by the treaty of Abo, the fort of Frederickſham and Wilmanſtrand, with part of the pariſh of Pythis, ſituated on the other ſide of the eaſtern branch of the river Kymmene. In this part of Carelia are the following places:

Suſterbec, which is ſeated in the gulph of Finland, is remarkable for the excellence of its muſkets, ſwords, and iron utenſils. The greateſt part of the arms uſed by the Ruſſian troops are made in this place.

Wiburg, once the capital of Carelia, a biſhop's ſee, and the bulwark of Sweden againſt Ruſſia, is ſituated on the gulph of Finland, and carries on a conſiderable trade. Peter the Great having taken this town by capitulation, in the year 1710, improved its fortifications, which have ever ſince been kept in ſuch good condition, that Wiburg may now be conſidered as the bulwark of Ruſſia againſt Sweden.

Wilmanſtrand is ſeated on the lake Saima, and is called by the Finlanders Lappi Weſſi, or Lapp Water. It had formerly the name of Lapſtrand, and was only a market-place, but was afterwards made a town; yet it has no magiſtrate of its own, it being dependent on Frederickſham. It was a conſiderable mart for tar, and the reſidence of a Swediſh governor. On the twenty-third of Auguſt, 1741, an obſtinate battle was fought about an Engliſh mile from this town between three thouſand Swedes and ſixteen thouſand Ruſſians; but the former were at laſt obliged to yield to ſuperiority of numbers. The Ruſſians, after they had gained the victory, burnt Wilmanſtrand, which was before fortified with a wall and moat; but they have ſince cauſed it to be rebuilt.

Frederickſham is ſituated on the gulph of Finland. This town was governed by two burgomaſters, and was defended by a caſtle built in 1722: it had alſo a good harbour and a conſiderable trade in tar; but in the laſt war between the Ruſſians and Swedes it was burnt to the ground, and ceded to the latter; afterwards it was rebuilt, and the limits between Sweden and Ruſſian Carelia were fixed near this place.

The diſtrict of Kexholm has been frequently contended for by the Ruſſians and Swedes, and was reſtored to the former by the treaty of Nyſtadt. The moſt remarkable place in it is,

Kexholm,

Kexholm, a ſtrong town ſituated on two ſmall iſlands at the influx of the river Woxen into the lake of Ladoga. The town is built on one of theſe iſlands; but the houſes are all of wood; and on the other iſland ſtands the caſtle.

In that ſmall diſtrict, which is a part of Sawolax that was yielded up to Ruſſia by the treaty of Abo in 1743, is only the town of Nyſlot, and the country nine miles round it.

This town is ſituated on the Samian lake, and was built ſo lately as in the year 1745; its caſtle, which ſtands on a rock in a river near the town, is extremely well fortified both by art and nature. In the year 1495 it baffled the attempts of Ruſſia, but in 1714 was obliged to ſubmit to their arms. It was reſtored to the Swedes at the peace of Nyſtadt, but they were conſtrained to give it up to the Ruſſians by the treaty of Abo.

CHAP. III.

Of POLAND, LITHUANIA, POLISH PRUSSIA, and COURLAND.

SECT. I.

Of POLAND *in general.*

Its Name, Situation, Extent, Climate, Soil, mineral and vegetable Productions; Animals, Lakes, and Rivers.

THE limited Kingdom, or, as it is alſo termed, the Republic of Poland, is called by the natives Polſka. Theſe names are deduced from the word Pole, or Poln, which in the Sclavonic tongue ſignifies a country adapted to hunting, the whole kingdom being compoſed of vaſt plains, and antiently of foreſts that afforded ſhelter for an infinite number of wild beaſts.

In its largeſt extent it is bounded on the eaſt by Ruſſia and Little Tartary; on the ſouth by Moldavia, Tranſylvania, and Hungary; on the weſt by Sileſia, Brandenburgh, and Pomerania; and on the north by Ruſſia, Livonia, Courland, and the Baltic; extending from forty-ſeven degrees forty minutes to fifty-ſix degrees thirty minutes north latitude, and between ſixteen and thirty-four degrees eaſt longitude from London.

The air is pretty cold in winter, but very healthy; and the country is for the moſt part level, it having but few hills. On the Carpathian mountains, which ſeparate Poland from Hungary, the air is ſo very cold, that it frequently ſnows there in the midſt of ſummer; and in ſome parts of them the ſnow never melts.

The ſoil is exceeding fertile, and yields plenty of corn, which evidently appears from there being near four thouſand veſſels and floats, moſt of them laden with corn, that annually paſs down the Viſtula to Dantzic. In Podolia, Volhinia, the Ukraine, and the province of Ruſſia, corn grows in vaſt plenty, even with little culture or manure; but in Great and Little Poland agriculture requires more labour and attention: however, the harveſt amply rewards the pains of the induſtrious peaſant. The ſoil of Lithuania is as fruitful as that of Podolia, and Samogitia produces abundance of grain, beſides flax and hemp. Poliſh Pruſſia is likewiſe a very fertile country, that alſo abounds in excellent paſtures; and in Podolia the graſs grows ſo high, that ſometimes a perſon cannot ſee the horns of the cattle when they are grazing in the meadows.

In this country are found peat, oker of all kinds, belemnites, agate, chalcedony, cornelians, onyxes, opals, jaſper, fine rock-cryſtal, amethyſts, topazes, ſapphires, and even rubies. This country likewiſe affords marienglaſs, or moſcovyglaſs, talc, allum, ſalt-petre, amber, pit-coal, and an inexhauſtible quantity of ſalt, which is hewn out of the rock in large blocks; ſalt ſprings, ſpar, quickſilver, lapis calaminaris, iron, lead, and a ſmall quantity of tin.

With reſpect to the vegetable productions of this country, they have fruit, herbs, roots, and other garden-ſtuff in great plenty; but though their grapes are well taſted, they will not make wine.

Poliſh manna is produced by an herb that grows in the meadows and fenny grounds, and is gathered in great quantities from the twentieth of June to the end of July.

The Poliſh berries called kermes, are always gathered in May, before they are quite ripe; for in the month of July they ſwarm with inſects, which render the berries unfit either for dying or medicine. Theſe berries are found on an ever-green of the oak kind, adhering to its leaves; but generally to its ſtem or branches. They are of a ſpherical form, as large as a pea, ſmooth, ſhining, and full of a mucilaginous juice of a beautiful red colour. After the moſt diligent enquiries of naturaliſts into the production of this grain, it is found to be the neſt of a ſmall fly or worm, which pricking the bark or leaf, in order to depoſit its eggs, raiſes a little tumour, which by degrees fills with a red pulp, impregnated with the numerous progeny of that animalcula. Great quantities of theſe berries grow in the Ukraine, and in the neighbourhood of Warſaw and Cracow, and were formerly exported to Genoa and Florence. Here are ſeveral woods of oak, beech, pine, and fir trees. Poland alſo yields abundance of honey and wax, and of the former is made a great quantity of mead.

Horned cattle are bred in ſuch numbers, that eighty or ninety thouſand oxen are every year driven out of Poland. The Poliſh horſes are ſtrong, ſwift, and beautiful, and of theſe they have alſo great numbers. Among the wild beaſts are the elk, the biſon, which reſembles the buffaloe; and alſo deer, hares, wolves, foxes, bears, and wild aſſes; and in the Ukraine, near the Nieper, are wild ſheep and wild horſes.

In great Poland are ſeveral lakes, ſome of which abound in fiſh: the moſt remarkable of theſe is the lake of Gopler, which is near twenty miles in length, and two miles and a half in breadth.

Among the Poliſh rivers the following are the moſt remarkable.

The Duna, called by the Poles the Cubo, which has its ſource in Ruſſia, and after running through Lithuania, diſcharges itſelf into the Baltic.

The Memel, in Poliſh Niemen, which riſes in the palatinate of Novogrodec, and running through Lithuania and Pruſſia, enters the Baltic.

The Weiſel or Viſtula, in Poliſh the Wiſla, riſes among the Carpathian mountains, runs through Poland, and after receiving ſeveral other ſtreams, diſcharges itſelf into the Baltic.

The Nieſter, which riſes in a lake among the Carpathian mountains, and dividing Poland from Moldavia, falls into the Black Sea.

The Nieper, the ancient Boryſthenes, which riſes in the mountains of Budin, in Ruſſia, and after a courſe of near a thouſand miles, diſcharges itſelf into the Black Sea.

SECT. II.

Of the Perſons, Dreſs, Manners, and Cuſtoms of the Poles. Their Houſes, Food, Diverſions, Method of Travelling; Language and Skill in the Sciences.

THE Poles are generally pretty tall, and inclinable to be fat; they have fair complexions, and their hair is uſually of a pale yellow; they have good conſti-

tutions,

tutions, and have a healthful look. They cut the hair of their heads ſhort, and ſhave their beards, leaving only large whiſkers: in ſhort, they have a ſtately mien, and great gravity of countenance.

The dreſs of the Poles is pretty ſingular: they wear a veſt which reaches down to the middle of the leg, and a kind of gown over it, lined with furs, and girded with a ſaſh; but the ſleeves ſit as cloſe to their arms as a waiſt-coat. They wear a fur cap, but have neither ſtock nor neckcloth; for though they wear a ſhirt, it is almoſt like a woman's ſhift, without a collar or wriſtbands. Their breeches are wide, and make but one piece with their ſtockings. Inſtead of ſhoes they always wear Turky leather boots, both abroad and at home, with thin ſoles, and deep iron heels bent like an half moon. They carry a pole-ax, and a ſabre or cutlaſs, by their ſides, which they never put off but when they go to bed. The ſabre hangs by a leathern ſtrap, with their handkerchif, knife and ſheath, and a ſmall ſtone ſet in ſilver, to whet their knife on. When they appear on horſeback, as they frequently do, they wear over all a ſhort cloak, which is commonly covered with furs, both within and without. The people of the beſt quality wear ſables, and others the ſkins of tygers, leopards, &c. The peaſants uſually wear a ſheep-ſkin with the wool on, for their winter dreſs; but in ſummer, a thick coarſe cloth, and inſtead of boots, wear buſkins and ſhoes made of the bark of trees; but as to linnen, they wear none at all.

The habit of the women comes very near to that of the men, only people of quality affect the French mode of dreſs. The Poliſh ladies are amiable, witty, and ſprightly, and are paſſionately fond of plays and muſic. They are generally modeſt, and according to Dr. Conner, ſo ſubmiſſive to their huſbands, as to aſk them on the knee for what they want, and diſpoſe of no money without their conſent. Thoſe who are very rich, ſeldom go to church, or to pay a viſit, without their coach and ſix, a great number of ſervants, and particularly an old gentleman for their uſher, and an old gentlewoman for their governante, with a dwarf of both ſexes to bear up their train; and if it be night, their coach is ſurrounded by a great number of flambeaux.

Theſe people have long been celebrated for their courage, their ſtrength, and their longevity; no country in the world affording more extraordinary proofs of bodily vigour, and an uninterrupted flow of health, which are juſtly aſcribed to the temperature of the climate, their inuring themſelves to manly exerciſes, and the continual uſe of the cold bath, even in the coldeſt parts of Poland: this laſt is ſuppoſed to contribute greatly to that muſcular ſtrength for which they are remarkable.

The nobility are open, affable, liberal, and hoſpitable, polite to ſtrangers, rigid to their dependents, punctilious in point of honour, vain, oſtentatious, and magnificent in their apparel, equipage, and manner of living: for ſome of the wealthy will have forty ſuits of cloaths as rich as poſſible. Though the Poles are paſſionately fond of liberty, they live in a perpetual ſtate of ſervitude to their profuſion and neceſſities, which frequently make them ſtoop to be the tools of ſome political faction. The conſtitution of Poland has been the ſource of continual misfortunes, yet the nobility are attached to it to a degree of enthuſiaſm, and eſpecially to thoſe parts of it which produce the greateſt inconveniencies. Poor in the midſt of a fertile country, they abhor the notion of improving their circumſtances by trade, and are, perhaps, the only people upon earth who have provided by law againſt raiſing a maritime power. Prodigality and debauchery are ſaid not to be reputed vices among this martial nobility: they borrow without intention of paying, with the ſame freedom that they ſquander. Conſtant in their friendſhips, bitter in their enmity, open to impoſition, unſuſpicious, opinionated, and haughty, their only care is to diſtinguiſh themſelves in arms, in finery, equipage, and ſplendor.

As to the vulgar, they are mean, mercenary, ignorant, indolent, and indigent to an extreme. This is the character given by ſeveral authors of the Poles in general, as the diſtinguiſhing features of that people; but it is not to doubted, that there are many exceptions to whom this character would be highly unjuſt, and who are diſtinguiſhed by their learning, their good ſenſe, and their humanity.

The Poliſh houſes chiefly conſiſt of ground rooms; for they ſeldom live above ſtairs. The dwelling houſe is uſually oppoſite the gate, the kitchens and offices on one ſide a round, or ſquare court, and their ſtables on the other; they are generally of wood; but thoſe who affect the Italian architecture, build much higher with brick or ſtone. Every nobleman has a hall or large room ſet apart for entertainments, in which is a place railed in with balluſters, in which the plate is placed, and over it a gallery for the muſic. The rooms are uſually hung with tapeſtry, and the reſt of the furniture is proportionably rich, except where they are liable to the incurſions of the Tartars, and there they have as little furniture as poſſible. The Poliſh nobility have ſeldom any gardens or orchards to their houſes, though the ſoil is extremely proper for them. But there are bagnios and ſtoves in every houſe, and the women have them ſeparate from the men. There are alſo baths in every town for the uſe of the common people, who bathe every day.

The houſes of the peaſants conſiſt only of huts built with poles in a round form, and open on the top, to let out the ſmoke. They are covered with thatch, or with boards; and as they frequently conſiſt but of one room, the people and their cattle ſleep together.

To the character that has already been given of the love of ſplendor which prevails among the Poliſh nobility, it is proper to add, that thoſe of high rank and great eſtates have their horſe and foot guards, which ſtand centry day and night at the gates of their houſes, and in their anti-chambers, and that they march before their maſter's coaches in the ſtreet. But theſe nobles never appear with ſuch ſplendor, as when they are at the general diet, where they will have four or five hundred, and ſome a thouſand guards to attend them; for they eſteem themſelves not only equal but ſuperior to any of the German princes: and indeed, they want little to diſtinguiſh them from ſovereigns in their reſpective diſtricts, but the privilege of coining money.

When they ſit down to dinner, or ſupper, they have their trumpets and other muſic playing, and a great number of gentlemen to wait on them at table, ſome to carve, others to ſerve their wine and place the diſhes, all ſerving with the moſt profound reſpect; for though the nobility of Poland are all ſaid to be equal, as having votes in the diet, yet wealth will ever create a diſtinction, and the nobles who are poor frequently find themſelves under the neceſſity of ſerving them that are rich. Their patron indeed uſually treats them with civility, and permits the eldeſt to eat with him at his table with his cap off, and every one of them has his peaſant-boy to wait on him, maintained by the maſter of the family. Yet if any of theſe noble ſervants neglects his duty, ſo little regard is paid to his quality, that he is ſtripped naked and whipped, and this is reckoned no diſgrace; but if a nobleman ſhould apply himſelf to trade, he would be deemed infamous.

Their ordinary food is beef or veal, mutton being little eſteemed; but they have plenty of wild-fowl and river-fiſh. Though they have ſuch plenty of corn, they eat but little bread, preferring roots to it, which they dreſs different ways. They are not fond of ſoup and broth, nor do they roaſt their meat too much: they are general admirers of pig and bacon; peaſe are alſo eſteemed a genteel diſh by the great. In their ſauces they uſe a great quantity of ſaffron and ſpices; for they ſeaſon their diſhes high: they are alſo fond of muſhrooms and pickled cabbage.

At an entertainment the Poles lay neither knives, forks, nor ſpoons, but every perſon brings them with him; and they no ſooner ſit down to table than all the doors are ſhut, and not opened till the company return home. Thoſe who are invited, bring their ſervants with them; and it is ſaid to be no uncommon thing for a nobleman to give his ſervant part of his meat, which he eats as he ſtands behind him, and to let him drink out of the ſame cup with himſelf; but this is the leſs extraordinary, if it be conſidered, that theſe ſervants are eſteemed his equal. Though there are uſually great plenty of

proviſions,

proviſions, very little is left for the reſt of the family, it being ſeized by the ſervants of the viſitors, who have a napkin in order to carry off the ſweetmeats for their ladies. After the cloth is taken away the gentlemen uſually ſit down to drinking, and after the ladies are retired, ſmoak tobacco; for the other ſex are not excluded from their feaſts. Bumpers are much in faſhion, both here and in Ruſſia; nor will they eaſily excuſe any perſon from pledging them.

Their uſual drink is beer, which in Poliſh Pruſſia they make only of malt; but in other parts of Poland of wheat ground. In Lithuania, and ſeveral other provinces of Poland, they have mead and metheglin; and at Warſaw they frequently mix the juice of cherries, blackberries, &c. with their honey, upon which the liquor receives different names. But beſides beer and mead produced in the country, great quantities of wine are imported from Hungary, France, Spain, Italy, and Germany. That of Hungary is ſaid to exceed the Spaniſh in ſtrength, and is brought over the Carpathian mountains in large caſks drawn upon carriages by oxen, which makes it very dear, the beſt ſort being ſold for twenty ſhillings the Poliſh pot, which is three quarts. The Italian wines come alſo over land; but are not much drank. The French and Rheniſh wines come by the way of the Baltic to Dantzic. Their ſtrong waters and ſpirits are drawn from wheat, barley, oats, and cyder; but theſe are chiefly drank by the common people, though ſometimes the nobility will drink them in winter, when impregnated with anniſeeds, cinnamon, and other ſpices.

The people are in general ſo extremely hardy, that the boys ſlide naked on the ice: the Poles will ſleep upon the ground without a bed in froſt and ſnow, and carry about their young infants naked in the ſevereſt weather. Hunting and feats of horſemanſhip are the diverſions of the great; and leaping, vaulting, and dancing, are alſo favourite diverſions.

The uſual method of travelling is on horſeback; for a Poliſh nobleman will ſcarce walk a ſtone's throw in a town without his horſe; but as it is a champaign country, a calaſh and a pair of horſes are very much uſed on a journey.

There are very few inns upon the roads, and in thoſe a traveller meets with he can ſeldom find any thing to eat; hence he is obliged to buy proviſions in the towns, and carry them with his baggage. This inconvenience is ſaid to be owing to a want of honeſty in the natives when they travel; and the inn-keepers never make any extraordinary proviſion, from their finding by experience that their gueſts are ſeldom diſpoſed to make any returns for their entertainment.

The Poliſh language is derived from the old Sclavonic; yet differs extremely from all the other languages derived from the ſame ſource.

High Dutch is very much ſpoke in Poland; and indeed the Germans firſt introduced into Poland a taſte for learning, opened the channels of commerce, built ſeveral towns, and raiſed them to a flouriſhing condition: for Caſimir the Great, ſenſible of the advantages Poland might reap from German colonies, invited them to ſettle in this kingdom by the greateſt encouragements, granting them the moſt improveable ſpots in Poland, and permitting them to be governed by their own laws.

The Latin tongue is likewiſe commonly ſpoken in Poland, even by the lower claſs of people; but without the leaſt regard to accent, quantity, or purity of language.

Dr. Buſching obſerves, that from the time of king Sigiſmond I. to the reign of Uladiſlaus IV. was the interval when arts and ſciences flouriſhed moſt in Poland. Since that æra the Poliſh muſes ſeem to have drooped and languiſhed: however, they now begin to revive; for at preſent the purity and elegance of the Poliſh and Latin tongues are ſtudied, the new philoſophy is introduced, the mathematics are taught, and natural philoſophy flouriſhes in Poland. The learned in this country alſo apply themſelves to the ſtudy of the hiſtory of Poland, which they cultivate and improve, and endeavour to make the good writers of former ages better known, and uſe of to the preſent; and for this purpoſe the library of count Zaluſki, at Warſaw, opens an inexhauſtible treaſure of antient authors.

The Greek language alſo begins to be ſtudied in Poland, and literary correſpondences are carried on with learned foreigners; but the preſs has not yet produced ſo many books as in other countries.

Poland exports none of its manufactures, its commodities being carried out of the country unwrought. Dr. Buſching obſerves, that religious bigotry is of infinite detriment to the trade and commerce of Poland, which, notwithſtanding all its natural advantages, has been long gradually ſinking into poverty. The Poles, indeed, export grain of all kinds, maſts, deal-boards, ſhip and houſe timber, pitch, flax, hemp, linſeed, hops, honey, wax, hides, horned cattle, tallow, leather dreſſed in the Ruſſian manner, pot-aſh, horſes, and other home commodities: but theſe are much over-balanced by the imports, as wine, that of Hungary alone, annually carrying vaſt ſums out of the kingdom; the other articles of commerce imported are ſpices, plate, copper, braſs, and ſteel.

SECT. III.

Of the different Claſſes of the People; the Privileges of the Nobles, and the Slavery of the Peaſants; with a conciſe Account of the Nature of the Wealth of the Poles.

THE Poles, when conſidered as members of the community, are either nobles or citizens, under which claſs are included merchants, artiſts, and mechanics; or peaſants, who are moſtly vaſſals to the nobles.

The Poliſh nobility have from time immemorial reſided in the country; for every nobleman lives in his own village, ſeat, or caſtle; manages his eſtate by his vaſſals, or hired ſervants; and maintains himſelf and family by agriculture, breeding of bees, grazing, and hunting. Some of the nobility alſo ſpend part of their time in cities and towns.

Though Poland has its princes, counts, and barons, yet the whole body of the nobility are naturally on a level, except the difference that ariſes from the poſts ſome of them enjoy. Hence all who are of noble birth call one another brothers. They enjoy many conſiderable privileges, and, indeed, the boaſted Poliſh liberty is properly limited to them alone; for they have the power of life and death over their vaſſals, who on that account groan under an oppreſſive ſlavery. Beſides, every nobleman is abſolute lord of his eſtates; ſo that the king can require no ſubſidy from him, nor is he obliged to maintain or find quarter for any ſoldiers. If a foreigner dies on a nobleman's eſtate in Poland, without leaving any heirs, his effects fall to the lord of the manor; but on the deceaſe of a nobleman without heirs, his eſtate does not fall to the king, while there are any perſons living who are related in the eighth degree to the deceaſed; and if a nobleman dies without heirs, or any ſuch relations, the king can appropriate his eſtate to himſelf; but is obliged to beſtow it on ſome other nobleman of merit.

The houſe of a nobleman is a ſecure aſylum for perſons who have committed any crime; for none muſt preſume to take them from thence by force; and even the judges in the towns dare not cauſe a nobleman's vaſſal to be arreſted, or his effects to be ſeized; nor can any magiſtrate, not even the king himſelf, cauſe a nobleman to be arreſted, without ſignifying the crime of which he is accuſed, and giving a previous citation, except he be a robber, and has been three times impeached by his aſſociates, or be ſurpriſed in the commiſſion of a crime; or laſtly, when he cannot or will not put in bail.

All eccleſiaſtical dignities and civil poſts are to be held only by the nobility, and they alone are qualified to be proprietors of eſtates, except the burghers of the cities of Thorn, Cracow, Vilna, Lemberg, and Lublin, who have the privilege of purchaſing lands. Any nobleman may purchaſe a houſe and live in a city or town, but he muſt then ſubmit to ſerve municipal offices; and if he be concerned in trade or commerce, he forfeits the privileges of a noble Pole. Every nobleman has not only a vote in the election of a king, but is even qualified to wear

the crown, if he be raiſed to it by the free choice of the reſt of the nobility. All civil cauſes relating to the nobility are tried in the provincial courts of judicature; but if a nobleman commences a ſuit with the farmers of the royal domains, a commiſſorial court is appointed to terminate the diſpute.

Nothing can be more abject than the peaſants of Poland. If one lord kills the peaſant of another, he is not capitally convicted, but only obliged to make reparation, by another peaſant equal in value. The peaſants have no property, and all their acquiſitions ſerve only to enrich the maſter. They are indiſpenſably obliged to cultivate the earth; they are incapable of entering upon any condition of life that might procure them freedom, without the permiſſion of their lords; and they are expoſed to the diſmal and frequently fatal effects of the caprice, cruelty, and barbarity of their tyrannical maſters, who oppreſs them with impunity, and having the power of life and property in their hands, too often abuſe it in the moſt groſs and wanton manner, their wives and daughters being expoſed to the moſt brutal treatment.

According to Mr. Hauteville, a nobleman who is deſirous of cultivating a piece of land, builds a little wooden houſe, in which he ſettles a peaſant and his family, giving him a cow, two horſes, a certain number of geeſe, hens, &c. and as much corn as is ſufficient to maintain him the firſt year, and to improve for his own future ſubſiſtence, and the advantage of his lord. In return, he obliges him to till a particular quantity of land, and to pay a number of live animals out of the produce of the original ſtock.

In autumn all the peaſants are employed in cutting down and reaping the maſter's harveſt, who appoints overſeers to reward the diligent, and puniſh the indolent with ſtripes. Pillories are erected in every village, on which theſe wretched beings are obliged to ſtand a whole day, for crimes of a very trivial nature.

One bleſſing, however, attends the wretched ſituation of the Poliſh peaſants, which is their inſenſibility. Born ſlaves, and accuſtomed from their infancy to hardſhips and ſevere labour, they ſcarce entertain an idea of better circumſtances and more liberty. They regard their maſters as a ſuperior order of beings, and hardly ever repine at that ſevere lot which has deprived them of all the comforts of life, in order to heap them upon a cruel, deſpotic, and unworthy tyrant. They ſeldom want for proviſions, and think that a man can never be very wretched while he has any thing to eat. Our author adds, a total want of ſentiment, and of mental enjoyments, prevail through the whole order, as if Providence had wiſely mixed the ſtupifying drop, to render more tolerable the nauſeous draught of ſervitude.

This is the boaſted liberty of the Poles, in which the multitude are reduced to the moſt abject ſlavery; and thoſe who enjoy eſtates, though ever ſo ſmall, are allowed the privilege of being tyrants, and have greater power over their vaſſals, than God ever gave to kings. But now let us take a view of the property of the great, and ſee in what their wealth conſiſts.

Every Poliſh noble muſt be poſſeſſed either of an eſtate in land, a ſhare in the ſalt-works, or the revenues of the city of Dantzic, which are eſteemed equivalent to an eſtate in land. The Poliſh eſtates in general may be divided into royal, eccleſiaſtical, or patrimonial. The greateſt number of them conſiſt in ſtaroſties, which muſt be given away by the king ſix months after a vacancy, and are regarded as the rights of old military officers, and the reward of their paſt ſervices, the word ſtaroſt ſignifying old age. Each ſtaroſta pays a fourth of his revenue to the republic.

The eccleſiaſtical eſtates conſiſt of biſhoprics, benefices, priories, canonries, and all the land poſſeſſed by the regular clergy, which is of vaſt extent. Some of the biſhoprics exceed five thouſand pounds ſterling a year, which is an immenſe ſum of money in a country that does not abound in ſpecie.

The patrimonial eſtates compoſe the ſolid wealth of the Poliſh nobility, they being entirely independent of the court, and deſcend by inheritance from generation to generation. Theſe conſiſt of lands, houſes, towns, villages, woods, and eſpecially peaſants, which are valued as the ſlaves in our colonies, at ſo much a head, according to their age, ſtrength, and conſtitution. They are in general reckoned worth a hundred livres each a year, to the maſter, and have only one chance for becoming free, by entering into orders, and enrolling themſelves in the long catalogue of prieſts and friars, for which a very ſmall degree of learning is neceſſary: but as it is for the intereſt of the maſter to diſqualify them, he obliges them to marry when young, and by this means not only preſerves, but increaſes his wealth, by the multiplication of the ſpecies.

SECT. IV.

Of the State of Religion in Poland.

THE Poles were firſt converted from idolatry to the Chriſtian religion, about the year 964; when St. Adelbert, afterwards archbiſhop of Gneſna, was the inſtrument of this revolution; and the arts of the church of Rome have, ſince that time, kept the Poliſh government firmly in the intereſt of the Romiſh pontiff. Hence popery is the national religion; for none but perſons of that perſuaſion are permitted to ſit in the ſenate, riſe to eminence in the army, or preſide in the courts of juſtice; yet the government tolerates Lutherans, Calviniſts, Jews, Armenians, and Greeks.

Formerly Poland had a number of Proteſtants of many different ſorts, which were eſtabliſhed there ſoon after the Reformation, when above half the nobility of the kingdom became Socinians, and the palatine of Podolia erected a printing-houſe, and founded an academy for their uſe; but they were expelled by John Caſimir in 1658. The bulk of the Proteſtants now reſide in Poliſh Pruſſia, at Dantzic, Elbing, Thorn, and Marienburg, where they enjoy privileges which are not granted in any of the other provinces.

Indeed, the Lutherans, Calviniſts, and Greeks, by the treaties concluded with the Proteſtant powers, and particularly the conſtitution of 1717, are promiſed ſecurity as to their effects, and an equality with the other ſubjects as to their perſons. The Proteſtants therefore, by virtue of the above articles, have frequently ſolicited for the free exerciſe of their religion, and the Proteſtant powers have intereſted themſelves in their behalf, which has procured them many fair promiſes that have not been fulfilled. On the contrary, a great number of their churches have actually been taken from them, or demoliſhed; and with reſpect to theſe diſſenters from the eſtabliſhed church, the laws of juſtice and equity have been violated; ſo that they have now only twenty-two churches in the cities and towns, and ſixty-five in the villages of Poland. The Greeks are alſo no leſs oppreſſed; yet the Jews, before the preſent reign, were indulged with great privileges; and this country is ſtiled the paradiſe of that people. An old Poliſh general, who was a native of Germany, ſays, that there are at leaſt two millions of Jews only in the villages of Poland, excluſive of the great numbers in the towns. Their annual capitation amounts to two hundred and twenty thouſand Poliſh guilders in the kingdom of Poland, and a hundred and twenty thouſand in Lithuania, amounting in the whole to fifty-ſix thouſand ſix hundred and ſixty-ſix rix-dollars, which they pay above the general impoſts and taxes.

The king is here ſtiled Orthodoxus, as a title of honour, and St. Florian and St. Adalbert are worſhipped as the patron ſaints of Poland.

The number of monaſteries in this kingdom amounts to five hundred and ſeventy-ſix, and of nunneries to one hundred and ſeventeen, beſides two hundred and forty-ſix ſeminaries or colleges, and thirty-one abbeys. The clergy are even poſſeſſed of two-thirds of the lands and revenues of the kingdom.

The monks of Poland are wealthy, profligate, and debauched in their manners; they are often ſeen drunk, and led from taverns, without apprehending any diſgrace to their order, or dreading the cenſure of their ſuperiors, who require equal indulgence. Their faſts conſiſt in abſtaining from eggs, milk, and boiled fiſh at night. But though no clergy on earth are ſo attached to the ſee of Rome

Rome as the Poliſh, yet they prefer good living even to the opinion of the pope, and therefore confine their abſtinence from animal food wholly to the evening.

The ſecular clergy admit of pluralities, and hold profitable benefices in the moſt diſtant parts of the kingdom, without being ever ſuppoſed to perform any of the duties of their office. A canon gives two-pence to a poor ſcholar or a monk, for going through the drudgery of the maſs, as his ſubſtitute. Even the biſhops are ſaid to be ſo negligent about the due execution of epiſcopal duties, that they are forced to wink at the enormities of their inferiors; yet the few clergy who attend the duties of their profeſſion have all the appearance of piety, and the laity make up for every other deficiency by their bounty to the church. They will grind the face of the poor to found a monaſtery, cheat and defraud in order to enrich an altar. In theſe particulars Poland is now what the more civilized nations of Europe were two centuries ago. All their churches are built by donations: they are in general rich and magnificent, and the jeſuits at Leopold have a chalice ſet with jewels, ſaid to be worth a million of livres. So zealous are the Poles in the catholic faith, that they draw their ſwords at maſs, to ſhew their readineſs to defend their religion by ſlaughtering its oppoſers.

As to the erudition of the clergy, a late author obſerves, it entirely conſiſts in that ſpecies of ſophiſtry called ſchool divinity, in an unmeaning metaphyſical jargon, and the moſt uſeleſs logical diſtinctions. The divines pride themſelves in adapting the metaphyſics of Ariſtotle to the doctrines of Chriſtianity, by which they render the latter as unintelligible as the former. They pay no regard to church hiſtory, but ſolve every difficulty by the affirmations of the Stagyrite, and the deciſions of the pontiff. In a word, they are ignorant, obſtinate, opinionated, and ſuperſtitious.

SECT. V.

Of the political Conſtitution of Poland. The very limited Power of the King; the general Contents of the Pacta Conventa; the Ceremonies of the Coronation; the arms of Poland; and the Badge of the Knights of the White Eagle.

THE political conſtitution of Poland is ſo extremely ſingular, that it bears no reſemblance to any other government, ancient or modern. The people have a ſovereign, and yet the government is with great propriety called a republic. The reader has ſeen that the nobility of this country have greater power than thoſe of any other, yet they deteſt the thoughts of an ariſtocracy; becauſe they all eſteem themſelves upon a level, each Poliſh nobleman or gentleman conſidering himſelf as inferior to none but the monarch.

The republic is compoſed of the king, the ſenate, and the nobility, the peaſants being admitted to no ſhare of the government. Upon every new election the royal prerogative has been retrenched, and the liberties of the diet and ſenate proportionably extended. This idea of independency is carried ſo far, as to hazard the general ſecurity of the kingdom, the monarch not being permitted to garriſon even the moſt remote and neceſſary frontier towns; whence Poland has in all ages been made a kind of public route for the paſſage of hoſtile armies.

Upon the death of the ſovereign, the whole body of the nobility aſſemble on horſeback for the choice of a ſucceſſor, and their unanimous voice conſtitutes a legitimate election; though there have been inſtances, where a majority have been deemed ſufficient. Here the nobility aſſume a power of altering the government, and impoſing ſuch conditions on the new monarch as they think proper, and theſe they call the Pacta Conventa. This contract is drawn up, methodized and approved by the ſenate and nobility, after which it is read aloud to the king by the great marſhal, and he ſwears to perform it before the ceremony of his proclamation. As this contract may be deemed the barrier of the privileges of the Poles againſt the encroachments of the crown, we ſhall here enumerate the principal articles.

The firſt is, that the king ſhall not attempt to incroach on the liberty of the people, by rendering the crown hereditary in his family, but ſhall preſerve all the laws and cuſtoms relating to the freedom of election: that he ſhall ratify all the treaties ſubſiſting with foreign powers which are approved by the diet: that he ſhall ſtudy to cultivate peace, preſerve the public tranquility, and promote the intereſt of the realm: that he ſhall not coin money, except in the republic's name, nor appropriate to himſelf the advantage ariſing from coinage: that he ſhall neither declare war, conclude peace, levy troops, hire auxiliaries, or admit foreign troops into the Poliſh dominions, without the conſent of the diet and ſenate: that all offices and preferments ſhall be given to the natives of Poland and Lithuania, and that no pretence ſhall excuſe the crime of introducing foreigners into the king's council or the departments of the republic: that the officers of his majeſty's guards ſhall be Poles or Lithuanians, and that the colonel ſhall be a native of Poland, and of the order of nobility: that all the officers ſhall be ſubordinate to the authority of the marſhal: that no individual ſhall be veſted with more employments than the law allows: that the king ſhall not marry without the approbation of the ſenate, and that the republic ſhall regulate the houſhold of the queen: that the ſovereign ſhall never apply his private ſignet to acts and papers of a public nature: that, on the other hand, the king ſhall diſpoſe of the offices both of the court and of the republic: that he ſhall regulate with the ſenate the number of forces neceſſary for the defence of the kingdom, and adminiſter juſtice by the advice of the ſenate and council: that the expences of his civil liſt ſhall be the ſame with thoſe of his predeceſſors, and poſſeſſed by his family only during his life: that he ſhall fill up all vacancies in the ſpace of ſix weeks: that this ſhall be his firſt buſineſs in the diet, obliging the chancellor to publiſh his appointments in due form: that the king ſhall not diminiſh the treaſure kept at Cracow, but endeavour to augment that and the number of the crown jewels: that he ſhall neither borrow money, nor equip a naval force, without the conſent and full approbation of the republic: that he ſhall profeſs, promote, and defend the Roman catholic faith through all the Poliſh dominions; and finally, that all their ſeveral liberties, rights, and privileges, ſhall be preſerved to the Poles and Lithuanians in general, and to all the diſtricts and provinces within each of theſe great diviſions, without change, or the ſmalleſt violation, except by the conſent of the republic. To theſe articles a variety of others are added, according to the circumſtances and humour of the diet; but the above are the ſtanding conditions, which are ſcarce ever altered or omitted.

The king ſwears to obſerve the Pacta Conventa upon his knees at the altar in the following manner: "We ***, "elected king of Poland, and great duke of Lithuania, "Ruſſia, Pruſſia, Maſſovia, Samogitia, Kihovia, Vol-"hinia, Podolia, Podlaſſia, Livonia, Smolenſko, Sibe-"ria, and Czernicovia, promiſe before the Almighty "God, and ſwear upon the holy evangeliſts of Jeſus "Chriſt, to obſerve, maintain, and fulfil all the condi-"tions ſtipulated at our election by our ambaſſadors with "the ſenators and deputies of Poland, and of the great "dutchy of Lithuania, and confirmed by our plenipo-"tentiaries; and to execute the ſame in all the clauſes, "points, articles, and conditions ſpecified in that con-"tract, in ſuch a manner, that the *ſpeciality* ſhall not de-"rogate from the *generality*; nor, on the contrary, the "*univerſality* from the *particularity*; all which we pro-"miſe ſolemnly to ratify on the day of our coronation."

Though the king is without exception acknowledged to be their ſovereign, yet he cannot exerciſe the functions of ſovereignty before his coronation. The ſpace between the election and coronation is a kind of interregnum, though he is veſted with all the badges and external pomp of majeſty. During this period the marſhal, in all proceſſions, carries his ſtaff bent downwards before the king; but after the coronation it is always held erect. This is to ſhew that the election is imperfect till it be ratified by the coronation, previous to which the king can neither diſpoſe of offices or benefices, grant favours of any kind as a ſovereign, nor apply the great ſeal to any act or ordinance. He appoints the day for performing

his coronation, which is uſually on that ſucceeding the funeral obſequies of his predeceſſor. All imaginable magnificence is obſerved on this occaſion, and a foreigner, unacquainted with the Poliſh conſtitution, would naturally conclude, that a monarch who aſcended the throne with ſuch pomp and ſplendor, was inveſted with very extenſive prerogatives.

When the coronation-day approaches, the king makes his entry into Cracow on horſeback, with a canopy of ſtate carried before him. The troops, both horſe and foot, march before with their officers, and are followed by the palatines, biſhops, and ambaſſadors on horſeback; while a man, who rides before, ſcatters ſome ſmall pieces of ſilver, ſtamped with the effigies of the new king; who is thus conducted from the city gate to the caſtle, paſſing through the public ſquare, in which are ſeveral triumphal arches. On the day that precedes the coronation, the body of the deceaſed king is carried in great ſtate to the church of St. Staniſlaus, at Shalka, where the marſhals break their ſtaves, and the chancellors their ſeals, againſt the king's coffin. The new king, with all his courtiers, and the officers of the crown, are preſent at this ceremony. The companies of tradeſmen even walk thither bare-foot in proceſſion, each having the repreſentation of a coffin covered with a pall, ſupported by two men; after which the corpſe is brought back to the chapel of the cathedral of Cracow, where are the ſepulchres of their kings.

The next day the coronation is performed in the cathedral of Cracow, to which the king is conducted in ſolemn ſtate by the ſenate, and the reſt of the nobility. The regalia are placed upon the altar, and the biſhops of Cracow and Cujavia preſent the king to the archbiſhop of Gneſna, to whom he bows, and then all the three prelates remind him of his duty; after which he kiſſes the archbiſhop's hand, kneels, lays his hand on the goſpels, and again ſwears to the Pacta Conventa; to which is added, that if he ſhould violate his oath, or any part of it, the ſubjects ſhall be diſcharged from their obedience and oath of fidelity. Then receiving the benediction of the primate, and other biſhops, his upper garment is taken off, and the primate anoints his right hand and arm up to the elbow, and alſo his ſhoulders and forehead with conſecrated oil, ſaying, "In the name of the Father, of "the Son, and of the Holy Ghoſt."

The king is then led to the chapel, where he is dreſſed much like a biſhop, and has other ornaments put on him by the marſhals of the kingdom and dutchy, in which he hears maſs on a throne erected in the midſt of the church; and afterwards goes to the altar, where the archbiſhop, putting a drawn ſword into his right hand, ſays, "Receive this ſword, and cordially protect and de-"fend the holy church againſt all unbelievers." The ſword-bearer then puts it up in the ſcabbard, and returns it to the archbiſhop, who girds it to the king's ſide: but his majeſty drawing it, waves it ſeveral times over his head. The king then kneels, and the archbiſhop places on his head the crown, which is ſupported by the biſhops of Cracow and Cujavia. After ſome prayers, the archbiſhop puts the ſcepter into the king's right hand, and the globe of gold into his left. The primate and two archbiſhops then lead the king back to the throne, in which the archbiſhop places him, ſaying, "Sit and "maintain the place God has given thee." The king returns again to the altar, and Te Deum being ſung, his majeſty kiſſes the archbiſhop's hand, offers him gold, confeſſes, receives the ſacrament, and the biſhop's benediction; after which the court-marſhal cries out ſeveral times, Vivat Rex, and the treaſurer of the kingdom ſcatters money among the people in the church.

The next day the king goes in great pomp to the town-houſe, with the regalia carried before him, and the great treaſurer again throws medals of gold and ſilver among the people. His majeſty being there placed on a throne, receives the homage and oaths of the diet, &c. on their knees, and the magiſtrates of the cities preſent him with the keys of their gates in a ſilver diſh, and a purſe full of ducats; after which he reſtores the keys, and makes ſome of the burghers of the city knights, by ſtriking them gently on the ſhoulder with his drawn ſword.

As the king is obliged by the Pacta Conventa to conſult his people with reſpect to marriage, ſo their conſent is neceſſary to the diſſolution of the nuptial engagement; for he can neither divorce the queen, nor ſeparate from her bed, without the approbation of the diet, unleſs he was married before his election. Her majeſty has no diſtinct houſhold, except a marſhal, a chancellor, and ſome inferior domeſtics. She is furniſhed with money by the king to defray the expences of the civil liſt; and, with reſpect to her domeſtic œconomy, is little more than his houſekeeper or ſteward. The king's whole revenue for the ſupport of his regal dignity does not exceed four hundred thouſand crowns; excluſive of which there is a maintenance for the queen-dowager, his conſort, and children, in caſe of his death; though the latter are denied the privilege enjoyed by other ſubjects, of riſing to places of truſt and profit, leſt this ſhould give them an aſcendant in future elections.

The arms of the republic are, gules, an eagle argent, for Poland; and gules, a cavalier argent, for Lithuania.

In the year 1705, king Auguſtus II. inſtituted the order of the white eagle; whoſe enſign is a croſs of gold enamelled with red, with a white border, and four flames between the points, appendant to a blue ribbon. On one ſide of the badge is the Poliſh white eagle, with a white croſs and the electoral ſword, &c. on its breaſt; on the other ſide the king's cypher, and round it this motto, PRO FIDE, REGE, ET LEGE. The croſs is ſurrounded with a crown ſet with diamonds.

SECT. VI.

Of the Senate of Poland.

THE moſt reſpectable part of the Poliſh government is the ſenate, which is compoſed of the biſhops, palatines, caſtellans, and ten officers of ſtate, who derive a right from their dignities of ſitting in that aſſembly, amounting in all to a hundred and forty-four members, who are ſtiled ſenators of the kingdom, or counſellors of ſtate, and have the title of excellency, a dignity ſupported by no penſion or emoluments neceſſarily annexed to it. The ſenate preſides over the laws, is the guardian of liberty, the judge of right, and the protector of juſtice and equity.

The members are nominated by the king, and take an oath to the republic, before they are permitted to enter upon their office. Their honour continues for life, and at the general diet they are ſeated on the right and left of the ſovereign, according to their dignity. They are the mediators between the monarch and the ſubject, and, in conjunction with his majeſty, ratify all the laws paſſed by the nobility. The value they ſet on their dignity makes them deſpiſe all other honours, and they have even rejected the titles offered them by the emperor of Germany. As a ſenator is bound by oath to maintain the liberties of the republic, it is thought no diſreſpect to majeſty to remind him of his duty; for as they are his counſellors, this freedom of ſpeech is an inſeparable prerogative of their office.

All the biſhops are ſenators, and precede the ſecular members: they are only thirteen in number, beſides two titular biſhops of places ſeized by the Turks and Ruſſians; but ſtill the titular honours are retained, and eagerly ſought after, becauſe they give them a right to ſit in the ſenate. The archbiſhop of Gneſna is ſeated at their head, and is ſecond only to the monarch; he is alſo apoſtolical legate by his office, and enjoys ſuch variety of privileges as gives him extraordinary weight, not only in the ſenate, but in the common-wealth; for it is a capital crime even to draw a ſword, or to ſpeak irreverently in his preſence. During the inter-regnum he has the power, under certain reſtrictions, of coining money: he convokes the ſenate; and oppoſes the conduct of the monarch whenever he acts contrary to the conſtitution: his marſhal is a ſenator, and the croſs is carried before him. When the primate viſits the king, he is met at the bottom of the ſtairs of the palace by one of the chief officers of the crown; another great officer attends him at the top of the ſtairs, and conducts him to the royal preſence, while

while the king advances to meet him at the door. He receives the viſits of ambaſſadors without being expected to return their civilities. He is the head and ſovereign of the republic during a vacancy of the throne. He likewiſe regulates the diet of election, iſſues out writs for holding the general and petty diets, and performs ſeveral other acts of ſovereignty, aſſiſted only by the ſenate, the members of which rather compoſe his council, than are his collegues. The Poles probably annexed theſe extraordinary privileges to the primate rather than to any lay ſenator, from their being ſecured by his religious character from his aſpiring after the crown.

The office of palatine is to march at the head of the nobility of his palatinate, and in time of peace to aſſemble the nobility, to preſide in the courts of judicature, and pronounce ſentence; to ſettle the price of goods brought to market, except in war-time, and during the ſeſſion of a diet; to examine weights and meaſures, and to protect and adminiſter juſtice to the Jews. Theſe palatines amount to thirty-ſeven, including the three caſtellans and the ſtaroſta of Samogitia, who rank with the palatines.

There are eighty-two caſtellans, who in time of peace are only ſenators, without any juriſdiction; but in time of war they, by general ſummons, act as palatines, and are in ſome meaſure their lieutenants. In the Poliſh language a caſtellan is ſtiled pan, or lord, and ki, or ſki, is added to the place over which each is caſtellan, as pan Poſnanſki, lord of Poſnan. They are divided into great or little caſtellans. The great caſtellans are admitted into the moſt ſecret councils, from which the others are ſometimes excluded.

The crown officers are, the crown great-marſhal, the great-chancellor, the vice-chancellor, the great-treaſurer, the deputy-treaſurer, and the court-marſhal of Poland, and all the ſame officers of Lithuania.

Though theſe ſtate officers are the laſt of the ſenators in order, yet they are perſons of great power and dignity, and in a fair way of riſing to the higheſt poſts in the kingdom.

SECT. VII.

Of the Poliſh Diet.

WE now come to the diet of Poland, which is compoſed of the king, the ſenate, and deputies of the nobility of every palatinate; and is uſually held on two accounts, either to conſider of the reſolutions of the ſenate relating to the public welfare, or for the adminiſtration of juſtice, which are the moſt uſual diets.

The king may aſſemble the diet at any particular place, except on occaſion of a coronation, which, according to the cuſtom of the country, muſt be celebrated at the capital. Indeed for a number of years the diet regularly aſſembled at Warſaw; but, on complaint made by the Lithuanians, it was agreed, that every third diet ſhould be held at Grodno. The general rule is to meet at leaſt once in three years. When it is propoſed to hold a general diet, the king, or, in caſe of an interregnum, the primate, iſſues writs to the palatines of the ſeveral provinces, appointing the time and place of meeting. A ſketch is alſo ſent of the buſineſs to be deliberated upon by the aſſembly, and the members are allowed ſix weeks to prepare for the intended ſeſſion.

It is remarkable that the diet never ſits above ſix weeks, even in the moſt critical conjunctures and preſſing emergencies; and they have been known to break up in the midſt of an important debate, and to leave the buſineſs to a future meeting. This has been juſtly eſteemed one of the great defects of the conſtitution of Poland: it probably owes its origin to convenience; but is kept up from whim and caprice.

On recepit of the king's writ, the palatine communicates the meeting of the diet to all the officers and nobility within his juriſdiction, requiring them to aſſemble on a certain day, to elect deputies, and take into conſideration the buſineſs mentioned in the royal ſummons. Theſe meetings are called petty diets, every gentleman poſſeſſing three acres of land having a vote, and matters being determined by a majority; but in the general diet decrees are only valued when the whole body is unanimous. Theſe indigent nobles are always directed by ſome perſon of ſuperior fortune, influence, or ability, and ſeldom examine the ſubject of the debate; but remit it wholly to the judgment of their repreſentatives. Every palatinate has three repreſentatives; but the buſineſs devolves upon one of them, who is elected for his ability and experience, and the other two are only added to give weight to this leading member, and to do honour, by their magnificent appearance, to the palatinate they repreſent.

As theſe deputies have ſeats in the diet, the general aſſembly is divided into two bodies, the upper and the lower; the one being compoſed of the ſenate, the ſuperior clergy, and the great officers; the other of the repreſentatives of the palatinates, who prepare all buſineſs for the ſuperior body. Thus we ſee how near an affinity the general conſtitution of the Poliſh diet has to a Britiſh parliament, and to the original form of government among all the northern nations, however they may vary in particular circumſtances, and be altered by the influence of time.

The firſt buſineſs of the aſſembly is to chooſe a marſhal; upon which occaſion the debates and tumults ſometimes run ſo high, that the whole time for the ſeſſion of the diet is conſumed in altercation and wrangling about the election of a ſpeaker, who muſt be a native of Great or Little Poland, or of the dutchy of Lithuania. After his election he kiſſes the king's hand, and the chancellor, as the royal repreſentative, reports the matters to be deliberated upon by the diet. The marſhal then acquaints the king with the inſtructions of the deputies from their conſtituents, and the abuſes they require to be remedied: he likewiſe requeſts his majeſty to fill up the vacant offices and benefices according to law, and is anſwered by a ſet ſpeech from the chancellor, who reports the king's inclination to ſatisfy his people as ſoon as he has conſulted his faithful ſenate.

Some of the cuſtoms obſerved by the Poliſh diet are remarkably abſurd; not only an unanimity of voices is neceſſary to paſs any bill, and conſtitute a decree of the diet, but every bill muſt alſo be aſſented to unanimouſly, or none can take effect. Thus, if out of twenty bills one ſhould happen to be oppoſed by a ſingle voice, all the reſt are thrown out, and the diet meets, deliberates, and debates for ſix weeks to no purpoſe. Can any thing be more aſtoniſhing, than that a rule ſo contrary to the dictates of common ſenſe, and attended with ſuch fatal conſequences, ſhould continue among a people who appear far from being void of underſtanding?

The uſual form of paſſing laws and decrees is as follows: they are firſt reviſed by the marſhal, attended by two of the deputies, or elſe by three ſenators and ſix deputies, and then read in the ſenate in the king's preſence; after which the chancellor aſks, with a loud voice, whether the king, ſenators, and deputies, agree to have the bill ſanctified by the royal ſeal, and the arms of the republic. Having paſſed through theſe forms, it is lodged in the regiſter at Warſaw, or in the great chancery of the kingdom, till printed copies are made, and diſperſed among the ſeveral palatinates.

The diet takes cognizance of affairs relating to war, the concluſion of a peace, the forming alliances, the impoſition of taxes, the levying of troops, the framing of laws, and the final determination of civil and criminal cauſes; there being an appeal from all the inferior courts to the general diet. Here too foreigners are naturalized, and admitted to all the rights of the natives; and ſuch peaſants as have ſufficient wealth and ambition, are advanced to the rank of nobility.

The afflux of people occaſioned by the diet is very aſtoniſhing: wherever it happens to ſit, thirty or forty thouſand people, who rival each other in pomp and profuſion, are added to the uſual number of inhabitants. The nobility, who are not deputed, attend with their families for the ſake of pleaſure: they drink deep of Hungarian wine, their favourite liquor, and feaſting and mirth are more purſued than the buſineſs of the ſtate. Hence the deputies frequently come intoxicated into the diet, affront the king, excite tumults, harangue with the moſt abuſive and factious eloquence, and ſometimes occaſion the diſſolution of the aſſembly. Thus the ſupreme

ſenate of the nation is in fact little more than a factious maſs, conducted with the utmoſt indecorum. However, a politic prince may mould this turbulent multitude according to his pleaſure, by ſoothing, cajoling, treating, and making pecuniary preſents.

Beſides the regular triennial great diets, a particular diet meets, as hath been already hinted, on the vacancy of the throne, in a large field in the neighbourhood of Warſaw. Upon the death, depoſition, or abdication of the ſovereign, the primate, on whom the chief power devolves, iſſues circular letters, ſummoning the diet to aſſemble on an appointed day. A kind of booth of prodigious extent is erected, to ſhelter the electors from the weather, and deputies are elected in the uſual manner in the petty provincial diets. A marſhal is choſen by the nobility, who muſt be confirmed by the ſenate. Theſe laſt, with the nobility, then form an aſſociation, and enter into the moſt ſolemn engagements to adhere to the ſame intereſt; not to nominate a king till one of the candidates has obtained their unanimous conſent; to preſerve all the rights and immunities of the republic; to enter into no engagements with any of the candidates, or their ambaſſadors, till all the abuſes, irregularities, and grievances of the republic be fully redreſſed; to inſiſt upon the repeal of all the decrees, and even of the royal ſtatutes that have any tendency to encroach on public liberty; and to ſupport the court of juſtice eſtabliſhed for preſerving order, enforcing the laws, protecting the ſtate, coining money, and performing all the offices of the executive power, during the vacancy in the throne; to prohibit all ſtrangers from approaching the diet; to forbid the carrying of fire-arms to this aſſembly; to oblige the principal military officers to ſwear fidelity to the ſtate; to exert no undue influence, and to uſe the army only againſt the enemies of their country; to defend the frontiers, and ſecure the honour and liberty of Poland and the great dutchy of Lithuania; to oblige the officers alſo to ſwear, that in caſe of any ſedition or revolt they will aſſert the public intereſt, reſtrain the ſoldiers from acts of violence, and receive no money upon any pretence whatſoever from the clergy, laity, the candidates, or their ambaſſadors. They alſo engage to oblige the officers not to advance to the heart of the kingdom with their troops, nor to approach the diet; and neither to augment or diminiſh the army but by the diet's conſent. Laſtly, the treaſurers of the crown are forbid to iſſue out money without the approbation of the ſenate, except for the pay of the army.

When the marſhal is elected, and a court of juſtice is eſtabliſhed, the diet draws out a bill of grievances and abuſes, either with reſpect to the republic or to individuals, which they intend to have redreſſed. A certain number of ſenators are then deputed to the army to keep them ſteady, and to aſſiſt the generals with their advice. Senators and deputies are alſo appointed to take an inventory of the crown treaſure and jewels depoſited at Cracow, and to make their report to the diet. Eight ſenators are then charged with the treaſure, and a particular ſeal and key is given to each, that none of the keepers may ſingly have acceſs. The ſame form is obſerved with reſpect to the crown revenue.

During the ſeſſion of the electoral diet, which is limited to fourteen days without prorogation, all courts of juſtice, except that of the marſhal, are ſuſpended till the coronation is over. The next proceeding is to give orders to the plenipotentiaries of foreign powers, and the advocates of the candidates for the crown. The pope's legate is honoured with the firſt notice, as being the repreſentative of Chriſt's vicar, the ſovereign of princes; then the ambaſſador of his imperial majeſty, who is ſucceeded by thoſe of France, and other catholic powers. They make their ſpeeches in Latin, and are anſwered by the biſhop of Gneſna and the marſhal of the deputies. But in general it is not the moſt perſuaſive oratory that can gain the eſteem of a Poliſh diet: the deputies deſire more ſubſtantial arguments, and expect their paſſion for money and wine to be alſo gratified. Addreſs in this particular, and in ſecuring the intereſt of the clergy, are the chief qualities neceſſary in a candidate for the crown.

Immediately before they proceed to the election, public prayers are read, and the whole diet join with one voice to beſeech heaven to direct their choice, and judge them according to their integrity in an affair of ſuch conſequence to the republic; a proceeding that muſt appear equally abſurd and impious to thoſe foreign miniſters who have purchaſed their votes. The deputies of each palatinate give their votes in particular *rotas*, the archbiſhop alone preſerving his ſeat. The firſt ſenator of every palatinate numbers the votes, which are afterwards tranſmitted in a roll to the nuncio-marſhal. Should all the votes prove unanimous in favour of one candidate, the primate aſks three times, with a loud voice, whether the grievances have been redreſſed, and then proclaims the king, the marſhals of the crown and dutchy of Lithuania obſerving the ſame ceremonies. In caſe of a conteſted election, the ſenate aſſembled in a particular part of the booth endeavour, by perſuaſions, promiſes, and menaces, to bring all the electors to one opinion; and ſhould this be found impractable, the majority is declared, and their opinion paſſed for a legitimate election, though this is diametrically oppoſite to the fundamental conſtitution.

SECT. VIII.

Of the Strength of Poland, with reſpect to its Fortifications and military Forces.

ONE of the moſt extraordinary parts of the conſtitution of Poland, is the manner of raiſing and maintaining the militia. Originally Poland was an open country, as at preſent, without fortreſſes; but, in courſe of time, the government cauſed fortifications to be erected in the cities, in order to oppoſe the incurſions of the enemy: theſe were ſubject to royal authority, and defended by regular garriſons; but as they were found to increaſe the power of the monarch, by erecting a kind of ſtanding army, with which ſome ambitious prince might deſtroy the liberties of the people, ſome of the citadels were demoliſhed, and others neglected. They were then uſurped by the neighbouring lords, who by this means extended their authority over the citizens and burghers, as well as over the peaſants on their own eſtates.

Hence there are at preſent few fortified places either in Poland or Lithuania: for the Poles alledge, that the bravery of the inhabitants is the defence of their country. Kaminiec, on the frontiers of Podolia, owes its ſtrength more to nature than art. The boaſted fortifications of the city of Zamoſk, if compared with the fortified towns of other countries, muſt appear very inconſiderable; and all the towns which formerly ſtood a ſhort ſiege, are now open and defenceleſs. Hence Dr. Buſching obſerves, that "when a foreigner reads of fortified places in Poland, he muſt not ſuppoſe that ſuch expreſſions ſignify "any thing more than a ditch, a rampart, a wooden or "a ſtone wall, with which ſuch places are ſurrounded. "Dantzic is the only place that deſerves the name of a "fortreſs in the Poliſh dominions; but this is an independent city."

No ſuch thing as a ſtanding army kept in conſtant pay was formerly known in this country; but all that were capable of bearing arms took the field on any emergency: but in the year 1551, the Lithuanians, for their own ſecurity, firſt began to keep on foot a certain number of troops, and their example was followed by the Poles, who raiſed an army to defend their frontiers from the ravages of their lawleſs neighbours, who live on plunder. Theſe troops are now divided into the crown army, and that of Lithuania; but ſome of the troops in both armies are cloathed and exerciſed in the Poliſh, and others in the German manner.

The crown army conſiſts of a thouſand ſpear-men, three thouſand nine hundred and forty cuiraſſiers, a thouſand light armed troops, which are all diſciplined in the Poliſh manner; four thouſand dragoons, ſix thouſand ſeven hundred and fifty foot-ſoldiers, eight hundred and fifty matroſſes, and four hundred Hungarians; all theſe, except the laſt, are under the German diſcipline.

The Lithuanian army is compoſed of four hundred men bearing lances or ſpears, above eleven hundred and ſixty cuiraſſiers, four hundred and ſixty Tartars, two hundred

hundred and forty Coſſacs, four regiments of dragoons, three regiments of foot, and a hundred and fifty matroſſes.

The charge of theſe troops is defrayed in Poland by a poll-tax; but in Lithuania other taxes are levied for this purpoſe. The ſoldiers alſo receive, beſides their pay, what is called winter-quarter money, and are moſtly cantoned on the crown lands.

Beſides this ſmall ſtanding army, which receives conſtant pay, Poland, on any preſſing exigency, is provided with another that can ſpeedily be raiſed, and is of little expence to the public: for on any ſudden and important danger, the whole body of the nobility are ſummoned to appear in the field on horſeback, and this army is called the poſpolite. This is concluded upon in a diet, after having been previouſly propoſed in the provincial meetings, and is done by royal letters; with the ſeals of the kingdom, and the great dutchy of Lithuania. Theſe being faſtened to poles by the ſummoners, are carried to the principal noblemen, ſtate officers, and perſons of rank in every palatinate, and read in the market-places of the cities and towns. When this has been three times repeated, the nobility, after holding their aſſemblies in their palatinates and diſtricts, appear in the field on horſeback, and, during the campaign, provide ſubſiſtence for themſelves.

All gentlemen who live in cities and towns upon the intereſt of money; all tenants who have procured leaſes for a term of years, which indeed are extremely uncommon in Poland; all the king's tenants; the eccleſiaſtical advocates in the ſpiritual courts; and, in caſe of imminent danger, all the citizens in general; and even the gentry impriſoned for high crimes, are diſmiſſed to attend the poſpolite, being afterwards bound to return to their confinement, to ſtand trial, and ſuffer the puniſhment due to their crimes, unleſs they have merited a pardon by ſome ſignal acts of valour in the ſervice of their country.

At preſent this body is entirely compoſed of cavalry. There is alſo a ſmall body of infantry raiſed at the expence of the citizens, worth four thouſand florins; the more wealthy burghers are obliged to find a horſeman compleatly armed. In the great dutchy of Lithuania the clergy are alſo obliged to fit out a number of men, in proportion to their temporal and ſpiritual poſſeſſions. The poor gentry may either appear in perſon, or ſubſcribe to equip one horſeman for a certain number of eſtates; and brothers who are joint proprietors, may depute one perſon to repreſent them all. However, the court and retinue both of the king and queen are exempted from taking the field. The primate alſo is veſted with a power of protecting a certain number of the gentry within his juriſdiction from appearing in a military capacity; and this privilege is ſometimes claimed by the biſhop of Cracow.

The poſpolite of every palatinate being aſſembled at the appointed place, are led by their proper officers to the general rendezvous, where the palatines ſurrender their ſeveral charges to the commander in chief. The Poliſh nobility ſquander the bulk of their fortunes in making a magnificent appearance in the field, and come with glittering arms, fine horſes, rich trappings, and elegant apparel.

The cavalry is divided into huſſarts and tavarſies; the former are choſen men and horſe, both defended by cloſe armour; the latter are covered only by a breaſt-plate, gorget, and helmet. Lances, ſabres, and piſtols, are the arms of the huſſarts; and carbines, bows and arrows, of the tavarſies. The former dart their lances at a conſiderable diſtance; and, if they miſs their aim, recover them by means of a ſilk cord faſtened to the wriſt. All the cavalry have the ſkins of wild beaſts over their armour, and are ſtuck over with the wings of ſtorks and other large birds, which give them a fierce appearance, and terrify the enemy's horſe, which, when unaccuſtomed to ſo extraordinary a ſpectacle, cannot be brought up to the charge. As to the Poliſh light-horſe, they differ little from the other troops, being armed with coats of mail and helmets, &c. Theſe are ſent upon all foraging parties and expeditions which require celerity, they being leſs encumbered with baggage.

As no ſuttlers are admitted into the camp, every Poliſh officer muſt provide himſelf proviſions, and the cities and towns provide carriages and due military ſtores.

The king himſelf always marches at the head of his army: but after the nobility have been a fortnight at the general rendezvous, if no enemy appear, they are at liberty to to return to their reſpective homes. Theſe troops are not obliged to march beyond the limits of the kingdom; but if this be reſolved, and the nobility voluntarily conform to it, every horſeman and foot ſoldier previouſly receives five Poliſh marks, or about one pound two ſhillings and ſix-pence; and the campaign is not to laſt above three months. Such a general ſummons has not been iſſued ſince the year 1672; nor was it ever of any great advantage to the republic, on account of the ſhort duration of the campaign, the want of good diſcipline, and obedience to their chiefs.

We have now given a particular account of Poland and its inhabitants in general, and ſhall therefore proceed to deſcribe the ſeveral provinces, and the principal places worthy of notice.

The kingdom of Poland, according to Dr. Buſching, conſiſts of three principal provinces, viz. Great Poland, Little Poland, and the great dutchy of Lithuania. This diviſion, he obſerves, is of great utility with reſpect to the public law of Poland; according to which, the nation conſiſts of three diſtinct people and three provinces, and the marſhal in the diet is alternately choſen from each. But however convenient this diviſion may be for the Poles, it does not appear to be ſo to the geographers, ſince even that gentleman has placed his account of Poliſh Pruſſia, which belongs to Great Poland, after Lithuania. We ſhall therefore give what appears to us a more natural diviſion, in which the countries and people, who are, in ſome reſpects, remarkably different, will be leſs confounded by being claſſed together.

SECT. IX.

Of GREAT POLAND, *including Poland Proper, Cujavia, and Maſſovia; with the principal places in each.*

GREAT Poland, including the above provinces, is bounded on the north by the kingdom of Pruſſia and Poliſh Pruſſia, on the eaſt by Lithuania, on the ſouth by Little Poland, and on the eaſt by Sileſia.

Great Poland, properly ſo called, contains five palatinates, the moſt remarkable of which are,

Poſeran, or Poſen, the capital of the palatinate of Poſnania, is a handſome but not a very large city, ſeated on the river Warta, in fifty-two degrees twenty-ſix minutes north latitude. It is incloſed with a double wall and a deep moat. On the other ſide of the river it has two ſuburbs, ſurrounded with a large moraſs; but both the city and ſuburbs are ſubject to frequent inundations by the overflowing of the river. The caſtle, which is a good ſtructure, ſtands on an iſland in the ſame river. The city has ſeveral churches and convents, a jeſuits college, an academy, which ſtands in the ſuburbs, and an epiſcopal ſeminary. The biſhop's palace is near the cathedral, which is a fine ſtructure. This is the moſt antient biſhop's ſee in Poland, it being founded by the emperor Otho I. and made ſubordinate to the archbiſhopric of Magdeburgh, under which it continued till it was ſubjected to the archbiſhopric of Gneſna. It owes great part of its proſperity to its trade with Germany; for it is a ſtaple town, and enjoys ſeveral other privileges.

Frauſtadt, in the Poliſh language Uſkowa, is a handſome town on the frontiers of Sileſia, in latitude fifty-one degrees forty-five minutes, built by the Germans, from whom a great part of its inhabitants are deſcended; hence there are two Lutheran churches in the town. The inhabitants carry on a conſiderable trade in oxen and wool. Frauſtadt formerly belonged to Sileſia; but was annexed to the Poliſh dominions by king Caſimir, who promiſed to maintain its former privileges, among which was the right of coining money. In the year 1644, this town was almoſt deſtroyed by fire, and in 1706 the combined armies of the Saxons and Ruſſians were entirely defeated by the Swedes near this place.

Liſſa,

Liſſa, called by the Poles Leſzno, is a fine populous town and lordſhip, near the preceding, in the territory of which it lies. It was formerly no more than a village, but great numbers of proteſtants removing thither from Sileſia, Bohemia, Moravia, and Auſtria, and obtaining the free exerciſe of their religion, it increaſed till it became a conſiderable town. The inhabitants carry on a good trade, and have a Lutheran church, a ſeminary, and a Calviniſt church: and the general-ſenior of all the Lutheran churches in Great Poland, formerly ſtiled the ſuperintendant, reſides in this town. In 1656 the inhabitants deſerted it for fear of the Poliſh troops, who plundered and laid it in aſhes; and in 1707 it was laid waſte by the Ruſſians, but was afterwards rebuilt with great improvements.

In the palatinate of Kaliſh is the city of Gneſna, called by the Poles Gniezno, the capital of Great Poland, and the moſt antient city in the kingdom. It is ſituated in a plain, and is not only a large town, but the ſee of an archbiſhop, whoſe power, as we have already obſerved, is next that of the king. A court of judicature is held in the town, and a particular chancellor belongs to the chapter of the cathedral, in which is the body of St. Adalbert encloſed in a ſilver ſhrine. There is alſo a ſeminary founded here.

We now come to the province of Cujavia, which is very fertile, and watered by many lakes, that abound with fiſh: the principal of theſe is the lake of Goplo. The biſhop of Cujavia is a ſuffragan to the archbiſhop of Gneſna, and alſo ſtiles himſelf biſhop of Pomerellia. Cujavia contains two palatinates, the moſt conſiderable place in which is,

Uladiſlaw, a handſome city in the palatinate of the ſame name, ſeated on the Viſtula. Here is a fine palace, in which the biſhop of Cujavia reſides. The cathedral is an antient Gothic ſtructure, rich in plate, ornaments, and relics, and is encompaſſed by the houſes of the canons and a large free-ſchool.

Another province of Great Poland is Maſovia, or Maſuren, which, from the beginning of the Poliſh monarchy, has been conſidered as a part of that kingdom. It has been twice given to the queens of Poland as a dowry. No other religion but popery is tolerated in this province, thoſe of other profeſſions being treated with the utmoſt ſeverity; for to ſuch a height is the bigotry of the government carried, that if a Lutheran or Calviniſt miniſter be found in Maſovia, he is certainly puniſhed with death. The number of noble families in this province are computed to be no leſs than forty-five thouſand. Maſovia contains two palatinates, in which are the following places:

Warſaw, the capital of Maſovia, and the royal reſidence, is ſeated on the Viſtula, almoſt in the center of the kingdom, in fifty-two degrees twenty-one minutes north latitude, and twenty-one degrees ten minutes eaſt longitude from London. It is ſurrounded with a moat and double wall, and has a ſtately caſtle. Here are ſeveral elegant ſtone-buildings and palaces, a great number of beautiful churches and convents, an hoſpital, an arſenal, and a ſtatue of king Sigiſmund III. erected to his memory by his ſon Uladiſlaus IV. The valuable library of count Zaluſk, which was opened in 1746, ſaid to contain above two hundred thouſand volumes, is both an advantage and an ornament to the city. Some years ſince an academy for military exerciſes and a literary ſociety were inſtituted at Warſaw. When the general diet is aſſembled, there is ſuch a vaſt concourſe of people, that great numbers of them are obliged to live in tents without the city, where they continue during the ſeſſion. The provincial aſſembly, or diet, and a court of judicature are alſo held here.

King Sigiſmond III. was the firſt who made this city the royal reſidence, and his ſucceſſors have reſided here ever ſince. In 1655 this city had a Swediſh garriſon, who brought hither a conſiderable booty from ſeveral parts of Poland; and a great number of military and civil officers, with ſome ladies of diſtinction of that nation, reſided there. But the Poles laid ſiege to it in 1656, and, after a vigorous defence, obliged the city to ſurrender. By the articles of capitulation, the Swedes were permitted to leave the place; but the beſt part of the plunder they had amaſſed fell into the hands of the Poles. However, Charles Guſtavus approaching with an army to relieve the city, king John Caſimir marched againſt him, and a battle was fought near the ſuburbs of Praga, which laſted three days; but at laſt the Poles were obliged to retreat, leaving behind them their artillery and baggage; upon which the Swedes placed a ſmall garriſon in the town, and deſtroyed the fortifications. In 1702, Charles XII. of Sweden made himſelf maſter of Warſaw, which happened then to be without a garriſon, and fixed his head-quarters at Praga.

In this province is alſo the city of Ploczko, which ſtands on an eminence by the Viſtula, and affords a very pleaſant proſpect. It is the ſee of a biſhop, who is ſuffragan to the archbiſhop of Gneſna: it is alſo the reſidence of a palatine, a caſtellan, and a ſtaroſta. Here are ſeveral churches richly ornamented, the principal of which belong to the nuns of St. Mary Magdalen and the Benedictine monks in the caſtle: the latter is the cathedral, and the revenues of the chapter are almoſt equal to thoſe of the biſhop. The provoſt, or dean, is lord of the diſtrict of Sielun, and ſovereign of the nobility who reſide there, and is accordingly ſtiled prince of that territory. The jeſuits have a college there, and in the caſtle is a ſeminary. The provincial court of judicature is held in the city, and its inhabitants carry on a good trade.

Poliſh Pruſſia is conſidered as a diſtrict belonging to Great Poland, merely perhaps from its bordering on that part of the Poliſh dominions: but this province deſerves a particular deſcription.

SECT. X.

Of LITTLE POLAND, *including Podlachia, Red Ruſſia, Podolia, Kiow, and Volhinia; containing an Account of the principal Towns, particularly of Cracow, and the famous Salt Mines of Bocnia and Wiliſka.*

LITTLE Poland, which is alſo called Upper Poland, properly ſo called, contains the palatinates of Cracow, Sandomir, and Lublin, and has the following remarkable places:

Cracow, the capital of the whole kingdom, and the fixed head reſidence of the ſovereign, is ſeated in a fertile country, at the conflux of the Viſtula and the Ridawa, in nineteen degrees thirty minutes eaſt longitude, and the fiftieth degree of north latitude. The city contains a great number of convents and churches, and among the latter that of the Virgin Mary, which is the principal. On the weſt ſide of it is a ſuburb with handſome gardens, and near it is the king's palace, which has the advantage of elegant gardens incloſed with a wall. On the ſouth ſide of it is the royal caſtle, ſeated on a high rock, near the Viſtula. This large ſtructure is defended by walls, towers, and baſtions, and has the appearance of a town; it including the king's palace, the cathedral, and two other churches, with ſeveral dwelling-houſes. The cathedral is dedicated to St. Staniſlaus, formerly biſhop of this ſee, whom Boleſlaus II. killed at the altar with his own hands, becauſe that biſhop's admonitions were grown inſupportable to him. St. Staniſlaus's remains are incloſed in a ſilver ſhrine, and maſſes are continually performed day and night in this church. In the treaſury of the cathedral, among other things of great value, are the regalia, on which account it is under the care of the treaſurer of the kingdom. Here the kings of Poland are always crowned, and their remains interred. The annual revenue of the biſhopric of Cracow amounts to forty thouſand dollars. The chapter conſiſts of thirty-ſix canons, beſides other prieſts, whoſe revenues are alſo very conſiderable.

Contiguous to the caſtle is the ſuburb of Stradomo, which includes ſeveral churches, convents, and hoſpitals; and from thence a bridge over the Viſtula leads to the town of Cazimircz, which may be conſidered as the ſecond diviſion of the city of Cracow: it lies to the eaſt of the latter, was built by Caſimir the Great, and is incloſed with a wall. The chief edifice in this part of the

city is the univerſity, which conſiſts of eleven colleges, to which are ſubordinate fourteen grammar-ſchools, diſperſed in ſeveral parts of the city. The Jews-town joins to Cazimircz. To the north of the city lies the ſuburb of Kleparz, or Klepardia, which has no walls, but contains ſeveral churches, particularly that of St. Florian, which is a very ſtately edifice, and the biſhop's palace. The city of Cracow is large, and was formerly populous and flouriſhing; but by the removal of the court, and the many calamities it ſuſtained in both the Swediſh wars, has much declined. The citizens have this particular privilege, that no appeal lies from the city council, but to the king only; and his majeſty can judge no cauſes relating either to the city or its ſuburbs in any other place but in Cracow. The palatine of this city has the power of chooſing the council, but not of diſplacing any member when elected. The caſtellan of this city has hardly any thing in common with the other caſtellans; however, he has the ſame name and appointments, and by his poſt is entirely exempt from ſerving any other offices, except his being obliged to appear in council. This city has often been conſumed by fire, and in 1707 and 1708 was viſited by the peſtilence, which ſwept away ſeveral thouſands of the inhabitants. In 1655 it was beſieged and taken by the Swedes; but in 1657 they were obliged to reſtore it to the Poles.

Boſnia is a town famous for its ſalt mines, which were firſt diſcovered in 1251, when this place was only a village. The ſmall river Raab runs near this town, which is ſurrounded, with eminences. The ſalt mine is in a ſlip of land of ſeven hundred and fifty feet in breadth from north to ſouth, about ten thouſand in length from eaſt to weſt, and its greateſt depth is a thouſand two hundred feet from the ſurface. The ſalt lies in veins, and is ſomething finer than that of Wiliſka, eſpecially at a certain depth. It is cut in ſmall pieces, and put up in caſks. The number of labourers in this mine is about two or three hundred. Alabaſter and large pieces of black wood have been found in this mine incruſted with ſalt, and every part of it is dry.

Wiliſka is a ſmall town, only famous for its mines, and is ſeated in a valley about five miles from Cracow. The town is entirely undermined, and the cavities extend for a conſiderable diſtance round it. The length of the mine from eaſt to weſt is ſix thouſand feet, its breadth from north to ſouth is two thouſand, and its greateſt depth eight hundred; but the veins of ſalt are not limited to this extent, for the depth and length of them from eaſt to weſt are yet unknown, and only the breadth has been hitherto determined. There are at preſent ten ſhafts, and within the whole ſalt mine there is not ſo much as one ſpring. Here a ſtranger is ſurprized on his deſcending to the bottom to find a kind of ſubterraneous common-wealth, conſiſting of a great many families, that have their peculiar laws and polity, and even public roads and carriages; horſes being employed to draw the ſalt to the mouths of the mine, where it is taken up by engines. Theſe horſes when once they are down never more ſee the light of the ſun, and many of the people ſeem buried alive in this ſtrange abyſs; ſome being born there and never ſtirring out, though others have frequent opportunities of breathing the freſh air of the fields, and enjoying the light of the ſun. The ſubterraneous paſſages or galleries are very ſpacious, and in many of them chapels are hewn out of the rock-ſalt, and in theſe are ſet up cruciſixes and the images of ſaints, before which a light is kept conſtantly burning. The places where the ſalt is hewn out, and the empty cavities whence it has been formerly taken, are called chambers; and ſome of theſe are ſo ſpacious, that a large church might be incloſed in one of them. Several of theſe chambers are made uſe of as warehouſes for the ſalt caſks, or barns for holding the fodder for the horſes, and others ſerve for ſtables, in which ſtand twenty or thirty horſes. In ſome chambers, where the water has formerly ſtagnated, the bottoms and ſides are covered with very thick incruſtations of ſome thouſands of ſalt cryſtals, one upon another, many of them weighing half a pound or more; and when any candles happen to be brought, the numerous rays of light reflected by theſe cryſtals emit a ſurpriſing luſtre.

In ſome parts of the mine huge columns of ſalt are left ſtanding to ſupport the rock. The number of miners employed are between four and five hundred, but all the men together who work amount to about ſeven hundred.

The ſalt lies near the ſurface in large ſhapeleſs maſſes, out of which blocks of ſixty, eighty, or a hundred ſquare feet may be hewn; but at a conſiderable depth it is found in ſmaller lumps. About ſix hundred thouſand quintals of ſalt are annually dug out of theſe mines. The worſt and cheapeſt is called green ſalt, from is greeniſh colour cauſed by an heterogenous mixture of a greyiſh mineral, or clay, and entirely conſiſts of ſalt cryſtals of different dimenſions. A caſk of this ſalt, which generally contains ſix quintals, ſells for about twenty-two Poliſh guilders, each of one ſhilling and two-pence value; but a quintal of that in large maſſes or blocks is worth thirty-two or thirty-three florins, each florin worth about ſix-pence halfpenny. A finer ſort of ſalt is ſold for twenty-four florins per caſk, and in large blocks at four florins the quintal. The third ſpecies of ſalt dug out of theſe mines is ſal gemmæ, or cryſtal ſalt, which is found in ſmall pieces interſperſed in the rock; and when detached from it, breaks into cubes or rectangular priſms. This is uſually ſold unprepared. The colour of the ſalt ſtone is a dark grey mixed with yellow.

Theſe ſalt mines have always made a part of the king's board revenues as they are termed, and are generally farmed; but ſometimes the king has kept them in his own hands, and appointed proper officers for the management of them. The office of mine-maſter at Wiliſka is hereditary, and a conſiderable ſalary ariſing from them is annexed to it.

The next town we ſhall mention is Sandomir, or Sendomir, the capital of a palatinate of the ſame name. This town is ſeated on an eminence near the influx of the river San into the Viſtula; and its delightful ſituation rendered it the favourite reſidence of Caſimir the Great, and other kings of Poland. This city is well fortified both by art and nature, and has a college of Jeſuits and other orders, with a rich foundation called Collegium Canonicorum. A provincial court of juſtice is alſo held here. In the year 1259 the Tartars and Ruſſians committed terrible ravages in this city, and put the inhabitants to the ſword. In 1656 the caſtle, which ſtands on a ſteep rock, was blown up by the Swedes.

The next city we ſhall mention is Lublin, in the palatinate of the ſame name, ſurrounded by a wall and ditch; but though it is not large, it is a place of good trade. It has a caſtle built on a high rock, and ſtands in a very pleaſant and fertile country. It has ſeveral churches and convents, a college of Jeſuits, and a great number of Jews live in the ſuburbs; they have there a very ſpacious ſynagogue. In this city are held three annual fairs, each of which laſts a month, and theſe are frequented by a multitude of German, Greek, Armenian, Ruſſia, Turkiſh, and Arabian traders and merchants. The chief tribunal for Little Poland is held in this city, beſides the provincial diet and a court of judicature. In 1240 this city was ſet on fire by the Tartars, after which it continued for a long time in the poſſeſſion of the Ruſſians. It alſo ſuffered much by fire in 1447 and 1606, and in 1656 was reduced to aſhes by the Swedes.

We ſhall now give a conciſe account of the countries dependant on Little Poland, and ſhall begin with Podlachia, or the palatinate of Bielſk, which is bounded on the north by Pruſſia and Lithuania; on the eaſt by Lithuania; on the ſouth by the palatinate of Lublin, in Little Poland; and on the weſt by that of Maſovia, extending about eighty-eight miles in length, and thirty in breadth. This province was formerly the occaſion of many diſputes and quarrels between the Poles and Lithuanians. The moſt remarkable places it contains are,

Bielſk, a large city on the river Biala, ſituated in latitude fifty-three degrees four minutes. Not only the town but the caſtle and other fortifications are built with wood: it is, however, a place of great trade, which is carried on by the Jews.

Bialyſtoc, a city divided into the Old and New Town; in the latter of which is count Braniki's fine ſeat and gardens, which are much admired, and from their elegance

have been termed the Verſailles of Poland. The greateſt part of the city was deſtroyed by fire in 1753.

Tykoczin, a conſiderable town on the river Narew, and defended by a caſtle ſituated amidſt inacceſſible moraſſes. Here is held a court of judicature, and in this town Auguſtus II. inſtituted the order of the White Eagle, in the year 1705, which he conferred as a reward of courage and loyalty.

The laſt place we ſhall mention in this province is Auguſtow, a beautiful town, ſeated on a lake, and thus called from Sigiſmund Auguſtus, by whom it was founded.

Little or Red Ruſſia, including Podolia, Poliſh Kiovia, and Volhinia, is bounded on the north by Lithuania; on the eaſt by the river Nieper; on the ſouth by Moldavia, Tranſylvania, and the Carpathian mountains, which divide it from Hungary; and on the weſt by Little Poland. The country is mountainous, but watered with abundance of rivers, which render it fertile in corn.

Red Ruſſia Proper conſiſts of the three palatinates Chelm, Belz, and Lemberg, the moſt remarkable places of which are,

Lemberg, called in Latin Leopolis, and in Poliſh Lwow, is the capital of the palatinate of the ſame name, and is a large opulent city, ſituated in latitude fifty degrees thiry-two minutes, and in the fortieth degreee eaſt longitude from London. It is pretty well fortified in the Poliſh manner, that is, only with timber; and has two caſtles, one within and the other without the walls: the latter ſtands on a high hill, and the Carmelite monaſtery, which is fortified, may ſerve as a citadel to the caſtle. The city lies low on the banks of the river Peltew, encompaſſed with hills and mountains that command the town. Lemberg is not only the ſee of a Popiſh archbiſhop, but of a Ruſſian and Armenian biſhop.

Here is a magnificent cathedral, and ſeveral other churches, among which is a Ruſſian and an Armenian church. The city has alſo ſome rich convents, and one belonging to the Dominicans which is ſaid not to have its equal in Poland. There is likewiſe a college of Jeſuits, a gymnaſium, or ſeminary, an arſenal, a public granary, and two Jewiſh ſchools. A provincial diet and a court of judicature are alſo held in this city. The inhabitants are a mixture of ſeveral nations, but no proteſtants are tolerated amongſt them.

Jaroſlaw is a handſome town ſeated on the river San, and is defended by a caſtle; it carries on a good trade, and within the town is a college of Jeſuits, and without it another foundation belonging to the ſame order.

Podolia, which is dependant on Red Ruſſia, is a very fertile country; but has in all ages been expoſed to the inroads of barbarous nations, who live on plunder, and have often ravaged it in a moſt cruel manner. It abounds with a fine breed of horſes and horned cattle. The inhabitants were formerly governed by their own dukes or ſovereigns, and are of a war-like diſpoſition. Podolia conſiſts of two palatinates, that of Podolia and Braclaw. The principal town in this country is,

Kaminiec Podolſki, the capital of the palatinate of Podolia, which is ſituated in forty-eight degrees fifty-eight minutes north latitude. It has a caſtle built on a rock, and owes its ſtrength more to nature than to art; however, it is eſteemed the beſt fortification in Poland. Here is alſo a college of Jeſuits; and the city is the ſee of a Popiſh and Armenian biſhop. In 1651 the Coſſacs laid ſiege to the caſtle, but without ſucceſs; it was, however taken by the Turks in 1672, who held it till the peace of Carlowitz.

Of the palatinate of Kiovia, or Kiow, which forms a part of the Ukraine, and is inhabited by the Coſſacs, we have already given an account in treating of Ruſſia, which has all that part of this country that lies on the other ſide of the Nieper; ſo that Poliſh Kiovia includes only two diſtricts, in which are ſeveral ſmall towns ſcarce worthy of notice.

We now come to Volhinia, the laſt province dependant on Red Ruſſia, a country ſo fertile, as to ſupply the inhabitants with a great deal more grain then they are able to conſume. Roſemary and aſparagus grow wild in the woods, and can hardly be diſtinguiſhed from thoſe cultivated in the gardens. Volhinia was annexed to Poland in 1569, and in 1618, the country was ravaged by the Tartars, who beſides a great booty, carried thirty thouſand perſons out of the country to be ſold as ſlaves. This province contains two diſtricts and ſeveral towns, among which are the following.

Lucko or Luceorien, the capital of Volhinia, which is ſeated on the river Ster, in fifty degrees fifty minutes north latitude, one hundred and ſeventy-five miles to the ſouth-eaſt of Warſaw. It has a caſtle, in which the biſhop of Volhinia reſides, and it is alſo the reſidence of a Ruſſian biſhop. The Jeſuits have a college here, and it has a provincial diet, and a court of judicature; but in 1752, the greateſt part of the city was deſtroyed by fire.

Olika, a handſome town and caſtle belonging to the Radzivil family, and the capital of a dutchy. A ſchool and ſeminary are founded in this town.

Sokal, a town and fortreſs on the river Bug, remarkable for a celebrated image of the virgin Mary, for the greater ſecurity of which, the Bernardine monks have built a fine church and convent, with ſuitable fortifications, on an iſland in the river Bug.

SECT. XI.

Of LITHUANIA, *including Lithuania Proper, Lithuanian Ruſſia, and the Livonian Palatinate, with the moſt remarkable Places in each.*

LIthuania, called by the natives Litwa, is bounded on the north by Courland and Ruſſia, on the eaſt by Ruſſia, on the ſouth by Volhinia, and on the weſt by Little Poland, Podlachia, and the kingdom of Pruſſia. It was anciently very woody, and the greateſt part of it lies uncultivated; but it is now greatly improved, by cutting down the woods, and the encouragement given to agriculture. Great quantities of pot-aſh and wood-aſhes are made here, and the country produces a conſiderable quantity of buck-wheat, and other corn. It has alſo great plenty of honey, with which mead and other palatable liquors are made. The meadows and paſtures are very fertile, and afford nouriſhment to numerous flocks and herds, and the ſheep yield fleeces of very fine wool. In the foreſts are bears, wolves, wild boars, buffaloes, deer, and prodigious flights of woodcocks. Here are alſo ſeveral lakes, in which are profitable fiſheries. But notwithſtanding the fertility of the ſoil, agriculture is not yet ſufficiently encouraged; for ſome of the fineſt ſpots of land in the country ſtill lie waſte, and the luxuriant paſtures in the meadows are neglected till the graſs rots on the ground: for want of care the woods are frequently conſumed by accidental fires. Proviſions in general are extremely cheap; but this is the leſs ſurpriſing, where money itſelf is dear, and ſo ſcarce, that ten per cent is the common intereſt.

All the common people, except the burghers of the royal towns and the Germans, are vaſſals; but the nobility, who are very numerous, are for the moſt part indigent, aud thoſe who are poor ſerve the wealthy as ſtewards, treaſurers, bailiffs, and valets. The noble families in better circumſtances, endeavour to mend their fortunes by farming a large eſtate. There is ſcarce a ſingle nobleman in tolerable circumſtances in Lithuania without a title, of which they are all extremely fond, and theſe titles deſcend to their children. The principal nobility have eſtates equal to the revenues of ſome princes, and generally retain ſome hundreds of the poor nobility in their ſervice. They are likewiſe inveſted with the higheſt poſts in the kingdom; but live in ſuch pomp and ſplendor, and with ſo little oeconomy, that their expences generally exceed their income.

Popery is the eſtabliſhed religion of Lithuania; but there are alſo many Lutherans, Calviniſts, Socinians, Jews, and Turks; but the Greeks are on a much better footing than any other of the diſſenters. Though this country is ſo cloſely connected with Poland, it ſtill retains its own peculiar laws, offices, and troops.

In a diet held at Lublin in 1569, the Poles and Lithuanians agreed, that the great dutchy of Lithuania, and the kingdom of Poland ſhould for the future be ſo

 united,

united, as to form but one ſtate under one prince; that the ſovereign ſhould be elected in Poland by both nations; that the two nations ſhould have a ſenate or council, and a houſe of provincial repreſentatives in common; that the coin in the kingdom and dutchy ſhould be of the ſame value, and that they ſhould be equally concerned in treaties and alliances.

Lithuania is at preſent divided into nine palatinates, the two firſt of which conſtitute Proper Lithuania, and the others Lithuanian Ruſſia, which is divided into White Ruſſia, Black Ruſſia, and Poleſia. Beſides theſe palatinates, Lithuania alſo includes the principality of Samogitia, and the dutchy of Courland, which is a fief of Poland.

Lithuania, properly ſo called, includes the palatinates of Wilna and Trock, the principal places of which are,

Wilna, the capital of Lithuania, ſtands on the river Wilia, near the influx of the Wilika, in fifty-four degrees thirty-two minutes north latitude, and is ſituated in a mountainous country. It is built on ſeveral little eminences, and has two conſiderable ſuburbs. In an old ruinous palace is the arſenal, and the hall where the court of juſtice is held, and oppoſite to it is a magnificent church that belongs to the caſtle. This church is very rich, and is alſo remarkable for the elegant marble chapel of St. Caſimir, whoſe ſilver ſhrine is ſaid to weigh thirty quintals. There are upwards of forty churches in this city, among which are one Lutheran and one Calviniſt church, a Jewiſh ſynagogue, a Tartarian and a Greek church; but all the reſt belong to the catholics.

Wilna twice ſuffered great devaſtations from the Ruſſians and from fire; particularly in 1748, it was deſtroyed by a dreadful conflagration, when thirteen churches, the Jewiſh ſynagogue, twenty-five palaces, four hundred ſixty-nine ſtone edifices, conſiſting of private houſes, hoſpitals, inns, baths and convents, with a hundred and forty-ſix tradeſmen's ſhops and diſpenſaries, beſides a great number of granaries and warehouſes, were conſumed. The next year another fire happened by lightning, which burnt ſix churches, the council-houſe, eight palaces, and two hundred ſeventy-ſeven ſtone buildings. The chapel of St. Caſimir was alſo burnt, and the loſs ſuſtained by the deſtruction of this edifice alone with its treaſure, amounted to an immenſe ſum. The churches have been ſince rebuilt at a very great expence, and ſome of them in a more elegant manner than before; but the city has not recovered its former grandeur.

This city is a biſhop's ſee, and has an univerſity, and a high court of judicature, beſides a provincial diet.

Grodno, a large and handſome city, and next to Wilna, the beſt in Lithuania, is ſituated in fifty-three degrees thirty-eight minutes latitude, and in twenty-three degrees fifty-two minutes eaſt longitude. It ſtands on the river Niemen, partly on an eminence, and partly on a level, and is encompaſſed with hills. The old caſtle, which is ſurrounded with a deep moat, is fallen to decay, ſo that no more than one wing of it is inhabited. The new palace is a large, regular, and beautiful ſtructure, conſiſting of two ſtories: the great hall, that for the ſenate and the chapel, are its fineſt apartments; and in the court ſtands the chancery or ſtate office, which is an elegant ſtructure. In the city are nine popiſh and two Greek churches, and alſo a ſynagogue for the Jews, which is built of ſtone. The Jeſuits college has a ſplendid church, and that belonging to the Carmelite nuns is likewiſe very magnificent. The palace of prince Radzivil is a very large ſtructure, and that of the Sapiehan family is a ſuperb edifice: both of them ſtand in the market place, which, together with the caſtle-ſtreet, and the area before the palace, are clean and well paved; but the other ſtreets are generally dirty. In 1673, it was enacted that for the future, every third general diet ſhould be held here, and during the ſeſſion, the concourſe of people has been ſo great, that four apartments with the ſtables adjoining to them, have been let for two hundred and ſixty ducats a month. A provincial diet, and a court of judicature, are alſo held in this city.

In treating of Lithuanian Ruſſia, we ſhall begin with the province of Poleſia, which contains ſeveral large moraſſes, that reſemble ſo many extenſive lakes. The principal towns in this palatinate are,

Brzeſk, which is a ſtrong, but not a very large town, ſituated on the river Bug, and has a caſtle built on a rock, near it is a royal palace with a fine garden. In this town is a famous ſynagogue, to which the Jews reſort from all the countries of Europe, both on account of ſtudy and preferment among their own people. A provincial diet is held in this town, and a Greek biſhop reſides here.

Pinſk is a large, handſome trading town on the river Pina, ſituated in the midſt of extenſive moraſſes, and inhabited not only by the Jews, who have a ſchool here, but alſo by people of many other religions, eſpecially by the Greeks, who have a biſhop here. The leather dreſſed in this town, after the Ruſſian manner, is eſteemed the beſt in the whole kingdom. A provincial diet is held here.

Under Lithuanian Ruſſia is included Black Ruſſia, called by the Poles Rus Czarna, which includes the palatinate of Novogrodec, and contains four diſtricts, the principal place of which is,

Novogrodec, a town ſituated on a hill, in which are ſeveral Popiſh and Ruſſian convents, with a college of Jeſuits. It has a provincial diet, and an inferior court of judicature; and an high tribunal, after the model of that of Wilna, is held alternately here, and at Minſk, which continues ſitting five months every year.

In White Ruſſia, called by the Poles Rus Biala, are four palatinates, the moſt conſiderable places in which are,

Minſk, which is ſeated on the river Swiſlocz, in the palatinate of Minſk, and has two caſtles. A provincial diet is held here, beſides a high tribunal once in two years. This town was taken by the Ruſſians in 1656.

Mohilow, in the palatinate of Miſciſlaw, is a handſome commercial town on the river Nieper, and the inhabitants carry on a conſiderable trade with the Ruſſians. In 1654 Mohilow was taken by the Ruſſians; and tho' it was inveſted by the Poles in 1660, they were obliged to raiſe the ſiege. It was, however, taken from the Ruſſians in 1662 by the inhabitants, who ſent off part of the garriſon by ſtratagem, and then made the reſt priſoners of war.

Poloc, a fortified town on the river Dzwina, and in the palatinate of Poloc. It has two ſtrong caſtles, and carries on a conſiderable trade. In this town the Jeſuits have a college, and the Greeks an academy for the ſtudy of philoſophy. A popiſh Greek biſhop alſo reſides here. In this town are likewiſe held a provincial diet and a court of judicature. In 1563 Poloc was taken by the Ruſſians, but in 1579 was retaken by the Poles.

We now come to the Livonian Palatinate, called by the Poles Woiewodztwo Inflantſkie. This country was a part of Livonia, and is alſo termed the palatinate of Wend. The Poles, on their delivering up Livonia to Sweden, by the treaty of Oliva, reſerved this part, which has a biſhop, a palatine, and a caſtellan, and ſends ſix deputies to the general diet. It has alſo five or ſix ſmall towns.

SECT. XII.

Of SAMOGITIA.

Its Situation, Extent, Soil, and Produce. Its Hiſtory, and the Manners of the preſent Inhabitants.

SAMOGITIA called by the Poles Zmuyds, or Xieſtwo Zmudſkie, is bounded on the north by Courland, on the eaſt by Lithuania, on the ſouth by Regal Pruſſia, and on the weſt by the Baltic ſea, it being about a hundred and ſeventy-five miles in length, and about a hundred and twenty-five in breadth; but this is only to be underſtood of its longeſt and broadeſt part, the two extremities being much contracted.

Great part of the country has a marſhy ſoil, and abounds with rivers and lakes, which at ſome ſeaſons overflow the land. Here are alſo inacceſſible mountains; the country is much over-run with woods, in which the inhabitants find great quantities of honey; for it is ſaid that almoſt every tree has a ſwarm of bees; and their

wax

wax is whiter and purer than either that of Lithuania or Ruſſia. We are told, that though the arable land is very ſtiff, the inhabitants uſe none but wooden plough-ſhares; becauſe one of their ſtaroſtas, introducing iron ſhares, and the ſeaſon afterwards proving leſs kindly than uſual, they had the weakneſs to attribute the cauſe ſolely to this change; upon which he was forced to let them return to the uſe of the wooden plough-ſhares, for fear the prohibition ſhould cauſe an inſurrection. Samogitia abounds with cattle, and has a breed of horſes, which, though ſmall, are ſprightly, ſwift, and hardy.

This country antiently belonged to Lithuania; but in the year 1404, was ceded to the knights of the Teutonic order: about four years after, it was taken from them by Uladiſlaus Jagello, king of Poland; after whoſe death it returned again to them; but in 1525, when Albert of Brandenburg was made hereditary duke of Pruſſia, it returned to the crown of Poland. The Chriſtian religion had been introduced for ſome time, and in 1413, it was made a biſhop's ſee.

The peaſants of this country differ but little from thoſe of Lithuania; but are not ſo laborious, and conſequently enjoy leſs plenty. Many of them, inſtead of bread, eat turneps, which grow wild, and are of a prodigious ſize. They are robuſt, bold, and nimble; and it is not uncommon for people to live a hundred or a hundred and twenty years of age.

The peaſants live in cottages, for the moſt part near lakes and rivers, and theſe are covered with thatch or boards. They are low, and of an oblong ſquare, with a hearth in the middle; their furniture is but mean, and they have only one room for themſelves and their cattle. Thoſe in good circumſtances drink out of horn cups, and eat out of wooden platters. However, moſt of the inhabitants differ but little in their manners, habit, or language, from the Lithuanians.

There are about twenty-eight towns in Samogitia; but all of them are ſmall and ill built; among theſe is Mednicki, where the biſhop of Samogitia reſides, and Roſienie, where the provincial diet and a court of judicature are held.

SECT. XIII.

Of COURLAND.

Of its Situation and Extent, Soil, Produce, and Rivers. Of the Inhabitants of Courland, and the Privileges of the Nobility. A general Hiſtory of Courland. Its Arms, Officers of State, and Courts of Judicature. The Diviſion of the Country, and a Deſcription of the principal Towns in each.

THE dutchy of Courland, which is dependant and under the protection of Poland, is bounded on the weſt by the Baltic, on the north by the gulph of Riga and Livonia, towards the eaſt by Lithuania Proper, and by Samogitia towards the ſouth. It extends fifty German miles in length, and in ſome places twenty, and in others hardly ten German miles in breadth; but towards the ſouth-weſt it gradually terminates in a cape or point of land.

The ſoil, except in a few diſtricts, is heavy, fat, and clayey, and the country abounds in woods and ſwamps: hence the roads of Courland are remarkably bad. In ſpring and autumn the meadows and low grounds are under water; but this only ſerves to improve the land. Some ſkilful farmers have drained ſeveral of the fenny parts of Courland, and converted them into what they call ſtaungens; that is, land which is ſown three years ſucceſſively with ſummer ſeed, and then left uncultivated for the like term. Courland, however, contains good arable land and fine paſtures, and produces great quantities of excellent flax. Here is alſo plenty of ſea-fiſh, and the woods abound with elks, bears, and wolves. Courland has alſo its mines of iron ore and other minerals, its quarries of ſtone, chalk, and ſtucco, and its mineral ſprings. Amber is likewiſe found on the coaſt.

The principal rivers in this country are the Windau, which riſes in Samogitia, and diſcharges itſelf into the Baltic near the town of Windau. The Aa, which has alſo its ſource in Samogitia, and empties itſelf into the gulph of Riga. The ſmall rivers are the Anger, the Abau, the Berſe, the Bartau, the Muſſa, &c.

The inhabitants of Courland conſiſt of Germans and Lettonians; but the latter are not only the tenants and vaſſals of the former, but in a manner their ſlaves. Hence there are two languages uſually ſpoken in Courland, the German and the Lettonian.

The reformation, or Lutheran religion, took place in this dutchy ſo early as the year 1522, and in 1532 Courland joined with Riga in a particular religious league; ſo that when this country fell under the dominion of Poland, all the inhabitants were Lutherans, and they had no papiſts amongſt them. But the miſunderſtandings which afterwards happened between the dukes and nobles of Courland occaſioned ſeveral orders to be iſſued by the court of Poland, and judiciary commiſſions to be deputed from thence, by which means a fatal gap was opened, by which popery entered. The Roman catholics were at firſt only permitted to have churches in this country; but they ſoon raiſed themſelves to a level with the Lutherans. In 1717 and 1727 they received ſome additional privileges, and ſeveral of the nobility who had embraced the doctrines of popery exerting their zeal, in order to introduce it into the churches within their juriſdictions, greatly contributed to its ſpreading over the country. The marriages of the dukes of Courland with princeſſes who were Calviniſts, alſo introduced that religion into the dutchy; but the Calviniſts are excluded from all public employments.

The nobility of Courland enjoy great privileges, and the old nobility are carefully diſtinguiſhed from the new; and by an antient law, which has been frequently confirmed, the former alone are capable of filling poſts of honour. The noblemen of Courland generally embrace a military life. They enjoy in Poland the ſame privileges as the natives, and a Poliſh nobleman has the ſame indulgence in Courland. However, neither of them enjoy that privilege till they are ſettled in thoſe countries; and indeed a Courlandiſh nobleman at preſent ſeldom holds any eminent poſt in Poland, except thoſe of the law, unleſs he be a papiſt. The nobility of Courland have no ſeat in the general diet of Poland.

A noble Courlander is proprietor of all the mines diſcovered in his eſtate: he is not to be taken into cuſtody, or his effects confiſcated, till he has been previouſly ſummoned and legally convicted before a court of judicature: his houſe is an aſylum, from which no perſon can forcibly be taken: his tenants, vaſſals, and domeſtics are exempted from paying any toll, cuſtom, or exciſe; and no ſoldiers are to be quartered on the eſtate of a Courlander. No new created nobleman is qualified to hold a poſt of honour, or to be a magiſtrate, till the third generation; nor can he be ſent as an envoy, unleſs he has diſtinguiſhed himſelf in the ſervice of his country, or is recommended by ſome of the antient noble families.

The nobility, among other privileges, have an unlimited power over their vaſſals, which extends even to life and death; but before they can puniſh a vaſſal with death, they are obliged to hold a regular court, under the penalty of paying a hundred florins; each florin equal to fourteen-pence ſterling. Hence the reſpect paid by the peaſants to their lords riſes almoſt to adoration, and whatever theſe require from them they are obliged to give up, and immediately obey their commands without murmuring. The nobility are all on a level, and have, in conjunction with the duke, the patronage of the pariſh churches; the duke being patron of ſome, and the nobility of the others. In war-time they appear on horſeback, according to the ſervice they owe the duke as his vaſſal: but when ſuch a general military appearance is required, the duke is obliged to march at their head. They indeed chooſe their own colonels and other officers; but theſe are all under the duke's command. They are, however, not obliged to march beyond the frontiers of Courland, except the duke voluntarily agrees to paſs beyond thoſe boundaries.

Courland antiently belonged to Livonia, and both were conquered by the knights of the Teutonic order, who kept them till the year 1561, about which time the Ruſſians

Ruſſians invaded the country; but the order being then much declined from its former power and greatneſs, Gothard Ketler, the laſt grand maſter, gave up Livonia to the king of Poland, as great duke of Lithuania; and, in return, Courland and Semigallia were erected into a temporal dutchy, and Ketler was inveſted with it as an hereditary fief.

In the beginning of the eighteenth century Courland was harraſſed both by the Swedes and the Ruſſians; but in 1710 Frederic William, the ſixth duke, married Anne a princeſs of Ruſſia, who, after his deceaſe, remained in poſſeſſion of the ſovereignty, under the protection of her uncle the czar Peter I. though Ferdinand, brother to the late duke's father, to whom the ſucceſſion belonged, was ſtill living.

Ferdinand and the nobility were at variance, leſs on account of his changing his religion, than for his generally living out of the dutchy, and his being deſirous of holding the reins of ſovereignty, though abſent. This put the Poliſh ſtate on contriving the means of incorporating Courland with the kingdom of Poland, on the demiſe of duke Ferdinand, and of dividing it into palatinates. This project filled the noble Courlanders with ſuch apprehenſions for their religion and liberties, that, notwithſtanding a royal inhibition was iſſued out, they held an extraordinary diet at Mittau in June, 1726, in which the ſucceſſion, on the deceaſe of Ferdinand, was ſettled on count Maurice of Saxony, as natural ſon to the king of Poland, and his male heirs. This election was oppoſed both by duke Ferdinand and the Poles, who voted it null and void, and by a new law confirmed the intended union of this country with Poland. The patriots of Courland ſtrenuouſly proteſted againſt this encroachment on their liberties, and maintained, that the ſtates of the dutchy derived from their anceſtors the right of electing their dukes: a right which they had never forfeited. At length the princeſs Anne Iwanowna aſcending the throne of Ruſſia, ſignified to the court of Poland, that ſhe could never conſent to that dutchy being abſolutely incorporated with that kingdom, but would protect it in its right to remain as a fief of the republic, under its own dukes. To this Poland at length conſented, and in 1736 it was agreed, that on the failure of the Ketler line in duke Ferdinand, the dutchy of Courland ſhould have its own dukes by the free election of the ſtates.

On the deceaſe of Ferdinand in the following year, the ſtates, at the recommendation of the empreſs of Ruſſia, choſe for their duke John Erneſt Biron, count of the holy Roman empire, and high chamberlain to her czariſh majeſty, who in 1739 was inveſted duke in the perſon of his envoy, or repreſentative. This prince's dignity was, however, but of ſhort duration; for in 1740, the czarina Anne cauſed him and his family to be taken into cuſtody, and ſent them into exile in 1741; upon which the ſtates of Courland choſe for their duke Lewis Erneſt, duke of Brunſwick-Wolfenbuttle, brother to the regent of Ruſſia's huſband; but this election not being compaſſed without force, it has not yet taken its proper effect.

Indeed Erneſt John is ſtill conſidered as duke of Courland, notwithſtanding his being deprived of the exerciſe of his power. However, the ducal chair having been declared vacant by the high council, all public inſtruments are iſſued out in the name of his Poliſh majeſty, who at preſent perſonates the duke, and are ſigned by the four lords of the regency who have the diſpoſal of public employments. Mean while the court of Ruſſia keeps ſix thouſand men in this country, and alſo a plenipotentiary, who reſides at Mittau; but his only employment is to take care of the revenues, and thoſe lands which the duke had either purchaſed or redeemed from the nobles to whom they had been mortgaged, alledging, that this was done by the duke's embezzling the money belonging to that crown; and accordingly near a hundred thouſand rixdollars are annually paid out of the ducal revenues into the hands of the Ruſſian miniſter.

The revenues of the duke of Courland are ſaid to be very conſiderable; for the ducal domains make above a third part of the whole country: if to theſe be added its convenient ſituation for a maritime trade, the duke of Courland, when in the full poſſeſſion of that office, cannot fail of being very rich. A judgment may be formed of the wealth of this dutchy, if we conſider that James duke of Courland was maſter of forty-four ſhips of war and ſeventy-five merchant ſhips, and endeavoured to ſettle colonies even in America.

The arms of Courland are, quarterly, the firſt and fourth argent, a lion gules, crowned or, for Courland; the ſecond and third azure, a demi-elk crowned proper, for Semigallia. In the center is a ſmall eſcutcheon party per pale, reſerved for the particular coat of the ducal family. The arms are within a ducal mantle of purple and ermine, and ſupported by two lions crowned or, and the whole ſurmounted with a ducal coronet.

By virtue of a form of government for the dutchies of Courland and Semigallia, drawn up in 1670, by a commiſſion from the king of Poland, the following officers of ſtate are appointed in Courland:

Four high counſellors, viz. a ſteward, a chancellor, a burgrave, and a marſhal.

Two civilians, who are the duke's council. The high council, during the abſence, minority, ſickneſs, or death of the duke, adminiſter juſtice, iſſue orders, paſs decrees, and tranſact all other ſtate affairs in his name.

Four ſuperior prefects, two for Semigallia, and two for Courland, who adminiſter juſtice both to the nobles and commonalty within their reſpective juriſdictions. From theſe the vacancies in the high council are filled up, and under each of them are two inferior prefects, who upon occaſion are promoted by the duke to the office of ſuperior prefects. From the court of the latter appeals lie to the ducal ſupreme court, where the duke aſſiſts in perſon, together with the high council. This is held twice a year, and from it, in cauſes amounting to above ſix hundred florins, an appeal lies to the king of Poland, except in caſes of wilful murder, burning of houſes, robbery, rapes, or open violence. Eccleſiaſtical cauſes are tried by the chancellor, aſſiſted by the ſuperintendant and four provoſts: If any diſputes happen to riſe between the duke and nobility, they are decided only by the king in perſon.

The adminiſtration of juſtice in the towns belongs either to the magiſtrate, or the prefect of the diſtrict in which the defendant reſides; according to the nature of the cauſe; and the ſecond and laſt hearing is at the ducal court. Suits relating to debts are heard by officers called executoriales.

Every two years a diet is held at Mittau, to which every pariſh ſends a repreſentative with full powers.

Courland conſiſts of three diviſions, Courland Proper, Semigallia, and the diſtrict of Pilten. The laſt has a particular form of government; but the two firſt are divided into prefectures, and theſe into pariſhes. There are here large and ſmall towns, ſeats, caſtles, farm-houſes, and ſingle houſes of accommodation; but no villages. The number of towns, caſtles, ſeats, &c. is about nine hundred.

In Courland Proper the moſt conſiderable place is,

Libau, which is a ducal city, and a port of good trade on the Baltic. It is ſituated in fifty-ſix degrees fifty-four minutes north latitude, and in twenty-one degrees twenty-ſix minutes eaſt longitude. It is of a middling ſize, and conſiſts entirely of wooden houſes, only one ſtory high; but there is a Lutheran church built in the modern taſte, with a flat roof and balluſtrade. The papiſts are allowed a church at Libau, and there is a proteſtant ſchool. As the harbour wants ſufficient depth of water for ſhips of burthen, they are unloaded in the road; but ſince duke Erneſt John cauſed it to be cleared in 1737, and prevented a future accumulation of mud and ſand by a water-work, it is rendered very commodious for light veſſels. Above one hundred and fifty ſhips annually arrive in this port, in order to load with hemp, linſeed, &c. A court of admiralty is alſo held here, and near the town is a freſh water lake, called the lake of Libau.

The ſecond principal diviſion is that of Semigallia or Semgallen, which includes the prefectures of Mittau and Seelburg, the moſt conſiderable places in which are,

Mittau, the capital of Courland, and the reſidence of the duke, which is ſituated in fifty-ſix degrees forty-

four minutes north latitude, and in twenty-three degrees fifty-one minutes eaſt longitude. This town ſtands on the river Aa, and is very extenſive; but within its circuit are many gardens and open places. The houſes have for the moſt part nothing very elegant to attract the eye, and both the walls and moats of the town are decayed. It is, however, pretty well inhabited. It has two Lutheran churches, a beautiful church belonging to the Calviniſts, and a popiſh church. The ſchool, though it is the principal in the whole country, is far from being in a flouriſhing condition. This city is the ſeat of the regency and ſuperintendant of both dutchies.

At a ſmall diſtance from the city ſtands a palace, begun by the unfortunate duke Erneſt John; but only the front of one wing is compleated, and the reſt hardly carried up as high as the roof. It is built in a moſt delightful ſituation, on the ſame ſpot where the old caſtle ſtood, and is two ſtories high. The palace, according to the plan from which it is built, would probably have been one of the moſt magnificent ſtructures in Europe, had not the building of it been interrupted by the diſgrace and exile of its unhappy founder. It is at preſent a deſolate place, and is gradually falling to decay. The cielings and floors of ſome of the apartments were of moſt excellent workmanſhip; but theſe have been taken away, and the rooms converted into granaries. Under one wing of this building is a handſome vault, in which are depoſited the remains of the deceaſed dukes, moſt of which lie in coffins of fine pewter curiouſly decorated; and among the princes lies a peaſant in a pewter coffin, on account of his heroic fidelity, in voluntarily ſuffering himſelf to be ſhot inſtead of duke Ferdinand, by ſome noblemen who had conſpired againſt that prince's life.

The next diviſion of Courland is that of Pilten, which lies in Courland properly ſo called, and derives its name from the ancient caſtle or palace of Pilten, built by Waldemar II. king of Denmark, about the year 1220, when he founded a biſhop's ſee in this country, for the more effectual converſion of its Pagan inhabitants.

This diſtrict afterwards ſucceſſively belonged to the Germans, then again to the king of Denmark, the duke of Courland, and to Poland; and by virtue of the inſtrument of regency drawn up for this diſtrict in the year 1717, the government is lodged in ſeven Poliſh ſenators or counſellors, from whom an appeal lies to the king. The biſhop of Samogitia alſo ſtiles himſelf biſhop of Pilten.

The moſt remarkable part of this diſtrict is the promontory of Domeſneſs, which projects northward into the gulf of Livonia. From this cape a ſand-bank runs four German miles farther into the ſea, half of which lies under water, and cannot be diſcerned. To the eaſt of this promontory is an unfathomable abyſs, which is never obſerved to be agitated. For the ſafety of veſſels bound to Livonia, two ſquare beacons have been erected on the coaſt, near Domeſneſs church, oppoſite to the ſand-bank, and facing each other. One of theſe is twelve fathoms high, and the other eight; and a large fire is kept burning on them from the firſt of Auguſt to the firſt of January. When the mariners ſee theſe fires appear as one in a direct line, they may conclude that they are clear of the extremity of the ſand-bank, and conſequently out of danger; but if they ſee both beacons, they are in danger of running upon it.

The diſtrict of Pilten contains ſeven pariſhes, but no towns worthy of notice. The inhabitants are chiefly of the Lutheran religion.

SECT. XIV.

Of POLISH PRUSSIA.

Its Situation, Extent, and Produce. Of the Religion and civil Privileges of the People; the Form of the Government. The Diviſions of the Country, with an Account of the principal Towns in each, particularly of Dantzic and Thorn.

POLISH or Regal Pruſſia, which has been added to the general province of Great Poland, is a very different country, inhabited by a different people, who have their peculiar laws and privileges; and therefore deſerves to be ſeparately conſidered, for the ſake of that order and perſpicuity which ought ever to accompany works of ſcience.

This country is bounded on the north by part of Pomerania and the Baltic Sea; on the eaſt, by the kingdom of Pruſſia; on the ſouth, by Great Poland; and on the weſt, by Great Poland and Pomerania. It is far inferior in extent to the kingdom of Pruſſia, it being only about ſixty miles in length, and fifty-one in its greateſt breadth; but in ſome places the latter does not exceed eighteen miles.

The face of this country is diverſified with mountains, woods, and lakes; but in the ſouth part there is little paſture ground, and conſequently few cattle. The fiſheries are of great advantage to this country, which alſo yields a vaſt quantity of honey and wax. The woods abound with wild boars, roe-bucks, and wild fowl, and a good deal of lime is alſo burnt in ſome parts of the country.

The moſt remarkable heaths in Poliſh Pruſſia are thoſe of Skal, Maſura, Nicholait, and the deſart of Johanneſberg, which is ſeven German miles in length, and four in breadth.

It is inhabited partly by Poles, and partly by Germans. The Reformation was introduced here early in the ſixteenth century, and in a few years the profeſſors of the Lutheran religion increaſed ſo faſt, that their number in the principal cities and towns far exceeded that of the Papiſts, and they had almoſt as great a ſuperiority in the ſmaller towns and villages. But ſucceeding times have introduced conſiderable alterations. The kings of Poland have, indeed, allowed the inhabitants the free exerciſe of the Lutheran religion in the cities of Pruſſia; but there are at preſent only few towns in which the Lutherans have churches, and in other towns they have been compelled to give them up to the Papiſts. Beſides, the Proteſtants are continually oppreſſed, and promiſes of preferment and other means are too ſucceſsfully employed, in order to ſeduce the Pruſſian nobility from the Lutheran church.

Poliſh Pruſſia is a diſtinct political body or ſtate, that has nothing in common with Poland, except its having the ſame ſovereign, and being connected with that crown by a perpetual alliance. For when the inhabitants put themſelves under the protection of king Caſimir IV. in 1466, it was expreſly ſtipulated, that the dutchy of Pruſſia ſhould have nothing to do with the republic of Poland; but that the king alone ſhould perſonally order and determine all matters relating to the former; and for that purpoſe ſhould come among them, and ſummon general diets. Hence this ſtate enjoys the ſame right as Poland and Lithuania, of voting at the election of a king, who after his coronation is obliged to ſwear, that he will maintain the Pruſſians in their rights and privileges; and when this is done, they pay homage to the new ſovereign.

In matters of a public nature, the king can determine nothing without the concurrence of the ſtates, who are divided into ſpiritual and temporal members, the latter conſiſting of nobles and burghers. Of theſe the ſenate is at preſent compoſed. This council conſiſts, firſt, of the biſhops of Ermland and Culm. The former is the preſident and chief among the nobility, and is not under any ſubordination to the archbiſhop of Gneſna; but holds immediately of the pope. His dioceſe, in which he has the ſupreme authority both in civil and eccleſiaſtical cauſes, is of very large extent. Its revenues are divided into three parts, one of which belongs to the chapter; but the other two, which are computed at ſixty-four thouſand dollars, are aſſigned for the epiſcopal table. The dioceſe of the biſhop of Culm is not near ſo extenſive, and conſequently the revenue is much inferior to that of the biſhop of Ermland. The biſhop of Culm is a ſuffragan to the archbiſhop of Gneſna, and the king abſolutely diſpoſes of that biſhopric without calling a chapter.

The other members of the council are three palatinates, who are of equal dignity with thoſe of Poland; three caſtellans, who are not inveſted with any particular office or employment, but on a general ſummons

of

of the nobility, may be looked upon as the lieutenants of the palatinates. Three vice-treaſurers, who have only a bare title; but as they are counſellors of ſtate, they take place of the reſt of the nobility. Two counſellors from each of the three great cities, Dantzic, Thorn, and Elbing, and each of theſe repreſentatives have a vote.

All theſe ſtate counſellors, according to the laws of the country, ought to be native Pruſſians; but they have ſeldom theſe qualifications. They are nominated by the king of Poland, and take a particular oath at their admiſſion. The biſhop of Ermland ſits as preſident in the Pruſſian diet; but in his abſence, his place is ſupplied by the principal perſon among the nobility who are preſent. Theſe members are ſtiled the two ſtates of the dutchy of Pruſſia, and royal counſellors: they may likewiſe be termed the ſuperior ſtates, to diſtinguiſh them from the inferior, compoſed of the lower nobility, and the deputies of the ſmall towns. Formerly king Caſimir IV. engaged for himſelf and ſucceſſors, not to determine any affair of conſequence, without the previous concurrence of the ſtates of Pruſſia. This was the original of theſe Pruſſian diets, which had formerly no connection with thoſe of Poland. But in the year 1569, part of the ſenate, or council of Pruſſia, was united with the ſenate of Poland, and the ſtates of the former were compelled to appear at the general diet of the kingdom. From that time the political conſtitution of Pruſſia has been much changed; but it is not entirely interwoven with that of Poland, and ſtill enjoys particular rights and privileges.

At ſummoning the general Pruſſian diet, which is alternately held at Marienburg and Graudenz, the king ſpecifies the time of holding the leſſer diets, where the repreſentatives of the former are choſen, and receive their inſtructions. Theſe provincial diets are held in every palatinate, and the happy concluſion of them is a preſage of the proſperous iſſue of the general diet; for if only one of theſe aſſemblies riſes abruptly, the general diet is ſeldom expected to aſſemble. The number of repreſentatives for every palatinate is not fixed, but they have lately been more numerous than formerly. The inſtructions given them are in the Poliſh tongue, and during the ſeſſion of the diet their expences are defrayed.

The Pruſſians, beſides their own general diet, aſſiſt at the general diet of Poland; but they agree to the taxes to be impoſed on them, only in their own general diet, and not in that of Poland.

The Pruſſians had formerly their own coin, which is now reduced to the ſtandard of the Poliſh money. However, the three principal cities of Pruſſia have ſtill the privilege of coining gold and ſilver pieces, impreſſed with the king's head on one ſide, and their reſpective arms on the reverſe; which, after receiving the royal ſanction, paſs as the current money of Pruſſia.

Beſides the counſellors of ſtate, already mentioned, there are ſeveral other public officers in Pruſſia, as the treaſurer, who is the principal, and the only one that has an annual appointment: the ſword-bearer, who has only the bare title: the ſtandard-bearer, who bears the ſtandard of the province, when all the nobility take the field; and ſeven judges, with their aſſiſtants.

With reſpect to the towns of Pruſſia, it is worthy of notice that they are divided into the three great cities, Dantzic, Thorn, and Elbing, and twenty-ſeven royal towns, beſides thoſe that belong to the biſhops of Ermeland and Culm. An aſſociation was formed among theſe ſmall towns under the government of the knights of the Teutonic order. By this union, which ſtill continues, they are to unite in behalf of their common privileges; to conſult their intereſt as a community in their particular aſſemblies; and to recommend their common concerns in the general diet of Pruſſia to the repreſentatives of the great cities. Marienburg, which is the moſt conſiderable among theſe towns, has the directory, and this, with Graudenz, Dirſhau, Stargard, and Konitz, are called the plenipotentiary towns; for, beſides their own affairs, they are charged with thoſe of all the other towns, which they lay before the directory, and the latter repreſent them to the deputies of the great cities.

Theſe ſmall towns are at preſent far from being in a flouriſhing condition. From the ſentences of their magiſtrates an appeal lies to the ſtaroſtas, and from the latter to the king.

Poliſh Pruſſia conſiſts of four provinces; we ſhall begin with that of Pomerellia, or Little Pomerania.

Pomerellia was antiently a part of the dutchy of Pomerania; but at laſt fell under the dominion of Poland. This palatinate contains five circles, and has four provincial judges; the moſt remarkable places in this province are,

Dantzic, called by the Poles Gdantzk, a celebrated commercial city and fortreſs, ſituated on the Viſtula, near five miles from the Baltic, in fifty-three degrees thirty-eight minutes north latitude, and in eighteen degrees thirty-five minutes eaſt longitude. The ſmall rivers called the Radaune and the Motlau run through the city; the latter dividing into two channels, which run between the Old and New Town, and afterwards unite again below the city, and, with the Radaune, fall into the Viſtula. It is a large, beautiful, and populous city, built after the antient manner of the Hanſe-towns. The houſes are generally five ſtories high, which make the ſtreets appear the narrower, eſpecially as the entrance into the houſes is by four or five ſtone ſteps, and a balcony, which make a projection of ten or twelve feet. Theſe houſes are kept clean after the manner of the Dutch, though with leſs nicety. Many of the ſtreets are planted with cheſnut-trees about thirty feet high, which afford an agreeable ſhelter.

This city has a beautiful harbour, and the inhabitants, who are remarkably civil and obliging to ſtrangers, carry on a conſiderable trade, eſpecially in corn. The ſhips belonging to this port are very numerous, and the privileges of this city are of great importance. As it is one of the three great cities, it ſends repreſentatives to the Pruſſian ſenate or council of ſtate, who have likewiſe a ſeat in the general diet of Poland, and vote at the election of a king. The Dantzickers have alſo the privilege of coining money, gathering amber, &c.

In this city are twelve Lutheran churches, excluſive of thoſe in the houſe of correction and in the alms-houſes, two Calviniſtical churches, and one Popiſh church, with a college of Jeſuits. The cathedral, which is a large Lutheran church dedicated to the Virgin Mary, is the moſt magnificent, and the principal church in Dantzic. Mr. Hanway obſerves, that this is an antient ſtructure that has not been much changed by the eſtabliſhment of the proteſtant religion of this city: for it was agreed by treaties to leave the crucifixes, images, and pictures, as in the times of popery. They ſhew a very curious piece of painting on wood, of the reſurrection, by Van Eyck. It is much admired, particularly for the hands and faces, and is ſaid to be one of the firſt performances in oil colours; yet is ſo perfect, and delicate, as to bear the niceſt examination. But this church, upon every frivolous pretence, is ſubject to the impoſitions of the Popiſh biſhop. The firſt preacher, or miniſter of this church, is called ſenior miniſterii, the reſt are equal as to dignity, and two of them muſt always be doctors in divinity. There is a Lutheran academy in the Grey Friars convent, in which are ſeven profeſſors and one teacher of the Poliſh language. In this convent is alſo the city library.

The other public buildings are the exchange, the council-houſes in the Old and New Town, the public weigh-houſe, the arſenal, which contains a good collection of arms, but many of them are old and uſeleſs; they have a hundred and fifty large braſs cannon, ſome of which are ſaid to weigh fifteen thouſand pounds. They have alſo a fine mill erected on the river Radune, which has eighteen wheels, is the largeſt in all the city, and is ſaid to have brought in a ducat every hour to the proprietors.

This city was antiently the principal of the Hanſe-towns, it being one of the firſt that entered into the Hanſeatic aſſociation. The German is almoſt the only language ſpoken here, the Poliſh being little uſed by the inhabitants.

This city has its own garriſon, and the fortifications make a good appearance, eſpecially towards the ſouth

and

and weſt; thoſe parts of the town being ſurrounded with eminences, ſome of which riſe higher than the towers of the city.

According to the bills of mortality eighteen hundred and forty-ſix perſons died in this city in 1752. In the ſame year twelve hundred and eighty-eight Poliſh veſſels, ſmall and great, from the Viſtula, and a thouſand and fourteen ſhips from the ſea, arrived in this port; and fifty-eight thouſand and ſixty buſhels of corn were brought into this city for exportation. Indeed the moſt conſiderable branch of the trade of Dantzic is that of corn, which is brought by the Polanders, in large barks of about fifty tons burthen, down the Viſtula. In plentiful years theſe barks annually amount to about ſixteen hundred. As theſe cargoes are often expoſed to the weather, it is cuſtomary to ſpread their ſails on the banks of the river, and to dry their corn upon them. They alſo export bees-wax to the annual amount of near a thouſand ſchippounds; beſides narrow linens, ſacking, pot-aſh, pearl-aſh, pipe-ſtaves, and oak-plank.

It appears from antient records, that Dantzic was a large commercial city ſo early as the year 997. The New Town was founded by the Teutonic knights in the year 1311, and was firſt encompaſſed with a wall and moat in 1343. Dantzic ſhook off the yoke of thoſe knights in 1454, and the inhabitants, upon certain conditions, ſubmitted to Caſimir, king of Poland, who, among other privileges, granted them the right of coining their own money. Afterwards they refuſed to do homage to Stephen, king of Poland, without the previous confirmation of their rights and privileges; upon which the city was put under the ban, and beſieged by that prince; but the affair was accommodated, and, on their publickly acknowledging their error, and paying a large fine, the king received them into favour, confirmed their privileges, and granted them the free exerciſe of the Lutheran religion. In 1734, Staniſlaus, king of Poland, took refuge here, which occaſioned a hot ſiege and bombardment from the Ruſſians and Saxons; but Staniſlaus making his eſcape, Dantzic ſubmitted to Auguſtus III. as its rightful ſovereign.

The city is in the dioceſe of Cujavia, and the inhabitants pay the popiſh biſhop all the regard conſiſtent with the difference of their religion, and the privilege and immunities of the city. Without the walls of Dantzic lie the following places within its juriſdiction.

The Dantziger Werder, or iſland, which is ſurrounded by the Viſtula, the Motlau, and the moraſſes cauſed by theſe rivers, and contains about fourteen hundred hides of land, and about thirty-three villages. It is entirely under the government of the magiſtrates of Dantzic; and the ſenior burgomaſter, and two of the ſenators, are ſuperintendants of it. There are twelve church-villages in this iſland, and among them is one Calviniſt church and two chapels.

The Friſche Nehrung is a long narrow ſlip of land, extending between the ſea and the harbour. It contains five villages that have churches; but the moſt remarkable place on this iſland is a fort called Munde, which is very ſtrong, and has a church and a commodious harbour. The Hohe, on which are eight church villages; and the little town of Hela, likewiſe belongs to Dantzic, and is on a point of land which projects with a curve into the Baltic, forming the Pantzkerwic-bay, where ſhips uſually caſt anchor.

About a German mile from Dantzic is Oliva, a celebrated convent, that has been frequently conſumed by fire. It is at preſent inhabited by about fifty Ciſtercian monks. The inſide of the church is extremely ſplendid, particularly the high altar and the pulpit, which are finely gilt and extremely beautiful. It has forty altars, all embelliſhed with the richeſt ornaments, and ſeveral chapels, among which that of the bleſſed Virgin is the moſt magnificent. The remains of the founder of the monaſtery, and his ſons, are depoſited under a marble tomb-ſtone in the choir, and the walls are ornamented with the ſtatues of the principal benefactors to this religious houſe. Near the entrance of the church is a marble table in the wall, in commemoration of the treaty of Oliva concluded in this monaſtery between the Poles and Swedes in 1660. The diſpenſary belonging to the convent is elegant and well contrived. This monaſtery has the privilege of gathering amber on the ſea coaſt. Round this ſtructure a pretty village has been gradually built. There are ſeveral other ſmall towns in the diſtrict belonging to Dantzic.

The next province of Poliſh Pruſſia is that of Culmerland, or the palatinate of Culm. This province has a palatine, who is the firſt of thoſe belonging to Pruſſia, a caſtellan, a vice-treaſurer, a ſword-bearer, a judge, and eight ſtaroſties. The principal places in this palatinate are,

Culm, or Chelmno, the capital of the province, which ſtands on an eminence on the banks of the Viſtula, in fifty-three degrees twenty minutes north latitude, and in nineteen degrees twenty minutes eaſt longitude. This city was founded in 1239, and bequeathed by one of the dukes of Maſovia, to the knights of the Teutonic order. The inhabitants afterwards withdrew themſelves from their obedience, and ſubmitted to Poland. While the Teutonic knights had the ſovereignty of Culm, the high tribunal of Pruſſia was held in this city, and the Culmean law became in ſuch reputation, that there were few places in Pruſſia or Maſovia, where it was not received. The biſhopric of Culm is the moſt antient ſee in Poliſh Pruſſia, and the college or chapter conſiſts of only four canons, who are choſen by the biſhop, and the reſt of the chapter. Culm is a large city, though but thinly inhabited, and was formerly one of the Hanſe towns. It is at preſent ſubject to the biſhop.

Thorn, the chief of the three great cities of Poliſh Pruſſia, ſtands on the Viſtula, ſeventy-two miles ſouth of Dantzic, in fifty-two degrees forty-ſix minutes north latitude, and in nineteen degrees fifteen minutes eaſt longitude. This city was founded by Herman Balck, firſt grand maſter of the Teutonic order, who in 1231, built the caſtle of Thorn, and in the following year laid the foundation of the town; but in 1235, the building of it was diſcontinued, on account of its inconvenient ſituation, and the city was built about four miles and a half up the river, where the city now ſtands. It is ſuppoſed to have been called Thorn, becauſe the knights, by building it, opened to themſelves a thor, or door, into Ruſſia. Thus the ſeal of the city preſents a gate thrown open. Thorn ſoon after its being built became diſtinguiſhed above the other towns of Pruſſia by its enjoying ſeveral valuable privileges; but when the Teutonic knights made a very ill uſe of their power throughout all Pruſſia, Thorn was the firſt city that formed the noble ſcheme of ſhaking off their oppreſſive yoke. The inhabitants having concerted an agreement with the other towns in the year 1454, made themſelves maſters of the caſtle, and demoliſhed it; and having expelled the Teutonic knights by force of arms, the confederates put themſelves under the protection of Caſimir the Great, king of Poland; but their rights, privileges, and immunities were to remain entire. They were to honour his Poliſh majeſty as their ſovereign; but without any farther connection with Poland than a cloſe harmony and alliance, by which they engaged to have the ſame allies and enemies, to aſſiſt each other on all occaſions, and reciprocally to promote the welfare and proſperity of both parties.

The privileges granted to theſe three cities in common were as follows: they were declared free, and were to be governed by their own magiſtrates, conſiſting of the council, the chief perſons of which are the burgrave and preſident, the judges, and the repreſentatives of the burghers. The members of the council were to be ſtiled noble; they were allowed to hold a ſupreme court of judicature, and in criminal caſes to puniſh capitally even thoſe who were not inhabitants of the city if they were taken in the fact; to have their own garriſon; to coin money, and to have their law-ſuits decided only in Pruſſia. They were to pay no other cuſtoms in Poland but thoſe uſually demanded at the firſt barrier on the frontiers. Laſtly, they were to be members of the ſtate-council of Poliſh Pruſſia, and to have a ſeat and vote in the Poliſh diet, and at the election of a king. The third jubilee of this event was commemorated with great rejoicings

rejoicings in the ſchools of all the three great cities in February 1754, when Thorn and Dantzic cauſed medals to be ſtruck on the occaſion.

In this city the records of Poliſh Pruſſia are kept; it has ten gates, and is divided into the Old and New Town, each of which had formerly its reſpective council, magiſtracy, and police; but in 1454 they were incorporated into one city. They are, however, ſeparated by a wall and moat within the town, but on the outſide are defended in common by a double wall and moats. This is eſteemed the handſomeſt city in Poliſh Pruſſia, its ſtreets being broad and regular, and for the moſt part planted with rows of trees: the houſes are alſo remarkable for their elegant appearance and cleanlineſs. The wooden bridge over the Viſtula in this city may be juſtly eſteemed the longeſt, the moſt extraordinary, and expenſive bridge in Europe, the city being obliged to expend great ſums in keeping it in repair. It properly conſiſts of two bridges, the iſland of Bazar dividing it in the middle. That part of it next to Thorn is called the German bridge, and the channel over which it lies is eſteemed the German Viſtula; but the other part is diſtinguiſhed by the name of the Poliſh bridge, it lying over the channel called the Poliſh Viſtula. As the river grows continually wider, the bridge muſt neceſſarily be lengthened; ſo that at preſent it takes up half an hour to walk over it from one bank of the river to the other. It is alſo the moſt ſingular on account of the quick-ſand into which the piles are driven, which occaſions the whole bridge to ſhake and totter whenever any carriages or horſes are upon it, or even when it is paſſed by a conſiderable number of foot-paſſengers: a ſtranger, who is unacquainted with its conſtruction, apprehends himſelf in great danger in paſſing over it. The ice on the Viſtula, which is frequently two or three feet thick, and the rapidity of the current, carry away every year at leaſt one third of it. Hence ſome idea may be formed of the vaſt expence the city of Thorn is at in repairing theſe annual damages; for the Poles, notwithſtanding the heavy loads they bring over it, pay no part of the expence.

Thorn has its own garriſon, which generally conſiſts of only one company. The ſope, gingerbread, &c. of this city are every where in great requeſt; and accordingly great quantities of them are exported. The aſparagus that grows wild in ſome of the city lands is not inferior to that cultivated in the gardens of other countries.

The inhabitants of Thorn are commended by all foreigners for their civility and politeneſs, in which they exceed thoſe of every other town in Pruſſia. It is alſo obſervable, that the German tongue is ſpoken here in the greateſt purity; ſo that even the inhabitants of Upper Saxony acknowledge that they are at preſent equalled, if not excelled, in this particular by the commonalty and burghers of Thorn. But what is ſtill more remarkable is, that not only the German but even the Poliſh language, which is neceſſary for carrying on trade, is alſo ſpoken here in ſuch perfection, that the Poles ſend their children hither, merely to learn their native tongue in its utmoſt purity and elegance.

The inhabitants of Thorn embraced the reformation very early. In the year 1557, king Sigiſmund Auguſtus granted them conſiderable privileges. The Lutherans were allowed St. John's church and St. Mary's in the Old Town, and St. James's in the New, beſides St. George's and St. Catharine's in the ſuburbs. On the other hand, the Papiſts were allowed a chapel near St. John's, and the church of St. Laurence in the ſuburbs. The Dominicans retained their church of St. Nicholas, and their convent in the New Town; and the Benedictine nuns their church of the Holy Ghoſt, and their nunnery, which ſtands on the Viſtula. In the above churches the Lutherans adminiſtered the ſacrament of the Lord's Supper in both kinds, and the council are empowered to nominate the miniſters of their religion. But in the year 1593 St. John's church was transferred to the papiſts, and afterwards the Jeſuits built a college at Thorn, which has always been much frequented by ſtrangers, and has occaſioned many calamities to the city, particularly in the year 1724. The city has, however, maintained its right of patronage of the above church, and alternately with the king of Poland nominates the Romiſh prieſt who officiates in it. In this church is to be ſeen the epitaph of the celebrated aſtronomer Nicholas Copernicus, who was born in this city. In 1667, St. James's church, in the New Town, with the hoſpital belonging to it, was taken from the Lutherans, and given to the Benedictine nuns, and they were deprived, in the ſame unjuſt manner, of St. Mary's, the only remaining Lutheran church, with the celebrated ſeminary, which was removed to another edifice, after having flouriſhed there ſince the year 1568. The Lutherans of the Old Town continued for ſeveral years to perform divine ſervice publicly in the exchange, which ſtands in the market-place; but that edifice was too ſmall for the congregation; for the burghers amount to at leaſt a thouſand men, who are all Lutherans, except about thirty perſons; on which account they have ſince the year 1755 built a new church on one ſide of the market-place. There are four Lutheran churches in the villages belonging to Thorn. In the city are alſo ſome Calviniſts, who perform their religious worſhip in a private houſe. The Jews have likewiſe a ſmall ſynagogue in the city. About a German mile from Thorn is a Popiſh chapel dedicated to St. Barbara, diſtinguiſhed by many pretended miracles; and an annual proceſſion is made with great ſolemnity every Whitſun-Tueſday from the city to this chapel, for obtaining public indulgencies.

Among the public edifices of the city, the town-houſe in the Old Town is worth the notice of the traveller: it ſtands in the market-place, on every ſide of which very handſome houſes are erected, and forms an elegant quadrangular ſquare ſtructure, built with ſuch magnificence, that for the beauty of its architecture, foreigners give it the preference to moſt edifices of that kind in Europe.

The exchange, which is alſo in the market-place, is a ſuperb ſtructure, adorned with towers, and its front embelliſhed with gilded buſtoes of the kings of Poland.

The popiſh churches, both for their ſpaciouſneſs and ornaments, deſerve particular notice, as does the Jeſuit's college.

The junkerhof which ſtands on the bank of the Viſtula, and belongs to the exchange, is a delightful place intended for feſtivity, and the entertainment of the principal merchants and citizens.

The leaning tower, as it is called, is an extraordinary piece of architecture; for as its outſide is built obliquely from the ground, it appears as if ready to fall: but on the inſide the floors and ceilings are perfectly horizontal, and the walls perpendicular to the horizon.

Graudenz, formerly called Grodec, and in the Poliſh language Grudziandz, is a handſome town pleaſantly ſituated on an iſland formed by the river Oſſa, which here flows through two channels into the Viſtula. The caſtle ſtands on an eminence, and within it is a church; there is another in the town, of which the Lutherans were deprived in 1598, on which account they are obliged to perform divine ſervice in the town-houſe, where they have alſo a ſchool, and the Jeſuits a college. The Pruſſian diet is held here and at Marienburg alternately.

The next province of Poliſh Pruſſia we ſhall deſcribe is the prefecture of Marienburg, which has a palatine, a vice-treaſurer, and a provincial judge. This palatinate contains three werders. A werder is a fen, or moraſs, ſurrounded with water, and improved for tillage and habitation. They produce plenty of graſs and corn, but have ſeldom either woods or hills. That called the wood of Elbing is the moſt conſiderable in this diſtrict. In many parts the only fuel is turf, ſtraw, and ſtubble; and even where there are woods, they afford little game, except hares, woodcocks, and other wild-fowl, but harbour very fierce wolves. The freſh water in theſe werders is very good; the air is tolerably healthful; a great number of cattle are bred here, and the horſes are much eſteemed. The inhabitants of the werders have from time immemorial been free peaſants, and are ſtiled the royal vaſſals and werderers. Thoſe however who are ſubject to

the juriſdiction of the cities, are under greater reſtrictions than the royal peaſants who live in the Marienburg werders. They ſpeak the German and Poliſh languages, and are for the moſt part Lutherans or Papiſts; but there are alſo ſome Calviniſts, and a conſiderable number of Mennonites, a ſort of Baptiſts.

The principal places in the prefecture of Marienburg are, Marienburg, a well built town, ſtands on an eminence near the river Nogat, in a pleaſant and fertile country, in fifty-four degrees twelve minutes north latitude, and in nineteen degrees twelve minutes eaſt longitude. Here is a handſome church dedicated to the Virgin Mary, from which the town takes its name. The wooden bridge laid over the Nogat is five hundred and thirty-nine feet in length, and is a very great charge to the city; the fund appropriated for building and repairing it not being ſufficient for that purpoſe. In the caſtle is the treaſury, where are kept the revenues of Poliſh Pruſſia: the ſtreets of the town are very dirty. Moſt of the inhabitants are Roman catholics, and there is but one Lutheran church.

Elbing, a handſome large city, fortified after the antient manner, ſtands on a river of the ſame name, in fifty-four degrees twenty-one minutes north latitude, and nineteen degrees fifteen minutes eaſt longitude. It was built in 1239, and is a place of conſiderable trade. Between the Old Town and the ſuburbs, where the ſtore-houſes of the merchants are erected, runs the river Elbing; and the Old Town is divided from the New by a wall and moat. The houſes are high, narrow in front, and built in the old taſte much like thoſe at Dantzic. The ſtreets are alſo very narrow, occaſioned by the balconies which project into them; and before theſe are receptacles for all the duſt and filth thrown out of the houſes. Here are ten churches, in which divine ſervice is performed. That of St. Nicholas, which is the largeſt and handſomeſt church in Pruſſia, was given up to the papiſts in 1616. The Calviniſts perform divine ſervice in a large hall, and the Mennonites in a private houſe in the city; but the ſchool belongs to the Lutherans. This is one of the Hanſe-towns, and as it is inhabited by a colony from Lubec, it is governed by the laws of that city; the burghers, however, have their particular rights and privileges. The caſtle, which was built in 1237, was demoliſhed by the burghers in 1454. The fortifications towards the werder are very ſlight, but on the oppoſite ſide they are in a much better condition; yet it is eſteemed one of the ſtrongeſt towns in Poliſh Pruſſia. Some companies of the crown-army of Poland are cantoned in this town, but the burghers keep guard at the gates, and the ſuburbs have a Pruſſian garriſon.

This city in eccleſiaſtical matters is under the juriſdiction of the biſhop of Ermeland, as far as is conſiſtent with the difference of religion, and without prejudice to the rights and privileges of the city; but in civil affairs it is only ſubject to the king. In 1703, Elbing fell into the poſſeſſion of the Swedes, who laid it under contribution; but the Ruſſians took it from them by ſtorm. It was formerly mortgaged to the elector of Brandenburg, as a ſecurity for the payment of four hundred thouſand rixdollars; but as the elector did not receive the ſum ſtipulated, the king of Pruſſia took poſſeſſion of the diſtrict belonging to the city, in virtue of the above agreement.

The laſt province of Poliſh Pruſſia which remains to be mentioned is that of Ermeland, which is entirely ſurrounded by the kingdom of Pruſſia. This province belongs to no palatinate, but is entirely ſubject to the biſhop and chapter; ſo that neither the nobility nor the other inhabitants of Ermeland can appeal to any other judicature. Two-thirds of this province belong to the biſhop, and the remaining third part to the chapter. Their ſubjects have recourſe to the ſame courts of judicature as the reſt of the Pruſſians; but they have ſome particular laws to themſelves. They have alſo a provincial diet, to which the nobility, the burghers, and country judges, together with the freemen, are ſummoned. Though the Ermelanders do not aſſiſt at the Pruſſian diets, the biſhop is always preſent, and propoſes whatever is debated concerning his dioceſe, particularly in relation to the taxes, according as they have been agreed upon in a provincial meeting held for that purpoſe, where the Ermelanders ſeldom diſſent from their biſhop and the Pruſſian ſtates.

The moſt conſiderable places in Ermeland are,

Braunſberg, a pretty large trading town, ſituated on the Paſſarge, at a ſmall diſtance from its mouth. It was built in 1255, and received its name from Bruno, biſhop of Prague. It is divided into the Old and New Town, and is very populous. The celebrated college of the Jeſuits in this town was formerly a Franciſcan convent; it is now under the juriſdiction of the biſhop.

Heilſberg, a beautiful town on the Alle, in which ſtands an elegant ſeat belonging to the biſhop of Ermeland. There is a college of Jeſuits in the town. It is ſaid to be built in 1240, and was deſtroyed by fire in 1521. Charles XII. king of Sweden, had his head-quarters here in 1703.

Keſſel, an elegant little town with a caſtle, has a college of Jeſuits, to which the church of the Holy Linden-tree in Brandenburgh Pruſſia belongs. This town is well ſupplied with proviſions, and carries on a good trade.

We might here be expected to conclude this chapter on Poland, by following the example of almoſt all other geographers, in joining to Regal or Poliſh Pruſſia the kingdom of that name; but this new kingdom ought no longer to be conſidered as a petty dukedom; it ought no longer to be placed on a level with Poliſh Pruſſia, and the other ſtates dependent on the republic of Poland; its ſovereign has given it a more reſpectable appearance in the eyes of all Europe: we ſhall therefore treat of it in a ſeparate chapter.

CHAP.

A New & Accurate
MAP
of the Kingdom of
POLISH PRUSSIA
and
PRUSSIA
from the Sieur Roberts
ATLAS

CHAP. IV.

Of the Kingdom of PRUSSIA.

SECT. I.

The Situation, Extent, Climate, Produce, Rivers, Lakes, and Bays of the Kingdom of Pruſſia in general; with a particular Account of the Properties of Amber.

THIS kingdom, which has been generally called Ducal Pruſſia, and belongs to the houſe of Brandenburg, is divided from the other dominions of its ſovereign by Poliſh Pruſſia, and is bounded on the north by Samogitia, on the eaſt by Lithuania, on the ſouth by Poland Proper and Maſovia, and on the weſt by Poliſh Pruſſia and the Baltic. Its greateſt length from its northern extremity to Soldau is about a hundred and ninety miles, and its breadth from the borders of the great dutchy of Lithuania, near Shirwind, to the weſtern coaſt of Samland is a hundred and fourteen miles; but in other places it is much narrower.

With reſpect to the climate and temperature of the air, the two laſt months of the ſpring and the two firſt ſummer months are temperate, warm, and pleaſant, and the weather generally favourable for bringing the fruits of the earth to maturity; but before and after theſe months the air is cold and piercing: autumn is often wet, and the winter ſevere. The air is, however, well purified by high winds. As to the diſtempers which moſt prevail in Pruſſia, the inhabitants are more ſubject to the gout and ſtone than to the ſcurvy.

The ſoil produces great plenty of corn, fruit, excellent herbs, and paſturage. Pruſſia likewiſe abounds with flocks and herds, and exceeding fine horſes; its chief commodities are buck-wheat, wool, flax, hemp, wax, honey, hops, pit-coal, and pitch.

Pruſſia alſo affords plenty of game, as elks, ſtags, roe-bucks, white and common hares, and wild boars; and is infeſted with beaſts of prey, as lynxes, bears, wolves, and foxes; but as for the buffaloes that formerly frequented this country, they have been extirpated by the poachers, and wild horſes and aſſes ſeem to have deſerted Pruſſia.

The woods, particularly thoſe of oak, are ſaid to be greatly diminiſhed, eſpecially in Leſſer Lithuania.

Pruſſian manna is found in the meadows on the top of a kind of graſs, and gathered in the morning, while the dew lies upon it. Natangen yields the beſt ſort, and in the greateſt plenty.

The beautiful red colour called St. John's blood, is made of the eggs of a ſmall worm, or inſect, very common in this country.

Vaſt quantities of amber are found on the coaſts of the Baltic, in Pruſſia, particularly on the Samland ſhore. It owes its origin to a ſulphureous matter, is pellucid, and generally yellow; but the white ſort is eſteemed the beſt. If amber be well rubbed, it attracts light ſubſtances; it is alſo inflammable, and when burnt, its odoriferous effluvia ſurpaſs thoſe of frankincenſe or maſtic. It likewiſe yields an acid ſpirit. That it was once in a fluid ſtate evidently appears from the leaves, minerals, flies, ſpiders, ants, gnats, worms, frogs, fiſhes, drops of water, pieces of wood, and grains of ſand, that are frequently ſeen incloſed in it. Dr. Buſching obſerves, that amber is generally found on large trees which are buried under ground in a vitriolic earth, and contain an oily ſubſtance; and that hence ſome are of opinion, that the oil being coagulated by the acidity of the vitriol, becomes the ſolid body which we call amber. Amber is not only obtained by digging, but is found in the ſea, it being waſhed off the trees by the agitation of the waves in high weſterly or north-weſt winds, and driven on ſhore. The profits ariſing from amber belongs to the crown of Pruſſia, and annually amount to about twenty-ſix thouſand dollars.

Pruſſia yields neither ſalt, wine, nor minerals, except in ſome places it contains iron ore. It is for the moſt part a level country. Among the Pruſſian mountains, that of Goldberg and Goldap are the higheſt.

The lakes, rivers, and canals, with the neighbouring ſea, afford a variety of excellent fiſh, as ſalmon, ſturgeon, cod, turbots, ſoles, hallybuts, pike, perch, plaiſe, eels, and many others.

The principal rivers in the kingdom of Pruſſia are, the Weichſel, or Viſtula, the Pregel, the Memel, or Mummel, the Paſſarge, and the Alle. Theſe rivers are partly navigable, but at certain times of the year, and in high winds, are apt to overflow their banks, and to cauſe terrible inundations.

This country is likewiſe watered by ſeveral large bays, lakes, and canals, which yield great plenty of fiſh, and the conveniency of a communication by water between ſeveral towns, the principal of theſe are,

The Friſche Haf, or Freſh Haven, in Latin Sinus Venedicus. This bay is from five to fourteen miles in breadth, and fifty-ſeven in length. It has a communication with the Baltic by a ſtreight called the Gatt, and in other places is ſeparated from the Baltic by a narrow ſlip of land called the Friſche Nerung. The Gatt is about an Engliſh mile in breadth, and twelve feet in depth; and the Friſche Haf is ſo ſhallow, that no ſhips of burthen can ſail upon it, and therefore they are obliged to unload at Pillau.

The Curiſche Haf, in Latin Sinus Curonicus. This bay is about ſeventy miles in length, and twenty-eight in breadth. It is ſeparated from the Baltic by a narrow ridge of land called Curiſche Nerung, but joins the ſea near Memel, where it is about an Engliſh mile broad, and nineteen feet deep. This bay is full of dangerous ſhelves and ſand-banks, and is agitated by frequent ſtorms. Its coaſts on every ſide are inhabited by fiſhermen.

As to inland lakes, this country has many of them from four to thirty miles in length, and five or ſix miles in breadth; the principal of which are thoſe of Spirding, Angerburg, Rein, and Drauſen.

SECT. II.

Of the Inhabitants of the Kingdom of Pruſſia. Their Number, Deſcent, and Religion. Their Manufactures, Commodities, and Coins. The Hiſtory and Arms of Pruſſia; the Orders of Knighthood; the Form of Government, and the royal Revenue.

THE number of inhabitants in this kingdom were in the year 1755 computed at ſix hundred and thirty-five thouſand nine hundred and ninety-eight perſons capable of bearing arms, and conſiſt of native Pruſſians, who, from their language and manners, appear to be deſcended from the Germans; of Lithuanians, who have their peculiar language; and of Poles. Since the year 1719, it is computed that above thirty-four thouſand perſons have removed from France, Switzerland, and Germany into the kingdom of Pruſſia, ſeventeen thouſand of whom were Saltzburghers: ſuch advantages has this nation reaped by wiſely giving encouragement to all who were perſecuted on account of religion, to ſettle there. Theſe ſtrangers have built four hundred ſmall villages, eleven towns, eighty-ſix ſeats, fifty new churches, and founded a thouſand village-ſchools in this country. Little Lithuania is for the moſt part peopled by theſe colonies; but it is thought that Pruſſia can afford both room and ſubſiſtence for as many more emigrants.

The Pruſſian nobility are for the moſt part deſcended from the antient Germans, and the peaſants are chiefly vaſſals either to the king or nobles.

With

With reſpect to the religion of Pruſſia, the inhabitants are in general Lutherans; but as a great number of the coloniſts are Calviniſts, they have alſo their churches, not only in the cities and towns, but in ſome villages they have a particular church appropriated to their uſe, and in other places they perform divine ſervice in the Lutheran churches. The Papiſts have a few churches in this kingdom; here are alſo ſome Mennonites, and a few congregations of Socinians.

The manufactures in Pruſſia are daily improving and increaſing, particularly the glaſs and iron works, manufactures of ſilk, cloth, camblet, linen, and ſtockings; paper, powder, copper, and braſs mills. Pruſſia is conveniently ſituated for trade, and to promote it a college of commerce and navigation has been erected, which takes cognizance of all diſputes and propoſals relating to trade and commerce.

The commodities of Pruſſia and Great Lithuania ſold to foreign merchants, and annually exported, are all kinds of grain, to the amount of twenty thouſand laſts; pine trees for maſts, deal boards, and other timber; tar, wood-aſhes, pot-aſh, elks ſkins, leather, furs, amber, about twelve thouſand five hundred ſtone of wax, honey, manna, linſeed oil, flax, hemp, linſeed, and hemp-ſeed; alſo yarn, hogs briſtles, ſtags horns, and elks hoofs; oatmeal, mead, dried fiſh, ſturgeon, caviar, lampreys, ſauſages, butter, and tallow, of which laſt three thouſand four hundred ſtone are exported every year.

The number of foreign ſhips that reſort hither for theſe goods are ſuppoſed to amount to about five hundred and fifty, which import ſuch commodities as are wanted here, as wine, ſalt, ſpices, linen and woollen ſtuffs, herrings, tin, iron, lead, tobacco, ſugar, rice, coffee, tea, raiſins, almonds, prunes, indigo, Brazil wood, &c.

With reſpect to the Pruſſian coins, they are as follow:

Six pfennings, which are only imaginary pieces of money, make a Pruſſian or Poliſh ſchilling.

Three ſchillings make a Pruſſian or Poliſh groſchen, each groſchen being of the value of ſeven-fifteenths of a penny ſterling.

A Brandenburg piece, of ſix pfennings, contains two groſchen.

An ort is eighteen groſchen, which is the higheſt groſchen piece, and is worth about eight-pence halfpenny.

A dollar, which is equal to three ſhillings and ſixpence ſterling, is worth three guldens, ninety groſchen, five achtzehners, fifteen ſeſchers, thirty dutchens, or two hundred and ſeventy ſchillings.

Ducats, ſpecie dollars, two-third pieces, and other foreign gold and ſilver coin, are alſo current in Pruſſia.

The name of Pruſſians was unknown till the tenth century, and its etymology is very uncertain: ſome authors ſuppoſe, that the former inhabitants, alluding to their proximity to the Ruſſians, called themſelves Poruſſi, or bordering on the Ruſſians, for po, in the old Pruſſian language, ſignifies near.

In that age the kings of Poland took great pains, and even made uſe of fire and ſword for the converſion of the Pagan Pruſſians to Chriſtianity. Boleſlaus I. began with chaſtizing the Pruſſians for the murder of St. Albert, or Adelbert, called the apoſtle of that nation. His ſucceſſors had alſo ſeveral quarrels with the Pruſſians: and Boleſlaus IV. who committed dreadful ravages in this country, loſt his life in an unſucceſsful battle in 1163.

In the thirteenth century the Pruſſians ravaged Culm, Cujavia, and Maſovia; upon which Conrad, duke of Maſovia, was obliged to apply to his allies, who all wore the croſs, which they carried into the field againſt the Pruſſians, whom they conſidered as the enemies of the Chriſtian name. But all their efforts proving ineffectual, the duke applied to the German knights of the Teutonic order, and ſtrongly repreſented the great importance of defending the frontiers. Accordingly, in 1230, they obtained the palatinates of Culm and Doberzin for twenty years, and afterwards for ever, with the abſolute authority of any future conqueſts in Pruſſia. Theſe knights, after long and bloody wars during the ſpace of fifty-three years, by the aſſiſtance of the ſword-bearing knights, ſubdued the whole country. Afterwards a war broke out between the Teutonic knights and the Lithuanians, which was attended with the moſt dreadful outrages. Theſe knights made religion the cloak of their ambitious views, and under the pretence of propagating the goſpel of peace, committed the moſt inhuman barbarities; and it is generally agreed, that they extirpated the native Pruſſians, and planted the Germans there in their ſtead. But in 1410 their ſavage zeal received a terrible check; for after a moſt bloody battle they were totally defeated.

In 1454 half of Pruſſia revolted from their obedience to the Teutonic order, and declared for Caſimir III. king of Poland. This occaſioned a freſh effuſion of blood; till at laſt a peace was concluded in 1466, by which it was agreed, that the part now called Poliſh Pruſſia ſhould continue a free province under the king's protection; and that the knights and the grand maſter ſhould poſſeſs the other part, but were to acknowledge themſelves vaſſals of Poland. The knights ſoon endeavoured, but in vain, to throw off this yoke. In 1519 they raiſed new wars, which were terminated in 1525, by a peace concluded at Cracow; by which it was agreed, that the margrave Albert, grand maſter of the Teutonic order, ſhould be acknowledged duke or ſovereign of the eaſt part of Pruſſia, which he was to hold as a fief of Poland, and which was to deſcend to his male heirs; and upon failure of male iſſue, to his brothers, and their male heirs. Thus ended the ſovereignty of the Teutonic order in Pruſſia, after it had ſubſiſted three hundred years.

The new duke favoured the introduction of the reformed religion into his dominions, and founded the univerſity of Konigſberg. The elector Joachim added the dutchy of Pruſſia to the electoral houſe of Brandenburg, with which it had been long cloſely connected. The reign of the elector George William was unhappily diſtinguiſhed by the calamities of a thirty years war, in which Pruſſia ſuffered much from the ravages of the Swedes: but Frederic William, his ſon, was by the conventions of Welau and Bromberg freed by Caſimir, king of Poland, from vaſſalage, and, with his deſcendants, declared independent and ſovereign lords of his part of Pruſſia. He alſo obtained a grant of the lordſhips of Lauenburg and Butow, to be held in the ſame manner as they had formerly been by the dukes of Pomerania; and having farther increaſed the power of his electoral houſe, obtained the title of the Great.

Frederic, the ſon of Frederic William the Great, and the grandfather of the preſent king, raiſed the dutchy of Pruſſia to a kingdom, and, on the eighteenth of January, 1701, in a ſolemn aſſembly of the ſtates of the empire, placed the crown with his own hands upon his head and that of his conſort; ſoon after which he was acknowledged as king of Pruſſia by all the other Chriſtian powers.

His ſon Frederic William, who aſcended the throne in 1713, peopled his country by the favourable reception he gave to the diſtreſſed and perſecuted Saltzburghers, and rendered his reign glorious by many uſeful and magnificent foundations.

This monarch was ſucceeded in 1740 by his ſon Frederic II. his preſent majeſty, who has annexed to his dominions the greateſt part of Sileſia and Eaſt Frieſland, rendered his kingdom formidable by his valour and uncommon prudence, and promoted the happineſs of his ſubjects by an amendment and reduction of the laws, the increaſe of commerce, and many other wiſe regulations.

The royal arms are argent, an eagle diſplayed ſable, crowned, or, for Pruſſia. Azure, the imperial ſcepter or, for Courland. Argent, an eagle diſplayed gules, with ſemi-circular wreaths, for the marquiſate of Brandenburg. To theſe are added the reſpective arms of the ſeveral provinces ſubject to the Pruſſian crown.

There are two orders of knighthood, the firſt that of the black eagle, inſtituted by Frederic I. on the day of his coronation at Konigſberg. The enſign is a croſs of gold, in the ſhape of that of Malta, enamelled with blue. In the middle of it, on one ſide, is a cypher of the king's name, F. R. and at each of the four angles, next the middle, is a black eagle diſplayed. The knights wear this croſs appendant to a broad orange-coloured ribbon over the left ſhoulder, acroſs the breaſt to the right hip. On the left ſide of their breaſt a ſilver ſtar is embroidered on the coat, and in the middle of it a black eagle volant, with

with a laurel wreath in one of its talons, and in the other a thunderbolt, with this motto, SUUM CUIQUE. The ſovereign is always grand maſter, and the number of knights, excluſive of the royal family, is limited to thirty.

Next to this is the order of Merit, inſtituted by his preſent majeſty, the enſign of which is a golden ſtar of eight rays enamelled with blue, which is worn appendent to a black ribbon edged with ſilver, and the motto is POUR LE MERITE.

Frederic the Second has new modelled the form of government, and appointed nine chambers of juſtice for determining cauſes in trade, and even eccleſiaſtical affairs. Theſe are ſubordinate to the high court of judicature at Konigſberg, to which they may appeal from the high court of judicature. An appeal alſo lies to the ſupreme court of appeals, where the chancellor ſits as preſident, and, according to the nature of the cauſe, it may be farther removed to the ſecret chamber of juſtice at Berlin.

The ſupreme college in Pruſſia is the royal court of regency, which ſuperintends all the affairs of the kingdom, whether civil, political, or eccleſiaſtical; and likewiſe all feudal and academical cauſes. Every member is ſtiled a privy-counſellor, or miniſter of ſtate and war, and has his particular department. Theſe are five in number, who have two ſecretaries. Pruſſia has its own particular digeſt of laws, which was publiſhed, with amendments, in the year 1721, and have ſince been improved and reduced into a ſmall compaſs. There are alſo two chambers of war and the domains, erected by king Frederic William, one at Konigſberg, and the other at Gumbinnen, that have the direction of every thing relating to the exciſe, the revenue, commerce, manufactures, magazines, forage, and whatever belongs to the colonies; every war and domain counſellor has his peculiar department. Subordinate to theſe are the counſellors of the taxes, the provincial receivers of the taxes, the commiſſaries of war, the officers of the exciſe and licences, the farmers of the royal diſtricts, and the officers of the revenues in cities and towns.

The royal revenue chiefly ariſes from the produce of the exciſe, cuſtoms, and ſervices; the farm of the royal domains, ſtamped paper, almanacs, and news-papers; mills of ſeveral kinds; duties ariſing from veniſon, and the ſkins of ſtags, elks, and other beaſts; maſts cut in the royal foreſts; the ſalt and iron works; the pot-houſes, granaries, manufactures, the cheſt of forfeitures, and the receipt cheſt, into which the purchaſe money of poſts and employments is paid; amber and the fiſheries. The taxes are heavy in Pruſſia, and our author obſerves, that whoever would live independent, either in town or country, muſt be very careful and induſtrious; but adds, that ſuch perſons ſeldom fail of getting a fortune here, when trade is briſk.

The military forces of Pruſſia, eſpecially in the preſent reign, have been no leſs formidable for their diſcipline, than by their number: and it may be juſtly aſſerted, that for a fine appearance, military diſcipline, and activity, the army of the king of Pruſſia has not its equal. The body of cadets at Berlin is a nurſery for good officers. Every regiment has its diſtrict, or canton, where the young men belonging to ſuch diſtrict are regiſtered, and in caſe of neceſſity may be ordered to march. But towards the concluſion of the laſt war his Pruſſian majeſty iſſued an order, that all the regiments ſhould be recruited with volunteers and foreigners, and that the young peaſants of Pruſſia ſhould remain unmoleſted.

SECT. III.

A general Diviſion of the Country, and a particular Deſcription of the City of Konigſberg, the Capital of the Kingdom.

THE kingdom of Pruſſia at preſent conſiſts of two departments, the German and Lithuanian. We ſhall begin with the former, which contains forty-four towns, fifty-ſix governments, and two hundred and eighty pariſhes, ſeven of which are inhabited by Calviniſts, ſeven by Papiſts, and all the reſt by Lutherans. Before we deſcribe the ſeveral diviſions of this department, we ſhall give a particular account of the metropolis of all Pruſſia.

Konigſberg, called in Latin Mons Regius, or Regiomontum, and in the Poliſh language Krolewies, is ſeat on the river Pregel, over which it has ſeven bridges, in the fifty-fourth degree forty-three minutes north latitude, and the twenty-firſt degree twenty minutes eaſt longitude. This city was founded in the year 1255, when Premiſlaus I. king of Bohemia, coming to the aſſiſtance of the Teutonic knights againſt the pagan Samlanders, a caſtle was built by his advice, and afterwards a town which was named Konigſberg, in honour of that prince; but in the year 1264 Konigſberg was rebuilt on another ſituation.

It is a large beautiful city. The rampart with which it is ſurrounded is about ſeven Engliſh miles in circuit, and has thirty-two ravelins and eight gates. This rampart incloſes ſeveral gardens, the large caſtle moat, and ſome meadows and fields. However, the whole circuit of the city is above eight Engliſh miles, and contains about three thouſand eight hundred houſes; the inhabitants amount to ſixty thouſand ſouls. Konigſberg properly conſiſts of three towns joined together, Altſtadt, Lobenicht, and Kneiphof, and of ſeveral ſuburbs.

Altſtadt, which ſignifies the Old Town, was particularly called Konigſberg till the year 1455; but afterwards it was named Altſtadt, to diſtinguiſh it from Lobenicht. It contains ſixteen ſtreets, in which are five hundred and fifty houſes, above one hundred of which are malt-houſes and brew-houſes. It has ſix gates, beſides four poſterns, two ſtrong built towers, and four bridges. Its other public edifices are the pariſh-church of St. Nicholas, which is of very great extent; the pariſh ſchool, which has nine maſters, and in this edifice is the city library; the poor-houſe, which is for the maintenance of thirty poor ſcholars; the town-houſe; the junkerhof, where weddings and other ſolemnities are celebrated, and which has a garden belonging to it; the common garden, which is frequented by artizans and mechanics; and laſtly, the hot baths.

The ſuburbs of Altſtadt are the Steindam, which is extremely well built, and contains eleven ſtreets, with the oldeſt church belonging to Konigſberg: the ſuburb called the New Roſs-Garten; on an eminence in this ſuburb ſtands the New Roſs-Garten church; here is alſo a large hoſpital for the burghers widows, an orphan-houſe, peſt-houſe, and ſhooting-ground: the Laacke, in which are the city timber-yard, and a long pleaſant walk called Reifferbahn: the Laſtadie, in which are the merchants magazine, the ware-houſes, the pack-houſes, the herring-bridge, the crane-wharf, the wine-wharf, the tar-wharf, and the king's licence-houſe, in which the colleges of admiralty and licences meet overy Monday and Thurſday. Without the wooden gate of Altſtadt lie the coal-magazines, many of which are now converted into dwellings; and the Lomſe, or Lanſe, in which are handſome houſes, with delightful gardens. The laſt ſuburb of Altſtadt is Dam, where are erected manufactures for woollen cloth, ſtockings, and leather.

Lobenicht was built about the year 1300, and was formerly called Neuſtadt, or the New Town. It has four gates, and is divided into two parts; one which ſtands on an eminence, is uſually called Der Berg, or the Mountain, and contains the city church, the city ſchool, and a public garden: in the other part, which has a lower ſituation, are the town-houſe, the junkerhof, the weigh-houſe, a large hoſpital, which has a church, and was once a convent; and the Munchenhof, which was formerly a monaſtery, but has been converted into a ſtore-houſe.

Without the gate of Lobenicht are ſeveral ſuburbs, among which is Sackheim, which is almoſt as old as the city itſelf, and conſiſts of five long ſtreets, interſected by others that run acroſs them; and has a Roman catholic church, a German Lutheran church, a Lithuanian Lutheran church, the royal orphan-houſe, with its chapel, and the king's great and little timber-yard, with the offices belonging to it.

Kneiphof, the moſt modern of the three towns, was not founded till the year 1324. It ſtands on an iſland formed by the river Pregel, and is erected on piles of alder-

tree, which, by length of time, are become as hard as iron. It has five large gates, and thirteen ſtreets, among which the Long ſtreet is the fineſt in the city of Konigſberg. Among the public edifices in Kneiphof the following are the moſt remarkable: the fine cathedral, in which is the famous organ finiſhed in 1721, which conſiſts of five thouſand pipes; and the Wallenrod library, which has above five thouſand books: the grammar ſchool: the poor-houſe ſtands near the cathedral, and contains thirty poor boys, which are decently provided with all kinds of neceſſaries. On the other ſide of the cathedral ſtands the biſhop's palace. The other buildings are the univerſity, or college, as it is called, which has thirty-eight profeſſors, excluſive of the tutors: in the refectory are eight tables, and twelve perſons ſit at each of them: twenty-eight of the ſtudents have their commons gratis, beſides ſeveral exhibitions, or penſions, which are beſtowed according to merit and the circumſtances of the pupils. The town-houſe, which is a very fine building, where the magiſtrates of the three towns meet every day: the edifice where the royal German ſociety meet: the junkerhof: the exchange for merchants, which is embelliſhed with curious paintings, in ſixty compartments. Not far from the exchange is a foundation for ſtudents. There are alſo the exterior and interior ſuburbs.

We ſhall now deſcribe the palace, which is built in the form of an oblong ſquare, with an area within it, that is a hundred and thirty-ſix paces in length, and ſeventy-five in breadth. The north ſide appears to be extremely antient, and even to have been built when the knights of the Teutonic order flouriſhed. The ſouth and eaſt wings were erected by the margrave Albert the Elder, and the margrave George Frederic added the weſt ſide of this ſtructure. In the laſt are the Lutheran court church; the library, which is opened on Wedneſdays and Saturdays; the domain office; the ſupreme court of juſtice; the Samland conſiſtory; the room where the archives of the court are kept; the Moſcovite-hall, as it is termed, which is two hundred and ſeventy-four feet long, and fifty-nine broad; and the college of phyſicians.

In the eaſt wing are the great palace-gate, with apartments for the principal miniſters of ſtate, and the royal apartments; within a pavilion are the chamber of war, the domain-chamber, the accompt and rent-chamber, and the exciſe-office.

The north wing contains the amber-office, the private chancery, the apartment in which the archives of the Pruſſian ſupreme court are kept, the fief-chamber, the revenue-office, the privy-chamber, where the lords of the regency meet, the accomptant's-office, the college of health, the high tribunal, and the apartments in which the ſtates of the country aſſemble, and the provincial cheſts are depoſited.

In the ſouth wing are ſeveral kitchens and apartments for the royal family and foreign princes; at one end of it ſtands the palace tower, which is aſcended by two hundred and eighty-four ſteps, and affords a noble proſpect of the whole city and the adjacent country. The ſtables, the wardrobe, the pleaſure-garden, and the great and little park are very beautiful.

In the liberties of the palace, which are five in number, the moſt remarkable places are the mint, the German Calviniſt church, the new French church, the German ſchool, where a congregation of Poliſh proteſtants aſſemble, the Jews ſchool, the college, the gardens belonging to the palace, and ſeveral other ſtructures, with ſome ſtreets, in which are many elegant houſes.

The ſtrong citadel, called Frederickſburg, ſtands facing Kneiphof, at the conflux of the two branches of the Pregel. This fort is a regular ſquare building, ſurrounded with broad ditches, and by the river Pregel; and within it is a church and an arſenal.

Konigſberg has always diſtinguiſhed itſelf by its commerce; for it was formerly one of the Hanſe-towns, and its trade is ſtill in a flouriſhing condition. The river Pregel, which is here navigable for the largeſt ſhips, is from a hundred and twenty to two hundred and forty feet in breadth. In the year 1752 there arrived in this port four hundred and ninety-three ſhips, beſides two hundred and ninety-eight ſmaller veſſels, and three hundred and ſeventy-three floats of timber.

Moſt of the inhabitants of Konigſberg are Germans of the Lutheran profeſſion, and a colony of French Calviniſts of about fifty families are ſettled there. Commerce has introduced the Poliſh and Lithuanian languages into this city.

Beſides the poor who are provided for in alms-houſes and hoſpitals, above eight hundred indigent perſons receive weekly penſions out of the general charitable fund, which is a proof of the opulence, as well as of the humanity of the inhabitants.

We ſhall now give an account of the ſeveral diviſions of the kingdom of Pruſſia, and the principal places in each. The German department is divided into German Samland, Old Natangen, and Oberland.

SECT. IV.

Of the Province of German Samland, and the principal Places it contains; with a particular Deſcription of Pillau and the neighbouring Country, and the remarkable Peninſula called Friſche Nerung.

THE diſtrict of German Samland contains three governments, the moſt remarkable places in which are,

Pillau, which is eſteemed the bulwark and key of Pruſſia towards the ſea. It ſtands on a point of land that projects into the Baltic, in the fifty-fourth degree forty-five minutes north latitude, and in twenty degrees five minutes eaſt longitude. It is well fortified: the fort is nearly a regular pentagon: the baſtions make a grand appearance; and all the buildings belonging to the fortifications are ſtrong, regular, handſome, and well planted with cannon; and the fort has a magazine for military ſtores. The ſtreets are broad, and run in a ſtraight line; and the houſes are built and furniſhed in the Dutch taſte: the harbour is a very fine one, and veſſels of great burthen are cleared and take in their lading here, for the Friſchehof has not a ſufficient depth of water to carry them to Konigſberg.

The city is frequented by people of various nations. Below the gate of the caſtle is a ſtone equeſtrian ſtatue of Frederic William the Great, and over the gate is a fine watch-tower, where a centinel ſtands day and night. There is alſo a church in the fort, which ſerves both for the Lutherans and Calviniſts. Over the gate on one ſide of the entrance towards the out-works ſtands the image of Mars in a bold attitude, looking towards Sweden.

The peninſula which extends from beyond Pillau to Fiſhauſen is, from its extreme pleaſantneſs and fertility, called the Paradiſe of Pruſſia; for it not only yields great plenty of the neceſſaries of life, but every thing that contributes to pleaſure and entertainment. Near the above fort is a fine plain, where the Friſchehof forms a ſemi-circular bay, which is frequented by a multitude of ſwans, ſea-mews, wild-ducks, and other water-fowl. On the other ſide of this bay lies Old Pillau, which conſiſts of two contiguous villages, inhabited by fiſhermen; theſe are called Alt Pillau and Wogram. In Alt Pillau is a public burying-ground, and near the church ſtands on a ſteep hill a building which was formerly the cuſtom-houſe. This ſtrong lofty edifice ſerves as a land-mark for the ſhips bound to Pillau, and nothing can exceed the proſpect this place affords, for it extends to a part of Samland, Natangen, and Ermeland; and is diverſified with a view of the ſhips coming in and going out of the harbour, and of the Nerung, or narrow ſlip of land that lies between the haven and the ſea. In a contiguous village, called Wogram, lies the ſtorbude, where the ſturgeons are boiled and packed up, and where caviar is made of their roes; moſt of which is exported to England. The fiſhermen in theſe parts catch at leaſt thirty different ſpecies of ſea and freſh-water fiſh; and in ſome parts of the year are ſeen aſtoniſhing flights of thruſhes, blackbirds, and magpyes. Round theſe villages are a great number of kitchen-gardens and orchards. After paſſing this delicious ſpot about Old Pillau, you croſs a barren piece of land to a well cultivated farm, and the Pillau Kruge, as it is called, which is a public-houſe ſeated in a moſt delightful grove, conſiſting of various

kinds

kinds of trees, whoſe branches are ſo cloſely interwoven, as to afford a good ſhelter from the rain. It was probably from this delightful grove that the adjacent country obtained the name of Paradiſe.

It will be proper to take particular notice here of the Curiſche Nerung, called in Latin Peninſula Curonenſis, which is a narrow ſlip of land that ſeparates the Baltic ſea from the Curiſche-haf, and is about ſixty miles in length, and in moſt parts one in breadth. This peninſula is a barren ſandy tract, where the high winds frequently make great ravages by tearing up the pine trees by the roots, and blowing up the ſand into high ridges and hills, which ſometimes obliges the poor inhabitants to remove their dwellings. Moſt of the trees, particularly on the Baltic ſide, are more or leſs blaſted, and appear like bare trunks; they however afford ſhelter for ſtags, falcons, and great numbers of thruſhes. There are ſeveral ſmall mean villages on this peninſula, in which the inhabitants live chiefly by fiſhing, and have very few cattle.

The next place we ſhall mention is Welau, an antient well built town, founded in 1336. It is ſeated on an iſland at the conflux of the Alle and the Pregel, and conſiſts of two principal and five croſs ſtreets, two ſuburbs, and two hundred and ſixty-four houſes. It has about a hundred and fifty burghers, beſides the other inhabitants. Great part of this town was burnt in 1736, ſince which time the buildings have been much improved; however, it has not recovered its former trade. It is chiefly remarkable in hiſtory for the treaty concluded there with Poland in September 1657, when the elector Frederic William was inveſted with the ſovereignty of Ducal Pruſſia.

In this diſtrict are ſeveral navigable rivers that abound with fiſh, and canals that are alſo of great ſervice to trade.

Among the latter is the New Deim, which begins at the royal manor of Schmerberg, and is carried above ten miles, till it enters the Pregel.

Two new canals called Great and Little Frederic's canal, which join the river Deim to the Wippe and Nemmonin, and alſo the latter to the Gilge. Great Frederic's canal commences at the Wippe, which is a branch of the river Nemmonin, and is carried on for fourteen miles to Labiau, a trading town on the river Deim. Little Frederic's canal begins at the river Gilge, and extends about ſix miles in length to the river Nemmonin. Theſe works, which are very convenient for the trade with Poland, were executed between the years 1688 and 1696, by order of the counteſs-dowager of Waldburg; and the counts of Waldenburg received a toll from all veſſels which paſſed through them, till the king purchaſed that right in the year 1713, and made it a part of the royal domains.

We now come to that diviſion of the kingdom of Pruſſia called Natangen, which is a populous and well cultivated country, conſiſting partly of arable and partly of meadow land; and though the ſoil is in ſome parts very ſtony, it produces better corn than either Samland or Little Lithuania; it is alſo well wooded, and yields all ſorts of game and great plenty of fiſh.

Old Natangen contains eight governments, the moſt conſiderable places in which are,

Gerdauen, a ſmall town in the government of the ſame name, was built in the year 1325. It is ſeated on the river Omet, and has two caſtles belonging to the count and baron Schlieben. The new ſeat is a magnificent ſtructure, and has an elegant garden. The town derives its name from E. Gerdaw, a Pruſſian nobleman, near whoſe caſtle it was built in the year above-mentioned. In a lake near this town is a floating iſland, which is a plat of ground covered with verdure, and driven backwards and forwards from one bank of the lake to the other. It was formerly three hundred and fifty paces in length, and two hundred and fifty in breadth; ſo that it afforded paſture for a hundred head of cattle: but it is at preſent divided into ſeveral little pieces, which are continually decreaſing. This iſland is called the Gerdauen Almanac, becauſe the inhabitants of the town prognoſticate approaching ſtorms by its motions.

Raſtenburg, a handſome town, with a caſtle, in a government of the ſame name, and ſeated on the river Guber. It was built in the year 1329; and though it was deſtroyed by the Lithuanians in 1348, it was ſoon rebuilt, together with its caſtle, and put in a more defenſible ſtate than before. It is incloſed with a wall and a rampart. The German pariſh church is the largeſt and handſomeſt ſtructure of that kind in all the Pruſſian inland towns, except the cathedral of Marienwerder, and the ſenior of the three miniſters who belong to it has the ſuperintendency of forty-ſix churches. The church of St. Catharine ſtands in the ſuburbs, and is one of the moſt antient in the kingdom of Pruſſia; and in the middle of the great hoſpital is the church of the Holy Ghoſt. This hoſpital was founded in 1361, and conſiſts of two wards, in which twenty indigent perſons are comfortably provided with food and a penſion in money. In the ſecond hoſpital twenty-five poor perſons are maintained by the alms of the charitable. Here is alſo a ſchool, under the direction of a rector and three aſſiſtants. The burghers amount to about two hundred, moſt of whom are Lutherans; and the inhabitants are ſupported by brewing, agriculture, and mechanic trades. This town is poſſeſſed of the largeſt territory of any inland town in Pruſſia, except Fiſhauſen.

Angerburg is a modern well-built town, ſituated in the government of the ſame name. It is encompaſſed with palliſadoes, and defended by a ſtrong caſtle, built in 1335 on the bank of the lake where the river Angerap has its ſource. This lake, which is ſeven German miles in length, and one and a half in breadth, is of great ſervice to the town. The church of Angerburg is a large handſome ſtructure. An arch-preſbytery was founded here in the year 1725.

By the ſide of the above lake, and about five miles from Angerburg, is Steinort, a noble ſeat of count Lelendorf, which has one of the fineſt gardens in all the country. The iſland which belongs to it, and is ſituated in the lake, with the ſummer-houſe built upon it, are extremely pleaſant.

SECT. V.

Of the Province called Oberland, with a Deſcription of its moſt remarkable Towns.

THE country of Oberland is fertile, rich, and well cultivated, and was formerly ſo populous, that it could bring into the field an army of ten thouſand horſe and foot; but the people having, on ſeveral occaſions, exerciſed great cruelties towards the Chriſtians, the Teutonic knights, in the year 1273, ravaged the country, and made themſelves maſters of it. Oberland, at preſent, conſiſts of nine governments, the principal places in which are as follow:

Marienwerder, in Latin Inſula Mariana, and in the Poliſh tongue, Kwidzin, is a well-built town, with a caſtle, which ſtands on the frontiers of Pomerania, on the Leibe, at a ſmall diſtance from the Viſtula. Marienwerder is ſituated in the forty-third degree fifty minutes north latitude, and was firſt built in 1233, on a werder or ſmall iſland called Kwidzin, but was ſoon after rebuilt on the ſpot where it now ſtands. The cathedral, which was erected about the thirteenth century, is the largeſt church in the kingdom of Pruſſia, it being three hundred and twenty feet long, and by its ſtrong breaſt-works appears to have formerly ſerved for a fortreſs. The palace of Marienwerder is a ſpacious building, erected in the Gothic taſte. The adjacent country is very pleaſant, and filled with eminences and gentle declivities. The inhabitants carry on a conſiderable trade with their neighbours. Salt-works were ſet up here in the year 1723, and in 1728 was built a magazine for corn and forage. This town has been often damaged by inundations, war, and fire. The league againſt the Teutonic knights was concluded here in 1440, and in 1520 the town held out againſt a vigorous ſiege. In 1709 the czar Peter the Great had an interview at this place with Frederic I. king of Pruſſia; and king Staniſlaus retired thither from Dantzic in 1734. The ſuburbs

of

of Marienwerder are continually improving, and the adjacent country is fertile and well inhabited.

Reiſenburg ſtands on an eminence near the river Leibe, in the fifty-third degree forty-eight minutes latitude, and derives its name from the adjacent Pruſſian territory, which was anciently called Reſin. The Poles call it Prabutha, which ſignifies a ruinous houſe: indeed it is a mean town, with narrow ſtreets. It was built in 1169, and the caſtle, which is even ſtill more ancient, ſtands on a hill, and is extremely decayed. The town contains a German and a Poliſh church. The burghers, beſides having a little commerce, ſubſiſt by brewing, agriculture, and feeding of cattle. In the year 1323, 1414, and 1422, Reiſenburg was burnt by the Poles. It was alſo conſumed by fire in 1628, 1688, and 1728.

Mohrungen, a little town in the government of the ſame name, is ſituated to the north-eaſt of Reiſenburg, and is ſaid to have been founded in 1302, and compleated in 1328; but the old caſtle is more antient. Count Dohna has here a remarkable ſeat. The town is well built, and ſurrounded with good walls and a double moat; beſides, it is almoſt encompaſſed by the lake of Mohrungen. As this town lies in the road to Poland, it is much frequented by ſtrangers. It was entirely deſtroyed by fire in 1697; but has been ſince rebuilt in a much more handſome manner than before.

Oſterrode, a well-ſituated trading town, in the province of the ſame name, ſeated by the river and lake of Dribentz, which ſupply it with plenty of fiſh. It ſtands in the fifty-third degree forty minutes north latitude, in a ſandy, but fertile country. Salt-works have been ſet up there, and the inhabitants carry on ſome trade with Poland. Some ancient Roman coins have been found at a ſmall diſtance from the eſtate of Gorlitz, which belongs to his Pruſſian majeſty.

Holland is a handſome town, ſeated on an eminence near the river Weeſke, in the fifty-fourth degree four minutes north latitude, and has a ſtrong fortreſs. It is ſaid to have been built by ſome Hollanders of diſtinction, who fled hither on account of the murder of count Florentius V. from whom it obtained the name of Holland. Its ſituation renders it naturally ſtrong, and beſides, it is ſurrounded with a wall and towers. The ſtreets are long and broad, and the houſes well built. To this town belong two ſuburbs, and ſeveral country ſeats with pleaſant gardens. The inhabitants have a free fiſhery, and the liberty of going out in their boats on the lake of Drauſen. St. Bartholomew's church is a large handſome ſtructure. The Calviniſts celebrate divine ſervice in a large hall which belongs to the fortreſs, and without the town ſtands a church dedicated to St. George. Here is alſo a good hoſpital, ſalt-works have been erected in the town, and likewiſe a public magazine for corn and forage. The preſent caſtle was begun by duke Albert, and compleated by George Frederic. It is encompaſſed by moats and walls, and has fine apartments that yield a noble proſpect.

SECT. VI.

Of the Department of Little Lithuania, and the Poliſh Governments ſubject to the King of Pruſſia, with the principal Places contained in each.

IN this diviſion are eighteen towns, ſixty-two diſtricts, and a hundred and five pariſhes.

Little Lithuania is a hundred and fourteen miles in length, and from thirty-eight to fifty-ſeven in breadth, but was antiently over-run with thickets and woods, and in 1710 was almoſt depopulated by the peſtilence; but in 1720 king Frederic William generouſly aſſiſted twenty-thouſand French proteſtants, Palatines, Franconians, and Swiſs, at the expence of five millions of rix-dollars, to ſettle in this country; and in 1732, three hundred and fifty thouſand dollars were diſtributed among a freſh colony of twelve thouſand five hundred Saltzburgers. By the ſkill and induſtry of theſe people, this deſolate country has been extremely well cultivated, ſuperfluous woods have been rooted up, moraſſes drained, and a multitude of towns, villages, farm-houſes, and churches built; whence the country has put on a new appearance, and now makes ample returns for the great ſums which his Pruſſian majeſty wiſely laid out upon it. The richneſs of the paſtures, the many thouſand laſts of corn which are either exported or laid up in the king's granaries, the fine horned cattle, excellent horſes, and numerous flocks of ſheep, with the excellent butter and cheeſe this country affords, are inconteſtible proofs of its uncommon fertility. It alſo abounds with wood for fuel, and has plenty of game and fiſh. Several manufactures of coarſe and fine cloth, leather, &c. are alſo eſtabliſhed here.

The ancient inhabitants of Little Lithuania have a peculiar language, into which the Bible, the Catechiſm, and ſome books of devotion have been lately tranſlated. The Lithuanians of this country are far from being ſo ſtupid as they have been generally repreſented; but like other nations they have their good and ill qualities. Among the coloniſts the Swiſs are chiefly employed in grazing and breeding cattle; the French are well verſed in trade, and ſkilled in the cultivation of tobacco, which they have introduced into this country; and the Saltzburgers are remarkable for their ſkill in agriculture. The Swiſs, French, and Franconians, are all Calviniſts, ſo that there are ten German and French reformed pariſhes, as they are called in Little Lithuania, and the reſt are Lutherans, with very few Papiſts among them.

There are four governments in the Lithuanian department, the principal places in which are,

Memel, a trading town, port, and fortreſs, ſeated at the northern extremity of the bay called Curiſche-haf, in the fifty-fifth degree forty-ſix minutes north latitude, and in the thirty-ninth degree nineteen minutes eaſt longitude. It was built in the year 1279, and fortified in 1312, and has on one ſide the Baltic, and on the other the Curiſche-haf, beſides which it is watered by the river Dange. The harbour is deep and has a very good entrance, and within theſe few years has been improved with two moles, which are carried above fifty rods into the bay. The town lies under the guns of the fort, and is well inhabited; it conſiſts of above four hundred houſes, and beſides the German church, here is one belonging to the Lutherans and another to the Calviniſts. The burghers, who are divided into thoſe of the Old Town and Frederic's Town, are employed in commerce, brewing, ſope-boiling, agriculture, fiſhing, &c. Great quantities of flax, hemp, thread, and linſeed, are annually exported from this town. In 1752 ſeventy ſhips arrived in this port, and ſixty-nine ſailed from thence to other ports. Memel is fortified with three whole, and two half baſtions, with other works all in the modern way. The citadel conſiſts of four pretty regular baſtions, with ravelins and half moons. The buildings and apartments in this citadel were much improved by the elector Frederic William and king Frederic I. The moſt remarkable things within it are the two arſenals, the ſuperb houſe of the commandant, the garriſon church, and the powder-magazine. In this town is likewiſe a college of juſtice, a ſalt-factory, and a poſt-office, which brings in a conſiderable revenue.

The next city worthy of notice, is that of Tilſit, the capital of the government of the ſame name. This city is, next to Konigſberg, the largeſt and moſt opulent place in the kingdom of Pruſſia, and carries on the greateſt trade; for the river Memel, which runs along the north ſide of it, affords the advantage of a very great trade with Konigſberg, in linſeed, corn, butter, and other proviſions. It is ſituated in the fortieth degree eaſt longitude, and in the fifty-fourth degree fifty minutes north latitude. Tilſit, properly ſo called, conſiſts of two long ſtreets of a conſiderable breadth, called German-Street and High-Street, contiguous to which is the ſuburbs, called the Liberty. The number of houſes in this city amount to about ſix hundred, and the inhabitants to ſeven thouſand ſouls. The eccleſiaſtical buildings are a Lutheran German church, near which is the royal provincial ſchool, a Lithuanian church, and one belonging to the Calviniſts. Without the town ſtands a Lutheran chapel, and at about the diſtance of an Engliſh mile is a Romiſh chapel. Here is an hoſpital, where ninety indigent perſons have a comfortable ſubſiſtence; and in the peſt-houſe the ſick and lame, as well as thoſe infected with

with contagious diſeaſes, are carefully provided for. Here is alſo a poor-houſe, in which ten poor boys are maintained, beſides a number of widows. Salt-works are alſo eſtabliſhed in this town.

The flat country about Tilſit, which is eighteen miles in length, and as many in breadth, is one of the moſt fertile ſpots in the whole kingdom; and the inhabitants furniſh not only Pruſſia, but other places, with excellent butter and cheeſe, and the fiſheries in this place are alſo very conſiderable. The natives breed great numbers of horned cattle, and the horſes are large and ſtrong, but clumſy. Barley is almoſt the only grain ſown in theſe parts, which at preſent afford little or no wood. The marſh lands are expoſed in ſpring to inundations by the overflowing of the rivers, which frequently do much damage.

Ragnit, a ſmall town, about five miles to the eaſtward of Tilſit, is ſeated on the river Memel, and in the government of Ragnit. It is ſurrounded by paliſadoes, and has a caſtle, which is one of the moſt antient ſtructures in the country, and was famous even in times of paganiſm. In this caſtle is a very large royal magazine for proviſions, &c. and the proſpect from a part of it, called Konigſberg, is hardly to be equalled. On the other ſide of the Memel is a mountainous, but delightful country, which, from its extraordinary fertility in corn and paſturage, is called the Larder of Lithuania. Here are prodigious flocks of ſheep, great plenty of all kinds of game, and excellent horſes.

Inſterburg, a town in the government of the ſame name, is ſeated on the Angerap, near its conflux with the Inſter, where it aſſumes the name of Pregel, in the fifty-fourth degree thirty-four minutes latitude, and the thirty-ninth degree forty-four minutes eaſt longitude. This town was built in 1572, and ſurrounded with paliſadoes in 1727. It contains about three hundred and fifty houſes, and three thouſand inhabitants; and beſides the Lutheran churches, there is one belonging to the Calviniſts. The caſtle was built in the middle of the fourteenth century, and much improved by king Frederic William. Here is a court of judicature for the adminiſtration of juſtice in all the Lithuanian governments, and alſo a granary and ſalt factory. The town carries on a conſiderable trade in corn, and very excellent beer, remarkable both for its wholeſomeneſs and ſtrength.

Gumbinnen, which lies to the ſouth-eaſt of Inſterburg, is a town regularly built ſince the year 1725, in a very pleaſant and fertile country on the river Piſſe. It conſiſts of about two hundred houſes, and the number of its inhabitants amount to three thouſand. The antient deputation-chamber, and the war and domain-chambers, have been removed to this place. The public buildings are the conference-houſe, the town-houſe, and the magazine, which was built in 1742. The other public buildings are the Calviniſt church in the New Town, and the Saltzburg alms-houſe. Here is a good cloth manufactory.

The laſt town we ſhall mention in the Lithuanian department is Stallupehenen, a newly built town, to which a charter was granted in the year 1722. The inhabitants carry on a conſiderable trade in cattle, and a good fair is held here; but freſh-water and wood for fuel are very ſcarce.

There are alſo ſeveral diſtricts ſtiled Poliſh governments, and two other diſtricts ſubject to his Pruſſian majeſty, all of them bordering on Little Lithuania; the principal places in which we ſhall now deſcribe.

Oletzko is a caſtle in the government of the ſame name, and was much embelliſhed on the inſide in the year 1640. Near it ſtands the large and regular town of Margrabowa, which derives its name from the Margrave Albert, who built it in memory of the interview he had in that place with Sigiſmund Auguſtus, king of Poland; and the latter in 1560 alſo cauſed a new town to be built on the Poliſh frontiers, about eight German miles diſtant from Margrabowa, and from his own name called it Auguſtowa. The market-place of Margrabowa is the largeſt in Pruſſia, and in it ſtands the church, which is entirely detached from any other building. In the neighbourhood of this town the electoral and Swediſh troops defeated the Tartars in 1656, and releaſed the prince of Radzivil, whom they had taken priſoner.

Lick, called in Latin Licca, is a trading town in the government of Lick, ſeated on the lake of Satrind, in the fifty-third degree fifty minutes north latitude, and the forty-third degree three minutes eaſt longitude. The caſtle, which was built in 1272, is pleaſantly ſituated on an iſland: but the town has nothing worthy of notice, except its church, the provincial ſchool, and the archpreſbyter's manſion-houſe. This country ſuffered extremely by the inhuman ravages of the Tartars in 1656, till they were defeated and driven from the frontiers by the battle of Warſaw. The adjacent country yields plenty of wood, and abounds with fiſh and other proviſions.

The villages of Taluſſen and Kuſſinowen in this diſtrict are chiefly inhabited by Arians, who live in a quiet inoffenſive manner, and perform their devotions in private houſes.

Johanneſburg is a ſmall but handſome town, ſeated on a plain near the lake of Spirding, in which are four iſlands and plenty of fiſh. It is ſeated in the fifty-third degree thirty-five minutes north latitude. Here is a caſtle, which was once fortified, a large granary, and a magazine for forage; and in this town an archpreſbyter reſides. In 1698 the elector Frederic had here an interview of four days with Auguſtus II. then newly elected king of Poland.

The king of Pruſſia is alſo poſſeſſed of two lordſhips in the Poliſh territories. Tauraggen, a large diſtrict near the river Juhr, in Samogitia, which has an excellent breed of horſes, abounds with fiſh, and yields plenty of game. This diſtrict devolved to the houſe of Brandenburg in 1691, on the deceaſe of the princeſs of Radzivil.

The other is Serrey, in the great dutchy of Lithuania, and the palatinate of Trocko, and contains twenty-two villages, three manors, and twenty great and ſmall lakes. This lordſhip devolved to the houſe of Brandenburg by the marriage of Lewis Margrave of Brandenburg with the princeſs Ludovica Carolina of Radzivil.

The other dominions of his Pruſſian majeſty are entirely ſeparated from this kingdom, and are even much more extenſive; but the deſcription of the dutchy of Brandenburg and Sileſia muſt be deferred till we enter upon the German empire. We ſhall now therefore proceed farther to the north, and deſcribe the extenſive country of Sweden.

CHAP. V.

Of the Kingdom of SWEDEN.

SECT. I.

Its Situation, Extent, Climate, Coaſts, Rivers, Foſſils, Minerals, Vegetables, and Animals.

UNDER the name of Sweden is included that extenſive country that lies between Denmark, Norway, and Ruſſia: having Ruſſia and the Baltic on the eaſt; the Baltic and the gulph of Finland on the ſouth; Norway, the Sound, and Categate on the weſt; and Norwegian Lapland on the north: extending from fifty-five degrees forty minutes to the ſixty-ninth degree of north latitude, and from the twenty-eighth to the fortieth degree of eaſt longitude from London; ſtretching about two hundred or two hundred and fifty Swediſh miles in length; and as each Swediſh mile is at leaſt equal to ſix Engliſh, its length may be computed at about fifteen hundred miles, its breadth is reckoned to be a hundred and thirty Swediſh miles, or ſeven hundred and eighty Engliſh, and its area is computed to amount to ten thouſand ſquare Swediſh miles, or ſixty thouſand Engliſh.

The climate of this country is very healthful, but the winters are extremely cold, more eſpecially towards the north. The air is, however, clear and ſalubrious. In the long nights of winter the moon, the reflection from the ſnow, and the clearneſs of the ſky, give ſuch light that one may travel as conveniently as in the day. In ſummer the days are very long, and the heat intenſe; but the nights are luminous, and exceeding pleaſant. Violent ſtorms of wind and rain are ſeldom known here, and the ſharp keen north wind ſerves to purify the air. We ſhall give a more particular account of the climate of the northern parts in treating of Swediſh Lapland.

The highways in Sweden are better than can be imagined, conſidering the many rugged mountains and rocks in the country. Theſe are in a manner plained and made even by the peaſants, ſo that, as Motraye obſerves, there are ſcarce better roads in any country in Europe; nor can a man any where travel with more ſecurity and leſs expence; for horſes are hired for about a penny a mile: but then there are very poor accommodations on the road, both for lodging and diet. The eaſieſt and moſt expeditious method of travelling is in winter, when they make uſe of ſledges, eſpecially in thoſe parts of the country which abound in lakes and rivers; for theſe being all frozen, they meet with no obſtacles in their way, and they can more conveniently carry proviſions with them in a ſledge than on horſeback.

The coaſts of Sweden are encompaſſed with innumerable capes, rocks, and iſlands; ſo that the approach to the continent is ſomething dangerous: theſe they call ſheers, and they derive their diſtinguiſhing names from the provinces oppoſite to which they lie, as the Upland ſheers, the Sundermanland ſheers, &c. Theſe iſlands, or rocks, lie very near each other, and are of different dimenſions. Several thouſands of them are inhabited by people who live chiefly by fiſhing.

The lakes of Sweden are very numerous: the large ones amount to ſeventeen.

The number of rivers in Sweden is likewiſe very conſiderable; the largeſt of them are in the Swediſh language called Elbe. The principal of theſe are the Dal-Elbe, in the vale country, which is the largeſt river in Sweden: the Gullſpang, which divides Weſt Gothland from Wermeland; the Gothiſhe-Elbe, or Gothic river, which riſes in the lake of Wener, and about forty-five miles before it falls into the North Sea forms a cataract, by precipitating itſelf from a high precipice: the Stang, which divides Eaſt Gothland into two parts: and the Motalaſtrom, which iſſues from the Wetter-lake, being increaſed by ſeventeen ſmaller rivers, forms a cataract, by falling ſixteen feet, and diſcharges itſelf into the Baltic.

Both the lakes and rivers abound in fiſh of ſeveral kinds, the principal of which are ſalmon and trout of various ſorts.

Sweden likewiſe affords medicinal ſprings of experienced virtue.

This country abounds with minerals and foſſils of all kinds, as topazes, amethyſts, cryſtals, cornelians, agate, a reddiſh ſtone called violſtein, coral, a greeniſh ſemi-pellucid ſtone, porphyry, lapis-lazuli, aſbeſtos, load-ſtone, touch-ſtone, free-ſtone, mill-ſtones, ſtucco-ſtones, ſlate, lime-ſtones, coarſe and white marble, and beautiful petrifactions; alſo excellent white marble with beautiful green veins, which are ſometimes of a dark, and at others of a bright vivid green, finely interwoven, marienglas or iſinglas, vitriol, mercury, amianthus, lead ore, cobalt, allum, fullers-earth, petrolium, ſulphur, mother of pearl, &c. gold, ſilver, tin, lead, copper, and iron.

Though Sweden is extremely mountainous, it affords many tracts of even ground fit for agriculture. The ſoil is in general ſandy or ſwampy, but is not void of fertility. Gothland produces the greateſt quantity of grain, as wheat, rye, barley, oats, and peaſe; but every part of Gothland is not equally fertile. Sweden alſo affords good paſtures, and in the ſouthern parts ſome orchards, which yield fine fruit; but this country is more famous for its mines than the produce of the ſoil. Nordland, being full of rocks and mountains, produces but little corn; however, it has ſome ſpots fit for grazing. Lapland yields ſtill leſs grain than Nordland; but Finland is in moſt places extremely fertile, though it is far from being properly cultivated. The corn in the ſhort but hot ſummers of this climate ſuddenly grows up and ripens; but it is far from being ſufficient for the ſubſiſtence of the inhabitants, and therefore ſeveral hundred thouſand quarters are annually imported from abroad, particularly from Livonia, Pomerania, and Wiſmar.

Some patriots among the Swedes ſtrenuouſly endeavour to promote ſchemes for the encouragement of agriculture and manufactures; and if the ſucceſs be anſwerable to the preſent favourable appearances, the produce of the country will ſoon be ſufficient to ſupport ſome millions of inhabitants more than it does at preſent, and that in greater affluence and plenty.

In the year 1752, the king granted the new ſociety of agriculture a great deal of waſte land for forty or fifty years rent-free, and exempted them from taxes. Hitherto conſiderable advantages have been made in the foreſts by cutting down the trees, burning them, and ſtrewing the aſhes on the land before it is ſown. This ſort of ground thus prepared yields a great crop of corn for three years after.

The ſouth parts of Sweden produce pretty good fruit and vegetables; but towards the north theſe gradually become more ſcarce, they degenerate in flavour and goodneſs, and in the moſt northern parts no ſuch vegetables are to be found.

In the beginning of the ſummer the fields in the ſouth are ſtored with variety of flowers, and, according to ſome authors, ſtrawberries, raſberries, and ſuch kind of fruit grow upon every rock. In dry years melons are brought to perfection in the gardens; but peaches, apricots, and other wall-fruit, are extremely ſcarce, as are alſo pears, apples, and plumbs; and thoſe they have are not well taſted. They have, however, cherries of ſeveral ſorts, and ſome tolerably good. According to Motraye, the gardens about Stockholm are very fine, and, notwithſtanding the ſeverity of the winter, their green-houſes afford orange, fig, myrtle, and other trees, plants, and flowers of the moſt tender nature. Finland produces excellent turnips; and flax, hemp, and tobacco, are cultivated to great advantage. Their woods chiefly conſiſt

of pines, beech, birch, alder, juniper, and ſome oak; which are generally ſtraight, tall, and fit for building. But the extenſive woods in Sweden become thinner, and daily decline from the immenſe conſumption of wood in making charcoal, tar, pitch, pot aſh, and burning the land. Oaks in particular grow very ſcarce.

In ſeveral parts of Sweden the inhabitants ſubſiſt by grazing, but in all the northern countries, the cattle are ſmall, and the wool of the ſheep very coarſe; ſo that in order to mend the breed, rams are imported from England and Spain. The horſes are ſtrong, hardy, and vigorous. Of the extraordinary advantages they reap from their rein-deer, we ſhall give a particular account in our deſcription of Lapland. This kingdom affords plenty of all ſorts of deer, elks, hares, and all ſorts of tame and wild fowl; and ſome parts of Sweden are much infeſted with lynxes, bears, wolves, foxes, otters, martens, and weaſels.

Tame and wild fowl are very plentiful and good; the reder, which is as large as an ordinary turkey, is much admired, as is alſo the orras, which is about the ſize of a hen. Partridges abound here, as does alſo a bird called yerper, which has ſome reſemblance to a partridge. In winter they take great numbers of blackbirds, thruſhes, and of a beautiful bird of the bigneſs of a field-fare, whoſe feathers are tipped with ſcarlet, and are ſuppoſed to come from Lapland in the hard ſeaſon. They have but few pigeons. The northern countries abound with eagles, hawks, and other large birds of prey.

SECT. II.

Of the Perſons, Dreſs, and Manners of the Swedes; the Number of the Inhabitants, their Employments, Food, Language, Skill in the Sciences, Religion, and Hierarchy. The Progreſs of the Arts and Manufactures; with a conciſe Account of the Trade and Coin of Sweden.

THE Swedes are of a good ſtature and robuſt conſtitutions, capable of enduring hardſhips and fatigues. Where they are not too much expoſed to the weather they have good complexions, and their hair, like that of other northern nations, is inclined to yellow. The women are of a juſt proportion; they have alſo good features, and thoſe who are employed at home are generally fair: but the peaſants generally make their females undergo an equal ſhare in all laborious employments. They go to plow, threſh their corn, row upon the water, ſerve the bricklayers, and carry burthens like the men. The inhabitants are, however, far from being ſufficient to people the country; there is a remarkable inſtance of this in one place, which though not the moſt northerly part, there are hardly four thouſand ſeven hundred people to be found in the compaſs of twelve hundred and ſeven ſquare miles.

The number of inhabitants of Sweden and Finland have been computed by ſome learned Swedes at about three millions, reckoning eighty thouſand farms, on which are one million ſix hundred thouſand ſouls, including the women, children, and ſervants; and it is ſaid, theſe farms make up above half the number of the inhabitants in the whole kingdom. Indeed at preſent ſome pariſhes are ſo extenſive, and at the ſame time ſo thinly inhabited, that a peaſant muſt travel ſeveral Swediſh miles to viſit his next neighbour; others contain not more than ſeventy farms, and yet take up a tract of land equal to the whole province of Holland, though perhaps ſuch a pariſh has not ſo many cottages as there are towns in that flouriſhing country.

The common people ſubſiſt by agriculture, working in the mines, grazing, hunting, fiſhing, and commerce, both domeſtic and foreign. Indeed the wealth of Sweden ariſes from its mines, ſome gold ore has been diſcovered, and there are ſeveral large ſilver mines ſaid to be very rich. The number of the copper mines, hammering mills, and ſmelting-houſes, is very conſiderable. Iron ore is in ſuch plenty that it generally appears on the ſurface of the earth, and is remarkable for its richneſs. Indeed the produce of the mines conſtitutes two-thirds of the national revenue.

The inhabitants of the north parts of Sweden are ſtrangers to delicacies, and live very hardly. They eat a ſort of bread made of the bark of birch and pine-trees, ſtraw, and roots. The hacke, or ſtampe, is a kind of bread very common in the north; and in times of ſcarcity is ſometimes uſed in the ſouth parts. This is made of the ears of corn cut from the ſtems and chopped ſmall; after which it is dried and ground: on this kind of meal they pour boiling water, and mix it with leaven and corn-meal, where it is to be had. In ſpring they alſo take the bark of firs, which at that time comes the eaſieſt off the trees; but not the thick bark next the wood. Having pared off the outward coarſe knots, it is dried in an oven, or placed over a wood-fire, till both ſides become brown, ſwell, and undergo a kind of fermentation, by which the reſin is conſumed. Theſe pieces of bark being thus dried, are ground, and then bread is made of the meal.

Neceſſity has alſo taught theſe poor people to make bread of a plant called miſſe, and by the Fins, wekka, called in Latin *calla foleis cordatis*, which is gathered during the ſpring in the moraſſes. After it is dried in the ſun, it is baked in an oven, or half dried in a warm room, while it is ſprinkled with water. It is then put into the oven a ſecond time, and dried till the leaves fall off, and the outward tegument detaches itſelf at the knots from the ſtem; then the ſtems are chopped ſmall in a trough, and being afterwards ground, the meal is ſifted and dough made of it, by pouring hot water on the meal; it is uſual to pour alſo ſome brandy lees amongſt it, to give the bread a more agreeable flavour. The dough is afterwards kneaded with great labour, and then a third part of corn-meal is mixed with it.

The reſt of their food conſiſts of fiſh, and dried fleſh. The rich, however, and the people in the great towns, are not unacquainted with delicacies; and perſons in affluent circumſtances here, as in other countries, keep a good table.

Their cloathing in winter is ſuitable to the climate: the rich wear cloaths lined with warm furs; inſtead of which thoſe who cannot afford them, make their cloaths of ſheep-ſkins with the wool on; and thus, as a modern writer obſerves, are better provided with cloathing adapted to the ſeaſon, and to their condition, than the people of moſt other countries.

The faſhion reſembles that of the Germans, and other European nations; and, like them, they wear in ſummer ſuch cloths and ſtuffs as they can procure; the great adorning themſelves with lace and embroidery.

The Swediſh tongue has ſuch an affinity with the Daniſh and Norwegian, that the inhabitants of the three kingdoms readily underſtand each other; but Finland and Lapland have their reſpective dialects. In the times of paganiſm, the Swedes made uſe of a particular alphabet, termed Runic characters; as appears from the Runic ſtones ſtill to be ſeen in moſt of the provinces near the ſepulchres of the dead.

The Swedes are of late greatly improved in arts and ſciences; but the branches of literature which they chiefly ſtudy are œconomics, natural philoſophy, with the antiquities, hiſtory, and geography of their own, and other countries.

The moſt ancient and conſiderable univerſity in Sweden is that of Upſal; there is alſo one at Lund in Schonen, and another at Abo in Finland. There is likewiſe a royal academy of ſciences at Stockholm: in the ſame city is a royal academy of painting and ſculpture; and another for that part of the mathematics which relate to the military art. At Drotningholm has been alſo lately inſtituted an academy for the polite arts.

Seminaries for the education of youth are inſtituted in ten towns of Sweden, and epiſcopal ſchools are founded at Upſal and Abo. There are inferior ſchools in ſeveral other places. In ſhort, an ordinance for the improvement and regulation of the art of printing was publiſhed by his Swediſh majeſty in 1752, by which a new ſociety was inſtituted for that purpoſe.

With reſpect to the religion of Sweden, it muſt be obſerved, that it was formerly involved in the groſſeſt darkneſs

neſs of idolatry, and Upſal was the ſeat of their ſuperſtitious worſhip. The emperor Charles the Great ſent hither an eminent eccleſiaſtic, named Herbert, who preached the goſpel in Eaſt Gothland; and for the ſame purpoſe the emperor Lewis ſent into Sweden the famous Anſcharius, who was ſucceeded by ſeveral others. In the middle ages the clergy had obtained the poſſeſſion of ſeveral large eſtates, and the pope aſſumed a great power over the temporal concerns of the kingdom. Theſe abuſes procured Olaus Petri, a diſciple of Luther, a favourable reception in Sweden, where he promulgated the pure doctrines of the goſpel and that great king Guſtavus Vaſa happily introduced the reformation in Sweden, in ſpite of all the numerous difficulties he had to encounter. Indeed it afterwards met with great oppoſition, and underwent many trials in the reigns of John and Sigiſmund; yet it was at laſt eſtabliſhed by the diet and ſynod held at Upſal in 1593, when the ſtates of the kingdom ſolemnly engaged to adhere to the doctrines of Luther; and this religion, ſince the decree of uniformity paſſed in 1613, is to be eſteemed both by the ſovereign and his ſubjects, the only eſtabliſhed church in the kingdom. Indeed in 1741, his majeſty was pleaſed to permit by a royal edict, that the Calviniſts and members of the church of England ſhould enjoy the free exerciſe of their religion in all the ſea-ports, except that of Carlſcroon.

The hierarchy of Sweden is compoſed of the archbiſhop of Upſal, who performs the coronation ceremony, and ten biſhops, with three ſuperintendants, one of whom reſides at Carlſtadt, another at Hernoſand, and the third in Gothland. The other eccleſiaſtics, who are ſubordinate to theſe, are the provoſts, deacons, chaplains or curates, and the miniſters or incumbents in villages.

Mr. A. Birch, in a diſſertation delivered in the year 1749, obſerves, that in this kingdom, excluſive of the German provinces, there are in all three thouſand eccleſiaſtical benefices, one thouſand three hundred civil poſts, filled by perſons learned in the laws, one thouſand three hundred military poſts, occupied by men of literature, ſix hundred officers relating to the ſeveral departments belonging to the government, and two thouſand ſix hundred phyſicians and ſurgeons.

We ſhall now take a view of the arts cultivated in Sweden; and here it is neceſſary to obſerve, that a few centuries ago no manufactures were eſtabliſhed in this kingdom. The Hanſe-towns not only exported unwrought iron and copper, but the ore of thoſe metals, and when they were wrought into various tools and utenſils, ſold them again to the Swedes. The inhabitants of the coaſts were all fiſhermen, and the towns had no artificers. The Swedes firſt began to work their metals, and even their wood, in the reign of the great Guſtavus Vaſa; and towards the middle of the ſeventeenth century began to ſet up all kinds of manufactures, but chiefly employed foreigners, particularly the Dutch and Flemings. In the year 1641 a glaſs-houſe was firſt erected in Sweden; in 1643 the Swedes began to make ſtarch; in 1646 they erected tin-works. They had no bookſellers ſhops till the year 1647; nor needle and ſilk manufactures till 1649. Leather-dreſſing and ſope-boiling were introduced into this country in 1651; ſawing-mills were erected in 1653; iron and ſteel manufactures in 1654; ſugar-baking in 1661; but the woollen and ſilk manufactures flouriſhed more than all the reſt, till the wars of Charles XII. put a ſtop to trade, and conſequently to the progreſs of the arts.

However, in the reign of Frederic I. trade and manufactures revived; the breeding of ſheep was encouraged, tobacco planted, and foreign artiſts and manufacturers allowed the free exerciſe of their religion.

Sweden has at preſent manufactures of ſilk, cloth, cotton, fuſtian, and other ſtuffs; linen, ſail-cloth, Morocco leather, dying, and printing of cottons; they have houſes for boiling or refining of allum, ſugar, ſope, and ſalt; for making glaſs, porcelain, and paper; they have alſo gun-powder mills, ſtamping mills, boring mills, wire and flatting mills; vaſt quantities of copper, braſs, iron, and ſteel are wrought in Sweden, which has founderies for great guns, pots, and the like, and forges for fire-arms, anchors; great numbers of ſhips are alſo built, and wooden veſſels and utenſils made in the kingdom.

Sweden is conveniently ſituated for commerce, as it lies between the Baltic and the North Sea. The towns which are allowed to import and export goods in their own ſhips, and to trade both with natives and foreigners, are called ſtaple-towns; theſe are thirty-four in number: but thoſe that lie near the ſea, and yet have no foreign commerce, and are only permitted to carry on a domeſtic trade, to have ſhares in the freight of goods, and to purchaſe by wholeſale the goods imported by the ſtaple-towns, are called land-towns: ſome of theſe are within land, and others ſea-port-towns; others again are mine-towns. The chief ſtaple-towns in Sweden are Stockholm and Gottenburg. At the former are held the college of commerce, an aſſurance-office, and the national bank, which has frequently advanced conſiderable ſums of money for the ſervice of the government, and has a fund of about ſix millions of ſilver dollars, each equal to one ſhilling and ſix-pence two-thirds ſterling, beſides current bills to the amount of ſeventy millions. At Gottenburg is the Eaſt India company, erected in 1731, which pays for every ſhip that returns from India fifty thouſand ſilver dollars to the government: the Swedes have alſo a Levant company.

The exports from Sweden are iron wrought and in bars, other wrought metals, timber, gun-powder, pitch, tar, ſalt-petre, pot-aſh, cordage, cobalt, furs, Morocco leather as it is called, and dried fiſh. The imports are grain, fleſh, bacon, cheeſe, butter, tallow, wine, brandy, ſalt, drugs, hides, hemp, flax, ſilk, and ſeveral foreign manufactures.

The coins of Sweden are, the gold ducat, worth about nine ſhillings and four-pence ſterling.

The ſilver coins are the oer, one of which is equal to four pfennings, twenty of them to a caroline, which is about one ſhilling and two-pence ſterling, and thirty-two to a ſilver dollar, equal to one ſhilling and ſix-pence three farthings Engliſh money. There are double and half carolines; and alſo double, ſingle, and half-ſingle oers.

The copper pieces are the copper oer, which, like the rundſtuc, is equal to two pfennings, and is no more than the eighth part of a penny Engliſh. An half, a quarter, and a ſixth part of a copper oer. A copper dollar, which is about four groſchen, and is nearly equal to ſix-pence farthing.

The imaginary money are the ſilver mark, equal to about four-pence three farthings, and the copper mark; the former is three times the value of the latter, and ſix ſilver, or eighteen copper marks, is equal to a ſpecie dollar, or thirty-two groſchen, which is about one ſhilling and three-pence ſterling.

SECT. III.

A general View of the Hiſtory, antient and preſent Government, Expences, Revenues, military and naval Strength of Sweden.

SWEDEN is famous for being the native country of the fierce and warlike Goths, whoſe emigrations make ſuch a diſtinguiſhed figure in hiſtory. The kingdom of the Swedes was ſeparate from that of the Goths till the twelfth century; but in 1132 both nations, with their ſeveral dependencies, were united under Suercher, king of the Oſtrogoths, who was proclaimed king of the Swedes and Goths. It was afterwards agreed by both nations, that the Swediſh and Gothic princes ſhould hold the ſovereignty alternately; but this occaſioned many bloody inteſtine wars.

Magnus Smeek added Schonen and the adjacent territories to the kingdom; but at length by his maladminiſtration, deprived both himſelf and his family of the throne: for after Albert, duke of Mecklenburg, his ſiſter's ſon, had been elected king, Margaret, who was heireſs to the crowns of Denmark and Norway, compelled him to give up the kingdom of Sweden to her; and by the union of Calmar, in the year 1397, united the

the three northern kingdoms under one head. This union filled the Swedes with the greateſt indignation: but after ſeveral unſucceſsful attempts, they at length, by the aſſiſtance of a Swediſh nobleman, named Guſtavus Erickſon von Vaſa, ſhook off the Daniſh yoke. What moſt provoked them to engage in this revolt, was a perfidious maſſacre, perpetrated at Stockholm in 1520 by king Chriſtian II.

The brave Guſtavus Vaſa, who had rendered himſelf extremely popular by the conduct and intrepidity he had ſhewn in reſcuing Sweden from the oppreſſion of the Danes, was elected king, and not only became the founder of a line of monarchs of his family, but advanced the royal authority to a very great height.

The crown of Sweden had hitherto been elective; but the Swedes had been deprived of this right under the Daniſh kings; and according to the laws of Sweden, the royal authority was ſo limited, that the prince had little more than the name of a ſovereign; for he could neither make war nor peace, levy money nor troops, without the conſent of the ſtates. He could neither erect a fortreſs, introduce foreign troops, nor put any ſtrong place into the hands of a foreigner. The revenue of the crown then ſolely aroſe from the ſmall domains about Upſal, an eaſy poll-tax on the peaſants, and from ſome fines and forfeitures which fell to the crown in criminal proceedings. The government of caſtles, fiefs, or manors, which were at firſt granted by the crown only for a term of years, or at moſt for life, were inſenſibly changed into hereditary poſſeſſions, which the nobility held by force, without paying the rents that had been reſerved out of them. This was alſo done by the biſhops and clergy, who poſſeſſed ſuch eſtates on pretence that the lands of the church ought to be exempted from all duties; and by theſe encroachments the royal revenue was ſo reduced, that the king could ſcarce maintain more than five hundred horſe. He was conſidered only as a kind of captain-general during a war, and as preſident of the ſenate in time of peace. The prelates and nobility fortified their caſtles, and rendered them the ſeats of ſo many independent ſtates; and arming their vaſſals, frequently made war on each other, and ſometimes on their ſovereign. They neither ſought nor expected redreſs, when they thought themſelves injured, from the king's courts; but took upon themſelves the power of doing themſelves juſtice. The kingdoms of Norway and Denmark were under the like form of government, both of them were elective, and had their reſpective ſenates, without whoſe concurrence, or that of the ſtates aſſembled in their diet, the king could tranſact nothing of importance.

But to return to Guſtavus, who found the kingdom in this ſituation. The ſtates, who thought they never could ſufficiently expreſs their gratitude to their deliverer, paſſed a ſolemn decree, by which they obliged themſelves to approve whatever Guſtavus ſhould think fit to perform for the preſervation of his dignity, againſt a pretender who was ſet up in oppoſition to him. They, in particular, impowered him to make peace and war, and reſolved that the enemies of Guſtavus ſhould be eſteemed the enemies of the nation.

This happened at the time that the doctrines of the reformation began to prevail in Sweden, and the Romiſh clergy, Guſtavus's greateſt enemies, being in poſſeſſion of half the lands and revenues of the kingdom, and among others, of many royal caſtles and domains, he thought this a proper time to reſume them, by falling in with the doctrines of Luther. He therefore procured an act to be paſſed, by which it was ordained, that the biſhops ſhould immediately ſurrender their caſtles to the king, and diſband their troops: that their pretended rights to fines and forfeited eſtates, which originally belonged to the crown, ſhould be entirely abrogated: that all the ſuperfluous plate and bells belonging to the churches ſhould be ſold to pay the public debts: that all the grants of eſtates to the clergy ſince the year 1445, ſhould be vacated, and the lands re-united to the crown: that two-thirds of the tythes, generally poſſeſſed by the biſhops and abbots, ſhould be ſequeſtered, for maintaining the army in time of war, and for erecting and endowing public ſchools and hoſpitals in time of peace: and that all the privileges of the clergy ſhould be entirely at his majeſty's diſpoſal.

The king having thus obtained a legal title to the revenues of the church, marched through great part of his dominions, at the head of a body of horſe, to ſee the act put in execution, attended by Olaus Petri, and other Lutheran doctors, whom he ordered to preach before him in the principal churches. Wherever he came, he commanded the titles and grants by which the clergy held their lands to be brought before him, and either reunited them to the crown, or reſtored them to the heirs of the ancient proprietors; by which means he recovered from the ſecular and regular clergy above two-thirds of their revenues, and ſeized upon near thirteen thouſand conſiderable farms. He alſo cauſed the ſuperfluous church plate to be melted down, and carried into the public treaſury. This indeed occaſioned ſome conſpiracies and inſurrections; but they were eaſily ſuppreſſed.

Having now ſucceeded ſo happily in ſuppreſſing his greateſt enemies, he obliged the nobility and gentry who held the crown lands, which they had kept as their own, to reſign up their fiefs, or to pay the rents that were originally due to the crown. Upon this they were obliged to compound with the king, and agree to pay him annually, a certain ſum for all their fiefs and manors.

Guſtavus next entailed the crown upon his iſſue, by the free conſent of the ſtates, and it has accordingly been enjoyed by his deſcendants ever ſince. But the diviſion of the kingdom among his children, the mal-adminiſtration of his ſon John, with the propenſity of Erick, John's brother, and his ſon Sigiſmund king of Poland to popery, threw the kingdom into terrible diſtractions, till they were at laſt compoſed by Charles IX. and his ſon Guſtavus Adolphus. This laſt prince conquered the greateſt part of Livonia, and penetrated ſo far into Germany as to become formidable to the emperor; but in 1632 he loſt his life in the battle of Lutzen.

His daughter Chriſtina, who ſucceeded to the throne, took from Norway and Denmark the territories of Jamtland and Harjedalen, with the iſlands of Gothland and Oeland, and in 1648 added Upper Pomerania, Bremen, Verden, and Wiſmar to the Swediſh dominions; but in the year 1654 that princeſs ſolemnly reſigned the crown of Sweden, and was very inſtrumental in advancing to the throne her couſin Charles Guſtavus prince Palatine of Deux-Ponts, who in 1658 added Schonen, Halland, Blekingen, and the Lehn of Bohus to the Swediſh dominions. His ſon Charles XI. re-aſſumed all the alienated crown-lands, and rendered himſelf an abſolute monarch.

Charles XI. dying in 1697, in the forty-ſecond year of his age, and the thirty-ſeventh of his reign, was ſucceeded by his only ſon Charles XII. who being under fifteen years of age, a regency was appointed. In the year 1700 the Poles, Danes, and Ruſſians, taking advantage of the king's youth, endeavoured to recover the dominions of which their anceſtors had been deprived. The Engliſh and Dutch ſent a fleet to his aſſiſtance, and compelled the Danes to conclude a peace with him. This young prince then marched againſt the Ruſſians and Poles, whom at the beginning of the war he defeated in almoſt every engagement, with numbers far inferior to thoſe of his enemies, though he had well-diſciplined veteran troops of Saxons to contend with, as well as Ruſſians and Poles: but while, filled with the utmoſt contempt for his enemies, he buſied himſelf in dethroning the king of Poland, the czar Peter, improving by his misfortunes, in his turn learnt to conquer: Charles was defeated at Pultowa, and his whole army entirely cut off, or made priſoners, except three or four hundred horſe, with whom he eſcaped to Bender, in Turky. He there gave ſignal proofs of his intrepidity and his folly; and, a few years after his return to Sweden, was killed at the ſiege of Fredericſhall. His exceſſive fondneſs for war brought the kingdom to very great diſtreſs, and he was the laſt male heir of his family.

After Charles's death his ſiſter Ulrica Eleanor aſcended the throne, by the free election of the ſtates; but firſt gave up all pretenſions to arbitrary power; and in 1720, by conſent of the diet, transferred the government to her huſband Frederic, hereditary prince of Heſſe Caſſel.

King Frederic having no iſſue, the ſtates in 1743 nominated Adolphus Frederic, duke of Holſtein, and biſhop of Eutin, his ſucceſſor, who accordingly on the deceaſe of Frederic, on the fifth of April, 1751, aſſumed the reins of government.

The titles of the kings of Sweden have been frequently varied. His preſent majeſty is ſtiled Adolphus Frederic, by the grace of God, king of Sweden, and of the Goths and Vandals; great Prince of Finland; hereditary ſovereign of Norway; duke of Sleſwic, Holſtein, Stormarn, and Ditmarſh; count of Oldenburg and Delmenhorſt.

The arms are quarterly: in the firſt and fourth azure, three crowns or, for the kingdom of Sweden; in the ſecond and third barré, onde argent and azure, a lion rampant or, crowned gules, for Gothland; with the arms of Holſtein in the eſcutcheon.

In 1748, Frederic I. revived two antient orders of knighthood, and founded another. The principal is the blue ribbon, or the order of Seraphim, inſtituted in 1334 by Magnus Smeek. The next is the yellow ribbon, or the order of the ſword, founded by Guſtavus Vaſa in 1523. The order of the black ribbon, or the north ſtar, is of late inſtitution. All three have their proper badges and mottos.

The preſent form of government was ſettled in Sweden in the year 1720, by which the king's male iſſue are declared his heirs and ſucceſſors to the throne; but before the new ſovereign enters on the adminiſtration of the government, he renounces by a ſolemn oath all claim to arbitrary power, and engages to puniſh with the utmoſt rigour all who ſhall endeavour to promote it, as traitors and enemies to the king and kingdom. The king cannot appropriate to himſelf or alienate any of the national revenues: he cannot ſettle any of the royal domains on his children, but muſt ſupply the neceſſary ſums for their education and portions in ready money: he muſt be of the Lutheran religion: he is to govern in concert with the council of ſtate, according to the general laws of Sweden, and the preſent form of government: he is not to engage in any war, to impoſe any new taxes, to alter the value of the current coin, to detain the ſalaries or penſions accruing to the officers and ſoldiers from the crown lands, nor to annul any ordinances made for the improvement of navigation, trade, and manufactures, without the conſent of his council and the ſtates of the kingdom.

The ſtates, according to the antient form of government, conſiſt of four orders. The firſt of theſe is the nobility, conſiſting of counts, barons, and gentry. One is choſen out of each family to repreſent that body, and with them the colonels, lieutenant-colonels, majors, and captains of every regiment, ſit and vote.

The ſecond order is compoſed of the repreſentatives of the clergy, who chuſe one out of every rural deanery, conſiſting of ten pariſhes, and their charges are borne. Theſe, with the biſhops and ſuperintendants, make about two hundred, who repreſent that body.

The third order of the ſtate conſiſts of the repreſentatives of the burghers, who are choſen by the magiſtrates and common-council of every corporation. Of theſe there are four elected for Stockholm. Some of the towns have two votes; but moſt of them have only one. Theſe members amount to about a hundred and fifty in the whole.

The fourth order conſiſts of the peaſants, who chooſe one out of every diſtrict, whoſe charges they bear, and theſe amount to about two hundred and fifty.

The king is obliged to convene a diet once in three years; but if he dies without leaving a male heir to the crown, the ſtates meet of themſelves. Each of the four claſſes has its chairman; the marſhal of the diet is uſually the chairman of the nobles, and the archbiſhop of Upſal that of the clergy: the burghers uſually chooſe one of the burgomaſters of Stockholm, and the peaſants have alſo their ſpeaker; but the counſellors of ſtate have no vote in the diet. Each of the four claſſes has alſo its reſpective houſe at Stockholm.

When they aſſemble they firſt meet in a large room in the king's palace, called the diet-chamber; where his majeſty being ſeated on his throne, and the ſenators or privy-counſellors ſitting at ſome diſtance from him, the preſident of the chancery uſually compliments the aſſembly in the king's name; after which a ſecretary acquaints them with the ſtate of affairs ſince their receſs, and the reaſon of requiring their advice and aſſiſtance; to which the marſhal of the nobility returns an anſwer; and after him the archbiſhop for the clergy, and the ſpeakers of the other orders of the ſtate. They then ſeparate to their ſeveral houſes or chambers, where they chooſe a ſecret committee, compoſed of an equal number of each body, to whom the miniſtry communicate ſuch particulars as are not thought proper to be made public, and they prepare what is to be propoſed to their reſpective bodies. In each houſe affairs are determined by a majority of voices; and a majority in all the chambers is neceſſary to the paſſing of every act. When the particulars propoſed by the king have been conſidered and diſpatched, each houſe offers its grievances ſeparately to his majeſty, to which he returns an anſwer; and each member of the three inferior houſes has a copy of the king's anſwer to their reſpective grievances, and of all the acts paſſed by the ſtates; both of which they communicate to their electors.

We ſhall now give an account of the ſenate, and the ſeveral courts or colleges for the adminiſtration of public affairs. Theſe are,

The ſenate, the council of ſtate, or ſupreme council, in which the king himſelf preſides, and has two votes. Here all national affairs that admit of no delay are determined by a majority of voices. This council conſiſts only of fourteen members, who are choſen in the following manner: twenty-four of the nobility, or houſe of lords, twelve of the clergy, and as many of the burgeſſes being aſſembled, take an oath of ſecrecy, after which they proceed to chuſe three perſons fit to be advanced to that dignity, on a vacancy, in which they muſt be unanimous. Of theſe his majeſty chooſes which he pleaſes. No ſenator can be elected in the intervals of their diet; nor may more than two of one family be of the ſenate at the ſame time.

The royal courts of juſtice, of which the Swediſh properly ſo called is held at Stockholm, the Gothic at Jonkoping, and that of Finland at Abo.

The royal war-office has a ſenator for preſident, and two others of the ſame dignity for his aſſociates, with a general of the artillery, a quarter-maſter-general, and two counſellors of war, under whoſe direction are all the land-forces, the artillery, and fortifications. Under this office are the commiſſary of war's, the ordnance, and pay-maſter's-offices; thoſe of the militia, the fortifications, ſtores, camp, cloathing, quarters, &c.

The court of admiralty, which is held at Carlſcroon, has an admiral for its preſident, with all the other admirals and principal ſea-officers for his aſſiſtants.

The ſtate-office, in which the prime miniſter reſides. As this office has the care of the records of the kingdom, the ſecretary of ſtate is a member of it.

The royal chamber of finances.

The royal domain chamber.

The royal chamber of reviſion.

The royal college of commerce.

The royal chancery.

The office of the ſtates, and the manufacture-office.

Foreigners are excluded from all poſts in the government.

With reſpect to the laws of Sweden, the new Swediſh digeſt was allowed of by all the ſtates in the diets held in 1731 and 1734, and was confirmed by the king, and publiſhed in 1736. It contains a new courſe of proceedings, by which all law-ſuits are eaſily determined and brought to a ſpeedy iſſue. The towns and diſtricts of the peaſants have their inferior courts, from which an appeal lies to the ſuperior or provincial courts, and from theſe again to the royal courts of juſtice. In the village courts of judicature twelve peaſants always ſit as aſſiſtants in trying cauſes.

The puniſhment of theft in Sweden is perpetual ſlavery; the criminal being condemned to labour all his life in the ſervice of the crown, in carrying wood and ſtone for the repair of the fortifications, or other ſervile and laborious employment. He wears an iron collar night and day

about his neck, to which a bow of the ſame metal is faſtened that comes over his head, and has a little bell that rings upon the leaſt motion.

Duelling, where one of the parties is ſlain, is puniſhed with the death of the ſurvivor; and if neither of them fall, they both ſuffer two years impriſonment, during which they are to live upon bread and water, and alſo pay a fine.

For murder, adultery, and burning of houſes, the criminal, if a man, is hanged; and if a woman, beheaded: but where the facts are attended with aggravating circumſtances, the offender is hung in chains, burnt, or quartered. Where a nobleman or gentleman commits a capital crime, he is ſhot to death.

We ſhall now conſider the expences, revenues, military and naval forces of Sweden. The ordinary and extraordinary expences for the kingdom of Sweden, and the great dutchy of Finland, for the year 1753, amounted to ten millions two hundred and forty thouſand four hundred and thirty-four ſilver dollars; but the ordinary revenue of the kingdom does not exceed eight millions ſeven hundred and forty-five thouſand ſeven hundred and eleven, including the ſum allowed to the king for his civil liſt. The uſual grant to the king for his privy purſe is about two hundred thouſand ſilver dollars; to the queen a hundred thouſand; to the princeſs and princeſſes, the children of the reigning monarch, thirty thouſand. The crown debts are ſo great, that ſince the year 1753 the annual intereſt of them has amounted to one million twenty-eight thouſand two hundred and eighty-ſix ſilver dollars.

The military forces of Sweden conſiſt partly of raiſed and partly of diſtributed regiments. The latter, which are the national militia, form the greateſt part, and, according to an ordinance publiſhed by Charles XI. are maintained by the country; for that prince obliged the nobility and gentry, as well as the peaſants, to provide and maintain both horſe and foot, of which each province furniſhes its contingency.

As to the infantry, every three farmers provide a foot-ſoldier, furniſh pay, and give him a dwelling and a piece of land; but he has his accoutrements, arms, and ammunition from the crown, which alſo pays the principal and ſubaltern officers, and ſupplies the troops with proviſion when they are on their march, or in the field, except at the rendezvous, in order to be muſtered.

The officers of horſe and foot are maintained out of the lands reſumed and reunited to the crown. Every officer has a houſe and land aſſigned him in that part of the country where his regiment is quartered, and the rent of other farms to the value of his pay, which they receive either in money, corn, or other goods. The lands aſſigned for the payment of a colonel of foot are about three hundred pounds a year, and the reſt of the officers in proportion. But on a march, or in the field, the crown furniſhes them with ſubſiſtence, and provides ammunition and forage for their horſes.

The raiſed regiments of infantry, moſt of which ſerve as garriſons in the fortified places, conſiſt of the king's life-guards, which amount to thirteen thouſand eight hundred men; a regiment of artillery, conſiſting of three thouſand; and the diſtributed regiments, which amount to twenty-four thouſand two hundred and thirty-eight. Hence the whole body of the infantry amount to forty-one thouſand and thirty-eight. The cavalry, including the king's regiment of life-guards, amounts to ſeven thouſand and twenty-ſix; beſides three regiments and one ſquadron of dragoons, amounting together to three thouſand one hundred and fifty-four. Hence it appears that the whole army conſiſts of fifty-one thouſand two hundred and eighteen men: but in time of war ſeveral extraordinary regiments are raiſed, which amount to at leaſt an equal number.

A college of invalids is founded at Wadſtena for twenty-eight field-officers, nineteen ſubaltern officers, and twenty-two private men, who are there provided with lodging, firing, proviſions, and cloaths: beſides theſe above five hundred field officers, five hundred and fifty ſubalterns, and four thouſand private men have penſions, and ſome other ſmall gratuities.

The Swediſh navy conſiſts of twenty-four ſhips of war, from the firſt to the ſixth rates, carrying from a hundred to forty-two guns; twelve frigates, carrying from thirty-ſix to twelve guns; four brigantines, carrying from eight to ſix guns; with ſeveral bomb-ketches, and forty gallies.

Sweden at preſent conſiſts of five great diviſions, or general provinces; Finland, Gothland, Sweden properly ſo called, Nordland, and Lapland.

SECT. IV.

Of Finland, its Situation, Extent, and Produce. A Deſcription of its ſeveral Provinces, and of the principal Places in each.

IN deſcribing the provinces of Sweden we ſhall begin with the eaſtermoſt part. Finland, called by the natives Suomi, is bounded on the eaſt by Ruſſia, on the ſouth by the gulph of Finland, on the weſt by the gulph of Bothnia, and on the north by a part of Swediſh Lapland. This country contains about eighteen thouſand ſquare Engliſh miles, and is naturally fertile; but it is far from being properly cultivated or ſufficiently peopled according to its extent.

The paſtures of Finland are in many places ſo rich, that the inhabitants obtain great profit by grazing; but the breed of cattle is here very ſmall. Here are conſiderable woods of pine-trees; ſo that vaſt quantities of timber, boards, and charcoal, are ſent from hence to Stockholm for exportation. It produces ſeveral ſorts of fruit, as pears, apples, plumbs, and cherries; and abounds with all ſorts of game.

Finland is every where watered with lakes, rivers, and brooks, which yield plenty of fiſh, and fine pearls are found in the pearl-fiſheries. Lead ore is found in ſeveral parts of this province, and in the lakes and moraſſes are dug up a ferruginous earth, from which iron is extracted. Finland is divided into five provinces, of each of which we ſhall give ſome account.

We ſhall begin with Finland Proper, which is ſituated at the angle where the gulphs of Bothnia and Finland join, and is about a hundred and ſeventy-four Engliſh miles in length, and a hundred and eight in breadth. The ſoil is very fertile, and the country yields very delightful proſpects, eſpecially in the ſouthern parts, where it is agreeably diverſified with lakes, rivers, corn-fields, paſtures, hop-grounds, woods, and ſome iron works; but the north part of Finland is not ſo well cultivated. The fief of Biorneborg is one of the moſt fertile parts in all Finland; and here is a rich pearl-fiſhery, where pearls of an extraordinary ſize are found, for the moſt part ſingle; but ſometimes a cluſter of two or three pearls are found in the ſame ſhell. The inhabitants of this country ſubſiſt by grazing, agriculture, fiſhing, and making of wooden-ware; and traffic in grain, meal, cotton, butter, talc, yarn ſtockings, and linen.

The principal places in Finland Proper are,

Abo, in Latin Aboa, is ſeated on the river Aurojocki, which runs through the city. It ſtands on the point of the angle formed by the gulph of Bothnia and Finland, has a commodious harbour, and is the moſt conſiderable ſtaple town in the whole country. It is ſituated in ſixty degrees forty minutes north latitude, and in twenty-one degrees twenty-eight minutes eaſt longitude, and is almoſt ſurrounded with hills. The cathedral, which was built in 1390, is a handſome ſtructure. King Guſtavus Adolphus founded a ſeminary here, which queen Chriſtina afterwards converted into an academy. A royal high court of judicature, which is the only one in Finland, is held at Abo, where the governor of the province alſo reſides. The chief magiſtrates are two burgo-maſters. The city carries on a briſk trade in corn, proviſions, linen, planks, &c. The Ruſſians, who were in poſſeſſion of this place from the year 1713 to 1720, committed great ravages here. It has alſo frequently ſuffered by fire. In the year 1743 a peace was concluded in this city between Sweden and Ruſſia. Abo caſtle is one of the moſt antient fortifications in Finland; it is ſeated on a peninſula at the mouth of the river Aura, and has been ſeveral times deſtroyed by the enemy, and conſumed by fire.

At

At the diſtance of nine Engliſh miles from Abo is Nadendahl, in Latin Vallis Gratiæ. A convent which occaſioned the building of this town, was ſequeſtered at the Reformation, the nuns, however, continued there till the year 1595, and ſet up a manufactory of knit ſtockings, which ſtill continues to flouriſh, and ſeveral hundred pairs of thread ſtockings are annually ſold at a very low rate, and ſent from hence to Stockholm and other places. Near the town is a fine medicinal ſpring.

Biorneborg is a ſea-port town, ſituated in the ſixty-ſecond degree of north latitude, on a narrow ſandy tract of ground on the bank of the river Kumo, which, juſt below the town, divides itſelf into ſeveral branches, forming many ſmall iſlands within the diſtance of three miles. Great quantities of wooden-ware and fiſh, particularly ſalmon and large whitings, are exported from hence to Stockholm and other places. The quay belonging to this town is at Sandud, which is at about ſix miles diſtance.

Between the iſland of Aland and Finland are many ſmall iſlands, ſhelves, and rocks, which render that part of the ſea very dangerous to mariners. Aland is ſituated in the ſixty-firſt degree five minutes north latitude; it is about thirty-ſix miles in length, and near as many in breadth. The ſoil is ſo fertile, that the inhabitants ſeldom experience any ſcarcity of corn. It alſo produces rich paſtures for grazing. The woods belong to the king, and are every where encloſed. In different parts of the iſland are quarries of lime-ſtone; and lynxes, foxes, and hares abound here; but bears are not very common. The inhabitants, who ſpeak the Swediſh dialect, chiefly ſubſiſt by agriculture, grazing, fiſhing, hunting, catching of ſea-fowl, and working in the woods. They alſo trade in butter, wooden-ware, coals, and lime; and ſome of them are good mariners. The clergy of this iſland are under the juriſdiction of the biſhop of Abo.

The next province of Finland we ſhall mention is that of Eaſt Bothnia, which lies farther north on the ſea-coaſt, and obtained its name from its being ſituated on the eaſt ſide of the gulph of Bothnia. Nature has ſeparated it from the adjacent countries by a chain of hills, which run along the eaſt ſide of it; and from theſe eminences iſſue ſeveral rivers. The country, eſpecially on the ſea-coaſt towards the ſouth, is for the moſt part level, but full of moraſſes. The induſtry of the inhabitants in agriculture is attended with good ſucceſs, ſo that they ſupply other places with corn; but their hopes of a good crop are ſometimes fruſtrated by an unexpected froſt. However, ſome large tracts of land lie uncultivated. Eaſt Bothnia abounds in woods, and with lakes and rivers that yield plenty of fiſh; and in ſome of the rivers are found pearls. The inhabitants ſubſiſt chiefly by agriculture, grazing, burning lime and tiles, and in making tar. Of the laſt they annually extract fifty thouſand barrels. They alſo employ themſelves in hunting and fiſhing, ſhip-building, and making of wooden-ware. The commodities exported from hence are beams, planks, tar, train oil, cattle, fiſh, and other proviſions.

All the pariſhes in this province amount only to nineteen inhabited by Fins, and nine by the Swedes. The number of the inhabitants is computed at eighty thouſand.

Eaſt Bothnia is divided into three parts, all under one governor; the principal places in which are,

Ulea, or Ulaborg, a ſea-port town, ſituated on a peninſula at the mouth of the river Ulea-Elf, in the ſixty-fifth degree twenty minutes latitude, and is the largeſt town in all Eaſt Bothnia. It has very ſtraight and long ſtreets, a good ſchool, a commodious harbour, and a fine ſalmon fiſhery. In the year 1714 it was demoliſhed by the Ruſſians. The caſtle which ſtands near it on a ſmall iſland, is ſaid to be at preſent in a ruinous condition.

Gamla-Carleby, in Latin Carolina-Antiqua, was built in the reign of Guſtavus Adolphus, in a fertile and pleaſant country, in the ſixty-fourth degree eight minutes north latitude. It has a commodious harbour, and the inhabitants not only carry on a conſiderable trade in tar, but make great advantages by ſhip-building. The adjacent country is famous for a particular kind of ſalt, which the peaſants boil from the ſea-water in ſpring and autumn. At firſt it is of a dirty grey colour; but upon pouring ſome ſour milk into the clarifying veſſel, it becomes as white as ſnow.

The province of Tavaſtland, in Latin Tavaſtia, lies in the middle of Finland, and is a hundred and eighty miles in length, and a hundred and twenty in breadth. The country, which is very fertile, conſiſts of fine plains, watered by a great number of lakes and rivers that abound with fiſh, and is diverſified with meadow and arable lands; and with reſpect to theſe natural advantages, it is ſcarce ſurpaſſed by any province in Sweden. It is alſo ſtored with cattle, and all ſorts of game: but it is far from being well cultivated, and conſequently the peaſants are generally poor. The inhabitants ſubſiſt by agriculture, grazing, and breeding of cattle, and ſome of them are employed in the fiſheries. They alſo trade in corn, peas, beans, butter, cattle, leather, dried fiſh, tallow, flax, hemp, lime, and the bark of trees.

One of the moſt remarkable places in this province is Croneburg, or Tavaſtehus, in Latin Croneburgum, a ſmall town built in 1650, on a pleaſant ſpot, and endowed with conſiderable privileges. This town, which is ſituated in the ſixty-firſt degree twenty-five minutes latitude, was taken by the Ruſſians in 1713, and in the laſt war between them and the Swedes it was laid in aſhes. The caſtle, which, excluſive of the town, is properly called Tavaſtehus, or Tavaſteburg, is well fortified, and ſerves for an arſenal and royal magazine.

The province of Nyland, in Latin Nylandia, lies in a bay of the gulf of Finland, and was formerly peopled by the Fins; but is now inhabited by the Swedes. It is near a hundred and twenty-eight miles in length, and in few places more than thirty in breadth. It is a level, fertile, and pleaſant country, better peopled and cultivated than the neighbouring provinces. It conſiſts of arable and excellent paſtures, woods, rivers and lakes that abound with fiſh, and is well ſtored with all ſorts of game. Here are alſo ſome ſawing-mills and iron-founderies. The inhabitants ſubſiſt by agriculture, grazing, and fiſhing, and trade in corn, planks, linen, and dried-fiſh.

The principal towns in this province are,

Helſingfors, in Latin Helſingoforſa, a ſtaple-town, and the beſt in the province, is ſeated on a peninſula, on the ſouth coaſt, and has a good harbour, not inferior to any in Sweden. This town was built by Guſtavus I. but in the late wars was laid in aſhes, and has not yet recovered its former flouriſhing ſtate. The governor of Nyland and Tavaſtland reſides in this town, and within theſe few years ſeveral forts have been built in its neighbourhood.

Borgo, in Latin Borga, an ancient ſea-port, with an indifferent harbour. This town was almoſt entirely demoliſhed in the late war; but is now in a very flouriſhing condition. It is a biſhop's ſee, and has a good ſeminary. The inhabitants trade in all kinds of linen.

Degerby, or Louiſa, is a well-built ſtaple-town on a creek of the gulf of Finland, and has a commodious harbour. It was built in 1745 as a frontier town towards the Ruſſian territories, according to the limits ſettled by the laſt treaty of peace, and was called Degerby from the nobleman's eſtate on which it ſtands; but in 1752 king Adolphus Frederic changed its name to that of Louiſa.

Beſides the above five provinces, Finland contains the country of Sawolax, which is two hundred and four miles in length, and a hundred and twenty-ſix in breadth, but produces very little corn or paſture, it moſtly conſiſting of woods, lakes, rivers, and moraſſes. The land is ſo unequally divided, and ſo thinly inhabited, that the grounds belonging to ſome farms, lie above ſixty miles from the houſe. The inhabitants, however, get a tolerable ſubſiſtence by ſowing buck-wheat, grazing, hunting, fiſhing and making wooden-ware. They alſo trade in tallow, butter, dried fiſh, hides, and furs. The country abounds in elks and rein-deer; but contains no towns worthy of notice.

SECT.

SECT. V.

Of Gothland in general; its great Diviſions; with a particular Account of them; and their ſeveral Provinces, Iſlands, and Towns.

GOTHLAND is bounded on the eaſt and ſouth by the Baltic; on the weſt by Norway, the Sound, and the German ocean; and on the north by Sweden Proper. It is a pleaſant and fertile country, conſiſting of fine plains and encloſures, and the greateſt part of the corn of the growth of Sweden is produced here. It alſo abounds in lakes and rivers, which yield great quantities of fiſh, and in extenſive foreſts and rich mines.

Gothland had anciently its own ſovereigns; but Suercher, king of the Oſtrogoths, being proclaimed king of the Swedes and Goths in 1132, both theſe kingdoms became united under one ſovereign. The arms of Gothland are azure, a lion rampant going over three ſtreams; by which the Goths probably intended to denote their warlike proweſs, and the ſucceſs of their arms in three countries of Europe.

The number of towns in Gothland amount to forty-eight, and it is divided into Eaſt Gothland, Weſt Gothland, and South Gothland.

Eaſt Gothland, in Latin Oſtro-Gothia, properly ſo called, includes Smaland, with the iſlands Oeland and Gothland. This country, which had formerly its particular kings and its own laws, is ninety-ſix miles in length, and ninety in breadth, and produces wheat, rye, barley, oats, and peas in ſuch plenty as to ſupply the neighbouring provinces. It has alſo many fine orchards, meadows, and paſtures, with lakes and rivers abounding with variety of fiſh, extenſive foreſts, ſome of which are of oak and birch, and valuable iron mines. The inhabitants are employed in agriculture, grazing, hunting, fiſhing, and in the mines and quarries. Along the banks of the lake of Wetter are found agate, cornelians, touch-ſtone, and rattle-ſtones. In the foreſt of Kalmarden are dug up fine marble, and a reddiſh violet-ſtone which emits a very fragrant ſmell. Antimony is found in mount Amberg, and beautiful petrifactions in ſeveral parts of the country.

There are twenty-three lakes in Eaſt Gothland, the moſt remarkable of which is the Wetter, which extends ninety miles in length, and fifteen in breadth, and contains two or three iſlands. It has but one outlet, which is by the river Motala, though above forty little ſtreams diſcharge themſelves into it. This lake is ſaid to lie above a hundred feet higher than either the Baltic or the North Sea, and is deep and clear, but very boiſterous in winter.

The rivers of Eaſt Gothland are the Motala, juſt mentioned, which receives ſeventeen rivulets, and paſſing through the whole country diſcharges itſelf into the Baltic; near Norkioping it precipitates its waters from a rock ſixteen fathoms high: the Stang, which divides the country into the eaſt and weſt parts, and diſcharges itſelf into the lake of Roxen: the Molby or Nibro, the Kareſbo, and the Skena.

Eaſt Gothland conſiſts of one dioceſe, which is that of Linkioping; the ſecond in Sweden as to precedence. It includes twenty-two provoſtſhips, and is divided into twenty-one diſtricts, which belong to the prefecture of Linkioping.

The principal place in Eaſt Gothland is Norkioping, in Latin Norcopia, a ſtaple-town ſituated on the river Motala. It is next to Stockholm in extent, and is eſteemed one of the beſt cities in the kingdom. It was deſtroyed by the Ruſſians, but has recovered itſelf, and contains five churches, has a new and commodious quay, and carries on a conſiderable trade. Here are paper mills, copper mills, a printing-houſe, and woollen manufactures.

The country of Smaland, or Smoland, is a hundred and twenty miles in length, and ſeventy-two in breadth, and was antiently governed by its own kings. It probably received the name of Smaland, or ſmall parcels of land, becauſe in antient times the country was ſo overrun with woods and barren waſtes, that the inhabitants could only cultivate a few ſpots here and there between them; and even to this day are ſeen large heaps of ſtones in the woods, which were thrown together by the firſt inhabitants, in order to clear the ground. Though Smaland is mountainous, thoſe parts which are cultivated are very fruitful, and it is particularly remarkable for its fine paſtures. Here are large foreſts of beech and other trees. A vein of gold has been diſcovered in this province, and there are alſo mines of ſilver, copper, and iron, and even a great quantity of the latter is found at the bottom of the lakes.

The high mountain of Hunſberg reſembles a cone, and may be ſeen at the diſtance of eight Swediſh miles. The inhabitants obtain a comfortable ſubſiſtence by agriculture, grazing, and the mines. They alſo deal in cattle, butter, cheeſe, fleſh, bacon, tallow, fiſh, hops, beans, planks, maſts, tar, pot-aſh, iron, and grain.

In this province are twenty-one lakes, which afford nothing remarkable, and ten rivers, the principal of which are the Emma, the Niſſa, the Laga, and the Helgea.

Smaland conſiſts of two dioceſes, that of Wexio, and that of Calmar, and contains three prefectures, which include twenty-four diſtricts, the moſt remarkable places in which are,

Calmar, in Latin Calmaria, is ſeated in the prefecture of the ſame name on the main ſea, oppoſite to the iſle of Oeland, in the fifty-ſixth degree forty minutes latitude, and in the ſixteenth degree four minutes eaſt longitude. It is a fine ſtaple city, and one of the oldeſt in Gothland: it is nearly of a circular form, and has fine regular ſtreets, in which are about five hundred houſes. It is ſurrounded on the land ſide by four walls and moats; but has only one wall towards the ſea. At the diſtance of a mile and a half from the town, ſtands the ſtrong fort of Grimſkiar, and towards the north is another fort on the iſland of Karinglaret. Calmar caſtle ſtands near the Sound, or ſtreight, oppoſite to the city; it has two ditches, and is ſo well fortified, that it has been generally conſidered as the ſtrongeſt and moſt important fortreſs on the frontiers. The prefect or governor reſides in the royal palace of Hoſmo, near the city; here are alſo a biſhop's palace, a fine cathedral, a commodious quay for ſhipping, and a ſeminary, and it has good manufactories of cloths and woollen ſtuffs. The Sound, which runs between the caſtle and the iſland of Oeland, is called Calmar-Sound, and is about ſix miles over. In this city the famous union of Calmar was concluded between the three northern kingdoms.

Jonkioping, in Latin Junecopia, is a very ancient ſtaple-town, in the prefecture of the ſame name, ſituated on a peninſula between the lakes of Wetter, Monk, and Rock. This town formerly ſtood in another place; but the inhabitants were removed hither in the reign of Guſtavus Adolphus. The ſuburbs on both ſides are ſeparated from the town by a canal that conveys water out of the lake of Lill into that of Rock. There are here three churches, an armoury, an elaboratory, and an arſenal belonging to the crown: fire-arms are alſo made here. The ſupreme court of juſtice for Gothland is held in this town, and ten provincial with forty-eight inferior courts are under its juriſdiction.

Wexio, in Latin Wexionia, is ſeated in the prefecture of Cronoberg, almoſt in the center of the province, and is the reſidence of the prefect or governor. In the year 1570, this town was reduced to aſhes by the Danes. A ſeminary was founded here in 1648; but the library and cathedral, which was above nine-hundred years old, and in which St. Siegfried, its founder, was interred, were deſtroyed by fire in 1740.

About twelve miles from this city is Browalla heath, famous for being the place where the Danes were totally defeated by the heroic Blenda, who commanded the Smaland women in the abſence of their huſbands, that were engaged in another expedition. As a recompence for their bravery, the women of Smaland were honoured with extraordinary privileges, and diſtinguiſhed by their wearing a kind of martial head-dreſs: they have even ſtill an equal ſhare with the men in inheritances.

The pleaſant iſland of Oeland, called in Latin Oelandia, lies in the Baltic, directly oppoſite to the Calmar-

Sound. It is eighty-four miles in length, and but nine broad in the wideſt place. It is divided into the north and ſouth parts: in the former are ſeveral fine foreſts, and many quarries of ſtone; but in the latter the ground being more level, is fit both for paſture and tillage. The iſland in general yields plenty of honey, wax, butter, and nuts. The Oeland horſes are ſmall, but ſtrong, and full of mettle. Here are alſo a multitude of deer of ſeveral kinds, as likewiſe hares and wild boars. The king's foreſt extends over the whole iſland. Both parts of Oeland abound in allum-mines, black marble, and free-ſtone, remarkable for its hardneſs. The inhabitants are ſaid to exceed ſeven thouſand perſons, who are employed in agriculture, working in the quarries, cutting ſtone, burning lime, fiſhing, and navigation.

In the north part of the iſland is Borgholm, a ſtately royal ſeat well fortified, though it has been ſeveral times taken by the Danes; but the Swedes have always inſiſted on its being given up to them by treaties. Near it is the commodious habour of Borga.

In the province of Eaſt Gothland is alſo the iſland of Gothland, or Gottland, in Latin Gottlandia, which is ſituated in the Baltic, and is about a hundred and eight miles in length, though but from thirty to thirty-ſix in breadth. From its convenient ſituation it acquired the name of the Eye of the Baltic. It was formerly governed by its own kings, and had its peculiar laws and privileges; but is at preſent ſubject to the ſupreme court of juſtice at Stockholm. It is ſaid to have obtained its name from its having been the winter-quarters of the Goths, when they put to ſea on naval expeditions.

As the ſoil is fertile, it has good paſtures, fine woods of oaks and pines, as well as profitable fiſheries. It has large quarries of ſtone of different kinds fit for building. Here are alſo ſeveral curious ſpecies of ſtone, corals, cornelians, agates, and beautiful petrifactions.

The inhabitants ſubſiſt by agriculture, grazing, fiſhing, burning lime, working in the quarries, navigation, and ſeveral ſorts of mechanic trades. The peaſants ſell none of their commodities to the inhabitants of the towns; but when one of them, ſays Dr. Buſching, comes to market, the burgher to whom he applies, furniſhes him with all neceſſaries, and gives him money to enable him to pay his taxes; while the peaſant, on the other hand, delivers up to the burgher all the produce of his induſtry, without mentioning a word about the price, both parties proceeding according to the dictates of natural juſtice and equity.

This iſland is divided into three parts, namely, the North, Middle, and South part; the firſt of which contains ſeven, the ſecond ſix, and the third ſeven diſtricts; but the only town worthy of notice is

Wiſby, a very ancient ſtaple city, which in former times was one of the Hanſe-towns, and was frequently viſited by the Swedes, Goths, Danes, Normans, French, Engliſh, Saxons, Livonians, Spaniards, Ruſſians, Greeks, and other nations. In times of popery there were three churches and five convents within the city, beſides two within the walls. The maritime laws of Wiſby were famous in all parts, and adopted along the coaſt of the Baltic. Wiſby is the reſidence of the ſuperintendant and prefect; it has a church and ſchool; its harbour is ſafe and commodious, and the town is in a pretty flouriſhing condition.

We now come to Weſt Gothland, which contains four provinces, Weſt Gothland properly ſo called, Warmeland, Daland, or the Vale Country, and Bohus-Lehn.

Weſt Gothland properly ſo called, lies below the lake of Wener, and is a hundred and twenty miles in length, and ninety-ſix in breadth. It was antiently governed by its own kings, and had its particular laws and privileges. The paſtures are ſo rich, that the inhabitants are able to ſupply other parts with butter and cheeſe; the laſt of which is much admired. The country alſo produces corn, fruit-trees, and vegetables; and here likewiſe are iron and allum works.

The lake of Wener, or Vener, is eighty-four miles in length, and forty-two in breadth; it ebbs and flows in a very extraordinary manner, is ſtored with great plenty of fiſh, and has ſeveral iſlands. Twenty-four rivers diſcharge themſelves into it, yet none flows out of it, but the large river called Gotha-Elbe.

The Gotha-Elbe, or Gothic river, diſcharges itſelf into the North Sea near Gottenburg. About forty-five miles from its mouth is the remarkable cataract of Trolhatta, where the water is precipitated between two rocks; it conſiſts of three caſcades, each of them about five fathoms high, and about three hundred fathoms from each other. At the diſtance of three miles from this cataract is a bridge, built from one rock to another, over another high cataract formed by this river, at the bottom of which great number of ſalmon are caught; and twelve miles lower down is another water-fall, where the boats and other veſſels paſs through three ſluices.

The other rivers in Weſt Gothland are the Halle and the Gullſpang, which laſt divides Eaſt Gothland from Warmeland.

Weſt Gothland is divided into two dioceſes, that of Skara, and that of Gottenburg. The former is the third in rank, and includes fifteen provoſtſhips; the latter is the tenth in rank, and contains nine provoſtſhips. The moſt conſiderable town in Weſt Gothland Proper is,

Gottenburg, in Latin Gothoburgum, a ſtaple-town, firſt built in 1607 by Charles IX. on the iſland of Hiſingen; but being deſtroyed by the Danes in 1611, the inhabitants, about ſeven years after, removed to the place where the town now ſtands, and were favoured with ſeveral conſiderable privileges. Gottenburg carries on the greateſt trade of any city in Sweden, except Stockholm. It is ſituated on the borders of Weſt Gothland, at the mouth of the river Moludal, which runs cloſe by the north ſide of the city, and is conveyed through it by ſeveral canals. The ſtreets are broad and kept very clean, and ſince the year 1746 the greateſt part of the houſes have been rebuilt with ſtone. It is regularly fortified, and on the land-ſide is defended by two citadels, called the Lion and the Crown; and towards the ſea by the citadel of New Elſsburg. The governor of the prefectures of Gottenburg and Bohus, who is alſo commandant of the forts and fortifications, reſides in the city. Gottenburg is a biſhop's ſee, and has two printing-houſes, a city church, a ſeminary, an orphan-houſe, an edifice called the crown-houſe, where the garriſon attend divine ſervice, a German church, and ſeveral quays and docks. The number of inhabitants is ſaid to amount to thirteen thouſand. In 1731 an Eaſt India company was eſtabliſhed in this city, for the harbour is a very fine one, and is reſorted to by a great number of ſhips: there is here alſo a college of admiralty and a court of appeals. It is ſituated in fifty-eight degrees twenty-nine minutes north latitude, and in eleven degrees thirty-ſix minutes eaſt longitude.

The province of Warmeland forms a ſemicircle round the north part of the lake of Wener, and is about two hundred and ten miles in length, and a hundred and fourteen in breadth. It is ſaid to derive its name from the Gothic word Wara, which ſignifies to defend; the inhabitants of this country having bravely defended it from the incurſions of their enemies.

Warmeland is very mountainous; but the ſouth and eaſt parts are moſt level and fertile; yet the woods and mines of ſilver, lead, copper, and iron, with the forgeries and founderies on the weſt and north, furniſh a great variety of employments for the inhabitants. In the year 1726 ſome pure ſilver was found in an iron mine near Philipſtadt, and the memory of this extraordinary circumſtance has been preſerved by ſome medals being ſtruck on the occaſion.

One of the principal towns in this province is Carlſtadt, an inland town, built by duke Charles on the iſland of Tingwalla, where the Clara falls into the lake of Wener. It ſtands on a commodious ſituation, has about eight hundred inhabitants, a ſuperintendant, a ſchool founded by king Charles XI. a woollen manufacture, a good metal weigh-houſe, from which great quantities of iron and copper are exported, and the town carries on a conſiderable trade.

Daland, or Thalland, or the vale country of Weſt Gothland, derives its name from the great number of vallies it contains. It lies between the lake of Wener and

and Bohus-Lehn, and is ſixty miles in length, and thirty-five in breadth. The greateſt part of the province is covered with rocks and mountains; but the plains and valleys that lie between them are ſo fruitful, as to ſupply the country with plenty of grain. The inhabitants chiefly ſubſiſt by grazing, breeding of ſheep, agriculture, fiſhing, and working in the mines. They alſo carry on a conſiderable trade in maſts, deal-planks, tar, horſes, oxen, ſheep, bacon, butter, and cheeſe. The principal town in this province is,

Amal, which is ſituated on the lake of Wener, and divides the town and market-place into two parts. This town has a metal weigh-houſe, and carries on a conſiderable trade, particularly in timber, deals, and tar.

The government of Bohus-Lehn is bounded on one ſide by the North Sea, and on the other by the vale country of Weſt Gothland, extending a hundred and twenty-ſix miles in length, and betweeen eighteen and twenty four in breadth. The country is in general level, and the ſoil, which is fertile, conſiſts of fine meadows and arable land, diverſified with woods, lakes, and rivers; but there are ſome mountains in which are large cavities that reſemble ſpacious apartments, and are called the caves of the giants. There is alſo a high mountain, which chiefly conſiſts of a kind of ſhells that are dug up and calcined for making lime. The inhabitants are chiefly employed in agriculture, grazing, and fiſhing. They alſo carry on a trade in maſts, planks, deals, tar, cattle, hides, tallow, lime, and all kinds of fiſh. This country is in the dioceſe of Gottenburg.

We now come to South Gothland, which conſiſts of the three provinces Schonen, Halland, and Blekingen.

The province of Schonen was in antient times governed by its own kings, and had its particular laws. If meaſured according to the roads, it is eighty-four miles in length, and about ſixty-ſix in breadth. It is the moſt level, pleaſant, and fertile ſpot in all Sweden, and produces plenty of rye, barley, oats, buck-wheat, peaſe, cummin-ſeed, and honey; alſo pit-coal, chalk, tiles, and pot-aſh, of which ten thouſand tons are annually exported from hence. The inhabitants likewiſe carry on a conſiderable trade in mill-ſtones, oak, timber, cordage, fiſh of ſeveral kinds, fine horſes, ſheep, and horned cattle. All the animals are larger in Schonen than in the northern parts of Sweden; but are leſs vigorous. Allum, ſulphur, and amber, are alſo found here. This country, with regard to its many advantages, may be called the ſtore-houſe and granary of Sweden. It contains more well-built towns, and finer ſeats belonging to the noblemen, than any other province in Sweden. The number of its inhabitants are computed at above ſix hundred thouſand perſons.

The principal places in this province are,

Lunden, in Latin Lunda Gothorum, a very antient city, an archbiſhop's ſee, and formerly the place where the kings of this country reſided. It is ſaid to have contained in the times of popery twenty-three churches, and at leaſt as many convents. Its cathedral, which is dedicated to St. Lawrence, is an antient ſtately building, and has a ſuperb altar, and a pulpit of alabaſter and black marble. Authors have mentioned, as the greateſt curioſity in this church, a very curious clock, which not only ſhews the hour, day, month, and year, together with all the feſtivals; but every hour two horſemen come forth, and encounter each other, giving the ſame number of blows that the hammer ſtrikes upon the bell: then a door opening diſcovers the Virgin Mary ſitting on a throne, with the infant Jeſus in her arms, and the wiſemen paying their homage to him, two trumpeters ſounding all the while. Within this cathedral is a fine well, with which all the other wells in the city have a communication. The city has an univerſity founded by Charles XI. whence it is ſtiled Academia Carolina Gothorum: it has ſince received the addition of a very elegant anatomical theatre; and has alſo a phyſic-garden. The biſhop of the ſee is vice-chancellor of the univerſity. The inhabitants of the city are chiefly employed in agriculture. In its neighbourhood are ſeveral good tobacco plantations, which nearly produce a hundred and ſixty thouſand pounds weight annually. Above twenty thouſand mulberry-trees have alſo been lately planted in the neighbourhood of this city. In 1679 king Charles XI. entirely defeated the Danes near this place, and in 1679 a peace was concluded here between the two kingdoms. It ſtands in latitude fifty-five degrees forty-one minutes ſix ſeconds.

Chriſtianſtadt is ſituated on the river Helgea, by which it is encompaſſed on three ſides, in the latitude of fifty-ſix degrees one minute twenty ſeconds. This town was originally built in 1614 by Chriſtian IV. king of Denmark, from whom it received its name. It has a handſome church, a good ſchool, and a ſtrong bridge, on which ſeveral warehouſes are built. It has manufactures of ſilk, woollen, and linen cloth, and carries on a conſiderable trade. It is fortified with walls and hornworks; but the caſtle, which ſtands near the church, has nothing worthy of notice. In 1676 the Danes made themſelves maſters of this town, but the very next year Charles XI. retook it ſword in hand.

Ween, in Latin Hevona, is a fertile iſland in the Sound, about eight thouſand one hundred and ſixty paces in circumference, and at a diſtance appears like a high mountain. By the treaty of Roſchild, in 1658, it was annexed to the crown of Sweden. This iſland was rendered famous by its being granted to the celebrated aſtronomer Tycho Brahe, together with a fief in Norway, and ſome other lands by Frederic II. king of Denmark, who cauſed an elegant ſeat to be built for him at a very conſiderable expence. This ſtructure, which is called Uranienburg, is ſixty feet ſquare, and ſeventy feet high. It has two towers deſigned for obſervatories, and two others which are not ſo high, but yield an extenſive proſpect, and it has alſo a delightful garden. However, the malice of Tycho's enemies deprived him of theſe enjoyments; he was obliged to leave Uranienburg in 1597, and died in Germany in 1601. His celeſtial globe, which was ſix feet in diameter, and is ſaid to have coſt him five thouſand dollars, was carried from hence to Benadky, in Bohemia, and ſoon after it was removed to Prague, from whence it was conveyed to Neiſſe, in Sileſia; but that town being taken in 1632, this curious machine was removed to Copenhagen, and depoſited in the round tower, where it was entirely deſtroyed in 1728 by the dreadful fire which laid great part of that flouriſhing city in aſhes. All the other valuable mathematical inſtruments and curious machines belonging to that celebrated aſtronomer have likewiſe been gradually loſt, and his favourite Uranienburg now lies in ruins. In the whole iſland is but one village, which conſiſts of fifty or ſixty houſes, and a church.

The province of Halland, which ſignifies high land, was thus called either from its lying higher up the country than Schonen, or from its high mountains. It is ninety-ſix miles in length, and about twenty-four in breadth. The produce of the arable land is not ſufficient for the ſupport of the inhabitants, but they have great plenty of fiſh, particularly ſalmon, which is eſteemed the beſt in all Sweden. The inhabitants have alſo ſome pearl-fiſheries, and an advantageous trade in cattle. The few inhabitants chiefly ſubſiſt by grazing and fiſhing; they alſo ſpin, weave, and make a kind of knit garments.

One of the moſt conſiderable towns in this province is Helmſtadt, which is a pleaſant well-built ſtaple town, ſituated at the mouth of the river Niſſa. The fortifications erected here by Chriſtian VI. king of Denmark, have been razed, but the governor of the province reſides in the caſtle. The linen and woollen manufactures eſtabliſhed here are in a flouriſhing condition, and the ſalmon-fiſhery near the town is very famous.

The laſt province which remains to be mentioned in South Gothland is that of Blekingen, which lies to the eaſt of Schonen, and extends about ninety miles in length, and twenty-four in breadth. It is a mountainous country, and exceeds in pleaſantneſs moſt of the provinces of Sweden; but is computed to contain only about a thouſand and eighty-nine families. The inhabitants have a conſiderable trade in beams, maſts, deal-boards, hides, tallow, pot-aſh, and tar: the beſt cheeſe in Sweden is made here, and grazing turns to a very good account.

The

The principal islands belonging to this province amount to about a hundred and thirty, and it contains twenty-nine parishes. The principal town in the province is,

Carlscron, or Carlscroon, in Latin Caroli Corona, a handsome staple town situated on the Baltic, in the latitude of fifty-six degrees twenty minutes, and longitude fifteen degrees two minutes east from London. It was built by Charles XI. who called it after his own name, and is esteemed next to Stockholm, the best town in the kingdom. A part of it is built on the small island of Biorkholm, where is the marine hospital; part on that of Stubholm, on which the arsenal is erected; and part on the mole, where the fleet is usually laid up. The large and small islands near the town, with the woods of oak, beech, and birch, render its situation extremely pleasant. Here are three churches; these are one Swedish, called the town-church, one which belongs to the Germans, and one belonging to the admiralty. The harbour is so commodious, that the whole royal navy may ride in it in safety, and its mouth is defended by two forts, in which there is a handsome parish church, and a German church. The dock-yard is remarkable for being dug out of a mountain to the depth of eighty feet. Its length is from three hundred to three hundred and fifty feet at the place where the king's fleet lies. This excellent dock, though prosecuted with all possible vigour, employed the engineers from the year 1715 to 1724, before it was compleated. Its entrance, which has a sufficient depth of water to set the largest wen of war on float, is closed by two flood-gates, and the bason may be emptied in twenty-four hours; so that the dock becomes quite dry for repairing and careening the ships, after which the water is readmitted by means of two sluices, in order to carry them out of the bason. The inhabitants are supposed to amount to about five thousand.

SECT. VI.

Of SWEDEN PROPER.

Its Situation, Extent, Divisions, Produce, and the principal Places in each; with a more particular Account of Stockholm, the Capital of the whole Kingdom.

SWEDEN properly so called, is bounded on the north by Nordland, on the east by the sea, on the south by Gothland, and on the west by Warmeland and Norway. This country was antiently sometimes a distinct kingdom, and at others united to that of Gothland, as it has been ever since the year 1132. Of all the Swedish dominions this has the greatest number of mines, forges, and hammer-mills. It is divided into the five following provinces: Upland, Sudermanland, Nericia, Westmanland, and Dahl, or the Vale Country. These had all their respective kings, and were governed by their own laws, Nericia only excepted, which had no peculiar laws of its own. This country contains twenty-five cities and towns.

In describing these several provinces, we shall begin with Upland, called in Latin Uplandia. This country received its name from the superiority of the antient kings, who resided at Upsal, to the vassal kings and governors who were their tributaries. This province extends about a hundred and eight miles in length, and ninety in breadth. It is for the most part a level fertile country, that produces wheat, rye, barley, and oats, in such plenty, that the inhabitants sell considerable quantities to their neighbours. But in some parts of Upland there are neither woods nor pastures.

Among the mountains of this province, some are remarkable for having spacious caverns that resemble large regular apartments.

In Swedeland Proper are twelve rivers, and a still greater number of lakes. The principal of the latter is the lake of Maler, which is situated between Upland, Sudermanland, and Westmanland. It is seventy-two miles in length, yields great plenty of fish, and is said to contain twelve hundred and ninety islands. It has a communication with the sea through the mouths of the north and south rivers, which enter it near Stockholm, and its banks are beautifully diversified with towns, castles, churches, noblemen's seats, and other edifices. In this province are the best iron mines in the kingdom; and there are several wealthy persons who are owners of mines and hammer-mills. The chief employment of the inhabitants is in agriculture, and a number of persons are also maintained by the fisheries.

The most remarkable places in Sweden Proper are the following:

Stockholm, called in Latin Holmia, is a staple city, the capital of the whole kingdom, and the residence of the king, is situated in the fifty-ninth degree twenty minutes of north latitude, and in nineteen degrees thirty minutes east longitude, at the junction of the Baltic and the lake of Maler, and therefore has the convenience both of salt and fresh water. Its circuit, computed from one gate to the other, is twelve miles, and it stands partly on islands and partly on peninsulas. Most of the streets are broad and kept very clean, and the market-places are spacious. In what is properly called the city there are above five thousand houses, most of which stand on piles, though they are entirely built of stone, and are four or five stories high: some of them are covered with copper or iron plates, and others with tiles. Besides these, there are a great number of timber houses in the suburbs, and twenty churches in all.

On the island of Stockholm, which contains what is properly called the city, is the new palace, which is a very magnificent structure, the senate-house, the town-house, St. Nicholas's church, St. Gertrude's or the German church, near which stands a grammar-school, the great market, the bank, the corn quay, and the house of the marine fraternity.

The senate-house just mentioned is a very superb structure, and one of the finest edifices in the kingdom: it is, as it were, one large pavilion, adorned on the outside with columns and marble statues, and within with pictures and sculptures, especially two large halls, where the nobility assemble.

Among the churches that of St. Nicholas is both the largest and most magnificent, it being supported by marble pillars, and covered with copper. It is also adorned with a great number of tombs of different kinds of marble. The statue of St. George on horseback trampling on a dragon is much admired. This is the fabulous history of his delivering Cleodolinda, the daughter of the king of Lydia, and twelve other devoted virgins from the fury of the dragon; and that princess is seen kneeling with her hands lifted up, returning thanks to their preserver. Over the altar is a cabinet finely gilt, on which is a table of a pyramidal form, with shelves of massy silver, on which are the following histories in basso relievo: on the first is the nativity of Christ; on the second his last supper; on the third his crucifixion; on the fourth his burial; and on the fifth his resurrection. These are all of silver, and on the top is a statue of the same metal about two feet high, representing the Ascension. There are other silver statues about the altar of the same height; as that of Moses, with the two tables of the law; John the Baptist, with a cross and lamb; and the evangelists, with the animals usually assigned them by painters and statuaries; all of them of silver, weighing together about thirty thousand ounces. This is the account given by several authors; but it is probable that the necessities of the state have caused this silver to be applied to a very different purpose. On the right side of the altar is a large picture of heaven and hell, which reaches from the roof to the pavement, and on the left side of the altar is painted the crucifixion. This church is very rich in plate, and, according to Mr. Motraye, is worth no less than forty thousand crowns. The other churches are little remarkable, only they are generally covered with copper, have very lofty spires, and instead of bells have very musical chimes in their steeples, which play upon festivals and other solemn occasions.

The other islands on which the city stands are, the Ritterholm, which lies on the west side of the city, with which it has a communication by means of a bridge. On this island stood the old royal palace, which was burnt in 1697, and St. Francis's church, in which are interred many of their kings and queens.

Helgandsholm,

Helgandſholm, or the iſland of the Holy Ghoſt, which lies in the north channel between the city and the north ſuburb, and contains, among other buildings, the king's ſtables.

Schiffiſholm, which lies to the eaſt of the city, and contains the dock-yard and the admiralty.

Konigſholm, on which ſtands the Ulrica Eleanora church.

Ladugardſland, which is conſidered as a ſuburb, and contains Hedwick's church, a market-place, an orchard belonging to the king, an orphan-houſe founded by the free maſons in the year 1750, alſo two large ſuburbs. On the eaſt ſide of this iſland is a royal palace named Fredericſhof, built in 1732 by Frederic I. and near it is a park and an orangery, which is much admired.

The north ſuburb is ſeparated from the city by what is called the north ſtream or channel, and lies in Upland, containing four churches, another orphan-houſe, the arſenal, and three market-places.

The ſouth ſuburb is ſeparated from the city by a canal dug in the year 1008, and lies in Suderland. In this ſuburb are three churches, one of which belongs to the Dutch Calviniſts, and alſo a Ruſſian chapel, with the Sudermaler market, in which is the town-houſe, the new market, a large hoſpital, and a fine iron weigh-houſe.

All theſe parts of Stockholm are joined together by bridges. The city on one ſide affords a proſpect over the lake, and on the other over the harbour, which, being almoſt encloſed by rocks, reſembles another lake; its water is ſo little brackiſh that it may be drank, which is owing to the great quantity of freſh water that runs into it from the lake.

We have obſerved that the houſes in theſe ſuburbs are chiefly built with wood, and it is ſaid the inhabitants ſometimes ſend the dimenſions of the houſe they intend to build to Finland, where the walls and ſeveral ſeparations are formed of pieces of timber laid one upon the other, and joined at the corners, and afterwards marked, taken down, and ſent by water to Stockholm, there to be ſet up and finiſhed.

The number of inhabitants who pay taxes in this metropolis is computed at ſixty thouſand.

The government of the city is lodged jointly in the magiſtracy and the governor, who preſides in the royal chancery, and the city council-chamber. There are beſides four burgomaſters. The magiſtracy is divided into four particular offices: thoſe of juſtice, the police, trade, and manufactures; and likewiſe into three courts of judicature. Here is alſo held the royal high court of Sweden eſtabliſhed in 1614, for Sweden properly ſo called. In this city are likewiſe a college of phyſicians, a royal academy of ſciences inſtituted in 1739, a royal academy for military architecture, and another for land-ſurveying, a chemical and mechanical elaboratory, an academy of painting and ſculpture, and a royal library.

There are beſides in this capital a board of admiralty, a navy-office, a cuſtom-houſe, an office of the revenues, a national bank, an inſurance-office, an edifice where goods manufactured in the kingdom are examined, and diſputes between manufacturers decided, a large iron weigh-houſe, commodious docks, in which many ſhips are built for foreigners, with manufactories of porcelain, glaſs, ſilk, woollen cloth, canvas, cotton, and parchment.

The foreign and domeſtic trade of Stockholm may be ſuppoſed to be very conſiderable, as it has an excellent harbour; but the many rocks at its mouth render its entrance ſomewhat difficult.

About a mile to the weſt of Stockholm is Carlberg, a fine royal pleaſure-houſe, with a garden laid out in a moſt elegant taſte, and adorned with ſome beautiful ſtatues.

Three miles to the north of Stockholm is Ulricſdal, another royal ſeat, which has a fine park and garden, remarkable for the elegance of its curious grotto.

On the iſland of Lofon, which lies about a Swediſh mile to the weſt of Stockholm, is Drotningholm, the fineſt of all the king of Sweden's palaces: it was founded by Hedwig Eleanora, conſort of prince Charles Guſtavus, the former palace being conſumed by fire. Facing the ſouth front of this noble ſtructure is a pleaſant garden adorned with a variety of fountains, and the eaſt and north ſides exhibit a view of the ſhips at ſea.

At the diſtance of about twelve miles from Stockholm, juſt at the entrance of the channel into the lake, is Waxholm, a ſtrong citadel, built on a ſmall iſland, in the year 1649. It has been ſince greatly improved and enlarged, ſo that it reſembles a little town. On this iſland, which is called Waxon, are alſo a church, a ſchool, and a cuſtom-houſe, and here all homeward-bound ſhips are ſearched. The chief employment of the inhabitants is fiſhing.

The next place we ſhall mention is Upſal, in Latin Upſalia, a very antient and pretty large city, ſeated on the river Fyris, which divides it into two parts, that on the eaſt ſide of the river being properly the city, and that on the weſt called Fierding. Upſal was antiently the chief ſeat of the ſovereigns of Sweden, where they held their ſupreme tribunal. During the times of Paganiſm the greateſt ſacrifices offered by all the northern provinces were brought hither, and the moſt eminent heathen prieſts reſided in the city. It is ſituated in latitude ſixty degrees ten minutes, and in the ſeventeenth degree fifty-ſix minutes eaſt longitude from London.

All the buildings of Upſal are of wood, except the cathedral and a few ſtone houſes, and the roofs are frequently compoſed only of the bark of birch trees covered with turf. Here are three churches, the principal of which is the cathedral, which was built in the thirteenth century, but was not conſecrated till the year 1435. The architect, being a native of Paris, took the church of Notre Dame in that city for his model. This cathedral has been five times deſtroyed by fire, the laſt time was in 1702; however, it has been ſince rebuilt in an elegant manner. The royal palace was conſumed in 1702. Here the kings of Sweden are generally crowned.

Here is an univerſity, called Academia Guſtaviana, which is three ſtories high, and was built by Guſtavus Adolphus in 1622. It has a round dome at the top, in which is a curious anatomical theatre; it has alſo a very valuable library, which contains near a thouſand manuſcripts. The muſeum, or cabinet of curioſities, is ſaid to be worth a thouſand Swediſh dollars, at one ſhilling and nine-pence each: it has an aſtronomical obſervatory planned by the celebrated Celſius, and a phyſic-garden chiefly laid out by the famous Linnæus. A royal academy of ſciences was inſtituted here in the year 1728. The archbiſhop of Upſal, who is the only one in the kingdom, is vice-chancellor of the univerſity. The Swediſh geographers place their firſt meridian, from which they compute the longitude, at Upſal.

Sudermanland, the ſecond diviſion of Sweden Proper, is a hundred and fifty miles in length, and ſeventy-two in breadth, and appears to have been one of the firſt that was inhabited and cultivated in this kingdom. The ſoil is fertile, and no labour is ſpared for its improvement; it abounds in fine arable land, paſtures, woods, iron mines, and forges. Its lakes are well ſtocked with fiſh, and its advantageous ſituation, between the ſea and the lake of Maler, is the cauſe of its carrying on a conſiderable trade. This country has ſeveral other lakes beſides that juſt mentioned, particularly the Kielmar, which is forty-two miles long, and has a communication with the lake of Maler by means of a canal and the river Arboya. Among the principal lakes is alſo that of Bawen, in which are a hundred iſlands.

The inhabitants chiefly ſubſiſt by agriculture, fiſhing, hunting, and working in the mines; and carry on a conſiderable trade in corn, iron, and wooden-ware. From the pleaſantneſs and fertility of this country the queen-dowager uſed to have her dowry, and the dukes their dutchies in this province.

The principal city in Sudermanland is Nikioping, which ſignifies a new mart, and is called in Latin Nicopia. It is a well-built ſtaple town, and the capital of the province. It is one of the moſt antient cities of Sweden, and was formerly the reſidence of the kings and princes of Sudermanland. The air is ſo temperate and ſalubrious, that when a contagious diſeaſe prevails in Sweden, the royal family and the public offices have frequently removed from Stockholm to this place. The

city is divided into nearly two equal parts by a large river, over which a ſtone bridge was built in the year 1728, that is ſcarcely to be equalled in the whole kingdom. Here was formerly a very antient caſtle famous in hiſtory; but it was demoliſhed in 1665: in this ſtructure the kings of Sudermanland reſided, and it was ſo ſtrongly fortified, that it was thought to be little inferior to thoſe of Stockholm and Calmar. The ſtreets of the city are all well laid out, and the High Street planted with Dutch limes. It has two handſome churches, with the palace of the governor of the province, who reſides there; and without the town is a royal incloſure. It has a commodious harbour, and the inhabitants, who amount to about twelve hundred, have ſeveral manufactures of cloth, and what is called Morocco leather: they ſpeak the Swediſh language in the greateſt purity, and carry on a conſiderable trade by ſea. Its chief magiſtrates are two burgomaſters. Nikioping was almoſt conſumed by fire in 1661, and ſuffered extremely by the ravages of the Ruſſians in 1719.

The province of Nericia, called by the Swedés Nerike, is ſixty miles in length, and forty-ſix in breadth. The ſoil is in moſt parts fertile, and produces corn and paſturage. The country has alſo quarries of loadſtone, limeſtone, and allum; with mines of iron and ſulphur. Here are large woods, ſeveral high mountains, ſeven conſiderable rivers, and twenty-three lakes, which abound with fiſh.

Nericia is famous for its flouriſhing manufactures of all kinds of hard-ware, and in particular has always been remarkable for forging arms, &c. The chief employments of the inhabitants are agriculture, working in the mines and forges, hunting, and fiſhing; and they trade in grain and all kinds of iron-wares.

The principal place in this province is Orebro, an antient town ſituated at the junction of the river Schwart with the lake of Hielmar, in fifty-nine degrees twenty-five minutes north latitude. It is a long narrow town, with a caſtle encompaſſed by water; and, as it has been frequently beſieged, king Guſtavus I. cauſed it to be well fortified, and the fortifications have been ſince improved. It has at preſent two churches, a grammar-ſchool, and a manufacture of fire-arms. Its harbour on the lake of Hielmar has a communication with the Maler, by means of the river and canal of Arboga, and conſequently there is a paſſage by water from hence to Stockholm. The inhabitants carry on a conſiderable trade, and have the reputation of uſing great exactneſs in their weights and meaſures.

The ſulphur work of Axberg lies about ſeven miles from Orebro. Of the ore dug up here, our author ſays, is firſt made ſulphur, afterwards vitriol, and laſtly a red colour for painting.

We now come to the province of Weſtmanland, in Latin Veſtmania, which is a hundred and two miles in length, and ſixty-four miles in breadth. The ſoil is fertile, and principally conſiſts of arable land, with meadows, paſtures, and ſome fine woods. It alſo contains ſilver, copper, and iron mines: it has many curious copper, ſteel, and braſs hammer-mills; and, indeed, is the moſt famous province in the kingdom for mines, the quantity of iron annually exported from hence amounting to a hundred and twenty thouſand pounds. The ſouth part of the province ſupplies the inhabitants of the mine diſtricts in the north with corn.

This province is well watered both by rivers and lakes, which yield vaſt plenty of fiſh; and the lake of Maler is of very great advantage to its commerce, as it affords a communication between this diſtrict and Stockholm.

The following are the moſt remarkable towns in this province:

Weſterahs, in Latin Aroſia, an antient inland town ſituated on the banks of the river Schwart, which, after running through it, diſcharges itſelf into the Maler. It is an epiſcopal ſee, and has a caſtle, part of which is made uſe of as a granary, a ſeminary, a weigh-houſe for metals, from whence a vaſt quantity of copper, braſs, and iron is annually exported to Stockholm, and is the reſidence of the governor of the province. The cathedral, which is a ſpacious and magnificent ſtructure, is particularly remarkable for the architecture of its tower, and for being the burial-place of king Eric XIV.

Sala, or Salberg, a handſome large mine town ſituated on the river Sag, in the ſixtieth degree ten minutes north latitude, and in the ſeventeenth degree five minutes weſt longitude. It was built by king Guſtavus Adolphus in 1624, who endowed it with ſeveral privileges. The ſtreets are ſtraight and well paved, and the market-place regular and ſpacious. Here is held a mine court, a court of works, and town council, and an inferior court of judicature. To this town belong ſeveral conſiderable eſtates, and the neighbouring villages ſupply the inhabitants with all kinds of commodities at a very cheap rate; no cuſtom or duty being paid here.

Near the town is a very large antient ſilver mine, which uſed annually to produce twenty-four thouſand Lothige marks of ſilver, each of theſe marks equal to nine ounces twelve pennyweights troy, but it is now greatly declined. In 1710 the royal family choſe this town for the place of their retreat during a raging peſtilence, and in 1736 it was deſtroyed by fire.

We now come to Dalecarlia, alſo called Swediſh Thal-Land, from its many valleys. This province is two hundred and forty miles in length, and a hundred and fifty-ſix in breadth: it is very mountainous, and has little arable land; but where the ſoil between the mountains allows of tillage, it yields plenty of oats and peaſe, of which the inhabitants make bread. It is indeed every where diverſified with mountains, valleys, woods, heaths, lakes, and rivers; and abounds in mines of ſilver, copper, and iron; with quarries of ſlate and mill-ſtones, and the paſtures are proper for grazing, which turns to good account.

The inhabitants, who are called Dalecarlians, are celebrated for their integrity and firm attachment to their king and country, and particularly for their bravery. They are proof againſt toil, hardſhips, and want; and have thoroughly learned the advantage of induſtry and œconomy, by being able to ſubſiſt by their labour in ſuch a barren mountainous country. In many pariſhes there is ſcarce a man who is not ſkilled in all neceſſary handicraft trades; and when they are in other parts of the kingdom, they hire themſelves as labourers, maſons, carpenters, and the like. They trade in the bark of birch trees, hops, ſlate, lime, wooden-ware, ſcythes, hatchets, and other iron utenſils. In the north part of this province they ſpeak a particular language that has a great affinity with the Gothic dialect; and they ſtill retain the manner of living, dreſs, and cuſtoms of the antient Swedes. The Runic calendar is ſtill in uſe among them, which they carry about them as a perpetual almanac.

The principal towns in this province are,

Hedemora, a very ancient city, which has been handſomely rebuilt: it ſtands on the lake of Hafran, carries on a good trade, and has an annual fair on the feſtival of St. Peter and St. Paul. It is indeed one of the principal cities in the whole kingdom, and is famous for the gunpowder made there. A mint was formerly ſet up in this town by Guſtavus Vaſa; and ſome of the pieces coined in this place are ſtill to be ſeen in the cabinets of the curious. The gardens around the town, in which fruit trees are cultivated, are the moſt pleaſant in all Dalecarlia.

Falun, in Latin Faluna, is a mine town, ſituated between two lakes and two mountains: it is large and very populous, but though its ſtreets are regular, the houſes are ill built with timber. One of its two market places is very ſpacious and handſome. On the north ſide of it ſtands a large ſtone edifice, in which is held a court of juſtice; and in the ſame market place are erected a granary and diſpenſary. On the eaſt ſide of it, is a handſome church built with ſtone, and the roof covered with copper, the doors are of braſs, and the tower is remarkably high. Without the town, towards the eaſt, ſtands another church built with ſtone, and covered with copper. Falun has a good ſchool, a fine copper weigh-houſe, a mine court, and other inferior courts. At a ſmall diſtance to the weſt of Falun, is the famous copper mine that uſed every year to produce ten thouſand

ſand tons of copper, and in ſome years even more, but of late its produce is greatly decreaſed. The depth of this mine is 350 Swediſh ells, and a great variety of curious engines belong to this work.

SECT. VII.

Of Nordland, its Situation and Produce. Its Provinces deſcribed, with the Peculiarities and principal Places in each.

NORDLAND, in Latin Nordlandia, doubtleſs received its name from its being ſituated to the north of Sweden Proper. It is bounded on the eaſt by the gulph of Bothnia; on the ſouth by Upland and Dalecarlia; on the weſt it joins to Dalecarlia, Norway, and Lapland; and to the north it borders on Lapland only. This country, in the times of paganiſm, was a diſtinct monarchy, to which ſeveral vaſſal kings were tributary. It has more timber and veniſon than any of the other parts of the kingdom, but its rocks and mountains leave only a ſmall extent of land fit for tillage. It has however ſome fertile ſpots and verdant paſtures, that are agreeably interſperſed with lakes, rivers, and woods, which abound with fiſh; and a great number of cattle are bred in the country. Here are greater flights of wild geeſe than in any other part of the kingdom; but oak and birch trees do not grow wild beyond Upland, ſo that thoſe trees are very ſcarce. This province has ſeveral rich mines.

It is divided into ſeven provinces, and yet has no more than nine towns.

The province of Gaſtrickland, in Latin Gaſtricia, derives its name from the word Gaſtrick, which ſignifies hoſpitable, and contains little arable land, it moſtly conſiſting of mines, woods, rivers, and lakes, from which the inhabitants procure a tolerable ſubſiſtance.

The only remarkable town in this province is Geſle, in Latin Gevalia, which is the largeſt in all Nordland, and is well ſituated on a creek of the gulf of Bothnia. The river Geſle, which runs through the town, ſupplies it with plenty of ſalmon, and afterwards dividing into three branches, forms the two pleaſant iſlands of Alderholm and Iſlandſholm; and about the diſtance of three miles from the town diſcharges itſelf into the main ſea. This is a ſtaple town of ſuch antiquity, that it boaſts of being founded three hundred years before Stockholm. Some of the buildings are of ſtone, and others of wood, others have a mixture of both. The ſtreets are very irregular, and the market place ſo badly laid out, that a ſtranger would never be able to find it without a guide. The town is populous, and has a fine town-houſe built with ſtone, a very ancient hoſpital, that was rebuilt with ſtone in the year 1731; and it carries on an advantageous trade. The company of fiſhermen conſtitute two thirds of the burghers. The caſtle was entirely deſtroyed by fire in 1727, but it has been ſince rebuilt, and the governor reſides in it. On the neighbouring iſland of Alderholm juſt mentioned, are a handſome iron weigh-houſe, a dock, a landing-place for deals, &c. a large cuſtom-houſe, an arſenal, a magazine, and two warehouſes; and ſeveral magazines and warehouſes are alſo erected on Iſlandſholm.

The province of Halſingland, called in Latin Helſingia, is one hundred and twenty miles in length, and ninety-ſix in breadth: its paſtures feed a great number of fine cattle, and the little arable land it contains yields good crops. Linſeed is cultivated here with great induſtry. Here are alſo large foreſts and good iron works.

The inhabitants trade in iron, linen, tallow, butter, tar, deal boards, timber, and wild fowl, as partridges, woodcocks, and moorhens, ſome thouſands of which are every winter carried in ſledges to Stockholm. The Helſingians are celebrated for their bravery, and have made themſelves maſters of ſeveral countries where they have ſettled, and to which they have given their own name. Beſides the Gothic or Runic calendar, which is here every where known, they have the Halſingland Runic, as it is called, which differs from the former.

There are no conſiderable cities in this province, thoſe moſt noted being only ſmall ſea-port towns that contain nothing worthy of obſervation.

The province of Medelpad, in Latin Medelpadia, is eighty-four miles in length and forty-two in breadth. Though it is very mountainous and woody, it has ſeveral valleys of arable and meadow land. The ſeed is not ſown here till about Whitſuntide, but the corn ripens in ten weeks. Among the foreſts of this province there are ſome of prodigious extent that abound in game of all ſorts, as elks, rein-deer, beavers, martens, lynxes, foxes, weaſels, and wild-fowl.

The country is agreeably interſperſed with lakes and rivers, which ſupply it with plenty of fiſh; and the grain produced in the province is ſufficient for the ſupport of its inhabitants. They have alſo plenty of cattle; and deal in timber, hoops, flax, hemp, butter, fowls and dried fiſh; ſalmon and ſeals are alſo caught here.

The principal place in this province is Sundſwall, a well-built ſmall town, and the only ſea-port in the country. It was built in the reign of Guſtavus Adolphus, on the ſpot now called the Old Town, but formerly the Trading-Place; but in 1647 was rebuilt by Queen Chriſtina in its preſent ſituation, which is a barren ſandy plain between high mountains. In the middle of the town is a pond well ſtocked with a kind of ſmall carp. A woollen manufacture has been lately ſet up in this town; and here is a dock where ſeveral large veſſels have been built. The harbour, which is above a league in breadth, is very commodious, and the inhabitants have a good trade in linen, fleſh, cheeſe, butter, wooden chairs, deals, tar, and the bark of birch trees.

The next province we ſhall deſcribe is that of Jamtland, called in Latin Jemtia, which borders on the kingdom of Norway, and is nearly of a circular form. It is an hundred and thirty-ſix miles in length, and an hundred and twenty in breadth, and was annexed to the crown of Sweden in 1658 by the treaty of Roſchild. It is in general a mountainous country; the weſtern part, on the frontiers of Norway, is over-run with vaſt craggy rocks and high mountains, and between theſe are deep vallies and rapid torrents; but there are ſome verdant ſpots among the mountains, that afford good paſture: in theſe parts the inhabitants houſe their cattle even in ſummer-time, and by this means breed fine cows, whoſe milk yields excellent butter.

The eaſtern part conſiſts of a champaign country, watered by ſeveral lakes and rivers that abound with fiſh. Barley is the grain moſtly ſown here; they alſo ſow a conſiderable quantity of rye, and ſome wheat, with oats of an extraordinary goodneſs. The country abounds with excellent turneps. The ſeverity of the froſt ſometimes, indeed, cauſes a ſcarcity of corn, which obliges the Jamtlanders to make bread of the pounded bark of trees, the rye bread being reſerved for feſtivals. Here are great numbers of elks, which the Jamtlanders caſtrate, in order to make them grow large and fat: and many hands are employed in extracting iron from a kind of iron ore, that reſembles ſmall ſtones, and are collected in fenny places. Here are alſo allum quarries, ſand-ſtone, ſlate, the lapis ollarius, fine rock-cryſtals, lead-ore, a place where ſalt-petre is refined, and two new built copper-works.

This country is ſo thinly inhabited, that there are only ſix places where divine ſervice is performed every Sunday; in ſome churches it is celebrated every other Sunday, in others only every third Sunday, and in all the reſt the congregations aſſemble but three or four times a year. There is not ſo much as one town in the whole country, and only eleven pariſhes, in which are erected forty-ſix churches: in all theſe pariſhes there are but ſeven hundred and ſeventeen chimnies, though they form an area of two thouſand four hundred ſquare miles.

The inhabitants chiefly ſubſiſt by agriculture, grazing, hunting and fiſhing. They likewiſe carry on a conſiderable trade with the Norwegians, whom they ſupply with ſalt-pans, ſteel, iron-ware, and a kind of leather, dreſſed in ſuch a manner as entirely to keep out the water; with this leather they make ſhoes, boots, and even jackets, that are proof againſt wet. In this ſolitary and

deſart

deſart country, hypocondriac diſorders and ſelf-murders are very frequent.

The next province we ſhall deſcribe is that of Harjedalen, in Latin Hardalia, which was added to the Swediſh dominions by the treaty of Bremſebro, concluded in 1645, and is ninety miles in length, and from forty-two to forty-eight miles in breadth. It abounds in woods and mines; but little of the ground is tilled: it has however paſtures that enable the inhabitants to carry on an advantageous trade in horned cattle; they ſubſiſt by grazing, hunting, and fiſhing, and ſell a great quantity of cheeſe, which is much eſteemed.

The province of Angermanland, in Latin Angermannia, lies to the north of Harjedalen, and is an hundred forty-four miles in length, and thirty-ſix in breadth. It is extremely mountainous and woody; but ſome parts produce barley, rye, peaſe, linſeed, and good flax; the meadow lands afford paſture for the cattle, and the lakes and rivers yield plenty of fiſh. Here are ſeveral fine iron works; and in the bottom of ſome of the ſtagnant lakes is found a fine red colour fit for painting.

The only town in this country is Hernoſand, in Latin Herneſandia, a ſea-port on the iſland of Hernon, near the mouth of the river Angerman, where it diſcharges itſelf into the gulf of Bothnia. It was built in 1584, and has a communication with the continent by a bridge about a hundred Swediſh ells in length. The houſes, which are of timber, have very thick walls, and ſtand on the declivity of a hill towards the ſea. On the north ſide of the harbour the water is of a ſufficient depth for the largeſt ſhips to come up and unload at the warehouſes; but on the ſouth ſide this can only be done by flat-bottomed veſſels and lighters. This was formerly a ſtaple town, and it ſtill carries on a conſiderable trade, particularly in linen, and the annual fair held at this town on the fourteenth of September, is the moſt frequented of any in Nordland. The town has a ſeminary and a ſchool. In 1710, 1714, and 1721, it was burnt by the Ruſſians, but it has ſince recovered from theſe dreadful deſolations.

The laſt province in Nordland is that of Weſt Bothnia, which lies on the weſt ſide of the upper part of the gulf of Bothnia, while the oppoſite ſide is termed Eaſt Bothnia, of which we have given an account in our deſcription of Finland.

The inhabited part of Weſt Bothnia, from the frontiers of Angermanland to the church of Upper Tornea, is computed to be about three hundred forty-eight miles in length, and its breadth from ninety-ſix to a hundred and eight miles. Many pleaſant iſlands lie off the coaſt of this province; it has alſo ſeveral foreſts, with many lakes and rivers. Weſt Bothnia has ſome excellent paſtures, though the ſummits of the high mountains are moſtly covered with moſs, on which the rein-deer generally feed. The land is for the moſt part level, and the ſoil tolerably fertile; for though they ſow the corn very late, it ripens in ſix, ſeven, or eight weeks, according as the place lies more or leſs expoſed to the north winds: ſudden froſts, however, often prove extremely detrimental to the corn, particularly the froſty nights that frequently happen in the month of July. There are alſo ſeveral good copper and iron mines in this province.

The inhabitants, who are famed for their courage and bravery, ſubſiſt by agriculture, grazing, hunting, and fiſhing; they endure hunger and want better than moſt other people, they being inured to it from their youth, and even in fruitful years they mix their corn with chaff and pulverized pine-bark, to make what they term pounded bread. They trade in ſables, and the ſkins of blue and white foxes, hyenas, bears, wolves, ermines, martens, beavers, and rein-deer; and alſo in beams, deal boards, timber, and ſhingles; tar, ſalted and ſmoke-dried ſalmon, and other fiſh; train oil, veniſon, tallow, butter, cheeſe, caſtor, and linen. Theſe commodities are not only carried to other parts of Sweden, but over the mountains to Norway, or through vaſt deſarts to Ruſſia.

Weſt Bothnia is divided into four inferior governments, the principal places in which are,

Umea, in Latin Uma, a conſiderable ſea-port town, built by Guſtavus Adolphus, at the mouth of the river Umea. It has four ſtreets, which extend in a ſtraight line from eaſt to weſt, with ſeveral others interſecting them at right angles from north to ſouth. At the eaſt angle is a large area, on which the church ſtands; the harbour is commodious, and the inhabitants carry on a conſiderable trade.

Pitea, in Latin Pitovia, is a ſea-port ſituated in a ſmall iſland at the mouth of a river of the ſame name. It is joined to the continent by a wooden bridge, at the end of which a gate is erected. The ſtreets run in parallel lines; but the church ſtands a good way without the town; ſo that the bridge muſt be croſſed to go to it. Pitea was firſt built in 1621, by Guſtavus Adolphus, about three miles higher up in the country; but the town being entirely deſtroyed by fire in 1666, it was rebuilt on its preſent ſituation, where it has a commodious harbour and a good ſchool. Old Pitea is now a large village, conſiſting of many houſes irregularly ſcattered on a fine common.

The laſt town we ſhall mention in this province is Tornea, in Latin Torna, a ſmall ſea-port ſituated on a peninſula formed by the river Tornea, where it falls into the gulph of Bothnia, in the ſixty-fifth degree fifty minutes fifty ſeconds north latitude, and is ſaid to be the fartheſt towards the north of any town in Europe. It has three ſtreets, which run in parallel lines from north to ſouth, and are interſected at right angles by fourteen croſs ſtreets or lanes. The church, which is built with timber, ſtands at a ſmall diſtance from the other buildings; but within the palliſadoes that incloſe the town, and alſo a pretty large piece of arable land. Divine ſervice is here performed in the Swediſh language, which is uſed by the burghers. There is another church built with ſtone on an iſland called Biorkhon, which lies near the town, and here the ſervice is performed in the Finean language for the benefit of the ſervants of the burghers, and the inhabitants of the adjacent country. All the dwellings in Tornea, like thoſe in the neighbouring country, have a large court, of which two ſides at leaſt are taken up with apartments; and in the other two are the ſtables, barns, and other out-houſes. Theſe courts, in the country habitations, are exactly ſquare; but in Tornea are of an oblong form. A very conſiderable trade is carried on here, not only by the Swedes and Laplanders, but by the Norwegians and Ruſſians; who alſo reſort to the trading places of Tornea, in order to traffic.

Mr. Buſching obſerves, that in 1694 this town was honoured with the preſence of king Charles XI. who, being accompanied by ſeveral perſons of diſtinction and learning, took a view of the ſun at midnight from the tower of the church at Tornea; for in the midſt of ſummer the ſun may be ſeen above the horizon when in the oppoſite part of the meridian of Tornea, by a ſpectator placed at a certain height above the ſurface of the earth.

SECT. VIII.

Of SWEDISH LAPLAND.

Its Situation and Extent; with a very particular Account of the Climate, and Face of the Country; the Beauty of the Northern Lights in a Lapland Winter; the Beaſts, Birds, and Fiſhes.

SWEDISH Lapland, which is called by its inhabitants Sameland, or Samenolmoi, is bounded on the eaſt by Eaſt Bothnia and Ruſſian Lapland, on the ſouth by Jamtland, and on the weſt and north by Norwegian Lapland. According to ſome computations this country is four hundred and twenty miles in length, and three hundred and ſixty in breadth; but others repreſent it as every way much more extenſive.

It muſt, however, be acknowledged, that this country ſeems at firſt ſight, eſpecially in winter, ſcarce fit to be the habitation of man. In moſt places it abounds with rocks and mountains, whoſe ſummits ſeem to pierce the clouds, and are covered with everlaſting ſnow. Other parts of Lapland conſiſt of barren heaths and ſandy deſarts, over-run with moſs, fern, and to appearance unprofitable weeds; while one barren wild ſtretches beyond another,

another with little or no paſture growing on the intermediate ſpots.

Beſides theſe inconveniencies, the long and ſevere winters, the cold, dark, and tedious winter nights, with the vaſt depth of ſnow that covers this deſolate region, might ſeem ſufficient to deter every living creature from fixing his abode in this inhoſpitable country. The deſcription given by M. Maupertuis of the ſeverity of this climate, when he, with other aſtronomers, went by order of the French king to determine the figure of the earth at the polar circle, is enough to make one ſhudder, though he made his obſervations on the ſouthern borders of this country. "In December, ſays he, the ſnow continu-"ally falling, or ready to fall, for the moſt part hid the "ſun the few moments he might have appeared at mid-"day. In the month of January the cold was increaſed "to that extremity, that Mr. Reaumur's mercurial ther-"mometer, which at Paris, in the great froſt of 1709, "it was thought ſtrange to ſee fall to fourteen degree "below the freezing point, were now got down to thir-"ty-ſeven. The ſpirit of wine in the others was frozen. "If we opened the door of a warm room, the external "air inſtantly converted all the vapour in it into ſnow; "whirling it round in white vortexes. If we went a-"broad, we felt as if the air was tearing our breaſts in "pieces; and the cracking of the wood of which the "houſes are built, as if ſplit by the violence of the froſt, "continually alarmed us with an encreaſe of cold; and "in this country you may often ſee people who have loſt "an arm or leg by the froſt. The cold, which is always "very great, ſometimes increaſes by ſuch violent and "ſudden fits, as are almoſt infallibly fatal to thoſe who "are ſo unhappy as to be expoſed to it; and ſometimes "there riſe ſudden tempeſts of ſnow that are ſtill more "dangerous. The winds ſeem to blow from all quar-"ters at once, and drive about the ſnow with ſuch fury, "that all the roads are in a moment rendered inviſible. "Dreadful is the ſituation of a perſon ſurprized in the "fields by ſuch a ſtorm: his knowledge of the country, "and even the mark he may have taken by the trees, "cannot avail him: he is blinded by the ſnow, and if he "attempts to find his way home is generally loſt. In ſhort, "during the whole winter the cold was ſo exceſſive, "that on the ſeventh of April, at five in the morning, "the thermometer was fallen to twenty diviſions below "the point of freezing, though every afternoon it roſe "two or three diviſions above it: a difference in the "height not much leſs than that which the greateſt heat "and cold felt at Paris uſually produce in that inſtru-"ment. Thus in twenty-four hours we had all the va-"riety felt in the temperate zones in the compaſs of a "whole year."

When at laſt, in ſummer, the ſun warms the air, Lapland is infeſted with ſuch ſwarms of gnats and flies of various ſpecies, that, like clouds, they darken the ſky, and obſcure the light of the ſun. Theſe fix on every naked part of the body, bite with unremitting fury, and ſome draw blood wherever they fix.

After this deſcription it muſt appear much leſs ſurpriſing that Lapland ſhould be thinly peopled, than that it ſhould be peopled at all: but notwithſtanding theſe diſadvantages, Nature has beſtowed on theſe dreary regions ſeveral conveniencies; and it is certain, however improbable it may appear, that content and happineſs are to be found there.

The mountains, which are of a prodigious height and extent, are perhaps intended to ſhelter the plains from violent winds; and even their wildneſs and irregularity has ſomething very entertaining to the eye, eſpecially in ſummer: the alternate ſucceſſion of hills and valleys exhibit a delightful variety of proſpects; and there are ſome places in this country, which in ſummer may be reckoned amongſt the moſt delightful ſpots in the world. The fine lakes, ſays the laſt mentioned author, that ſurround the mountain of Niemi, give it the air of an inchanted iſland in romance. On one hand you ſee a grove of trees riſe from a plain ſmooth and level as the walks of a garden, and at ſuch eaſy diſtances as neither to embarraſs the walks, nor the proſpect of the lakes that waſh the foot of the mountain. On the other hand are apartments of different ſizes that ſeem cut by art in the rocks, and to want only a regular roof to render them complete: The rocks themſelves are ſo perpendicular, ſo high, and ſo ſmooth, that they might be taken for the walls of an unfiniſhed palace, rather than for the work of nature: "From this height, he adds, we ſaw thoſe vapours riſe "from the lake which the people of the country call "haltios, and deem the guardian ſpirits of the moun-"tains. We had been frightened with ſtories of bears "haunting this place, but ſaw none. It ſeemed rather, "indeed, a place of reſort for fairies and genii, than for "thoſe of ſavage animals."

It alſo appears, from the trials that have been made, that theſe mountains are inferior to none in the richneſs of ores and foſſils: at leaſt the largeſt and cleareſt rock-cryſtals, purple amethyſts, topazes, loadſtones, native cinnabar, quickſilver, and other foſſils and minerals, have been found in their bowels.

If at a certain ſeaſon of the year the days are very ſhort, and the nights long, tedious, and irkſome; this is in ſome meaſure compenſated by the pleaſant luminous ſummers, when, in moſt parts of this country, the ſun is viſible for ſeveral weeks above the horizon; a phenomenon to which the inhabitants of the temperate climates are entirely ſtrangers. Even in winter, the radiancy of the ſun, the brightneſs of the moon-light, the twinkling of the ſtars, and the effulgent corruſcations of the aurora borealis, afford a light ſufficient for moſt occaſions of life. "The ſhort days are no ſooner cloſed, ſays Mau-"pertuis, than fires of a thouſand figures and colours "light up the ſky, as if deſigned to compenſate for the "abſence of the ſun. Theſe fires have not here, as in "more ſouthern climates, any conſtant ſituation. Tho' "a luminous arch is often ſeen fixed towards the north, "they ſeem more frequently to poſſeſs the whole extent "of the hemiſphere. Sometimes they begin in the form "of a great ſcarf of bright light, with its extremities "upon the horizon, which, with a motion reſembling "that of a fiſhing-net, glides ſoftly up the ſky, preſerv-"ing in this motion a direction nearly perpendicular to "the meridian; and moſt commonly after theſe preludes, "all the lights unite at the zenith, and form the top of "a crown. Arcs like thoſe ſeen in France towards the "north, are here frequently ſituated towards the ſouth; "and often towards both the north and ſouth at once. "Their ſummits approach each other; the diſtance of "their extremities widens towards the horizon. I have "ſeen ſome of the oppoſite arcs whoſe ſummits almoſt "joined at the zenith; and both the one and the other "have frequently ſeveral concentric arcs beyond it. "Their tops are all placed in the direction of the meri-"dian, though with a little declination to the weſt; "which I did not find to be conſtant, and which is "ſometimes inſenſible. It would be endleſs to mention "all the different figures theſe meteors aſſume, and the "various motions with which they are agitated. Their "motion is moſt commonly like that of a pair of colours "waved in the air, and the different tints of their light "gives them the appearance of ſo many vaſt ſtreamers "of changeable taffety. Sometimes they line a part of "the ſky with ſcarlet. On the eighteenth of December "I ſaw a phenomenon of this kind, that in the midſt "of all the wonders to which I was now every day ac-"cuſtomed, raiſed my admiration. To the ſouth a great "ſpace of the ſky appeared tinged with ſo lively a red, "that the whole conſtellation of Orion looked as if it "had been dipped in blood. This light, which was at "firſt fixed, ſoon moved, and changing into other co-"lours, violet and blue, ſettled into a dome, whoſe top "ſtood a little to the ſouth-weſt of the zenith. The "moon ſhone bright, but did not in the leaſt efface it. "In this country, where there are lights of ſo many "different colours, I never ſaw but two that were red; "and ſuch are taken for preſages of ſome great misfor-"tune. After all, when people gaze at theſe pheno-"mena with an unphiloſophic eye, it is not ſurprizing "if they diſcover in them armies engaged, fiery chariots, "and a thouſand other prodigies."

Another advantage is the twilight, which begins four or five hours before ſun-riſe, and laſts as long after that luminary is ſet. Indeed many of the inhabitants ſleep away moſt of the dark ſeaſon, and employ the luminous

part of the year in their reſpective occupations; and, in general, ſuffer little in their health from this apparent inconvenience.

In the woods upon the mountains are almoſt as many trees fallen as ſtanding; for the ſoil, after having raiſed them to a certain height, can generally no longer furniſh proper nouriſhment; nor is it deep enough to allow them to take firm root; whence they are overſet by the leaſt blaſt of wind, and in all theſe woods a multitude of firs and birches are blown down. Time reduces the wood of the latter to duſt, without affecting the bark; and one would be ſurprized to find pretty large trees that crumble upon the ſlighteſt touch. This probably gave the Swedes the hint of covering their houſes with this bark; and indeed nothing can be imagined fitter for the purpoſe.

In the valleys, and along the banks of the lakes and rivers, where the trees find a deeper ſoil, pine, fir, birch, juniper, aſpen, alder, willow, and other trees, are obſerved to thrive; and ſome wholeſome vegetables, berries, and flowers, are produced. The pine-trees are more ſerviceable than orchards would be there; that beneficial tree, beſides ſeveral other uſes to which it is applied, being an eſſential part of the food of the inhabitants; for a labouring man who feeds on bread made of the pounded bark of the pine-tree, preſerves his health and vigour to a great age.

Lapland abounds in many kinds of beaſts, birds, and fiſhes. The furs and ſkins of bears, wolves, beavers, martens, otters, wild and tame rein-deer, hyenas, ermines, hares, ſquirrels, black, red, and white foxes, &c. bring a great deal of money into the country. Here are alſo a ſpecies of partridges, moor-hens, woodcocks, falcons, ſnow-birds, as they are called, and other large and ſmall birds.

The fiſheries not only afford a plentiful ſubſiſtence to many of the inhabitants, but enable them to ſell a conſiderable quantity of fiſh to their neighbours. The pearls found in the rivers of Lapland are remarkably valuable; and ſwans, geeſe, all kinds of wild ducks, and ſeveral ſorts of ſea-fowl unknown in other countries, abound here, eſpecially in the ſouthern parts of Lapland.

SECT. IX.

Of the Perſons, Dreſs, and Manner of Life of the Laplanders, whoſe principal Wealth and Subſiſtence conſiſts in their Rein-deer, which are therefore particularly deſcribed. Their Arts; the Riches of thoſe who engage in Trade; their Tents and Furniture; and their Skill in the Management of their Boats. The Food of the different Tribes.

THE Laplanders are of a brown and ſwarthy complexion, which is the caſe with the inhabitants both of very cold and very hot countries; their hair is black, and their faces broad, with peaked chins, and hollow cheeks. They are generally of a middling ſtature. The all-wiſe Creator has made a proviſion for them againſt the ſeverity of winter, by placing there a multitude of animals, whoſe ſoft and warm furs and ſkins defend them from the moſt piercing cold.

The upper garment both of the men and women is made of ſkins with the hair on, formed like the ploughman's frock, girt about them with a broad belt; they wear breeches which reach down to their ancles, and their cap, which is made of the ſkin of a young rein-deer, ſits as cloſe to their heads as a ſcull-cap, covering all the neck and ſhoulders. Their ſhoes are peaked, and turned up at the toes. The finery of the women conſiſts in a kind of pewter wire, with which they work the boſoms of their coats, their girdles, and the edges of their caps. Neither ſex know what it is to wear linen; but in the cold ſeaſon wear next the body a fawn's ſkin waiſtcoat. Almoſt the only difference between the dreſs of the men and that of the women is, that the latter is ſomewhat longer. A purſe hangs at their girdles, with their money, rings, and toys; a knife, and a leathern bag.

Theſe people afford an inſtance of a whole European nation ſubſiſting contentedly without ploughing, ſowing, or planting; without ſpinning or weaving, brewing or baking. They employ themſelves in feeding of herds; and as their lot is caſt in a country where winter takes up the greateſt part of the year, and conſequently renders it impoſſible for them to provide a ſufficient quantity of hay and fodder for great herds of cattle, the bountiful Creator has therefore beſtowed on them a ſpecies of animals that are provided for with little trouble: this is the rein-deer, which of all tame animals requires the leaſt attendance and ſupport, while it procures the greateſt advantage to its owners. Theſe creatures provide for themſelves, feeding in ſummer on leaves, moſs, and graſs, of which they find as much as is ſufficient for them, even among the mountains; and in winter live only on a kind of moſs that grows in almoſt every part of Lapland. They come at this moſs by ſcraping away the ſnow with their feet, and are taught by inſtinct to find the ſpots where it grows. During a journey of ſeveral days with theſe animals, the only trouble a traveller is at is, either to turn them looſe, or tie them to a tree, where the quantity of food they eat at a time does not exceed a handful. The Laplanders are only ſolicitous to keep their herds of rein-deer from going aſtray, and to protect them from wild beaſts; and this, particularly in ſummer, they think no inconſiderable taſk. They have no occaſion to houſe theſe animals, for they always lie out in the open air, without any inconvenience; and when after a ſtrict ſearch there is no danger from beaſts of prey, they turn them looſe into the woods; but when they are under any apprehenſion of danger from that quarter, they are watched by the Lapland herdſmen.

The rein-deer nearly reſembles a ſtag, except its hanging the head down a little, and the horns projecting directly forward: beſides, on the fore part of the head, near the root of the large horns, are two ſmaller branches; ſo that they ſeem to have four horns. There are two different ſpecies of theſe animals, namely, the wild and the tame. The latter is well made and exceeding ſwift, and indeed is of ſuch uſe to the Laplanders, that it ſupplies the place of corn-fields and meadows, horſes and cows. In winter they make uſe of the rein-deer in travelling; its fleſh, either freſh or dried, without ſalt, is their chief food; and all their cloathing, from head to foot, conſiſts of the ſkins of theſe animals. The rein-deer alſo ſupplies its owner with a bed, and both winter and ſummer, with good milk and excellent cheeſe; beſides, of the inteſtines and tendons he makes thread and cordage.

The Laplanders, with reſpect to their manner of living and habitations, conſiſt of two different tribes, namely, the Foreſt and Mountain Laplanders. The former ſpend the greateſt part of the ſummer in the woods, and have no property; but the latter live among the mountains. The food of the former chiefly conſiſts of fiſh and fowl; but that of the latter principally depends on their herds of rein-deer. The Laplanders in general, and particularly the Foreſters, are eſteemed good marksmen. They have a great averſion to mining. In moſt of the lapmarks they make it their employment to carry the burghers to the yearly fairs; and ſome of the Laplanders, for a reaſonable reward, look after the rein-deer belonging to other people. Moſt of them chooſe rather to ſleep away the whole day in their tents, than to engage in any laborious employment; but thoſe whom want has prompted to induſtry, give evident proofs that they are not without a capacity for mechanic trades, nor even for exquiſite pieces of workmanſhip. Their boats and utenſils are plain indications of their ſkill, and ſome of their ſledges are inlaid with horn in a variety of figures. Their horn ſpoons, their Runic calendars, their moulds for caſting pewter utenſils, their bows and arrows, and the like, are all of their own making.

The Lapland women make uſe of a horn perforated with large and ſmall holes, through which they draw tin or pewter into wires of different thickneſs, with which they neatly embroider their girdles, cloaths, and ſledge furniture. They alſo prepare all kinds of ſkins by various methods, and cut out and ſew the habits uſed among them.

Several Laplanders, beſides the herds of rein-deer, are maſters of a conſiderable quantity of ſilver in rings, buckles, large and ſmall ſpoons, cups, &c. and money

grows

grows daily more and more in uſe among them: but they prefer the Holland rixdollar to all other coins, becauſe the Norwegians, with whom they trade in ſummer, will not take any other money in exchange for their goods. The reſt of their ſubſtance conſiſts of domeſtic utenſils and other furniture, as tents, iron pots, copper and braſs kettles, furs and other cloaths, bed-furniture, fine ſledges with harneſſes, hatchets, boats, and fiſhing-tackle. As to the poorer ſort, they are obliged to be ſatisfied with fewer conveniencies.

As feeding their herds of rein-deer is the chief employment of the Laplanders, they frequuently ſhift their habitations. At the approach of ſpring moſt of them move with their families twenty or thirty Swediſh miles among the mountains of Norway as far as the North Sea, where they fix their abode till autumn, and then quit the mountains and return to the ſouth, to prevent their being frozen to death for want of fewel; and their rein-deer being ſtarved, there being little or no moſs ſo far to the north.

The other Laplanders, who make no excurſions to the mountains, but dwell in the village diſtricts, or live by fiſhing, likewiſe never ſettle in one place: to this they are obliged by their rein-deer, which at certain times ſhew a diſpoſition to remove, either from the want of fodder, or their being ſenſible of the changes that will happen in the weather.

This unſettled way of life obliges the Laplanders to provide portable dwellings, and ſuch are their tents, which are thus formed: they firſt ſet up ſeveral poles in a circular poſition, gradually cloſing together on the top, much in the form of a ſugar-loaf with the top of it broken off. Over theſe poles they lay a kind of coarſe cloth, and thus form tents, ſome of which are ſufficient to contain twenty perſons. The hearth is in the middle, with ſtones laid round it, to prevent the fire from ſpreading. An aperture is left at the top, where the poles almoſt join, which ſerves both for chimney and window. From this hole hang two chains with hooks at the end, to hang the pots on, in order to boil their victuals, or melt the ice or ſnow into water to drink. Round the inſide of the tent they lay their cloaths to keep out the cold wind, and ſpread branches of birch or fir round the tent, by way of ſeats to ſit upon; for they have neither chairs, ſtools, nor benches. About the tent ſtand the cupboards, where they keep their proviſions; theſe are fixed on poſts or blocks of wood, and have ſome reſemblance to pigeon-houſes erected on pillars. The Laplanders, whenever they have an opportunity, pitch their tents near dried pines, for the convenience of fewel; but in ſpring and autumn they are forced to be contented with bruſh-wood. It ought not to be omitted, that in ſome of the lapmarks they erect boarded cottages, or wooden houſes, that reſemble thoſe of the Swedes.

Their carriages are ſledges ſhaped like ſmall boats with a broad keel, and ſo thick, that no water can penetrate through them. They have a back-board for the traveller to lean againſt, who ſits faſt laced in the ſledge, and well ſecured from the cold. This vehicle is drawn by the rein-deer with incredible ſwiftneſs through the ſnow over mountains and valleys. The rein-deer is harneſſed with a large cloth girt, embroidered with pewter wire, and faſtened on his back. The bit is a piece of leather tacked to the reins of the bridle over the deer's head and neck, and from the breaſt a leather ſtrap paſſing under the belly is faſtened to the fore-part of the ſledge, which ſerves inſtead of ſhafts. The rein-deer in a great meaſure loſe their vigour and ſwiftneſs in ſummer, when theſe are leſs neceſſary; but even then they are very proper for carrying the Laplanders effects from one place to another.

The Laplanders alſo uſe a kind of ſkates, like thoſe uſed by the Fins and Nordlanders. Theſe conſiſt of a board three or four Swediſh ells in length, and ſix inches broad, ending in a point which turns up before. With theſe boards faſtened to their feet, and a pole, with a round piece of wood at the end to prevent its ſinking too deep into the ſnow, the Laplanders ſlide along with ſuch ſwiftneſs, as to overtake wolves and bears.

The Laplanders who practiſe fiſhing, and live in South Lapmark, make uſe of a kind of boat or little bark for croſſing rivers, made of ſlight boards curiouſly joined together with filaments of the roots of trees, or hempen ſtrings, and are ſo light that a Laplander carries his boat on his ſhoulders, with the oars and every thing belonging to it, beſides his bag of proviſions. Theſe boats they ſteer with amazing dexerity, even among the rocks and down the moſt rapid water-falls; and though the cataract be ever ſo dreadful, and the Laplander ever ſo great a ſtranger to it, he undauntedly ventures down the precipice in his little boat: but when he ſteers againſt the ſtream, and comes to a water-fall, he puts aſhore, takes his boat upon his back, and travels till he comes to ſmooth water.

In the Northern lapmarks they have larger boats, four or five fathoms in length; theſe they either haul up the great water-falls with ropes, or where the caſcades are ſmall, ſhove them up with poles; which is done by two men, one of whom ſits at the head, and the other at the ſtern. As for going down the water-falls with the ſtream, they conſider it as attended with no difficulty.

The Mountain Laplanders in ſummer live chiefly upon milk, and of the cheeſe made of it, of which they lay up a ſtore for winter. In the month of September, before the piercing froſts ſet in, they kill as many of their rein-deer as they think will ſerve them till Chriſtmas: afterwards they kill as many as will ſupply them for the reſt of the winter, and ſometimes kill one or two occaſionally. It is not unuſual with the Weſtern Laplanders to buy Norway cows and ſheep in ſummer, which they kill for their winter proviſion. They alſo eat the fleſh of bears and beavers, ſea and wild fowl, &c. The poor who live in villages are contented with the fleſh of dogs, wolves, foxes, and horſes, when they can get them. The Fiſhing Laplanders live on fiſh, which they have various ways of dreſſing; and thoſe who have rein-deer on their high days and feſtivals, dreſs fleſh and fiſh together. In ſummer they buy their ſalt of the Norwegians, and in the winter purchaſe it of the burghers. Tobacco is not very uncommon among them; but they buy it at a very high price. In this country none of the women have any hand in dreſſing proviſions, that office belonging to the maſter of the houſe. They never omit ſaying of grace before and after meat, nor ſhaking one another by the hand before they riſe from table.

SECT. X.

Of the Marriages and Religion of the Swediſh Laplanders; their Sorcerers, and the Manner in which they pretend to foretel future Events by their Magic Drums. The Government, Trade, and Diviſions of Lapland.

THE marriages of the Laplanders depend entirely on the pleaſure of their parents, who pay no regard to the inclinations and affections of their children; and it is ſaid that a widow, though decrepid with age, and both deaf and blind, will never want ſuitors, if ſhe be but rich. They ſeem to diſapprove of marriages between relations, and even intimate friends: as to polygamy, it has never obtained amongſt them. When the parents have determined to chooſe a daughter-in-law, they take their ſon, let him be ever ſo unwilling, and accompanied by ſome of their near relations, go to the dwelling of the ſon's future father-in-law, always taking ſome brandy with them. This liquor is the firſt and moſt powerful pleader in their behalf, and the acceptance of it is eſteemed a good preſage of ſucceſs; but if the treaty comes to nothing, the young woman's parents are obliged to pay for all the brandy uſed during the courtſhip. If the marriage takes place, an agreement is made about the money and goods which the parents of the bridegroom are to give to thoſe of the bride. In return, the bride's parents are obliged to give the new-married pair as much furniture and as many rein-deer as are eſteemed an equivalent for the preſents they have received. Thoſe who are poor marry without any of theſe previous ceremonies, every one at ſuch times providing according to his ability. The marriages are ſolemnized in the churches; and the bride uſually feigns ſuch timidity, and ſhews ſuch reluctance, that force is ſometimes obliged to be uſed to

get

get her thither. After the ceremony the company return to their tents, where they have a feaſt, every one bringing his portion of proviſions, which are all dreſſed and ſerved up together.

The children are inured to hardſhips from their infancy: they are firſt ſecurely laced up in little cradles, which are ſuſpended in the ſmoke near the top of the tent, and rocked by pulling two cords that hang down from each ſide. They are very careful when they begin to grow up, to teach them to earn a comfortable ſubſiſtence, by accuſtoming them to all kinds of work practiſed among them; but they have a great averſion to ſchools.

Though the inhabitants of the Swediſh lapmarks make an outward profeſſion of Chriſtianity, yet the greateſt part of them are moſt groſsly ignorant, and ſhew no other ſigns of their having embraced that religion, than by being baptized and called by Chriſtian names. Indeed they are extremely tenacious of their pagan rites and cuſtoms, which proceeds from the high idea they entertain of their anceſtors, and their willingneſs to believe that whatever they did muſt be reaſonable, juſt, and worthy of commendation.

Thoſe who are ſtill pagans call the Supreme God by the name of Jubmal, and term the prince of the evil ſpirits Perkmel. As they attribute to this laſt ſpirit a power equal to that of God, they endeavour to obtain his favour and render him propitious, in order that he may not hurt them. Beſides theſe, and ſome other deities, they have a number of demi-gods. They make images both of wood and ſtone, but pay the greateſt reverence to the latter. When the Laplanders come within ſight of the place where the idol ſtands, they uncover themſelves, make low bows, and creep on their hands and feet up to the idols, in order to make their offerings.

Much has been ſaid of the ſorcery practiſed by theſe people; but fame has magnified their ſkill far beyond the truth. Few of the Laplanders pretend to have any ſkill in magic, and when any thing ſingular ſeems to be brought about by their magicians, it cauſes as much admiration as among other nations. They are indeed perſuaded that their ſorcerers, by repeating myſtical words, or by ſome other means, can reſtore health to the ſick, give tidings of goods ſtolen, and have it in their power to injure their neighbours.

Almoſt every body has heard of their magic drums; but they are ſo cautious in the uſe of them, that their own countrymen ſcarce know any thing about them; for if they are detected in uſing them, it coſts the pretended magician his life. They are ſuppoſed to uſe theſe drums as oracles; for they imagine, that by means of various figures painted on the head of the drum, they can know what paſſes in diſtant places; whether they ſhall meet with ſucceſs in hunting; what offerings will be moſt acceptable to their gods; with the cauſes and cures of certain diſeaſes.

We are told that M. Motraye, who travelled through Lapland in 1718, hired a guide to direct him to the tent of one of theſe magicians in the moſt remote part of Lapland; but was firſt obliged to give the guide all imaginable aſſurances that he would not betray him to the government. He found the wizard in a poor hut, and in as wretched circumſtances as can be imagined. This miſerable magician gave M. Motraye his hand, and ordered him to follow him to the top of a high mountain, where he deſired him to ſtay while he fetched his drum and other utenſils. Soon after the Laplander returned with his magic drum, which he had concealed among the ſhrubs for fear of a diſcovery. It was of an oval form, and had but one head, which was covered with a kind of tranſparent parchment, wretchedly painted with the celeſtial ſigns; and to it was faſtened a chain with ſeveral braſs rings. Before the operation began, the wizard demanded if they had any brandy; and half a pint of that liquor being given him, he immediately drank two-thirds of it. He then put the chain and rings into the inſide of his drum, and turning the bottom upwards, beat upon it with a forked piece of a rein-deer's horn for a few minutes, the rings all the while jumping about and making a jingling noiſe. After this he laid himſelf flat on his back, ſet the head of the drum on his bare breaſt, and ſhutting his eyes, pretended to be in a trance; but at length fetching a deep ſigh, he gently raiſed the drum above his head, and looked at the rings, which he could eaſily diſcern through the tranſparent parchment. Having obſerved their poſition and diſtance from the figures of the celeſtial ſigns, he fixed his eyes upon M. Motraye, and declared he would run a great hazard of his life by water as he returned in his ſledge, and would alſo be in great danger in going down the cataracts in a boat: that he would have another narrow eſcape from fire; and that his life would be long and healthful after he had overcome two fits of illneſs, both which would ſeize him within the ſpace of two years. As for the Lapland interpreter who led M. Motraye to his cell, he directed him to go out to fiſh on ſome particular days in that and the following month, when he ſhould return home laden with fiſh: he alſo pretended to tell him on what days he would be equally fortunate in hunting. M. Motraye aſked if he could tell whether he was a batchelor or a married man, into what countries he had travelled, and other queſtions of the like nature; but this pretended magician was too wiſe to gueſs at things that were paſt, in which he knew his ignorance muſt be inſtantly diſcovered.

With reſpect to the government of this country, the Laplanders in general acknowledge the king of Sweden for their rightful ſovereign; though ſome of them alſo pay tribute to Denmark and Ruſſia, as at certain ſeaſons they pitch their tents within the dominions of thoſe crowns. They, however, conform to the Swediſh laws; ſome of them attend the celebration of divine ſervice in the Swediſh churches, and apply to the Swediſh courts of judicature eſtabliſhed all over Lapland.

The judges aſſiſtants are choſen from among the Laplanders, and the taxes are uſually paid at the time when thoſe courts of juſtice are held. At the places appointed for theſe courts, and for levying the taxes, are houſes and tents, erected by the Laplanders for their own convenience, with houſes and ſhops that are let to the burghers who frequent the annual fairs. The moſt conſiderable of theſe fairs are held at the ſame time with the courts of juſtice, and in ſome provinces laſt about a fortnight, but in others only a few days. The goods which the Laplanders buy from the inhabitants of the towns are chiefly tobacco, ſalt, meal, cloth, a kind of coarſe cloth called walmar, kettles, pots, ſilver ſpoons, buckles, girdles, rings, cups, needles, laces, hatchets, knives, ſciſſars, lead, powder, fire-arms, tin, or pewter, ſulphur, wine, malt-liquor, figs, &c. The Laplanders in return ſell to the inhabitants of the towns furs of all kinds, the fleſh and ſkins of rein-deer, fur gowns, boots, ſhoes, fiſh, cheeſe, &c. There are neither towns nor any fixed or meaſured miles uſed in any of the lapmarks.

Lapland is divided into ſeven lapmarks, or provinces, which receive their names from the places of note in Nordland in whoſe neighbourhood they lie. They all belong to the government of Weſt Bothnia, except Jamtland lapmark, which is included in the government of Weſt Nordland. We might here give an account of each of theſe lapmarks, but as it would afford neither any uſeful inſtruction nor entertainment to the reader to deſcribe petty villages, conſiſting of a few little wooden houſes, or huts, and a church reſembling a barn, we ſhall conclude our account of Swediſh Lapland, and proceed to Norway, which bounds it to the weſt.

CHAP.

CHAP. VI.

Of NORWAY.

SECT. I.

Of the Situation, Climate, Coaſt, Mountains, Roads, Bridges, and Face of the Country in Norway. Of the different Kinds of Marble, and other Stones; with a particular Account of the Aſbeſtos, or Amianthus, a Sort of incombuſtible Flax; and of the Mines of that Country.

NORWAY, which is called by the Danes and the Norwegians themſelves Norge, is bounded on the north and weſt by the North Sea, on the eaſt by Swediſh Lapland and Sweden, and on the ſouth by the ſea called the Categate, extending in length from the fifty-ſeventh degree forty-ſeven minutes to the North Cape in the ſeventy-firſt degree thirty minutes north latitude, and in breadth from the fourth degree thirty-five minutes to very unequal diſtances within land, it being in ſome places two hundred and eighty, in others about a hundred and fifty, and in others not above thirty miles broad.

In moſt parts of Norway the air is pure and ſalubrious, but more ſo in the middle and eaſt ſide than on the weſtern coaſt; for in the latter the air is damp, and the weſtern extremely variable, on which account ſcorbutic diſorders are very common among the Norwegians.

In the ſummer nights the horizon, when unclouded, is ſo clear and luminous, that at midnight one may read, write, and do all kinds of work as in the day; and in the extremity of this country, towards the iſlands of Finmark, the ſun is in the midſt of ſummer continually in view, and is obſerved to encircle day and night the north pole, contracting its orbit and then gradually enlarging it, till at length it leaves the horizon. On the other hand, in the depth of winter the ſun is for ſome weeks inviſible, all the light perceived at noon being a faint glimmering that continues about an hour and a half, which, as the ſun does not then appear above the horizon, chiefly proceeds from the reflection of the rays on the higheſt mountains, whoſe ſummits are ſeen more clearly than any other objects; but the bountiful Creator has granted the inhabitants all poſſible aſſiſtance; for beſides the moon-ſhine, which by reflection from the mountains is rendered exceeding bright in the valleys, the people receive conſiderable relief from the aurora borealis, or northern lights, which frequently afford them as much light as is neceſſary for their performing their ordinary labours.

In the weſtern parts of this country the cold of winter generally ſets in about the middle of October, and continues till the middle of April. The waters are congealed to a thick ice, and the mountains and valleys covered with ſnow: yet even this is of ſuch importance to the welfare of the country, that in a mild winter the peaſants, who live among the mountains, are conſiderable ſufferers; for without this ſevere froſt and ſnow, they can neither convey the timber they have felled to the rivers, nor carry their corn, butter, furs, and other commodities, in their ſledges to the market-towns; and after the ſale of them carry back the neceſſaries with which they are there ſupplied: for the largeſt rivers, with their roaring cataracts, are arreſted in their courſe by the froſt, and the very ſpittle is no ſooner out of the mouth than it is congealed, and rolls along the ground like hail. But the wiſe Creator has given the inhabitants of this cold climate a greater variety of preſervatives againſt the weather, than moſt countries afford. Extenſive foreſts ſupply them with plenty of timber for building and for fuel; the wool of the ſheep, and the furs and ſkins of wild beaſts, furniſh them with warm lining for their cloaths, and covering for their beds; innumerable flights of wild fowl ſupply them with down and feathers; the mountains themſelves ſerve them for fences againſt the north and eaſt winds, and their caverns afford them ſhelter.

While the winter thus rages in the eaſt of Norway, the lakes and bays on the weſt ſide are kept open by the warm exhalations of the ocean, though lying in a direct line with theſe frozen eaſtern parts; and the froſts are ſeldom known to laſt above a fortnight or three weeks. Even in the centre of Germany, which is two hundred leagues nearer the line, the winters are generally more ſevere, and the froſts ſharper than in the dioceſe of Bergen; for the inhabitants here are often ſurprized at reading in the public papers of froſt and ſnow in Poland and Germany, when they feel no ſuch weather; and the learned Dr. Pontoppidan obſerves, that the harbours of Amſterdam, Hamburg, Copenhagen, and Lubec, are much oftener froze than thoſe of Norway, where this ſeldom happens above two or three times in a whole century. Thus the winter at Bergen is ſo moderate, that the ſeas are almoſt always open to the fiſhermen and mariners; and there the North Sea continues navigable during the whole winter as far as the eightieth or eighty-ſecond degree. Thus while the inhabitants of the eaſtern parts have by means of the ice and ſnow the convenience of bringing their commodities in ſledges to the market-towns, thoſe of the weſtern ſide on the ſea coaſt are at the ſame time employed in their profitable fiſheries. However, Bergen, and all the eaſtern coaſt, is ſo ſubject to frequent rains, that the men, whenever they go abroad, wear rain-hats made like umbrellas, and the women in all weathers ſecure themſelves by wearing a woollen or ſilk black veil over their heads.

In ſummer the weather is not only warm but extremely hot. Theſe violent heats, which are, however, of ſhort duration, may be partly derived from the valleys incloſed within high mountains, where the reverberation of the rays of the ſun on all ſides heat the air; and as there is almoſt no night, neither the atmoſphere nor the mountains have time to cool. Indeed there cannot be a more deciſive proof of the ſummer's heat in Norway, than that ſeveral vegetables, and particularly barley, in ſome places grow up and ripen within ſix weeks or two months.

With reſpect to the coaſt, that on the weſt of Norway is ſurrounded by a great number of iſlands and rocks, ſome of the former being three, ſix, or nine Norway miles in length, and pretty fertile; but moſt of them are ſmall, and inhabited by only a few fiſhermen and pilots. The rocks, which riſe ſeveral fathoms above the ſurface of the water, are a kind of rampart that defends the coaſt, and amount to ſome hundred thouſands. They form abundance of good harbours; and in many places iron rings are faſtened to them for mooring ſhips, where there is not ſea-room or good anchorage. As the water is calm and ſmooth, they are of great ſervice to coaſters, the violence of the waves being broken againſt theſe barriers, while the open places are very dangerous, and every year prove fatal to many ſmall veſſels. The ſhore of Norway is generally ſteep and perpendicular, ſo that cloſe to the rocks, the depth of the ſea is from a hundred to two, three, or four hundred fathoms.

Several gulphs and creeks run forty, fifty, and ſixty miles into the land, and in ſome of them, which are but from fifty to a hundred fathoms in breadth, runs a narrow channel four hundred fathoms deep; but on the ſides the depth does not exceed a hundred fathoms.

As the country is extremely mountainous, the arable land is but little in compariſon of the waters and deſarts, which obliges the inhabitants to procure half their ſubſiſtence from the ſea. Hence the villages are ſmall, and the houſes ſcattered among the vallies: in ſome places, however, thoſe of the peaſants ſtand ſo high on the edge of ſteep precipices, that ladders are fixed to climb up to them; ſo that when a clergyman is ſent for, who is unuſed to the road, he riſks his life in aſcending them, eſpecially in winter, when the ways are ſlippery. In

ſuch places the bodies of the dead are let down with ropes, or brought down on men's backs, before they are laid in a coffin; and at ſome diſtance from Bergen, they are obliged in winter to draw the mail over the ſteepeſt mountains.

One of the principal inconveniencies experienced by travellers ariſes from the roads; for they cannot, without terror, paſs even the king's road, which in ſeveral places extends up the ſides of ſteep and craggy mountains on ways that are either ſhored up, or ſuſpended by iron bolts fixed in the mountains; and, though not above the breadth of a foot path, have no rails on the ſide. If two travellers were to meet there in the night, and not ſee each other ſoon enough to ſtop where the road will ſuffer them to paſs, they muſt ſtop ſhort, without being able to paſs by each other, or to find a turning for their horſes, or even to alight. The only reſource I can imagine in this difficulty, ſays the biſhop of Bergen, is, that one muſt endeavour to cling to ſome cliff of this ſteep mountain, or, if help be at hand, be drawn up by a rope, and then throw his horſe headlong down a tremendous precipice, in order to make room for the other traveller to paſs.

The caverns of the mountains alſo afford ſhelter to the wild beaſts, which render it difficult to extirpate them; and it is not eaſy to deſcribe the havoc made by the lynxes, foxes, bears, and eſpecially wolves, among the cattle, goats, hares, and other uſeful animals.

Another diſadvantage is, that the cows, ſheep, and goats belonging to the peaſants often fall down the precipices, and are deſtroyed. Sometimes they make a falſe ſtep into a projection called a mountain-hammer, where they can neither aſcend nor deſcend: on this occaſion a peaſant chearfully ventures his life for a ſheep or a goat; deſcending from the top of a mountain by a rope of ſome hundred fathoms in length, with his legs over a croſs ſtick, till he ſets his foot on the place where he finds his goat, when he faſtens it to the rope, and it is drawn up along with himſelf. But the moſt amazing circumſtance is, that he runs this riſk with the help of only a ſingle perſon, who holds the end of the rope, or faſtens it to a rock, if there be one at hand proper for that purpoſe. There are inſtances of the aſſiſtant himſelf having been dragged down, and ſacrificing his life from his fidelity to his friend, on which both have periſhed. When a man or beaſt has thus the misfortune to fall ſome hundred fathoms down the precipices, it is obſerved, that the air preſſes with ſuch force againſt the bodies thus falling, that they are not only deprived of life for ſome time before they reach the ground, but their bellies burſt, and their entrails come out, which is plainly the caſe when they fall into deep water.

From the multitude of ſprings that iſſue from the mountains, and the vaſt maſſes of ſnow accumulated on their ſummits, which gently diſſolves in ſummer, are formed many lakes, in ſome of which are floating iſlands, and a conſiderable number of rivers, the largeſt of which is the Glommen, or Glamer; but none of them are navigable far up the country: the paſſage being every where interrupted by rocks, and in ſome places by dreadful cataracts, in which the ſtream precipitates itſelf from the height of forty, fifty, and even a hundred fathoms. The bridges over theſe rivers are not walled, but formed of timber caſes filled with ſtones, which ſerve for the piers on which the timbers are laid. The largeſt bridge of this kind has forty-three ſtone caſes, and is a hundred paces in length. In thoſe places where the narrowneſs and rapidity of the current will not admit of ſinking theſe caſes, thick maſts are laid on each ſide on the ſhore, with the thickeſt end faſtened to the rocks: one maſt being thus laid in the water, another is placed upon it, reaching a fathom beyond it, and then a third or fourth in like manner to the middle of the ſtream, where it is joined by other connected maſts from the oppoſite ſide. Thus in paſſing over the bridge, eſpecially in the middle, it ſeems to ſwing, which to thoſe who are not uſed to theſe bridges appears extremely dangerous, ſo that filled with terror they alight from their horſes, and lead them over.

The mountains of Norway are, however, attended with ſome advantages: a great chain of them ſerves as a barrier between this country and Sweden; and beſides, they exhibit the moſt delightful proſpects; for here nature has added greater beauties to the ſituation of cottages and farm-houſes, than in other countries can be enjoyed by royal palaces, though aſſiſted by all the varieties of groves, terraſſes, canals, and caſcades. A predeceſſor of mine, ſays the biſhop of Bergen, is ſaid to have given the name of the Northern Italy to the diſtrict of Waas, which lies ſome leagues to the eaſtward of Bergen; and certainly there cannot be a more inchanting proſpect. All the buildings in it are the church, the parſonage, and a few farm-houſes ſcattered on different eminences. The beauty of the place is much heightened by two uniform mountains gradually riſing to a vaſt height, betwixt which runs a valley near half a league in breadth, and a river which ſometimes precipitates itſelf down the rocks in foaming cataracts, and at others ſpreads itſelf into ſmall lakes. On both ſides it is bordered with the fineſt meadows intermingled with little thickets, and by the eaſy declivities of the verdant mountains covered with fruitful fields and farm-houſes, ſtanding above each other in a ſucceſſion of natural terraſſes. Between theſe a ſtately foreſt preſents itſelf to the view, and beyond that the ſummits of mountains covered with perpetual ſnow, and ten or twelve ſtreams iſſuing from the ſnowy mountains, form an agreeable contraſt in their meanders along the blooming ſides of the hills, till they loſe themſelves in the rivers beneath.

Within the bowels of ſome of the mountains are ſeveral of the moſt beautiful kinds of marble, ſome white, others veined with blue, and others variegated with a variety of colours: there is likewiſe black marble ſpotted with white, green marble with greyiſh veins, and blue marble with white veins. They alſo contain ſuch quantities of the magnet or loadſtone, that ſome tons of them have been exported: they likewiſe yield the aſbeſtos, of which incombuſtible linen and paper have been made.

It will not be unentertaining to the reader to ſee here a particular account of the aſbeſtos, or amianthus, as deſcribed by Dr. Pontoppidan, biſhop of Bergen: "Having heard of ſome wood petrified by a certain ſpring, "I wrote, ſays he, for ſome ſamples, and a large parcel "of it was ſent me. At firſt I thought it reſembled "hazle, that had lain a long time in the water; but "upon a narrower inſpection, and drawing out ſome of "the filaments, I found it to be amianthus, much finer "than the Greenland ſtone-flax, which the reverend "Mr. Egede ſays is uſed there as wicks in the lamps, "without being in the leaſt waſted, while ſupplied with "oil or fat. This amianthus, from the ſoftneſs and "fineneſs of its fibres, deſerves to be called ſtone ſilk, "rather than ſtone-flax: I alſo made a wick for a lamp "of it, and it was not conſumed; but its light being "much dimmer than that produced by cotton, I laid it "aſide. I have alſo in my poſſeſſion a piece of paper of "this aſbeſtos, which when thrown into a fierce fire is "not in the leaſt waſted; but what was written on it to-"tally diſappears.

"The manner of preparing this ſtone-ſilk or ſtone-"flax is this: After its being ſoftened in water, it is "beaten with a moderate force, till the fibres, or long "threads, ſeparate from each other; afterwards they are "carefully and repeatedly waſhed till clear of all terrene "particles; then the flax is dried in a ſieve: all that re-"mains now is to ſpin theſe fine filaments, wherein "great care is required; beſides which the fingers muſt "be ſoftened with oil, that the thread may be the more "ſupple and pliant."

Though this country thus abounds in ſtones, no flints have yet been found there, ſo that thoſe for fire-arms are imported from Denmark or Germany: but though there are no flints, there are amethiſts, garnets, chalcedonies, agate, jaſper, and cryſtals.

Norway formerly produced gold; but the expence of working the mines, and ſeparating the gold from the ore, being greater than the profit, they have been neglected. There are, however, ſilver mines, which are extremely valuable, and give employment to ſeveral thouſand perſons. The copper-mines are alſo extraordinary rich, and employ great numbers: one of the moſt profitable productions of this country is iron, ſeveral hundred thou-

ſand

ſand quintals being annually exported chiefly in bars, and the reſt caſt into cannon, kettles, ſtoves, and the like. Here are likewiſe ſome lead-mines, but none of tin or quickſilver.

SECT. II.

Of the Corn, Fruit, and Trees; Beaſts, Inſects, Birds, and Fiſhes of Norway.

THOUGH this country is ſituated ſo far to the north, it produces rye, barley, white, grey, and green peas, vetches, which are uſed as provender for horſes; hops, flax, and hemp; many kinds of roots and greens for the kitchen, with a conſiderable number of hardy flowers. There are ſeveral kinds of cherries, of which the peaſants ſell great quantities dried; there are alſo many ſorts of wholeſome and well-taſted berries, as ſtrawberries, raſberries, red and white currants, red and white gooſeberries, ſun-berries, barberries, biſberries, cranberries, blackberries, and many others; ſeveral kinds of plumbs attain to a tolerable ripeneſs; but this is ſeldom the caſe with peaches, apricots, and grapes. However, ſeveral ſorts of apples and pears are found all over the country; but the greateſt part of theſe are ſummer fruit, which ripen early; for winter fruit ſeldom come to perfection, except the ſummer proves hotter, and the winter ſets in later than uſual. But though Norway is inferior with reſpect to its fruits than many other countries in Europe, yet this deficiency is compenſated by its inexhauſtible foreſts, from which moſt of the provinces are enabled to receive immenſe ſums from foreigners for beams, maſts, planks, and boards; beſides the great conſumption for houſes built at home, entirely of beams of wood, ſhips, bridges, and a prodigious number of founderies, which require an immenſe quantity of charcoal in the fuſion of metals; to which we muſt add, that in many places the woods are felled only to clear the ground, and are burnt for the ſake of the aſhes, which ſerve for manure.

In treating of the animals in Norway, we ſhall begin with the horſes, which are of greater uſe in riding than in drawing; they have an eaſy pace, are full of ſpirit, and very ſure-footed. When they mount or deſcend a ſteep rock on ſtones, like ſteps, they firſt tread gently with one foot, to try if the ſtone they touch be faſt, and in this they muſt be left to themſelves, or the beſt rider will endanger his neck; but when they are to go down a very ſteep and ſlippery place, they, in a ſurprizing manner, draw their hind-legs under them and ſlide down. They ſhew great courage in fighting with the wolves and bears, which is very uſual with them; for when a horſe perceives any of theſe furious animals advancing towards him, and has a mare or gelding with him, this generous animal places them behind him, and then attacks his antagoniſt, by ſtriking at him with his fore-legs, with ſuch courage, that he commonly remains conqueror. Both the Norway horſes and cows are generally of a yellowiſh colour, but the latter are ſmall, and yield no great quantity of milk; however, their fleſh has a fine grain, is juicy, and well-taſted. The ſheep are alſo ſmall, and reſemble thoſe of Denmark.

In many places the goats run wild in the fields, both in winter and ſummer, till they are ten or twelve years old, and when the peaſant to whom they belong is reſolved to take them, he muſt either do it by ſome ſnare or ſhoot them: They are ſo bold, that on the approach of a wolf, they ſtay to receive him, and if they have dogs with them, will reſiſt a whole herd. They alſo frequently attack the ſnakes, and when they are bit by them, not only kill, but eat them, after which they are never known to die of the bite, though they are ill for ſeveral days. If theſe goats are tame, the owner warms their own milk, and with it waſhes the wound.

The biſhop of Bergen obſerves, on mentioning theſe animals, that near Roſtadt is a flat and naked field, on which no vegetable will grow. The ſoil is almoſt white, with grey ſtripes, and has ſomewhat ſo peculiarly poiſonous in its nature, that though all other animals may ſafely paſs over it, a goat or kid no ſooner ſets its foot upon it, than it drops down, ſtretches out its legs, its tongue hangs out of its mouth, and, if it has not inſtant help, it expires.

Norway has few ſwine, and not many of the common deer; but the hares, which in the cold ſeaſon change from brown or grey to a ſnow white, are very cheap in winter. In ſome parts of the country there are elks, but they are not numerous. The rein-deer, however, run wild in herds, and are ſhot for food by the inhabitants. Of theſe animals we have given a deſcription in treating of Swediſh Lapland; but the author juſt mentioned takes notice of one or two particulars that ought not to be omitted: he ſays that when the rein-deer ſheds his horns, and others riſe in their ſtead, they appear at firſt covered with a ſkin, and till they are of a finger's length, are ſo ſoft, that they may be cut with a knife like a ſauſage, and are delicate eating, even when raw. The huntſmen, therefore, when far out in the country, and pinched for want of food, eat them, and find that they ſatisfy both their hunger and thirſt. But when the horn is grown, there breeds within the ſkin a worm, which eats away the root. The ſame gentleman alſo takes notice, that the rein-deer can draw over his eyes a kind of ſkin, through which he can ſee, when otherwiſe in the hard ſnows, he would be obliged to ſhut his eyes entirely: a ſingular inſtance of the wiſdom and benevolence of the Creator, in providing for the wants of each creature according to its deſtined manner of life.

Beſides the bears and wolves, already mentioned, there are here the lynx; vaſt numbers of white, red, and black foxes; and the glutton, which receives its name from its voracious appetite. Thoſe of this country, in their ſhape and ſize, have ſome reſemblance to a long-bodied dog, with thick legs, ſharp claws and teeth; his colour is black, variegated with brown and yellowiſh ſtreaks: he has the boldneſs to attack every beaſt he can poſſibly conquer, and if he finds a carcaſe ſix times as big as himſelf, he will not leave it, while there is any left: when fully gorged, ſays our author, he preſſes and ſqueezes himſelf between two trees that ſtand near together, and thus empties himſelf of what he has not time to digeſt. As his ſkin ſhines like damaſk, and is covered with ſoft hair, it is much valued, and it is therefore well worth the huntſman's while to kill the animal without wounding the ſkin, which is done by ſhooting him with a bow and blunt arrows.

The marten is likewiſe hunted for the ſake of its ſkin; as are alſo the ermine and the ſquirrel, both of which are ſhot with blunt arrows. The ſkin of the ermine is of a beautiful white, and it has a black ſpot on the tail. Theſe little animals run after mice like cats, and drag away what they catch, particularly eggs, which are their greateſt delicacy. Here are alſo otters, caſtors, hedgehogs, and badgers.

Among the mice, ſome are thought poiſonous, and others are remarkable for their being white, and their having red eyes. But the moſt pernicious vermin is a little animal called the læmus or lemming, which is between the ſize of a rat and a mouſe; the tail is ſhort, and turned up at the end, and the legs are alſo ſo ſhort, that they ſcarce keep the belly from the ground. They have very ſoft hair, and are of different colours; particularly black, with yellow and brown in ſtreaks, and ſome in ſpots. About once or twice in every twenty years, ſays our reverend author, they aſſemble from their ſecret abodes in prodigious numbers, like the meſſengers of heaven to puniſh the neighbouring inhabitants. They proceed from Kolen's rock, which divides the Nordland manor from Sweden, and is held to be their peculiar and native place, marching in vaſt multitudes through Nordland and Finmark to the weſtern ocean; and other bodies of them through Swediſh Lapmark to the Sinus Bothnicus, devouring all the graſs and vegetables in their way. They do this in a direct line, and going ſtraight forward, proceed into the rivers or the ſea: thus, if they meet with a boat in any river, they run in at one end, or ſide, and out again at the other, in order to keep their courſe. They carry their young with them on their backs, or in their mouths, and if they meet with peaſants who come to oppoſe them, they will ſtand undaunted, and bark at them like dogs. This evil is, however,

however, of ſhort duration; for on entering the ſea, they ſwim as long as their ſtrength laſts, and then are drowned. If any are ſtopped in their courſe, and unable to reach the ſea, they are killed by the froſts of winter, and if any of theſe eſcape, moſt of them die as ſoon as they eat the new graſs.

With reſpect to the reptiles, toads and ſnakes are only in the ſouthern parts of this country, and theſe ſnakes are leſs poiſonous than in warmer climates. There are lizards here of various colours, as brown, green, and ſtriped; thoſe that are green are found in the fields, and the others in the cracks and holes in the rocks.

There are here moſt of the fowls to be found in the reſt of Europe, and ſome that appear peculiar to this country. Among the former are common poultry, turkies, tame and wild geeſe, peacocks, ducks, and pigeons; nightingales, larks, quails, partridges, ſtarlings, wrens, magpyes, bats, water-wagtails, ſtorks, herons, gulls, owls, ravens, cormorants, falcons, eagles, and many others. Of the latter, there are only two ſpecies, the rock-eagle and the fiſh-eagle; the former is ſomewhat leſs than the other, and ſpotted with grey; it haunts the higheſt places in the country, and frequently kills hares, ſheep, lambs, and the like animals, as well as birds. The farmers here ſay, that he will ſometimes attack a deer, in which caſe he makes uſe of the following ſtratagem: he ſoaks his wings in water, and then covering them with ſand, and flying againſt the deer's face, blinds him for a time, when the pain makes him run about as if mad, and he frequently falls down a rock and breaks his neck, upon which the eagle ſeizes upon him for his prey. There are alſo many accounts of their carrying away young children.

The fiſh-eagle is of a larger ſize, and of a light brown. Though it does not diſlike a dead carcaſe on ſhore, it lives principally on fiſh, which it often takes from the otters, and frequently ſeizes fiſh on the ſurface of the water. When this bird flies out to ſea, in order to ſtrike a fiſh with his talons, he ſometimes lays hold of ſuch as are too ſtrong for him, particularly the fiſh here called the queite, whoſe high and prominent back makes him appear much leſs than he really is: when the eagle ſtrikes his talons into him, he cannot eaſily diſengage them, on account of their crookedneſs and length, in which caſe the fiſh drags him down with him; while the bird, making a miſerable cry, ſtrives to keep himſelf up, and works with his wings ſpread as long as poſſible, though in vain; for at laſt he muſt yield, and fall a prey to thoſe he intended to devour. Our author mentions another inſtance, in order to ſhew that this king of birds, as he is called, extends his attempts beyond his power. Near Bergen, an eagle ſtanding on the bank of a river, ſaw a large ſalmon as it were juſt under him; on which he inſtantly ſtruck one of his talons into the root of an elm near it, and partly hanging over the river, ſtruck the other into the ſalmon, which being large and ſtrong, ſwam away, and ſplit the eagle to his neck.

Among the birds in a manner peculiar to this country is the francolin, an excellent land-bird, which ſerves the Norwegians inſtead of the pheaſant, its fleſh being white, firm, and of a delicious taſte.

The great northern diver is a pretty large ſea bird, bigger than a gooſe. It has a long neck, the upper part of which is black, as well as the beak and feet; but from the breaſt downwards it is white. There are alſo ſome white feathers at the extremity of the wings and tail. The wings are ſo ſhort, that they can hardly raiſe themſelves with them; and the legs ſtand ſo far backward, that they are leſs fit to walk with than to paddle along the water, on which account they are ſeldom ſeen to come aſhore. They are ſaid to lay but two eggs, and that under their wings there are two pretty deep holes big enough to put one's fiſt in. In each of theſe they hide an egg, and hatch the young ones there as perfectly, and with leſs trouble than others do on ſhore.

The Norwegian parrot is a middle-ſized ſea bird ſomewhat larger than a pigeon. Its feathers are black and white, and its beak, which is hooked like that of a parrot, is ſtriped with yellow, red, and black, and ſo ſharp, that when he bites any of the bird-catchers, he takes away a piece of fleſh: his claws are alſo very ſharp, with which, and his beak, he defends himſelf againſt the raven, whom he holds by the throat, and will carry out to ſea, and drown him before he loſes his hold. This bird builds his neſt in a ſlanting hole in the ground, two or three ells deep, and alſo between the clefts of the rocks.

The black cap is almoſt as ſmall as the wren; the body is black and yellow, white under the belly, and the top of the head black. Theſe birds keep near the houſes, and are ſuch lovers of meat, that the farmers can hardly keep them from it, and therefore catch them in a trap like mice. In ſhort, there are ſuch incredible numbers of ſea and land fowl near the rocks on the ſea ſhore, that they ſometimes obſcure the ſight of the heavens for many miles out at ſea, ſo that one would imagine that all the fowls in the univerſe were aſſembled in one flock.

Norway is alſo as plentifully ſupplied with fiſh as any country in the world. There are here whales of ſeveral kinds, purpoſes, ſword-fiſh, and ſharks; ſturgeon, ſalmon, ſalmon-trout, turbot, cod, thornback, rock-fiſh, flying-fiſh, whiting, carp, gurnet, flounders, plaiſe, mackrel, herrings, bream, anchovies, eels, and many others well known in other countries.

Among thoſe which are more uncommon is the fin-fiſh, which is forty feet or more in length; their liver alone yields ſeveral caſks of train-oil. On their backs they have a high round and ſharp bone, with which they tear open the bellies of other fiſh. They are covered with a kind of hair, ſomething like a horſe's mane, and are often ſeen about the boats of the fiſhermen, who are as much afraid of them as of the moſt dangerous ſea monſter.

The ink-fiſh, called by ſome the ſea-gnat, is one of the moſt extraordinary creatures produced in the ocean, and are from nine inches to upwards of two feet in length. The head has two large eyes, and the mouth has ſome reſemblance to a bird's beak; above which there ſtand two long arms or horns, each of which is octangular, and covered with a number of ſmall round balls, ſomewhat longer than a pin's head. At the back of the head are two of theſe horns twice as long as the reſt, and broader towards the end. The body is almoſt round; it reſembles a ſmall bag, and is blunt at both ends. On each ſide of it are two ſkinny membranes, with which the animal can cover itſelf over; and it aſſumes various forms by the motion of its ſkin and arms: but what muſt appear very extraordinary, the fore part of the body is filled with a black fluid, which makes the fiſh appear of a blue colour, though this fluid is of a fine black, and may ſerve for ink to write with. When theſe creatures are in danger, they diſcharge this liquid, which blackening the water all round them, they become inviſible to their purſuers, and thus make their eſcape. Thus this otherwiſe helpleſs animal is provided by the wiſe Creator for its defence. If any of this black fluid happens to drop upon the hand, it burns like a cauſtic.

There are here alſo a vaſt variety of ſhell-fiſh, as lobſters, crabs, craw-fiſh, prawns, ſhrimps, oyſters, muſcles, cockles, ſea-ſnails, ſtar-fiſh, hermit-fiſh, and many others; one of the moſt curious of which is the ſea-urchin, known alſo by the name of the ſea-apple, a name that repreſents the ſize and figure of the thin and tender ſhell that ſurrounds this extraordinary fiſh, which are very common on the coaſt of Norway, where they are ſeen every day. They are of various ſizes, from that of a walnut to the head of a new-born infant; ſome are of the form of a cone, and others are quite round, except the under part, which is pretty flat, and of theſe are the greateſt number. The ſhell is covered with a multitude of ſmall ſharp prickles like ſmall pins, which they probably ſhed once a year, and have new ones. When they are juſt taken out of the ſea, they have a beautiful greeniſh luſtre; but their greateſt beauty appears when they are dried, boiled, and the prickles rubbed off. This conſiſts in certain regular interchangeable ſtripes of a cylindrical form, running from the top to the bottom: ſome are white, others of an orange colour, others of a light red, and others of a deep red; and theſe ſtripes are ſtrewed over with as many little white knobs as there were originally prickles. When this beautiful ſhell is broken, which is

eaſily done, there is found in it a quantity of ſlime and water, with a ſmall fiſh, of a black or dark red colour; and from this little body there runs into all the turnings and windings of the ſhell a great number of fine threads, that ſeem only compoſed of a thicker ſlime, and have a communication with the external prickles; and between theſe is diſpoſed in ſtripes a yellowiſh ſpawn. The fiſh lies ſtretched from the bottom to the top of the ſhell, where there is an almoſt imperceptible opening, through which the excrements paſs. The mouth, which is extremely curious, is formed of five bones, part convex and part concave, all running to a ſmall point, where they join together like the bill of a bird, and have ſome reſemblance to a flower. The ſea-urchin is found in a ſandy bottom, where he rolls himſelf about on his prickles wherever he pleaſes.

SECT. III.

Of the Perſons, Dreſs, Houſes, Food, and Employments of the Norwegians; with a particular Account of the extraordinary Manner in which they catch Fowl on the higheſt Rocks.

THE Norwegians are generally tall of ſtature, well made, and lively; yet thoſe on the coaſt are ſaid to be neither ſo tall nor ſo robuſt as thoſe who inhabit the mountains, but are remarkable for being fatter and having rounder faces. The hair and eyes of the Norwegians are of a lighter colour than thoſe of moſt other nations; and a dark complexion is as rare here, as a fair complexion in Italy. Indeed their eyes are generally blue or of a light grey; and they are in every reſpect a different people from the Laplanders, who lie farther to the north, and are of a ſmaller ſtature, have a flatter viſage, a dark brown complexion, and black hair.

The Norwegians in general are briſk, active, and ſo ingenious, that the peaſants employ neither hatters, ſhoe-makers, weavers, taylors, tanners, carpenters, joiners, or ſmiths: all theſe trades being exerciſed in every farm-houſe, and they think a boy can neither be an uſeful member of ſociety, nor a good man, without becoming maſter of all theſe arts.

The Norwegians, who live in towns, have nothing remarkable in their dreſs; but the peaſants do not trouble themſelves about faſhions. Thoſe termed ſtrile farmers have their breeches and ſtockings of one piece. They have a wide looſe jacket, made of a coarſe woollen cloth, as are alſo their waiſtcoat; and thoſe who are fond of appearing fine, have the ſeams covered with cloth of a different colour. The peaſants of one pariſh are remarkable for wearing white cloaths edged with black: the dreſs of another pariſh is black edged with red, and that of another is all black; others wear black and yellow: and thus the inhabitants of almoſt every pariſh vary in the colour of their cloaths.

They wear a flapped hat, or a little brown, grey, or black cap, made quite round, and the ſeams adorned with black ribbons. They have ſhoes of a particular conſtruction without heels, conſiſting of two pieces, the upper-leather ſitting cloſe to the foot, and the ſole being joined to it by many plaits and folds. In winter, and when they travel, they wear a ſort of half boots that reach up to the calf of the leg, and are laced on one ſide; and when they go on the rocks in the ſnow, they put on ſnow-ſhoes: but as theſe are troubleſome, when they have a great way to travel, they put on ſnow-ſkates, which are about as broad as the foot, but ſix or eight feet long, and pointed before; they are covered underneath with ſeal-ſkin, ſo that the ſmooth grain of the hair turns backwards to the heel. With theſe ſnow-ſkates they ſlide as faſt upon the ſnow as upon the ice, and no horſe can keep pace with them.

The peaſants never wear a neckcloth, or any thing of that kind, except when they are dreſſed; for their neck and breaſt are always open, and they let the ſnow beat into their boſoms: on the contrary, they cover their veins, binding a woollen fillet round their wriſts. About their body they wear a broad leather belt, a dorne with convex braſs plates, to which hangs a braſs chain that holds their large knife, gimblet, and other tackle.

The women at church, and in genteel aſſemblies, are dreſſed in jackets laced cloſe, and have leather girdles, with ſilver ornaments about them. They alſo wear a ſilver chain three or four times round the neck, with a gilt medal hanging at the end of it. Their handkerchiefs and caps are almoſt covered with ſmall ſilver, braſs, and tin plates, buttons, and large rings, ſuch as they wear on their fingers, to which they hang again a parcel of ſmall ones, which make a jingling noiſe when they move. A maiden-bride has her hair platted, and hung as full as poſſible with ſuch kind of trinkets, as alſo her cloaths: for this purpoſe they get all the ornaments they can.

Their houſes are generally built of fir and pine-trees, the whole trunks of which are only chopped even to make them lie cloſe, and then laid one upon another, and faſtened with mortices at the corners. Theſe trunks are left round as they grow, both on the inſide and outſide of the houſe, and are frequently boarded over and painted, eſpecially in the trading towns, which gives them a genteel appearance.

The people in the country villages build their houſes at a diſtance from each other, with their fields and grounds about them. The ſtore-houſe for the proviſions is generally at a diſtance from the dwelling-houſe, for fear of fire, and placed high upon poles, to keep the proviſions dry, and preſerve them from mice and all kinds of vermin. The kitchen alſo ſtands ſeparate, as do the cow-houſes, barns, ſtables, and the like. A farm has generally a mill belonging to it, ſituated by ſome rivulet; beſides a ſmith's forge. Up the country, where timber for building is of little value, there are many farm-houſes as large as the ſeats of noblemen: theſe are frequently two ſtories high, and have a railed balcony in the front, and the additional buildings reſemble a village. The common farm-houſes have, however, only the ground-floor, and no other window but a ſquare hole in the wall, which in ſummer is left open; but in winter, or in wet weather, is filled up with a wooden frame, covered with the inward membrane of ſome animal that is very ſtrong, and as tranſparent as a bladder. This hole, which is as high as poſſible, alſo ſerves to let out the ſmoke, by anſwering the purpoſe of a chimney.

Under the above hole there is generally placed a long thick table, with benches round it; and at the upper end is a high ſeat, which belongs ſolely to the maſter. In the towns theſe houſes are covered with tiles; but in the country the people lay over the boards the ſappy bark of birch trees, which will not decay in many years. They cover this again three or four inches thick with turf, on which graſs or moſs always grows.

The people are remarkable for their civility, and are willing to do any one all the ſervice in their power. Hence a traveller is ſeldom permitted to pay for his lodging; for they think it their duty to treat a ſtranger as well as they can, and think he does them an honour by accepting of their civilities: yet the peaſant never gives his place at the upper end of the table to the greateſt gueſt that ever comes under his roof; for he thinks that place belongs only to himſelf. They keep open-houſe at Chriſtmas for three weeks, during which their tables are ſpread and loaded with the beſt proviſions they can afford. At Chriſtmas-eve their hoſpitality extends to the very birds, for whoſe uſe they hang on a pole at the barn-door an unthreſhed ſheaf of corn, which draws thither the ſparrows and other ſmall birds.

In the trading towns the inhabitants live with reſpect to proviſions much in the ſame manner as the Danes; but the peaſants keep cloſe to the manners of their forefathers. Their oat-cakes are their common bread, but upon particular occaſions, as at weddings, or other entertainments, they have rye bread. However, if grain be ſcarce, which is uſually the caſe after a very ſevere winter, the peaſants have recourſe to what even they eſteem a diſagreeable method of preſerving life, by boiling and drying the bark of the fir-tree, mixing it with a little oatmeal, and making it into a ſort of bread. Even in times of plenty they eat a little of this, in order that when there is a ſcarcity, they may think it the leſs diſagreeable.

The beſt dainties of the Norway peaſants conſiſt in milk, meats, and different ſorts of cheeſe, on which they ſpread butter as on bread. The highland peaſants are ſo fond of angelica, which grows very plentifully in the mountains, that they chew it in a morning dried, and alſo make ſnuff of it.

The mountains furniſh the people with game, and the lakes and rivers with plenty of freſh-water fiſh. They kill cows, ſheep, and goats for their winter ſtock, part of which they pickle and ſmoak, and ſome of it they cut in thin ſlices, ſprinkle it with ſalt, then dry it in the wind, and eat it like hung beef. They are fond of brandy, and of chewing and ſmoaking tobacco.

The peaſants employ themſelves in cutting wood, felling and floating of timber, burning of charcoal, and extracting of tar. Many are alſo employed in the mines, furnaces, and ſtamping mills; and alſo in navigation and fiſhing, beſides hunting and ſhooting; for every body is at liberty to purſue the game, eſpecially in the mountains, and on the heaths and commons, where every peaſant may make uſe of what arms he pleaſes.

SECT. IV.

The Hardineſs of the Norwegians; the Manner in which they carry on their Fiſhing, and their Agriculture; with their aſtoniſhing Methods of catching Fowl.

THE Norwegians are inured to cold and hardſhips from their childhood; for in the latter end of November they run about bare-foot, even upon the ice. The mountaineers who daily go in the woods have frequently their beards full of iſicles, and their boſom full of ſnow. Our author ſays, that in his travels over the higheſt mountains of Norway, which are covered with ſnow, and where horſes are of no ſervice, he has ſeen the peaſants in great numbers do the work of theſe animals, which they ſeem almoſt to equal in ſtrength. When they have been in a profuſe ſweat, he ſaw them throw themſelves every half hour upon the ſnow, for the ſake of its refreſhing coolneſs, and even ſucked it to quench their thirſt. This they undergo without the leaſt apprehenſions of a cold, or a fever, and without murmuring, or betraying the leaſt diſcontent. On the contrary, they go on ſinging merrily, and with incredible chearfulneſs and alacrity undergo the hardeſt labour imaginable for nine hours together.

The ſtrong conſtitutions of the fiſhermen and ſeafaring people of this country are no leſs remarkable. The peaſants of both ſexes aſſemble together in prodigious numbers about the middle of January, to make their winter-harveſt of the rich produce of the ocean. The people of every family at theſe times take with them five or ſix weeks proviſions, which chiefly conſiſt of dried fiſh. They keep out at ſea all day and a great part of the night, by moon-ſhine in open boats; and after that croud together by ſcores into little huts built in the iſlands near the coaſt, where they have hardly room to lay themſelves down in their wet cloaths. Here they repoſe themſelves the remainder of the night, and the next morning return to the ſame laborious employment with as much pleaſure and chearfulneſs as if they were going to a merry-making.

Agriculture in Norway is leſs burthenſome to the former than in other parts; for he does not here toil in the fields of an oppreſſive lord; but the fruits of his labour, as in the Britiſh dominions, are his abſolute and certain property. But, on the other hand, it is in many places attended with great inconvenience and fatigue: the fields conſiſting of little ſpots of ground among the rocks, many of which muſt be dug inſtead of being plowed, and particularly in the dioceſe of Bergen, where the ſoil is leſs fruitful, and affords few places where the plough can be uſed. Inſtead of this they ſometimes uſe a crooked ſtick, with an iron at the end, which yielding eaſier to the ſtones, is not ſo ſubject to break. Nor is the harveſt without its difficulties; the grain, according to the old cuſtom of the peaſants, not being mowed with a ſcythe, except about Chriſtiana, where it is lately come into uſe, but cut with a ſickle; for the corn often grows ſo thick and cloſe, and the ſtalks are ſo apt to bend with the weight of the ears, that the reapers graſp the ſtems with one hand, while they cut them with the other, and then bind them in ſheafs: that they may be thoroughly aired and dried, a great number of poles are ſet up in the fields, and ſix or eight ſheafs hung to each pole. No waggons are uſed in harveſt work, except on the frontiers, where they have been introduced; but inſtead of them the Norway peaſants uſe ſledges, and are prejudiced againſt any other kind of vehicle, even in places where waggons might eaſily travel, though their work would be performed with much greater eaſe and expedition. But in this and every thing elſe they are ſo ſuperſtitiouſly tenacious of the cuſtoms tranſmitted to them by their forefathers, that they will not venture to move a ſtone which their parents had ſuffered to lie.

The catching of birds affords ſome of the inhabitants a very good maintenance: but it is impoſſible to give a juſt idea of the fatigue and danger with which the people ſearch for the birds in the high and ſteep rocks, many of which are above two hundred fathoms perpendicular. Theſe people who are called birdmen have two methods of catching them: they either climb up theſe perpendicular rocks, or are let down from the top by a ſtrong and thick rope. When they climb up they have a large pole of eleven or twelve ells in length, with an iron hook at the end. They who are underneath in a boat, or ſtand on a cliff, faſten this hook to the waiſtband of the man's breeches who climbs, by which means they help him up to the higheſt projection he can reach, and fix his feet upon. They then help up another to the ſame place; and when they are both up, give each his bird-pole, and a long rope which they tie at each end round their waiſts. The one then climbs up as high as he can, and where it is difficult the other, by putting his pole under his breech, puſhes him up, till he gets to a good ſtanding-place. The uppermoſt of the two then helps the other up to him with the rope; and thus they proceed till they get to the part where the birds build, and there they ſearch for them. As they have many dangerous places ſtill to climb, one always ſeeks a convenient ſpot where he can ſtand ſecure by being able to hold himſelf faſt, while the other is climbing about. If the latter ſhould happen to ſlip he is held up by the other, who ſtands firm; and when he has paſſed in ſafety thoſe dangerous places, he fixes himſelf in the ſame manner, that he may enable the other to come ſafe to him; and then they clamber about after birds where they pleaſe. But ſometimes accidents happen; for if one does not ſtand firm, or is too weak to ſupport the other, when he ſlips, they both fall and are killed; and every year ſome periſh in this manner.

On their thus reaching the places that are ſeldom viſited, they find the birds ſo tame, that they may take them with their hands, they being unwilling to leave their young; but where they are wild, they throw a net over them in the rock, and entangle thoſe that are flying, with a net fixed to the end of their poles. Thus they catch a vaſt number of fowls, and the boat keeping underneath them, they throw the dead birds into it, and ſoon fill the veſſel. If the weather continues favourable, and there be a great deal of game, the birdmen ſometimes continue eight days together on the rocks; where they find holes or caverns, in which they can ſecurely take their repoſe. In this caſe they draw up proviſions with lines, and boats are kept coming and going to carry away the game they have caught.

As many of the rocks are ſo ſteep and dangerous, that they cannot poſſibly climb up them, they are then let down from above; when they have a ſtrong rope, eighty or a hundred fathoms long, and about three inches in thickneſs. One end of it the birdman faſtens about his waiſt, and then drawing it between his legs, ſo that he can ſit on it, he is let down with his bird-pole in his hand, by ſix men at the top, who let the rope ſink by degrees, but lay a piece of timber on the edge of the rock, for it to ſlide on, to prevent its being torn to pieces by the ſharp edge of the ſtones. Another line is faſtened round the man's waiſt, which he pulls to give ſigns

when he would have them pull him up, let him lower, or keep him where he is. He is in great danger of the ſtones looſening by the rope, and falling upon him; he therefore wears a thick furred cap well lined, which ſecures him from the blows he may receive from ſmall ſtones; but if large ones fall, he is in the greateſt hazard of loſing his life. Thus do theſe poor men often expoſe themſelves to the moſt imminent danger, merely to get a ſubſiſtence for their families. There are ſome indeed who ſay there is no great hazard in it, after they are accuſtomed to it; but at firſt the rope turns round with them, till their heads are giddy, and they can do nothing to ſave themſelves. Thoſe who have learnt the art make a play of it; they put their feet againſt the rock, throw themſelves ſeveral fathoms out, and puſh themſelves into what place they pleaſe. They even keep themſelves out on the line in the air, and catch with their poles numbers of birds flying out and into their holes. The greateſt art conſiſts in throwing themſelves out, ſo as to ſwing under the projection of a rock, where the birds gather together: here they fix their feet, looſen themſelves from the rope, and faſten it to to a ſtone, to prevent its ſwinging out of their reach. When a man has done this, he climbs about and catches the birds either with his hands or his pole, and when he has killed as many as he thinks proper, he ties them together, faſtens them to the ſmall line, and by a pull gives a ſign for thoſe above to draw them up. In this manner he works all day, and when he wants to go up, he either gives a ſignal to be drawn up, or, with his belt full of birds, works himſelf up with his hands and feet.

In caſe there are not people enough to hold the rope, the birdman fixes a poſt in the ground, faſtens his rope to it, and ſlides down without any help. After which he goes to work as before. In ſome places there are ſteep cliffs of a prodigious ſize lying under the land, and yet above two hundred yards above the water, which are likewiſe very difficult to be got at. Down theſe cliffs they help one another in the above manner, and taking a ſtrong rope with them, faſten it here and there in the cliff where they can, and leave it all the ſummer: upon this they will run up and down, and take the birds at pleaſure.

It is impoſſible to deſcribe how dreadful and dangerous this bird-catching appears to the beholders, from the vaſt height and exceſſive ſteepneſs of the rocks, many of which hang over the ſea. It ſeems impoſſible for men to enter the holes under theſe projections, or to walk a hundred fathoms high on crags of rocks, where they can but juſt fix their toes.

After the birds are brought home, they eat part of them freſh, and part is hung up to dry for the winter ſeaſon. Theſe birds afford the inhabitants a good maintenance, partly from their feathers, which are gathered and ſent to foreign parts, and partly from their fleſh and eggs; ſome ſorts of which are as good as hens eggs, and are ſent to market, though they are of various colours and ſizes.

SECT. V.

Of the Religion and Government of the Norwegians.

LUTHERANISM is the eſtabliſhed and almoſt the only religion in Norway, except in the province of Finmark, where are ſtill no inconſiderable number of pagans, but no hardſhip, expence, or labour is ſpared for their converſion. The firſt meaſures for the reformation of religion in Norway, were taken in the year 1528, and were compleated in 1537. In 1607 a new hierarchy, or church government, was eſtabliſhed: in every ſee there is a biſhop: the biſhop of Chriſtiana is the principal, and takes place of all the reſt. Under the biſhops are the provoſts, the preachers, and the chaplains, or curates, with inferior church officers. A pariſh uſually contains more churches than one; whence the parochial incumbent has often the care of many.

With reſpect to the laws of Norway, king Olave is ſaid to have been the firſt legiſlator of this country, and to have inſtituted a law for the puniſhment of robbery, fraud, and aſſaults. King Chriſtian IV. publiſhed a new body of laws for Norway, which were in force till the reign of Chriſtian V. who cauſed a new digeſt to be drawn up, and theſe are the only laws now obſerved in the kingdom. This law-book was printed in one volume in quarto at Copenhagen in 1687; the ſubſtance of it is taken from that of Denmark, with only a few alterations made neceſſary by the different circumſtances of the two kingdoms.

At preſent the chief officer in Norway is a vice-ſtadtholder, who is preſident of the ſupreme court of judicature at Chriſtiana, which is the general tribunal for all Norway, to which there lies an appeal in all cauſes from the inferior courts of the ſeveral dioceſes, or general governments, in this kingdom; but may, however, be removed to the ſupreme court at Copenhagen.

Each of the four dioceſes, or general governments, into which Norway is divided, has its general governor; and under theſe are the prefects. The office of both is the ſame as in Denmark.

Next to the prefects are the ſecretaries, and the collectors, who levy the king's taxes, and pay them into the hands of the receiver.

Over the nine provincial courts are nine judges: there are alſo inferior judges, each of whom, in conjunction with eight aſſiſtants, has the power of deciding cauſes within his diſtrict. Beſides, in the four chief cities of Norway, Chriſtiana, Chriſtianſand, Bergen, and Drontheim, are preſidents appointed by the king; and under theſe, as in all other towns, are collectors. There are likewiſe collectors of the toll, comptrollers over the farmers of the duties, and commiſſaries of proviſions in this part of his Daniſh majeſty's dominions.

With reſpect to the diviſions of Norway, nature has divided the main land of this kingdom into two parts by the immenſe chain of mountains called Dofrefield and Langfield, which ſeparate the weſtern and northern parts that lie near the ſea, from the ſouthern and eaſtern, or inland parts. Here it muſt be obſerved, that the high lands which lie to the ſouth and eaſt of theſe mountains are called Sondenfield, or South-land; while that lying north of Dofrefield and weſt of Langfield towards the ſea, is called Nordenfields, or North-land.

But, according to the political diviſion of this country, it conſiſts of four general governments; two of which, that is Chriſtiana and Chriſtianſand, lie in the ſouth; and Bergen and Dontheim in the north part of the kingdom. The eccleſiaſtical diviſion into four biſhoprics, is agreeable to the civil, and as the general governments are ſubdivided into prefectures, and diſtricts or fiefs, ſo the biſhoprics are ſub-divided into provoſtſhips and pariſhes.

SECT. VI.

Of the four Governments of Norway, and the principal Places in each; particularly of the Silver-Mines of Kongſberg.

THE government of Chriſtiana, or Aggerhuus, is the largeſt in the ſouth part of the kingdom, and the richeſt in all Norway. Its principal city is Chriſtiana, which is ſaid to be the moſt magnificent city in the kingdom; it is regularly built, is of conſiderable extent, and carries on a great trade. Here the governor and the biſhop of Chriſtiana reſides, and here are held the general and provincial high courts of judicature. It has a work-houſe, and two ſuburbs called Waterland and Peper-Vigen; through the firſt runs a river, which riſes in Maridalen. We have, however, no particular deſcription of the buildings of this city, which is ſituated in fifty-nine degrees fifty minutes north latitude, and in ten degrees fifteen minutes eaſt longitude.

Kongſberg is a flouriſhing mine town in this government, that contains no leſs than ten or eleven thouſand ſouls, among whom are a congregation of Danes and another of Germans. A mint was ſet up in this town ſo early as the year 1686, and in 1689 the mine college was erected. Kongſberg is moſt famous for its ſilver mines, which are the richeſt in all Norway. Theſe were

dif-

diſcovered in 1623, upon which the town was immediately built, and peopled with German miners. In 1751, forty-one ſhafts and twelve veins were wrought in the four reviers of this mine, in which three thouſand five hundred officers, artificers, and labourers are uſually employed. The rich ore in this mine is found only in diſperſed ſtratas and interrupted veins. Even pure ſilver is ſometimes dug out of it; and in 1647 ſome gold was found among the ſilver, of which king Chriſtian IV. cauſed the famous Brillen ducats to be coined, with this legend, VIDE MIRA DOMINI; See the wonderful works of the Lord. In the year 1697, a vein of gold was diſcovered here, of which ducats were coined, which on one ſide had this inſcription, CHRISTIAN V. D. G. REX DAN. NORW. V. G. The legend on the reverſe was from the book of Job: VON MITTERNACHT KOMMT GOLD: that is, Out of the north cometh gold. Kongſberg, December 1, 1697.

Theſe mines are in a mountain between Kongſberg and the river Jordal: but it has been found that the ſilver ore is not, as was as firſt imagined, limitted to that mountain, but extends its veins for ſome miles, throughout the adjacent diſtricts; which is proved by the new mines that are from time to time undertaken in ſeveral places, and moſt of them carried on very proſperouſly. One of the moſt ancient and rich of all the mines, named Old God's Bleſſing, has ſometimes within a week yielded ſeveral hundred pounds weight of rich ore. This mine never fails to fill the beholder with amazement at its aſtoniſhing depth, which is no leſs than an hundred and eighty perpendicular fathoms; and the circumference at the bottom forms a clear of ſome hundreds of fathoms. Here the ſight of thirty or forty piles, burning on all ſides in this gloomy cavern, and continually fed, in order to mollify the ſtone in the proſecution of the mines, ſeems, according to the common idea, an image of hell; and the ſwarms of miners, covered with ſoot, and buſtling about in habits according to their ſeveral employments, may well paſs for ſo many devils; eſpecially when, as a ſignal that a mine is going to be ſprung in this or that courſe, they roar aloud, Berg-livet! Berg-livet! Take care of your lives!

Frederickſhall is a famous frontier town towards Sweden, ſituated in latitude fifty-five degrees, twenty-ſix minutes, at the mouth of the river Tiſtedal, where it diſcharges itſelf into the Spineſund. This town was formerly called Halden, and was a mean place, under the juriſdiction of the magiſtracy of Frederickſtadt; yet it made a very gallant defence againſt the Swedes in 1658 and 1659, by means of a ſmall intrenchment or rampart. It was afterwards ſtrengthened with additional fortifications; and in 1660 ſuſtained a third ſiege from the Swedes; and Charles Guſtavus is by ſome thought to have received here the wound of which he died. Five years after, this town received a charter with the privileges of a city. In 1716 and 1718, the inhabitants again diſtinguiſhed themſelves by the vigorous defence they made againſt the attacks of the Swedes; and here, on the eleventh of December 1718, Charles XII. of Sweden was ſhot in the trenches. King Frederic IV. ordered a pyramid twenty feet high to be erected on the ſpot where that hero fell. Its ſides were decorated with military trophies, the arms of Sweden, and the king's name; and the top was ſurmounted with a gilt crown. On four marble tables at the baſe, were one Latin, and two Daniſh inſcriptions in golden letters. But king Chriſtian VI. in compliment to Sweden, ordered this pyramid to be taken down. The town itſelf is of no great ſtrength; but on a high rock oppoſite to it, ſtands the ſtrong fortreſs of Frederickſtein, and there are other ſmaller forts near it. This city has been ſeveral times deſtroyed by fire.

Frederickſtadt was built in 1567 by Frederic II. who granted it a favourable charter, and removed the provincial court thither. It lies thirty-four miles to the ſouth of Frederickſhall, and is governed by a town magiſtrate, and its chief trade is in timber. Frederickſtadt was regularly fortified in 1655 by Frederick III. and new works have been ſince added to it; ſo that its ſtrength by nature and art, and its convenient ſituation, render it the moſt important fortreſs in Norway.

The general government of Chriſtianſand is ſituated in the moſt ſouthern extremity of Norway, and is bounded on the north by the government of Chriſtiana, and on the eaſt, ſouth, and weſt by the North Sea. This province is fertile in corn, and has ſeveral rivers, one of which is the Mandel, which in one place has a bridge laid over it from one rock to another, thirty-ſix feet above the ſurface of the water. At a ſmall diſtance from this bridge is a cataract, where a very uncommon method of fiſhing is practiſed; the fiſhermen go under the cataract, which forms an arch over their heads, to catch the ſalmon, at the extreme hazard of their lives, in a hole in the rock. This government conſiſts of four prefectures, five diſtricts, and has two provincial courts.

The principal city of this government is Chriſtianſand, which is ſituated on the eaſtern coaſt, in the fifty-ninth degree three minutes north latitude, and is the reſidence of the biſhop and the general governor, where is a cathedral and epiſcopal ſchool. This city was built by Chriſtian IV. between the year 1641 and 1643, and is thus called from its founder, and the great ſande, or ſtrand, on which it is built. It is of a ſquare form, and the ſtreets are broad, regular, and handſome. Its ſituation is very commodious, three ſides of it being ſurrounded either with freſh or ſalt water, and on the fourth it has a communication with fine meadows and the mountains. In 1734 the church, with the greateſt part of the city, was deſtroyed by fire.

The ſmall town of Arndal is remarkable for its ſituation on a rock in the midſt of the river Nid. It has a good wharf, and moſt of the houſes ſtand on the acclivity of the rock, the reſt being built on piles in the water. The ſtreets are only formed of bridges of boats, by means of which the inhabitants go from houſe to houſe. The water is of ſufficient depth for the largeſt ſhips to lie alongſide of the bridges. As the church ſtands high, and almoſt on the ſummit of the rock, there is an aſcent to it from the houſes by a great number of ſteps hewn out of the rock. The inhabitants make a good uſe of the commodious ſituation of this town for trade, by employing many ſhips and dealing largely in timber.

The government of Bergen is from two hundred and forty to three hundred miles in length, and contains only the ſingle prefecture of Bergenhuus, including ſeven diſtricts, and the ſame number of provoſtſhips. This country is very populous, and is remarkable for its having ſeven marble quarries; but produces little corn.

The only city we ſhall deſcribe in this government is that of Bergen, its capital, which has the greateſt trade in all Norway. It is ſituated in the ſixty-firſt degree eleven minutes north latitude, in the midſt of a valley, and built in a ſemicircular form, on the ſides of a bay called by the inhabitants Waag. It is ſo well fortified by nature on the land ſide by lofty mountains, ſeven of which are remarkably high, while the defiles or paſſes between them are quite impracticable to an enemy, and towards the ſea the harbour is well defended by ſeveral fortifications. All the churches, public edifices, and moſt of the houſes along the ſtrand are built with ſtone. This city formerly contained thirty churches and convents; but it has at preſent only four pariſh churches, three of which are Daniſh, and one German, with a church in the large hoſpital of St. Jurgen, and a ſmall chapel in St. James's church-yard. The caſtle of Bergen is a noble ſtructure. The large cathedral ſchool was founded in 1554, by biſhop Petrus, who alſo endowed it, and, by the liberality of king Frederick II. and others, twelve ſcholars are maintained and educated in it. The navigation ſchool founded here, which once flouriſhed greatly, is now fallen to decay. The ſeminarium Fredericianum alſo deſerves notice, it being a noble foundation, where moral and natural philoſophy, the mathematics, hiſtory, with the Latin and French languages, are taught. This city carries on a large trade in all kinds of fiſh, tallow, hides, and timber; and the returns are moſtly made in corn and foreign commodities. The number of its inhabitants are computed at thirty thouſand.

The general government of Drontheim is the moſt northern province in Norway, and the largeſt in extent. It borders on the North Sea, on Sweden, and Swediſh Lapland.

Lapland. A range of iſlands extends from north-eaſt to ſouth-weſt, and between them and the continent runs a large bay called Weſt Fiorden. Among the above iſlands is a remarkable kind of current, or whirlpool, called the Moſkoeſtrom, in the ſixty-eighth degree of latitude, near the iſland of Moſkoe, from which this whirlpool takes its name. Its violence or roarings exceed thoſe of a cataract, being heard at a great diſtance, without any intermiſſion, except for a quarter of an hour at the turn of high and low water, when its impetuoſity ſeems at a ſtand, and fiſhermen venture in: but this motion ſoon returns, and let the ſea be ever ſo calm, gradually increaſes with ſuch a draught and vortex, as abſorb whatever comes within their ſphere of action, keeping it for ſome hours under water, when the fragments, ſhivered by the rocks, appear again. This circumſtance, among others, makes ſeveral authors firmly believe, that here is an abyſs penetrating the globe, and iſſuing in ſome very remote parts; and Kircher is ſo particular as to aſſign the gulph of Bothnia. But the learned biſhop of Pontoppidan obſerves, that, after the moſt exact reſearches, this is but a conjecture without any foundation; it having no other cauſe than the colliſion of the waves riſing and falling at the flux and reflux, againſt a ridge of rocks and ſhelves, which confine the water, ſo that it precipitates like a cataract; and thus the higher the flood riſes, the deeper muſt be the fall, the natural reſult of which is a whirlpool.

Mr. Ramus is of the ſame opinion, and obſerves, that at the time of flood the ſtream runs up the country between the iſlands of Lofoden and Moſkoe, with a boiſterous rapidity; but the roar of its impetuous ebb to the ſea is ſcarce equalled by the loudeſt and moſt dreadful cataracts, the noiſe being heard at ſeveral leagues diſtance. The whirlpool is then of ſuch extent and depth, that if a ſhip comes within its attraction, it is inevitably abſorbed, and daſhed to pieces againſt the rocks at the bottom. But when the ſtream is moſt boiſterous, and its fury heightened by a ſtorm, it is dangerous to come within one Norway, or ſix Engliſh miles of it, boats, ſhips, and yachts, having been carried away, by not guarding againſt it, before they were within its reach. It frequently happens that even whales coming too near the ſtream, are over-powered by its violence; and then it is impoſſible to deſcribe their howlings and bellowings in their fruitleſs ſtruggles to diſengage themſelves. A bear once attemping to ſwim to the iſland of Moſkoe, in order to prey on the ſheep at paſture in the iſland, afforded the like ſpectacle to the people; for the ſtream caught him and bore him down, while he roared terribly ſo as to be heard on ſhore. Even large firs and pine-trees, after being abſorbed by the current, riſe again, with their trunks broken and torn to ſuch a degree, that they ſeem as if covered with briſtles.

The general government of Drontheim contains three prefectures, which are thoſe of Drontheim, Nordland, and Finmark.

The principal city in this province is that of Drontheim, which is in the prefect of the ſame name. It is two hundred and ſixty-one miles north-eaſt of Bergen, in the ſixty-third degree ſixteen minutes north latitude, and in the tenth degree fifty-five minutes eaſt longitude from London. It is ſituated on the river Nid, which almoſt ſurrounds it, and had formerly ten churches and five convents, but at preſent it has only two churches beſides that at the hoſpital. The cathedral, which was a ſuperb edifice built with marble, was all burnt down in 1530, except the choir, which is rather too large for the preſent church, and is ſtill called the cathedral. This city is the reſidence of the general governor and the biſhop. It has a fine cathedral ſchool, a ſeminary of miſſionaries, an orphan houſe, a work-houſe, a houſe of correction, and an hoſpital. A conſiderable trade in timber, fiſh, tallow, and copper, is carried on in this city; which is defended by fort Chriſtianſtein, erected in 1680; it has alſo ſome fortifications on the land-ſide; and the caſtle of Munkholmen, which ſtands on a rock in the harbour of Drontheim, and defends both the city and harbour towards the ſea.

CHAP. VII.

Of DENMARK.

SECT. I.

The Iſlands and Country included under that Name. Their Situation, Climate, and Produce in general.

DENMARK, properly ſo called, conſiſts of two pretty large, and ſeveral ſmall iſlands, together with the peninſula of Jutland. It is remarkable that though all theſe together conſtitute the kingdom of Denmark, not any one of theſe is ſeparately called by that name.

Denmark is ſituated exactly to the north of Germany, and is ſeparated from it by the Baltic, and by the Leven and the Eider, which divide Jutland from Germany; to the weſt, it is waſhed by the North-Sea; to the north, it has the Categate; and to the eaſt, is bounded by the Baltic. Between the continent and the iſlands, Funen and Zealand are the famous ſtreights, called the Sound, which divides Denmark, or, in other words, the iſland of Zealand, from Sweden. The Sound is about a thouſand three hundred and thirty-one fathoms broad, and is the common paſſage out of the North-Sea into the Baltic. This, with the other ſtreights, called the Great-Belt and the Little-Belt, are reckoned part of the king of Denmark's dominions, and all ſhips that paſs that way are obliged to pay a toll, according to the value of the cargoes with which they are laden.

Beſides the places juſt mentioned as conſtituting the kingdom of Denmark, there are many others ſubject to that ſtate, particularly the kingdom of Norway, juſt deſcribed, with the iſlands Faroe, Iceland, and part of Greenland, half of the dutchy of Holſtein, with the counties of Oldenburg and Delmenhorſt in Germany; the citadel of Chriſtianſburg on the coaſt of Guinea; the iſlands of St. Thomas and St. John, with ſome of the Caribbee iſlands, and St. Croix in America; the town of Tranquebar, with its territory, and the iſlands of Nicobar on the coaſt of Coromandel, in the Eaſt-Indies. We are here to conſider only what is properly termed Denmark.

It is difficult to determine the extent of the whole kingdom of Denmark, with any tolerable degree of exactneſs, becauſe its parts are not contiguous to each other; but we ſhall hereafter give the extent of every part ſingly.

The air in North Jutland is pretty cold and piercing; but on the eaſt ſide of South Jutland, and in the iſlands of Funen and Zealand, it is milder and more temperate: however, in the low and marſhy part, and in the iſland of Laaland, the air is thick, moiſt, and unhealthy. The ſhifting of the winds, indeed, while it renders the weather ſomewhat variable, at the ſame time purges the air of fogs and vapours. The weſt wind, which frequently blows in theſe parts, is the moſt violent.

Denmark lies moſtly low and on a level, and, except the tract of land about the middle of Jutland, is very fertile; ſo that the country maintains the inhabitants in plenty, and yields every thing neceſſary for the ſupport of human life: but the inhabitants can better diſ-

penſe with their horned cattle and horſes for exportation, than with their corn. The ſea coaſts, lakes, ponds, rivers, and brooks of this country yield abundance of fiſh. Denmark produces no wine, no metals, and very little ſalt. Moſt of the provinces have wood ſufficient for their neceſſary occaſions; but as this is not the caſe with them all, the Danes are obliged to burn a great deal of turf.

We ſhall give a more particular account of the produce of this kingdom in treating of its ſeveral parts, and ſhall now proceed to the inhabitants, their manners, cuſtoms, and government.

SECT. II.

The Perſons, Dreſs, Manners, and Cuſtoms of the Danes.

THE Danes are generally tall and ſtrong limbed; they have good features, and an agreeable complexion; their hair is fair, and for the moſt part yellow or red; and, as few of them wear wigs, they take a great deal of pains in combing and curling their locks. As red hair is natural to the country, they have not the folly to be aſhamed of it, and therefore do not endeavour to conceal or change the colour. Both the gentlemen and ladies in ſummer dreſs very ſplendidly after the French mode; but in winter, like the reſt of the northern people, they wrap themſelves up in furs or wool. The winter dreſs of the ladies, which is Daniſh, is very convenient and becoming. The burghers, the ſervants, and even the peaſants, are neat in their linen, which they often change, and all who can afford it are fond of making a ſplendid appearance.

The lord Moleſworth ſays, that he never knew a country where the minds of the people are more upon a level; and that as there are none of extraordinary qualifications to be found, who excel in particular arts or ſciences, ſo there are ſeen no enthuſiaſts, madmen, natural fools, or whimſical people; but a certain equality of underſtanding reigning among them, every one plods on in the ordinary beaten track of common ſenſe, without deviating to the right or left. The people in general, however, read and write, and their clergy uſually talk Latin. We cannot ſay how far this nobleman was prejudiced in the account he has given of theſe people; but the encouragement given to learning, and the modern improvements that have been made in Denmark, by the introduction of the arts and ſciences, has rendered his picture extremely unlike the original.

We are informed by that nobleman, that the vices which the gentry are moſt addicted to are gluttony and drunkenneſs. When they ſit down to eat and drink, ſays he, they never know when to riſe; but the debauch ſometimes continues whole days and nights. The firſt thing a friend is preſented with at his entering the houſe, is a dram of brandy; and they no ſooner ſit down to dinner, but all the men and women have a glaſs ſet by their plates; and, on propoſing a health, all take off their glaſſes together, and by that means make quick diſpatch: the women indeed, he ſays, retire ſoon after dinner; but the men ſit till they have loſt that little ſenſe which falls to their ſhare. But after all, there is nothing more unjuſt than theſe national reflections, which have frequently no other foundation than that circle of acquaintance which a ſtranger happens to fall into while he reſides in a country; and indeed where they are juſt at one time they are far from being ſo in another; for cuſtoms like theſe differ greatly within the compaſs of an age.

The liquor drank by people of rank are chiefly rheniſh wine, cherry brandy, and all ſorts of French wine; while the common people drink beer and malt ſpirits. The tables of the great are covered with a variety of diſhes. They have no fallow deer, woodcocks, pheaſants, or rabbits; and red deer being the king's game, are not to be purchaſed: their beef and veal are excellent, as are alſo their bacon and hares. The common people, whether in town or country, generally live upon coarſe rye bread, lean ſalt meat, ſtock-fiſh, roots, and bad cheeſe, ſeldom taſting of freſh-meat, except on ſome extraordinary feſtivals, as on St. Martin's eve, when each family in Denmark never fails to make merry, and to have a roaſted gooſe for ſupper. As to the peaſants, they chiefly live on roots, greens, white meats, and rye bread. Sea fiſh is ſcarce, and not very good; but the river fiſh make amends, here being moſt excellent perch, carp, and craw-fiſh. One cannot expect very extraordinary fruit ſo far to the north; yet the gentry do not want ſuch as are very tolerable; and ſome of the nobility have grapes, melons, peaches, and all ſorts of ſallads very early, and in great perfection.

It is ſaid to be difficult for ſtrangers to find the conveniencies of lodging and boarding in Denmark; for even in Copenhagen there are few lodgings to be let in private houſes, and in the taverns people muſt be content to eat and drink in a public room, into which any other company may enter.

With reſpect to their marriages, they are ſometimes contracted three, four, or more years before the ceremony is performed. The gentry give portions with their daughters; but the burghers and peaſants only give cloaths, houſhold goods, and a great wedding dinner, which are all they part with till their death.

Magnificent burials and monuments are uſual with the nobility, and ſometimes the body of a perſon of quality is kept in a vault, or the chancel of a church, for ſeveral years together, till they have an opportunity of celebrating the funeral with ſufficient ſplendor. The poorer ſort are buried in great thick cheſts, and in the towns there are about a dozen common mourners belonging to each pariſh, who are obliged to carry and attend the people to their graves.

SECT. III.

Of the Language of the Danes; their Skill in the Arts and Sciences; the Manufactures carried on in the Country; their Commerce and trading Companies; with their Coins, Weights, and Meaſures.

THE Daniſh language is only a dialect of the Swediſh and Norwegian; whence the inhabitants of theſe three nations in general underſtand each other, except in a few words and phraſes. The modern Daniſh is a mixture of the antient Gothic, Friſian, and German languages; and, with reſpect to the pronunciation, has ſome affinity with the Engliſh, with which it has many words in common.

The number of learned men in Denmark is ſaid to be now as conſiderable as in any other country in Europe of its extent, for there is ſcarce any branch of literature in which the men of genius of this kingdom have not acquitted themſelves with honour. Beſides the univerſity at Copenhagen, which conſiſts of four colleges, the academy at Soroe, and the ſeminary at Odenſe, there are ſeveral ſchools well endowed in country towns, where the maſters are not only liberally provided for, but the ſcholars are inſtructed and partly maintained gratis. In 1742 a royal academy of ſciences was inſtituted at Copenhagen, with a royal ſociety for the improvement of the northern hiſtory and languages. Societies for the improvement of the uſeful arts and manufactures, and of the ſeveral branches of natural philoſophy, have been inſtituted; and in 1736 the Theatrum Antomico-Chirurgicum and ſeveral libraries were erected. At Copenhagen is alſo an academy for painting, ſculpture, and architecture; and there the polite arts are in high eſteem.

Scarce any manufactures were carried on in Denmark in the laſt century; for they were firſt introduced by Frederick IV. and Chriſtian VI. There are at preſent artiſts of extraordinary ſkill at Copenhagen, and every branch of the mechanic arts is well executed in Denmark. Silks, ſtuffs, and velvets; cloth, cottons, and woollen ſtuffs; gold and ſilver lace, tapeſtry, ſtockings, and hats; with different ſorts of hardware, are alſo made in this kingdom: as are likewiſe porcelain and fire-arms. Here are beſides paper and copper mills, one ſilk and two cotton printing-houſes; with manufactories of ſope, ſtarch, ſteel, glue, ſugar, tobacco, and lacquer. The lace of Tondern, and the gloves of Odenſe and Randers, are allowed to be excellent in their kind. Indeed no manufactures

factures are now permitted to be imported into Denmark; and, ſince the year 1736, the wearing of jewels, gold and ſilver ſtuffs, and foreign lace, has been alſo prohibited. In 1738 a general warehouſe, or magazine, was opened at the exchange, in Copenhagen, to which manufacturers bring all the wares they cannot diſpoſe of in other towns, and are paid ready money for them; and from this warehouſe the goods are delivered out to the retail traders on credit.

Indeed as Denmark enjoys the moſt commodious ſituation for navigation and commerce, it might be made the center of the important trade of the North, and particularly that carried on in the Baltic.

All the commerce of this kingdom was formerly carried on by the Hanſe-towns; but they were afterwards ſupplanted by the Engliſh and Dutch, but chiefly by the latter. The Danes firſt began to carry on their own trade in the reign of Chriſtian III. it was encouraged by Chriſtian IV. and in the reign of Chriſtian V. was carried on in their own bottoms; but Frederick IV. may be called the real founder of the Daniſh commerce, which was ſupported by Chriſtian VI. and Frederick V, by his munificence, endeavoured to carry it to its higheſt pitch. The ſtrict application of the Danes to navigation and commerce partly appears from the ſeveral opulent companies eſtabliſhed at Copenhagen.

The principal of theſe is the royal Aſiatic company, firſt erected in 1616, and confirmed by a royal charter in 1698, which was renewed with proper regulations in 1732 and 1744. This company trades to Tranquebar on the coaſt of Coromandel, where they have a governor, and to Canton in China. They carry on this commerce almoſt entirely with current ſpecie, or bullion; and in return bring chintz, cottons of all ſorts, muſlins, pepper, tea, ſalt petre, &c. For theſe commodities they receive conſiderable ſums of money from foreigners, who take them off their hands, and by this means refund the ſpecie carried out of Denmark. They alſo ſupply their own country with all theſe merchandizes. This company ſends two ſhips annually to Canton, which return richly laden, and two or three more to Tranquebar.

The Weſt India and Guinea company, which was formerly eſtabliſhed by charter, was diſſolved in 1754, and the trade to America laid open to the natives of Denmark, Norway, and Sleſwic; but in 1755 the king eſtabliſhed an African company, with a capital of five hundred actions, every action conſiſting of five hundred rixdollars, which are divided between thirteen adventurers.

There is alſo eſtabliſhed by a royal charter a general trading company, inſtituted in order to carry on ſuch branches of trade as no private adventurers are able to undertake; and at the ſame time to ſerve as a kind of academy for young merchants. This company was incorporated in 1747, and enjoys conſiderable privileges. Its actions are one thouſand, each of which conſiſts of five hundred rixdollars, but only three hundred are paid down; ſo that their fund amounts to no more than three hundred thouſand rixdollars: but the remaining two hundred of every action may be demanded on any emergency. This company carries on a trade to France, Spain, the Mediterranean, the Baltic, and likewiſe to Greenland, by ſending ſhips to the whale fiſhery.

The Iceland and Finmark company, who obtained their laſt charter in 1746, have monopolized the trade to Iceland and Finmark; but that charter is to expire in 1771.

Beſides, other Daniſh adventurers, trade to different ports of Europe; but the imports in Denmark always exceed the exports: however, it is quite the reverſe in the kingdom of Norway.

The Aſſignation-Exchange, or Loan-Bank, was erected at Copenhagen in 1736. The bank-notes are drawn for a hundred, fifty, or ten rixdollars, and paſs through all the king's dominions, and the public offices, as current ſpecie. Great and ſmall ſums, not under a hundred rixdollars, are lent out of this bank at four per cent. on depoſiting a ſufficient pledge. The capital ſtock is no more than five hundred thouſand rixdollars, and though their circulating notes amount to much more, they are in very good credit.

There is alſo an office of inſurance for ſhips at ſea, eſtabliſhed by charter. The number of ſhips that annually enter the port of Copenhagen is very conſiderable; for it appears that above three thouſand ſhips and ſmaller veſſels, laden with all ſorts of merchandize, eſpecially timber, materials for building, and proviſions, were entered at the cuſtom-houſe in the year 1752.

The current coins in Denmark are, a roſe-noble, which is eighteen ſhillings ſterling; a ducat, nine ſhillings; a rixdollar, four ſhillings and ſixpence; a ſlet-dollar, three ſhillings; a rix-mark, about eleven-pence; a ſlet-mark, about nine-pence; and a ſtiver, a penny; beſides theſe there are ſeveral copper coins of ſmall value.

The weights are the great and ſmall hundred, the firſt a hundred and twenty pounds, and the other a hundred and twelve pounds; they have alſo their liſpound, which is as much as our ſtone of fourteen pounds; and their ſhippound, which is twenty liſpounds. A Daniſh ell is about one-third leſs than the Engliſh; and a Daniſh mile almoſt ſix Engliſh miles.

SECT. IV.

Of the Religion and eccleſiaſtical Juriſdiction of Denmark.

THE Danes, in antient times, paid religious worſhip chiefly to the gods Fryer, Thor, Thyr, Odin, and Freya, and in the Daniſh language four days in the week ſtill retain the names of the four laſt imaginary deities; of which Odin was the chief. Several attempts were made at different times, in the middle ages, to convert the Danes to Chriſtianity, and in 882, Ebbo, biſhop of Rheims, preached the goſpel in Denmark. King Harald Klag, who fled for refuge to the emperor Lewis, conſenting to be baptized, was attended back to his kingdom by ſeveral monks, who founded churches in many places in Denmark, particularly at Haddebye, in the dutchy of Sleſwic, where the firſt Daniſh church was erected. But the ſucceeding kings were the inveterate enemies of the Chriſtians, and cruelly perſecuted the new converts; however, after various viciſſitudes of fortune, they at length obtained a free and uninterrupted toleration from king Sweno, about the year 1000.

At length, when Luther began to reſtore the doctrines of the goſpel to their genuine purity, they were favourably received in Denmark by Chriſtian II. The reformation gained ſtill more ground under Frederic I. and at the diet held at Copenhagen in 1537, was made the eſtabliſhed religion; when John Bugenhagen drew up a new body of eccleſiaſtical laws, and made ſeveral other good regulations.

Though the Lutheran religion is eſtabliſhed in this country, other religious ſects, as the Calviniſts, the Jews, and the Papiſts, enjoy the free exerciſe of their religion in Copenhagen, Fredericia, and Fredericſtadt. The Arminians, Mennonites, and Quakers, are alſo tolerated at Fredericſtadt; and on the iſland of Nordſtrand, the Roman-catholics enjoy the public exerciſe of their religion. By the laudable endeavours of the kings of Denmark, the light of the goſpel alſo ſhines in Finmark, Greenland, and among the inhabitants of Malabar, on the coaſt of India; and in 1714, a ſociety for the propagation of the goſpel was inſtituted for that purpoſe.

The chief eccleſiaſtical juriſdiction is under the biſhops, of which there are ſix in Denmark, four in Norway, and two in Iceland. Of theſe the biſhop of Zealand and Chriſtiana have the precedence. The former is alſo third profeſſor of divinity in the univerſity of Copenhagen, and conſequently is obliged to reſide in that city. The title of archbiſhop is aboliſhed in Denmark; and both Sleſwic and Holſtein are under a general ſuperintendant.

The power of the biſhops was formerly very conſiderable in Denmark; for, with the other principal prelates, they formed the third ſtate of the kingdom; but at preſent they enjoy no other power, but what the general ſuperintendants in Germany are inveſted with. They are always appointed by the king, and are obliged, every three years, to viſit the churches and ſchools in their reſ-

reſpective dioceſes; to examine and ordain new preachers; and, together with their provoſts, to hold, at ſtated times, provincial ſynods, where they preſide in conjunction with the governor of the province. Their revenue ariſes from lands, tythes, and what is called the cathedraticum, or a ſmall ſum which they receive from every church in the dioceſe. In every cathedral is a ſmall college, which conſiſts of four or five canons, who meet twice a year in the chapter-houſe, in order to ſit as judges in matrimonial and other cauſes, which were formerly decided by the canon law. There was formerly a divinity lecturer, who read public lectures weekly in every cathedral; but theſe have been laid aſide.

Next to the biſhops are the provoſts, of which there are a hundred and ſixty in the whole kingdom, who annually viſit the preachers and ſchoolmaſters within their juriſdiction; decide diſputes between the preachers and the veſtries, or pariſhes, when they are cognizable by the eccleſiaſtical law; and twice a year appear at the provincial ſynod. The provoſts have annually a rixdollar, or four ſhillings and ſixpence ſterling, from every church in their juriſdiction, and in their viſitations are entertained gratis.

Next to theſe are the preachers, whoſe aſſiſtants are called chaplains. The revenues of the Daniſh clergy, which ariſe partly from tythes and partly from the liberality of their reſpective flocks, are very conſiderable. Confeſſion money is indeed aboliſhed; but inſtead of it, the preachers enjoy the offerings made by their congregations at Chriſtmas, Eaſter, and Whitſuntide. A preacher's widow in Denmark receives half the benefit of the firſt year, and the eighth part of the income every year after, from the ſucceſſor of her deceaſed huſband. In the principal town of every dioceſe is alſo a widow's box, in which every preacher puts a certain ſum, and if his widow ſurvives him, ſhe enjoys an annuity in proportion to what he has contributed.

SECT. V.

A particular Account of the Manner in which the Danes made a voluntary Surrender of their Liberties; with the Privileges enjoyed at preſent by the Nobility, the Burghers, and the Peaſants.

IT will be proper here to give an account of an event which will always be eſteemed one of the moſt extraordinary that has ever been mentioned in hiſtory. Till about the middle of the laſt century, Denmark was governed by a king choſen by the people of all ranks, who in their choice, paid a due regard to the family of the preceding prince, and if they found one of his line properly qualified to enjoy that high honour, they thought it juſt to prefer him before any other, and were pleaſed when they had reaſon to chooſe the eldeſt ſon of their former ſovereign: but if thoſe of the royal family were either deficient in abilities, or had rendered themſelves unworthy by their vices, they choſe ſome other perſon, and ſometimes raiſed a private man to that high dignity.

One of the moſt fundamental parts of the conſtitution was the frequent meetings of the ſtates, in order to regulate every thing relating to the government. In theſe meetings new laws were enacted, and all affairs relating to peace and war, the diſpoſal of great offices, and contracts of marriage for the royal family, were debated. The impoſing of taxes was merely accidental, no money being levied on the people, except to maintain what was eſteemed a neceſſary war, with the advice and conſent of the nation, or now and then by way of free-gift, to add to a daughter's portion. The king's ordinary revenue conſiſted only in the rents of lands and demeſnes, in his herds of cattle, his foreſts, ſervices of tenants in cultivating his ground, &c. for cuſtoms of merchandize were not then known in that part of the world: ſo that he lived like one of our modern noblemen, upon the revenues of his eſtate. It was his buſineſs to ſee juſtice impartially adminiſtered; to watch over the welfare of his people, to command their armies in perſon; to encourage induſtry, arts, and learning; and it was equally his duty and intereſt to keep fair with the nobility and gentry, and to be careful of the plenty and proſperity of the commons.

But in 1660, the three ſtates, that is, the nobility, clergy, and commonalty being aſſembled, in order to pay and diſband the troops which had been employed againſt the Swedes, the nobility endeavoured to lay the whole burden on the commons; while the latter, who had defended their country, their prince, and the nobility themſelves with the utmoſt bravery, inſiſted that the nobles, who enjoyed all the lands, ſhould at leaſt pay their ſhare of the taxes, ſince they had ſuffered leſs in the common calamity, and done leſs to prevent its progreſs.

At this the nobility were enraged, and many bitter replies paſſed on both ſides. At length the principal ſenator ſtanding up, told the preſident of the city, that the commons neither underſtood the privileges of the nobility, nor conſidered that they themſelves were no better than ſlaves. The word ſlaves was followed by a loud murmur from the clergy and burghers: when Nanſon, the preſident of the city of Copenhagen, and ſpeaker of the houſe of commons, obſerving the general indignation it occaſioned, inſtantly aroſe, and ſwearing that the commons were no ſlaves, which the nobility ſhould find to their coſt, walked out, and was followed by the clergy and burghers, who proceeding to the brewers-hall, debated there on the moſt effectual means of humbling the inſupportable pride of the nobility.

The commons and clergy the next morning marched in great order to the council-houſe, where the nobles were aſſembled; and there the preſident Nanſon, in a ſhort ſpeech, obſerved, that they had conſidered the ſtate of the nation, and found that the only way to remedy the diſorders of the ſtate was to add to the power of the king, and render his crown hereditary; in which, if the nobles thought fit to concur, they were ready to accompany them to his majeſty, whom they had informed of their reſolution, and who expected them in the hall of his palace.

The nobles, filled with a general conſternation at the ſuddenneſs of this propoſal, and at the reſolution with which it was made, now endeavoured to ſooth the commons by fair ſpeeches; and urged, that ſo important an affair ſhould be managed with due ſolemnity, and regulated in ſuch a manner as not to have the appearance of a tumult.

To this the preſident replied, that they only wanted to gain time, in order to fruſtrate the intentions of the commons; who came not thither to conſult, but to act. After farther debate, the commons growing impatient, the clergy, with the biſhops at their head, and the burghers headed by their preſident, proceeded, without the nobles, to the palace; and were met by the prime miniſter, who conducted them to the hall of audience, whither the king ſoon came to them.

The biſhop now made a long ſpeech in praiſe of his majeſty, and concluded with offering him an hereditary and abſolute dominion. The king returned them thanks; but obſerved, that the concurrence of the nobles was neceſſary: he aſſured them of his protection, and promiſed to eaſe their grievances.

The nobles were all this while in the greateſt diſtraction; they could come to no reſolution, and broke up in order to attend the funeral of a principal ſenator: but while they were at a magnificent dinner, which was uſually provided on ſuch occaſions, they were told that the city gates were ſhut by the king's orders, and the keys carried to court. They were now filled with the apprehenſions of being all maſſacred, and the dread of loſing their lives took away all thoughts of their liberty: they therefore immediately diſpatched meſſengers both to the court and to the commons, to give notice of their compliance. But the king, being reſolved to purſue the affair to the utmoſt, would not ſuffer the gates to be opened till the whole ceremony of the inauguration was concluded. Three days were employed in preparing for the fatal hour, in which they were to make a formal ſurrender of their liberty. Scaffolds covered with tapeſtry were erected in the ſquare before the caſtle, and orders were given for the burghers and the ſoldiers to appear in arms, under their reſpective officers. In ſhort, on the twenty-

ſeventh of October, in the morning, the king, queen, and royal family being mounted on the theatre erected for that purpoſe, and ſeated in chairs of ſtate under velvet canopies, received publicly the homage of all the ſenators, nobility, clergy, and commons, which were performed on their knees, each taking an oath to promote his majeſty's intereſt in all things, and to ſerve him faithfully as became hereditary ſubjects. One Gerſdorf, a principal ſenator, was the only perſon who had the courage to open his lips in behalf of their expiring liberties, and ſaid, that he hoped and truſted that his majeſty deſigned nothing but the good of his people, and not to govern them after the Turkiſh manner; but wiſhed his ſucceſſors would follow the example his majeſty would undoubtedly ſet them, and make uſe of this unlimitted power for the good, and not for the prejudice of his ſubjects. None of the reſt ſpoke a word, or ſeemed in the leaſt to murmur at what was done. Thoſe who had payed their homage retired to the council-houſe, where the nobility being called over by name, and ordered to ſubſcribe the oath they had taken, they inſtantly obeyed.

Thus in four days time the kingdom of Denmark was changed from a ſtate but little different from that of an ariſtocracy, to that of an unlimited monarchy. We here ſee a houſe of commons ſtimulated by reſentment, and filled with indignation at the inſolence of the nobility, betraying their conſtituents, and inſtead of a noble effort to oblige thoſe nobles to allow them the privileges they had a right to demand, voluntarily giving up for themſelves, their conſtituents, and their poſterity, what they ought to have ſtruggled to preſerve at the hazard of their lives, and of whatever elſe might have been eſteemed valuable; while the only comfort the people had left, was to ſee their former oppreſſors almoſt as much humbled as themſelves. The clergy indeed reaped many advantages from this change; but the citizens of Copenhagen obtained little more in exchange for their liberty, than the inſignificant privilege of wearing ſwords.

The nobles of Denmark are diſtinguiſhed by the appellation of the higher and lower nobility. There never were any dukes in Denmark, beſides the king's ſons, except one nobleman named Knut Pors, who was created duke of Halland by Chriſtopher II. ſo that the rank of higher nobles includes only counts and barons. The counts enjoy certain privileges, and their younger ſons and daughters are not only ſtiled barons and baroneſſes, but enjoy the privileges annexed to that rank. In their counties they have the right of patronage, and of appointing a judge and ſecretary, from whoſe ſentence there lies no appeal, but only to the ſupreme court of judicature. They are allowed three hundred acres of land free from all impoſitions: they bear a coronet over their coat of arms; and all ſuits carried on againſt them muſt commence in the ſupreme court of judicature.

The rights and privileges of the barons is much the ſame with thoſe of the counts. The principal difference is, that the barons enjoy only one hundred acres of land free from tythes and contributions, and are ſomething inferior to the counts in rank and title.

The privileges of the lower nobility, like thoſe of the former, conſiſt in their being cited only before the king's ſupreme court, in all affairs that affect their life and honour, except they have a poſt in the militia by land or by ſea, in which caſe this privilege extends only to the ſuperior officers. No inferior judge can execute a ſentence paſſed upon them, for that muſt be done only by the judge or his commiſſary.

A lord of a manor who, beſides the produce of his manor, together with the mills and tythes, has two hundred acres of land in farm eſtate lying within two miles of his manor, is free from contribution. Lords of a manor have alſo the privilege of appointing a judge and ſecretary; that of hunting and fiſhing; the right of trover, if the proprietor of the goods found does not make his claim within a year and ſix weeks; and the right of patronage or preſentation to their own churches. Theſe are the principal privileges enjoyed by the nobility ſince the kings of Denmark became abſolute; but before that period their power roſe to the higheſt pitch.

The burghers enjoy greater or leſs privileges according to the cities of which they are members. Hence thoſe of Copenhagen enjoy the pre-eminence, and have advantages enjoyed by none of the reſt. The Daniſh peaſants are of different claſſes. Some are poſſeſſed of a ſpot of land, which may be conſidered as their own property, ſince they only make the lord of the manor ſome inconſiderable acknowledgment. Others have only a farm, for which they pay a certain rent in money, cattle, or corn, to the proprietors of their farms, and do inferior ſervices at the manor of their lord; but ſlavery, or a ſtate of vaſſalage, was entirely aboliſhed in Denmark by Frederic IV. in the year 1702, and is only continued in ſome part of the dutchy of Sleſwic.

SECT. VI.

Of the Prerogative, Court, Titles, and Arms of the Kings of Denmark; the Orders of Knighthood; the public Offices and Revenues; with a conciſe Account of the military and naval Force of the Kingdom; the civil Government of the Provinces, and the different Courts of Judicature.

THE king of Denmark, as hath been already obſerved, is an abſolute prince, and conſequently his prerogative is unbounded. He is pleaſed, however, to act by the laws framed by his anceſtors, or by himſelf and council; though he has the power of repealing and altering them as he thinks fit. He is the guardian of all the noble orphans, and none can ſell or alienate their lands, without leave of the crown, the king being entitled to a third part of the purchaſe money upon every ſale.

He has, however, few enſigns of majeſty, except ſuch as are military, as horſe and foot guards, yeomen, and the ſound of drums and trumpets; for the badges of peace, as heralds, maces, the chancellor's purſe, and the ſword of ſtate are here unknown. The officers of the houſhold are the marſhal, who regulates the affairs of the family, and gives notice when dinner or ſupper is ready; the comptroller of the kitchin, who places the diſhes of meat on the table; and the maſter of the horſe, who looks after the king's ſtables and ſtuds of mares. The king ſits down to dinner with his queen, children, relations, and general officers of the army, till the round table be filled; the court-marſhal inviting ſometimes one and ſometimes another to eat with his majeſty, till all have had their turns in that honour. A page in livery ſays grace before and after meat; for no chaplain appears here but in the pulpit. The attendants are one or two gentlemen, and the reſt livery ſervants. The kettle-drums and trumpets, which are ranged before the palace, proclaim aloud the very minute when his majeſty ſits down to table; but the ceremony of the knee is not uſed to the king.

Every winter, the ſnow is no ſooner firm enough to bear, than the Danes take great delight in going in ſledges, the king and court firſt giving the example, and making ſeveral tours about the capital in great pomp, attended by kettle-drums and trumpets; their ſledges are drawn by horſes adorned with rich trappings, and the harneſs full of ſmall bells. After the court has thus opened the way, the burghers and others ride about the ſtreets all night, wrapped up in their fur gowns, with each his female in the ſledge with him.

His Daniſh majeſty's titles at full length are, Frederic V. by the grace of God, king of Denmark and Norway, and of the Goths and Vandals; duke of Sleſwic, Holſtein, Storman, and Ditmarſch; count of Oldenburg, and Delmenhorſt.

The royal arms are parted by the Daneborg croſs into four principal quarters. In the firſt or, three lions paſſant gardant azure, ſurrounded with nine hearts gules, for Denmark. In the ſecond gules, a lion rampant crowned or, holding a Daniſh battle-ax argent, for Norway. In the third azure, three crowns or, the firſt and ſecond for Sweden. In the fourth or, a lion leopardized azure, with nine hearts gules, for antient Gothland. The eſcutcheon quarterly, in the firſt or,

two lions paſſant azure, for the Dutchy of Sleſwic. In the ſecond gules, three nettle-leaves argent, pierced with three nails of the croſs; theſe leaves are charged with a ſmall eſchutcheon argent, for the dutchy of Holſtein. In the third gules, a cygnet argent, gorged with a crown or, for Storman. In the fourth gules, a cavalier armed argent, holding a ſword pommelled or, for Ditmarſch. Upon all an ineſcutcheon in the center party per pale or, two bars gules, for Delmenhorſt; and azure, a croſs pattee or, for Jutland. The ſupporters are two ſavages armed with clubs.

The principal order of knighthood in Denmark is that of the elephant, or the blue ribbon, which ſome authors ſuppoſe to be founded in the twelfth century, by Canute VI. while others ſay, that it was inſtituted about three hundred years ago by Chriſtian I. at his ſon's wedding. Its enſign, or badge, is a white enamelled elephant with a caſtle on its back, appendant to a blue ribbon, worn over the left ſhoulder to the right ſide. Theſe knights wear on the left breaſt a ſilver ſtar of eight rays, with the Daneborg croſs in the middle of it.

The ſecond order of knighthood in this kingdom, is called the Daneborg order, or the white ribbon, which was inſtituted by Waldemar II. The badge is a gold croſs enamelled, and ſet with eleven diamonds. This hangs at a watered white ribbon with a red border, which is worn over the right ſhoulder to the left ſide. Theſe knights wear on the right breaſt a ſilver ſtar of eight rays, in which a croſs is to be ſeen, with the word reſtitutor thus divided, RE-STI-TV-TOR, and the name of CHRISTIAN V. in the middle. Both theſe orders were revived by Chriſtian V. and have their particular ſtatutes, collars, and mottos.

We ſhall now give an account of the offices by which the government is adminiſtered:

I. The privy council, or, as it is called, the ſupreme college, was firſt inſtituted on its preſent footing in the year 1679: this college at preſent conſiſts of four members, and the king, who is preſident. Under this college are the two following chanceries:

1. The Daniſh chancery, which was placed on its preſent footing in 1660, and conſiſts of a prothonotary, a maſter of requeſts, ſeveral ſecretaries, two chancery ſolicitors, notaries, regiſters, &c. To this chancery all petitions for places in the courts of judicature in Denmark and Norway, as alſo for civil and eccleſiaſtical employments, are preſented. The prothonotary, with the principal ſecretaries, and two other perſons, as aſſiſtants, conſtitute a chancery.

2. The German chancery, which was inſtituted in 1688, and conſiſts of a prothonotary, a ſollicitor, and ſeveral ſecretaries. All petitions relating to the affairs of Sleſwic, Holſtein, and Oldenburg are given into this court. It alſo carries on a correſpondence with foreign courts and ambaſſadors; and all treaties and alliances concluded with foreign powers, are diſpatched by this college. The members of the weekly chancery-ſeſſion are the prothonotary, ſome other ſecretaries, and two foreigners, as aſſiſtants.

II. The military chancery for the land ſervice, which conſiſts of a prothonotary, a recorder, or keeper of the archives, a ſollicitor, clerks, curſitors, and notaries. This college has the care of military promotions, and in general, the direction of every thing belonging to the army and to war. But the peculiar military œconomy is committed to the general commiſſion for the land ſervice. Theſe commiſſaries pay, maintain, and recruit the army, fill the magazines, keep the fortifications in repair, and have the care of the artillery. To this college are ſubject all general commiſſaries of war; all officers that have the care of proviſions, arſenals, and materials for building. The magiſtrates, and other civil officers, are under their juriſdiction, as far as they have any concern in the marching and quartering of the army. The money expended by this college, which is immediately under the king's command, is iſſued by the deputies of the finances.

III. The military chancery for the ſea ſervice, conſiſts of a prothonotary and ſollicitor. They order and direct whatever relates to naval promotions, the marine and harbours; but the peculiar management of naval affairs is under the general marine commiſſion, which has been united to the college of admiralty, ever ſince the year 1746. The admiralty college was inſtituted in 1660, and has not only the command of the fleet, but is a ſuperior court of judicature; for all the ſentences paſſed by the inferior court of admiralty come before them. The inferior court of admiralty has power over all civil and military ſubaltern officers in the navy.

IV. The treaſury and the college of the finances, are better regulated than formerly. The firſt was inſtituted by Frederic IV. who aboliſhed the college of treaſurers, and appointed in their room, a ſingle treaſurer and vice-treaſurer. He alſo introduced the college for the finances, which conſiſts of the deputies for the finances, and commiſſioners of the college of the finances. The deputies, in concert with the commiſſioners, direct all affairs relating to the finances; but the deputies alone have the management of the public money, make diſburſements, and ſubſcribe all contracts. The commiſſioners are intruſted with the care of every thing elſe that relates to the revenues, and the impoſts in money and corn; they farm the public revenues; have the inſpection of every thing that may tend to their improvement and augmentation; and ſubſcribe all repreſentations made by the chamber to the king. The chamber of finances has two chanceries: theſe are the Daniſh, or northern, which has a ſecretary and two agents; and the German chancery, which conſiſts of a ſecretary and one agent. The chamber court of judicature has a juſticiary and an agent, who manage the judicial proceedings of the chamber. The correſpondence of the chamber college is carried on, and the accompts of the collectors inſpected and adjuſted, by ſeventeen clerks of the revenues. Theſe clerks have their reſpective departments and offices, of which there are ſeven, and as many clerks, for Denmark; five for Norway; and five for the German dominions.

V. The general college for the improvement of manufactures and commerce, was inſtituted in 1735, and conſiſts of deputies and commiſſioners for the domeſtic and commercial departments, and of a Daniſh and German ſecretary. This college has the direction of every thing that may promote the increaſe of domeſtic trade, manufactures, fiſheries, and all new foundations or eſtabliſhments. By virtue of a royal ordinance, iſſued in 1753, every deputy has his particular department, but is under the controul or check of the general college.

The general eccleſiaſtical college of inſpection was inſtituted in 1737 by Chriſtian VI. and uſually conſiſts of ſix members, three divines, and as many laymen, who are all called general eccleſiaſtical inſpectors. The third lay-inſpector is alſo ſecretary of the college, and has one or two ſecretaries under him. This college has the general direction of all eccleſiaſtical affairs in Denmark and Norway, and its members inſpect into the behaviour of the clergy, and the ſtate of the univerſities and ſchools in their juriſdiction: they likewiſe paſs their cenſure on all theological treaties on religious controverſies. This college is alſo under the king's immediate juriſdiction.

The laſt college is that of the general poſt-office, which has the direction of the poſts in the two kingdoms, audits the accounts of the poſt-maſters, and inſpects into their conduct. This office has its directors, treaſuries, and reviſion chamber. In all towns the couriers for letters go out and come in twice a week. The roads are meaſured all over the kingdom, and at every quarter of a Daniſh mile the ground is a little raiſed, and a ſtone erected upon it.

We now come to the revenues of Denmark, which ariſe from the cuſtoms, particularly thoſe of the Sound, Coldingen, and Norway. A toll in paſſing from the northern ocean into the Baltic, and from the laſt into the northern ocean, is paid in the ſtreights, at Elſinore, Nyburg, and Fredericia, but the principal cuſtom-houſe is at Elſinore. In ſome years, above ſix thouſand ſhips paſs through theſe ſtreights, and conſequently the toll is very conſiderable. This toll is not on an equal footing with reſpect to all nations; for the Hamburghers are obliged to pay more than others for paſſing through the Sound. The Engliſh, Dutch, Swediſh, and French

ſhips

ſhips are not ſearched, when they are provided, according to treaties with paſſes: they alſo pay down only one per cent. for ſuch goods as are ſpecified in the tariff, while all other nations are not only ſearched, but are obliged to pay one and a quarter per cent. With reſpect to the Hanſe-towns that lie on the Baltic, there is a great variety in the toll they pay; for almoſt every one of thoſe towns is treated with in particular. The tolls are, in general, either farmed out or collected by officers appointed for that purpoſe, and there are comptrollers appointed by the king over the farmers and officers.

The other revenues ariſe from the exciſe and conſumption.

From the taxes paid by the farming peaſants for freeholds and contributions of proviſions in Norway; from duties on oxen, corn, and bacon in Denmark; and from redeemed eſtates.

From the poll-tax, which, however, is never impoſed, but upon extraordinary occaſions.

From fines, diſpenſations, ſtampt paper, and the poſt-office. The revenues ariſing from the latter are appropriated for penſions, and for carrying on the foreign miſſions.

And laſtly, from the royal tythes, which formerly belonged to the biſhops; but after the reformation were annexed to the crown.

The military forces in the kingdom of Denmark, and the places ſubject to it, conſiſt of the horſe life guards, one regiment of cuiraſſier guards, and one regiment of dragoon guards; nine other regiments of cuiraſſiers, two regiments of foot life-guards, one of which conſiſts entirely of grenadiers; the king's own regiment, the queen's regiment, and the prince-royal's regiment; beſides nine regiments of infantry enliſted, ſeven national regiments of infantry, and a regiment for garriſons. In Norway there are five national regiments of cavalry, two enliſted, and thirteen national regiments of infantry, and the light troops, conſiſting of five or ſix hundred men. An enliſted regiment of cavalry conſiſts of eight, and an enliſted regiment of infantry of twelve companies; but the national regiments are more compleat than the enliſted. The king of Denmark's whole military force amounts to fifty-nine thouſand two hundred and eighty-nine men.

The Danes were antiently very powerful and ſucceſsful at ſea, and in later times, Chriſtian V. and Frederic IV. have performed great exploits with the Daniſh fleet. It at preſent conſiſts of thirty-four ſhips of the line, ſixteen frigates, and a number of gallies, which uſually amount to fifty. Since the year 1755, the ſeamen in conſtant pay conſiſt of four diviſions, each diviſion containing ten companies, with a company of artillery, amounting in all to four thouſand four hundred men: but the number of regiſtered ſeamen, with which the fleet may be manned upon any emergency, is about twenty-four thouſand, which in Denmark are diſtributed in ſix diſtricts, and in as many in Norway, they being under the direction of certain officers appointed for that purpoſe. There is alſo in Denmark a company of ſea cadets inſtituted by Frederic IV. in the year 1701.

The fleet is laid up at Copenhagen, and the naval ſtores, with the materials for ſhip building, are in great plenty, and kept in very regular order. Floating block-houſes are uſed upon occaſion with great ſucceſs in the Baltic.

Juſtice is no where obtained with more expedition than in Denmark. The whole body of their laws is contained in one moderate quarto volume, written in their own language in ſo plain and intelligible a manner, that it ſcarce needs a comment. This excellent work is intitled Codex Chriſtianeus; it was publiſhed in 1683 by Chriſtian V. and is the only law obſerved in Denmark.

Every general government has its general governor, who is always a perſon of diſtinction, and uſually a knight of one of the orders. His power is very great, and extends both to ſpiritual, temporal, and judicial affairs. He has likewiſe authority over the revenues, towns, and country within his juriſdiction. Under the governor are the prefects, who are alſo noblemen, or at leaſt perſons of diſtinction; but they have no power in the towns within their juriſdiction, which extends only to the open country. The civil government in the cities and great towns is lodged in a burgomaſter and council; but in ſmaller towns in a kind of headborough. Many towns have alſo a royal preſident, and ſeveral of them have the privilege of holding courts of juſtice.

Beſides the town courts of judicature, and thoſe held by the nobility in their own manors, there are three other courts, the ting-court, land-court, and the ſupreme tribunal. In the ting-court cauſes are generally firſt brought, both in the towns and in the country; every ſmall diſtrict conſiſting of forty or fifty villages, or hamlets, which have their headborough, a judge, and a ſecretary; to which are added eight peaſants. Theſe courts are held weekly. From this inferior court an appeal lies to the provincial court, or aſſizes, which commonly conſiſts of two judges and a ſecretary, and is held once a month in ſeveral of the principal towns. The other court, from which there lies no appeal, is the ſupreme tribunal at Copenhagen, which is held almoſt all the year round, and is opened by the king in perſon every year, about the beginning of March. This court, where the law is ſilent or doubtful, has a power of determining the affair; and, it is ſaid, that through all theſe courts a ſuit is carried in the ſpace of thirteen months, and the whole expence, notwithſtanding the appeals from one court to another, amounts to no more than ten or twelve pounds ſterling. They have indeed no inns of court, or public ſocieties of lawyers; but every one who pleaſes may take up the profeſſion; yet the fees are ſo low, that there are few advocates: and there is the leſs occaſion for them, as every man is at liberty to manage his own ſuit, and plead his cauſe himſelf. The greateſt expence ariſes from the ſtampt paper, upon which the proceedings are written; and, to prevent this being exceſſive, the clerks, or regiſters, are obliged to bring the whole matter into a certain number of ſheets, as well the allegations and proofs, as the ſentence itſelf, which are all reduced to writing. In the inferior courts the reaſons on which every ſentence is founded are expreſſed, but not in the ſupreme court. The judges of the inferior courts, whoſe ſalaries are very inconſiderable, are not only puniſhed for miſdemeanors committed in the execution of their office, but are obliged to make ſatisfaction to the party injured by an unjuſt ſentence.

Our merchants who have had occaſion to proſecute ſuits in this country, admire the equitableneſs of their laws, and the eaſe with which juſtice is obtained.

The crimes of high treaſon, robbery, and houſe-breaking are ſeldom heard of in Sweden; and ſeditious diſcourſes, and practices are ſtill more uncommon. The puniſhment for capital crimes is beheading, which is uſually done by one ſtroke with a ſword.

In the city of Copenhagen is an officer called the polity-maſter, who takes care that good orders are kept, compoſes differences among the merchants, and ſees that their merchandize is good and ſaleable. He cauſes the ſtreets, bridges, and canals to be cleanſed, kept in good repair, and free from nuſances or obſtructions. He takes care that the city be ſupplied with corn fit for bread at a moderate price; ſeizes prohibited goods, and aſſiſts at the extinguiſhing of fires; for the mob is not ſuffered to ruſh in on theſe occaſions; but have companies like our firemen, whoſe proper buſineſs it is, who are provided with inſtruments for the purpoſe; and no other perſons muſt approach within a certain diſtance of the place. The polity-maſter alſo cauſes people to be apprehended who walk the ſtreets by night, no perſon being allowed to be abroad after beating the tattoo. He likewiſe ſuppreſſes riots and tumults in the ſtreets. The polity-maſter is alſo the general game-keeper, and has the power of ſeizing guns, nets, and veniſon unlawfully taken.

We ſhall conclude this account of the government and adminiſtration of the laws, with obſerving, that the Danes ſeem to be very apprehenſive of the abuſes of apothecaries in ſelling and applying their drugs; for they permit no perſon to exerciſe that profeſſion who is not appointed by the college of phyſicians, and confirmed by the king himſelf. Not long ago there were but two of them allowed in the city of Copenhagen, and one in every other great town, which would doubtleſs be much too few did not ſome of their phyſicians prepare their own medicines. The apothecaries ſhops are viſited by the

the magiſtrates and phyſicians two or three times a year, and the bad or decayed drugs taken and deſtroyed. The prices of all drugs are fixed, from which they durſt not vary. They keep exact books of what they ſell, and to whom, that where an ill accident happens it may be known who has occaſioned it; and for the ſame reaſon they are obliged to file all the preſcriptions that are brought them.

We ſhall now deſcribe the Daniſh iſlands, and, beginning with the eaſt, give a particular account of what is moſt worthy of notice.

SECT. VII.

Of the general Government of Zealand, with a Deſcription of that Iſland, and of the Iſlands Amac, Mona, Bornholm, and other ſmaller Iſlands; with the principal Places in each, particularly of the City of Copenhagen, the King's Palaces, and the moſt remarkable Cities in that Government.

THE kingdom of Denmark is divided into ſeven governments, the moſt eaſterly of which is that of Zealand, which contains ſixteen prefectures, in which are included all the above iſlands, and the moſt conſiderable places belonging to this kingdom.

The iſland of Zealand, in the Daniſh language called Saland, or Sialland, is ſeated at the entrance of the Baltic, and is encompaſſed by the Categate on the north; the ſtreight called the Sound on the eaſt; the Baltic ſea on the ſouth, and the ſtreight called the Great Belt on the weſt. This is the largeſt of all the Daniſh iſlands, it being about ſeventy miles in length, and ſixty-five in its greateſt breadth.

The ſoil of this iſland is tolerably fertile, and produces fine barley, of which malt is made, and a great quantity of the latter is exported from this iſland; it likewiſe yields plentiful crops of fine oats, but the rye is not more than ſufficient for home conſumption. It has fertile meadows of a beautiful verdure, and ſome woods of oak and beach; but in the country lying near Copenhagen, and ſome other parts, no woods are to be ſeen, and the inhabitants are obliged to uſe chiefly turf for their fuel. There are ſeveral lakes in this iſland, ſome of which are pretty large, and well ſtocked with fiſh; and the rivers, which are in every part of Zealand, alſo abound in fiſh. The moſt convenient harbour in the iſland is that of Copenhagen, and next to that the port of Kallundborg. Within the prefecture of Copenhagen is the city of that name, of which we ſhall now give a particular deſcription.

Copenhagen, the capital of the kingdom of Denmark, and the place where the court reſides, is ſituated on the Baltic, in the fifty-fifth degree forty minutes fifty-nine ſeconds north latitude, and in the twelfth degree fifty minutes eaſt longitude, about thirty miles from the Sound, and has a beautiful and commodious harbour. It is in a low and marſhy ſituation; but on the land ſide are ſeveral fine lakes, which furniſh the inhabitants with plenty of freſh water. The adjacent country is very pleaſant, and oppoſite to the city lies the fertile iſland of Amac, which forms the harbour, and which we ſhall deſcribe in its proper place. The city at a diſtance makes a magnificent appearance, and from the weſt gate to the Norway gate in the citadel, extends four thouſand one hundred and forty Zealand ells in length, and from the north gate to the Amac gate it is three thouſand one hundred and twenty ells in breadth; ſo that its circuit muſt be twelve thouſand ſix hundred ells, or ſix miles ſix hundred ells. The Gother-ſtreet, which runs in a ſtraight line acroſs the whole city, dividing the Old from the New Town, is above four thouſand two hundred feet in length. This metropolis contains four royal caſtles, ten pariſh and nine other churches, a conſiderable number of public and private palaces, above four thouſand burghers houſes, ſeveral of which are inhabited by ten or more families, eleven markets and public ſquares, a hundred and eighty-ſix ſtreets, and a hundred thouſand inhabitants.

This city is divided into three principal parts, Old Copenhagen, New Copenhagen, and Chriſtians-hafen. As the two laſt are more modern than the firſt, they are laid out in broad ſtreets that run in a ſtraight line. Moſt of the ſtreets in Old Copenhagen ſince the laſt great fire have been made of a ſufficient breadth; but the old windings could not be entirely avoided. The houſes in the principal ſtreets and ſquares are almoſt entirely built with brick; but in the lanes moſt of the buildings are of timber. However, in general they make a handſome appearance. The city is at the annual expence of ten or twelve thouſand rixdollars in keeping the ſtreets clean, and in the night it is illuminated with lantherns. In ſome parts of the city are deep canals into which large ſhips may enter, and, to the great convenience of the merchants, may lade and unlade cloſe to the warehouſes.

Beſides the above three general diviſions, the city is divided into twelve quarters, and the burghers into as many companies, which have all their particular colours.

The Old Town conſiſts of the following quarters. Firſt, the north quarter, which has the following places of note: the German church, dedicated to St. Peter, which was the principal pariſh church at the time of the reformation; it was afterwards converted into a foundery, but in 1585 was given to the Germans, and in 1618 was again made a pariſh church.

The Walkendorf college in St. Peter's ſtreet was formerly a Carmelite monaſtery; but the lord ſteward, Chriſtopher Walkendorf, converted it into a college for ſixteen ſtudents, each of whom has a yearly penſion of thirty rixdollars.

The ſecond is the weſt quarter, in which are the great Wartow hoſpital, which is an antient foundation; but the edifice is new and ſpacious, and the endowment ſo conſiderable, that it contains at preſent above three hundred beds for the ſick and poor, each of whom hath his lodging gratis, and a weekly allowance of half a rixdollar. Cloſe to the hoſpital ſtands a ſmall commodious and neat church, which is ſo contrived, that the ſick and bedridden may hear divine ſervice and ſermons in their beds.

The city priſon, which has alſo its particular church.

The orphan-houſe, which takes up one entire ſide of the new market, and is a conſiderable ornament to that ſquare. The preſent building was finiſhed in 1734, and contains a hundred poor children, that is ſixty boys and forty girls, who are maintained and educated; but at preſent the number is increaſed to a hundred and eight: it has a particular church, a diſpenſary, a printing-houſe, and a library belonging to the foundation.

The council-houſe is a new ſtructure, and, being detached from the other buildings, ſeparates the Old from the New Market. In the Old Market is a fine fountain, and in the New is a place walled in for the execution of malefactors.

The other places in the weſt quarter worthy of notice are the weſt gate, and the royal palace, ſituated near the citadel of Chriſtianſburg, which in 1743 and 1744 was new fronted in a very elegant manner.

The third is the clothiers quarter, in which are the following places worthy of notice. The collegiate church of St. Mary, in which the biſhops of Denmark and Norway are uſually conſecrated. The tower, which is eſteemed the nobleſt in Copenhagen, ſtands on the higheſt ſpot in the whole city; it is three hundred and eighty feet in length, and has a fine ring of bells. The univerſity, which includes the royal community, or the cloyſter, in which a hundred poor ſtudents had formerly two meals a day; but at preſent they receive a penſion inſtead of proviſions; and in this edifice they hold their daily diſputations. It likewiſe contains the conſiſtory, the auditories, or halls, the rector's houſe, and other buildings. To the univerſity alſo belong four ſpacious colleges, well endowed for the maintenance of the young ſtudents gratis. The Walkendorf college has been already mentioned. The other three are the royal college founded by Chriſtian IV. for a hundred and twenty ſtudents, though no more than a hundred now reſide in it. The Collegium Elerſianum, founded by George Elers, for ſixteen ſtudents.

The

The Borrichian College, or the Collegium Mediceum, is the moſt elegant and beſt endowed of all the private foundations. The learned Olaus Borrichius erected this college in 1689, for ſixteen Daniſh and Norwegian ſtudents. Every ſtudent has apartments gratis for five years, with an annual penſion of ſixty rixdollars. The library and cabinet of curioſities which joined to this college were burnt down in 1728, but have ſince been in ſome meaſure reſtored.

The laſt place we ſhall mention in this quarter is the north gate, which is the moſt elegant ſtructure of the kind belonging to this city, and was erected in 1671.

The fourth diviſion is the freemen's quarter, in which are two churches, and the church of the Holy Ghoſt, or rather of the Holy Gueſts, it deriving its name from a large hoſpital or gueſt houſe that formerly ſtood near it, and was converted by Chriſtian IV. into a houſe of correction. This church was rebuilt after the fire of 1728.

The fifth is named Snarren's quarter.

The ſixth is called Strand quarter, and contains the following places worthy of notice. The magnificent royal palace of Chriſtianſburg, which was enlarged and embelliſhed by Chriſtian III. Chriſtian IV. and Frederick IV. but being very irregularly built, Chriſtian VI. cauſed the whole building, with the adjoining houſes, which had been purchaſed of the burghers, to be pulled down in 1731, and the following year laid the foundation of the preſent ſpacious and magnificent ſtructure, which was finiſhed in 1740. The firſt floor is called the ladies ſtory, becauſe moſt of the ladies and gentlemen in waiting have their apartments there. The royal treaſury and caſh-office are alſo kept here, and the king's court of juſtice and the burghers court are held in other apartments. The office of the general ſuperintendants of the buildings is likewiſe in this ſtory. In the ſecond or royal ſtory the apartments are adorned with the utmoſt magnificence and elegance. The ſupreme court of judicature is likewiſe held in this ſtory. The prince royal's ſtory is thus named from his highneſs and the princeſſes royal having their apartments in it, which are extremely elegant and well contrived. The inſide of the royal chapel is alſo very beautiful and magnificent. The chancery is joined to the palace by a corridore, or covered gallery, and is a ſuperb ſtructure. In the loweſt ſtory, which is vaulted, are kept the archives of the kingdom. In the ſecond is the privy-council-chamber, and alſo the chanceries of Denmark, Norway, and of the German dominions, the military colleges, and the college of the finances. In the third ſtory are the offices belonging to the treaſury, and the rent-chamber.

In this quarter is alſo an edifice in the firſt ſtory of which is the arſenal, and in the ſecond the king's library, which is above two hundred feet long, and contains about ſixty or ſeventy thouſand volumes. In the third ſtory are the royal cabinet of curioſities, the picture-gallery, and the cabinet of medals; and in the fourth ſtory is the cabinet of models.

In the royal cabinet of curioſities, juſt mentioned, are ſeveral large pieces of ſilver ore dug out of the mines of Norway in 1666, one of which weighs five hundred and ſixty pounds, and is valued at five thouſand crowns: another piece is valued at above three thouſand, both being ſuppoſed to contain at leaſt three parts ſilver. They are compoſed of a whitiſh ſtone, the cavities of which ſeem filled with pure virgin ſilver, which in ſome places lies in broad flat plates, and in others like pieces of fine ſilver lace; but what are moſt admired are the threads and branches of ſilver, which ſhoot out an inch or two beyond the ſtone, in form of ſmall ſhrubs or buſhes. Here are likewiſe ſeveral large pieces of amber, ſome weighing forty or fifty ounces. Upon opening the ditches about Copenhagen theſe were found ſticking, like the gum on the plumb trees in our gardens, to the ſides of the old trees that were buried there. Among the artificial curioſities is a piece of ivory, on which is the hiſtory of our Saviour's paſſion beautifully expreſſed in relievo. There is likewiſe a ſmall man of war in ivory, with ſilver guns, which is much admired; as is alſo a watch made of ivory, and a ſkeleton made of the ſame ſubſtance two feet ſix inches high, and ſo nicely formed, that it is ſcarcely to be diſtinguiſhed from a natural one. There are beſides many other curioſities in ivory, ebony, box, amber, and other materials kept for the ſake of the elegance or minuteneſs of the workmanſhip; and, it is ſaid, there is a common cherry-ſtone on the ſurface of which are engraven two hundred and twenty heads, but their ſmallneſs makes them appear imperfect and confuſed.

In this quarter is likewiſe the magazine for proviſions, the poſt-office, and the exchange, which is a grand ſtructure in the Gothic taſte, four hundred and ſix feet in length, and ſixty-ſix in breadth, the greateſt part of which was built in 1624 by Chriſtian IV. The loweſt ſtory is laid out in warehouſes, which are very commodious for the merchants; for on both ſides of this ſtructure are canals where the ſhips may lie cloſe to the warehouſes, and goods be conveniently landed or ſhipped from them. In the ſecond ſtory in the north ſide is the place where the merchants uſually meet. In the middle and down the whole length on both ſides is a range of ſhops; in one wing of the ſouth ſide is the royal bank, and in the other the royal magazine, where moſt of the cloths, ſilks, and ſtuffs made in the city are depoſited, and from thence ſold to merchants and dealers.

The ſeventh is the Roſenburg quarter, in which is a Calviniſt church, a ſmall neat edifice, where the miniſters preach in French and high Dutch; and the Trinity church, generally called the Round church from its round tower: its arched roof, which is pretty high, is ſupported by two rows of very ſlender octangular pillars, which give it the air of a very light building. This edifice ſuffered leſs than the other churches in the great fire in 1728, and was ſoon repaired. The greateſt loſs was the noble collection of books belonging to the univerſity, kept in a large room over the arched roof of the church. However, a new library has been ſince collected, in which are ſeveral valuable manuſcripts relating to the Northern hiſtory. The tower of this church is eſteemed a maſter-piece of its kind, and was deſigned by the celebrated Chriſtian Longomontanus, the aſtronomer. It is round, a hundred and fifteen feet high, and fifty-four feet in thickneſs; flat on the top, and ſurrounded by an iron baluſtrade. The aſcent is ſpiral, and ſo ſpacious and eaſy, that a coach and horſes may go up and down again with eaſe; which experiment was tried by Peter the Great in 1716. This tower was deſigned for an obſervatory, but the curious aſtronomical and mathematical inſtruments, invented by Tycho Brahe, Olaus Romer, and others, which were kept here, were all conſumed by the great fire in 1728; but afterwards Chriſtian VI. procured the moſt curious and valuable mathematical and aſtronomical inſtruments, to ſupply the place of thoſe that were burnt.

The eighth is the manufacturers quarter.

The ninth is the eaſt quarter, in which are the following places of note: the church of St. Nicholas, which, next to St. Mary's, is the largeſt in the city, and the beſt ornamented both within and without; the roof is covered with copper, and it has ſeveral curious monumental inſcriptions.

The Bremer Holms church, alſo called the admiralty church, it being firſt allotted for the uſe of perſons belonging to the navy; but afterwards a large congregation of burghers were added.

The general commiſſion-office is a large ſtructure erected by Frederic IV. in the year 1704. Here the united colleges of the admiralty and general commiſſion meet. Beſides this ſtructure, the following edifices belong to the naval department: the Old or Bremer Holm, and the New Holm, where the naval ſtores are diſtributed: Chriſtianſholm, where is the naval arſenal, which far exceeds that of Venice, and where the royal fleet uſually lies.

The New Town conſiſts of two quarters: the firſt is St. Ann's eaſt quarter, in which are Charlottenburg, a pretty large and regular ſtructure, begun in 1672, and completed in the ſucceeding years. It derives its name from queen Charlotte Amelia, conſort of Chriſtian V. The ſituation of this caſtle or palace is very agreeable, its principal front facing the ſquare called the King's New Market, which is embelliſhed with an equeſtrian ſtatue of Chriſtian V. of lead gilt, placed on an elegant pedeſtal. On the ſides of this fine ſquare are alſo the

great guard-houſe, the foundery, and the Daniſh play-houſe.

There are alſo in this quarter the naval hoſpital, the church belonging to the garriſon: the Frederickſtadt, which is now adorned with ſeveral elegant new palaces: Frederick's church, built in imitation of St. Peter's at Rome: the general hoſpital: the tolbooth, or cuſtom-houſe; and the grand academy of the royal cadets. This laſt ſtructure was built by Frederick IV. for an opera-houſe; but in 1720 he aſſigned it for the land cadets; and, five or ſix years after, removed the company of ſea cadets to this edifice. Each company has its ſeparate apartments and exerciſing-rooms, and is under the inſpection of its proper officer, who likewiſe lives in the academy. Theſe young men are not only ſupplied with lodging, cloathing, fire and candles, and a monthly penſion ſufficient to find them in diet; but are alſo inſtructed at the king's expence in all the ſciences by able maſters appointed for that purpoſe. Theſe two companies are a kind of nurſery for the army and navy.

In St. Anne's weſt quarter is the royal palace called Roſenburg, a ſmall edifice built by Chriſtian IV. in 1604, in the ſemi-gothic taſte; but is a grand ſtructure, adorned with one large and two ſmall towers. It is ſurrounded with a ditch and a kind of fortification, and has its own commanding officer; but the guard is daily relieved from the garriſon of Copenhagen. The adjoining gardens are very extenſive, and embelliſhed with a great number of ornaments. Theſe, in ſummer, ſerve the inhabitants for a public walk, and the royal family ſometimes reſide a few days in this palace. The third ſtory of the palace is ſaid to be the moſt remarkable from its containing a treaſure of ineſtimable value. In the great hall, which is in this ſtory, and takes up the whole extent of the building, are five pieces of painting by the Daniſh artiſt Krogk; twelve valuable pieces of tapeſtry, repreſenting the atchievements of Chriſtian V. and three ſilver lions as large as the life, which at the king's inauguration are placed round the throne. In two cabinets ajoining to the hall are kept the old and new regalia, with other valuable jewels, and a whole ſervice of gold. Another cabinet has a collection of curious and valuable drinking glaſſes, and other glaſs veſſels. The royal throne uſed at the inauguration ſtands in another apartment.

Chriſtianſhafen conſiſts only of one quarter; it is ſituated on the iſland of Amac, and had formerly its own magiſtrates; but is at preſent under the juriſdiction of thoſe of Copenhagen. The moſt remarkable places in this ſuburb are St. Saviour's church, which is eſteemed the moſt magnificent and elegant church at Copenhagen; and has a beautiful ſteeple, that has a ſpiral aſcent on the outſide, by which one may go up to the top. The German, or Frederick's church; the orphan-houſe for the education of two hundred poor boys; the Eaſt India company's houſe; the fine dock-yard, where ſhips of war are refitted; and the gate of Chriſtianſhafen.

Between Copenhagen and this ſuburb is a high pillar erected in the midſt of the water, on which is a ſtatue of a naked woman, with a ſwan on her left ſide that extends its long neck behind her back, and, bringing its head over her right ſhoulder, puts its bill into her mouth. This pillar and ſtatue are conſidered as a ſymbolical repreſentation of the city of Copenhagen: they were, however, found near Calmar, in Sweden, during the war in 1611, and from thence conveyed to this city.

In this city the Calviniſts have a church to themſelves; thoſe of the Romiſh religion frequent the chapels of foreign miniſters of that profeſſion, and the Jews have their ſynagogues.

The magiſtracy of this city is appointed by the king, and conſiſts of a preſident, three burgomaſters, with vice-burgomaſters, and common-council men.

Beſides the ſupreme and other colleges, academies of painting and drawing, the Theatrum Anatomico-Chirurgicum, trading companies, the bank, and the office of inſurance already mentioned in treating of this kingdom in general, they have an inſurance-office for caſh, fire and water-offices, and different manufactures, in which ſilk and woollen ſtuffs, cloths, fine gold linen, and ſilver lace, porcelain, &c. are made.

This city has been frequently viſited by the plague, which ſwept away great numbers of the inhabitants. It has often been beſieged, and in 1658, and 1659, held out againſt the Swedes almoſt two years; and in 1700 was bombarded by the combined fleets of Sweden, England, and Holland. On the twentieth of October, 1728, a fire broke out in the evening in a mean houſe near the weſt gate, which ſpread with ſuch fury, that in forty-eight hours the moſt elegant and greateſt part of the city was reduced to aſhes. Twenty-four ſtreets and ſquares, a thouſand ſix hundred and fifty dwelling-houſes, five churches, the univerſity, with the four colleges belonging to it, the council-houſe, and ſeveral other public buildings, were burnt to the ground. The anniverſary of this dreadful accident is obſerved in a religious manner on the twenty-third of October. The city has, however, been ſince rebuilt with greater elegance and beauty.

As the ſuburb of Chriſtianſhafen is ſeated on the iſland of Amac, it is neceſſary to take ſome notice of that iſland, which is joined to the city, and conſequently to Zealand, by two bridges. That iſland is about nine miles in length, and three in breadth: it is entirely level, and has no woods, except a few thickets. The ſoil is uncommonly rich and fertile, and is therefore called the garden of Copenhagen. A part of it was given in 1516 to ſeveral families, who were invited thither from North Holland by Chriſtian II. at the deſire of Elizabeth his queen, who was a native of the Netherlands, to make butter and cheeſe for the court; and their deſcendants ſtill retain the habit, language, and cuſtoms of their predeceſſors, together with their cleanlineſs and induſtry; for they will not mix with the Danes, but intermarry with each other. This iſland, through the induſtry of theſe laborious people, plentifully ſupplies the markets of Copenhagen with all ſorts of roots and herbs, beſides butter, milk, great quantities of corn, and ſome hay. The whole iſland is divided into two pariſhes, and is peopled by about eight hundred families, many of whom are Danes.

In the neighbourhood of Copenhagen, is a magnificent royal palace, ſituated on a hill. It derives its name from Frederick IV. who was its founder, and has been ſince greatly enlarged by Chriſtian VI. This edifice is very ſpacious; on every ſide it makes a moſt magnificent appearance, and has a fine proſpect. The garden, which lies below the hill, is very extenſive, and contains a great number of pleaſant walks, ſeveral groves, a labyrinth, a theatre, many ſtatues, fountains, and ſummer-houſes; and, in particular, a very fine caſcade juſt fronts the palace. From this edifice is a deſcent into the garden by two flights of broad ſtone ſteps. The menagery in the garden is ſtocked with lions, tigers, and other wild beaſts. From this palace a pleaſant avenue, planted with a double row of trees, extends above half way to Copenhagen.

Jagerſburg is a royal hunting-ſeat, rebuilt by the preſent king; here the officers of the chace reſide. From hence a ſtraight avenue leads to the noble park of Charlottenlund, ſo called from the king's pleaſure-houſe, which ſtands in it.

At about the diſtance of a mile from this park lies that of Jagerſburg, which affords a great deal of game. About the middle of it ſtands a new edifice called the Hermitage, which is thirty ells in length, twenty in breadth, and elegantly adorned both within and without. In the loweſt ſtory is a curious machine, by means of which the victuals, &c. are conveyed to and from the king's table in the ſecond ſtory, when his majeſty dines there.

At the diſtance of about five miles is the caſtle of Hirſchholm, a royal palace, which was antiently a place of conſiderable ſtrength: but nothing now remains of the old caſtle, beſides the name; for it is not only demoliſhed, but the very ſituation of the place has been entirely altered by art. Chriſtian VI. who took poſſeſſion of it as prince royal, cauſed the foundation of a new edifice to be laid on the ſpot where the old caſtle ſtood, and his queen, after his acceſſion to the throne, continued the building, the king having made her a preſent of it. In 1739 it was thought to be finiſhed; though every year ſince, new improvements and embelliſhments have been

continually

continually added. The outside has a very magnificent appearance, nor is it less elegant within. The great hall takes up the height of two stories, and has a noble fountain that throws up a column of water above twenty feet high, which falls down again into a copper bason. The chapel is elegant and well adorned, and the garden very beautiful. At the extremity of it, directly opposite to the palace, is a noble summer-house; and on one side of the garden is an eminence covered with trees, on which stands the Norway-house, which is so called from its being built in the Norwegian taste.

At the distance of about twenty miles from Copenhagen, is the famous castle of Fredericksburg, which is esteemed the most beautiful of any belonging to the king, and is frequently called the Versailles of Denmark. Christian IV. caused the old building to be demolished, and the present magnificent structure to be built by the ablest and most celebrated architects in Europe. It stands in the midst of a lake of fresh water, and consists of three principal parts, each surrounded with water, but joined together by bridges. The first division, to which you arrive by passing over a bridge, resembles a horn-work, the front of which is quite round, and faced with stone. On both sides are several buildings, which serve either as dwelling houses for the officers of the castle, or stables for horses. From hence you pass over a stone bridge to a noble high tower, which stands over the gate that leads into the second court. On each side of this court to the right and left, stands a magnificent building, in one of which are the governor's house, several apartments for the noblemen belonging to the court, and the king's kitchen; and on the other the chief magistrate of the prefecture of Seroe resides. From this second court a fine stone bridge, built over a deep canal, leads to the grand portico of the chief entrance of the castle, which is built with free-stone, and adorned with sculpture and gilding. The principal building consists of a corps-de-logis, and two wings, four stories high, all covered with copper, and adorned with several towers, of which the church tower is the highest. Both the wings are joined to the front by a low building of one story. Upon the first entrance into the inner court, the magnificence of the structure, the beauty of the marble, the elegance of the sculpture, and the richness of the gilding, fill the beholder with astonishment; but what principally strikes the eye is a noble imitation of the ancient architecture, consisting of two grand arcades, one over the other, in the front of the building. These consist of seven arches below, and as many above, built with free-stone, and embellished with statues that stand either in niches or detached from the wall, with many other ornaments. Near one of the wings is a beautiful fountain; and which way soever you turn your eyes, curious sculpture, and a variety of other embellishments, present themselves to view.

The gallery that leads to the hall of audience, is adorned with a fine collection of paintings, most of them brought from Italy; and the hall is hung with the pictures of several of the Danish kings, and of the present royal family as large as the life. Tne exploits of some of these monarchs are also beautifully painted in different parts of the palace, and the great actions of Christian IV. are represented in rich tapestry. In the church belonging to the castle, the eye is in a manner dazzled by the glittering of the gold, silver, and curious marble, with which it is embellished. The altar is of black marble, the front of the table is of silver and ebony, and the pulpit is of the same materials. From the gallery you have a view of the large pictures with which the pilasters between the windows are decorated. In the windows, and on the walls of this church, are the escutcheons of the knights of the Danebrog order. The gallery leads to a spacious place behind the altar, where the royal throne is erected; and on the walls, which are hung with crimson velvet, are seen the arms of all the knights of the order of the elephant. The grand organ in this apartment, is curiously embellished with sculpture and gilding. Formerly a fine organ of silver and ebony likewise stood here. The kings of Denmark are always anointed in this church. In the tower is a fine ring of bells. In short, all the apartments of the castle are very magnificent, especially the knights ball-room, which is over the church in the third story, and has also a noble organ. There is a fine garden behind the palace, and the neighbouring park is interspersed with canals and fish-ponds, and agreeably diversified with a mixture of grass-plats, and little hills and valleys, well stocked with fallow-deer from England.

At the distance of about eighteen miles from Copenhagen, is Elsinore, or Elsineur, a town situated on the Sound, directly opposite to Elsingburg in Sweden, in the fifty-sixth degree eight minutes north latitude, and in the thirteenth degree twenty-three minutes east longitude. This is the richest and most elegant town in Zealand, next to Copenhagen. It has two churches, in one of which, named St. Peter's, the ministers preach in the German language. There is here also a grammar school, in which thirty-three poor scholars are educated and maintained gratis, a good hospital, and the king's custom-house, which is a fine edifice newly built. Elsinore has a considerable trade, and is famous, both on account of its being the place by which the Swedes and Norwegians usually pass into Denmark, and for the toll paid here by every ship that sails through the Sound. On the north side of the city stands the famous and important castle of Cronenburg, which is built with large blocks of hewn stone, in the most durable manner, and is adorned with several turrets and a variety of sculpture. The fortifications of this castle are in excellent order.

Friedensburg is a royal palace, pleasantly situated about nine miles from Cronenburg, in latitude fifty-five degrees thirty-six minutes. Frederic IV. was invited to build this palace by its delightful situation, and as the edifice was compleated in 1720, when the treaty of peace was concluded with Sweden, the king gave it this name, the word *frieden* signifying peace. This prince, being extremely fond of this place, often resides here, and therefore, to render it as agreeable as possible, endeavours to supply by art whatever beauties were denied it by nature. The inner court is a regular octagon, formed by seven wings, one story high, and the main building, which is opposite the principal entrance. In the midst of the court is a fountain adorned with a marble statue of peace, made at Florence. The main building is in the form of a parallelogram, and covered with copper, and in the middle has a spacious, light, and elegant square hall. The other apartments in both stories are nobly furnished. The garden is not very extensive, but is well laid out, and embellished with statues, vases, and other ornaments. It is surrounded with a large wood, that affords plenty of game, and in which several vistas are cut. From the palace is a delightful prospect, the eye commanding almost all the vistas at once, and at the end of them is an extensive lake, in which is a beautiful yacht. Near the palace is also a fine orangery, and an elegant church. In the wood which joins the garden, is a manegery stocked with a variety of beautiful tame and wild fowl.

Roschild, or Roeskild, is an ancient city about a mile from the extremity of a bay called Isefiord, and derives its name from Roe, the eleventh king of Denmark, who was its founder, and the word *kilde*, which signifies a spring; there being several excellent springs on the spot where it stands. This city is situated in the fifty-fifth degree thirty minutes north latitude, and in the twelfth degree fifteen minutes east longitude, and once contained twenty-seven large churches and convents within its walls, and its streets extended to the sea-shore. The kings of Denmark were formerly elected and crowned here, and also made it the place of their residence. But frequent fires, the tyranny of the bishops, and the flourishing state of Copenhagen, have so far reduced this city, that it at present consists of only an inconsiderable number of houses, which are for the most part meanly built. The inhabitants support themselves by trade and industry, but their chief employment is agriculture and the planting of tobacco. The cathedral is a standing monument of the ancient grandeur of this city, though it has been three times consumed by fire; it being adorned with many monuments of the kings and queens of Denmark. A small royal palace was built here in the year 1733 that has a

communication with the church, by means of a covered paſſage.

In the cathedral ſchool, ſix maſters and forty ſcholars are maintained and educated. Here is alſo an hoſpital for ſix poor widows; and in 1699 a convent was founded in this town for twenty-one ladies of quality, and a prioreſs. Each of theſe ladies has an annual penſion of eighty rixdollars, beſides lodging and board. Chriſtian V. alſo endowed this proteſtant convent with five hundred rix-dollars a year. At the other end of the town is a church dedicated to the Virgin Mary, in which, money was formerly coined, and a multitude of relics was preſerved.

The city of Calinburg, or Kallundborg, in the prefecture of the ſame name, is one of the moſt flouriſhing towns in Zealand, and has the beſt harbour in the iſland, except Copenhagen. St. Mary's church, which has four lofty ſpires, makes a good appearance. The inhabitants carry on a conſiderable trade, and a great quantity of malt is annually exported from hence. The paſſage to Barhuus in Jutland is uſually performed in twelve hours; and a certain number of ſmacks ſail twice a week from one town to the other.

The iſland of Samſo, in Latin Samſoa, lies about thirty-eight miles to the north-weſt of Kalinburg, and nineteen from Arhuſe in Jutland, in the fifty-ſixth degree north latitude. It is about fourteen miles long and five broad. It has ſeveral hills and eminences, and the ſoil is for the moſt part fertile, and in particular yields plenty of peas, whence moſt of the inhabitants are in good circumſtances, and carry on a conſiderable trade with their ſmall craft. It conſiſts of five pariſhes, and is ſurrounded with ſeveral very ſmall iſlands and ſandy ſhoals.

Sora is a little noted town, in a pleaſant country, in the prefecture of the ſame name. It is ſituated ten miles to the ſouth of Roſchild; where it is ſurounded by three lakes of freſh water, and theſe are again almoſt encompaſſed with fine woods. This town is remarkable for the royal academy ſituated at the ſouth end of it, to which belong a grand maſter, an inſpector, profeſſors in all the ſciences that relate to civil or political employments, a French maſter, a riding maſter, with proper maſters for fencing, dancing, and drawing. There is alſo a printing-preſs ſet up in this academy. The ſtudents have their apartments in a large and commodious ſtone building.

The iſland of Mona, Moen, or Moon, as it is uſually called in our maps, lies near the coaſt of the ſouth point of Zealand, in the ſtreights called the Wolfsund; it is ſituated in fifty-five degrees twenty-one minutes north latitude, and is nineteen miles in length from eaſt to weſt, and about nine in breadth. The high chalky cliffs towards the Baltic may be ſeen at a great diſtance at ſea, one of which has ſome reſemblance to a throne, and is therefore commonly called the king's chair. Stones of an uncommon figure are in great plenty on this coaſt. The ſoil of the whole iſland is fertile, and yields great plenty of peas. It conſiſts of one prefecture, and contains ſeven rural pariſhes, and the little town of Stege, ſituated in the middle of the iſland.

The iſland of Bornholm, in Latin Bornholmia, or Boringia, is ſituated in the Baltic, in the fifty-fifth degree fifteen minutes north latitude, and in the fifteenth degree ten minutes eaſt longitude, about ſeventy-ſix miles from the extreme point of Zealand, and extends about thirty-three miles in length from north-weſt to ſouth-eaſt, and is nineteen in breadth. The ſoil is fertile, and produces all kinds of grain, particularly oats. Here is alſo good paſturage, and a great quantity of butter is exported from hence; it has alſo quarries of marble and lime-ſtone, and abounds with pit-coal. The coaſt, from its dangerous rocks and ſhoals, is inacceſſible almoſt on every ſide; but where there might be any danger of an enemy's landing great guns are planted. At the peace of Roſchild in 1658, it was ceded to the Swedes; but the inhabitants being treated with great ſeverity by their new maſters, they took up arms the ſame year, and, under the conduct of Jens Koefod, recovered their liberty, after which they delivered up the iſland to the king of Denmark, who, pleaſed with this proceeding, ſent them a letter of thanks, and in a ſecond letter promiſed to take them under his immediate protection; an engagement which the ſucceeding kings have confirmed from time to time, and Bornholm has been ever ſince an hereditary country, belonging to the kings of Denmark. In 1678, five thouſand Swediſh troops were ſtranded on this iſland, in their paſſage from Pomerania to Sweden, when, notwithſtanding their being provided with Daniſh paſſes, thoſe that eſcaped the fury of the waves were made priſoners of war. The inhabitants defend the iſland with their own militia, without any expence to his Daniſh majeſty, and have a governor, deputy-governor, prefect, and other officers. The iſland conſiſts of one prefecture, which contains about a hundred villages, and ſixteen rural churches.

SECT. VIII.

Of the general Government of Funen, including a Deſcription of that Iſland; and of the Iſlands of Lanſeland, Falſter, and Laaland, with the principal Towns in each.

THIS government is the ſecond in order, and includes Funen, Langeland, Falſter, Laaland, and other ſmaller iſlands. It has two governors, under one of whom are Funen and Langeland, and under the other are Falſter and Laaland.

The iſland of Funen, called in Latin Fionia, and by the Danes Fyen, lies between the Great and Little Belt. It is about fifty miles in length, and forty-five in breadth. It received its name from its being a fine country, the whole iſland being fertile and very pleaſant; whence moſt of the noble families of the kingdom reſide there. Indeed, it is not eaſy to find in any other place of ſuch ſmall extent, ſo many noblemen's ſeats as there are in this iſland. The ſoil yields ſuch plentiful crops of grain, that the inhabitants may annually export above a hundred thouſand barrels of rye, barley, oats, and peas, to Norway and Sweden, excluſive of their home conſumption. It alſo produces a vaſt quantity of buck-wheat, which is chiefly cultivated by the inhabitants. They employ a great deal of care in breeding bees, and make a conſiderable quantity of fine mead, which is exported to all parts of the kingdom. The apples that grow in this iſland are alſo much admired, and it likewiſe produces plenty of hops and eſculent herbs; but the ſcarcity of wood obliges the inhabitants chiefly to uſe turf for fuel. There are in this iſland two mountains of conſiderable height, ſeveral freſh water lakes, and rivers that abound with fiſh; but none of them are navigable. In the bays, and all along the coaſts, are taken a great quantity of ſea-fiſh, particularly turbot, cod, herrings, and eels.

The whole iſland is divided into five prefectures, the principal places in which are,

Nyborg, or Niburg, in Latin Neoburgum, a ſtrong town on the Great Belt, and though not very large, has a commodious ſituation, and is well built. The pariſh church and the council houſe are the beſt in the iſland. The harbour is large, but neither ſufficiently deep, nor ſheltered from ſome winds. The town is ſeated in the fifty-fifth degree twenty-ſeven minutes north latitude, and in the tenth degree fifteen minutes eaſt longitude. The inhabitants ſubſiſt partly by accommodating the paſſengers who daily croſs over from hence to Zealand, or return hither from thence, and partly by commerce. The ſhips that paſs through the Great Belt are obliged to pay toll here, for which purpoſe a man of war is always ſtationed in the Belt. This city was firſt built in 1175. All that remains of the royal ancient palace, where Chriſtian II. was born in 1481, and when an infant carried up to the top of it by a monkey, and brought down again without receiving any hurt, is only a large wing, with a flat tower, a little higher than the roof, and at preſent ſerves for a magazine and an arſenal.

Odenſee, in Latin Othinia, is a city of great antiquity, and the capital of the general government; it is pretty large and populous, but the greateſt part of the city is old and decayed; ſome of it is, however, new and well built. It is ſaid to have been erected before the Chriſtian era, and to derive its name from the idol Odin, and not as ſome have imagined from the emperor Otho I. who never

was

was there. It is ſituated in a fine plain, in the fifty-fifth degree twenty-five minutes north latitude, and in the tenth degree thirty minutes eaſt longitude, on a river that yields a variety of fiſh, and about a mile below the town runs into the gulph of Stegeſtrand. The city is about a mile and a half long, and half as broad. It has four churches, among which the cathedral is the moſt remarkable: the inſide has been lately repaired and beautified; but the architecture is old and mean. In the Grey Friars, or Franciſcan church, are interred king John, and Chriſtina his queen, with their ſon Francis, and king Chriſtian II. The table of the altar, which was the gift of the above-mentioned queen, is extremely beautiful. Near this church is a handſome hoſpital, built in the year 1540. The king's palace is neither large, commodious, nor elegant; it being only erected as a lodging for Frederick IV. in his occaſional progreſs through Funen; but there that excellent prince died in 1730. In this city is a college, erected and liberally endowed by Chriſtian IV. and alſo a large cathedral ſchool, conſiſting of ſix claſſes, where all the ſcholars, beſides their education, receive a ſmall penſion, and thirty-ſix of the poorer ſort are boarded and provided with all neceſſaries. The provincial court is held every month in the great hall of the city. The bay lies a little above a mile from the city; the inhabitants brew the beſt beer in Denmark, and carry on ſo conſiderable a trade, as to employ thirty-four large ſhips, beſides above a hundred ſmaller veſſels.

The iſland of Langeland, which is ſituated in the fifty-fifth degree twenty minutes north latitude, and in the tenth degree fifty-four minutes eaſt longitude, is thirty-three miles in length, but ſcarce five in breadth. It is very fertile, and under the ſame general governor as Funen; it contains only the royal prefecture of Tranekiar, which includes the north and ſouth diſtricts, each conſiſting of ſeven churches or pariſhes.

The iſland of Falſter lies at the diſtance of two leagues from Zealand, in fifty-five degrees north latitude, and is about twenty-eight miles in length, but its breadth towards the north end does not exceed fourteen, and towards the ſouthern extremity is but about four miles broad. It is very fertile, and may be called the orchard of Denmark, from its yielding abundance of fruit: all ſorts of game are likewiſe here in great plenty. This iſland is commonly the dowry of the queens of Denmark, and conſiſts of one ſingle prefecture, which contains two diſtricts, in one of which are thirteen rural churches, and in the other fifteen.

The principal town in this iſland is Nicopping, in Latin Nicopia, or Neapolis Danica, ſituated on the ſtreights called Guldborgſund, in the forty-ninth degree fifty-ſix minutes north latitude, and is a pretty large, well built town, one of the moſt ancient in the kingdom; but is not in ſo flouriſhing a condition as formerly, when the queen dowager, and other royal perſonages, conſtantly reſided here. On the land ſide it is fortified by a wall and ditch. It has a free grammar ſchool, and a well endowed hoſpital. The royal palace is a great ornament to the town, and is ſituated very agreeably: the garden is pretty large, and kept in good order. This town carries on a conſiderable trade.

The iſland of Laland or Lolland, called by the Danes Laaland, is ſeparated from Falſter on the eaſt, by the ſtreights called Guldborgſund, and on every other ſide is encompaſſed by the Great Belt and the Baltic. It is nineteen miles diſtant from the iſland of Femeren; is thirty-three miles in length, and about fourteen in breadth, and the moſt fertile ſpot in the Daniſh dominions. This iſland produces plenty of grain, particularly very fine wheat, and excellent peas: it is likewiſe famous for a kind of red fruit called manna, which in its taſte reſembles ſweet almonds, and grows on a ſlender ſtem; it alſo abounds with apples. It has ſome woods, but theſe are more frequent on the eaſt than on the weſt ſide of the iſland. As agriculture turns out greatly to the advantage of the inhabitants, they make little account of grazing. Yet, after all, the country lies low, the ſoil is damp, and the air very unhealthy. The nobility are here, however, very numerous, and have conſiderable eſtates, and very fine ſeats. This iſland, like Falſter, has a particular governor; but in ſpiritual affairs, both are under the biſhop of Funen. It contains three prefectures.

The capital of the iſland is Naſkow, in Latin Naſcovia, which was anciently well fortified; but is now only encompaſſed with a wall. It is of a middling ſize, and handſomely built. The inhabitants are wealthy, and trade in the produce of the country, it having a pretty good harbour. The Jews are allowed the public exerciſe of their religion, and have a ſynagogue here: the town has alſo a grammar ſchool, and an hoſpital.

SECT. IX.

Of Jutland in general; with a particular Account of North Jutland, its ſeveral Governments, and the principal Places contained in each.

WE now come to the peninſula of Jutland, called by the Danes Judland or Jylland, in Latin Jutia, the ancient Cimbrica Cherſoneſus. This large peninſula is bounded by the Baltic on the eaſt; by the North-Sea on the north and weſt; and on the ſouth is ſeparated from Holſtein by the Eider and the Lewen. It is computed to extend, from the river Eider to its northern extremity at Cape Skau, two hundred and forty-ſeven miles in length; and from Bouberg to Naſſet, a hundred and fourteen miles in breadth. It is divided into North and South Jutland, the latter of which is called the dutchy of Sleſwic, of which we ſhall give an account in a ſeparate ſection.

North-Jutland, which is commonly called by the general name of Jutland, is bounded on three ſides by the North-Sea and the Baltic; but on the ſouth is divided from South Jutland, or Sleſwic, by the rivers Kolding and Skotburg. It extends a hundred and eighty miles in length, and from ſeventy-one to ninety-five in breadth, and, of all the territories in Denmark, is the largeſt, and yields the greateſt revenue. Indeed the middle part is moſtly compoſed of heaths and moors, which, however, afford good paſture for oxen, ſheep, and goats; but the other parts, which are of greater extent, are extremely fertile, as appears from the great quantity of all ſorts of grain annually exported to Sweden, Norway, and Holland, and from the great ſums received by the inhabitants for their horſes, oxen, and hogs. Hence Jutland has been frequently called the Land of Bacon and Rye-Bread. Here is alſo great plenty of ſea and freſh water fiſh of all kinds; but the largeſt lakes, in which the moſt fiſh are found, are near the palace of Scanderburg. The chief bays and gulfs are on the eaſt ſide of the peninſula, the principal of which is the gulf Lymfurt, which runs from the Categate, ninety-five miles within land, and gradually widening, forms ſeveral iſlands: it is navigable, and abounds with fiſh; but though it is of ſuch large extent, it is ſeparated from the ſea only by a narrow tract of land. Here are alſo ſeveral other gulfs, which form good harbours. There are a great number of ſmall ſtreams, but the largeſt river is that of Guden, from which Jutland is ſaid to derive its name; it riſing in the government of Arhuſe, and after receiving above forty ſmaller ſtreams, becomes navigable near Randers, and having run a courſe of about a hundred and nineteen miles, falls into the Categate.

Jutland is every where interſperſed with hills, and on the eaſt ſide has fine woods of oak, fir, beach, birch, and other trees; but the weſt ſide being leſs woody, the inhabitants are obliged to uſe turf and heath for fuel. Here is alſo great plenty of all kinds of game. The air is ſomewhat keen and piercing, eſpecially towards the North-Sea.

The Jutlanders are of a robuſt conſtitution and reſolute temper, ſeeming to have raiſed themſelves to a ſtate of freedom ſuperior to that of the other inhabitants of Denmark. Many of the peaſants have freeholds, for which they only pay a ſmall acknowledgment to the lord of the manor.

The Daniſh language is ſpoke with leſs purity and elegance here than in the other provinces, and beſides, the Jutlanders have a particular accent. Fredericia is

the only place where any religion, beſides that of Lutheraniſm, is tolerated.

North Jutland was formerly divided into nine large diſtricts; but this ancient diviſion is now aboliſhed by the royal courts of judicature, and it is at preſent compoſed of four dioceſes, or general governments. Each of theſe has its biſhop and general-governor. They derive their names from four chief cities. We ſhall begin with thoſe that lie moſt to the north.

The general government of Alburg, or Aalborg, comprehends the moſt northern part of Jutland, it being divided from the other provinces by the gulf of Lymfurt, and would be an iſland were it not for the narrow iſthmus between the North-Sea and the gulf of Lymfurt. It extends in length ſomething above eighty-five miles, and its greateſt breadth is nearly as much. Nature has divided this province into four parts, which are ſubdivided into a certain number of prefectures.

Albourg, in Latin Alburgum, the capital of this government, is a large, populous, ancient city, and, next to Copenhagen, the moſt wealthy in the whole kingdom. It ſtands in latitude fifty-ſix degrees thirty-five minutes, in a very low ſituation, and is watered by two rivers called the Eaſt and Weſt River, which run through it. It has two pariſh churches, an hoſpital with a chapel, a cathedral ſchool, and two alms-houſes. An epiſcopal palace was built here by Chriſtian V. and a royal palace ſtands near the water-ſide, where the general governor reſides. Here is alſo an exchange for merchants, and a deep and ſafe harbour, but its mouth is ſomewhat difficult. A great quantity of herrings and grain is exported from hence, as alſo muſkets, piſtols, ſaddles, and gloves, for which the city is famous.

The next general government is that of Wibourg, which is bounded on the north by the gulf of Lymfurt; on the eaſt by the Categate; on the ſouth by the governments of Arhuſe and Ripen; and on the weſt by the government of Ripen alone. It is about forty-ſeven miles in breadth, and fifty-ſeven in length, and is eſteemed the leaſt of the four governments into which North Jutland is divided, it containing only two prefectures, in which are forty-ſeven manors.

The moſt conſiderable place in this government is Wibourg, in Latin Viburgum, the capital of all North Jutland. It ſtands in the fifty-ſixth degree eighteen minutes north latitude, and in the ninth degree twenty minutes eaſt longitude, almoſt in the center of the country, and is ſeated on the lake of Aſmild, which abounds with fiſh. This is one of the moſt ancient cities in the whole kingdom: before the Reformation it contained twelve churches and ſix convents. It is at preſent near two miles and a half round, and includes three pariſh churches, three market-places, ſix gates, and twenty-eight ſtreets and lanes. The governor-general of the province reſides here, and it is a biſhop's ſee. The cathedral was burnt down in the year 1726; but proper meaſures were immediately taken for rebuilding it. The epiſcopal, or cathedral ſchool, has ſix maſters, with handſome ſalaries, and a royal foundation for poor ſcholars. Here is alſo a ſtately edifice, in which the provincial court for all North Jutland is held monthly. In the year 1606, this city was entirely deſtroyed by fire, and in 1726 the largeſt and beſt part of it was a ſecond time burnt; but the damages it then ſuſtained were ſoon repaired.

The general government of Arhuſe, called by the Danes Aarhuus, borders on the gulf of Wibourg, and extends about ſeventy-one miles in length, and from forty to forty-three miles in breadth. This government is, in ſome reſpects, preferable to any other in Jutland, and the extraordinary fertility of the ſoil enables the inhabitants to export annually very large quantities of grain. It is diverſified with many woods, ſeveral lakes abounding with fiſh, and commodious bays; and is watered by ſeveral rivers and brooks. This government is divided into eight prefectures, the principal places in which are,

Arhuſe, Arhuſen, in the Daniſh tongue Aarhuus, the capital of the dioceſe, is ſituated in the fifty-ſixth degree ten minutes north latitude, and lies low in a fine plain between the ſea and a lake, and from the latter a ſtream runs in a pretty wide channel through the city, dividing it in two unequal parts. It is a large, populous, and much-frequented town, that has ſix gates, two churches, a chapel of eaſe, an epiſcopal palace, a cathedral ſchool, and a well-endowed hoſpital. The cathedral is a large ſtructure, a hundred and fifty paces long, ninety-ſix broad, and near forty-five Dutch ells in height. Before the Reformation, here were two monaſteries, and one convent of nuns. The provoſts of the dioceſe hold an aſſembly twice a year in the chapter-houſe. The harbour, which is at the mouth of the abovementioned channel, is ſafe and convenient, but is not very large, and ſometimes has not a proper depth of water; however, the city carries on a conſiderable trade.

Scanderbourg is a very ancient palace, ſituated in a pleaſant country, and ſurrounded on every ſide with woods and water. The kings of Denmark have, ever ſince the Chriſtian religion was introduced into the kingdom, reſided more or leſs in this place. In the reign of Frederic IV. the apartments were rendered more commodious; they were embelliſhed with new ornaments, and near this ſtructure a garden was laid out. On one ſide of this palace is the little town of the ſame name, the inhabitants of which are chiefly employed in agriculture; and in 1751, ſome works were ſet up for refining brown, red, and yellow oker, all which ſpecies of earth are very common in Jutland.

The general government of Ripen is bounded on the north by the gulf of Lymfurt, and by the dioceſes of Wibourg and Arhuſe, with the Little Belt on the eaſt; on the ſouth it joins to the dutchy of Sleſwic, a part of which belongs to it; and on the weſt is waſhed by the North-Sea. It is a hundred and forty-two miles in length, and fifty-ſeven in breadth. This is the moſt extenſive, but neither the moſt fertile nor populous, of the four general governments, into which North Jutland is divided; for it is interſperſed with large barren waſtes: the ſoil is, however, very fertile in ſeveral parts of the government. The ſee of Ripen was founded in 946, by the emperor Otho I. who, after a ſucceſsful war with Harold king of Denmark, prevailed on him to embrace the Chriſtian religion. This province contains four prefectures, the moſt conſiderable places in which are,

Fredericia, or Frederica, in the prefecture of Kolding, the moſt fertile part of the country. This is the only fortified place in all North Jutland. It is a modern town ſituated on the Little Belt, but though it takes up a large compaſs, it is far from being full of buildings and inhabitants. It firſt began to be built in 1651, by Frederic III. but ſcarce were the fortifications finiſhed, and the town properly inhabited, when the Swedes, in 1657, took it by ſtorm, and burnt a great part of it to the ground. Both the fortifications and the town were repaired at the concluſion of the war, and in 1682, Chriſtian V. granted a charter which rendered Fredericia an aſylum for all bankrupts, whether natives or foreigners, and allowed all the Calviniſts, Papiſts, and Jews, who ſettled here, the free exerciſe of their religion. The fortifications of this town are in good condition, but are ſo large in extent, that they would require a numerous garriſon to defend them. Here are two Lutheran churches, in one of which the ſervice is alternately performed in the Daniſh and German languages; a Calviniſt church, a popiſh church, a ſynagogue, a grammar ſchool, and a good arſenal. A conſiderable quantity of tobacco is planted both within and without the walls. Here all veſſels paſſing through the ſtreight called the Little Belt, pay a toll.

Kolding, in Latin Coldinga, a ſmall town on the river Trueth, or Kolding, which here diſcharges itſelf into a bay that runs about five miles from the Little Belt within land, as far as this town. It lies low between two hills, and is one of the oldeſt towns in the country. It has one pariſh church, a rich hoſpital, with a church belonging to it, and a grammar ſchool: but the harbour being choaked up, is a great diſadvantage to its trade. On an eminence to the north-weſt ſtands a caſtle, built in the year 1248, but it was greatly improved by Chriſtian III. Chriſtian IV. and Frederic IV. One of its greateſt ſingularities is the giant's tower, erected by Chriſtian IV. which is flat on the top, with a ſtone baluſtrade, and has at each of the four corners, a ſtatue of ſtone,

ſtone, ſeven feet high. This caſtle has its particular church or chapel. But Kolding is chiefly remarkable for the royal cuſtom-houſe, which ſtands over the water on the bridge, in order to receive toll for all foreign commodities that paſs through it in carriages, and likewiſe for the horſes and oxen that go into the dutchy of Sleſwic. The number of oxen paſſing this way one year with another is computed at twenty thouſand, and two rixdollars are paid for every head.

The city of Ripen, in Latin Ripæ Cimbricæ, the capital of the dioceſe, is ſituated in the fifty-fifth degree thirty-ſix minutes north latitude, and in the ninth degreee ten minutes eaſt longitude, on the banks of the river Nibs-Aa, and, next to Wibourg, is reckoned the moſt antient town in North Jutland. It was formerly one of the moſt celebrated and flouriſhing cities in the North, it having four pariſh churches and five chapels, beſides the cathedral, four convents with their churches, and between ſix and ſeven hundred free burghers. A conſiderable number of ſhips then traded from this port to Norway, England, Holland, and France, and the city had the privilege of coining money; but an end was put to this opulence, partly by ſeveral dreadful conflagrations, and partly by inundations and the ravages of war. The city and ſuburb are ſeparated by the river Nibs-Aa, which entirely ſurrounds the former, and ſometimes lays it under water. Here are two churches, beſides the cathedral, which is dedicated to the Virgin Mary, and ſtands on an eminence. It is a large ſtructure, and contains the monuments of king Erick III. and Chriſtopher I. On one ſide of the choir is the chapter-houſe, in which the conſiſtory is held: here are alſo the effigies of all the biſhops of Ripen ſince the Reformation, the firſt excepted. St. Catharine's church is alſo a large edifice, ſaid to have been built in the thirteenth century by the Dominican monks, whoſe convent was contiguous to it. The grammar-ſchool, which is ſaid to have been founded in the year 1298, is the moſt antient of any in Denmark: it conſiſts of ſix claſſes, has ſeven maſters, and a library erected in 1720. The Dominican convent is converted into a commodious hoſpital, and the old exchange belonging to the merchants into a town-houſe. Here is ſtill a ſmall trade carried on in grain, horned cattle, and horſes; but the ſhallowneſs of the river will admit of only ſmall veſſels coming up to the city, and theſe only at high water.

SECT. X.

Of South Jutland, or the Dutchy of Sleſwic: its Situation, Extent, Rivers, Produce, and Inhabitants: with a Deſcription of the principal Towns in that Dutchy, and of the Iſlands on its Coaſt.

THE dutchy of Sleſwic derives its name from its capital, but is frequently termed in hiſtory South Jutland, particularly by antient writers. Some have erroneouſly annexed it to Holſtein, and deſcribed it as a part of Germany; but Sleſwic is in reality a part of Denmark, and is divided from the dutchy of Holſtein, which bounds it on the ſouth, and conſequently from the German empire, by the Eider and the Lewen; on the eaſt it is bounded by the Baltic and the rivers Kolding and Skotburg, which ſeparate it from North Jutland; while to the weſt it is waſhed by the North Sea. Thus it extends in length from Rendſburg to Koldingen, about eighty-five miles, but its breadth is unequal, it being in ſome places no more than forty, though in its broadeſt part it is about ſixty-ſix miles, including the two ſmall iſlands of Arroe and Helgeland.

There are no high mountains in Sleſwic, but only ſome eminences. The higheſt hills are near the towns of Sleſwic and Apenrade. The chief rivers in this dutchy, moſt of which flow from eaſt to weſt, are the Eider already mentioned, as dividing Denmark from Germany; the Treen, which falls into the Eider near Frederickſtadt; and the Nips-Aa, which runs cloſe by Ripen, with ſeveral ſmaller ſtreams.

Providence has plentifully ſupplied this country with corn, cattle, and fiſh; and ſome parts of the weſt ſide of Sleſwic, lying between the continent and the iſlands, which are overflowed by the tides, afford a great many oyſters.

The inhabitants are a mixture of Danes or Juts, Lower Saxons, and Frieſians; beſides which there are Hollanders ſettled in Frederickſtadt, and Flemings in Nordſtrand: whence in ſome places the Frieſian is the common language, in others the Daniſh, and in others the German.

Lutheraniſm is the prevailing religion in this dutchy, except at Frederickſtadt, where papiſts and Jews, beſides ſeveral ſects, are tolerated; and on the iſland of Nordſtrand the Romans have a popiſh church and a chapel: the Calviniſts are alſo indulged in the exerciſe of their religion in this dutchy, by an edict iſſued in 1734; but they are not very numerous.

The nobility of Sleſwic have the ſame privileges with thoſe of Holſtein, but are not ſubject to the ſame governor; for they acknowledge the king only for their ſovereign, and are under the juriſdiction of the royal provincial court at Gottorp.

The whole dutchy is divided into cities, prefectures, diſtricts, pariſhes, manors, and other ſmaller diviſions. The cities have their particular magiſtrates, who are entirely independant of the prefects. A governor is preſident or chief judge in all the towns of the dutchy.

The taxes in the country are ſometimes levied by the ſtewards or clerks of the prefects, and ſometimes by the magiſtrates of the diſtricts, and by them paid to the king's receiver at Rendſburg. In every prefect there is alſo a ſteward or adminiſtrator, who takes care of the royal revenues, the repairs of the roads, the preſervation of the woods, and the like.

The principal places in the dutchy of Sleſwic are,

Apenrade, or Abenrade, in the prefecture of the ſame name, which is one of the beſt and moſt flouriſhing towns in the country, and is continually improving in beauty and extent. It is ſituated in the fifty-fourth degree fifty-two minutes north latitude, and in the tenth degree ſeven minutes eaſt longitude, at the bottom of a deep open bay, which runs from the Baltic a good way into the land, and is ſurrounded on three ſides with high mountains. It has a ſafe and commodious harbour, but not deep enough for ſhips of burthen to come up cloſe to the bridge. Moſt of the inhabitants, who are famed for ſhip-building, are in good circumſtances; and though the town has frequently ſuffered by fire, they, by their induſtry, have repaired all the damage it has ſuſtained.

In the prefecture of Tundern is the iſland of Sylt, which is nineteen miles in length, but very unequal in its breadth. The ſoil is not fertile, nor does it produce either wood or turf, on which account the inhabitants are obliged to ſupply themſelves with fewel from the continent. They ſubſiſt chiefly by navigation, agriculture, grazing, and knitting; and are ſuch expert ſeamen, that the trading towns are glad to employ them on board their ſhips; but as they are very ſenſible of their abilities, few will ſerve as common ſailors, but expect the pay as maſters or mates. Both ſexes are very tenacious of their antient dreſs. The iſland contains four pariſhes, and had formerly an harbour at the north angle, but it is at preſent quite choaked up with ſand.

The iſlands of Alſen and Arroe contain the prefectures of Sonderburg and Norburg.

The iſland of Alſen is ſituated in the Baltic near the continent, and is ſeparated from it by a narrow ſtreight called Alſenſund. This iſland is about nineteen miles in length, and is about four miles in breadth. It lies under the fifty-fifth degree of north latitude. The ſoil, which is every where very fertile, yields all kinds of grain except wheat, and plenty of fruit. It has alſo ſeveral fine woods that abound with game, and lakes of freſh water, which afford a variety of fiſh. In the prefecture of Sonderbing, in the ſouth part of the iſland, is the town of the ſame name, which is of a middling ſize, and ſtands on the acclivity of a very rugged hill that renders the ſtreets very uneven. This town is lately much improved in its buildings, yet it has but one church, which ſtands on an eminence almoſt without the town; and adjoining to it is an alms-houſe, built out of the ruins of an old convent. The harbour is eſteemed one

of

of the beſt in Denmark, and moſt of the inhabitants are mariners. The king's palace, which ſtands at the entrance of the harbour, is both ſtrong and ſpacious; it is a quadrangular ſtructure, fortified after the antient manner with round baſtions. On the eaſt ſide of this caſtle is a round tower, in the lower part of which king Chriſtian II. was impriſoned for twelve years. This caſtle is the reſidence of the king's prefect, and has a beautiful chapel.

The iſland of Aroe, which is at the diſtance of about three miles from Funen, and about twelve miles to the north-eaſt of Alſen, is about fourteeen miles in length, and about three miles in breadth. It was formerly very woody; but has been entirely cleared, in order to render it fit for tillage. It has no deer, but abounds in hares and wild fowl. It has two good harbours, that in the large bay, at the entrance of which two caſtles formerly ſtood, one on each ſide; and that of the little town of Arroes-Kiopping, which is ſheltered by the little iſland of Deyeroe, that lies oppoſite to the harbour. Here is great plenty of all kinds of vegetables, eſpecially Daniſh cummin, cabbages, and onions. The inhabitants are a mixture of peaſants and ſea-faring people. With reſpect to ſpiritual affairs, this iſland is in the dioceſe of Funen; but, with regard to civil affairs, is included in the dutchy of Sleſwic; and, by virtue of an edict publiſhed in 1750, is under a particular court of judicature.

Flenſburg is in the prefecture of the ſame name on the continent, and is a pretty large well-built town. It has a low ſituation, and is ſurrounded on three ſides by mountains, and on the fourth lies the famous gulph called Flenſburgerwieck, which runs ninety-five miles from the Baltic into the land. The hills on both ſides of the gulph form a ſecure harbour, with a depth of water ſufficient for the largeſt ſhips, which are at preſent unloaded at the quay; but this was formerly done cloſe to the warehouſes. At that time the trade of this town was very conſiderable, but it is at preſent greatly decayed, for the commerce of the Flenſburghers to Norway has been clogged with great difficulties, and that to Copenhagen and other parts of Denmark entirely loſt, they being prohibited from exporting thither any ſilk, cloths, woollen ſtuffs, wines, and brandy. Flenſburg is a long narrow town, extending above four miles in length from the north gate to St. John's gate: it has twelve lanes, beſides the high ſtreet, and ſix gates; and is divided into twenty-two quarters. Moſt of the houſes are ſpacious and ſtrongly built. Here are three German pariſh churches, one Daniſh church, an orphan-houſe, and a good ſchool; alſo an alms-houſe, with a chapel, that was formerly a convent of Grey Friars, and in which fifty poor perſons are comfortably maintained. By the water-ſide is a warehouſe for merchants. The north and ſouth market-places are both ſpacious, and the latter adorned with a fountain. With St. John's gate is a pleaſant ſuburb facing the harbour called St. Jurgen, the greateſt part of which belongs to the alms-houſes.

The caſtle of Gottorp, or Gottorf, ſtands in the midſt of a ſmall lake, and is built in the form of an oblong ſquare. Some derive its name from Gotteſdorf, or God's village, it originally belonging to the biſhops of Sleſwic, and was appropriated to a pious uſe. A rampart encompaſſes the firſt court, and the gate of the caſtle is of a fine blue ſtone as hard as marble. On the north ſide of this ſtructure is a bridge over the lake two hundred paces in length, at the end of which a pleaſant walk, between rows of trees, leads to a fine garden, adorned with caſcades, fountains, and other water-works; particularly in a large baſon is a ſtatue of Hercules combating the hydra, whoſe ſeven heads ſpout water. On the north is a parterre in the form of a creſcent, divided into compartments, and embelliſhed with the buſts of ſeveral kings and princes. Before the houſe is a level piece of ground, about a hundred and fifty paces long, divided into three parts; thoſe on the ſides being two fine parterres, and that in the middle having a large baſon in the center, with fine water-works. From thence you aſcend to different terraces, one above another, ſet round with ſtatues, buſts, and other ornaments. The higheſt terrace exhibits a moſt delightful proſpect of the caſtle, the ſurrounding lake, and a fine country; and, on the other hand, of a noble orangery, and the neighbouring park, which is four or five miles in circuit, and well ſtocked with deer.

Sleſwic, or Schleſwig, in Latin Sleſvicum, is the capital of the dutchy, and is ſuppoſed to derive its name from the Wiecke, or gulph of Schley. It is ſituated in a moſt delightful country, in the fifty-fourth degree fifty-one minutes north latitude, and in the ninth degree fifty minutes eaſt longitude. Its form is very irregular, but has ſome reſemblance to a creſcent, and is about half a Daniſh mile in length. The city is divided into three parts, Old Sleſwic, Lollfuſs, which is a long ſtreet leading from the town to the caſtle of Gottorp juſt deſcribed, and Frederickſburg, formerly called Kratzenberg, which lies at the ſouth extremity of the town. In the Old Town is only one church, which is the cathedral, dedicated to St. Peter. This is a grand ſtructure, that makes a good appearance both within and without. It has however no ſteeple, though a very noble foundation of hewn ſtone has been laid for one. Not far from the cathedral is the orphan-houſe, which was founded in the year 1714; and in the great market-place ſtand the town houſe and the Grey Friars convent. On the north ſide of the city on St. Michael's hill ſtands a church called by the name of that ſaint; and in Frederickſburg is Trinity church. On the eaſt ſide of the city, on the other ſide of the Fiſh-bridge, lies the Holm, as it is called, where ſtands the famous convent of St. John, which was founded for ladies of noble families, and ten nuns, including the abbeſs, now reſide in it. This city has been ſeveral times pillaged, burnt, and razed to the ground; and in 1447 was entirely deſtroyed by fire. It was, however, a flouriſhing town after all theſe misfortunes, till the year 1713, when the ducal court being removed from Sleſwic, it fell to decay; and though the governor and the ſtate officers ſtill reſide there, theſe advantages are not an equivalent for the above loſs; nor is it capable of carrying on any great foreign trade. The mouth of the Sley being choaked up, at preſent many houſes in the city are uninhabited.

Frederickſtadt is not a large, though it is a regular and well-built town, of a ſquare form, ſituated between the rivers Eider and Treen. Its ſtreets are kept very clean, and in ſome of them are planted fine rows of lime trees. Some Dutch Arminians, who quitted Holland immediately after the ſynod of Dort, founded this town, and called their ſettlement by the name of Frederick IV. who was then duke of Sleſwic. Half of the magiſtracy is of the Arminian, and the other half of the Lutheran perſuaſion: the Calviniſts alſo aſſemble in the Arminian church; but the moſt ſubſtantial traders and merchants in this town are Mennonites. Here are alſo ſome Quakers and Jews, who have a ſynagogue in the town. The inhabitants ſubſiſt by ſilk and woollen manufactures, navigation, and commerce. Inſtead of a wall Frederickſtadt is encompaſſed by a moat, with large trees growing on its banks.

The iſland of Femeren, Femern, or Femarn, in Latin Imbria, Fimbria, or Cimbria-parva, lies in the Baltic, near the coaſt of Germany, in the fifty-fourth degree fifty-ſix minutes north latitude, and in the eleventh degree twelve minutes eaſt longitude, and is ſeparated from Holſtein by the narrow ſtreights called Femern-ſound. It is generally computed to be about fifteen miles in length, its breadth is ſomething above ſix miles, and its circumference about forty-eight. The ſoil is in general very fertile, and yields plentiful crops of wheat, barley, and peas; but affords no other game beſides hares. The greateſt inconvenience this iſland labours under is the ſcarcity of ſprings and rivulets; for in dry ſummers the inhabitants are extremely diſtreſſed for want of freſh water. There are about forty villages in this iſland, of which Denſchendorf is of the largeſt extent; but Lemkendorf is the beſt peopled. This iſland has ſuffered extremely by the devaſtations of war, particularly in 1419, when it was ravaged with the moſt inhuman barbarity by king Erick, of Pomerania, and moſt of the inhabitants put to the ſword. Femern at preſent belongs to the king of Denmark; but whether it be comprehended in the dutchy of Sleſwic, or has been always a diſtinct territory, is diſputed.

The

The iſland of Helgeland, alſo called Heiligland, is ſituated in the North Sea, in the fifty-fourth degree twenty-eight minutes latitude, about thirty-ſix miles from the mouth of the Elbe, and at the ſame diſtance from that of the Eider. This iſland has been ſeveral times greatly damaged by being overflowed by the ſea, and even a conſiderable part of it has been long ſwallowed up by the waves; but the laſt inundation, which happened in 1649, left only a ſmall part of the iſland remaining; the baſis of which is a ſolid rock that appears round it, the ſoil being there waſhed away by the ſea. This little ſpot has, however, two diſtricts, the high land and the downs, and each of them its ſub-diviſions. The whole circuit of the high land is about nine hundred and forty rods, and the downs are nearly of the ſame circumference. The ſoil in the high land is red, and rather clayey than ſandy, and from two and a half to four feet in depth; yet its fertility is greater than one would imagine, for it produces barley and oats, though not a ſufficient quantity for the ſubſiſtence of the inhabitants. Here are very few trees, except ſome cherry trees and raſberry buſhes; nor are there many vegetables, for the inhabitants cannot ſpare time to cultivate them, they being very cheaply ſupplied with all kinds of vegetables and fruit from Hamburg and other places. The high lands have paſture ſufficient for no more than about ſixty cows, and as many ſheep on the higheſt part. The Hamburghers have erected a light-houſe, which is ſupplied at their expence with pit-coal; the deſcent is very ſteep, but is made ſo eaſy by about a hundred and eighty ſteps, that a bullock may be driven up and down. The low land is ſecured by a mole, to prevent its being entirely deſtroyed by the ſea. Since the year 1727 the downs have been ſeparated by a channel, which is three quarters of a mile in breadth, and of a ſufficient depth for pretty large veſſels. The Helgelanders are deſcended from the antient Frieſians, and have their particular laws and manners, ſtill retaining their Frieſian names and cuſtoms, and never removing to ſettle in any other country. Their chief food is fiſh, and a kind of gruel thickened with oatmeal; and their conſtant employment at ſea renders them exceeding hardy and intrepid in all weathers. Their number amounts to about two thouſand; while the men are employed at ſea, the women are no leſs diligent and induſtrious on ſhore: for as there is neither plough, carriage, nor horſe on the whole iſland, the women dig the land, and ſow, harrow, reap, threſh the corn, and grind it with hand-mills; and, beſides theſe laborious employments, are indefatigable in performing all other domeſtic buſineſs. The ſpecies of fiſh caught by the inhabitants about this iſland, and diſpoſed of at Hamburgh, Bremen, and other places, are cod, haddock, ling, ſeveral kinds of flat fiſh, mackerel, thornback, whitings, lobſters, &c. and the inhabitants being very ſkilful pilots, are hired to conduct ſhips bound to the Elbe, Weſer, and Eider, for which they are generally well rewarded; but one-tenth of their profit and ſome other duties are payable to the king: this iſland was annexed to the crown of Denmark in the year 1714.

We ſhall now return to the ſouth of Europe, and viſit the countries to the weſt of Poland, and beginning with Hungary and Tranſilvania, &c. ſhall proceed to the German empire.

CHAP. VIII.

Of HUNGARY, including HUNGARY PROPER, TRANSYLVANIA, SCLAVONIA, CROATIA, and DALMATIA.

SECT. I.

Its Names, Boundaries, and Extent. Its Climate, Mountains, Plains, Lakes, Rivers, Minerals, and Foſſils; Plants, and Animals.

HUNGARY, the antient Pannonia, received its preſent name from the Hungarians, a race of the Huns, a Scythian or Tartar nation, who in the ninth century took poſſeſſion of the country; but the Hungarians themſelves call it Magyar Orſzag: the Sclavonians give it the name of Wergierſka; by the Germans it is called Ungern, and Hungerland; and by the Italians Ungharia.

The name of Hungary is uſed both in a limited and extenſive ſenſe. In the former, this country is bounded on the ſouth by Servia and the river Drave, which ſeparates it from Sclavonia; on the eaſt by Walachia and Tranſylvania; on the north by the Carpathian mountains, which ſeparate it from Poland; and on the weſt by Moravia, Auſtria, and Stiria. But in its more extenſive ſenſe it comprehends Sclavonia, Dalmatia, Boſnia, Servia, and Tranſylvania, lying between the forty-fourth degree forty minutes and the forty-ninth degree north latitude, and between the ſixteenth and twenty-fifth degree fifty minutes eaſt longitude from London.

The air of Hungary is very unhealthful, eſpecially to foreigners; which is generally thought to proceed in a great meaſure from the ſudden alteration of the weather; the days being exceſſive hot in ſummer, and the nights intolerably cold; whence it has been called the Churchyard of the Germans, from the great mortality which uſually happens among the German forces when they take the field. The noxious vapours which ariſe from the many ſwamps and moraſſes, are alſo conſidered as another great cauſe of this unhealthfulneſs; but theſe noxious exhalations are leſs common in the mountainous and more barren parts than in the ſouth.

The chief mountains of Hungary are the Crapac, or the Carpathian: theſe at the foot are overgrown with common trees, higher up with very large ones, and at a greater interval, which forms as it were a third region, with bruſh wood: the ſummit is a chaos of frightful crags and precipices, continually covered with ſnow, and lakes of very tranſparent water lying between them.

However, the inner part of the country is far from being mountainous; for the land along the Danube, from Preſburg to Belgrade, is almoſt one continued plain, of near three hundred miles in length: there are beſides many other large and fruitful plains in Hungary, very little of it being taken up with mountains and woods.

Though this country lies at a diſtance from the ſea, it is well watered by lakes and rivers. The moſt conſiderable of the former are the lake Balaton, or Plattenſee, which is about forty miles in length, and lies on the weſt ſide of Hungary, between the Drave and the Danube; and the New Siedlerſee, or Lacus Peiſonius, which is about twenty-eight miles in length.

The principal rivers of Hungary are, firſt, the Danube, which riſing in Swabia, runs eaſtward through Germany, Hungary, and Turky, after receiving ſixty navigable rivers, and above a hundred and twenty in the whole, diſcharges itſelf by ſeveral mouths with ſuch violence into the Black Sea, that both the ſtream and water are perceptible in it for ſeveral miles diſtance.

The Drave, which iſſues out of Stiria, ſeparates Hungary and Sclavonia, and at laſt falls into the Danube, near the tower of Darda.

The Teys, or Tibiſcus, which riſes in the Carpathian mountains, and, while among them, has a rapid and

clear ſtream; but afterwards becomes ſlow and turbid. It receives ſeveral ſmaller rivers, and falls into the Danube at a conſiderable diſtance above Belgrade. No river in Europe equals this in plenty of fiſh.

The Araba, or Raab, which riſing in Stiria, enters the weſt ſide of Hungary, and falls into the Danube near Raab.

The Gran, or Granus, which riſes in the Carpathian mountains, and running to the ſouthward, falls into the Danube near the city of Gran.

The Wag, which alſo riſes in the north of Hungary, and diſcharges itſelf into the Danube a little above Comorra.

Moſt of theſe rivers are well ſtocked with fiſh, which in ſome parts of Hungary are ſo plentiful that they feed their hogs with them, and in other places it is ſaid that a thouſand carps have been bought for the value of a crown.

This country abounds alſo with many ſalutary hot baths, and ſeveral ſprings that have very uncommon qualities; among which is a ſpring of vitriol-water, near Shmolnitz, which in a ſhort time gives the appearance of copper to plates of iron; and there are others of ſo poiſonous a nature, that an animal's drinking of them is followed by immediate death.

With reſpect to the minerals of this country, it is obſervable that pure gold ore is never found in the mines, though they yield gold ore with a mixture of ſilver or lead; and on the other hand, no ſilver is dug up here that does not contain ſome gold. A quintal of the richeſt ore, according to Mr. Keyſler, yields thirty-five ounces of ſilver; but ſome is refined, eſpecially at Cremnitz, that does not yield above two ounces out of a hundred weight, but the ore that yields the leaſt ſilver generally produces the moſt gold. There are alſo mines of copper, vitriol, iron, lead, quickſilver, antimony, cinnabar, yellow orpiment, ſulphur, marcaſite, rock-ſalt, ſalt-petre, magnets, aſbeſtos, and gems, though the latter are very different from the oriental; with alabaſter, and quarries of marble.

The ſouthern part of this country is ſo delightful, that a traveller has ſaid of it, "Out of Hungary there is no "living, or if there be living it is not life."

The level country produces eſculent plants, tobacco, ſaffron, aſparagus, melons, hops, corn, pulſe, millet, delicious wine, and a great variety of fruits.

The animals of Hungary are chiefly fine horſes, moſtly mouſe-coloured, and of which incredible numbers are exported; mules, aſſes, buffaloes, cows, ſheep, goats, ſwine, and many ſpecies of wild beaſts, deer, chamois-goats, wild boars, bears, wolves, and lynxes.

Beſides the ſheep common in moſt countries, Hungary affords a particular ſpecies, that have large twiſted horns, generally about two feet in length. Theſe are kept in ſeparate flocks, and great numbers of them are annually ſent to Vienna.

Among the birds are pheaſants, partridges, woodcocks, &c. The number of the wild fowl is, indeed, incredible; and it is not uncommon, in ſuch flocks, for ſome of them to live to a good old age.

SECT. II.

Of the different Origin of the Inhabitants: their Languages, Perſons, Dreſs, and Manner of Travelling: their Exports, Imports, and Coin.

THE inhabitants are of different origin. The true Hungarians, as we have already intimated, are the deſcendants of that fierce people called by the ſame name, who, by force of arms, ſeated themſelves here in the year 888; and theſe, though more civil than their anceſtors, ſtill ſhew ſome traces of their Scythian extraction. Another part of the inhabitants are of the Sclavonian race, and this includes the Bohemians, Croats, Servians, Raſcians, and Vandals, who inhabit the eaſt and northern parts of Hungary. Theſe, indeed, are found all over the country, and ſeem to have been ſettled here from the remoteſt antiquity. The German nations are the Auſtrians, Stirians, Bavarians, Franks, Swabians, and Saxons, who ſeem to have entered Hungary much about the time when the Saxons ſeated themſelves in Tranſylvania; but war, commerce, and the fruitfulneſs of the country, have drawn hither other Germans, who have conſiderably increaſed ſince Hungary became ſubject to the houſe of Auſtria. The Walachians, who inhabit the country next to Tranſylvania and Walachia, ſeem to be the deſcendants of the Romans that ſettled in Dacia. Among the foreigners are the Greeks, who removed hither for the ſake of a more advantageous commerce; the Jews, who were formerly much more numerous than they are at preſent; the Turks and Zingari, who are a wandering people of very uncertain origin; many of theſe are ſmiths and muſicians. Thus the inhabitants muſt have been anciently of different diſpoſitions, though, by frequent intercourſe, they now reſemble each other. They are, for the moſt part, of a ſanguine choleric temper; the nobility are numerous, and both in their dreſs and tables are fond of pomp and magnificence, yet apply themſelves to learning and rural improvements, but more to war, hunting, and martial exerciſes.

There are four common languages in Hungary; the Hungarian, which is of Scythian origin, without the leaſt affinity to any of the European tongues, and one unvaried dialect. The Hungarians, in writing, uſe the Roman characters; but the German has its different dialects according to the different nations of Germans ſettled here. The Sclavonian, which derives its origin from the Sarmatian, is divided into the Bohemian, Croatian, Vandalian, Raſcian, and Ruſſian dialects. The Walachian tongue is allied to the Italian, and formed by a mixture of Latin and Sclavonic. The Latin is not only ſpoken by the literati and gentry, but alſo by the commonalty. The Zingarians have a ſpeech compoſed of a corruption of the Hungarian, Sclavonic, Walachian, and other languages.

The Hungarians are well proportioned, of a good ſtature, and have tolerable complexions. On their heads they wear fur caps, and they have cloſe-bodied coats girt about them with a ſaſh, over which they wear a kind of cloak or mantle, that comes no lower than the hips, and is ſo contrived as to buckle under one arm, that the right hand may be always at liberty. The colours they moſt affect in their cloaths are red, green, and blue, the latter of which is moſt common. The men ſhave their beards, but leave whiſkers on the upper lip; and beſides a broad ſword, the uſual arms of an Hungarian are, an iron mace with a round head, and a kind of hatchet. The young gentlemen have frequently feathers in their caps.

The Hungarian ladies are much handſomer than thoſe of Auſtria; and the beauties of Vienna chiefly come from this country. They are generally very fair and well ſhaped, and their dreſs extremely becoming. The lady Wortley Montague deſcribes one of theſe ladies, as in a gown of ſcarlet velvet, lined and faced with ſables, and made exact to her ſhape, the ſkirt falling to her feet. The ſleeves are ſtraight to their arms, and the ſtays buttoned before with two rows of little buttons of gold, pearl, or diamonds. On their heads they wear a taſſel of gold, that hangs low on one ſide, lined with ſables, or ſome other fine fur; and their behaviour is extremely polite and agreeable.

The women's dreſs in the mine-towns is not unbecoming; they wear knots of ribbons on their ſhift ſleeves, and others hanging down their backs, but the peaſants and lower ſort of people dreſs very meanly. Among the latter, the men are very fond of wearing a furred mantle, and their dreſs is generally no more than a plain ſheep's ſkin, with a cap and boots of the ſame. Moſt of the women have boots, and many of them a long furred gown: they have a kind of ſhifts of very coarſe linen next their ſkin, with a girdle round it at the waiſt; and their head-dreſs is a piece of white linen with two lappets hanging down behind.

In the towns of Hungary the entertainment travellers meet with is not to be found fault with; but in the country it is frequently ſo bad, that beſides the want of good proviſions, there is ſcarce ſtraw to lie upon; and where beds are to be had, they are ſo ſhort, that one would think

think the Hungarians ſlept in the poſture in which they ride. They generally keep hogs, of which they make bacon, which is the common food of the Hungarian peaſants. The hogs, geeſe, and fowls, live in the ſame apartment with their owners.

As Hungary is plentifully watered with fine rivers, the uſual way of travelling in ſummer is by water; and where they have not this convenience, an open chariot drawn by two, three, or four horſes a-breaſt, carries the traveller with great expedition over this flat country. As the air is extremely cold in winter, notwithſtanding its ſouthern ſituation, travellers in that ſeaſon have a coach fixed upon a ſledge, which is drawn by horſes with great expedition over the ice and ſnow. They have a very fleet breed of horſes for riding, and never dock the tails, which are conſidered as a great ornament. Where the roads lie through the woods, travellers are in danger from the wild beaſts, and eſpecially the wolves, which in ſome places are very numerous.

The moſt common diſtempers in Hungary are the gout, in its ſeveral ſpecies, and the fever; the laſt of which is even called the Hungarian ſickneſs. The firſt ſymptoms of this diſeaſe in Hungary are nodes or tubercles on the hands and arms, which if rubbed in time with vinegar, ſalt, and garlic, till they diſappear, an end is put to the progreſs of the diſeaſe. The plague alſo comes from Turky, and here ſpreads its contagion.

The burghers follow arts, manufactures, and trade, but the laſt is almoſt entirely engroſſed by the Greeks. From Hungary is exported excellent wine, and particularly tokay, ſaffron, oil, metals, minerals, cattle, leather, wool, tallow, and wax; and its imports are ſpices, tin, ſilk, velvets, cloths, and other foreign goods.

The pieces of coin current in Hungary, are, a heller, which in Upper Hungary goes for the ſixth part of a groſch, and in Lower Hungary for the fifth; a groſchel, the fourth part of a groſch; a kreutzer (a German coin) the third part of a groſch, and the ſixtieth of a Spaniſh gulden; the pulgrotz, half a groſch, and the fortieth of a gulden; the ſiebner, worth ſeven kreutzers; a ſiebentehner, worth ſeventeen kreutzers; a half gulden, worth two ſhillings and four-pence, Engliſh; an ungriſch gulden, worth ſeventeen groſchen and a half; a Rheniſh gulden, worth twenty groſchen, which, in Upper Hungary, are worth a hundred and twenty, and in Lower Hungary, a hundred ungriſch; a thaler is equal to two Rheniſh guldens; the ducats are of two ſorts, the Cremnitz ducat is worth four guilders four groſchen, but a Tranſylvanian goes only for three guilders, each guilder worth two ſhillings and four-pence, Engliſh.

SECT. III.

Of the Religion and Learning of the Hungarians.

THE Chriſtian religion was firſt eſtabliſhed in Hungary in the tenth century, when, in the year 969, or 975, Geyſa, prince of the country, was baptized; and this religion made great progreſs under his ſon and ſucceſſor Stephen, whoſe zeal gained him the title of apoſtle and ſaint.

In 1523, the Reformation began by Martin Cyriacus firſt preaching the doctrine of the goſpel in this country; but it had before made its way into Tranſylvania. From that time great numbers of Hungarians went to ſtudy in Germany, and at their return were conſidered as the diſciples of Luther. Soon after the opinions of Zuinglius, in relation to the ſacrament, were made known in Hungary, and a little after the ſentiments of Calvin were embraced by great numbers. But from the time Hungary became ſubject to the houſe of Auſtria, and the Jeſuits got footing in that kingdom, the proteſtants underwent many ſevere trials, eſpecially in the beginning of the ſeventeenth century. Under Ferdinand III. the proteſtants were deprived of ſeveral churches, and of more under the emperor Leopold, in whoſe time it was enacted at the diet of Sopron, or Oldenburg, that the reformed ſhould not poſſeſs more than two churches in each palatinate. Nor could their enemies reſt here till they had driven them out of all the churches that had not been expreſly mentioned in the twenty-ſixth article of the diet of Sopron, and accordingly above three hundred were actually taken from them. The Vandals too had ſix churches, and now are without ſo much as one place where divine worſhip is performed in their own language.

Mr. Keyſler obſerves, that ſix or ſeven thouſand of the inhabitants of Schemnitz, which conſtitute two-thirds of the city, profeſs Lutheraniſm, and yet the magiſtrates are always Romans; but at Cremnitz the magiſtracy is ſhared between the two religions, though no proteſtant is capable of employment in the imperial mines. In Upper Hungary he ſays the Lutherans are very numerous, eſpecially in the country, and yet in ſome places they are forcibly driven into the Romiſh churches like ſo many ſheep; but at Pilſen, which is not far from Schemnitz, the popiſh clergy and the proteſtant inhabitants are ſo conformable, that the prieſts read maſs in the churches belonging to the proteſtants, and theſe in their turn ſing Lutheran hymns in the Romiſh churches.

It is worthy of remark, that the proteſtants have generally more churches allowed them in thoſe countries that remain under the dominion of the Turks, than where they are ſubject to the emperor; for on paying the tribute impoſed on them, every one enjoys his own religion without moleſtation. Though the Romans ſcarcely conſtitute one-fourth of the inhabitants of Hungary in general, and do not pay above one-ſixth part of the taxes, they are inceſſantly contriving to impoſe new grievances on the reſt of their countrymen. The proteſtants are not poſſeſſed of a ſingle printing-preſs, either in Hungary or Tranſylvania; beſides, the importation of Bibles, and all books relating to the doctrinal points of their religion, are ſtrictly prohibited; and before an Hungarian ſtudent is permitted to go to a foreign univerſity, he muſt obtain a licence, or paſſport, from the Imperial governor of the country. Their ſchools are confined to the ſyntax, and no teachers of the ſciences allowed among them; except their being indulged ſince the year 1751 with a college at Oedenburg, and a ſeminary at Eperes.

At the head of the Romiſh church are two archbiſhops and nine biſhops, nominated by the queen, and confirmed by the pope. In Dalmatia, Croatia, and Sclavonia, none but the papiſts are qualified to hold lands. The Raſcians, Ruſſians, and Walachians, profeſs the Greek church, which has been tolerated ſince the year 1690, by the emperor Leopold and other kings. The Baptiſts and Mennoniſts are chiefly ſettled in the neighbourhood of Preſburgh; but the Jews are diſperſed in moſt of the conſiderable towns, though under the burthen of paying double taxes of all kinds.

Learning among the Romans is principally cultivated by the Jeſuits, who in the univerſities of Tirnau, Buda, Raab, and Caſchau, are the profeſſors of divinity, philoſophy, mathematics, rhetoric, and other ſciences, which they alſo teach in ſeveral colleges: but the *patres piarum ſcholarum* only teach polite literature. The Benedictines, Paulines, and other orders of monks apply themſelves after their manner to learning in their ſeveral convents. The Lutherans and Calviniſts, after having laid the foundation of the ſciences in their ſchools, go, if they can obtain a licence for that purpoſe, to the univerſities in Germany, Holland, and Switzerland: but very narrow bounds have been lately preſcribed to their ſtudies. The Chriſtians of the Greek church alſo begin to ſhew a greater inclination to learning than formerly. The law was antiently taught only in private; but at preſent there is a public profeſſor appointed for it in the univerſity of Tirnau, and even a particular college erected for that purpoſe at Erlau.

SECT. IV.

The Hiſtory of the Hungarians; the Manner in which their Kings were crowned; the Arms of Hungary; the States of the Kingdom; the public Offices, Forces, and Courts of Juſtice.

WE ſhall here give a conciſe view of the hiſtory of this country. It appears that its antient weſtern inhabitants were called Pannonians, and the northern Jazygians:

Jazygians: but the Romans, having reduced Pannonia, kept it almoſt four hundred years, till in the fourth century the Vandals drove them out of it, and held it forty years; but in 395, when they advanced towards Gaul, the Goths took poſſeſſion of their ſettlement; but theſe were alſo, in their turn, obliged to reſign their new poſſeſſions to the Huns, who had likewiſe driven them from their antient habitations.

In the year 888, the Huns, under the name of Hungarians, made a ſecond irruption into Pannonia, as auxiliaries to Arnulph emperor of the Weſt, and Leo emperor of the Eaſt, againſt the Bulgarians and Sclavonians, whom they reduced. They had ſeven commanders, and both Germany and Italy afterwards felt the terrible effects of their ferocity; but by degrees their manners became more civilized, eſpecially towards the latter end of the tenth century, when Geyſa, their prince, embraced the Chriſtian religion, and his ſon Stephen, in 997, became the firſt king of Hungary, and, as hath been already obſerved, completed the eſtabliſhment of that religion, annexed Tranſylvania as a province to Hungary, and after his death was canonized. After him followed a ſucceſſion of twenty kings, natives of the country, the laſt of whom was Andrew III. who died in the year 1301. On this followed a ſucceſſion of twelve foreign kings, the laſt of whom, who was Lewis II. fell in an unſucceſsful battle againſt the Turks. The kingdom next devolved to the houſe of Auſtria, under whom aroſe a moſt bloody inteſtine war, which laſted for a long time, in which the country was equally ravaged by the Turks and Auſtrians. In 1687 Hungary became an hereditary kingdom to the archducal houſe of Auſtria; and it was agreed at the diet in 1722, that in caſe of failure of male heirs, the princeſſes ſhould alſo ſucceed. Accordingly the emperor Charles VI. dying in the year 1740, his eldeſt daughter Maria Thereſa aſcended the throne, and was crowned in 1741. Her majeſty is conſort to the preſent emperor Francis Stephen, whom the ſtates of the kingdom, in 1741, alſo inveſted with the joint ſovereignty.

A late author obſerves, that the Hungarians have contended with their princes about their rights and privileges, till the Imperial eagle has decided the controverſy by devouring both, and left them only the ſhadow of their antient conſtitution; and that their ſtates or diet aſſemble like the parliament of France, for form ſake, or rather to record the arbitrary decrees of the emperor, and by ſigning their conſent to them, take off the odium of every deſtructive ſcheme from the court, and place it on themſelves: by which means their chains are probably now ſo firmly riveted, that their ſlavery will be everlaſting, unleſs another family ſhould be elected to the Imperial crown.

At the coronation of the Hungarian kings, the people antiently aſſembled in a plain called Rackes, near Peſt, where the biſhops, the nobility, and the repreſentatives of the ſeveral counties and cities, having unanimouſly approved of the perſon propoſed for their king, who was uſually the next in ſucceſſion; he was conducted to Stuhlwieſſenburg, or Alba Regalis, where he was preſented to the people by the palatine, who demanded three times whether they approved of the new elected king? and they having expreſſed their conſent, he put a drawn ſword into the hand of the new king, who brandiſhed it towards the eaſt, weſt, north, and ſouth. He was then attended to the great church, where the archbiſhop of Gran holding the royal robes in his hand, aſked the people if they were ſatisfied with the king elect, and were willing to become his ſubjects; and receiving an anſwer in the affirmative, he proceeded to perform the uſual rites obſerved at the coronation of their kings; after which the prelates and nobility carried the arms and other relics of king Stephen I. before the new king in a ſplendid proceſſion to the palace. The crown of Stephen is ſtill preſerved at Preſburg with great veneration, and no prince is allowed to be duly crowned with any other: the Hungarians in general believing that the fate of their nation depends on their carefully preſerving it, and therefore in all their calamities they have taken care to convey it to a place of ſafety; nor have the Turks been leſs follicitous to make themſelves maſters of it, from the opinion that the Hungarians would make no ſcruple of paying their allegiance to the grand ſeignior, could he but once cauſe king Stephen's crown to be placed on his head.

The kings of Hungary are by the laws ſtiled catholic and apoſtolic, on account of the zeal which Stephen I. ſhewed in the converſion of the Hungarians. The regalia, which conſiſt of the golden crown, made in the eleventh century, the ſceptre, king Stephen's ſword and mantle, gloves and ſhoes, with the ſilver croſs, the mark of his apoſtolic function, are kept in the caſtle of Preſburg; and in that city is ſtill performed the coronation of the king by the archbiſhop of Gran.

The arms of the kingdom are, a ſhield longitudinally divided; the right field gules, divided by four bars argent. The left quarter is alſo gules, with an archiepiſcopal croſs argent, ſtanding on a triple hill vert.

The ſtates of Hungary are divided into four claſſes.

To the firſt belong the prelates, who direct all religious matters, and precede all other perſons, except the governor of the kingdom, who gives place only to the archbiſhop of Gran. Theſe are the archbiſhops of Gran and Kolocza; the former is primate of Hungary, chief ſecretary and chancellor legate of the papal ſee, and prince of the holy Roman empire. He alone crowns the king or queen, is perpetual count of the Geſpanchaft, or county of Gran, creates even noblemen, and never takes an oath himſelf, but his official ſwears in his ſtead. Under him are the ſix biſhops of Erlau, Nitra, Raab, Vatz, Funfkirchen, and Veſzprim; to whom may alſo be added the Greek biſhops of Buda and Muncatz, who are united to the Roman church. Next to him is the archbiſhop of Kolocza, with the following ſuffragans: the biſhop of Bats, which is however annexed to the archbiſhopric of Great Waradin, Cſanad, Zagrab, Sirmia, Boſnia, Tranſylvania, and Bakow in Walachia. Theſe biſhops have a double character, and all of them, except the biſhop of Bats, are perpetual counts of the counties in which they reſide, and have alſo a ſeat in the diet. Beſides theſe are the abbots, who are ten in number, and nine probſts.

To the ſecond claſs belongs the magnates, or barons, the principal of whom are the great barons of the kingdom, who alſo hold the chief offices: theſe are the palatine, who is the principal, and in many caſes acts as ſovereign; the court judge; the ban or viceroy of Dalmatia, Croatia, and Sclavonia; the governor of Tranſylvania; the treaſurer; the great cup-bearer; the ſteward of the houſhold; the maſter of the horſe; the lord-chamberlain; the captain of the yeomen of the guards; and the grand marſhal of the court. To theſe may be added, the inferior ban, or counts, and barons.

To the third claſs belong the gentry, ſome of whom have noble manors, and others only the privileges of nobles.

To the fourth claſs belong the royal free cities, which are ſummoned to the diet, and are not ſubject to the counts, but hold immediately of the king, and have a council of their own, in which a city judge and burgomaſter uſually preſide.

The diet is ſummoned by writ from the ſovereign every three years, to meet whenever his majeſty's ſervice or the public welfare require it. Accordingly on the day appointed the lords ſpiritual and temporal perſonally appear in the chamber of the magiſtrates; but the towns and gentry ſend two deputies, who meet in the ſtates-chamber. The ſtates lay their repreſentations before the king or queen, who alſo refers to them ſuch articles of public concern as require their aſſent.

The public offices by which the government is adminiſtered are the following:

The Hungary office, which is at Vienna, and has a ſecretary of ſtate at its head. This office expedites the royal edicts in municipal, religious, and judicial affairs for Hungary, and the incorporated kingdoms of Croatia, Dalmatia, and Sclavonia. To this office belong all matters relating to the king, and wholly dependent on his pleaſure. All who ſtand in need of a perſonal audience

dience of the queen, muſt firſt acquaint this office with it. In other reſpects it has very little connection with the kingdom, its principal buſineſs being to execute the ſovereign's pleaſure.

The ſtadtholder's or governors council reſides at Preſburg, and, beſides the governor, who is preſident, conſiſts of twenty-two counſellors, whom the king chooſes at pleaſure from among the prelates, nobility, and gentry. In Hungary and the incorporated countries it ſuperintends the civil concerns of the towns as regulated by the laws of the land. It is ſubject to no other office; but when it has any thing to lay before the king applies immediately to his majeſty.

The royal exchequer is divided into the Hungarian and mine-chambers, and takes care of the royal eſtates, incomes, and dues. This exchequer is held at Preſburg, and has a preſident and eighteen counſellors. Under it is the office at Caſchaw, beſides eight provincial commiſſaries for collecting the contributions. The mine-chamber is held at Cremnitz, and manages all affairs belonging to mines and coinage. It receives orders from the treaſury at Vienna; and under it are the mine-chambers of Schemnitz, Neuſohl in the geſpanſchaft of Zip, and at Konigſberb.

The public revenues conſiſt of contributions, cuſtoms, mines, ſalt-works belonging to the crown royal domains, and eſcheats, which abundantly anſwer the expences of the court and defence of the frontiers.

The kingdom of Hungary can eaſily raiſe an army of a hundred thouſand men, keeping fifty thouſand in pay, and the provinces furniſhing the ſame number. Their horſe are denominated huſſars; theſe are extremely expert horſemen. They uſe very ſhort ſtirrups, and ſitting with their knees high, riſe up when they make a ſtroke with their ſcimitars, to give the greater force to their blows. Their horſes are fleet and well managed, but too ſmall; and in a regular engagement are far inferior to the Engliſh horſe, whoſe weight alone will bear them down.

Their foot are denominated heyducs, or foot huſſars; theſe brandiſhing their naked ſwords, put themſelves into a hundred terrible poſtures, advancing, retreating, turning, and winding about with great activity, ſinging all the while.

Juſtice is adminiſtered in civil affairs in the name of the ſovereign, after the manner preſcribed by the laws and cuſtoms of the kingdom. Suits are carried from the courts of the ſmaller towns, either to the court of the geſpanſchaft, or county, when it is a free town, or to the lord of the manor when it belongs to any particular lordſhip. In the royal free cities the firſt hearing is before the judge of the town, the ſecond before the council, from which there is an appeal to the treaſurer. The mine-court in the free mine towns is diſtinct from the town court, and takes cognizance of only ſuch affairs as relate to the mines: the mine judge preſides, but an appeal lies from him to the commiſſion-court of the mine towns.

Inferior noble courts are held by the lord of the manor in each county for determining cauſes relating to the commonalty, and where noblemen are concerned, by the court judges or judge of the nobles, and the vice-geſpan; but a cauſe may be carried from theſe to the county court, and afterwards to the *Tabula regia* and *ſeptemviralis*. The middle noble court meets at Tirnau, Guntz, Eperies, and Depretzen, and has the trial of all cauſes in which two or more counties are concerned, and may from thence be removed to the *Tabula regia* and *ſeptemviralis*. The upper noble court, which reſides at Peſt, is divided into the *Tabula regia* and the *Tabala ſeptemviralis*, and not only decides cauſes brought hither by appeal, but alſo other important ſuits relating to the nobility. In the firſt preſides the king's repreſentative; in the ſecond the count palatine, or, in his abſence, either the court judge or the treaſurer. The *Tabula ſeptemviralis* is thus called from its formerly conſiſting of ſeven perſons; but Charles VI. made an addition of eight more. It takes cognizance only of ſuch cauſes as are referred to it from the *Tabula regia* examining them, and making the neceſſary amendments.

SECT. V.

Of the Diviſions of Hungary, with a particular Account of Upper Hungary, a Deſcription of a remarkable Cavern, and of the principal Towns of that Diviſion.

HUNGARY Proper is divided into Upper and Lower Hungary; here ſome give the name of Upper Hungary to that part which lies between the Danube and Poland, and call that which lies below the Danube Lower Hungary; while others drawing a line from the county of Lip, to the junction of the Banat of Tameſwaer, and the county of Sirmi, call that part which lies to the eaſt of the line Upper Hungary, and that towards the weſt Lower Hungary. With reſpect to its government by the great juridical courts, it is divided into four large circles, and fifty-two geſpanſchafts, or counties, called by the Hungarians varmegye. Theſe counties are ſmall provinces under counts, viſcounts, and aſſeſſors, who in the name of the ſovereign hold provincial aſſemblies or diets.

We ſhall begin with Upper Hungary, which forms the eaſt part of the kingdom, and borders on Poland, Tranſylvania, and Walachia; conſiſting of two circles, that on this ſide the Teiſſe, and that on the farther ſide of that river. The former of theſe circles contains eleven counties, and is inhabited by Hungarians, Bohemians, Sclavonians, Germans, and Ruſſians.

The county of Sips is almoſt every where woody and mountainous, but is interſperſed, eſpecially towards the middle, with delightful plains, fruitful fields, paſtures, and rivers that abound in fiſh. The Carpathian mountains are here at their greateſt height: here are alſo ſeveral other remarkable mountains, among which are the Ochſenberg and the Konigſberg, or King's mountain, ſo called from king Matthias Corvinus, who in 1474 dined on its ſummit.

From theſe mountains iſſue the following rivers: the Popper, which runs from the lake of the ſame name in the weſtern part of the Carpathian mountains, and runs into the Dunavetz. This laſt river riſes in the northern ſummits of the Carpathian mountains, and at laſt diſcharges itſelf into the Viſtula. The Kundert, or Hernat, ſprings at the foot of Konigſberg, and runs into the Teiſſe. The Golnitz, which has its ſource in the mountain named Ochſenberg, and alſo falls into the former. Beſides theſe there are ſeveral rivers of leſs note.

The air is here cold, but very healthy; and though no wine be produced in this country, it abounds with corn, particularly wheat, barley, and peas; and the inhabitants raiſe flax.

The wild beaſts here are lynxes, bears, wild boars, wolves, foxes, ſtags, hares, chamois, and marmottes.

The inhabitants are not fond of mining, agriculture turning out more to their advantage.

One of the greateſt phænomenons in this circle is a wonderful cavern in a mountain in the neighbourhood of a village named Szelitze. The neighbouring country is hilly, and abounds with woods; and the air is ſharp and cold. The entrance of the above cavern, which fronts the ſouth, is eighteen fathoms high and eight broad, and conſequently wide enough to receive the ſouth wind, which here generally blows with great violence; but the ſubterranean paſſages, which conſiſt entirely of ſolid rock, winding round ſtretch away farther to the ſouth than has been yet diſcovered. As far as people have gone, the height is found to be fifty fathoms, and the breadth twenty-ſix; but the moſt unaccountable ſingularity is, that in the midſt of winter the air is warm in the inſide; and when the heat of the ſun without is ſcarce ſupportable, the cold within is not only very piercing, but ſo intenſe, that the top is covered with icicles of the ſize of a large caſk, which ſpreading into ramifications form very odd figures. When the ſnow melts in ſpring, the inſide of the cave, where its ſurface is expoſed to the ſouth ſun, emits a pellucid water, which immediately congeals as it drops, and thus forms the above icicles; and the very water that drops from them on the ground, which is ſandy, freezes in an inſtant. It is even obſerved,

that the greater the heat is without, the more intenſe is the cold within; ſo that in the dog-days all parts of this cavern are covered with ice, which the inhabitants uſe for cooling their liquors. In autumn, when the nights grow cold, and the heat of the day begins to abate, the ice in the cave begins to diſſolve, ſo that by winter no more ice is ſeen; the cavern then becomes perfectly dry, and has a mild warmth. At this time it is ſurpriſing to ſee the ſwarms of flies and gnats, bats and owls, and even of foxes and hares, that chooſe this for their winter retreat, till the beginning of ſpring, when the cold obliges them to quit their dwelling. Above the cavern the hill riſes to a very great height, and on the ſouthern ſide produces plenty of graſs.

Among the principal towns of this circle are,

Kaſmark, or Keſmark, a royal free town in the county of Sips, not far from the river Popper. It is defended by a wall and towers, and is one of the moſt antient places in Hungary. It has three churches, and at a ſmall diſtance from the town is a proteſtant oratory. It has been frequently taken during the civil wars, and has been ſeveral times burnt to the ground.

Leutſchau, Lotſe, or Lewotſe, is a royal free town, and the capital of the county of Sitz. It ſtands on a hill, and its walls, which are remarkably thick, are ſtrengthened by twelve towers. The church, which is dedicated to St. James, is a fine building. Here is a Jeſuits college, and a ſeminary for noblemen. The inhabitants are moſtly Germans: it has been ſeveral times ſacked, and frequently conſumed by fire.

Tokay, a pretty conſiderable town pleaſantly ſituated near the conflux of the Theis and Bodrug, in the county of Zemplin, and in forty-eight degrees ſixteen minutes north latitude. It had formerly a ſtrong caſtle and a ſeminary; but is moſt remarkable for its excellent wine, which in flavour and ſtrength exceeds all other wine produced in Hungary. The ſpot of land which yields this noble liquor is about ſeven miles in circumference; and, was all of it to be well cultivated, no part of Europe would be without the rich wine of Tokay.

Munkats is an almoſt impregnable caſtle, ſeated on a high and ſteep rock which riſes in a ſpacious plain, its natural ſtrength being increaſed by art and labour. It is the capital of a lordſhip, which formerly bore the title of a dutchy. Beneath it, on the river Latortza, is a town which is the reſidence of a Greek biſhop united to the Roman church, and has a convent of the order of St. Baſil. This famous caſtle ſurrendered to the Imperialiſts in 1688, after a blockade of three years. Count Tekely's lady, who had made this long defence, was carried to Vienna, and great ſums of money were found in the place.

Great Waradin is a metropolitan city in the county of Bihar, ſituated on the river Kows, in the forty-ſixth degree fifty-three minutes north latitude, and is ſurrounded with good fortifications. This place was formerly much celebrated for the relics of the canonized king Ladiſlaus, and is now the reſidence of a biſhop and chapter; and has alſo a college of Jeſuits. The adjoining fortreſs is a regular pentagon, well fortified and defended by a deep and broad moat. The town itſelf is not large, but has three ſuburbs of very conſiderable extent. It was taken by the Turks in 1660, but the Imperialiſts re-took it in 1692.

Temeſwaer is an important and ſtrong town, the capital of a county of the ſame name, ſeated in the forty-fifth degree fifty-four minutes north latitude, and in the twenty-ſecond degree fifteen minutes eaſt longitude. It was formerly eſteemed impregnable, it being ſeated in a moraſs, which renders it inacceſſible, unleſs it be dried up for want of rain. In 1551 the Turks made themſelves maſters of it; however, it was taken from them the very ſame year: but in 1552 it was again inveſted by the Turks, when the Imperial commandant, dreading their cruelty, ſet fire to the place, and then abandoned it; but the Turks, extinguiſhing the flames, took poſſeſſion of the fort, which they kept till the year 1595, when it was taken from them by the Tranſylvanians, who afterwards ſiding with the Turks, the Imperialiſts made themſelves maſters of it in 1603; but in 1614 it was loſt again: however it was taken in 1716 by prince Eugene in a dry ſeaſon, who threw ſeveral thouſand bombs into the place.

SECT. VI.

Of Lower Hungary, with an Account of the principal Places it contains.

LOWER Hungary conſiſts of the two following circles, that beyond the Danube, which ſtretches through the upper region towards the weſtern parts, and from the Danube to the Carpathian mountains; and the circle below the Danube. The former contains fourteen counties, inhabited by Hungarians, Bohemians, Sclavonians, Germans, and in one part by Servians.

In this circle is the county of Preſburg, which lies on the borders of Auſtria, between the Danube and Moravia. It is about ſixty-five miles in length, and forty-three in breadth. Its mountains begin the Carpathian chain. The country about Tirnau is the beſt and moſt fruitful; but the ſoil does not want fertility, though ſcarce a year paſſes in which the grain is not damaged by mildew.

The large rivers in this country are the Danube, Morau, and Wag. The air is healthy, particularly on the mountains, but unwholeſome among the moraſſes near the Danube. The inhabitants are Hungarians, Germans, Bohemians, Sclavonians, Croats, and a great number of Jews. The dignity of palatine was made hereditary in the year 1599, in the houſe of Palfi. The whole province is divided into five diſtricts, called by the Hungarians Proceſſus, and each has a noble judge.

The principal places of Lower Hungary are,

Preſburg, a royal free city, and the capital of the kingdom, ſeated on the Danube at the foot of a mountain, on which ſtands the caſtle; it is pleaſantly ſituated, and enjoys a better air than moſt of the other towns in Hungary. The cathedral, dedicated to St. Martin, is the place where (from the time of Ferdinand I.) the kings of Hungary have been crowned. Here the diets are held, and the treaſury office for Hungary kept. Here are alſo a chapter of fourteen regular canons, a Jeſuits college, with a ſeminary and church, beſides three other convents and churches, a Lutheran church, and a Proteſtant ſchool. This city is of great antiquity, but is ill built, and the houſes of the town, properly ſo called, do not much exceed two hundred, which are encompaſſed by a double wall and moat; but the ſuburbs, which are large and handſome, contain four convents, with their churches, and two hoſpitals. The ſuburb on the ſouth ſide of the city makes a fine appearance, and is famous for the King's hill, on which every new elected king, being ſeated on horſeback, brandiſhes St. Stephen's ſword towards the four cardinal points, to ſhew that he will defend the country againſt all its enemies. It is ſituated in the forty-eighth degree eight minutes, north latitude, and in the ſeventeenth degree thirty-ſix minutes, eaſt longitude. Beſides its frequent ſieges, it has often ſuffered by fire. Preſburg caſtle ſtands on a pleaſant eminence, two hundred paces to the weſt of the city: it is of a quadrangular form, with four towers exactly alike at the corners. As the ſovereign, when here, reſides in this caſtle, there are in ſome of the apartments the hiſtory of Ferdinand II. with inſtances of his virtues, painted by eminent hands. In every one of theſe pieces, which are all on religious ſubjects, is ſeen an exact reſemblance of the emperor's face. The crown, and other regalia of Hungary, are kept in the above towers, but are never ſhewn. In the armoury are ſeveral ancient arms, both offenſive and defenſive, with ſome old machines uſed in aſſaults. The proſpect from the caſtle is extremely delightful, eſpecially over the vaſt plain, towards Lower Hungary and Belgrade. Below the caſtle is a ſmall town, called by the Hungarians Varalja, and by the Germans Schloſsberg, in which are a great many Jews.

The county of Lipto is about thirty-eight miles in length, and about eight broad; it is every where full of moun-

mountains, which are not only ſaid to be higher than the Alps, but alſo to ſurpaſs them in curioſities and ſubjects of admiration. Its rocks are indeed aſtoniſhing, particularly thoſe of Derminfalo, one of which, called Benikova, is perpendicular, and three thouſand paces in height. In theſe rocks are ſeveral vaſt natural caverns, with multitudes of ſtrange figures formed by the petrified water: bones of an uncommon ſize are alſo found here, differently ſhaped, and even larger than thoſe of horned cattle or horſes.

The chief rivers are the Wag and the Biela. There are a multitude of freſh ſprings in this diſtrict, ſome of which are mineral and medicinal; and there are other waters of different kinds that are very remarkable. The exhalations from thoſe of Szentivan and Stamkowan ſuffocate birds in their flight over them. The nature of the country admits of very little tillage, and grazing is alſo inconſiderable, though its cheeſes are very famous. This country abounds greatly in metals, particularly the Botſa mountains, which contain mines of gold and ſilver, ſome of iron, antimony, nitre, and other minerals; but it has no towns worthy of notice.

In the county of Altſohl, which abounds in valuable ores and minerals, is Herrengrund, which has the appearance of a town lying among the tops of mountains; and all its inhabitants are miners. It is famous for its vaſt copper works and its vitriol, by which iron is apparently turned into copper, and ſeveral hundred weight of iron are thus changed every year. The vitriol indeed does not properly transform the iron into copper, but inſinuates into it the copper particles with which it is ſaturated; and this ſeeming tranſmutation requires only a fortnight or three weeks; but if the iron be ſuffered to lie too long in this vitriolic liquor, it becomes at laſt reduced to powder.

In this diſtrict is Neuſohl, a royal free town, and the beſt of the mine towns. It is ſituated on the river Gran, and built pretty much in the Saxon manner. It has ſix churches, a Jeſuits college and ſchool, and has a weekly market. It is famous for the copper ore in the adjacent mountains; but though proviſions here are good and cheap, the ſmelting works give the air an unhealthy taint. Upon a hill on the north ſide of the town is the caſtle, which is a ſtrong place, and has two churches.

In this county is alſo the village of Ribar, celebrated for the warm baths on a hill in its neighbourhood. About ſix hundred paces from it, towards the ſouth, in a fine meadow which makes part of a moſt delightful valley, is an aperture long noted for its noxious effluvia, which ſeem to be ſulphureous, and kill both beaſts and birds. The ſtream guſhes out with great impetuoſity, and yet immediately after is abſorbed in the aperture. Theſe effluvia are however not poiſonous; for the water may be drank, and the dead beaſts and fowls killed by it, ſafely eaten. Not far from this ſtream is a mineral ſpring.

The county of Bars is about thirty-eight miles long, and about twelve broad. Its chief rivers are the Gran, the Nitra, and the Sitva, or Zitawa. Here are the moſt famous hot baths in all Hungary, and rich mines. The country affords good wine, and the level parts grain. Few cattle are bred in the mountains except ſheep. The inhabitants conſiſt of Hungarians, Bohemians, Sclavonians, and Germans.

In this county is Cremnitz, the principal mine town, which is ſituated in the forty-eighth degree fifty-two minutes north latitude, and in the 19th degree twenty-one minutes eaſt longitude from London; lying in a deep valley between high mountains, ſo that it cannot be ſeen till one is juſt upon it. The town of itſelf is an inconſiderable place, though it has two churches, a Franciſcan convent, and a caſtle; for it has not above thirty houſes; but the ſuburbs, which are much larger, conſiſt of nine ſtreets, with a church and an alms-houſe. In this town the king has a revenue office, with a director, receiver, book-keeper, and other officers. Here is a mint, to which all the other mine towns bring their gold and ſilver. It is computed to coin every year about an hundred thouſand ducats. The mine country in its neighbourhood is divided into the After and Fore Mint; the former containing ſeven mines, and the latter two; but all the nine belong to the king. There are alſo mines which belong to the town in general, and to private perſons; but at preſent they are all ſo exhauſted, that the gold obtained from them ſcarce anſwers the expence. On a hill near the town is a caſtle with a church. The unwholſomeneſs of the air and water occaſions a great deal of illneſs among the common people. In the year 1751, the emperor Francis I. went down a very deep ſhaft, in the garb of a miner, and is the only inſtance of a prince taking ſuch pains to gratify his curioſity.

In the county of Hont is Schemnitz, a pretty large and populous town, in a long valley, the houſes of which ſtand ſcattered a conſiderable way up the acclivity on both ſides. The proteſtant inhabitants, who amount to about two-thirds of the town, are between ſix and ſeven thouſand in number. In the largeneſs and number of its mine-works, this town ſurpaſſes all the others in Hungary. It has two caſtles, two churches, two chapels, and a college of Jeſuits, with a royal mine-office; and is the reſidence of a chief commiſſioner. The gold and ſilver mines here ſtill produce a conſiderable quantity of ore, which contains more and better gold than that of Cremnitz. Mr. Keyſler obſerves, that he went down an hundred and fifty fathoms in a ſhaft without the leaſt danger, being buckled up in a kind of leather chair, after which he deſcended about fifteen fathoms deeper, by means of a ladder. He adds, that it would require three or four days to walk through all the paſſages of this mine; that the number of labourers employed in it amount to five or ſix thouſand men, and thoſe without, together with the carpenters, &c. are computed at two thouſand, excluſive of thoſe employed about the carriages. The profits are, however, ſaid to be not near ſo conſiderable as formerly.

In the above mines are alſo found cryſtals, amethyſts, and vitriol naturally cryſtalized. At a ſmall diſtance is a rock, in which is found a red ſubſtance, called cinnabar of ſilver, of which is made a fine vermillion; and near the town is alſo a high perpendicular rock, part of which is of a ſhining blue, with green and yellow ſpots.

The county of Pilis is incorporated with that of Peſt. Amidſt its mountains and woods is a large plain, which lies between the Danube and Theis, but is for the moſt part ſandy and barren. The principal river is the Danube, and the ſmaller are the Galga, Tapjo, Kakos, Vajas, Theis, and Zagyva. In the mountainous parts the winters are cold, and the ſummers temperate; but in the large plains, the winters are ſevere, and the ſummers intolerably hot: the warm days are then ſucceeded by very cold nights: good water is extremely ſcarce; and the gnats are very troubleſome both to man and beaſt. In the mountainous parts is produced an excellent kind of red and white wine; but no corn can be raiſed in the ſandy ſoil. The deſart plains, however, afford good paſturage for cattle, where they wander at large. The whole province is divided into four diſtricts, the principal towns in which are the following:

Peſt, a royal free town in a plain on the Danube, over againſt Buda, to which is a paſſage in ſummer by a bridge of boats. In this city is the ſupreme court of appeal, alſo a large military hoſpital, built with ſtone, two hundred paces ſquare, and three ſtories high; ſix convents, and ſeveral churches. In the years 1526, and 1541, it was taken by the Turks, who held it till 1602, when it was recovered by the Hungarians; but the following year, being abandoned through fear, it once more fell into the hands of the Turks, who in 1684, ſet it on fire, and then marched to Buda; upon this the Imperialiſts took poſſeſſion of the town, but abandoned it again, and did not return till two years after, when the inhabitants were reduced to great diſtreſs.

Vaitz is a populous epiſcopal city, pleaſantly ſituated on the Danube. Beſides the houſes belonging to the biſhop, here are three convents, and a ſeminary. The city chiefly owes its proſperity to its great annual fair, and beaſt market. It has been frequently deſtroyed by fire, and ſeveral times taken by the Turks and Imperialiſts.

Buda is the name both of an old and new city, ſituated in the forty-ſeventh degree forty minutes north latitude,

latitude, and in the nineteenth degree twenty minutes eaſt longitude. Old Buda is ſituated in a plain which extends from the ſuburbs of New Buda to the Pilis mountains and the Danube, and at preſent is a mean place; in which are ſeen the deſolate ruins of the old city, with ſeveral Roman monuments. New Buda was built by Bela IV. and is a royal free town, ſeated on a mountain by the Danube. It was formerly the capital of the kingdom, the reſidence of the king, and the largeſt and fineſt of all the Hungarian towns; but has been much reduced by its being frequently beſieged, taken, and deſtroyed. The principal church is that of the Virgin Mary, near which the Jeſuits have an academical college and ſeminary. The Carmelite nuns of St. Clare have convents here, and the Franciſcans have ſeveral churches. The city is ſurrounded with walls and moats, and is well fortified; near it ſtands a ſtrong caſtle. The palace of the Hungarian kings was reckoned a moſt beautiful building, but it is entirely deſtroyed. It has three ſuburbs; in that called Neuſtiſt is only one church, together with a pillar fifty-two feet high, which in 1690 was dedicated to the Holy Trinity, to commemorate a deliverance from a peſtilence, which ceaſed in 1715. In the ſuburb called the Waſſerſtadt, or Water-Town, which lies on the Danube, are two churches and one convent; and on the hill is Reiſenſtadt, in which is a Ruſſian Greek church. Lady Wortly Montague, who was there in the year 1717, ſays, that without the walls lie a vaſt number of little houſes, or rather huts, called the Raſcian Town, from its being entirely inhabited by that people. The houſes ſtand in rows, and appear at a diſtance like old-faſhioned thatched tents, each conſiſting of one hovel above, and another under-ground. Theſe are their ſummer and winter apartments.

In the ſuburbs of Waſſerſtadt and Reiſenſtadt are five warm baths; the principal of which, called the Emperor's, is built ſomewhat in the manner of the Rotunda at Rome, with a large aperture in the centre of the dome, beſides ſeveral ſmall holes or windows round the cupola for admitting more light. In a large bath in the centre of the other four, both ſexes publickly bathe together, the men wearing only a kind of drawers, and the women what they term a ſore-ſhift; but the common people, for whom one of the other baths is appointed, look upon even this ſlight covering as ſuperfluous. There is alſo a pond of mineral water, which has this ſurpriſing property, that when the water is wholly turned off, the water-ſprings ceaſe flowing, but when the pond is a little above half full, they return again. The wine produced on the neighbouring hills is red, and of a very good ſort. Here are alſo excellent melons, which are ſold for the value of a penny a piece.

Buda was firſt taken by Solyman the Magnificent, in 1526, and loſt the following year to Ferdinand I. king of Bohemia. Solyman regained it by the treachery of the garriſon, and voluntarily gave it up to king John of Hungary; after whoſe death, his ſon being an infant, Ferdinand laid ſiege to it, and the queen-mother was forced to call Solyman to her aid, who indeed raiſed the ſiege, but left a Turkiſh garriſon in the town, and commanded her to remove her court from thence, to which ſhe was forced to ſubmit. It afterwards reſiſted the ſieges laid to it by the marquis of Brandenburg, in the year 1542; by count Schwartzenburg, in 1596; by general Roſworm, in 1602; and by the duke of Lorrain, commander of the emperor's forces, in 1684, to whom it yielded in 1686, after an obſtinate defence; Apti Baſha, the governor, being killed, fighting with the utmoſt bravery in the breach. The loſs of this town was of ſuch importance, and ſo much reſented by the Turks, that it occaſioned their depoſing of their emperor Mahomet IV. the year following.

About a mile and a half below Buda is the iſland of Eſepel, in the midſt of the Danube, and ſurrounded on both ſides by ſmall iſlands, among which the Pheaſant iſland is particularly remarkable, and is a thouſand paces long, and covered with wood. The iſland of Ujvalviſiſche is twenty-ſeven miles in length, and has a ruined church, ſaid to have been built by St. Margaret. This iſland is not very fruitful, but it abounds with game, and has great plenty of hares. Near the iſland of Eſepel a promontory, covered with woods and vines, projects into the river; and in its neighbourhood is a pleaſant and fruitful plain, about five miles in circumference, containing the ſeat of prince Eugene, who often reſided here, and had a breed of Arabian ſheep; and on this plain are ſcattered ſeveral farm houſes.

We now come to the other circle of Lower Hungary, which is that below the Danube, containing twelve counties, and is inhabited by Hungarians, intermixed with Croats, Raſcians, and ſome Sclavonians. The principal places in this circle are,

Œdenburg, Edenburg, or Sopron, a royal free town in the county of the ſame name, and though not very large is well built, populous, and has extenſive ſuburbs. The inhabitants apply themſelves with great induſtry to the cultivation of vineyards, and the wine is accordingly remarkable for its goodneſs. Here is a Jeſuits college, and a Lutheran ſchool. Among the diets which have been held here, that in 1681 is remarkable for the free exerciſe of religion granted to the proteſtants by the emperor Leopold.

Raab, which was made a royal free city ſo lately as the year 1742, is an ancient and ſtrong fortreſs, ſituated in a pleaſant country at the conflux of the Danube, the Raab, and Rabnitz, by which it is encompaſſed. Its houſes are all built with ſtone, the ſtreets are large and ſtraight, and it has a biſhop, a chapter, and an univerſity, the profeſſors in which are Jeſuits. The fortifications of the city and caſtle are chiefly the work of the emperors Ferdinand I. and Maximilian II. and it has always a ſtrong garriſon well provided with military ſtores. In the year 1529 the garriſon, for fear of the Turks, firſt ſet fire to the caſtle, and then abandoned the city. In 1566 it was burnt to the ground. In 1594 it was by agreement delivered up to the Turks, from whom it was afterwards recovered by ſtratagem, by count Adolphus of Swartzenburg. In 1749 the churches and ſchools of the Lutherans and reformed were ſuppreſſed.

The city of Gran, the capital of the county of the ſame name, is ſituated in a delightful country at the conflux of the river Gran with the Danube, in the forty-eighth degree twenty-one minutes north latitude, and in the eighteenth degree forty-ſix minutes eaſt longitude. This city was formerly the reſidence of the primate of Hungary, and had alſo a chapter, which is removed to Tirnau; and the archbiſhop reſides at Preſburg. There is here a Jeſuits college and ſchool. The city of Gran properly conſiſts of a royal free town, the caſtle, which is ſituated on a high rock, and in which is the cathedral; the Waſſerſtadt, which lies on the Danube; with the Raſcian town, Thomeſberg, and Jungerſtadt: all which are fortified ſo as to be a mutual defence to each other. King Stephen was born here in the year 909, and buried in the cathedral built by himſelf. In 1543 the city was for the firſt time taken by the Turks; but in 1596 it was taken from them by the Imperialiſts. On this occaſion Sir Thomas Arundel, of Wardour-caſtle, for his ſignal bravery in ſtorming the water-tower, and pulling down the Turkiſh banner, &c. was created a count of the empire by the emperor Rodolph, and afterwards king James I. made him a baron of England, which honours are ſtill enjoyed by his poſterity. The Turks beſieged it in vain in the year 1604; but the following year they obliged the city to ſurrender, and kept it till 1683, when, after the defeat of their army before Vienna by John Sobieſki, the Imperialiſts once more recovered it, and afterwards defended it againſt the Turks, who laid ſiege to it in 1685, but were entirely defeated by the dukes of Lorrain and Bavaria, and it is ſtill ſubject to the houſe of Auſtria.

Comorra is ſituated in the iſland of Schutt, at the conflux of the Wag and the Danube. In this town is the court-houſe of the county, with a Jeſuits college and ſchool; and near it is an impregnable fortification, ſurrounded on the weſt with deep moats, and on the north and ſouth by the Danube and Wag, which meet to the ſouthward. It was built by Ferdinand I. and it is remarkable that it never fell into the hands of the Turks.

SECT.

SECT. VII.

Of TRANSYLVANIA.

Its Names, Situation, Extent, Climate, Mountains, Rivers, Minerals, Plants, and Animals.

THE country now known by the name of Tranſylvania was a part of the antient Dacia, and derived its preſent name from its lying behind the foreſts with which the Carpathian mountains are ſurrounded; and for the ſame reaſon the Hungarians call it Erdely, which ſignifies a woody mountainous country. The Germans give it the name of Siebenburgen, from ſeven celebrated forts, or caſtles, by which it is defended. Tranſylvania is bounded on the north by Moldavia, Poland, and Hungury; on the eaſt by Moldavia; on the ſouth by Walachia, and the bannat of Temeſwar; and on the weſt by Hungary; extending from forty-five degrees thirty minutes to forty-eight degrees ten minutes north latitude, and from twenty-two to twenty-five degrees eaſt longitude, and is about a hundred and ſeventy miles in length, and a hundred and twenty in breadth.

This country is on all ſides environed with mountains, whence it enjoys temperate air, and ſprings of excellent water; and though it is both mountainous and woody, yet its fields are ſo rich and fertile, that it is deſtitute of none of the neceſſaries, and few of the luxuries of life. The mountains of Tranſylvania run from north to ſouth, branching out likewiſe eaſt and weſt, and terminating in the center of the country in hills, cloathed with vineyards and rich in mines. The former are ſituated in the ſouthern parts of the country; but in ſome places the grapes are prevented from being thoroughly ripened by the northerly blaſts. In ſeveral of the mountains metals and minerals are found, while others yield rock-ſalt. There are here medicinal ſprings, ſome of which are warm, others cold, and others ſulphureous.

The chief rivers are the Samos, the Maros, which traverſes the middle of the country, and the Aluta, which riſes at the foot of the Carpathian mountains, and runs into Walachia.

The minerals of this country are gold, ſilver, copper, iron, quickſilver, cinnabar, ſolar antimony, ſulphur, vitriol, rock-ſalt, ſalt-petre, red oker, and chalk, which are exported from hence to Hungary.

Tranſylvania produces medicinal herbs, grain, pulſe, vines, and ſeveral kinds of fruit-trees, with wood fit for timber. The ſoil is indeed extremely fruitful. The wheat is eſteemed the beſt in Europe, and ſo plentiful, that the peaſants eat no other bread: but their ſoil is leſs fit for barley, and therefore they brew but little beer; this defect, however, is ſupplyed with plenty of good wine, which is little inferior to that of Hungary.

In the meadows and paſtures they feed vaſt herds of large oxen, which are there extremely cheap. They have alſo ſheep, and a good breed of horſes. Their foreſts abound with many kinds of wild beaſts, particularly buffaloes, elks, deer, wild boars, hares, which are much larger, and have a more valuable fur than ours; wild horſes of incredible ſwiftneſs, whoſe manes hang down almoſt to the ground; ſome parts of the country are infeſted with wolves and bears, which in winter do great miſchief among the cattle: there are alſo wild aſſes, lynxes, chamois, martens, ermines, and beavers. The woods afford plenty of bees and honey, with which they make a ſort of mead that is highly valued; the honey being mixed with ſeveral other pleaſant ingredients.

SECT. VIII.

Of the different Nations who inhabit Tranſylvania; their Religion, Learning, Government, Arms, Forces, Revenue, and Adminiſtration of Juſtice.

WITH reſpect to the various nations who inhabit Tranſylvania, theſe are Hungarians, who in their natural genius, underſtanding, diſpoſition, and language, reſemble the natives of the country; the Siculi, a people deſcended from the Scythian Huns, and formerly enjoyed ſome particular privileges on account of their antiquity; but theſe have been gradually aboliſhed: they ſpeak the Hungarian language, but their pronunciation is broad, and they alſo retain ſome old Hun words: the Saxons, who are partly the remains of the Gepidi, and partly the deſcendants of thoſe Saxons who in 1154 entered the country: theſe ſtiffly adhere to their natural diſpoſition and antient cuſtoms, which are widely different from thoſe of the two above-mentioned nations, but reſemble the modern Hungarians, and like them apply themſelves to learning, war, arts, and trade. Their language agrees with that ſpoken in Lower Saxony. Theſe are the principal people of this country, and the reſt, who are eſteemed foreigners, muſt unite with one of the above nations.

Thoſe whom they thus call foreigners are the Germans, who ſpeak the ſame language as the other natives of Germany, but a different one from that of the Saxons: the Walachians, the deſcendants of the antient Roman colonies, who therefore ſtile themſelves Romanius, that is, Romans. Their language conſiſts of a great deal of Latin, corrupted with a mixture of the Sclavonian. Theſe reſemble the Romans in their dreſs and diet, and are fond of the Italian language; the waywodes have their phyſicians and ſecretaries from Italy, and the few who apply themſelves to literature go to the univerſity of Padua. They reſide in the mountainous parts of the country, and wholly apply themſelves to agriculture. From their firſt embracing the Chriſtian religion, they have profeſſed themſelves of the Greek communion; but ſince Tranſylvania became ſubject to the houſe of Auſtria, the Jeſuits have been perpetually endeavouring to unite them to the Romiſh church, under the ambiguous title of the *Græci ritus Uniti*. The qualifications of the Walachian clergy barely conſiſt in their being able to read and ſing; and when any of them would ſhine, he makes a tour to Buchereſt in Walachia, where he learns to be polite, and to ſpeak in an ornamental ſtile; but returns in other reſpects as illiterate as he went. The common people among the Walachians are ſaid to be ſo ignorant, that ſcarce one in twenty of them can repeat the Lord's Prayer. The others are Armenians, who have a particular language, and chiefly apply themſelves to trade, Raſcians, Bulgarians, Greeks, and Jews.

The Hungarians, the Siculi, and a few Saxons, are of the Romiſh church, and have ſome rites and privileges in common with that church in Hungary: theſe are under a biſhop who reſides at Weiſſenburg, and is ſubordinate to the archbiſhop of Colotza. The reformed, who conſiſt of the Hungarians and Siculi, have a ſuperintendant, who by the laws of the kingdom is the ſecond in rank. The proteſtant Lutheran church, which conſiſts of Saxons and a few Hungarians, is divided into nine chapters, and governed by a biſhop. This church, with reſpect to the number of its members, is ſo ſuperior, that there are reckoned twenty-five proteſtants to one catholic. The Socinians, or Unitarians, were formerly the prevailing ſect; but at preſent they are greatly dwindled, though they have ſtill a ſuperintendant. Theſe four churches are eſtabliſhed by the laws of the kingdom. The Greek religion, profeſſed by the Walachians and Greeks, has particular privileges granted by the prince of the country, as well thoſe who are united to the Romiſh church, as thoſe who diſſent from it. Over the former is a biſhop, who has prieſts under him; but the latter is ſubject, in eccleſiaſtical affairs, to the biſhops of Walachia; and under theſe alſo are the Armenians, ſome of whom differ, in point of public worſhip, from the Greeks, while others acknowledge the church of Rome.

With reſpect to the ſtate of learning in this country, the catholics have a college of Jeſuits at Clauſenburg, and ſeveral ſeminaries. The different ſects of proteſtants have likewiſe ſeminaries and ſchools, in which the elements of the ſciences are taught; after which, ſuch ſtudents as are of the reformed religion go to Swiſſerland and Holland, but the Saxons are ſent to ſtudy in Germany.

The government of Tranſylvania is entirely different from that of Hungary, and by the joint conſent of prince and people, is formed into an ariſtocratical government,

which ſince the year 1722 has been hereditary to the princes and princeſſes of the houſe of Auſtria. Formerly the prince of Tranſylvania ſucceeded to the government by a free election; but ſince the above period, by inheritance; and though his power is connected with that of the king of Hungary and the arch-duke of Auſtria, yet his government and privileges differ from both.

The principality of Tranſylvania is governed in the name of prince and nobility, by the diet, the office of ſtate, the royal government, the exchequer, the aſſembly of Hungarian counts, the tribunals of juſtice, and the magiſtrates of the Saxons and Siculi.

The diets meet at Hermanſtadt, by ſummons from the prince, and are divided into the upper and lower table: at the upper table ſits the government, with the prelates, counts, and barons: at the lower, the king's council, with the deputies of the Hungarian counts, the tribunals of the Siculi and royal Saxons; and at each ſits a preſident, who repreſents the ſovereign, and lays the king's intentions and propoſals before the ſtates.

The Tranſylvania office, which draws up and ſends away the prince's orders, is held at Vienna, and, with reſpect to public affairs, has not the leaſt connection either with thoſe of Auſtria or Hungary.

The royal government reſides at Hermanſtadt, and ſuperintends both the temporal and ſpiritual affairs of the principality. At its head is a governor with the counſellors of the three nations, and alſo of the three religions, the Romans, the Calviniſts, and the Lutherans.

The exchequer is divided into the Tranſylvania and mine-office. The former is held at Hermanſtadt, and that of the latter at Abrug-Banya.

The arms of Tranſylvania are divided into three parts, by two indentations diverging downwards. In the firſt are ſeven Hungarian caſtles in a field or; in the ſecond, in a field gules, the eagle of the Siculi; and in the third, the Saxon ſun and moon in a field gules.

Tranſylvania could formerly bring from eighty to ninety thouſand men into the field; but at preſent the whole force of that principality conſiſts of ſix regiments, under a commander in chief, for the defence of the country.

The revenue of Tranſylvania riſes from contributions, cuſtoms, metals, minerals, rock-ſalt, royal domains, eſcheats, and confiſcations, and are levied by the treaſury.

With reſpect to the adminiſtration of juſtice, civil cauſes are tried in the prince's name, in the ſuperior and inferior courts; and each of the three nations has its particular court. In the royal free towns which belong to the Saxons, the cauſes of the burghers are firſt heard before the judge of the town, and afterwards diſcuſſed by the town council, from which there lies an appeal to the meetings of the towns, when they hold the national court; and from this court an appeal lies to the *Tabula regia*. In the Hungarian counties, the cauſes of the gentry are firſt tried by their judge, and then brought before the whole body of the nobility; from whom alſo lies an appeal to the *Tabula regia*. In the courts of the Siculi, who have their peculiar cuſtoms and privileges, cauſes are firſt heard before the king's judge, and in dubious caſes carried up to the king's lieutenant, and from him to the *Tabula regia*. This *Tabula regia*, or royal table, is the chief court of juſtice, and has a preſident with prothonotaries and aſſeſſors; yet even from this board cauſes may be carried up to the government, and from thence removed to the ſovereign.

In affairs relating to the church, there is only one court, which is held at the reſidence of the biſhop of Tranſylvania, from whom appeals lie to the metropolitan, from him to the pope's nuncio, and from thence to the court of Rome.

SECT. IX.

A conciſe Deſcription of the principal Places in Tranſylvania.

THE whole country of Tranſylvania is divided into ſeven Hungarian counties; the territory of the Siculi, which is ſubdivided into ſeven tribunals; and the royal country of the Saxons, which conſiſts of five diſtricts. The principal places in Tranſylvania are,

Clauſenburg, which is ſeated on a plain by the rivulet of Samos, near the foot of a mountain, in the forty-ſeventh degree fourteen minutes north latitude. This is a large populous town, that has many houſes of ſtone, and ſtrong walls fortified with towers. Over the Portina gate is ſtill to be ſeen an inſcription in honour of the emperor Trajan. The Jeſuits have a college here, and the reformed a ſeminary, as have alſo the Socinians, who are very numerous. Till the year 1603, they were in poſſeſſion of the cathedral, which was taken from them, and given to the Jeſuits, whoſe church and college they had pulled down. This town has been ſeveral times beſieged and taken.

Hermanſtadt, by the natives called Zeben, is the capital of Tranſylvania, ſituated in that part called the royal country of the Saxons, in the forty-ſixth degree fifty-one minutes north latitude, and the twenty-fifth degree one minute eaſt longitude. It ſtands in a plain, and is large and well built, and is defended by a double wall and deep moat. This is the principal place of the Saxon colony; and it is governed by the royal chamber, the tribunal of appeals, and the diet; beſides which, the general and royal governor of the Saxon nation reſide here. The air is however unwholſome, and produces the gout; ſo that many of the fineſt buildings are uninhabited. The houſes within the gates are moſtly well built, and covered with ſlates, which in this country is reckoned an extraordinary piece of magnificence. Beſides ſeveral good ſprings in and about the place, the river water is conveyed through every ſtreet by little canals. This city is a granary for the whole principality. Its principal trade conſiſts in cloth and mead, made here in great quantities for exportation into the neighbouring countries. This city had formerly a conſiderable trade with Greece, which they loſt during the wars; but it has greatly declined on account of the perſecution the inhabitants have ſuffered, and the ſeverity of the government.

Weiſſemburg, or Carlſburg, is a ſtrong well built town, ſituated on a riſing ground, from whence, for about two miles round, there is a moſt delightful proſpect of a fruitful country, amidſt corn-fields and eminences covered with vines. It is watered by the gentle ſtreams of the rivers Ompay and Mariſch, and is two miles in length; but was much larger formerly, as appears from its ancient boundaries within the walls, which are ſaid to be twenty miles in compaſs. It was for a long time the metropolis of ancient Dacia, and was called Alba Julia, from Julia Auguſta, the mother of the emperor Marcus Aurelius Antoninus; and is now generally called Carlſburg, in honour of Charles VI. by whom it was conſiderably improved. It had formerly a magnificent palace, which is now gone to decay, and has at preſent a biſhop and a college of Jeſuits.

The laſt place we ſhall mention in Tranſylvania is Cronſtadt, which is next in rank to Hermanſtadt, both with reſpect to its appearance, the number of its inhabitants, and its trade. It is ſeated among pleaſant mountains, and is fortified with walls, towers, and moats. None reſide in the town itſelf beſide Germans, but in its three large ſuburbs are Hungarians, Saxons, Bulgarians, and Siculi.

SECT. X.

Of SCLAVONIA.

The Extent, Climate, Rivers, different Inhabitants, Languages, Government, Adminiſtration of Juſtice, both in Sclavonia and Croatia. The Diviſions of Sclavonia, and its principal Towns.

WE ſhall now treat of the country by ſome authors called Hungarian Illyricum, which extends from the Danube to the Adriatic Sea, between the rivers Drave, Save, and Unna, and comprehends Sclavonia, Croatia, and Dalmatia.

The country which lies between the Drave and Adriatic enjoys a mild and temperate air, and a fruitful ſoil; but

but the maritime places are not eſteemed healthy. It produces all the neceſſaries and conveniencies of life, particularly corn, wine, and oil; and beſides the rivers already mentioned, has the Culpa, which riſes in Croatia, and falls into the Save; the Kerka, which together with the ſmall rivers of Dalmatia, diſcharge themſelves into the Adriatic ſea.

The inhabitants are of Sclavonian extraction; and according to the different provinces, are divided into different people, among which are Hungarians, Germans, Venetians, and Turks. The principal nations are the Sclavonians, who make as it were one people with the Servians and Raſcians, which, with a mixture of Germans and Sclavonians, inhabit Sclavonia: the Croats, who dwell in Croatia and Sclavonia, and are intermixed with colonies from Germany and Walachia: the Dalmatians, among whom are the Uſcocs and the Morlachians. They have likewiſe Venetian, Turkiſh, and Albanian colonies among them.

With reſpect to the languages of theſe different people, the Croatians and Raſcians ſpeak German and Hungarian; the Dalmatians, Italian and Turkiſh; the Walachians who have ſettled in theſe countries retain their own language.

The only religion tolerated here is the Romiſh, which is under the government of three archbiſhops and twenty biſhops. Theſe nations, however, concern themſelves little about ſtudy; yet Zagrad has an academy; and among the Croats and Raſcians are many perſons of an excellent genius, who entertain a paſſion for literature, which they endeavour to promote.

The government of Sclavonia and Croatia is connected with that of Hungary and Stiria, being hereditary in the archducal houſe of Auſtria. Croatian Hungary is under the juriſdiction of the ban or viceroy of Croatia, Sclavonia, and Dalmatia, who governs by the laws of Hungary, and the provincial acts of Illyricum. Croatian Stiria has a governor both in Stiria, military Croatia, and on the coaſt of the Adriatic.

The prelates, nobility, gentry, and royal Caſtellans, enjoy the ſame privileges as the Hungarians. At the diets, which conſiſt of the four orders of the province, all deliberations run in the name of the ſovereign; and beſides, the ſtates of Illyria appear at the Hungarian diets by their repreſentatives.

The adminiſtration of juſtice in Sclavonia and the bannat of Croatia is the ſame as in Hungary; the free towns having inferior courts, from whence cauſes may be removed to the royal treaſury. The other towns have alſo their inferior courts, from whence there lies an appeal to the bannat court, which is thus named from the ban, or prorex, who preſides in it; and this at certain times hears cauſes brought from the counties, and holds conſultations on other important matters; but ſometimes, when the cauſes require a farther inſpection, the litigants are diſmiſſed to the *Tabula regalis* at Peſt, from whence they may proceed to that of the *Septemviralis*.

The public revenue ariſes from contributions, cuſtoms, tillage, graziery, and trade. The military force of the Hungarian Illyrians perhaps never appeared to greater advantage than in the war which preceded the laſt, when no leſs than fifty thouſand men were brought into the field from Croatia alone.

We ſhall now proceed to give a conciſe account of Sclavonia.

Sclavonia is ſituated between the Drave and the Save, extending eaſtward to the Danube, and being bounded on the weſtward by Carniola. It obtained the name of Sclavonia in the middle ages, from the neighbouring Slavi or Slavina. The inhabitants are Servians or Raſcians, Croats, and Walachians, with ſome German and Hungarian colonies. This country is divided into the bannat and generalſhip of Sclavonia, the former of which is ſubdivided into three counties, the principal towns in which are,

Eſſeck, the capital of the county of Verowitz, is ſeated on the river Drave near the Danube, and is moſt remarkable for the large wooden bridge which is here erected over the Danube and the neighbouring moraſſes, and extends in length about five miles; it was built in 1566, by Solyman, emperor of the Turks, who conſtantly employed twenty thouſand men in this work till it was compleated. In the year 1529 Eſſeck was taken by the Turks, and in 1664 the Imperialiſts burnt this bridge; but it was ſoon rebuilt by the Turks. The Hungarians afterwards burnt the bridge a ſecond time, and in vain attempted to take the town; but after the battle of Mohatz, the Turks voluntarily evacuated it. This city is ſituated in the forty-fifth degree fifty-one minutes north latitude, and in the nineteenth degree ten minutes eaſt longitude.

Carlowitz, a military town, the reſidence of the Greek biſhop of Sclavonia, and famous for its red wine, and for the peace concluded there with the Turks in 1699.

Peterwaradin is a town ſituated on the Danube, oppoſite Belgrade, ſix miles to the ſouth-eaſt of Carlowitz. It is ſtrongly fortified, and is the frontier town of the Imperialiſts. The Turks made themſelves maſters of it in the year 1526; but quitted it in 1687, when the Hungarians took poſſeſſion of it. But it is chiefly remarkable for the glorious victory obtained near it over the Turks in the year 1716, by prince Eugene.

SECT. XI.

Of CROATIA.

Its Situation, Extent, Inhabitants, and principal Places.

THIS country, which is called by the Hungarians Horwath Orſzag, is bounded on the eaſt by Sclavonia and Bothnia, on the north and weſt by Stiria and Carniola, and on the ſouth by Turkiſh Croatia and Dalmatia. The Croatians are of a good ſtature, and make brave and hardy ſoldiers. They derive their origin from the Slavi. In the middle ages they had ſovereigns of their own, who ſtiled themſelves kings of Croatia and Dalmatia; but were for ſome time ſubject to the emperors of the Eaſt. In the eleventh century Croatia and Dalmatia devolved to the kings of Hungary, to whom they have ever ſince continued in ſubjection, though not without frequent attempts to recover their independency.

The Croats, of all the Illyrian nations, have the greateſt affinity in their language to that of the Poles.

Croatia, which is about eighty miles either way, is divided into two parts; that within and that beyond the Save; and is inhabited by Croats, a few Raſcians, Greeks, and Walachians.

The chief towns in Auſtrian Croatia are,

Little Waradin, a royal free town on the river Drave, ſtrengthened with a caſtle and bulwark; it ſtands in a large plain. Between this town and a high mountain is a warm bath, formerly called Thermæ Conſtantinianæ.

Kreutz, a royal free town, that is fortified, and has many privileges.

Iwanitz, a ſtrong fortreſs on the river Koros, where the kings of Sclavonia formerly reſided.

Zagrab, or Agran, a royal free city, ſeated on the Save. It is the capital of Croatia, and has a biſhop and chapter.

Beſides a conſiderable number of other towns, of which we know little more than their names.

Turkiſh Croatia lies on the other ſide of the Unna, and as we have already given an account of it in treating of Turky in Europe, we ſhall now paſs on to Dalmatia.

SECT. XII.

Of the Kingdom of DALMATIA.

Its Name and Hiſtory. The Climate and Face of the Country. A particular Account of the Uſcocs and Morlachians; with a Deſcription of the principal Places in Hungarian and Venetian Dalmatia; alſo a conciſe Account of the Republic of Raguſa and its Capital.

DALMATIA obtained its name from its antient capital Delmium, or Delminium, which was taken and deſtroyed by the Romans, who brought this country under their yoke; but Dalmatia ſhook it off no leſs than five times.

On

On the diviſion of the provinces between Auguſtus and the ſenate, Dalmatia fell to the latter, as one of the proconſular provinces; but they voluntarily ceded it to the emperor, and at the demiſe of Conſtantine the Great it was reckoned among the weſtern parts of Illyricum. It ſuffered extremely by the inroads of the northern barbarians, and was reduced by the Goths in their way to Italy. Afterwards Juſtinian, emperor of the Eaſt, conquered not only Dalmatia, but Italy; but in the year 1548 the Sclavi entered the country, and about the end of the reign of Heraclius eſtabliſhed themſelves there. Dalmatia had then its particular kings, of which Zlodomia, or Zaromyr, dying without iſſue, left the kingdom to his conſort, who bequeathed it to her brother St. Ladiſlaus, king of Hungary, and it has been ever ſince dependent upon that crown; but the Venetians are maſters of the maritime parts. In the wars which the kings of Hungary had with the Venetians and Dalmatians, they were for ſome time ſucceſsful; yet in the fifteenth century the Venetians reduced the whole kingdom of Dalmatia, but the Turks have ſince diſpoſſeſſed them of a conſiderable part, and at preſent the Hungarians, Venetians, Turks, and Raguſans, ſhare it among them.

The Dalmatians have the Sclavonian language and cuſtoms, and profeſs the Romiſh religion.

The air of Dalmatia is pure and temperate. The country is as it were ſtrewed with fertile mountains that produce olives, vines, myrtles, and a great variety of palatable and wholeſome vegetables; and have alſo in their bowels treaſures of gold and ſilver ore. This country has alſo many fertile plains, are watered by rivers that have a ſhort courſe, though they are moſtly navigable; and theſe plains feed many herds of horned cattle, and large flocks of ſheep.

Before we give a deſcription of the ſeveral parts of Hungarian Dalmatia, which lies in the upper part of the Adriatic Sea, it is neceſſary to give ſome account of the Uſcocs and Morlachians. The Uſcocs are a people who, galled by oppreſſion, eſcaped out of Dalmatia, whence they obtained the name of Uſcocs, from the word Scoco, which ſignifies a deſerter: they are alſo called ſpringers, or leapers, from the agility with which they leap, rather than walk, along this rugged and mountainous country. Their chief ſettlement was at Cliſſa; but the Turks taking that place in 1537 they retreated to Zengh, which was granted them by the emperor Ferdinand; but in 1616 they were ordered, on account of their robberies, and other acts of violence, to remove and ſettle at a place appointed for them in a mountain of Carniola, four German miles in length, and two in breadth. In the center of this mountain ſtands Sichelberg caſtle, to the governor of which all the Uſcocs are ſubject. Some of them live in ſcattered houſes, and others in large villages. They are a rough, ſavage, people, large-bodied, intrepid, and given to rapine, though their only viſible employment is grazing. They uſe the Walachian language, and in their religion come neareſt to the Greek church; but ſome are Roman catholics. They have an archbiſhop, biſhops, popes, or prieſts, and coluges, or monks; their prieſts are not prohibited marriage, but the wife muſt be of a good family, and at her deceaſe they are not to marry again. Their children are not baptized till they are adults; and none among them go to confeſſion under thirty years of age.

Morlachia extends from the juriſdiction of Zengh, near St. George, to the county of Zara; or, according to others, from Vinodok to Novigrad; it being fifteen German miles in length and five or ſix in breadth, and full of high mountains. The inhabitants are a branch of the Walachians, and are very ſwarthy; but are a large, ſtrong, robuſt people, inured to toil and hardſhips from their living amidſt barren mountains. Their chief employment is attending cattle, and the greateſt part of them are of the Greek religion. Some of them at preſent are under the protection of Hungary, and others are dependent on the Venetians. There is hardly a place of any ſtrength in Dalmatia that is not governed by theſe people. Hungarian Dalmatia conſiſts of five diſtricts, moſt of which are under the generalſhip of Carlſtadt, in which the moſt remarkable places are the following:

Zengh, Segnia, or Senia, a royal free town, fortified both by art and nature, is ſeated near the ſea in a bleak mountainous and barren ſoil. The biſhop of this place is a ſuffragan to the archbiſhop of Spalatro. Here are twelve churches and two convents. The governor reſides in the old palace called the royal caſtle, and in the upper fort, which ſtands on a riſing ground fronting the town, lives the deputy-governor. Near this place dwell the Uſcocs.

Ottoſchatz, a frontier fortification in the river Gatzka, which abounds with fiſh; that part of the fortreſs where the governor and the greateſt part of the garriſon reſide, is ſurrounded with a wall and ſome towers; while the reſt of the buildings, which are but mean, are erected on piles in the water, whence one neighbour cannot viſit another without a boat.

We have already given a deſcription of Turkiſh Dalmatia in treating of Turky in Europe, and ſhall now therefore proceed to that part of the country called Venetian Dalmatia, and the republic of Raguſa.

Venetian Dalmatia is ſituated to the ſouth-eaſt of the country laſt deſcribed, on the borders of the Adriatic Sea, and abounds in caſtles and fortified places, though but few of them are of modern ſtructure. The principal places in this country are,

Zara, the capital of Venetian Dalmatia, is ſituated in the country of the ſame name, in the forty-fourth degree twenty-two minutes north latitude, and is ſurrounded on all ſides by the ſea; but has a communication with the continent by means of a draw-bridge, which is defended by a fort. This is eſteemed one of the beſt fortifications in Dalmatia, and is thought to be almoſt impregnable. The citadel is ſeparated from the town by a very deep ditch hewn out of the rock, and in the caſtle reſides the governor, or proveditor of Dalmatia, whoſe office is only triennial. The harbour, which lies to the north, is capacious, ſafe, and well guarded; and the rain is careſully preſerved in ciſterns to ſupply the want of freſh water. It is the ſee of an archbiſhop, and St. Simeon is patron of the city; and in the cathedral, which is dedicated to him, they pretend to ſhew his body depoſited in a coffin covered with a cryſtal lid. There are very fine paintings in the churches done by the beſt maſters; and near the church called by the Greeks St. Helia are two handſome fluted columns of the Corinthian order, ſuppoſed to have been part of the temple of Juno. This city was formerly more conſiderable than it is at preſent, the walls being but two miles in compaſs, and the number of the inhabitants not exceeding ſix thouſand.

Tenen, a fortified town on the extremities of Boſnia and Dalmatia, is ſeated on a hill, and, though not large, is eſteemed of importance from its elevated ſituation. It is encompaſſed with two very broad and deep natural moats, formed by the rivers Kerka and Botiſniza, which precipitate themſelves at a ſmall diſtance from the hills. This city, which, in the thirteenth and fourteenth centuries, was the capital of a country, is the ſee of a biſhop. In the year 1522 it was taken by the Turks. In 1649 it was recovered by the Venetians, and for the moſt part demoliſhed; but it was afterwards rebuilt by the Turks, and again taken from them by the Venetians.

Trau, or Tragurium, a town on a peninſula, but ſeparated from the continent by a canal. It is divided into the Old and New Town, the former of which has a ſingle, and the latter a double wall. Its three towers are alſo a good defence. Nothing can be pleaſanter than its ſituation; for the north ſide is covered with beautiful gardens, and on the iſland of Bua it has fine ſuburbs, that have a communication with the town by means of a ſtone bridge, and is joined to the continent by three of wood. It is the reſidence of a Venetian proveditor, who bears the title of count, and alſo of a biſhop, ſuffragan to the archbiſhop of Spalatro. The harbour, which is formed by a bay, has depth of water ſufficient for the largeſt ſhips which ride there, ſheltered by two capes.

Spalatro, the capital of Venetian Dalmatia, is ſeated on a peninſula fortified with good baſtions of free-ſtone, but theſe works are commanded by the neighbouring mountains. This city is the ſee of an archbiſhop, who is primate of all Dalmatia and Croatia. It is alſo the ſtaple

where

where all merchandize paſſing from Turky to Italy muſt be tranſacted. Near its harbour, which is very large and deep, is erected a large lazaretto for performing quarentine. Among the Roman antiquities to be ſeen here are the noble remains of Diocleſian's palace, on which the city itſelf is built, and its walls make two-thirds of thoſe of Spalatro. It is in the forty-third degree fifty-three minutes north latitude. This city has been poſſeſſed by the Venetians ever ſince the year 1420.

Caſtel Nuovo, the beſt fortification in all Dalmatia, was antiently called Neocaſtro, and was built by a king of Boſnia in 1373, on a high rock adjoining to the ſea. It is better fortified by nature than by art, it being an irregular quadrangle, ſecured towards the ſea by ſhelves and inacceſſible rocks. In the upper town is the caſtle of Sulimanega, and the fortified town of Haſtavich; but its beſt fortification is the capital of Cornigrad, which ſtands about ſix hundred and fifty paces north of the town. It was taken by the Venetians, and is now a place of conſiderable trade.

Within this province are alſo ſeveral iſlands, as, 1. Oſero, or Oſoro. 2. Cherſo, which has a communication with the former by means of a bridge. It is a woody tract, and breeds great numbers of cattle. It has a pretty populous town of the ſame name, that has a convenient harbour. 3. Vegia, or Veglia, is ſeparated from the continent by a narrow channel, and has a town of the ſame name, which has a harbour and caſtle, in which reſides the Venetian count or governor. 4. Arbe, which abounds with figs and the ſmaller kinds of cattle, and produces moſt delicious wine. Its capital is an epiſcopal city. 5. Great Iſole, which contains ſeveral towns and caſtles. 6. Mortara, or Mortero, which has a deep and ſecure harbour between two iſlands. It is celebrated for its wine, and its abounding alſo in olives and melons. The town of the ſame name is ſeated in a valley between two hills of various culture. 7. Leſina, ſaid to be the celebrated iſle of Pharos, is rocky, but produces figs; bread and wine are very cheap, and from hence all Italy and Greece are ſupplied with ſardines. The town of the ſame name, though ſmall, is well fortified. 8. Corzola-nigra, the antient Corcyra, abounds with timber of all kinds. In the city of the ſame name, which is the only one in the iſland, reſide the governor and a biſhop. It is fortified with ſtrong walls and towers, has a fine harbour, and produces plenty of wine. The Turks, attempting to make a deſcent here, were, in the year 1507, repulſed by the women, who behaved with heroic reſolution, when their daſtardly huſbands had, through fear, deſerted the city, and fled up into the country. Beſides theſe there are ſeveral other iſlands.

We now come to Raguſan Dalmatia, which lies to the ſouth-eaſt of the former, and is about fifty-five miles in length, and twenty in breadth. Raguſa is an ariſtocratical ſtate, formed nearly after the model of that of Venice. The government is in the hands of the nobility; and the chief of the republic, who is ſtiled rector, is changed every month, and elected by ſcrutiny, or lot. During his adminiſtration he lives in the palace, wears a ducal habit, compoſed of a long ſilk robe with white ſleeves, and his ſalary is five ducats a month; but if he be one of the pregadi, and aſſiſts at appeals, he receives a ducat a day. Next to him is the council of ten. In the great council all noblemen above twenty years of age are admitted, and in this council are choſen the perſons who conſtitute the board of the pregadi, who ſuperintend all civil and military affairs, diſpoſe of all employments, and receive and ſend envoys. Theſe continue a year in their office. The little council conſiſts of thirty nobles, who take care of the polity, trade, and revenues of the ſtate, and decide appeals of ſmall value. Five proveditors confirm, by a majority of votes, the proceedings of the adminiſtration.

Civil cauſes, and particularly thoſe relating to debts, are firſt heard before ſix conſuls, or ſenators, from whom there lies an appeal to the college of thirty, and from them again, in particular caſes, to the council. In criminal cauſes ſpecial judges are appointed. There are likewiſe three commiſſioners for the woollen trade; a board of health, conſiſting of five nobles, who endeavour to preſerve the city from all contagious diſeaſes; and four patrons of eminence manage the taxes, exciſe, and mint.

As the Raguſans are unable to protect themſelves, they make uſe of their wealth to procure them protectors, the chief of whom is the grand ſeignior. They are ſaid to pay tribute to the Turks out of fear; to the Venetians out of hatred; to the pope, emperor, Spain, and Naples, out of reſpect and political views. The tribute to the Porte, with the expences of the annual embaſſy, amounts to about twenty thouſand zequins, worth about nine ſhillings and two-pence each. The Turks are indeed of great ſervice to them, by bringing thither all kinds of neceſſaries, eſpecially fire-arms and military ſtores; and the Raguſans keep ſo watchful an eye over their freedom, that the gates of Raguſa, their capital, are allowed to be open only a few hours in the day.

They profeſs the Romiſh religion; but the Greeks, Armenians, and Turks are tolerated. The language chiefly in uſe among the Raguſans is the Sclavonian, but the greateſt part of them alſo ſpeak the Italian. Almoſt all the citizens are traders, and this place is diſtinguiſhed by the fineneſs of its manufactures. As its territory is but ſmall, it has but few places of note worthy of a particular deſcription, beſides its capital.

The city of Raguſa was built a conſiderable time before the birth of our Saviour, and was antiently called Epidaurus. It at length became a Roman colony, and in the third century was demoliſhed by the Scythians. It ſtands in the peninſula of Sabioncello in the gulph of Venice, in the forty-ſecond degree forty-eight minutes north latitude, and in the eighteenth degree forty minutes eaſt longitude from London. Though it is not large it is well-built, and has ſome beautiful edifices. This city, which is the ſee of an archbiſhop, is defended by ſtrong bulwarks, and the fortreſs of St. Nicholas ſecures its harbour againſt any hoſtile attempts. Its port, which is called Santa Croie, or the Holy Croſs, is ſecured on one ſide by the little rocky iſland of Chiroma, which lies in the ſea about half a mile diſtant, and the headland of the peninſula on the other: the latter is well fortified, and were the former ſo it would be impregnable. The city is ſurrounded with large ſuburbs, and has a garriſon of about two hundred men; the burghers alſo keeping a conſtant guard.

The city of Gravoſa is alſo ſituated on the peninſula of Sabioncello, and has the beſt harbour on all the coaſt. The entrance to it is very commodious, broad, deep, and well ſecured. It is ornamented with raviſhing proſpects of the adjacent mountains, which are covered with fine vineyards, gardens, and ſummer-houſes, to which the Raguſans retire for the ſake of pleaſure.

There are alſo five ſmall iſlands ſubject to the Raguſans, the principal of which is Melida, which ſome learned men ſuppoſe to be the iſland of Melita upon which St. Paul was ſhipwrecked; but this is not probable. It is about twenty-five miles in length, and abounds in oranges, citrons, wine, and fiſh. It has a ſmall town of the ſame name, together with ſix villages and fine paſtures.

CHAP. IX.

Of the GERMAN EMPIRE.

SECT. I.

Of GERMANY *in general.*

Its Names, Situation, Extent, Climate, Mountains, Rivers, Woods, Fruit, Corn, and other Vegetables; Beaſts, Birds, and Fiſhes; with the Produce of the Mineral Kingdom.

GERMANY, which is called by the French Allemagne, and by the natives themſelves Deutſchland, is bounded by France, the Netherlands, and the German ſea on the weſt; by South Jutland and the Baltic on the north; by Poliſh Pruſſia, Poland, and Hungary on the eaſt; and by the gulph of Venice, the dominions of the ſtate of Venice and Swiſſerland on the ſouth; extending from the forty-fifth degree four minutes to the fifty-fourth degree forty minutes north latitude, and from the ſixth degree to the nineteenth degree forty-five minutes eaſt longitude; and accordingly its greateſt extent from north to ſouth is ſix hundred and forty Engliſh miles in length, and five hundred and fifty in breadth.

Though Germany in general may be ſaid to enjoy a temperate air, yet with reſpect to its purity, warmth, and healthfulneſs, it is very different; both from the ſoutherly or northerly ſituation of the places of the country, from the proximity and diſtance of the ſea, and from the difference of the ſoil. Thus the level parts enjoy a different air from the mountains, and the places where the ſoil is deep, moiſt, and marſhy is different from the more elevated, dry, and ſandy. Hence the produce of the trees, fields, and gardens ripen in different parts at different times.

Germany has many mountains, for Bohemia is principally environed with them; it is ſeparated from Sileſia by thoſe called the Rieſengebirge, and a ſtill more conſiderable range of mountains parts Sileſia and Moravia. In the very heart of Sileſia are alſo many large mountains, and the countries in the circle of Auſtria are moſtly mountainous. The Upper Palatinate has likewiſe many mountainous and hilly tracts, and the biſhopric of Saltſburg is alſo very mountainous. Franconia, both within the country and on its borders, has a conſiderable number of mountains; and in Swabia are large ranges of them, with many ſingle ones. The Upper and Lower Rhine are alſo mountainous, and particularly the electorate of Cologn. In the circle of Weſtphalia are ſome mountainous tracts, and in Lower Saxony the Hartz are famous. In Upper Saxony are likewiſe many mountainous tracts; but the higheſt mountains in Germany do not exceed four thouſand five hundred feet in height.

In ſeveral of the mountains are remarkable caverns and natural grottos, of which we ſhall give a deſcription in their place.

The principal rivers in Germany are the Danube, the Rhine, the Mayne, the Elbe, the Oder, and the Weſer.

This country was antiently very woody, and is ſtill in general well provided with uſeful woods; but theſe are daily growing thinner, and in many parts timber is wanted for building and fewel. The German woods yield oak, beech, pine, white and red fir, limes, alder, aſh, black poplar, larch, plane trees, cheſnut trees, and olive trees; and for the cultivation of ſilk a great number of white mulberry trees are planted.

Germany is provided with all the neceſſaries and conveniencies of life; its ſoil indeed is not every where fertile, but the barrenneſs of one place is made up by the fruitfulneſs of another. Agriculture is here daily improving, and the lands are rendered more fertile, rich, and beautiful. It yields plenty of all kinds of grain, as common wheat, Turky wheat, rye, ſpelt, barley, oats, peas, beans, vetches, lentils, chiches, millet, and buckwheat, of which it is able to export a vaſt quantity: manna is alſo found there. The Germans likewiſe cultivate hops, aniſe, cummin, flax, hemp, tobacco, madder, woad, ſaffron, and baſtard ſaffron, with truffles, potatoes, and a variety of excellent pot-herbs, ſallads, and roots. They have likewiſe all ſorts of common, French, and Italian fruits, as apples, pears, cherries, plumbs, cheſnuts, almonds, olives, medlars, figs, peaches, apricots, oranges, lemons, citrons, grapes, nuts, filberts, walnuts, &c.

With reſpect to the cattle of Germany, there is a prodigious number of horſes, cows, ſheep, goats, and ſwine; the marſh lands in the dutchy of Holſtein, Eaſt Frieſland, and Bremen afford cheeſe and butter in the greateſt plenty. The wild beaſts are deer, roes, boars, hares, and rabbets; in ſome places are alſo bears, wolves, lynxes, foxes, wild cats, badgers, martens, wild goats, and chamois.

Of tame fowl they have plenty of poultry, turkies, pigeons, geeſe, and ducks; and of thoſe that are wild, ſwans, buſtards, pheaſants, woodcocks, partridges, grouſe, ſnipes, larks, fieldfares, ortolans, quails, wild-geeſe, wild-ducks, the ſpoonbill, and ſtork; alſo the falcon, heron, hawk, &c.

The numerous rivers, brooks, lakes, and ponds in Germany afford ſturgeon, ſalmon, pike, carp, trout, lampreys, eel-pouts, eels, pearch, roach, barbel, ſhads, and on the ſea-coaſt are a great variety of ſea-fiſh.

Of the mineral kingdom, here are many ſpecies of marble, ſome of one colour, and others variegated; alabaſter, free-ſtone, many ſpecies of agate, cornelian, chalcedony, onyx, jaſper; with various ſpecies of cryſtals and precious ſtones, as rubies, ſapphires, topazes, emeralds, chryſolites, amethyſts, granates, hyacinths, turquoiſes, and carbuncles. Here are likewiſe vitriol, allum, ſalt-petre, ſal-gem, and ſpring ſalt, petroleum, coals, black amber, ſulphur, quickſilver, and alſo virgin ſilver, arſenic, cobolt, antimony, biſmuth, calamy, and mock-lead; and of metals, gold, ſilver, copper, and iron.

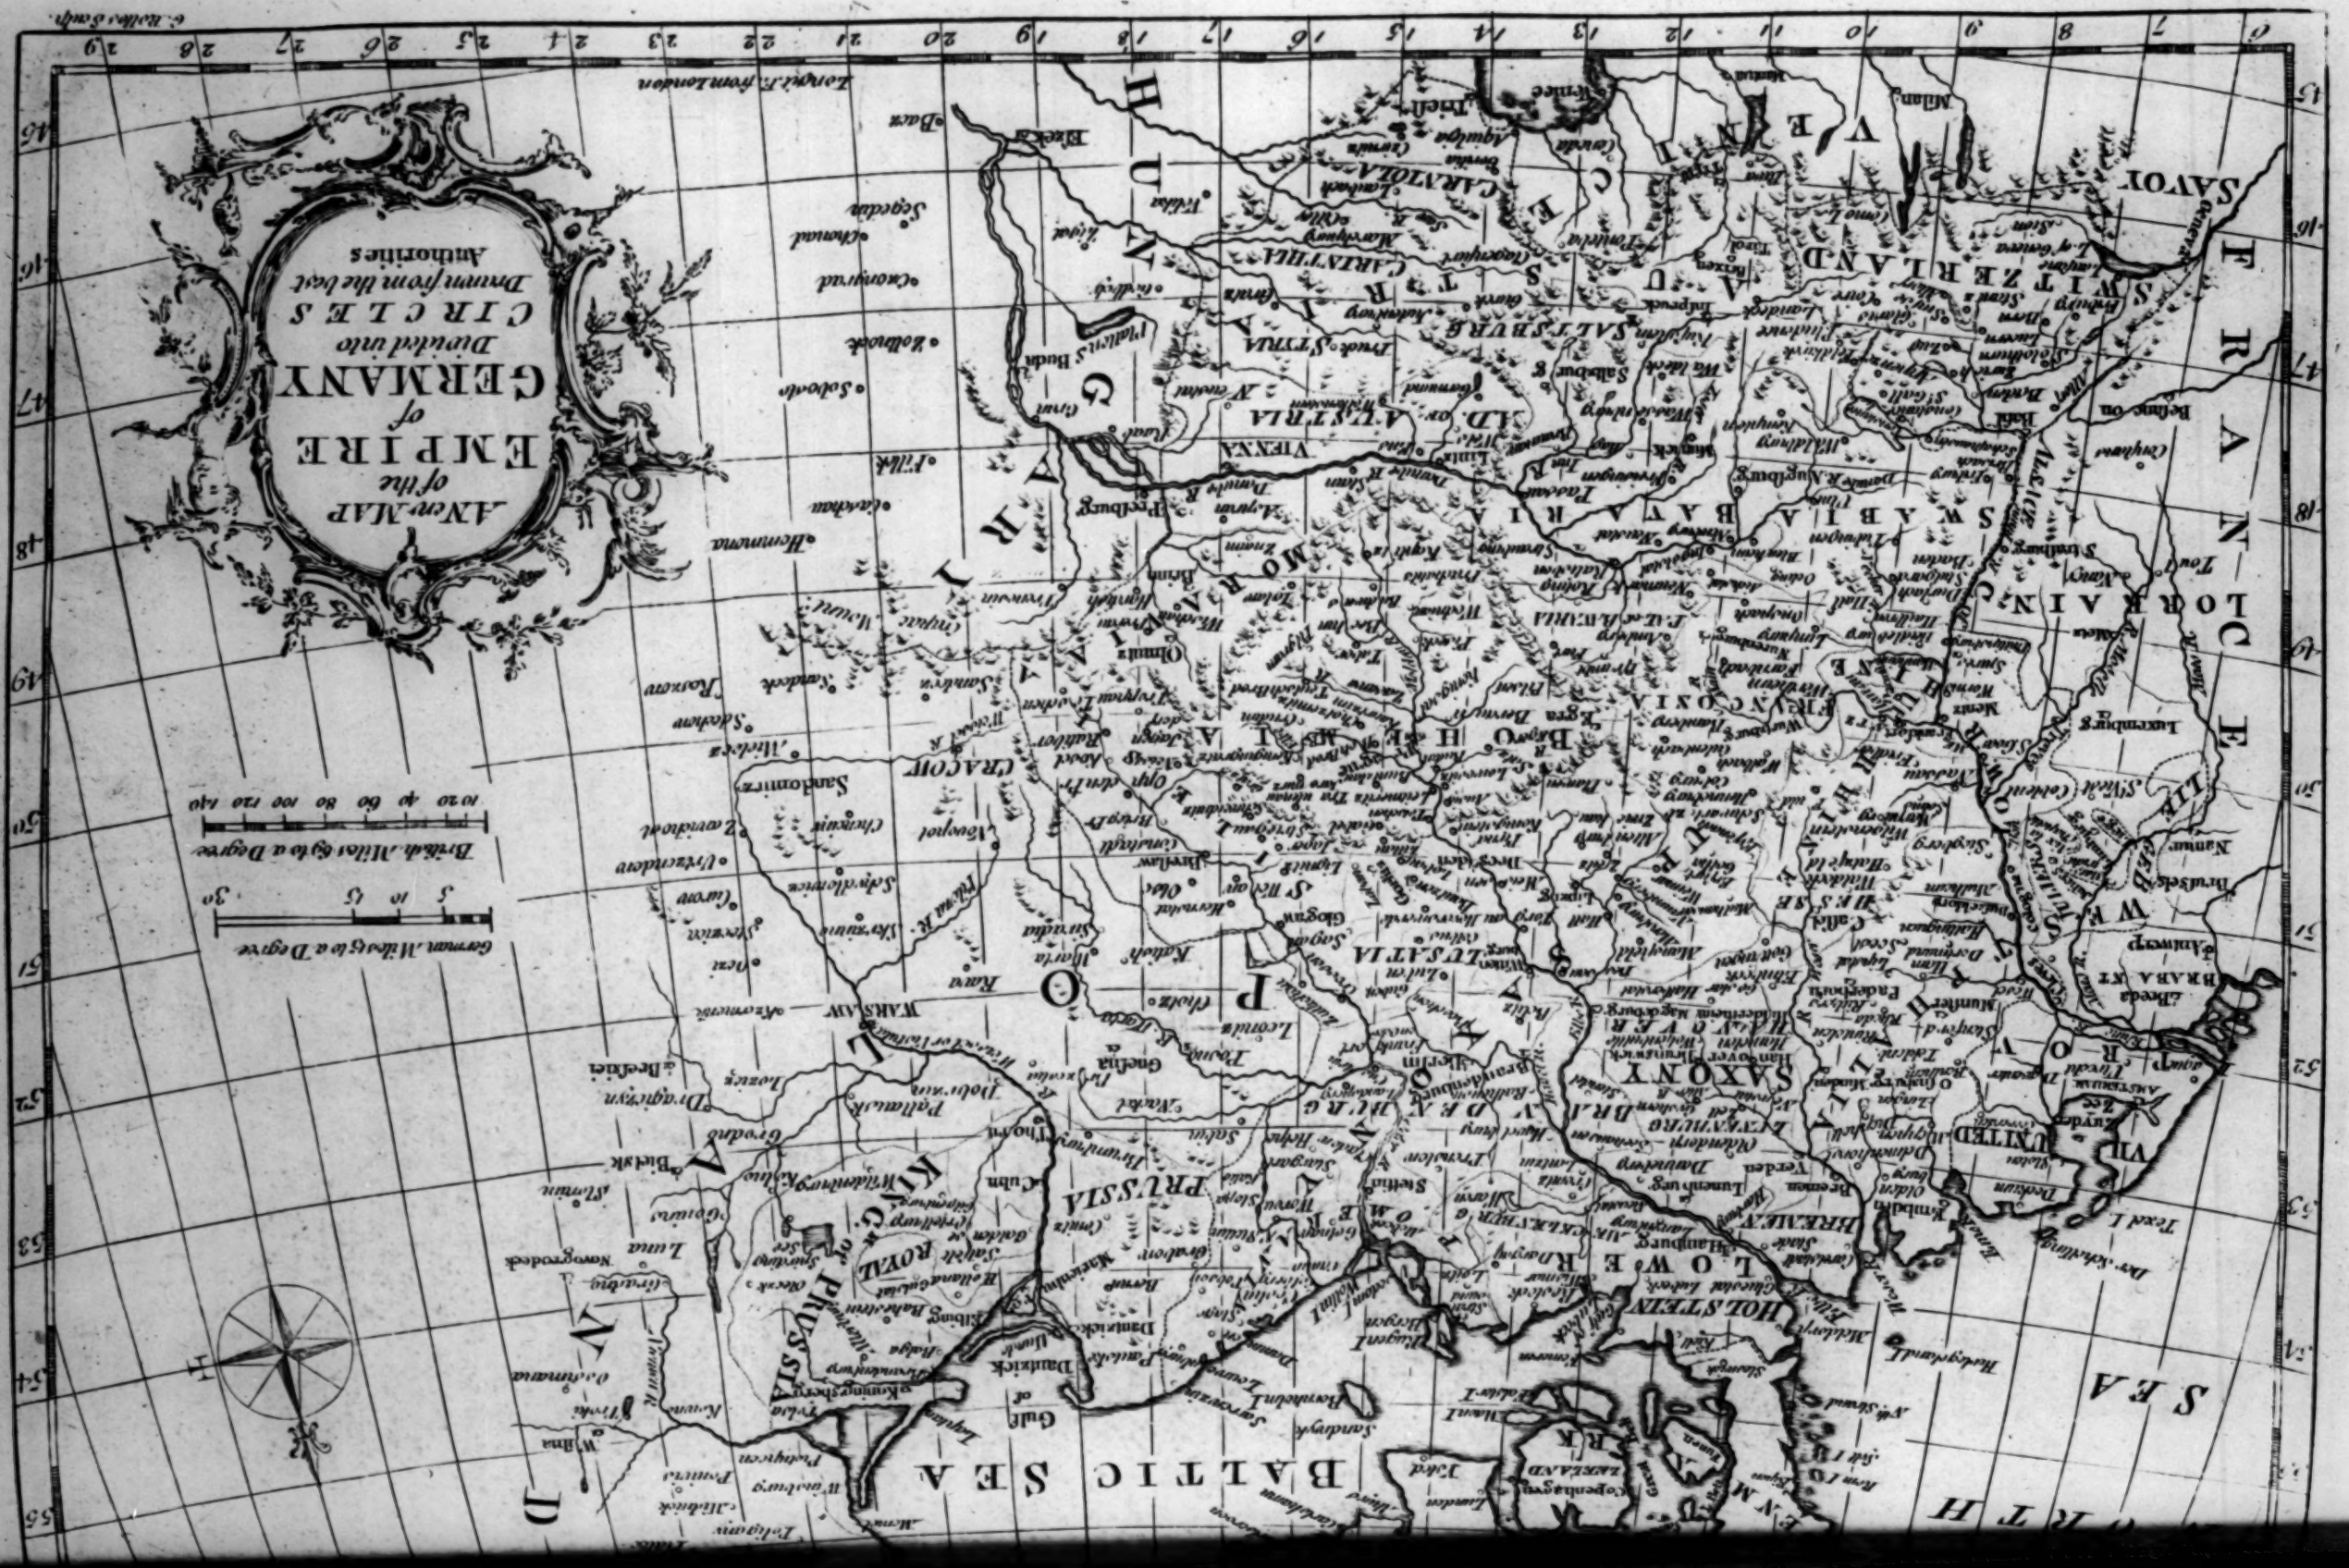
SECT. II.

The Perſons and Manners of the Germans in general. Their Skill in the Polite Arts, Manufactures, Commerce and Coins.

THE Germans are generally tall and well made, and it is eaſy to obſerve amongſt them a remarkable difference with reſpect to their character, temper, and manner of life, which is an evident proof of their conſiſting of ſeveral diſtinct nations. They are, however, in general, very remarkable for their honeſty and fairneſs in their dealings. Both the ancient and the preſent Germans have been long diſtinguiſhed for their hoſpitality. Julius Cæſar obſerves, that in his time their houſes were open to all men, who were welcome to ſuch entertainment as they found provided. That they eſteemed it a piece of injuſtice to affront a traveller, and thought it a neceſſary act of religion to protect thoſe who came under their roof. The preſent Germans have not degenerated from their anceſtors, and a ſtranger is ſure to be every where well entertained. The courage and bravery both of the ancient and preſent Germans were never diſputed. The Germans have alſo the honour of having almoſt all the kingdoms in Europe owe to German blood their crowned heads, particularly Great-Britain and Ireland, Denmark, and Norway, Sweden, Poland, Hungary, Pruſſia, Bohemia, and Ruſſia.

With reſpect to learning, the Germans are not inferior to any other nations; for not only their natural fondneſs for imitation, but the variety of governments,

A New MAP of the EMPIRE of GERMANY Divided into CIRCLES Drawn from the best Authorities



their mutual emulation, and the freedom proteſtants enjoy of writing according to their own judgment, have procured the greateſt improvement in the ſciences. The pleaſure they take in reading is ſo great, and general, particularly among the proteſtants, that it is thought unbecoming even the female ſex, and perſons of any rank, not to be converſant with books. Nor is there any place in the world where more books are written and printed; and though this gives riſe to many mean performances, they have a great number of very excellent works; and there are at preſent many German authors juſtly eſteemed for their genius and abilities.

As to the vices of the Germans, they have been cenſured for their drunkenneſs; but they do not ſeem to be more guilty of this vice than their northern neighbours, or indeed than the Engliſh: that there are perſons of high rank there, as well as country ſquires among us, who will inſiſt upon bumpers going round, and will glory in drinking deeper than their companions, cannot be diſputed; but this is far from being a national vice; and both there and in Great-Britain it is leſs common than formerly.

Their drink is beer and wine, as with us; but they have the latter upon much eaſier terms; for they have not only Moſelle, Rheniſh, and other wines of their own growth; but thoſe of Hungary, France, and Italy, which lie contiguous to them, where the beſt wines are produced.

Their ordinary food is beef, mutton, fowls, &c. as among us, which are generally more thoroughly boiled and roaſted than in England. They have alſo one diſh, which was eſteemed a dainty by the ancient Romans, as it is by them, and that is ſnails, which are dreſſed in various manners, and eaten at the tables of the quality as a great rarity: they are fed for this purpoſe, ſo as to grow to an extraordinary ſize; and there is ſcarce a nobleman's garden that has not a place ſet apart for breeding and fattening them.

Among the other peculiarities, inſtead of the chearful fire-ſide, which enlivens our winter evenings, they heat their rooms with ſtoves. And they not only ſleep on a feather-bed as we do, but, inſtead of blankets, have a light feather-bed covering too; which is placed upon the upper ſheet, and is covered with a counterpane.

Among the diverſions practiſed by the great, is hunting the wild boar, and, in winter, riding through the ſtreets on the ſnow, in ſledges drawn by horſes richly accoutred, and adorned with bells and feathers.

In Germany are thirty-ſix univerſities, ſeventeen of which belong to the proteſtants, and the ſame number to the Roman Catholics; with two other mixed ones, thoſe of Erfurth and Heidelberg. They have alſo a number of academies for the ſciences, and many colleges and ſchools. The Germans have particularly diſtinguiſhed themſelves by their knowledge in the civil law, natural hiſtory, and the various branches of philoſophy.

The French had formerly the reputation of excelling all other nations in the polite arts; but at preſent they are nearly equalled by the Germans.

In the polite arts, they excel in muſic, and boaſt the works of Teleman, Handel, Graun, Bach, and Haſſe. Some of their poets have excelled moſt of the European nations in the ſublimity of their thoughts, and the mingled ſtrength and ſweetneſs of their language. With reſpect to painting, they claim the firſt place after the Italians, and juſtly boaſt their Peter Paul Rubens, John Calker, and ſeveral others. The firſt copper plates appeared in Germany; Albert Durer alſo etched in copper before the Italians; and metzotinto was diſcovered by Von Sichem, an Heſſian lieutenant, in 1648, but others ſay by prince Rupert: wooden cuts were alſo the invention of a German. The firſt diſcovery of the art of printing cannot with juſtice be refuſed the Germans; and Berthold Schwartz, in the thirteenth century, diſcovered at Cologn how gunpowder might be made ſerviceable in the art of war.

With reſpect to mechanics and manufactures, the Germans at preſent make velvets, beautiful ſilks, rich ſtuffs, and half ſilks, with a variety of woollen ſtuffs, and all manner of cloths, ribbons, lace, very large quantities of linen, fuſtian, embroidered work, fine hats, and tapeſtry; they alſo print cotton in a beautiful manner, make Spaniſh rough and ſmooth leather; and are well ſkilled in the art of dying. They work all ſorts of metals for ornaments, veſſels, tools, wire, &c. in the beſt manner; and Augſburg in particular is famous for its performances in ſilver. They are well ſkilled in the working of braſs and arms. They make glaſs, and beautiful mirrors of all ſizes; fine works in lacquer, and a variety of porcelain, among which the Miſnian is ſaid to be the fineſt in the world. In ſhort, Nurenburg is famous for a variety of ingenious works in wood, ivory, metal, ſtone, glaſs, &c. which are exported to all parts of the earth.

With reſpect to commerce, Germany enjoys every advantage; for it not only borders on the German ocean, the Baltic, and the gulf of Venice, but is watered by many navigable rivers; and being ſituated in the heart of Europe, can commodiouſly export the ſuperfluity of its home commodities and manufactures, and receive thoſe of foreign countries.

About the middle of the thirteenth century, many towns in Germany, as well as in other countries lying on the German ocean and the Baltic, entered into a mutual league with each other for the promotion of trade and navigation, and were thence called Hanſe towns. Though their trade fell to decay in the fifteenth century, and the name of the league in that time ceaſed, yet the trading towns of Hamburg, Lubec, and Bremen, are ſtill called Hanſe-Towns, and have a league actually ſubſiſting between them, under the name of which they conclude treaties of commerce with foreign powers. Hamburg is the moſt important trading town in all Germany, and is chiefly indebted to navigation for its fame, as being the moſt reſorted to by the Engliſh and Dutch of all the towns in Germany. The other principal trading towns are Francfort on the Mayne, Leipſic, Nurenburg, Augſburg, Vienna, Fiume, and Trieſte, which laſt is a free port. Several towns have likewiſe the privilege of holding fairs; of theſe, Francfort on the Mayne has the greateſt, and the next to it is Leipſic. The other fairs are kept at Francfort on the Oder, Naumburg, Brunſwic, and Mentz.

The goods exported from Germany into the neighbouring and remote countries are corn, wine, particularly the Rheniſh and Moſelle, tobacco, horſes, lean cattle, butter, cheeſe, honey, ſyrup, linen, woollen ſtuffs, yarn, ribbons, ſilk and cotton ſtuffs, wool, Nurenburg wares, wood of various ſorts, particularly timber fit for ſhip-building, iron plates and ſtoves, cannon, ball, bombs, granades, tin-plates, ſteel-work, copper, braſs wire, porcelain, earthen ware, mirrors, glaſſes, beer, Brunſwic mum, hogs briſtles, tartar, ſmalt, zaffer, Pruſſian blue, printers ink, and many other articles.

With reſpect to the coins in Germany, it is proper to obſerve, that the emperor, with the electors, the chief part of the princes of the empire, ſeveral prelates, abbeſſes, counts, barons, ſome of the gentry, and the imperial cities, enjoy the privilege of coining money; but with this diſtinction, that ſome are entitled to coin only ſmall money, others to coin alſo a larger ſpecies, and that either of ſilver alone, or of gold alſo. Yet many ſtates of the empire, in order to ſave expences, ſeldom make uſe of this privilege. One or two days are appointed every year in each circle to be held by the mint maſters for the examination of the coin; and the emperor has engaged that they ſhall be regularly held in every circle. All the money in the empire ought likewiſe to be coined of the ſame ſtandard, and to be of one weight and intrinſic value: at preſent, by virtue of a reſolution of the diet of 1737, this ſtandard ought to be that of Leipſic; but neither this, nor the other regulations of the empire, with reſpect to coinage, have been able to prevent its debaſement.

In Hamburgh and Lubec they reckon by marks, ſhillings, and pfennings: one mark, which is one ſhilling and ſix pence ſterling, makes ſixteen ſhillings, one ſhilling twelve pfennings; but this pfenning is no real coin; forty-eight ſhillings, or three marks, make one rix-dollar. The current heavy money of this country is gene-

rally

rally twenty-five *per cent.* better than the light current coin of Germany.

In Bremen they reckon by rixdollars, grots, and ſchwars: one rixdollar worth four ſhillings and ſixpence makes one and a half double, and three ſingle Bremen marks, ſeventy-two grots, or three hundred and ſixty ſchwars.

In Leipſic, and in all the electoral countries of Saxony, as alſo at Naumburg, Berlin, Magdeburg, and Francfort on the Oder, they reckon by rixdollars, gut-groſchen and pfennings; that is, one rixdollar, which is there an imaginary coin, contains one imperial florin and a half, or twenty four gut-groſchen; and one gut-groſchen twelve pfennings. An imperial florin contains ſixteen gut-groſchen; a one third piece, eight groſchen; and one ſixth piece, four gut-groſchen.

At Francfort on the Mayne they reckon in rixdollars, kreutzers, and pfennings: one rixdollar makes one florin and a half, four head-pieces and a half, twenty-two batzes and a half, thirty imperial groſches, and forty-five albuſes, or white pfennings.

At Nurenburg, Augſburg, Vienna, Prague, &c. they reckon by imperial guldens, or florins, kreutzers, and pfennings: one imperial florin, or two-third piece, makes fifteen batzes, ſixty kreutzers, twenty imperial groſches, or two hundred and forty pfennings.

In Breſlau, and all Sileſia, they reckon by rixdollars, ſilver groſchen, and pfennings: one rix-dollar contains thirty imperial or ſilver groſches or bohms, forty-five white groſches, ninety kreutzers, an hundred and twenty groſches, an hundred and eighty dreyers, and three hundred and ſixty pfennings.

In Brunſwic, and many other places in Lower Saxony, as alſo in the whole circle of Weſtphalia, they reckon by rixdollars, marien-groſchen, and alſo by gut-groſchen and pfennings: one rixdollar makes twenty-four gut-groſchen, thirty-ſix marien-groſchen, or two hundred eighty-eight pfennings; one marien-groſche contains two mattiers, or eight pfennings.

At Cologn on the Rhine, they reckon by rixdollars, albuſes, and hellers; as alſo in eſſes, and pfennings Flemiſh: one rixdollar current makes one imperial florin and a half, four head-pieces and a half, forty-eight Brabant ſtyvers, fifty-eight and a half Cleve ſtyvers, ſeventy-eight albuſes, and an hundred and ſeventeen ſetmanger.

It is obſervable, that the rixdollar which at Hamburg, Altena, Lubec, Bremen, &c. is worth four ſhillings and ſixpence, goes in moſt parts of Germany for no more than three ſhillings and ſixpence.

SECT. III.

An Abſtract of the ancient and modern Hiſtory of the Germans.

THE Germans were, in the early ages of the world, divided into many petty nations and principalities, ſome governed by kings whoſe power was limited, and othere were abſolute; ſome of their princes were elective, and others hereditary; and ſome ariſtocratical and democratical governments were alſo found among them. Many of theſe ſtates and kingdoms frequently united under one head or general, both in their offenſive and defenſive wars.

This was the ſtate of the Germans before they were conquered by the Romans. At that time the children went naked, and the men hung the ſkin of ſome wild beaſt upon their ſhoulders, faſtening it with a thong; and perſons of the beſt quality wore only a little woollen mantle or a coat without ſleeves. Their uſual bed was the ground, a little ſtraw, or the ſkins of wolves or bears. Their food was bread, fleſh-meat, butter, and fruit, as at preſent, and their drink water, milk, and beer; for in thoſe early ages they were ſtrangers to the uſe of wine. They were uſually very merry at their entertainments, ſitting in a ſemi-circle, with the maſter of the family in the middle, and the reſt on the right and left, according to their quality; but to theſe feaſts no women were admitted, nor a ſon under twenty years of age.

They expreſſed an extraordinary regard for morality, and were very ſtrict in divine worſhip, chooſing their prieſts out of the nobility, who were not entirely ignorant of moral philoſophy and phyſics, and were uſually called to councils of ſtate. Women were likewiſe admitted to the prieſtly office, and both the one and the other were treated with the moſt profound reſpect by the laity. The doctrine of tranſmigration then prevailed in Germany; they believed that departed ſouls, when they had left theſe bodies, animated other creatures; and, according as they behaved in this life, were happy or miſerable. Cluverius obſerves, that they worſhipped the ſun with ſuch devotion, that they ſeemed to acknowledge that planet as the ſupreme God, and to it dedicated the firſt day of the week. They alſo worſhipped Woden, or Godan, after whom the fourth day of the week was called Wedneſday. It is ſaid that this word Godan becoming afterwards contracted into God, the Germans and Engliſh gave that name to the Deity. They alſo worſhipped the god Faranes, the ſame with the Daniſh Thor, the Thunderer, from whom our Thurſday has its name. The goddeſs Freia, or Venus, gave her name to Friday; and Tuiſco, the ſame with Mars, gave name to Tueſday.

Like the antient Britons they performed their ſacrifices in groves, the oak being uſually choſen for an altar; and, inſtead of a temple, they erected an arbour made of the boughs of the oak and beech. The prieſts, as well as the ſacrifice, were always crowned with wreaths of oak, or of ſome other ſacred tree. They ſacrificed not only beaſts, but men; and theſe human ſacrifices were taken from among their ſlaves or malefactors. Their belief that their ſouls ſhould animate other bodies after death, it is ſaid made them fearleſs of danger, and upon extraordinary occaſions they made no ſcruple of diſpatching themſelves into the other world. They burnt their dead bodies, and having gathered up the bones and aſhes of the funeral pile, buried them together; and at the funerals of the great were tiltings and ſongs, ſung in memory of their heroic actions.

Theſe were the manners of the Germans before they were ſubdued by the Romans, who met with ſuch reſiſtence, that they were contented with making the Rhine and the Danube the boundaries of their conqueſts; and accordingly built fortreſſes, and planted garriſons on the banks of both thoſe rivers, to prevent the incurſions of what they termed the barbarous nations: but within about a hundred years after Conſtantine the Great, the Franks, Burgundians, Alemans, and other German nations broke through thoſe boundaries, paſſed the Rhine, and diſpoſſeſſed the Romans of all Gaul, Rhætia, and Noricum, which they ſhared among them; but the Franks prevailing over the reſt, at length eſtabliſhed their empire over all Modern Germany, France, and Italy, under the conduct of Charlemagn, or Charles the Great.

The conquered German nations had at firſt hereditary dukes of their own, and were governed by their own laws; but Charles put an end to the former, and governed the countries by counts and royal miſſionaries. However, the antient diets were ſtill retained. In the year 800, Charles revived and conferred the dignity of Roman emperor upon himſelf and family: but his ſon Lewis divided the empire among his ſons; upon which great troubles aroſe, which, in 843, were adjuſted by an accommodation; by which Lewis the German obtained all Germany as far as the Rhine, with the three towns of Spires, Worms, and Mentz; and thus Germany became an independent kingdom. In 870, Lewis reduced half of the Lotharingian kingdom under his ſubjection, and his ſon Lewis, the younger, nine years after reduced the other.

Lewis the Younger ſharing his paternal kingdom with both his brothers, Carlman became king of Bavaria, Lewis of Eaſt Franconia, and Charles the Fat of Alemannia; the laſt ſurviving his brothers, not only inherited their kingdoms, but obtained the imperial dignity, together with all Italy and France: yet governed in ſo weak a manner, that in 887 he was depoſed by the German ſtates, who conſtituted Arnulph, Carlman's natural ſon, king of Germany. This prince beat the Normans, who had made great devaſtations in Germany; and, by the

the aſſiſtance of the Huns, ſubdued the Bohemians. But afterwards, by the death of his ſon Lewis the Child, his family became extinct. Germany was at that time an hereditary kingdom, but the power of its monarchs was limited by the diets. The ſeveral territories belonging to it were governed under the king by counts, among whom the margraves defended the borders againſt hoſtile attacks.

The German ſtates now raiſed a Frankiſh lord, named Conrad, to the throne, he being deſcended from the daughter of Lewis the Firſt. Conrad was ſucceeded by his enemy Henry duke of Saxony, whom on his death-bed he recommended to the ſtates

In Henry II. the male race of the Saxon kings and emperors ended in 1024, during which time Germany continued an hereditary kingdom. The ſtates afterwards aſſembling at Tribus in the open fields on the banks of the Rhine, elected Conrad II. for their king, who being alſo acknowledged by the ſtates of Italy, he likewiſe obtained the imperial dignity. By means of his ſon he annexed the kingdom of Burgundy to the empire, rendered Poland ſubject to his dominion, and in a treaty with Denmark appointed the Eider as the boundary of the German empire.

Henry III. depoſed three popes who had ſet up againſt each other, appointing a fourth in their ſtead; ſince which time the vacancy of the papal chair has always been intimated to the emperor, who ſends a perſon to Rome to deſire that a new pope may be elected.

Henry IV. his ſon, was, however, put under the ban by the pope, on which he was depoſed by the ſtates.

Henry V. ſucceeded his father, but was obliged to renounce all pretenſions to the inveſtiture of biſhoprics, which had been claimed by his anceſtors; and in him became extinct the male line of the Frankiſh emperors.

Upon this the pope cauſed Lotharius, duke of Saxony, to be elected; but he was not acknowledged by all Germany for their ſovereign, till after a ten years war. After him Conrad of Hohenſtanſen ſucceeded to the crown. The emperor Frederic I. effectually exerciſed his ſovereignty over the ſee of Rome, by virtue of his coronation at Arles, reſerving alſo his dominion over that kingdom, and obliging Poland to pay him tribute, and take an oath of allegiance. Henry VI. attempted in vain to render the crown hereditary in his family. Philip, the brother of Henry, ſucceeded him; but refuſing to acknowledge the pope's ſupremacy, was excommunicated, and Otho, duke of Brunſwic, ſet up againſt him by the pope and the electors. The whole empire was engaged in this diſpute in a bloody war, till Philip being treacherouſly aſſaſſinated in his bed, Otho became poſſeſſed of the whole empire; but he had not reigned four years, before he was depoſed by the pope and the electors, and Frederic, king of Sicily, advanced to the imperial dignity.

Frederic II. whom hiſtorians extol for his learning, wiſdom, and reſolution, was five times excommunicated by three popes; but prevailed ſo far againſt pope Gregory IX. as to depoſe him from the papal chair. Theſe continual conteſts between him and the popes gave riſe to the two famous factions of the Guelphs and Gibellines; the former adhering to the papal ſee, and the latter to the emperors. Frederic having reigned thirty-eight years, died, or, as ſome ſay, was poiſoned, in Italy; after which the empire remained in great confuſion for upwards of twenty years, there being no leſs than ſix competitors for the imperial dignity.

Germany began to recover from its diſtracted ſtate in 1273, when count Rodolphus of Hapſburg was advanced to the imperial dignity, the other electors leaving the choice to the palſgrave Lewis; and from him the houſe of Auſtria ſprung.

Count Adolphus of Naſſau was alſo, by virtue of a compromiſe, created emperor by the elector of Mentz; but he ſo diſguſted the electors of the empire, that they made choice of Albert the ſon of Rodolphus for their ſovereign, who defeated Adolphus in a pitched battle, and ſlew him with his own hand. Albert's coronation was confirmed by the pope; but he was afterwards murdered by his nephew and three aſſaſſins.

On the death of Albert, in 1308, Henry, count of Lutzelburg, was created emperor: he was famed for his wiſdom, temper, and courage; but was poiſoned by a Franciſcan friar with the conſecrated elements. The emperor no ſooner perceived what was done, than he generouſly adviſed the villain to make his eſcape; but neglecting to perform it, he was taken and flayed alive.

Ludowic, or Lewis of Bavaria, after an interregnum of ſome years, was choſen emperor, by a majority of the electors, in 1318; but Frederic, duke of Auſtria, ſon of the late emperor, was ſet up by a contrary faction. Frederic's forces were defeated, and Lewis remained ſole emperor. After his death Charles IV. was unanimouſly elected emperor, and diſtinguiſhed himſelf by drawing up the golden bull, or thoſe regulations for the election of an emperor, which are ſtill obſerved. Charles lived to ſee his ſon Wenzel, or Wenceſlaus, elected king of the Romans. This prince, who was the fourth ſon of Charles, at his father's deſire, ſucceeded to the empire; but, being diſſolute and cruel, was depoſed, after he had reigned twenty-two years.

Charles was ſucceeded by three other princes, whoſe reigns were ſhort; and at length, in 1411, Sigiſmund was unanimouſly choſen emperor, who, in 1414, proclaimed a general council to be held at Conſtance, in which three popes were depoſed, and a new one ſet up. At this council thoſe reformers John Huſs and Jerom of Prague were condemned and burnt, though this emperor had granted them a paſſport, and was engaged in honour and conſcience for their ſafe return to their country; which ſo exaſperated the Huſſites of Bohemia, that they raiſed a formidable army, and, under the conduct of Ziſca, their general, defeated his forces in fourteen battles. Frederic, duke of Auſtria, ſon-in-law to the emperor Sigiſmund, was choſen emperor upon the death of his father, and reigned fifty-three years. His ſon Maximilian was choſen king of the Romans during his father's life-time, and afterwards obtained from the pope the imperial crown; and during his reign the empire was divided into ten circles.

Charles V. ſurnamed the Great, ſon to Philip king of Spain, and grand-ſon to Maximilian, was elected emperor in 1519. He procured Luther's doctrine to be condemned, and in his reign the diſciples of that great reformer obtained the name of Proteſtants, from their proteſting againſt a decree of the imperial diet in favour of the Catholics. He is ſaid to have been victorious in ſeventy battles: he had the pope and French king priſoners at the ſame time, and carried his arms into Africa, where he conquered the kingdom of Tunis. He drove the Turks from the ſiege of Vienna, made war on the proteſtant princes, and took the elector of Saxony and the prince of Heſſe priſoners; but, after a reign of thirty-eight years, he reſigned his empire to his brother Ferdinand, and retired into a convent in Spain.

Ferdinand I. diſtinguiſhed himſelf by eſtabliſhing the aulic council of the empire: he was a peaceful prince, and uſed to aſſign a part of the day to hear the complaints of his people. Maximilian II. and his ſon Rodolphus II. were both elected king of the Romans, but the latter could not be prevailed upon to allow a ſucceſſor to be choſen in his life-time. He was ſucceeded by his brother Matthias, in whoſe capitulation it was for the firſt time inſerted, that the electors for the future ſhould be entitled to elect a king of the Romans even againſt the will of his father.

In the reign of Ferdinand II. broke out the thirty years war, in which he endeavoured to deſtroy the Proteſtants, and which was put an end to by his ſon Ferdinand III. in the year 1648, by the peace of Weſtphalia, by which the Proteſtants were ſecured in their religious and civil privileges. This emperor conferred on duke Erneſt Auguſtus of Brunſwic Lunenburg the ninth electoral dignity, and was ſucceeded by his ſon Joſeph, king of the Romans. This laſt was followed by his brother Charles VI. who in the year 1713 publiſhed the ordinance called the pragmatic ſanction, to ſecure his hereditary dominions in his family, and died in 1740, without male heirs. In 1742 Charles VII. of Bavaria was choſen emperor, by the ſuſpenſion of the vote of Bohemia; but, after an un-

happy reign, in which he was continually at war, he died in 1745, and was ſucceeded by Francis I. grand duke of Tuſcany, and duke of Lorrain, who had married the queen of Bohemia, the daughter of Charles VI.

SECT. IV.

Of the Election and Coronation of the Emperor; his Power, and the Power and Privileges of the States of the Empire and the Diet.

THE empire is elective, and every new king of the Romans is obliged ſolemnly to renounce all attempts of rendering it hereditary in his family. The laws of the empire make no limitation with reſpect to religion, nation, ſtate, or age. The choice is ſettled by the majority of the electors, and declared by the elector of Mentz, within a month after an account is received of the former emperor's death, by means of envoys and public reſcripts to each elector. The ceremony of election is performed at Frankfort on the Mayne; where the electors appear, either in perſon, or ſend two or three envoys, who muſt be provided with ſufficient powers. After ſettling the deliberations, as well relating to the capitulation of election, as to other matters propoſed by the ſtates, foreign envoys, and others, all the foreigners who do not belong to the retinue of the electors, or their envoys, are ordered to leave the town before the day of election; after which all the electors preſent, with the firſt envoys of ſuch as are abſent, march in their electoral habits in proceſſion on horſeback, the three eccleſiaſtical electors wearing ſcarlet robes, with caps lined with ermine, and the robes of the ſecular electors of crimſon velvet lined alſo with ermine, each with his hereditary marſhal carrying a ſword in a ſcabbard before him; but this honour is not paid to the deputies of the abſent electors. In this manner they proceed from the council-houſe to St. Bartholomew's church, where alighting at the gate, they go to their reſpective ſeats in the choir, followed by ſeveral princes and counts of the empire, the ſeveral ſword-bearers ſtanding before their reſpective electors, with their ſwords drawn and laid on their ſhoulders. The ſervice begins with Veni Creator, and the Proteſtant electors withdraw till maſs is over; after which they return, and they all ſolemnly take an oath before the altar, to elect the fitteſt perſon to be emperor, and then ſhut themſelves up in the chapel of election, which is a ſmall vaulted gallery, to which there is an entrance from the choir. When they have once more ſworn to ſtand to a plurality of votes, theſe votes are collected by the elector of Mentz, according to the rank of the electors; and then the elector of Mentz is aſked by the elector of Saxony for his vote. Whoever has above half the voices of the college is elected, and an elector may even vote for himſelf.

The election being over, the perſon elected, or his proxy, muſt immediately ſwear and ſubſcribe to the capitulation of election, which being done, he receives the congratulations of the electors, and the choice is made public in the church. If the elected king of the Romans be not preſent in perſon, he muſt give a counter-bond that he will maintain the capitulation of election, and, before his coronation, muſt ſwear to it in perſon; and, till this is done, he cannot aſſume the government, but muſt leave it to the vicars of the empire. An authentic copy of the capitulation of election, ſubſcribed by the perſon elected, or his envoy, and confirmed by his ſeal, is delivered to each of the electors; and, on the other hand, the electoral college cauſes to be delivered to the perſon elected an inſtrument of his election, which, when he is abſent, is carried to him by a prince, with a writing of notification. Upon this he appoints a day for his coronation, which ought to be performed at Aix la Chapelle, but at preſent is always held in the town of election.

Part of the jewels of the empire are kept at Aix, and part at Nurenburg. Moſt of them belonged to Charlemagne, and are ſolemnly delivered up at the place of coronation. Excluſive of ſeveral kinds of veſtments, there are the crown and ſceptre, with two rings, one imperial monde, two broad ſwords, one ſmall one, a book of the goſpels, &c.

At the coronation the temporal electors, or their ambaſſadors, attend the perſon elected from his palace to the church, in the following order; the elector Palatine with the crown, the elector of Bavaria with the monde, or globe, and the elector of Brandenburg with the ſceptre, march firſt, abreaſt; the elector of Saxony carries the ſword, and the elector of Hanover the ſtandard. At the door of the church he is received by the three eccleſiaſtical electors in their robes, who attend him to the altar; and having taken a general oath as a ruler, and alſo promiſed due veneration to the pope and the church, the archbiſhop who officiates, anoints his head, and between his ſhoulders, his neck, breaſt, and right arm; then being clothed in the ancient imperial robes, he is brought to another altar, and once more ſworn; he is then crowned, and afterwards conducted to the throne, where the archbiſhop bids him receive and keep the pledge which was deſigned for him by Providence. Te Deum is then ſung, and the trumpets and other muſic proclaim the general joy. After which he dubs ſome knights, is made a canon of the collegiate church of St. Mary at Aix la Chapelle, and is then conducted on foot, in ſolemn proceſſion, to the council-houſe to a table, at which the hereditary officers attend.

Till the reign of Charles V. the emperors ſuffered themſelves to be crowned at Rome by the pope, and then ſtiled themſelves Roman emperors. The emperor, immediately on his entering on the government, ſhews his veneration to the pope by an embaſſy. The title of king of Italy and Lombardy, if we except twenty-one fiefs of the empire, that lie in the eccleſiaſtical ſtate, is merely titular.

The emperor's title runs thus, "F. by the grace of "God elected a Roman emperor, and at all times aug-"menter of the empire of Germany." Next follow the titles of the hereditary imperial dominions. The ſtates of the empire give the emperor the title of moſt illuſtrious, moſt powerful, and moſt invincible Roman emperor; but the laſt is omitted by the electors.

The arms of the emperor and empire are a black ſpread eagle with two heads, hovering with expanded wings in a field of gold, and over the head of the eagle is ſeen the imperial crown. To theſe are annexed the arms of the ſeveral hereditary countries.

The prerogatives of the emperor conſiſt partly in his being looked upon by all other crowned heads and ſtates in Europe as the firſt European potentate, and conſequently has precedence given him and his ambaſſadors. With reſpect to the German empire, he is its ſupreme head, and as ſuch enjoys many privileges. Yet his power in the adminiſtration of the German empire is limited both by the capitulation of the election, the other laws of the empire, by treaties, and by the cuſtoms of the empire. Thoſe privileges which he has the right of exerciſing without the advice of the ſtates, are called his *reſervata*; but his greateſt power does not conſiſt in theſe, which are far from being repugnant to the liberties of the ſtates of the empire.

His rights, with reſpect to eccleſiaſtical affairs, conſiſt in little more than confirming eccleſiaſtical elections, and ſending commiſſaries to the elections of archbiſhops, biſhops, and abbots, that they may be performed in due order; but the commiſſary is never perſonally preſent at theſe elections.

With reſpect to temporal affairs, the emperor has the right of beſtowing perſonal dignities; as for inſtance, the creating of noblemen, as lords, barons, counts, who enjoy the dignity of princes, and of knights and gentry; as alſo that of raiſing countries and territories to a higher rank; of beſtowing coats of arms, as alſo the enlarging, improving, and altering them. He has the power of eſtabliſhing univerſities, and enabling them to confer academical degrees; of granting a right of holding fairs and markets, and of erecting any place into a ſanctuary. He has likewiſe the power of beſtowing letters of reſpite, of ſecuring a debtor againſt his creditor, and of conferring majority on minors. He can put children who are born out of wedlock upon the footing of ſuch as are legitimate; can confirm the contracts and ſtipulations of the members of the empire; and ſo far remit the oaths extorted from them, that they may com-

commence an action at law againſt another, on account of the very thing for which the oath was adminiſtered.

The emperor, however, has no right, without the conſent of the collective ſtates of the empire, to put one of thoſe ſtates under the ban; to exclude a ſtate of the empire from a ſeat and voice in its colleges; to interfere in the laws of the empire; to conclude treaties in affairs relating to the empire; to involve it in a war; to raiſe levies; or to conclude a peace in which the empire is concerned; to appoint taxes in it; to regulate the coinage; to build forts in the empire; or to determine religious diſputes.

The ſucceſſor in the adminiſtration is frequently choſen by the electors during the life of the emperor, and the perſon ſo choſen ſtiled King of the Romans. He is elected and crowned in the very ſame manner as the emperor; and though he has properly no kingdom, is actually a crowned head; is ſaluted with the title of Majeſty, and enjoys the title of Perpetual Augmenter of the empire, and king of Germany. He bears a ſpread eagle with one head, in his arms, and takes precedence before all other kings of Chriſtendom.

With reſpect to the emperor's court and chancery, he has for his aſſiſtants the arch-offices of the empire, which are filled by electors.

Of the nine electors, three are ſpiritual, and the reſt temporal; of the former is the elector of Mentz, who is arch-chancellor of the holy Roman empire, and director of the electoral college: this prince, beſides the offices he enjoys at the coronation, as already mentioned, has the general direction, and is not to be controuled by the emperor; he lays before that body the grievances of the ſeparate ſtates. Before him, or his envoys, all thoſe of the ſtates of the empire, as well as of foreign powers, legitimate themſelves. He nominates the vice-chancellor of the empire, who muſt take an oath to him as well as the emperor. He likewiſe appoints all officers for the chancery of the empire, and has ſupreme juriſdiction over them, and alſo the inſpection of the archives of the empire.

The elector of Treves, who is the ſecond ſpiritual elector, is the arch-chancellor of the holy Roman empire in Gaul and the kingdom of Arles, but this is at preſent no more than a mere title. He has the firſt voice at the election of a king of the Romans, and conſtantly precedes the elector of Cologn.

The elector of Cologn is arch-chancellor of the holy Roman empire in Italy, and has a ſecond voice at the election of a king of the Romans. When the emperor is crowned at Aix-la-Chapelle, and in the archbiſhopric of Cologn, he has the right of performing the coronation alone; but if it happen in a third place, that is neither in his archbiſhopric, nor in that of Mentz, he exchanges therein with the elector of Mentz.

The temporal electors are the following: The king of Bohemia, the elector of Bavaria, the elector of Saxony, the elector of Brandenburg, the elector Palatine, and the elector of Hanover.

The king and elector of Bohemia is arch-cup-bearer of the holy Roman empire, and as ſuch, preſents to the emperor the chalice, filled with wine and water, and hands the firſt liquor to the table in a ſilver cup, which weighs twelve marks, or about ninety-ſix ounces Engliſh, which afterwards, together with the horſe, becomes the property of his vicar. His other prerogatives are, his preceding all other temporal electors, walking in proceſſion immediately after the emperor, followed by the empreſs, and the electors of Mentz and Cologn; and in the electoral college he has a third voice.

The elector of Bavaria is arch-ſewer of the holy Roman empire. At the coronation he carries the monde before the emperor, ranks next to Bohemia, and at the imperial coronation places four ſilver diſhes, weighing twelve marks, on the imperial table, and ſerves up the firſt courſe.

The elector of Saxony is arch-marſhal of the holy Roman empire. At the diets, and on other ſolemn occaſions, he carries the ſword of ſtate before the emperor, and at the coronation rides into a heap of oats, and fills a ſilver meaſure with them. At the diets he appoints quarters for the electors, or their envoys; and during the holding of the diets, has juriſdiction over all electoral, and other officers of the empire.

The elector of Brandenburg is arch-chamberlain of the empire, and carries the ſcepter before the emperor, and preſents him with water in a ſilver baſon, for him to waſh his hands.

The elector Palatine has the office of arch-treaſurer, and throughout all Germany is protector of the order of St. John; he can alſo raiſe nobles and gentlemen to the degree of counts.

The elector of Bavaria being put under the ban of the empire, and the Palatine obtaining the office of arch-ſewer, the elector of Brunſwic Lunenburg alſo obtained the office of arch-treaſurer, a title which he ſtill bears, till another ſuitable office be found him. He enjoys the alternate ſucceſſion of the biſhopric of Oſnaburg, with ſome other rights and privileges; and his electoral juriſdiction extends both to the territories of Hanover and Zell. Indeed, the emperor Leopold raiſed the illuſtrious houſe of Hanover, on account of the extraordinary ſervices both he and the empire had received from it, to the electoral dignity, ſo early as the year 1692; but thoſe electors obtained neither a ſeat nor a voice in the electoral college till the year 1708.

After theſe follow in rank the princes of the empire, who are partly ſpiritual, and partly temporal; partly old, and partly new; or firſt raiſed to that dignity ſince the reign of Ferdinand II. The ſpiritual princes are either archbiſhops, biſhops, or princely abbots; and to them likewiſe belong the Teutonic maſters, together with the maſterſhip of the order of St. John. Among the temporal princes is an arch-duke, and the reſt are either dukes, palſgraves, margraves, landgraves, burgraves, princes, or princely counts. In the college, or council of the princes of the empire, are three benches: on what is called the ſpiritual bench, ſit the ſpiritual princes, with the arch-duke of Auſtria, and that of Burgundy, but in ſuch a manner that Auſtria daily exchanges the firſt place with Saltzburg: on the temporal bench ſit the other temporal princes; and on the croſs bench the biſhops of Lubec and Oſnaburg, when the latter happens to be a Lutheran.

The diet of the empire is an aſſembly of the emperor, and of all the ſtates, or their envoys and plenipotentiaries, in order to conſult and take reſolutions in ſuch affairs as concern the whole German empire. The diet is ſummoned by the emperor, who, after conſulting with the electors, appoints the time and place where it ſhall meet, which muſt be within the German dominions. The ſummons conſiſts of printed patents ſubſcribed by the emperor, and ſent in the form of a letter to each ſtate of the empire, briefly declaring the occaſion of their meeting, and the moſt important matters to be tranſacted. The emperor either aſſiſts at it in perſon, or has a principal commiſſary, who is generally an old imperial aulic counſellor, and a perſon of learning raiſed to the dignity of a baron.

The reſpective ſtates may either appear themſelves, or by their envoys, or charge another ſtate, or its envoys, with their voice. On the ſide of the ſtates the elector of Mentz, or his envoys, has the general direction; and theſe envoys ſhew their credentials to the elector of Mentz, or his envoys, and to the imperial principal commiſſary.

The ſtates of the empire, in their conſultations, divide into three colleges, the electoral, the princely, and the college of the imperial cities; each of the two firſt, which are called the higher colleges of the empire, has a principal and by-chamber of its own; but all the three colleges meet to hear the imperial propoſals, and at the exchanging of the concluſions of both the higher colleges againſt the imperial cities, in the hall of correlatives.

It ought not to be omitted, that the eccleſiaſtical and ſecular princes of the empire, and all prelates who have princely dignities annexed to their functions, with the maſter of the Teutonic order, have each one ſingle voice; but the reſt, who have no temporal principality, give their voices by companies, of which kind are the two benches of the Rhine and Swabia. The repreſentatives,

of

or the deputies of the imperial cities, form the laſt and third rank of members in the diet, and are alſo divided into the Rheniſh and Swabian benches. On the firſt ſit the repreſentatives of Lubec, the free cities upon the Rhine, which amount to fifteen; and on the other the repreſentatives of the thirty-ſeven free cities in Swabia and Franconia. The repreſentatives of the city where the diet is held ſit at a table by themſelves, and take an account of the voices of the other deputies, which are regiſtered by the two regiſters of Ulm and Spire, one of them repreſenting the cities in the circle of the Rhine, and the other the cities in the circle of Swabia.

In each college the reſolutions are formed by a majority of voices; but when affairs relating to religion are diſcuſſed, or where all the Catholics are of one opinion, and all the Proteſtants of another, it does not turn on a majority of voices.

If the three colleges be unanimous, a judgment of the empire is formed for the uſe of the emperor, or his principal commiſſary; but if only two of the colleges are unanimous, their reſolution, with the particular concluſion of the third, is delivered into the imperial commiſſion. When the emperor approves either of the judgment of the empire, or the concluſion of two colleges, an obligatory concluſion of the empire ariſes out of it, and it is immediately put into execution.

SECT. V.

Of the Forces, Taxes, Courts of Juſtice, and Laws of the Empire.

TAXES and other impoſts can no otherwiſe be laid on the empire in general by the emperor, than with the advice, privity, and conſent of the electors, princes, and ſtates, at the general diets. Theſe taxes are partly ordinary, and partly extraordinary: the former, which are ſtyled the chamber-terms, are what each ſtate of the empire is annually to contribute for maintaining the chamber-judicatory of the emperor and empire; and the proportion paid by each ſtate is expreſſed in the matricula of the chamber. But theſe chamber-terms are ſo ill paid, that in 1753 the empire was indebted to the chamber-judicature ſix hundred and fifty-four thouſand and thirteen rixdollars. Indeed many complaints have been made, that the matricula is imperfect, and the ſtates not proportionably rated.

The extraordinary taxes are ſuch as are frequently granted, in caſe of neceſſity, by the ſtates, for the ſupport of the emperor, or the army of the empire; for the maintenance or building of its forts; and for a war, particularly againſt the Turks. Theſe are granted according to what is called in Germany Roman months; a denomination which took its riſe from this circumſtance: in antient times the emperors, in order to receive the papal coronation, took a journey to Rome, and the German ſtates of the empire were bound to eſcort them with a certain number of horſe and foot for ſix months, at their own expence; or to pay twelve florins monthly for a horſeman, and four for a footman; which money obtained the name of Roman months. This foot, or ſtandard, was afterwards retained, and the rate of each ſtate, either in men or money, is ſettled in what is termed the matricula of the empire. A Roman month ought to bring in fifty-eight thouſand two hundred and eighty florins.

The emperor is not to commence a war of the empire, without the conſent of the electors, princes, and ſtates, obtained in an open diet. But when the empire reſolves upon a war, the generality of the empire, with the field-marſhal at the head, and alſo the directors and counſellors of the military council, are to be nominated by the emperor and the whole body of the ſtates; and thoſe to an equal number of both religions, who, together with the whole army, are ſubject to the emperor and empire. The war muſt alſo be carried on agreeably to the ordinances of the empire; and the oldeſt field-marſhal, without diſtinction of religion, muſt command the army. But at preſent no directors of the military council are any longer called in, and the war is generally managed by the emperor and his aulic military council.

With reſpect to the forces which the ſeveral princes of the empire are able to maintain and pay, the following calculation has been made:

The elector of Mentz can maintain	6000
The elector of Triers	6000
The elector of Cologn	6000
The biſhop of Munſter	8000
The biſhop of Liege	8000
The archbiſhop of Saltzburg	8000
The biſhop of Wirtzburg	2000
The biſhop of Bamburg	5000
The biſhop of Paderborn	3000
The biſhop of Oſnaburg	2500
The abbot of Fulda	6000
The other biſhoprics of the empire	6000
The abbies and provoſtſhips of the empire	8000
Total of the eccleſiaſtical princes	74,500
The emperor for Hungary	30,000
For Bohemia, Sileſia, and Moravia	30,000
For Auſtria, and his other dominions	30,000
The king of Pruſſia, as elector of Brandenburg	40,000
The elector of Saxony	25,000
The elector Palatine	15,000
The duke of Wirtemburg	15,000
The Landgrave of Heſſe Caſſel	15,000
The prince of Baden	10,000
The elector of Hanover	30,000
The duke of Holſtein	12,000
The duke of Mecklenburg	15,000
The princes of Anhalt	6000
The prince of Lawenburg	6000
The elector of Bavaria	30,000
The dukes of Saxony	10,000
The princes of Naſſau	10,000
The other princes and imperial towns	50,000
The ſecular princes	379,000
The eccleſiaſtical princes	74,500
	453,500

But of the body of men which the empire unanimouſly agree to ſend, and promiſe to ſupply, one-half ſeldom actually appear in the field.

With reſpect to the courts of juſtice, the principal is the imperial aulic council, which is held at the imperial court, and ſolely depends on the emperor, who is ſupreme head and judge, to whom in all matters of importance a judgment is exhibited by the imperial aulic council. This judicatory conſiſts of a preſident, the imperial aulic vice-chancellor, a vice-preſident, and a number of imperial aulic counſellors, ſix of whom are always to be Lutherans; beſides theſe are two ſecretaries, and a fiſcal of the empire. To this claſs alſo belong the agents of the imperial aulic council, who give in the writings, urge the reſolutions, &c.

The imperial and chamber judicatory of the empire, which is filled by the emperor and ſtates of the empire at the ſame time, but maintained only by the latter, is at preſent held in the imperial city of Wetzlar. This judicatory conſiſts of a chamber judge, two preſidents of the chamber judicatory, one of whom is a Roman, and the other a Lutheran; as alſo of ſeventeen aſſeſſors, eight of whom are Lutheran, and nine catholic. To this court alſo belong a general and advocate fiſcal, with thirty procurators, and a number of advocates. The chamber judicatory has alſo a chancery of its own, and a treaſury, and has the direction of the chamber-terms of payment.

The other judicatories are called peculiar or lower, and to theſe belong the imperial land judicatory in Upper and Lower Swabia, held in the three imperial cities of Ravenſburg, Wangen, and Iſny, and in the borough of Altdorf, together with the imperial land judicatory of the burgraviate of Nurenburg, which belongs to the margrave of Brandenburg, and is held at Anſpach, and many others, particularly the imperial aulic judicatory of Rotweil, which ſolely depends on the emperor, and is the principal of the lower judicatories of the empire.

The

The civil law is generally obſerved in all courts of the empire, and to this are added ſome decrees, to which an equal regard is paid; as firſt, the golden bull, already mentioned, which has only about twenty-four leaves, and was publiſhed by Charles IV. with the approbation of moſt of the princes, counts, barons, and other ſtates of the empire, and contains all the fundamental laws relating to the election of the emperor, and the privileges of the electors: the ſeal annexed to this decree being of gold, it obtained the name of the Golden Bull, or edict, and is eſteemed irrevocable. Another conſiderable part of the municipal laws of the empire is the *Capitulatio Cæſarea*, which is a collection of forty or fifty articles between the electors and the emperor; who, at his coronation, ſwears to maintain the privileges of the electors, princes, and other ſubjects of the empire; that he will not alienate or diminiſh the revenues of the crown, or bring foreign troops into the empire, without the conſent of the ſtates. The third kind of laws by which the Germans are governed are, the acts of their general diets. Theſe laws indeed relate chiefly to the great, whoſe privileges they aſcertain and ſecure; but every diſtinct ſtate is governed by its prince or ſovereign, either according to a ſet of laws formed by him or his anceſtors, or his arbitrary pleaſure.

SECT. VI.

Of the State of Religion in Germany.

THE Germans became acquainted with ſome principles of the Chriſtian religion, towards the cloſe of the ſeventh century, by the Iriſh biſhop Kilian, Suidbert and Ewald, who were Engliſhmen, and Rupretcht, of Worms, who ſettled at Saltzburg; and in the eighth century, Winifred, of England, preaching among the Thuringians, Heſſians, and Saxons, was ordained biſhop of the Germans beyond the Rhine, by the name of Bonifacius; he was afterwards made archbiſhop of Germany, when, under the ſpecious pretence of propagating the doctrines of Chriſtianity, he exerted himſelf with great zeal in promoting obedience to the church of Rome, and even employed the ſecular power againſt ſuch biſhops and prieſts as refuſed to ſubmit to the Romiſh yoke and ceremonies of worſhip. Charlemagne propagated Chriſtianity among the Saxons by fire and ſword; and ſome time after, the Bohemians and Moravians were alſo brought to embrace the Chriſtian religion.

The reformation began in Germany about the year 1517; for the archbiſhop of Mentz being unable to pay the large ſums the pope expected from him, procured leave of his holineſs to ſell his pardons and indulgencies in all the great towns of Germany. Dr. Martin Luther hearing of this, proteſted againſt the proceeding, and openly diſputed at Wittemberg and Leipſic againſt thoſe who aſſerted the power of the pope to grant pardons and indulgences, notwithſtanding his being threatened with excommunication, and with being condemned as an heretic; but the elector of Saxony approving of his doctrines, he boldly propagated them in other parts of Germany, where the dukes of Brunſwic and Lunenburg, Wirtemburg, Mecklenburg, Pomerania, the marquis of Brandenburg, the landgrave of Heſſe, and the inhabitants of moſt of the imperial cities, became his diſciples, and, in 1529, proteſted againſt the concluſion of the diet at Spire, by which all innovations in religion, till the decree of a future council ſhould be obtained, were declared unlawful; and from this proteſt they received the name of Proteſtants; and from their confeſſion of faith, which the following year they ſolemnly delivered to the diet at Augſburg, they obtained the name of Adherers to the Augſburg Confeſſion. They took no part in the council of Trent; but the year before, that is in 1537, at an aſſembly at Smalkald, they ſet forth the ſubſtance of their doctrine in certain articles, in order to deliver them to the aſſembled biſhops. Afterwards refuſing to recede from the opinions they had profeſſed, the emperor Charles V. endeavoured to reduce them by force; but after a long war, which broke out in the year 1546, he granted them a toleration at Paſſau in 1552, which was afterwards confirmed to them at Augſburg in 1555, during the receſs of the diet of the empire. By this peace, all the adherents to the Augſburg confeſſion were confirmed in their full religious liberty, till a final agreement concerning both religions ſhould be brought about, and in caſe that could not be effected, for ever. To the maintaining of this important law of the empire, the emperors and popiſh powers have frequently bound themſelves by new obligations; and the former in particular have always confirmed it by oath in their capitulation of election; and the doubts that aroſe upon it were removed in the year 1648, by the treaty of Weſtphalia.

By virtue of this renewed and confirmed religious peace, no other religion, but that of the Roman, Lutheran, and reformed, is to be tolerated in the empire; yet there are ſects that adhere to neither of theſe three religions, and yet in ſome places enjoy the free exerciſe of their own. The determination whether a perſon be a member of this or that church, belongs only to that very church; and each ſovereign, or lord, is bound to allow his own vaſſals and ſubjects who are of another religion, not only the public and private exerciſe of theirs, but every thing belonging to it, as churches, ſchools, ſpiritualities, incomes, conſiſtories, &c. in the ſame manner as they ſtood on the firſt of January, 1624: but in a country where there are ſubjects who adhere to one religion, which in that year was neither publickly nor privately obſerved, it lies in the ſovereign's breaſt whether he ſhall ſuffer them in his country or not. If he enters into a ſtipulation with them, and promiſes them a toleration, it muſt be maintained, not only by him, but by his ſucceſſors; for the rights of ſuch ſubjects muſt not be infringed. But if he will grant no toleration, he muſt allow thoſe who at the time of the treaty of Weſtphalia were already ſettled in his country, five years at leaſt; and thoſe who afterwards came to ſettle therein, or have made any change in their religion, at leaſt three years. However, theſe regulations have in later times been repeatedly infringed.

Each proteſtant ſtate may make what regulations and changes it pleaſes within its own juriſdiction in matters relating to the churches or ſchools. Hence the external forms differ greatly in the proteſtant countries of the empire. The ſovereign commonly decides all important affairs, ſettles and eſtabliſhes, removes, promotes, caſhiers, or otherwiſe puniſhes ſuch as ſerve either in the church or ſchools: he forms eccleſiaſtical regulations, appoints feaſts and faſts, and erects colleges, which in his name ſuperintend the other affairs of the church. Conſiſtories are alſo generally appointed by the proteſtant ſtates, which for the moſt part conſiſt of lay and eccleſiaſtical counſellors; but in ſome places more, and in others fewer things fall under their notice. In many places alſo peculiar ſynods and a church council are held. Thoſe that ſerve the church and ſchools are either appointed by the ſovereign of the country, or the conſiſtory, the elders of the church, or its members. Theſe alſo appoint inſpectors, provoſts, or ſuperintendents; and general ſuperintendents are frequently placed over theſe.

The power of the proteſtant ſtates over their catholic ſubjects is the ſame with that which the catholic ſtates have over their proteſtant ſubjects. In favour too of thoſe, who in the year 1624 enjoyed the public exerciſe of their religion, it is provided, that the catholic biſhops in whoſe diſtrict they belong, ſhall retain the ſame ſpiritual juriſdiction over them as far as in that period: conſequently, ſuch as were merely tolerated out of grace or favour, are alſo wholly left in this particular to the ſupreme juriſdiction of the lord of the country; but with this limitation, that he can require nothing of them which is contrary to the principles of their church. On the other hand, no cloiſter ſituated in the territory of any proteſtant ſuperior, or lord, muſt be converted into any other order, unleſs the former order be wholly extinct; and even in that caſe, the cloiſter is to be ſupplied only with ſuch regulars as had a being as an order, prior to the religious diſſentions.

In ſhort, the proteſtant body has mutually agreed, that whenever, for the future, a Lutheran lord of a country

ſhall turn to the reformed or Calviniſt church, or obtain a country annexed to it, and *vice verſa*, in that caſe he ſhall leave his ſubjects the free exerciſe of their religion, their whole form of church and ſchool diſcipline, and all their other privileges. But if a church ſhall of itſelf turn to that of the lord of the country, the public exerciſe of religion ſhall be permitted the people; but at their own expence, and without prejudice to the others. The conſiſtorial counſellor, ſuperintendents of divinity and philoſophy are to be of the religion that prevailed in the country at the concluſion of the treaty of Weſtphalia.

SECT. VII.

Of the Circles into which the German Empire is divided, and the Italian Fiefs ſubject to the Emperor and the Empire.

GERMANY is divided into ten circles, in order to promote and maintain the internal peace and ſecurity of the empire, and the better to repel hoſtile violence; this is alſo done for the better examination and diſpoſal of whatever regards the public welfare; for the more juſt diviſion and collection of the aids granted by the empire, either in men or money; and for preventing and remedying the diſorders in the taxes, coinage, &c. The circles have, however, no particular regulations with reſpect to precedence, but are very differently ranked in the ordinances and acts of the empire. But if we conſider the rank of the aſſeſſors of the chamber-judiciary, and the regulations ſtipulated between ſome of them, they will appear in the following order, viz. the Auſtrian, the Burgundian, the Electoral Rheniſh, the Franconian, the Swabian, the Upper Rheniſh, the Lower Rheniſh Weſtphalian, the Upper and Lower Saxon. But this diviſion of the circles is imperfect, it not including all the dominions of the German empire; for Bohemia, Moravia, the Luſatias, and the Sileſias, are not comprized within them; nor was a ſufficient regard paid to the ſituation of the countries; for a part of the territories belonging to the Auſtrian circle lies ſcattered over all Swabia, and ſome countries of the Upper Rheniſh lie alſo therein, though they might with more propriety be added to the circle of Swabia.

With reſpect to religion, the circles are divided into thoſe that are entirely popiſh, as the Auſtrian and Burgundian; into ſuch as are wholly proteſtant, which are thoſe of Upper and Lower Saxony; and into the mixed, to which all the others belong.

The French wars have frequently occaſioned an aſſociation of the four circles that lie neareſt the Rhine, for their common defence, as well as that of the empire.

It will be proper juſt to mention here the fiefs belonging to the emperor and the empire in Italy, which the emperor in the laſt capitulation of election promiſed to preſerve. Theſe fiefs are at the imperial court divided,

1. Into thoſe of Lombardy, of which there are thirteen; and among them the dutchies of Milan, Mantua, and Montferrat; together with all the principalities of the houſe of Gonzaga, and the principality of Mirandola.

2. The Ligurian, of which there are nineteen, the chief of which are poſſeſſed by the princes of Dòria.

3. The Bononian, of which there are twenty, among which are the dukes of Modena and Ferrara, with the princes Spinola, Dòria, &c.

4. The Tuſcan, of which there are ten, and among them are the grand dutchy of Tuſcany or Florence, Piombino, Soramo, Comacchio, &c.

5. The Tirniſani, of which there eleven, and among them the princes of Maſſa, Malaſpina, &c.

We ſhall defer giving any account of theſe princes till we come to treat of Italy, to which they properly belong; and ſhall now proceed to the circles and other diviſions of Germany; beginning with Auſtria, which is bounded on the ſouth and eaſt by the countries we have juſt laid before our readers, and deſerves to be firſt mentioned on account of its containing the capital of the whole German empire.

SECT. VIII.

Of AUSTRIA.

Its Situation, Climate, Rivers, Mountains, Produce, and Face of the Country. Its Royal Towns, the Language ſpoke by the People, and its Government. With a conciſe Account of the Sciences, Arts, Manufactures, and Trade.

THE circle of Auſtria borders to the north on Moravia, Bohemia, and the circle of Bavaria; to the eaſt on Croatia and Hungary; to the ſouth on Croatia, the Adriatic Sea, and the territory of the Republic of Venice; and to the weſt on Swiſſerland. The countries diſtinguiſhed by Hither Auſtria are ſcattered in and about Swabia, and all the territories within this circle amount to about two thouſand and twenty-five German ſquare miles; ſo that this appears to be the largeſt of them all. It takes its name from the archdutchy of Auſtria, which conſtitutes the principal part of the circle, and alſo contains the provinces of Auſtria Proper, Stiria, Carinthia, Carniola, Tyrol, Trent, and Brixen.

The archdutchy of Auſtria is in general divided into two parts of very different extent. The larger tract, called Lower Auſtria, forms the eaſterly part of the country, and the ſmaller one, named Upper Auſtria, conſtitutes the weſterly.

The air of Lower Auſtria would be very unhealthy, was it not purified by ſtrong gales of wind. It is principally level, and the higheſt and moſt numerous mountains it contains are towards Stiria.

The country is fertile, and yields ſuch plenty of corn, that the inhabitants are able to diſpoſe of conſiderable quantities to their neighbours. In a few places they alſo cultivate muſtard, calamous, ſaffron, and, particularly towards Hungary, an excellent ſort of wine. The breed of cattle is good, and it has alſo a variety of game. At St. Annaberg, near the borders of Stiria, is a rich ſilver mine, which was firſt worked in the year 1754. It is remarkable that they have found in it a new ſpecies of ſilver ore, which is of an alcaline kind. Allum is alſo prepared here in plenty.

At Baden are ſome celebrated hot-baths. The Danube traverſes Auſtria from eaſt to weſt, and receives all the great and ſmall rivers of this country. The former of theſe are the Morawa, or March, which receives the Teya, and divides a part of this country from Hungary; the Leitha, which alſo forms the limits of Hungary; with the rivers Traſen, Erlebach, Ips, Kamp, &c. which all riſe in this country, and produce great variety of fiſh.

Upper Auſtria is mountainous, particularly towards Stiria and Bohemia, in which countries ſeveral tracts lie uncultivated; but the reſt of the country is fruitful. Towards Stiria the mountains are high, but the other parts abound in low hills. The ſoil of Upper Auſtria, from its many ſprings, is wet, and the air all the year round moiſt and cool, which ſeems partly owing to the ſaline earth it contains, but chiefly to the ſituation of the country; for as it lies on the ſhady ſide of the mountains of Auſtria Proper, and of the ſtill larger and higher ones of Upper Stiria and Saltzburg, the warm ſoutherly and weſterly winds are precluded.

Upper Auſtria is uncommonly fertile in muſhrooms, and the inhabitants plant a vaſt number of fruit-trees. As there are here no vineyards, the inhabitants plentifully ſupply themſelves with cyder and perry. This is alſo the firſt beer country on proceeding from Lower Auſtria towards the Danube; but as it has not a ſufficiency of corn, that defect is ſupplied by Lower Auſtria. The breed of cattle here is pretty good; the woods and foreſts are numerous, and abound in all ſorts of game.

Near Munden is a conſiderable mine of ſalt, out of which both the cryſtal and variegated ſort is dug; but the latter is little eſteemed. In theſe parts too freſh water is conveyed into the ſalt-works, or pits, which, after it has impregnated itſelf with alcaline particles, is extracted by machines, and conducted through canals for ſeveral miles in order for boiling. There are ſome other ſalt-works and ſome ſaline ſprings, and others that have a petrifying

VI

petrifying quality, and yet afford the beſt water for drinking of any in the country.

Here are ſeveral lakes and ſmall rivers, which yield many ſorts of fiſh; and alſo two medicinal baths.

There are fifteen royal towns in Lower Auſtria, with eighteen others belonging to particular lords; as alſo market-towns, and many common boroughs, religious foundations, and cloiſters, which enjoy both a ſeat and voice with the country; and likewiſe other cloiſters, citadels, and noblemen's ſeats.

In Upper Auſtria are ſeven royal towns, with five belonging to particular lords, eighty-one market-towns, many common boroughs, thirteen religious foundations, which enjoy both a ſeat and voice with the country, two knights commanderies, two colleges, one Jeſuits college, ſeventy other cloiſters, and two hundred and ſeventeen citadels and noblemen's ſeats.

The Auſtrian-German dialect, which is very different from the High Dutch, or proper German, is ſpoken from the Adriatic Sea to the north-north-weſt, and weſterly as far as Sileſia, Saxony, Franconia, Swabia, and Swiſſerland. It alſo extends to the eaſt and ſouth-eaſt, through Hungary and the Sclavonian territories; yet there is an obſervable difference in the pronunciation, and in a few particular words uſed in certain parts of this large tract of country.

The ſtates of Auſtria conſiſt of the prelates, including biſhops, abbots, and provoſts; of the lords, under which claſs are reckoned princes, counts, and barons; of the knights; and laſtly, of the towns and markets. The land-marſhal is here always elected from among the lords; but the deputy land-marſhal out of the order of knights.

The aſſemblies of the ſtates are either general land-diets, or ban-diets; the latter of which are divided into the greater and leſſer ban. Theſe aſſemblies are appointed by the ſuperior, and the buſineſs is laid before them either by the aulic counſellor, or by the archducal deputy; but the deliberations are carried on before the land-marſhal. In theſe aſſemblies they treat of contributions, taxes, military affairs, &c. The land-diet of Lower Auſtria is held at Vienna, and that of the Upper at Lintz.

The biſhopric of Vienna was immediately ſubject to the ſee of Rome, though the archduke has long had the right of nominating a biſhop. In 1722, at the ſolicitation of the emperor Charles VI. it was raiſed by the pope to a metropolitan church and archbiſhopric. The archbiſhop is a prince of the holy Roman empire, and has the biſhop of Newſtadt, near Vienna, for his ſuffragan, but is ſubject to the ſupremacy of the archducal houſe of Auſtria.

The ſciences in this country are in an improving condition, for there is an univerſity at Vienna, and academies of painting, ſculpture, and architecture. Manufactures are much improved; for in this country are thoſe of ſilk, gold and ſilver lace, woollen and linen cloths, ſtuffs, ſtockings, porcelain, mirrors, plate, braſs, and other articles. The importation of foreign manufactures is either prohibited, or under great reſtrictions. The trade of Auſtria gradually increaſes, and there are chiefly exported from thence ſaffron, wine, allum, and gunpowder.

SECT. IX.

The Diviſions of Lower Auſtria, and a particular Deſcription of the City of Vienna, and the Manners of its Inhabitants.

LOWER Auſtria, which is alſo termed the Country below the Ens, is divided into four circles, over each of which is appointed a circle-captain. Of theſe circles, two lie on the ſouth, and two on the north ſide of the Danube; the former from their ſituation, with reſpect to the foreſt of Vienna, are called the circles below and above the foreſt of Vienna; but the latter, from their ſituation with reſpect to Manhartſberg, the circles below and above the Manhartſberg.

We ſhall begin with giving a deſcription of the principal places in what is called the circle below the foreſt of Vienna, the ſeat of the emperor, and the capital of the German empire.

The celebrated city of Vienna, called by the Germans Wien, by the Turks Beez, and by the Poles Wieden, is ſituated in the forty-eighth degree twenty minutes north latitude, and in the ſixteenth degree twenty minutes eaſt longitude, on a branch of the Danube, which ſeparates the ſuburbs of Leopoldſtadt from the town, and receives the little river Wien, which paſſes through it between the city and ſuburbs. It ſtands in a pleaſant ſituation; for to the north and eaſt the country is entirely level, but to the ſouth and weſt are ſeen a range of mountains thick planted with vines and trees; and the Danube, which is there very wide, divides itſelf into ſeveral arms that form ſo many iſlands ſtocked with wood. This city has always been the reſidence of the emperors of the houſe of Auſtria.

Vienna indeed is but of ſmall extent, it being poſſible to walk round it on the glacis within the ſpace of an hour. Its ſituation is capable of rendering it pretty ſtrong, and it is actually well fortified; for it has a ſtrong rampart defended by eleven ſtout baſtions, and ten ravelins very broad and deep, with lined ditches, and the neceſſary out-works. The many churches and extenſive cloiſters the city contains, which have generally gardens and walks near them, take up almoſt one-ſixth part of the whole city, whence the ſtreets, which are narrow and crooked, are about eighty, and the houſes are computed at no more than about twelve hundred and thirty; but theſe are from four to even ſeven ſtories high, and are in general well built of ſtone, and provided with large convenient cellars; and among them are many magnificent palaces, which have noble fronts, though the narrowneſs of the ſtreets will not admit their being ſeen.

The lady Wortley Montague obſerves, with reſpect to the height of theſe buildings, that the town being too little for the number of people that deſire to live in it, the builders ſeem to have contrived to repair that misfortune, by clapping one town on the top of another; and adds, You may eaſily imagine, that the ſtreets being ſo narrow the rooms are extremely dark, and, what is ſtill a more intolerable inconvenience, no houſe has ſo few as five or ſix families in it. The apartments of the greateſt ladies, and even of the miniſters of ſtate, are divided but by a partition from that of a taylor or ſhoemaker. Thoſe who have houſes of their own let out the part they do not uſe to whoever will take them; and thus the great ſtairs, which are all of ſtone, are as common and as dirty as the ſtreet. It is true, when once you have travelled through them, nothing can be more ſurpriſingly magnificent than the apartments. They are commonly a *ſuite* of eight or ten large rooms all inlaid, the doors and windows richly carved and gilt, and the furniture ſuch as is ſeldom ſeen in the palaces of ſovereign princes in other countries. The apartments are adorned with hangings of the fineſt Bruſſels tapeſtry, prodigious large looking-glaſſes in ſilver frames, fine Japan tables, beds, chairs, canopies, and window-curtains of the richeſt Genoa damaſk, or velvet almoſt covered with gold lace or embroidery. The rooms are alſo adorned with pictures, vaſt jars of Japan porcelain, and large luſtres of rock-cryſtal.

The city is divided into four quarters, the Schotten, Wubmer, Stuben, and Carinthian. There are fifteen principal ſquares, the moſt remarkable of which are the ſix following: the Hof is the largeſt of them all, and, beſides a ſtone fountain, has a magnificent monument of gilt metal, which the emperor Ferdinand III. cauſed to be erected in the year 1647, in memory of the immaculate conception of the Virgin Mary; but this pillar was removed in 1667, by the emperor Leopold, and another of braſs erected in its place. The image of the Virgin Mary on this pillar is a maſter-piece, and is of braſs gilt. This pillar has a pompous Latin inſcription, compoſed by the emperor himſelf; the letters are of gold, and ſet in a braſs plate. The New-market, in which is a fine fountain. The Graben, in which, beſides two beautiful fountains, ſtands the marble Trinity pillar, which is ſixty-ſix feet high; this is an admirable piece of architecture built with ſtone, on which is alſo a Latin inſcription by the emperor Leopold its founder. Formerly it was

uſual

uſual for people, by way of amuſement, to ſit round theſe pillars; which often produced many pleaſant incidents. But a company, among which were ſeveral counteſſes, having given too much wine to a ſoldier on guard at the Virgin Mary's pillar, ſuch a diſturbance enſued as cauſed theſe aſſemblies to be forbidden; and at preſent people only kneel round the pillars. In the High-market ſtands Joſeph's metal pillar, which was erected in the year 1732.

The principal church in this city is the metropolitan church of St. Stephen, a very dark Gothic ſtructure of free-ſtone, adorned on the outſide with ſculpture repreſenting ſaints, beaſts, flowers, pyramids, &c. The roof is covered with glazed tiles of various colours. The higheſt tower is four hundred and ſixty, or according to others, only four hundred and forty-ſeven Auſtrian feet and a half high. It is built of large blocks of free-ſtone, faſtened together with iron braces, and is the ſtrongeſt ſteeple in Europe. It has a great bell hanging in it, upwards of ten feet in height, and thirty-two feet two inches in circumference, weighing, excluſive of the clapper, ſeventeen tons and a half. The clapper, which is eleven feet and a half long, weighs thirteen hundred and twenty-eight pounds. It was caſt by order of the emperor Joſeph out of the Turkiſh field-pieces taken in ſeveral battles. In the inſide of this church is a coſtly high altar, with many relics and curioſities, and a magnificent marble monument of the emperor Ferdinand III.

In Vienna are reckoned four pariſh churches, with ten other churches ſerved by particular eccleſiaſtics, ſixteen cloiſter churches, and eighteen cloiſters; among theſe are three colleges of Jeſuits, a college of regular canons, of Auguſtins, of St. Dorothea, a Capuchine convent, a Minorite convent, and the cloiſter of bare-footed Auguſtins, who have the imperial Aulic church, in which is kept, in ſilver repoſitories, the hearts of the high perſonages of the archducal houſe. This church belongs to the court, and you aſcend to it up a pair of ſtairs out of the palace. Ferdinand III. had a chapel built here to St. Apollonia, the patroneſs of the teeth, in conſequence of a vow he had made when his ſon prince Leopold cut his teeth. The tooth of St. Apollonia ſhewn here is likewiſe adored and kiſſed by the vulgar, who imagine the touch of it a cure for the tooth-ach.

Among the charitable foundations is the burghers hoſpital, in which three thouſand perſons are maintained.

The imperial muſeum is in the caſtle, and has an aſtoniſhing variety of curioſities in gold, ſilver, ivory, and mother of pearl, mathematical inſtruments of exquiſite workmanſhip, excellent pictures, antique intaglios, vaſes of agate, jaſper, cryſtal, garnet, emerald, and jewels of ineſtimable value. Among the curioſities is ſeriouſly ſhewn a dæmon, or familiar ſpirit, which being conjured out of a demoniac, was confined in a glaſs: but this is really nothing more than ſome dark-coloured moſs, or ſomething of that kind, which has ſome diſtant reſemblance of a little man, and is naturally incloſed within a triangular piece of cryſtal.

The imperial library is a very handſome edifice, adorned with good paintings, ſculpture, and a ſuperb gallery: with reſpect to the number and importance of the manuſcripts and printed books, it may vie with the Vatican and royal French libraries, and, with reſpect to printed books, exceeds them.

The land-houſe of the ſtates of Lower Auſtria and the town-houſe are fine modern ſtructures. The riding-houſe and the chancery of the empire are noble buildings in the modern taſte. The other public buildings here are the imperial arſenal, the burghers arſenal, the imperial arſenal near the new gate, in which is every thing neceſſary for the equipment of the ſhips uſed on the Danube, and the opera-houſe, which is a magnificent ſtructure.

The univerſity is ſaid to conſiſt of four nations; theſe are the Auſtrian, Rheniſh, Hungarian, and Saxon. An academy of painting, ſculpture, and architecture, was founded here in 1705. The Thereſian college, which was founded by the empreſs queen Maria Thereſa, is a well inſtituted riding academy, the members of which are all uniformly dreſſed, and each of them pays for his board, lodging, waſhing, ſchool-books, and other neceſſaries eight hundred florins yearly, and another hundred for riding. The Savoy Lichtenſtein riding academy was founded by Maria Thereſa, dutcheſs of Savoy, who was born princeſs of Lichtenſtein.

Among the palaces of Vienna is that of prince Eugene, which conſiſts of four ſtories, the third of which is the moſt magnificent; but the apartments and ſtair-caſe are ſomewhat darkened by the houſes on the other ſide of the ſtreet. In the front are three doors opening into ſo many balconies, and in every ſtory are ſeventeen windows. The roof is flat, in the Italian taſte, and adorned with eighteen large ſtatues. In one of the antichambers are fine paintings, repreſenting the battles of Hochſtet, Zenta, and four others; but the piece which firſt ſtrikes the eye, is the relief of the city of Turin. Among the beautiful tapeſtry, that repreſenting a ſhipwreck is particularly admired. Some of the apartments are hung with crimſon velvet, eſpecially that in which the late prince Eugene gave audience to the Turkiſh ambaſſador, under a canopy, and in a chair of ſtate. The ſtove in this room is made of braſs, and repreſents Hercules vanquiſhing the hydra. In another apartment is a book-caſe and a deſk covered entirely with tortoiſeſhell Nothing can be more beautiful than the looking-glaſs chamber; and indeed every part of this ſuperb palace is embelliſhed with exquiſite pictures, glaſſes of all kinds, and fine chimney-pieces. The library contains fourteen thouſand volumes, which are moſtly folios, and being bound in red Turky gilt, make a fine appearance. In this library is alſo a planetarium, in which Mr. Rowley, an Engliſhman, has accurately repreſented the revolutions of the heavenly bodies according to the Copernican ſyſtem.

The prince of Lichtenſtein has three palaces in Vienna; but that in the Herron ſtreet is the moſt magnificent. The front is adorned with columns and ſtatues; and the palace is furniſhed in the Italian taſte, with ſculptures, paintings, and antiques. Among the paintings are ſeveral pieces by Rubens; particularly ſix capital pieces repreſenting the hiſtory of Alexander the Great, valued at about twenty-four thouſand dollars; Herodias with John the Baptiſt's head by Raphael: the building of the tower of Babel on vellum, and the overthrow of Pharaoh with his army in the Red Sea, painted on marble, are very curious. The ſaloon is elegant and lofty; the vaulted roof was painted by Belucci, who alſo painted the cieling of the firſt and ſecond ſtories on canvas.

The ſuburbs are much larger than the city itſelf, which they encompaſs, but are removed to the diſtance of five or ſix hundred paces from the works of the fort. The line which encloſes them, and extends on both ſides to Leopoldſtadt, was in the year 1704 thrown up againſt the Hungarian rebels, and afterwards lined with bricks; the gates and entries to it being always kept by regular guards; of theſe Leopoldſtadt is the principal, and lies next the city on an iſland of the Danube; it was formerly called the Jews Town, but in the year 1670, the emperor Leopold driving that people from hence, it took its name from him. It contains one pariſh church, two monaſteries, the old imperial Favourita, a citadel, which in the year 1683 was almoſt deſtroyed by the Turks, and only a ſmall part of it is repaired. There are here alſo many fine houſes and gardens.

Oppoſite to it on the other ſide of the Danube lie the large ſuburbs of Roſſau, which contains ſome fine churches, palaces, houſes, and gardens. The nobleſt of theſe palaces is that of prince Lichtenſtein, which is extremely magnificent. The great ſtair-caſe conſiſts of two flights, and every ſtep coſt ſixty guilders, each being a ſingle block of red marble, ſeven paces in length, and in the two flights are a hundred and eight of theſe ſteps. Though the Italian palaces greatly ſurpaſs all others in the beauty and magnificence of the ſtair-caſes, yet Italy affords very few that equals this. The ſaloon, which is very ſuperb, was painted by Pozzo, and is adorned with four beautiful ſtone ſtatues, ſo finely encruſted with plaſter, that they have the appearance of alabaſter. Two of the apartments are entirely painted by Franceſchini di Bologna; and in every part of this noble palace, the eye is entertained with pieces of painting by celebrated artiſts.

The

The walks, parterres, water-works, and ſtatues, render the garden a moſt delightful place. It contains a great number of uncommon vegetables, and at the ends affords a very fine view of the country.

In the ſuburbs of Waringergeſſen is nothing worthy of notice.

In that called the Alſtergaſſe is the hoſpital of invalids, with the peſt-houſe, the great hoſpital, the Lower Auſtrian provincial academy, and count Paar's riding-ſchool.

The populous ſuburbs of St. Ulrich is ſubject to the juriſdiction of the Benedictine Scots abbey in Vienna, and contains one pariſh church, a Capuchin monaſtery, and upwards of a hundred gardens.

In the ſuburbs called the Leimgrube is one church, one cloiſter containing a church, a military academy founded by Maria Thereſa, the empreſs queen, and the imperial ſtables, which are equalled by few buildings of the kind, though the ſtalls in them are too narrow.

The ſuburbs called the Wien, from the little river of the ſame name which runs through it.

Gaudendorf, which belongs to the provoſt of St. Dorothea in Vienna, contains one convent of Dominicans, and a ſmall church.

The Wieden is pretty extenſive, and, beſides a cloiſter and the church of St. Charles Boromaus, contains the new imperial favorita, a ſummer reſidence, though but meanly built.

The Rennweg is remarkable for its churches, convents, palaces, and noble houſes. The cloiſter of the female Salerians, or Engliſh nuns, is pretty large, and has a ſmall but coſtly church. Theſe nuns are obliged to bring up and inſtruct young ladies. The palace of prince Schwartzenberg is extremely magnificent; the ſaloons, ſtair-caſes, marble tables, looking-glaſſes, porcelain vaſes, paintings, beds, and other rich furniture, make this one of the fineſt palaces near Vienna. The trees in the large orangery in the garden, inſtead of being planted in pots or tubs, ſtand in the ground, and in winter are ſheltered by little ſheds, which on occaſion may be warmed. The walks, groves, and water-works are extremely beautiful; and the laſt are ſupplied by means of an hydraulic engine worked by fire.

Adjoining to the above palace is that of prince Eugene, one of the fineſt buildings about Vienna. It has eleven rooms in a direct line in the front and the towers at the angles, and ſeven rooms in the wings. In the room adjoining to the prince's bed-chamber are ſeveral exquiſite pieces of painting in miniature, and in the next apartment is a chandelier of rock-cryſtal valued at twenty thouſand guldens, each gulden equal to two ſhillings and four-pence. Here is alſo a Dutch piece of painting of great value, repreſenting an old woman on her death-bed, with her daughter on her knee taking her leave of her, while her maid is ſtirring a medicine, and the phyſician looking into an urinal. In the chapel is a fine picture of the reſurrection of our Saviour. The large ſaloon is an oblong octagon, the cieling of which is finely painted in freſco, and it yields a very fine proſpect over the gardens towards the city. Among the excellent paintings in the other apartments are a beautiful piece repreſenting Adam and Eve as big as the life, a woman embracing a youth in a bath, Endymion and Diana, and a copy of Ruben's three Graces, which is much eſteemed. The gardens lie on a ſlope, and on that account make its elegant water-works appear to advantage. In that part of the garden on the left called Paradiſe, is a ſpacious aviary made of curious wire-work, and alſo beautiful walks and gilt ſummer-houſes. On one ſide of this palace the prince has a view from his apartment of eight ſmall courts, embelliſhed with fountains and rows of cheſnut trees, among which are to be ſeen a conſiderable number of exotic animals.

The ſuburb called the Landſtraſze lies directly oppoſite on the other ſide of the Danube, and contains a fine cloiſter of hermits of the order of St. Auguſtin, who here wear white ermine; alſo a couple of chapels, a ſeminary of Jeſuits, an hoſpital, and ſeveral fine houſes.

The Prater, or imperial park, is a pretty large iſland planted with wood, and has ſome fine walks, to which the people in ſpring reſort for taking the air.

The inhabitants of the city and ſuburbs amount to about a hundred and eighty or two hundred thouſand. The country about Vienna is fertile, and produces good graſs.

The fineſt of all the imperial pleaſure-houſes is Schonbrun, which lies at the diſtance of a league from Vienna; it was begun by the emperor Joſeph, who did not live to finiſh it. The pleaſant ſituation of this place is, however, attended with one inconvenience, which is, that the little river Wien croſſes the road ſeveral times between it and Vienna; and as it is ſubject to ſudden floods, it frequently happens, that a perſon who goes to Schonbrun at noon without the leaſt danger, in the evening finds his return rendered impracticable by the ſwelling of the river.

It will be proper before we take leave of Vienna, to give ſome account of the inhabitants of this celebrated city. The Proteſtants have the public exerciſe of their religion allowed them at the houſes of the Swediſh, Daniſh, and Dutch ambaſſadors; but in the ſtreets they muſt take care not to come in the way of a proceſſion of the Hoſt, the ignorant multitude frequently handling very roughly thoſe who make a conſcience of kneeling as it paſſes by.

The pride of rank is an eternal ſubject of quarrels among the great, for none of them will, upon any condition, deſiſt from their pretenſions where they imagine their rank is concerned. The lady Wortley Montague obſerves, that they are never lively but upon points of ceremony, and mentions two coaches, which meeting in a narrow ſtreet at night, when the ladies in them not being able to adjuſt the ceremonial of who ſhould go back, ſat there with equal gallantry till two in the morning, when the emperor ſending his guards they were both taken out exactly at the ſame moment, and carried away in chairs. The men are not leſs touched with this point of honour, and not only ſcorn to marry, but to make love to any woman of a family leſs illuſtrious than their own.

As the houſes of the great are richly furniſhed, the good taſte and magnificence of their tables are anſwerable to that of their furniture. They have frequently fifty diſhes of meat, all ſerved in ſilver, and well dreſſed, with a deſſert proportionable ſerved in the fineſt china. But what appears moſt ſurpriſing is the variety and richneſs of their wines. It is uſual to lay a liſt of their names upon the plates of the gueſts along with their napkins, and there are ſometimes eighteen different ſorts, all exquiſite in their kind.

Mr. Keyſler ſays, that when the empreſs amuſes herſelf in the evening with playing at cards, her company are the ladies of the privy-counſellors or lords of the bed-chamber, according to their ſeniority. She uſually plays at a gulden, or two ſhillings and four-pence a fiſh.

Among the diverſions of the imperial court, thoſe of the carnival muſt not be omitted; though the ſtrictneſs of the ceremonial checks the liberty allowed at other courts in the carnival maſquerades, no ladies but thoſe who have acceſs to the empreſs's chamber are admitted at court on thoſe occaſions. The emperor generally dances ſeveral times with the empreſs and archdutcheſſes, but the empreſs dances with the emperor only. In the country-dances their imperial majeſties are ſpectators, but the archdutcheſſes mingle with the company.

On the ſaint's day of the name of any of the royal family operas are exhibited, each of which is ſaid to coſt about ſixty thouſand guldens; for the magnificence of the theatre, the ſplendor of the decorations, the richneſs of the habits, and the performance in the orcheſtra, ſurpaſs any thing of the kind in Europe. Theſe days are called days of gala; and the ladies of quality, whenever they have a mind to diſplay the magnificence of their apartments, or oblige a friend by complimenting them on the day of their ſaint, declare, that on ſuch a day will be their gala. All the friends or relations of the lady whoſe ſaint it is, are obliged to appear in their beſt cloaths and all their jewels. The miſtreſs of the houſe takes no particular notice of any body, nor returns any body's viſit. The company are ſplendidly entertained, and afterwards divided into ſeveral parties at cards, or converſation, all games of hazard being forbidden.

The opera is here performed at court; and as the noble lady with whoſe obſervations we have in ſeveral parts embelliſhed this work has fully deſcribed them, we ſhall give a particular account of this and other diverſions from her letters. This lady, on viſiting one of theſe operas, ſays, "The ſtage was built over a very large canal, and "at the beginning of the ſecond act divided into two "parts, diſcovering the water; on which there immediately came, from different parts, two fleets of little "gilded veſſels, that gave the repreſentation of a naval "fight. It is not eaſy to imagine the beauty of this "ſcene, and all the reſt were perfectly fine in their kind. "The ſtory of the opera was the enchantment of Alcina, "which gives opportunities for a great variety of machines and changes of the ſcenes, which are performed "with ſurpriſing ſwiftneſs. The theatre is ſo large that "it is hard to carry the eye to the end of it, and the "habits in the utmoſt magnificence, to the number of "a hundred and eight. No houſe could hold ſuch large "decorations; but the ladies all ſitting in the open air, "expoſes them to great inconveniences; for there is but "one canopy for the imperial family, and the firſt night "it was repreſented, a ſhower of rain happening, the "opera was broke off, and the company crowded away "in ſuch confuſion, that I was almoſt ſqueezed to "death.

"But if their operas are thus delightful, their comedies are, in as high a degree, ridiculous. They have "but one play-houſe, where I had the curioſity to go "to a German comedy, and was very glad it happened "to be the ſtory of Amphitrion. As that ſubject has "been already handled by a Latin, French, and Engliſh "poet, I was curious to ſee what an Auſtrian author "would make of it. I underſtand enough of that language to comprehend the greateſt part of it; and, beſides, I took with me a lady that had the goodneſs to "explain to me every word. The way is to take a box, "which holds four, for yourſelf and company. The "fixed price is a gold ducat. I thought the houſe very "low and dark; but I confeſs the comedy admirably "recompenſed that defect. I never laughed ſo much in "my life. It begun with Jupiter's falling in love out "of a peep-hole in the clouds, and ended with the birth "of Hercules. But what was moſt pleaſant was, the "uſe Jupiter made of his metamorphoſis; for you no "ſooner ſaw him under the figure of Amphitrion, but "inſtead of flying to Alcmena with the raptures Mr. "Dryden puts into his mouth, he ſends for Amphitrion's taylor, and cheats him of a laced coat, and his "banker of a bag of money, a Jew of a diamond ring, "and beſpeaks a great ſupper in his name; and the "greateſt part of the comedy turns upon poor Amphitrion's being tormented by theſe people for their debts. "Mercury uſes Soſia in the ſame manner. But I could "not eaſily pardon the liberty the poet has taken of "larding his play, not only with indecent expreſſions, but ſuch groſs words as I do not think our mob "would ſuffer from a mountebank. Beſides, the two "Soſias very fairly let down their breeches in the direct "view of the boxes, which were full of people of the "firſt rank, that ſeemed very well pleaſed with their entertainment, and aſſured me this was a celebrated "piece."

It ought, however, to be added, in juſtice to the Germans, that ſince the time this lady wrote, they have greatly improved in the arts, and that their poetry, which even at the beginning of the preſent century was very rude, and in its infancy, is now much improved, and they have dramatic pieces that would do honour to any nation.

The above ingenious lady deſcribes another common amuſement of the court, which will farther ſerve to characterize the taſte of the great in this metropolis. The empreſs was ſeated on a little throne at the end of a fine alley in her garden, and on each ſide of her were ranged two parties of her ladies of quality, headed by two young archdutcheſſes, all dreſſed in their hair full of jewels, with fine light guns in their hands; and at proper diſtances were placed three oval pictures, which were the marks to be ſhot at. The firſt was that of a Cupid filling a bumper of Burgundy, and the motto, "It is eaſy to be valiant here." The ſecond, Fortune holding a garland in her hand, with the motto, "For her whom Fortune "favours." The third was a ſword with a laurel wreath on the point, the motto, "Here is no ſhame to the "vanquiſhed." Near the empreſs was a gilded trophy wreathed with flowers, formed of little crooks, on which hung rich Turkiſh handkerchiefs, tippets, ribbons, laces, &c. for the ſmall prizes. The empreſs gave the firſt with her own hand, which was a fine ruby ring ſet round with diamonds in a gold ſnuff-box. There was for the ſecond a little Cupid ſet with brilliants; and beſides theſe a ſet of fine china for the tea-table, japanned trunks, fans, and many other things of the like nature. All the men of quality at Vienna were ſpectators, but the ladies alone had permiſſion to ſhoot, and the archdutcheſs Amelia carried off the firſt prize.

SECT. X.

A conciſe Deſcription of the other principal Places in the Dutchy of Auſtria.

ANOTHER of the emperor's pleaſure-houſes is Laxenburg, which is ſituated about two German miles from Vienna, in a pleaſant little wood, and near it is a pretty well inhabited village and park. The extenſive circumjacent plain affords very great conveniences for the baiting of herons, which is ſaid to be performed here in ſpring-time by the imperial family.

In the neghbourhood of Vienna is Baden, which is much frequented for its warm baths, aſſemblies, and other diverſions. Both ſexes bathe here without diſtinction in the ſame bath, and at the ſame time. The bathing cloaths are made to cover the whole body, and thoſe of the women have lead at the bottom of them to keep them down. There are ſeats within the baths for the convenience of ſitting in the water, which can be raiſed or lowered at pleaſure. The company walk up and down in the bath converſing together, and the ladies are ſometimes treated with ſweetmeats. There are particular doors and ſtairs leading into the ſeparate ſtove-rooms out of the bath, where the different ſexes dreſs and undreſs apart. Some of theſe baths are within and others without it, and in moſt of them the water is extremely clear. The principal is called the Women's bath, and next to that the Duke's and Anthony's baths. There is alſo one appropriated to the uſe of the poor. The ſulphureous effluvia ariſing from the baths tinge moſt kind of metals with yellow; and a ſilver cup, after being ſome time uſed for drinking the water, contracts a ſort of gilding. Theſe baths are chiefly recommended to patients afflicted with the gout, lameneſs, pains in the joints, and any arthritic diſorders. Barren women often reſort thither and find relief; but whether this proceeds from the virtue of the water, or that of the company, we ſhall not determine. Before the principal church in this town is a fine pillar dedicated to the Holy Trinity.

Neuſtadt is a pleaſant and well built town on the Leitha: it is well fortified, and contains ſome broad even ſtreets, with ſome fine ſquares ornamented with pillars in honour of the Virgin Mary. Theſe kind of pillars have a fine effect in a city; and, though ſeldom ſeen in other popiſh countries, are very frequent in the Auſtrian territories. The palace here has been allotted for the new erected military academy, and is now inhabited by the young gentlemen, who are here inſtructed by officers appointed for that purpoſe in all parts of the art of war, and by others in the mathematics and polite literature. There is alſo here a college of Jeſuits. Out of the fine earth near this place is made a very beautiful ſort of porcelain.

The moſt conſiderable places in Upper Auſtria, which is divided into four quarters, are the following:

Lintz, the capital of Upper Auſtria, ſtands in an agreeable ſituation on the river Danube, in the forty-eighth degree twenty-one minutes north latitude, and the fourteenth degree twelve minutes eaſt longitude. It is well built and populous, and has ſome fine ſuburbs. The old town conſiſts almoſt entirely of one ſingle ſtreet, and includes in it the citadel, which is ſeated on an eminence that affords a fine open proſpect. In this citadel are the courts of juſtice for Upper Auſtria; and in the

town

town are a houſe belonging to the ſtates, a pariſh church, a conſiderable college of Jeſuits, the academy, and a fine church endowed by the emperor Ferdinand II. with four cloiſters of monks, and two of nuns, a commandery belonging to the Teutonic order, and ſome manufacturies. This town carries on a conſiderable trade.

Steyr is a town ſituated on a river of the ſame name, near the place where it falls into the Ens. It conſiſts of three parts; the town with its ſuburbs, and the villages of Ens and Steyr, both which have a communication with the former by means of bridges. It has a citadel, which ſtands on a point of a ſteep rock within the walls, and within the town are alſo one pariſh church, one college of Jeſuits, together with a cloiſter of Dominicans and another of nuns, as alſo an hoſpital. Without the town is a convent of capuchins, and all theſe religious houſes have churches. Moſt of the inhabitants work in ſteel and iron. This place was formerly the capital of a county, and belonged to Stiria; but it has been ſeparated from thence, and added to the country above the Ens.

SECT. XI.

Of the Dutchy of STIRIA.

Its Situation, Mountains, and Face of the Country; its Produce, Rivers, &c.

STIRIA, or Steyermark, in the circle of Auſtria, is bounded by the dutchy of Auſtria on the north; by Hungary on the eaſt; by Carniola on the ſouth; and by Carinthia and Saltzburg on the weſt. The northerly part is called the Upper Steyermark, and the ſoutherly the Under.

Upper Steyermark contains many high and ſteep mountains, among which the Grimming is the higheſt in the country; but by the diligence of the inhabitants this dutchy is pretty well cultivated, ſo that in many places the higheſt tops of the mountains are inhabited.

The people who dwell in theſe parts in winter, when great quantities of ſnow fall, are blocked up for ſeveral months, and as it were rendered captives. Indeed they are ſo habituated to the cold, that they ſeldom come down from theſe eminences. It is aſtoniſhing that they are able to ſucceed ſo well with the plough on theſe mountains, and that the eminences themſelves are ſo fertile.

The inhabitants cultivate a fine ſort of wheat, which is ſufficient not only to ſupply their neceſſities, but in ſome meaſure alſo for ſale. They have fruit, large herds of cattle, chamois goats, and wild fowl. The brooks and lakes, many of which lie between the high rocks, are rich in fiſh. In ſome places are ſmall vales, and the inhabitants take advantage of every ſpot of earth.

The mountains contain ſilver, lead, copper, and particularly iron. The Stirian ſteel is reckoned the beſt in Europe. The foreſts, with which the ridges of the mountains are covered, yield a ſufficient quantity of wood for the uſe of the ſmelting huts. In theſe mountains are likewiſe hot baths and medicinal ſprings.

The principal rivers which run through this country are the Muehr and Ens, both of which ariſe in the biſhopric of Saltzburg.

Lower Steyermark has fewer mountains and more plains. The hills produce a fine wine, and the plains which are alſo fruitful, have hot baths and medicinal ſprings. In the quarter of Cilli, as in Carniola and Italy, dormice are caught in plenty, and eaten.

The language of the Stirians is very rough. They ſpeak the Wendiſh tongue, which is in uſe among the common people for ſeveral miles round Gratz; but thoſe who are raiſed only a ſmall degree above the vulgar ſpeak not only Wendiſh, but German and Italian, and the principal inhabitants ſpeak alſo French.

In the whole dutchy are twenty boroughs, near one hundred market towns, and about five hundred citadels, many of which ſtand on the higheſt ſummits of the rocks. The highways, notwithſtanding the country is mountainous, have been put into excellent condition.

The principal place in Lower Stiria is the city of Gratz, the capital of the whole dutchy, which is ſeated on the river Muehr, in the forty-ſeventh degree twenty-two minutes north latitude, and the ſixteenth degree ten minutes eaſt longitude. It has ſuburbs on each ſide the river, which exceed the town in bigneſs, to which they are joined by a bridge. The city is well fortified, and contains ſome fine ſtreets and houſes. The caſtle ſtands on a high hill, and here is a good armoury and magazine, conſtantly well furniſhed. The Jeſuits have a fine church, and a chapel detached from it, where the architecture and ſculpture are well worth ſeeing. Over the entrance of this chapel is a Latin inſcription to this purpoſe, "The imperial mauſoleum of Ferdinand II. "emperor of Rome, ſacred to St. Catharine virgin and "martyr." On the roof is repreſented the life of the emperor Leopold in ſeveral emblematical paintings, and on the tower is an obſervatory well furniſhed with mathematical inſtruments. The other public buildings are the Jeſuits college, the univerſity, the pariſh church, the ſovereign's hoſpital, the fine Trinity pillar of gilt braſs in the market-place, the ſovereign's fort, in which the privy council, the government, the chamber for the Inner Auſtrian countries, and the military council, are kept; and in this fort is alſo the arſenal; the land-houſe, in which the land-diets are held; the arſenal of the land ſtates, and the council houſe. There are alſo in the city eight cloiſters, with their churches. In the Dominican convent is a piece of painting repreſenting Catharine of Sienna exchanging her heart for that of Chriſt, and at ſome diſtance on the right hand, is the portrait of St. Alan, a Dominican monk, who was a native of England. An inſcription underneath ſays, that the bleſſed Virgin was ſo pleaſed with his love to her, that in the preſence of the Son of God, an infinite number of angels, and bleſſed ſpirits, ſhe was eſpouſed to St. Alan; gave him with her virgin mouth a kiſs of everlaſting peace, refreſhed him with the milk of her moſt chaſte breaſt, and preſented him with a ring in token of the marriage. However, ſome of the more ſenſible Romaniſts have openly expreſſed their abhorrence of ſuch impious fictions.

In each of the ſuburbs that lie on the weſt ſide of the Muehr, is a church with a cloiſter; but in the large ſuburbs on the other ſide of the river, are ſeveral churches and convents. In the midſt of a plain about a mile from the city, is a round hill, on which are erected nine chapels in commemoration of Chriſt's paſſion. In one of theſe chapels the whole crucifix is covered with pearls; but the ſculpture of all of them is very coarſe, and ſometimes ridiculous. Beſides, the holy ſepulchre, which is ſaid to be conſtructed after the manner of that of Jeruſalem, here is alſo a ſcala ſanta, or holy ſtairs, by aſcending which every Friday, and on the days of the invention and elevation of the croſs, people may gain forty days indulgence.

About the diſtance of four miles from the above mount, to which is given the name of Calvary, is the ſeat of count Adam. The gardens, paintings, and water-works, are greatly admired by the country people, though they contain nothing very extraordinary.

The principal places in Upper Stiria are,

Judenburg, its capital, which is ſeated on the high bank of the Muehr, and commands a proſpect into a plain ſurrounded with high mountains that are continually covered with ſnow. This place contains a royal fort, a pariſh church, a cloiſter of Minorites, in which is a church, and a college of Jeſuits, and without the town is a convent of nuns.

Leuben was formerly the capital of the county, and contains a college of Jeſuits, and a Dominican convent, both of which have churches, and without the walls are two pariſh churches, one of which is in the ſuburbs, on the other ſide of the Muehr, in which is alſo a convent of Dominicans. A great trade in iron is carried on here.

SECT. XII.

Of the Dutchy of CARINTHIA.

Its Situation, Rivers, Mountains, and principal Places.

THE dutchy of Carinthia, in the circle of Auſtria, is bounded on the eaſt by Stiria; on the north by Stiria and the archbiſhopric of Saltzburg; on the ſouth by

by Carniola, and the Republic of Venice; and on the weſt by Tyrol.

This country is woody and mountainous; the higheſt of the mountains are called St. Ulrich, St. Helena, St. Veit, and St. Laurence. Several of the mountains of this country yield good iron, and ſome of them lead. There are many fertile dales, which produce wheat and other grain, yet the country cannot produce corn ſufficient for the inhabitants.

This country has alſo a great number of lakes, brooks, and rivers. The largeſt river is the Dran, which iſſues out of Tyrol, and traverſing Carinthia from eaſt to weſt, receives all the other rivers and brooks of the country.

The only religion profeſſed here is that of the Romiſh church, though there were formerly many profeſſors of the Lutheran religion, and the youth are inſtructed in the Jeſuits college at Clagenfurt. In this dutchy are eleven boroughs, and twenty-one market towns. The principal manufactures are thoſe of iron and ſteel, which are worked in various ways, and afterwards exported. The dutchy is governed by a land captain, and annually contributes ſix millions thirty-ſeven thouſand ſix hundred ninety-five florins to the ſupport of the military ſtate of the houſe of Auſtria.

The principal towns in this dutchy are,

Clagenfurt, the capital of the dutchy, which is ſituated near the river Glan, in the forty-ſeventh degree ten minutes north latitude, and the fourteenth degree twenty minutes eaſt longitude, and is alſo joined by means of a canal with the Wordtſee. It is well built, and ſurrounded with a wall ſaid to be broad enough for five coaches to drive a-breaſt. It contains ſix churches, a college of Jeſuits, an academy, two convents of monks and one of nuns, and a provincial-houſe. It is adorned with two marble pillars, one conſecrated to the Holy Trinity, the other to the Virgin, and an equeſtrian ſtatue of the emperor Leopold. In the year 1600 Martin, biſhop of Seckau, came to this town, accompanied by four hundred ſoldiers, in order to burn the Lutheran books and aboliſh that religion. In 1636, and 1723, the town was almoſt entirely conſumed by fire.

Freiſach, the oldeſt town in Carinthia, is ſituated on the rivulet of Metnitz, and belongs to the archbiſhop of Saltzburg.

It contains a citadel and two cloiſters, and without the town ſtands the citadel of Geyerſberg, where the archiepiſcopal vicar reſides.

SECT. XIII.

Of the Dutchy of CARNIOLA.

Its Situation, Extent, Mountains, Roads, and Produce; the Hardineſs of the People, their Languages, Religion, Arms, and Exports; with the principal Places in this Country: among which is a particular Account of the Lake of Cirknitz, ſome remarkable Caverns, and Mines of Quickſilver.

CARNIOLA, which is alſo included in the circle of Auſtria, is bounded on the north by Carinthia and Stiria; on the eaſt by Liburnia, Dalmatia, and Croatia; on the ſouth by that part of Iſtria poſſeſſed by the republic of Venice, and by a part of the Adriatic Sea; and on the weſt by Friuli, the country of Gortz, and a part of the Adriatic; extending in its greateſt length a hundred and forty-two miles from eaſt to weſt, and a hundred and eighteen from north to ſouth.

This dutchy is for the moſt part mountainous, and ſome of the mountains are quite naked, while others are covered with wood; ſome of them are uninhabited, and many of their ſummits are continually covered with ſnow.

In winter, when the ſnow lies deep on the ground, ſome of the peaſants make uſe of ſmall baſkets, which they bind to their feet; and others have a kind of ſnow-ſkates made of thin narrow boards, like thoſe uſed by the Laplanders, by the help of which, and a ſtout ſtaff or pole, they deſcend from the mountains with great ſpeed. One of the moſt remarkable of theſe mountains is the Lobel, called by the Carinthians Lybel: it is high, rocky, and ſteep; and therefore the road winds round it, in a ſerpentine form, for near five miles. This road is pretty well paved, and near the top a paſſage has been hewn through the rock about a hundred and fifty geometrical paces in length, twelve feet high, and nine broad; and this ſeparates Carniola from Carinthia. The proſpect from this mountain is uncommonly fine.

It is remarkable that the roads through Carniola and Stiria, though the country be ſo very mountainous, are extremely good. The making of theſe roads at firſt was very burthenſome to the ſubjects; but as they are now completed, the expence of keeping them in order is not very great. Firſt all the ſtones were made uſe of to raiſe it to a proper height. On each ſide is a ditch ſecured with large ſtones well compacted, and the road between theſe ditches conſiſts of a ſtratum of flint-ſtones beaten ſmall. This is covered with ſand mixed with a kind of clay, which makes the road very ſmooth and hard, like a threſhing-floor. The greateſt care is taken to repair theſe roads; and the labourers who have good wages for that purpoſe, have their dwellings along the ſide of the roads, that they may be at hand to keep them in good order.

In Carniola are medicinal ſprings and hot baths: it alſo contains ſeveral lakes, and ſome rivers, the principal of which is the Sau, into which the other rivers diſcharge themſelves; it is navigable, and its ſtream uncommonly rapid; it flows into Hungary, and diſcharges itſelf into the Danube.

Though this country is moſtly mountainous, yet it contains many fruitful valleys and fields, which not only yield good paſturage, but every year produce a double crop; for when wheat, rye, barley, peas, beans, and lentils are cut down, they ſow buck-wheat. This dutchy alſo produces excellent fruit, which becomes early ripe, and of which the inhabitants make cyder and perry: large cheſnuts and walnuts are here very plentiful, and in ſome parts are olives, citrons, oranges, lemons, pomegranates, figs, and grapes, of which an exquiſite white and red wine are made.

The bowels of the earth yield all ſorts of minerals and metals, as copper, iron, and lead; and the marble of this country is very beautiful: but ſalt is wanting, and the people are obliged to purchaſe it at the magazines provided by the ſovereign.

There are here horſes and horned cattle in great plenty, and the people furniſh themſelves with all ſorts of veniſon and fowl, and with many kinds of fiſh.

This country is more populous than one would imagine; for it contains twenty-one boroughs, thirty-five markets, and, according to Valvaſor, upwards of four thouſand villages. The common people are extremely hardy, for they go bare-foot in winter through the ſnow, and the men always with open breaſts. At night they ſleep without bed or bolſter on a hard bench, and their food is always mean. The common people are of Sclavonian extraction; but the principal nobility are for the moſt part deſcended from the Germans.

The two principal languages in Carniola are the Sclavonic and the German; in the latter of which all letters are written, judicial matters carried on, and all writings made.

The Chriſtian religion was gradually received here about the latter end of the eighth century. The Lutheran doctrine alſo gained a conſiderable footing in the ſixteenth century; but was afterwards aboliſhed, and all the inhabitants at preſent profeſs the popiſh religion, except the Walachians and Uſcocs, who adhere to the Greek religion, and ſtile themſelves Old Believers. In Carniola are three biſhoprics, that of Laubach, to which belong a number of pariſhes in Carniola, twenty-one pariſhes in Stiria, and ſixteen in Carinthia; the other biſhoprics are thoſe of Biben and Trieſt. In this dutchy there are computed to be a hundred and thirty-four pariſhes, and twenty-four religious houſes.

The arms of this dutchy are an eagle crowned, on whoſe breaſt and expanded wings is a diced creſcent.

From Carniola are exported into other countries horned cattle, ſheep, cheeſe, white and red wine, quickſilver, iron, ſteel, oil of olives, linen, a kind of woollen ſtuff, Spaniſh leather, which is prepared in plenty in Upper Carniola,

Carniola, honey, timber for ſhip-building, and many ſorts of wooden-ware, as boxes, diſhes, trenchers, ſpoons, ſieves, &c.

Carniola annually contributes to the houſe of Auſtria three hundred and ſixty-three thouſand one hundred and ſeventy one florins fifty-ſix kruitzers. This dutchy is divided into Upper, Lower, Middle, and Inner Carniola.

Upper Carniola, commonly called Gorenſka Stran, enjoys a wholeſome air and freſh ſprings. The vineyards here are but few. Iron is found in the greateſt plenty, and there are profitable iron-works in many parts of the country. The lake of Feldes is near five miles long, and above two broad; it is uncommonly deep, but in its middle riſes a round mountain, on which ſtands a ſmall church, and at its foot is a fine ſpring. The lake of Wocheiner ariſes out of a copious ſpring that rolls from a very high rock into the dale of Wocheiner, which is about three miles long and a mile broad, and out of it runs a river called the Wocheiner Sau, which, after a courſe of nineteen miles, diſcharges itſelf into the Sau. Both in the lake and river are excellent trout.

In this dutchy are the following remarkable places:

Laubatcht, or Laybach, the principal town in Carniola, is ſituated on a navigable river of the ſame name, by which it is ſo divided, that it lies partly in Upper and partly in Lower Carniola. That part which forms the latter, and is ſituated on the other ſide of the river, is the largeſt and fineſt. The royal citadel here ſtands on an eminence covered with trees and beautifully cultivated, and at its foot is that part of the city in which are the market, the town-houſe, the cathedral, and epiſcopal palace. The cathedral is finely painted, and under the cupola are four ſtatues of its antient biſhops. In the Auguſtins church, behind the high altar, is a *Caſa Santa*, in imitation of that at Loretto. The Urſuline nuns have a very beautiful light church, and that of St. Peter is one of the fineſt in the city.

At the Jeſuits church is a ſuperb altar of marble, adorned with four ſtatues that are worth ſeeing: their library is well contrived, and thoſe fathers have ſpacious wine-vaults capable of containing three thouſand pipes, which is the leſs ſurpriſing, as moſt of the rents of their eſtates are paid in wine. The whole town contains three ſuburbs, in one of which live the butchers, in the ſecond are chiefly fiſhermen, and the third is principally inhabited by mariners. Theſe ſuburbs contain five churches, four cloiſters, and a commandery of the knights of Malta. The ſtreets are narrow; and, beſides the above buildings, the council-houſe, and the royal provincial and city arſenal, are worthy of notice. The biſhop is immediately under the pope, and bears the title of a prince of the holy Roman empire. This place carries on a conſiderable trade.

Lower Carniola, more uſually called Dalenſka Stran, contains many fruitful valleys, and produces red and white wine. In many places there are here no ſprings, and particularly the fertile bottom of Temnitz labours under a total want of ſprings and running water; whence the inhabitants, when they have been long without rain, are obliged to fetch water at five or ſix miles diſtance. Among the caverns or grottos in this part of Carniola, that near Lueg is worthy of notice. The entrance of this cavern extends a conſiderable length under the rocks, and within it are ſeen many icicles equal in whiteneſs to ſnow itſelf.

One of the principal towns in this diſtrict is Rudolphſwerth, or Neuſtadtlein, a royal town ſeated on an eminence on the river Gurk, and founded by the archduke Rodolph IV. in 1365, whence it received its name. It has a collegiate church, to which belong four others in the town, fourteen in the country, and five pariſhes in Stiria. It has a monaſtery of Franciſcan friars, and another of Capuchins. The many incurſions of the Turks into the territory belonging to this town, together with fires and peſtilence, have reduced it from its former flouriſhing ſtate.

The next diviſion is Middle Carniola, to which belongs a tract called Dry Carniola, which is between four and five German miles in extent; and if we include in it the bottom of Temnitz, which belongs to Lower Carniola, and is alſo deſtitute of water, it is between ſix and ſeven in compaſs: yet this tract of land, though almoſt every where mountainous and ſtony, is covered with great and ſmall villages, and in ſome parts of it the inhabitants produce good wine. The celebrated lake of Cirknitz in this part is very remarkable; it takes its name from the neighbouring market-town, and is encompaſſed with wild, rough, and ſtony mountains; but round it alſo lie two inhabited citadels, nine villages, and twenty churches.

This lake is one German mile in length from north to ſouth, half a German mile in breadth, and from one, to two, three, and four fathoms in depth, the pits excepted, ſome of which are many fathoms deep. In it lie three beautiful iſlands covered with trees: theſe iſlands are called Vornec, Velha Goriza, and Mala Goriza. A peninſula alſo runs into this lake, and is ſeparated from the iſland of Vornec by a canal. In the lake are many holes or pits with long ditches like canals, and eight brooks diſcharge themſelves into it.

It is a common ſaying, that in this lake a perſon may ſow and reap, hunt and fiſh, within the ſpace of a year; but this is the leaſt remarkable circumſtance in it, and no more than what may be ſaid of almoſt any other ſpot that is overflowed in winter or ſpring. The moſt wonderful circumſtance is its ebbing and flowing. The former always happens in a long drought, when it runs off through eighteen holes at the bottom, which form ſo many eddies or whirlpools. Valvaſor mentions a ſingular method of fiſhing in one of theſe holes called Ribeſcajama, and ſays, that when the water is entirely run off into its ſubterraneous reſervoirs, the peaſants venture with lights into that cavity, which is in a hard rock, three or four fathoms under ground, to a ſolid bottom; whence the water running through ſmall holes, as through a ſieve, the fiſhes are left behind, caught, as it were, in a net provided by nature.

At the firſt appearance of its ebbing a bell is rung at Cirknitz, upon which all the peaſants in the neighbouring villages, with the utmoſt diligence, prepare for fiſhing; for the greateſt part of the fiſh generally go off at the beginning of the ebb, and ſeldom ſtay till the water is conſiderably decreaſed. Above a hundred peaſants never fail to exert themſelves on this occaſion, and both the men and women promiſcuouſly run into the lake ſtripped quite naked, though both the magiſtrates and clergy have uſed their utmoſt endeavours to ſuppreſs this indecent cuſtom, particularly on account of the young lay-brothers of a neighbouring convent, who have the privilege of fiſhing there; and, notwithſtanding the prohibitions of the fathers, leave the convent in order to ſee this uncommon ſpectacle. The peaſants, however, are not obſerved to be guilty of more lewdneſs at theſe times than at others, when they are cloathed. At theſe ebbings an incredible number of pike, trout, tench, eels, carp, pearch, &c. are caught in the lake; and what are not conſumed, or diſpoſed of while freſh, are dried by the fire.

Though every part of the lake is left dry, except two or three pools, yet Mr. Keyſler ſays, immediately upon the return of the water, it abounds in fiſh as much as it did before; and the fiſhes that return with the water are of a very large ſize, particularly pikes weighing fifty or ſixty pounds. It is alſo remarkable, that when it begins to rain hard, three of the cavities ſpout up water to the height of two or three fathoms, and if the rain continues, and is accompanied with violent thunder, the water bubbles out of all the holes through which it had been abſorbed, two of them excepted, and the whole lake is again filled with water in twenty-four, and often in eighteen hours. Sometimes not only fiſh, but live ducks, with graſs and fiſh in their ſtomachs, have emerged out of theſe cavities.

In a rock on one ſide of the lake, but conſiderably higher than its ſurface, are two caverns, at ſome diſtance from each other; and when it thunders the water guſhes out of both, with great noiſe and impetuoſity: if this happens in autumn, they alſo eject a great many ducks, which are blind, but very fat, and of a black colour; and though they are at firſt almoſt bare of feathers, in a fortnight's time, or at fartheſt before the end of October,

they are entirely fledged, recover their ſight, and fly away. Each of theſe caverns is ſix feet high, and as many broad; and when the water guſhes out of them, it is in a large column of the ſame dimenſions, and in a continual ſtream. There is a large paſſage in each of theſe caves, where a man may walk upright for a conſiderable way; but it is ſaid that no perſon has ever yet ventured into them, to ſearch into the nature of the inner caves and reſervoir to which theſe apertures lead; for there is no certainty but that in an inſtant he may be ſurprized by the water ruſhing upon him, with the force and rapidity of a fire-engine.

When the lake ebbs early in the year, within twenty days time graſs grows upon it, which is mowed down, and the bottom afterwards ſown with millet: but if the water does not run off early nothing can be ſown, and if it ſoon returns, as it ſometimes does, the ſeed is loſt: otherwiſe after the millet harveſt all manner of game is hunted and ſhot in it.

In Middle Carniola are ſeveral little royal towns, and ſome market towns; but none that deſerve a particular deſcription.

We now come to Inner Carniola, a diviſion which is for the moſt part mountainous and full of ſmall eminences. Little corn is cultivated here; but it produces a great deal of very good wine, which is commonly called Italian, and is exported to very diſtant countries; but in many places the inhabitants labour under great want of freſh water.

The moſt remarkable places in this diviſion are the following:

Adlſberg, or Adlerſberg, in the Sclavonian language called Poſtoina, a well-built market-town, ſituated at the foot of a high rocky mountain, on which ſtands a citadel.

About half way up the acclivity of this mountain is the entrance into a large cavern that is divided into a great number of ſubterraneous paſſages. The eye is here delighted with viewing a vaſt number of ſparry icicles, formed on the arched roof of this vaſt cavern, by the exſudations of a lapideous or petrifying fluid, which form the moſt beautiful decorations. The ſides are covered with all kinds of figures formed by the ſame exſudations, to which the imagination of the ſpectator gives various forms never intended by nature; ſo that it is not at all ſtrange that ſome people ſhould make out dragons, heads of horſes, tygers, and other animals. Several pillars, which are to be ſeen on each ſide, proceed from the droppings of the petrifying fluid from the top, which form a kind of ſparry pillar on the bottom of the cave: this gradually increaſes, till it at laſt joins the icicle at the top, by meeting it about half way, and thus a complete pillar is formed. If a perſon's curioſity will carry him ſo far, he may rove about two German miles in the ſubterraneous paſſages of this cavern.

It is remarkable that the river Poig, which riſes in the above mountain, about four Engliſh miles from Adlerſberg, runs again to it with an inverted courſe, loſes itſelf near the entrance of the cavern, and falls a great depth into the rock, as is evident from its roaring noiſe, and the ſound cauſed by flinging a ſtone into the hole. The ſame river appears again near Planina; but ſoon after a ſecond time loſes itſelf in a rock, and at length emerges a third time, when it aſſumes the name of the Laubach.

Tybein or Duin, which ſtands on an eminence on the Adriatic, has a ſmall harbour, a cloiſter, and a citadel. At a ſmall diſtance is dug a very beautiful black marble, and in the rocks on the ſea is found on breaking off a piece of them, a living ſnail about the thickneſs of a man's fiſt, and eatable. The ſtone in which theſe ſnails are incloſed, contains many ſmall apertures.

Lueg, a citadel ſeated on the center of a high rocky mountain that riſes perpendicularly. This large building ſtands in a hole in the rock in ſuch a manner that no rain falls on it; but it has a roof to defend it againſt the water which trickles down from the rocks. From this citadel there is no other proſpect than that of the heavens. One half of the fore tower alone projects: it is extremely damp, and in ſummer cool.

About two German miles from Adlerſberg is a remarkable cavern, named St. Magdalen's cave. The way to it being covered with ſtones and buſhes, is extremely troubleſome; but the great fatigue in going is overpaid by the ſatisfaction of ſeeing ſuch an extraordinary cavern. You firſt deſcend into a kind of hole, where the earth ſeems to be fallen in for ten paces before you reach the entrance, which reſembles a fiſſure in a huge rock cauſed by an earthquake. Here the torches are always lighted to conduct travellers; for the cave is extremely dark. This wonderful cavern ſeems as if divided into ſeveral large halls, and other apartments. The vaſt number of pillars by which it is ornamented by nature, give it a ſuperb appearance, and are extremely beautiful; for they are as white as ſnow, and have a kind of tranſparent luſtre, not unlike that of white ſugar candy. The bottom is of the ſame materials, ſo that a perſon may imagine he is walking among the ruins of ſome ſtately palace, amidſt noble pillars and columns, partly mutilated and partly entire. From the top, ſparry icicles are ſeen every where ſuſpended, in ſome places reſembling wax tapers, which from their radiant whiteneſs appear extremely beautiful. All the inconvenience here ariſes from the inequality of the bottom, which may make the ſpectator ſtumble, while he is viewing the beauties above and around him.

Idra, or Ydra, is a ſmall town, ſeated in a deep valley, amidſt high mountains on the river of the ſame name, and at the bottom of a deſcent ſo ſteep, that it is very difficult and ſometimes dangerous, to ride to it. The town conſiſts of about two hundred and ſeventy ſcattered houſes, and a citadel; but the number of the inhabitants is ſaid to amount to about two thouſand.

This town is famous for its quickſilver mines, which were firſt diſcovered in the year 1497. Before that time, ſays Mr. Keyſler, this part of the country was only inhabited by a few coopers, and other artificers in wood, with which this country abounds. But one evening a cooper having placed a new tub under a dropping ſpring, in order to try if it would hold water, when he came in the morning to take the tub away, found it ſo heavy, that he could hardly move it. At firſt the ſuperſtitious notions that are apt to poſſeſs the minds of the ignorant, made him begin to ſuſpect that his tub was bewitched; but at laſt perceiving a ſhining fluid at the bottom, and not knowing what to make of it, he went to Laubatch, where he ſhewed it to an apothecary, who being an artful man, diſmiſſed him with a ſmall gratuity, and bid him bring him ſome more of the ſame ſtuff whenever he could meet with it. This the poor cooper frequently did, being highly pleaſed with his good luck; till the affair being at laſt made public, ſeveral perſons formed themſelves into a ſociety, in order to ſearch farther into the quickſilver mine. In their poſſeſſion it continued till Charles duke of Auſtria, perceiving the great importance of ſuch a work, gave them a ſum of money, as a compenſation for the expences they had been at, and took it into his own hands.

The ſubterraneous paſſages of the mine are ſo extenſive, that it would take up ſeveral hours to go through them. The greateſt perpendicular height, computing from the entrance of the ſhaft, is eight hundred and forty feet; but as they advance horizontally under a high mountain, the depth would be much greater, if it was meaſured from the ſurface of the hill. One way of deſcending down the ſhafts is by a bucket; but as the entrance is narrow, the bucket is liable to ſtrike againſt the ſides, or to be ſtopped by ſomething in the way, ſo that it may be eaſily overſet. The other way of going down is ſafer; this is deſcending by a great number of ladders, placed obliquely in a kind of zig-zag; but as the ladders are wet and narrow, a perſon muſt be very cautious how he ſteps, to prevent his falling. As you deſcend there are reſting places in ſome parts, that are very welcome to the weary traveller. In ſome of the ſubterranean paſſages the heat is ſo intenſe, as to throw a man into a perfect ſweat; and formerly in ſome of theſe ſhafts the air was extremely confined, ſo that ſeveral miners have been ſuffocated by a kind of igneous vapour called the damp; but by ſinking the main ſhaft deeper,

deeper, this has been prevented. Near the main ſhaft is a large wheel, and an hydraulic machine, by which all the water is raiſed out of the bottom of the mine.

Virgin mercury is that which is prepared by nature, and is found in ſome of the ores of this mine, in a multitude of little drops of pure quickſilver. This is alſo to be met with in a kind of clay, and ſometimes flows down the paſſages or fiſſures of the mine in a ſmall continued ſtream, ſo that a man has frequently gathered in ſix hours above thirty-ſix pounds of virgin mercury, which bears a higher price than common quickſilver. The reſt is extracted from cinnabar, (which is the ore of quickſilver) by the force of fire.

Every common miner receives the value of three ſhillings and ſix-pence a week; but many of them are afflicted with a nervous diſorder, accompanied with violent tremblings, ſudden convulſive motions of the hands and legs, and frightful diſtortions of the face. Thoſe are moſt ſubject to theſe diſorders who work in the places where virgin mercury is found, which in a ſurpriſing manner inſinuates itſelf into their bodies; ſo that when they go into a warm bath, or are put into a profuſe ſweat by ſteam, drops of pure mercury have been known to iſſue through the pores from all parts of the body. Theſe mines are often infeſted with rats and mice, which feed on the crumbs of bread, &c. dropped by the miners at their meals. But this plague ſeldom laſts long; for even they are ſeized with the like convulſive diſorders as the men, which ſoon kills them. It is eſteemed a neceſſary precaution for every perſon to eat before he deſcends into theſe ſubterraneous regions.

All the adjacent country is very woody; but that the woods may not be deſtroyed, great quantities of fuel for the ſmelting furnaces are annually brought down the river Idra, or Idriźza, from ſome foreſts that lie about five or ſix miles diſtant. Beſides this river, here is a canal about two miles in length, ſupplied with water by ſeveral ſtreams iſſuing from perennial ſprings, in order to put in motion the machines belonging to the mines.

The next town we ſhall mention is that of Fiume, or St. Veit, which is ſituated on a bay of the Adriatic Sea, called the gulph of Carnero. It is ſeated in a valley, and is famous for good wine, figs, and other fruit. It is populous, and contains an arſenal, a cathedral, and a Jeſuits college; with two convents within the town, and one without it near the ſea. The harbour is formed by the river Finmara, and from thence large quantities of goods are exported, a conſiderable part of which come from Hungary, on which account an expenſive highway has been made from this place to Carlſtadt in Croatia. It is ſeparated from the dutchy of Carniola, and under the government of a captain, who reſides at the citadel. The gulph of Carnero abounds in fiſh, among which is a ſort called gatto, which grows to a conſiderable ſize, and of its ſkin is made a kind of ſhagreen, uſed for the caſes of watches, caſkets, teleſcopes, and the like.

Trieſte is pleaſantly ſituated on a hill, and forms a ſemicircle, which is encompaſſed with vineyards. The town is but ſmall; however on the ſouth-weſt ſide, where formerly were ſalt-pits, a beautiful ſuburb has been erected. The caſtle, which ſtands on an eminence, is ſurrounded with a ditch, and the fortifications have been conſiderably improved. The Jeſuits church is a handſome ſtructure, but has neither good paintings, nor any other ornaments worthy of notice. In the church near the caſtle are two chapels, adorned with a great deal of old moſaic work. The ſtreets of the town are narrow and uneven, except in the market-place, where there is a very convenient walk. The inhabitants of Trieſte are accuſed of being lazy and proud, of never applying themſelves to any uſeful employment, and of being ſo malicious, as to moleſt and injure ſtrangers to the utmoſt of their power. This town, which ſtands on the borders of Italy, is ſituated in the forty-ſixth degree ten minutes north latitude, and in the fourteenth degree twelve minutes eaſt longitude, only fifty-eight miles to the north-eaſt of Venice.

SECT. XIV.

Of the County of TIROL.

Its Extent, Situation, Mountains, Rivers; with a particular Deſcription of the Channel of the Inn, and the Face of the Country. The Appearance of the Peaſants; and a Deſcription of the principal Places in Tirol.

THE next diviſion of Auſtria is that of the county of Tirol, which is one hundred and fifty miles in length, and one hundred and twenty in breadth; and is bounded on the north by Bavaria; on the eaſt by Carinthia and the archbiſhopric of Saltzburg; on the ſouth, by part of the territory of Venice; and on the weſt, by Swiſſerland, and the country of the Griſons.

The paſſes into this country, where all travellers are obliged to take paſſports, are entirely ſurrounded by a continued chain of mountains, ſo that at a diſtance you are often at a loſs to diſtinguiſh the paſſage; and when after many windings, you come to an opening, you find it ſecured by ſtrong forts. It is ſaid that ſeven thouſand men could defend the whole country againſt the attempts of any number of men. In ſeveral parts, particularly before noon, not only light miſts, but heavy clouds, are ſeen reſting in the middle of a mountain; higher up it is quite clear, till at the ſummit, it is again inveloped in clouds; "a ſight, ſays Mr. Keyſler, "which ſometimes gave me an idea of mount Sinai, at "the promulgation of the law."

But though the mountains of Tirol have their tops conſtantly covered with ſnow, they are very fertile, and have not only the fineſt woods, abounding in a variety of game, but alſo large corn-fields; and where the mountains are barren, there are generally either mines or quarries of excellent marble of all colours. On the eminences grow all ſorts of the fine fruits that Italy affords, and alſo woods of cheſnut trees. The country likewiſe yields flax, and produces excellent wine. There are found in this country granates, rubies, amethyſts, emeralds, agates, cornelians, chalcedonies, and a ſpecies of cryſtal ſo hard as to be uſed inſtead of diamonds for cutting glaſs. It has in ſome places profitable ſalt-pits, and in others mines of copper, ſilver, lead, allum, and vitriol. Hence it is one of the moſt profitable parts of the territories of the emperor; and it was not without reaſon that Maximilian I. uſed to ſay, "Tirol is like "a peaſant's coat, very coarſe, indeed, but alſo very "warm."

It produces a good breed of horned cattle and horſes, and among the wild beaſts are the chamois and wild goats. The chamois, or ſhamoy, goat is properly a native of Tirol, as well as of the principality of Saltzburg. The huntſmen have ſharp crooked pieces of iron on their ſhoes, and ſometimes faſtened to their hands, for the better purſuing this ſwift footed animal among the rocks and mountains.

The principal rivers in this country are the Inn, which receives a number of leſſer ſtreams, and entering Bavaria falls into the Danube. The ingenious Mr. Addiſon ſays, "It was the pleaſanteſt voyage in the world to follow "the windings of this river, through the variety of "pleaſing ſcenes to which its courſe naturally lead us. "We had ſometimes on each ſide a vaſt extent of naked "rocks and mountains, broken into a thouſand irregular "ſteeps and precipices. At other places we beheld a "long foreſt ſo thick ſet together that it was impoſſible "to diſcover any of the ſoil they grew upon, and riſing "up ſo regularly one above another, as to give us the "view of a whole wood. The time of the year that had "given the leaves of the trees ſo many different colours, "compleated the beauty of the proſpect."

The other rivers of Tirol are the Etſch, which alſo riſes in this country, and traverſing the biſhopric of Trent, and the territory of the republic of Venice, at length falls into the Adriatic ſea. The Lech which riſes here, and after paſſing through Tirol, forms the limits between the circles of Swabia and Bavaria, and at length falls into the Danube.

In

In this country are twelve towns and ten villages that have markets. The common people live chiefly by working in the mines and ſalt-works.

The meaner ſort of peaſants make ſo wretched an appearance, that one would almoſt take them for gypſies: both the men and women wear hats of all colours. Their farm-houſes, barns, and ſtables are alſo very mean, when compared with thoſe of other countries, and are only covered with boards placed almoſt horizontally, on which are laid heavy ſtones to ſecure them from being blown off.

The inhabitants have, however, many particular privileges above thoſe of the other hereditary dominions of the houſe of Auſtria: for being naturally well fortified by their mountains, and bordering upon many different governments, as the Bavarians, Swiſs, Venetians, Griſons, &c. were they treated with ſeverity, they might be tempted to ſet up for a republic, or at leaſt throw themſelves under the milder government of ſome of their neighbours. The country is, however, poor, though the emperor draws conſiderable ſums out of its mines of ſalt and metal; and theſe mines fill the country with greater numbers of people than it would be able to ſupport without the importation of foreign corn.

The arms of this country are an eagle gules in a field argent.

Tirol is governed by three councils, which are held at Inſpruck, one of which ſits upon life and death, the other regulates the taxes, and the third manages the affairs of juſtice: but as theſe courts are guided by the orders they receive from Vienna, there are in many caſes appeals from them to the emperor. It contributes yearly a hundred thouſand florins towards the military ſtate of the houſe of Auſtria.

The principal places it contains are,

Inſpruck, the capital of the whole country, which is a handſome city, formerly the reſidence of the archdukes of Auſtria, who are counts of Tirol. It is ſeated on the river Inn, within the forty-ſeventh degree thirty-eight minutes latitude, and the eleventh degree thirty-nine minutes eaſt longitude, and ſtands in a fertile plain environed with mountains. Though Inſpruck be ſmall, it is a fine city with well paved ſtreets, and ſtately flat-roofed palaces, after the Italian taſte. Here are no leſs than twelve churches, including thoſe in eight convents, and the two ſuburbs, which are much larger than the city itſelf, and are finely built. The city is adorned with curious fountains, ſpacious market-places, and the caſtle, or palace; but is of ſmall extent within the walls. The great hall of the palace is a very noble room, the walls being painted in freſco repreſenting the labours of Hercules, many of which make a very fine appearance, tho' great part of the work has been cracked by the earthquakes, which are very frequent in this country. The famous golden roof in the palace conſiſts of copper-plates richly gilt, at the expence of two hundred thouſand dollars. Near this palace is another of wood, to which it was uſual for the court to retire at the firſt ſhock of an earthquake. In one of the rooms of the palace, which is hung with the pictures of illuſtrious perſons, they ſhew the portrait of Mary queen of Scots, who was beheaded in the reign of queen Elizabeth. The gardens are very large, and in the middle of them is a beautiful equeſtrian ſtatue in braſs of the archduke Leopold, and near it twelve figures of water nymphs and river gods, well caſt and as big as the life. Covered galleries lead from the palace to five different churches, and a very long one reaches to the church belonging to the Capuchin convent, where the duke of Lorrain uſed frequently to aſſiſt at their midnight devotions. In this convent are ſhewn the apartments of Maximilian, archduke and count of Tirol, who, while he kept the government in his hands, lived in this convent with all the rigour and auſterity of a Capuchin. His room of audience and anti-chamber are little ſquare wainſcotted rooms, faced with a kind of fret-work, that gives them the appearance of little hollow caverns hewn out of a rock.

The church belonging to the Franciſcan convent was erected by Ferdinand I. and is a kind of attempt at modern architecture. But though the architect has ſhewn his diſlike of the Gothic taſte, it is eaſily ſeen that in that age the people, at leaſt in this country, were not arrived at the true knowledge of that ſimplicity obſerved by the Greeks and Romans. The portal, for inſtance, conſiſts of a compoſite order unknown to the antients; for though the ornaments are taken from them, the volutes of the Ionic, the foliage of the Corinthian, and the uovali of the Doric order, are mixed without any regularity in the ſame capital. The vault of the church is incumbered with many little pieces of ſculpture; and tho' it is ſupported with ſingle columns, inſtead of the cluſters of little pillars found in Gothic cathedrals, theſe columns are of no regular order, and are at leaſt twice too long for their diameter. In the middle of it is the monument of the emperor Maximilian I. which was erected by his grandſon Ferdinand I. but the body of the emperor lies elſewhere. On the top of this monument is the figure of Maximilian kneeling, in braſs, ſurrounded with four other ſmaller metal figures repreſenting the virtues, and on the monument itſelf is a beautiful baſſo relievo of white marble, repreſenting the exploits of that prince in twenty-four ſquare pannels of ſculpture. In the middle paſſage of the church are twenty-eight brazen ſtatues ranged in two rows, and larger than the life, repreſenting the regal and princely perſonages, male and female; in particular thoſe of the houſe of Auſtria, and on the cornice of the vaulted paſſage, which ſeparates the choir from the nave of the church, ſtand twenty-three ſmall ſtatues of braſs.

Among the other churches is a little Notre Dame, which is handſomely deſigned and covered with a cupola. This church was built by the contributions of the whole country, and was deſigned as an expreſſion of gratitude to the Virgin Mary, for having defended the country of Tirol againſt the victorious arms of Guſtavus Adolphus, who was unable to enter this part of the empire, after his having over-run moſt of the reſt.

The regency and provincial houſes here are fine ſtructures. In the ſuburbs is an arſenal; there is alſo an univerſity, a cloiſter of Capuchins, and two monaſteries.

At a league's diſtance is the town of Hall, which is a pretty place ſeated on the river Inn, and contains a mint that is worked by water, a pariſh church, a college of Jeſuits, a Franciſcan cloiſter, and a royal foundation for ladies. But this town is moſt famous for its ſalt-works. In the neighbourhood of this town are vaſt mountains of rock-ſalt, where four or five hundred men are conſtantly employed; and as ſoon as they have hewn down a ſufficient quantity of the rock, which in colour reſembles allum, and is extremely ſolid, they let in their ſprings and reſervoirs among their works, where the water diſſolves the particles of ſalt mixed with the ſtone, and is conveyed from thence through long troughs and wooden canals to Hall, where it is received in vaſt ciſterns, and from time to time boiled off. The ſalt-works of this town have great convenience for fewel, which is brought down to them by the river Inn; and, during its courſe through Tirol, is generally encloſed between a double range of mountains, moſt of which are covered with fir-trees. Great numbers of peaſants are employed in felling the largeſt of theſe trees, which, after they have barked and cut into ſhape, are tumbled down from the mountains into the river, which carries them off to the ſalt-works: vaſt quantities of them are likewiſe taken up at Inſpruck for the uſe of the convents and the public offices, who are allowed a certain portion of them by the emperor, and the reſt paſs on to Hall. Several hundred loads of this timber are generally on float; for they begin to cut twenty leagues up the river above Hall; and other rivers that flow into the Inn bring in their contributions. The above ſalt-works, with the mint eſtabliſhed at the ſame place, have rendered Hall almoſt as populous as Inſpruck. This mint is deſigned to work part of the metals obtained in the neighbouring mountains, where ſeven thouſand men are ſaid to be conſtantly employed in the mines.

Schwatz is a very conſiderable market-town, ſituated in the juriſdiction of the ſame name; it ſtands on the Inn, and exceeds moſt towns in the country in beauty. Near it is a mine-work of ſilver and copper, in which a thou-

a thouſand men are employed. This mine was diſcovered in 1448, and was formerly much richer than it is at preſent.

In this province is the paſs of Koſel, in Italian Covelo, which lies on the borders of the territory of the republic of Venice. In it is a high and ſteep rock, which riſes fifty fathoms like a wall, and in the middle of it is a cavity which contains a ſpring, on which a caſtle or fort has been erected. It has a ſmall garriſon, which muſt be wound up and let down by ropes. Below it is a narrow paſs, in which two carriages can ſcarce go abreaſt; and on the oppoſite ſide is the ſteep ſhore of the river Brent. At the beginning of this paſs is a bulwark, or baſtion, the guard of which is let down from the caſtle. Hard by is the village of Primolano, about a gun-ſhot from which is a lazaretto, where travellers in the time of the plague perform quarantine. This place lies quite loneſome, between mountains and cliffs of an uncommon height.

The next town we ſhall mention is that of Meran, which is ſituated on the river Paſſer in the moſt fertile part of the diſtrict of Etſch, and contains ſix churches and cloiſters. It was formerly the capital of the country, and even ſtill, on public occaſions, takes precedency of all the towns. Near it antiently ſtood a town, which in the middle age was quite overwhelmed by the fall of a mountain.

Bozen, by the Italians called Bolzano, is ſituated in a pleaſant valley twenty-five miles to the north of Trent, and ſtands on the river Eyſock. This city contains ſeveral religious houſes, and the monaſteries of the Franciſcans and Dominicans have churches. The moſt remarkable thing in the great church is a round hole in the roof three feet in diameter, ſurrounded with a garland of ribbons of different colours, with large wafers appendent to them; and Mr. Miſſon was told, that a ſacred opera being acted in that church on Aſcenſion-day, the perſon who repreſented Chriſt was taken up to heaven through this hole. This church has a high ſteeple, adorned with three ſtories of baluſtrades of very good workmanſhip. The houſes are all plaiſtered over, and a rivulet of ſpring-water runs through all the ſtreets, which are generally ſtraight and broad; but the town has no walls, nor any defence, except a large ſtream at its entrance, over which there is a bridge. It is a place of good trade, eſpecially at its four annual fairs, that laſt each a fortnight, and to which great numbers of merchants come from all parts of Germany, Swiſſerland, and Italy; on which account great privileges have been granted to the city. During theſe fairs the merchants are allowed magiſtrates and judges of their own, diſtinct from thoſe of the town, and none are permitted to trade without being entered in the judges books, and a certificate of the entry under the ſeal of the corporation.

The neighbourhood of this place, and indeed the whole valley of Bolzano, is full of villages, and vineyards planted in the form of arbours, with the branches of the vines tied to wooden frames; props not being uſed in this country. Their white wines are generally of a very agreeable tartneſs; but they muſt be drank the very year of their growth, or elſe they grow luſcious, and then turn crabbed. At certain diſtances in this valley are little ſtraw huts, each raiſed upon three trunks of trees or poles, from whence they ſhoot the bears that come from the mountains to eat the grapes.

SECT. XV.

Of the Biſhoprics of TRENT *and* BRIXEN.

Their Situation, Extent, and Produce; with a particular Account of Trent and Brixen, the capital Cities of this Country.

THE temporal juriſdiction of the biſhop of Trent is ſituated in the county of Tirol, and the biſhop enjoys, as an immediate prince of the empire, a ſeat at the diets: it is ſituated among the Alps, in the ſouth part of Tirol, to the north-weſt of the dominions of Venice, and to the eaſt of thoſe of the Griſons. It is near ſixty miles in length from eaſt to weſt, and forty, where broadeſt, from north to ſouth.

The river Adige runs through the country from north to ſouth, and receives ſeveral ſmaller rivers that riſe in the mountains on each ſide. The ſoil produces a good wine that is of a pale red, with oil, fruit, and paſture; but not much corn. The common languages of the people are the German and Italian.

The city of Trent, the capital of this biſhopric, ſtands on the river Adige, in the forty-ſixth degree north latitude, and the eleventh degree twenty-nine minutes eaſt longitude. It is ſuppoſed to have received its Latin name Tridentum from three ſharp peaks or rocks of the Alps, which reſemble three teeth, and hang over the city. It is built on a flat rock of a kind of red and white marble, which alſo furniſhes the materials for their houſes; but is ſubject to dangerous inundations, not only from the overflowing of the river, but from the brooks of Levis and Ferſena, which ſometimes precipitate themſelves from the adjacent mountains, and force great rocks along with them even into the town.

The city is encompaſſed with ſteep impaſſable hills, except the Tirol road on the north, and that to Verona on the ſouth. The ſun-beams darted from theſe flinty rocks, render the heat as intolerable as the ſnow on their tops makes the air cold in winter; but in ſpring and autumn the air is temperate. The town is ſmall, but pretty populous, and defended by an old caſtle. The ſtreets are broad and well paved, and have many ſtately palaces, beautiful churches, and religious houſes. The cathedral dedicated to St. Vigil is a fine piece of Gothic architecture, ſupported by marble pillars of an extraordinary height and thickneſs; but the inſide is too dark. It has a chapel, in which nothing is to be ſeen but marble and ſculpture, and is ſaid to have coſt a hundred thouſand crowns. In one of the chapels of this cathedral is ſhewn a crucifix as big as the life; and they gravely aſſert, that it bowed its head at the time of the council's being ſworn and proclaimed under it, to ſhew its approbation of the veracity of their decrees.

The church of St. Mary Major is noted for the famous council of Trent, held there from the fourth of January, 1545, till 1563, the repreſentation of which is finely painted on the walls. The church is alſo famous for an organ, which is ſaid to imitate all ſorts of inſtruments and the ſinging of birds, with the cries of ſeveral beaſts, and the ſound of drums and trumpets ſo naturally, that it is hard to diſtinguiſh them.

We now come to the biſhopric of Brixen, which is by the Matricula placed in the circle of Auſtria, and, as it forms a part of the Tiroleſe, is ſubject to the houſe of Auſtria. This country is bounded by Saltzburg and part of Carinthia on the eaſt, by Trent and the dominions of Venice on the ſouth, and joins the Tirol on the north and eaſt, extending about forty-five miles in length, and thirty in breadth.

The city of Brixen is ſituated on the river Eyſock, at the foot of Mount Brenner, in the forty-ſixth degree thirty-eight minutes north latitude, and the eleventh degree forty-nine minutes eaſt longitude, in a fine country abounding in vineyards, that yield excellent red wine. It is adorned with ſpacious ſquares, a very handſome palace, a town-houſe, a cathedral, two churches which join to each other, and two convents. It has alſo a caſtle ſeated on an eminence. It is a populous town much frequented on account of the mineral ſprings in its neighbourhood. The houſes are well-built, and are almoſt all of the ſame ſize: they are adorned with porticos, and curiouſly painted on the outſide; but their ſhops are kept in vaults, which run from one ſide of the ſtreet to the other. The biſhop's palace, which forms one ſide of a fine ſquare over-againſt the two churches, is encompaſſed with a ditch, and defended at the entrance by four braſs cannon.

The country between this city and Bolzano is extremely populous, and ſo well manured, that the ſteepeſt mountains are cultivated. The men of Brixen are reckoned more genteel and civilized, and the women handſomer, than in any other part of Tirol. The Virgin Mary and St. Chriſtopher being the principal objects of

the people's devotion, the roads are full of little chapels of the Virgin, and St. Chriſtopher is painted on all their houſes. This city has its own magiſtrates, who are two burgomaſters and twelve council.

We ſhall defer treating of that part of Swabia ſubject to the houſe of Auſtria, till we come to the circle of Swabia.

CHAP. X.

Of the Kingdom of BOHEMIA, including MORAVIA.

SECT. I.

Its Name and Situation; the Face of the Country of Bohemia; its Minerals and Foſſils, Vegetables and Animals; its Rivers and Highways, Towns and Villages. Of the Inhabitants, the Hardſhips under which they labour, their Language, Religion, and Government.

SOME authors include under the name of Bohemia in general the kingdom of Bohemia, Moravia, Sileſia, and Luſatia, which lie together in the form of a lozenge, between Auſtria on the ſouth, Brandenburgh on the north, the palatinate of Bavaria, with part of Saxony, on the weſt, and Poland on the eaſt, extending in its greateſt length and breadth two hundred and ſeventy-ſix miles from north to ſouth, and two hundred and ſixty from eaſt to weſt.

But however convenient it may be for geographical writers thus to claſs countries that have little or no relation to each other, it can only ſerve to miſlead the mind and confound our ideas; for neither Sileſia nor Luſatia can properly be conſidered as provinces of Bohemia; the greateſt part of the former being ſubject to the king of Pruſſia, and the latter divided between the elector of Saxony, the king of Pruſſia, and ſeveral other princes. We ſhall therefore confine this account of Bohemia to the kingdom of that name, including Moravia; but ſhall treat of each ſeparately, beginning with the former.

Bohemia, in German Boiherheim, Boiheim, and corruptly Bohmen, that is the abode of the Boii, obtained its name from the Boii, its antient inhabitants, who were a tribe of the Celtæ, that retired into the Hercynian foreſt, which extends through this country, rather than ſubmit to the Roman yoke, and is bounded to the north by Miſnia, Luſatia, and Sileſia; to the eaſt by Moravia, Sileſia, and the county of Glatz; to the ſouth by Bavaria and Auſtria; and to the weſt by Bavaria and Franconia.

It is on all ſides encompaſſed with high mountains and thick extenſive woods, yet the country lies high, tho' it is for the moſt part level, and enjoys a warm, pleaſant, and wholeſome air; a ſoil in ſome places fat, and in others ſandy. In the bowels of the earth are found iſinglaſs, coal, allum, ſulphur, and ſealed-earth: there are here ſome mines of ſilver, tin, copper, lead, quick-ſilver, and iron; ſalt-petre is alſo found here, and all kinds of marble are dug in Bohemia. Among the precious ſtones are a kind of diamond which have a beautiful luſtre, but want a proper hardneſs, which is alſo the caſe with the rubies and cryſolites found in this country; here are likewiſe emeralds, granates, ſapphires, topazes, amethyſts, hyacinths, berils, carbuncles, jaſper, chalcedonies, turquoiſes, and cornelians.

Bohemia is very fertile in corn, conſiderable quantities of which are exported, particularly buck-wheat and millet. It alſo abounds in garden and orchard fruits, and produces excellent red wines, with ſaffron, ginger, and calamus. It likewiſe yields good paſture, which feed numerous droves of cattle, and has excellent chaces. Among the wild beaſts are lynxes, bears, wolves, foxes, martens, badgers, beavers, and otters; and there are here plenty of wild fowl.

With reſpect to the principal rivers of the country, the Elbe riſes in Bohemia, and becomes navigable at Leutmeritz: at Melmic it receives the Moldaw, and near Leutmeritz the Egra.

Ten principal highways, leading from Prague through the whole country, are made in a direct line, and in many places ſecured by maſonry, the hollow parts being filled up, and on both ſides deep trenches are cut for carrying off the water. This uſeful labour coſt ſome millions of florins.

Bohemia was formerly well ſupplied with towns, boroughs, villages, caſtles, and men; but it at preſent appears extremely deſolate when compared with its former ſtate. During the inteſtine religious wars, and the ſucceeding eruptions of the Swedes, moſt of the towns, caſtles, and villages, were laid waſte; ſo that at preſent it contains only one hundred and five great and ſmall towns. Theſe are Prague, the capital, with thirty-one royal towns, nine royal dowry or jointure ones, two common mine towns, three royal mine towns, twelve exempted mine towns, and forty-ſeven baron towns, with not much above ſix thouſand villages.

The number of inhabitants is likewiſe conſiderably decreaſed: according to Balbin, there is not the tenth part of the people by which it was formerly inhabited, and Modern Bohemia is ſcarce the ſhadow of what it was antiently. In 1622, and the three or four ſucceeding years, thirty thouſand families quitted this country, not to mention women, children, handicraftſmen, and the greateſt part of the nobility, who alſo retired; whence an attentive traveller finds the towns, boroughs, villages, and highways of this country extremely deſolate.

The peaſants here are bondmen to their lords, and the hard yoke by which they are galled, appears to be the cauſe both of their ſtiff-neckedneſs and of their indolence; the latter being very obſervable by the wretched condition of their villages. In 1679, the heavy bondage they laboured under induced a great part of them to take arms, but for this they were wholly ſtripped of the ſmall remains of liberty they enjoyed.

The owners of free eſtates are but few in number. The landed eſtates belong to the prelates, lords, knights, and towns. The prelates here are the archbiſhop of Prague, with the biſhops of Leutmeritz and Konigingratz, the canons and capitulars of the metropolitan church of St. Vitus in the citadel of Prague, with many others. The lords conſiſt of princes, counts, and barons.

The Bohemian language is a dialect of the Sclavonic, but is harſher than that of the neighbouring people who ſpeak that language.

The Bohemians are ſuppoſed to have embraced the Chriſtian religion ſo early as the ſixth century; but it is more certain that they were inſtructed in it by the Greek brethren Methodius and Cyril, about the middle of the ninth century; hence the Greek religion and cuſtoms were in uſe among them till the Romiſh method of worſhip was introduced by Boleſlaus the Good. In the fifteenth century John Militz preached againſt the pope and the abuſes of the clergy; Matthias Janow trod in his ſteps, and was followed by John Huſs, Jerome of Prague, and Jacob Von Miſa, who in the fourteenth, and more particularly in the fifteenth century, oppoſed many doctrines of the popiſh church. This brought Huſs and Jerome to the ſtake, and put their adherents, moſt of whom were Bohemians, under the ban; upon which

account they were so irritated, that they raised a bloody war, which continued for many years. They pitched their camp on a mountain for the security of themselves and their religious assemblies, which gave occasion to their being called Taborites; Tabor in the Bohemian tongue signifying a camp. A part of the people, who were principally desirous of participating in the cup at the Lord's Supper, obtained the name of Calixtines, and after the death of Ziska, their general, a part called themselves Orphans. The Calixtines, in the year 1433, obtained the use of the cup, which was permitted to every one; but in other respects they complied with the church of Rome. The Taborites, on the contrary, could neither be brought over by allurements, threatenings, nor persecutions, to the Romish church; but improving their doctrines and church discipline, and laying aside war and disputes, called themselves the Bohemian Brethren; but, in 1547, the greatest part of them being banished, retired to Poland and Prussia. In the sixteenth century the opinions of Luther spread in Bohemia, and the greatest part of the Calixtines embraced that religion. In 1575 Maximilian II. allowed every one full liberty of conscience, which was granted in stronger terms in 1609, by Rodolphus II. when they were not only permitted the free exercise of their religion, but the use of the university of Prague. These privileges were confirmed by Matthias I. in 1611, and Ferdinand II. was admitted to the throne only upon condition of his confirming them by oath; but in 1617 he entered into an agreement with Philip III. king of Spain, without the consent of the states, that he, with all his descendants, after the extinction of the male archducal stock of Austria, should possess the hereditary succession in Bohemia. This terrified the Lutheran Bohemians, who had besides so many complaints to prefer, that their deputies, in 1618, obtaining no favourable answer to their representations in the royal chancery at Prague, they, in the heat of their passion, threw two of the royal counsellors, with a secretary, out of the window, as betrayers of their country; and no regard being paid to their complaints, they created the palsgrave Frederic king, and took up arms in their own defence. Hence arose a dreadful war, which ended very unhappily both with respect to the new king and the protestant Bohemians; for in 1627 they were deprived of all their rights and privileges; and those who would not submit to the Romish church, were compelled to quit the country. From that time the church of Rome became the only prevailing religion in Bohemia; and though the Jews at Prague are indulged in the exercise of theirs, the few Lutherans were afterwards obliged to conceal themselves as much as possible.

The archbishop of Prague is legate of the see of Rome, a prince of the Roman empire, primate of the kingdom, and standing chancellor of the university of Prague, and has for his suffragans the bishops of Leutmeritz and Konigingratz. The archiepiscopal consistory has the supreme jurisdiction over the clergy, and from it lies an appeal, either to the king or the pope.

Learning is at a low ebb in this kingdom; nor do the Bohemians apply themselves much to the fine arts. They, however, make good cloth, fine potters work, good blades for swords and knives, fine paper and glass.

With respect to commerce, they export a considerable quantity of corn and malt into Saxony and Bavaria. Hops and the Spaw waters of Egra are also plentifully exported from this kingdom, and likewise paper, pottery, and beautiful glass; but their commerce is in general inconsiderable.

With regard to the government, Bohemia is at present an hereditary kingdom, but was formerly elective, though the states usually kept to the family of the deceased king. Ferdinand I. in 1547, declared the kingdom hereditary by a conclusion of the diet, and it fully became so in 1620, from which time the states have had nothing to do with respect to the right of succession.

We have already observed, in treating of Germany in general, that the king of Bohemia is arch-cup-bearer to the holy Roman empire, but he does not add that office to his other titles. He has for hereditary cup-bearer of the empire the counts of Althan, who therefore bear a cup in their arms. On the death of the emperor Charles VI. great debates arose concerning the person who at the election of a new king of the Romans, should represent the electoral voice of Bohemia. Queen Maria Theresa had conferred the sovereignty on her consort the great duke of Tuscany; but by a majority of votes in the electoral college, it was determined that the voice of Bohemia should remain dormant for that time. But after the death of Charles VII. the envoys of election of the queen of Bohemia were admitted to the choice of a new king of the Romans.

The arms of Bohemia are a lion argent, with a double tail, in a field gules.

The supreme officers of the empire are the supreme burgrave, land-steward, land-marshal, land-chamberlain, land-judge, aulic feudal-judge, president of appeals, chamber president, and supreme land register. The hereditary officers are principally the four following, the supreme hereditary marshal, the sewer, the cup-bearer, and the steward.

The aulic chancery of Bohemia, which constantly follows the court, was united in 1749, with that of the Austrian at Vienna, and the government of Prague is abolished; there are, however, several courts of judicature held there. The circles and towns in Bohemia have also their peculiar judicatories, and the lords their hereditary and feudal ones.

According to the new regulation, with respect to the military state of the Austrian hereditary countries, the annual contribution of the kingdom of Bohemia amounts to five millions two hundred and seventy thousand four hundred eighty-eight florins, forty-four kruitzers.

The kingdom of Bohemia is divided into twelve circles, and the territory of Egra, but does not contain many towns so considerable as to deserve a particular description; we shall therefore begin with the capital of the kingdom.

SECT. II.

A Description of the City of Prague, with a concise Account of the Inhabitants of that Metropolis.

THIS city is seated almost in the middle of Bohemia, in the fiftieth degree five minutes north latitude, and the fourteenth degree forty minutes east longitude. It extends on both sides the Moldaw, which is here about eight hundred paces broad; but shallow, and not navigable. The stone bridge which joins the two parts of the city on the opposite banks of the river, was erected by Charles IV. in the year 1357, and exceeds in length those of Dresden and Ratisbon, it being one thousand seven hundred and seventy feet long: its breadth amounts to thirty-five feet; three carriages may pass upon it abreast, and it has a strong tower at each end. It is raised on sixteen piers, and adorned on the sides with twenty-eight statues of saints. The crucifix with the two female statues that stand under it, and that of St. John of Nepomuck, are of metal; but the others are of stone. This Nepomuck, king Wenzel caused to be thrown from the bridge into the river, and drowned in 1683; but in the year 1729, he was not only ranked among the saints, but adored with such veneration, that almost all the other saints are on his account forgotten in Bohemia.

The fortifications of the city are pretty strong. The houses are built entirely of stone, and for the most part consist of three stories. The streets are broader than those of Vienna; but it has not so many magnificent palaces. It is computed to contain ninety-two churches and chapels, with about forty cloisters. The town, considering its extent, is not sufficiently populous, it containing only about seventy thousand Christians, and between twelve and thirteen thousand Jews. Nor is its commerce very considerable; for exclusive of the arts and handicraft trades, its principal means of subsistence is drawn from the brewing of beer. It comprehends three towns, the Old, the New, and the Little Town.

In Old Prague the Jesuits have a magnificent college, which is one of the largest belonging to their order, except that of Goa. It is called *Collegium Clementinum*, from

from St. Clement's church which joins to it, and two hundred and ten prieſts of that order conſtantly reſide there. They have alſo another college in the New City, and in the Little City, they have a college, and two ſeminaries. Their ſchools are very full, and the number of ſtudents in the twelve claſſes of the Clementine college amounts to no leſs than eighteen hundred. The library of the Clementine college is worth obſerving, being very light and lofty, and adorned with galleries. The mathematical cabinet built here has a moving armillary ſphere, according to Tycho Brahe's ſyſtem, and a large ſextant made by that celebrated mathematician. In the tower of the Clementine college is an obſervatory, from which there is a fine proſpect of the city. On the top of this tower is a ſtatue of Atlas, ſupporting an armillary ſphere.

In the church near the Trinhoff is the monument of Tycho Brahe, over which is his uſual motto in large characters, ESSE POTIVS QUAM HABERI. That is, "To be rather than ſeem to be;" and underneath a long inſcription mentioning his various diſcoveries. Under this, Tycho Brahe is repreſented in baſſo relievo dreſſed in armour, with a long ſword by his ſide, a band and whiſkers: he leans with his right hand on a celeſtial ſphere, placed over his coat of arms, and on his left is his helmet.

The church of the croſs near the Jeſuit's college in the old city is an elegant piece of architecture, adorned with fine marble columns, and beautiful paintings. On the church, which ſtands in Charles's ſquare, is a *ſcala ſanta*, built of Bohemian marble. The high altar is embelliſhed with ſculpture in wood, which is well executed; but the walls of the church are entirely covered with votive pieces, ſome of which are wretched daubings deſigned for pictures, others filthy rags, coats, &c. which give the church a very diſguſtful appearance.

The cathedral, which is dedicated to St. Vitus, and ſtands on the caſtle hill, is very rich in plate, altar furniture, and relics: among other valuable ornaments is a crucifix of Hungarian virgin gold, that weighs ten thouſand ducats. Some have repreſented St. Wenceſlaus's chapel in this ſtructure, as if the walls were entirely covered with jaſper, amethyſts, and cornelian; every thing indeed is there very rich, but falls ſhort of this exaggerated account. Indeed, a conſiderable part of the wall is covered with theſe gems, ſome of which are as big as a man's fiſt; but irregularly ſet without any order; and as for the embelliſhments of gold, and the like, their value is much more owing to the metal, than the ſkill of the artificer.

Upon a fountain within the area of the citadel is a braſs ſtatue of St. George, caſt in the year 1373, and making allowance for the age in which it was produced, it may be reckoned a very good one. The proſpect from the royal apartments is quite charming, and the hall where the emperor entertains the nobility well contrived, and very ſplendid.

Facing the Capuchin church is an edifice, built in the imitation of the *caſa ſanta* at Loretto, the walls of which are like that, black and ſmoaky within; but on the baſſo relievos on the outſide, there is a very great difference, theſe being only of plaiſter, and thoſe of the holy houſe at Loretto of marble, and the workmanſhip is as far inferior to the latter as the materials. The treaſure collected in this chapel is very extraordinary. Among other valuable offerings are the following: a pyx ſet with pearls of the ſize of an acorn, one of which in the middle is ſhaped like a heart, and is of the ſize of a middling walnut, another is enriched with ſix thouſand ſix hundred ſixty-ſix diamonds, repreſenting the ſun. The ſize of the diamonds gradually decreaſes, and they are curiouſly arranged, in order to form the ſolar rays, which terminate in a point, conſiſting of one ſingle ſtone. It coſt two hundred thouſand guldens, and the artiſt who made it, and was employed ten years before it was compleated, was rewarded with ten thouſand.

In the middle of the horſe-market, which is a large ſquare, is an equeſtrian ſtatue of king Wenceſlaus, and on one ſide of the area, before count Czernini's palace, is a ſtone pillar in memory of Drahomira, a pagan dutcheſs of Bohemia, the mother of St. Wenceſlaus, whom the earth ſwallowed up on this ſpot, in the year 939.

A white tower in this city ſerves for a ſtate priſon, and it is ſaid there was formerly in one of the rooms a curious machine, made in the ſhape of a woman, which when any delinquent was brought near it, would embrace him, and with its arms inſtantly break his back and ribs; but no ſuch thing is now to be ſeen.

Prague has been frequently beſieged, and obliged to ſurrender; particularly in the year 1631, it was taken by the Saxons, and in 1741, by the elector of Bavaria. In 1742, the Auſtrian forces inveſted the city, in which were about twenty thouſand French, commanded by the marſhals Broglio and Belleiſle, who ſuffered greatly by famine; but defended themſelves with great bravery, and at length found means to make their eſcape. In the year 1744, the Pruſſians made themſelves maſters of this capital, after cannonading it ſeven days; but quitted it the ſame year.

The inhabitants of Prague are poor, and their ſhops but meanly furniſhed. The people of quality, who cannot eaſily bear the expence of Vienna, chuſe to reſide here, where they have aſſemblies, muſic, and all other diverſions, except thoſe of a court; proviſions are extremely cheap, and they have plenty of the moſt excellent fowl. The women of quality now dreſs pretty much in the French mode; but thoſe of the Jews have a diſtinct habit. The wives of the wealthy citizens wear fur caps and long cloaks, ſome of them ſatin lined with taffety, and petticoats of the ſame; but ſhort, on account of the dirtineſs of the ſtreets.

SECT. III.

The other principal Towns in Bohemia.

IT has been already intimated, that war and perſecution have rendered the kingdom of Bohemia extremely deſart, in compariſon with what it was formerly, and therefore, though there are many towns and villages, there are few worthy of notice. The country is, however, divided into twelve circles, ſome of the principal places in which are the following.

Pfaundorf is the firſt town in Bohemia on the ſide next Vienna. At Deutſchbrod the baggage of travellers is ſearched by the Bohemian cuſtom-houſe officers. In the road from hence to the pretty town of Jenkow, you have a delightful proſpect of a fine level country on each ſide, which is interſperſed with above fifty little villages and ſmall towns. Dzaſlow, which is ſix miles farther on this road, is alſo a very pretty town, and has a large ſquare market-place.

Melnic, a ſmall royal jointure town, is ſeated on an eminence in the circle of Bunzlau, near the conflux of the Elbe and Moldau; it has a collegiate church, and is defended by a caſtle.

Konigingratz, a royal jointure town in the circle of the ſame name, is ſeated on the Elbe, and is a biſhop's ſee, ſuffragan to the archbiſhop of Prague. The town is pretty large, and has a college of Jeſuits, and a commandery belonging to the knights of the Teutonic order. It has been ſeveral times beſieged and taken.

Pardubice, a royal town in the circle of Chrudim, is fortified, and its citadel is a fine ſtructure. The town is well built, and the inhabitants make excellent blades for ſwords and knives. This town has the privilege of holding fairs.

Crumau, or Crumlow, a well built fortified town, ſeated on the river Moldau. It has a beautiful citadel and college of Jeſuits. This town, with the ſeigniory annexed to it, bears the title of a dutchy.

Elnbogen, a royal borough, ſeated together with its citadel, on a high and ſteep rock, by which it is alſo environed. The river Eger, which ruſhes by the left ſide of this rock, here forms a curve reſembling an elbow; and hence the town receives its name. The way which leads to it is very narrow, but it has ſometimes been beſieged and taken.

Five miles to the eaſt of Elnbogen is Carlſbadt, or Charles's Bath, which is famous for its medicinal wa-

ters, of which there are two ſorts, that differ both in heat and ſtrength, and are diſtinguiſhed by the names of the Sproudel and the Muhl bath, the firſt of which are boiling hot, and the latter little more than luke-warm. They are both bathed in and drank, and on ſeveral occaſions at one and the ſame time. They were firſt diſcovered in the year 1370, and take their name from the emperor Charles IV. They are recommended for many diſeaſes, particularly the gravel and barrenneſs in women. Several eminent phyſicians have wrote upon them, and on the manner in which they ought to be uſed. The method of drinking them is very diſagreeable; for let the weather be ever ſo hot, the patient is obliged to be ſhut up in a room heated with a ſtove, and to drink two or three large pots of water hotter than thoſe of the king or queen's bath in Somerſetſhire, and to walk about while the ſweat trickles down in drops. For this reaſon, people ſeldom ſtir out till three or four hours after they have drank the waters; and the reſt of the day it is abſolutely neceſſary to walk about, to prevent ſleeping, which after dinner is dangerous: yet the walks are narrow, and afford no proſpect but of barren rocks, except only one ſquare place planted with rows of lime-trees, oppoſite to which is a great houſe, which has fine rooms, in which thoſe who drink the waters play, dance, or walk from five to eight o'clock, the hour of ſupper. Theſe baths are frequented by abundance of foreigners, and particularly the nobility and gentry of Auſtria, as well as thoſe of Bohemia; but whoever would be well accommodated, muſt bring his own bed, wine, and cook with him.

The town itſelf is divided into two parts by the river Tappel, which runs through it; but it is a dirty place, chiefly inhabited by artificers in iron, whoſe works are very neat, and extremely cheap.

Carlſtein is a celebrated citadel that ſtands on a mountain about fifteen miles diſtant from Prague. It is ſtrong both by art and nature, and was built by Charles IV. to be the depoſitory of the regalia of the kingdom. In it is a well two hundred and forty-four feet deep. It was beſieged by the Huſſites in the year 1422, from the twenty-eighth of May to the eleventh of November, but without ſucceſs.

Leutomeritz is a conſiderable town on the Elbe, thirty-five miles to the north-weſt of Prague, and is a biſhop's ſee ſuffragan to the archbiſhopric of Prague. It was garriſoned with French forces by the late emperor Charles VII. but was taken by the troops of the queen of Hungary in 1742.

The laſt town we ſhall mention in Bohemia is that of Egra, or Eger, the principal place in a territory of the ſame name It is a beautiful and well fortified town, ſituated on the riger Eger: it has a college of Jeſuits, and three cloiſters. This town retains its antient rights and privileges, and particularly that of coining money, which, however, paſſes only within its own diſtrict. From the judicial ſentences of the town-council an appeal lies only to the king. Egra has been frequently beſieged and taken: in the year 1742 the French made themſelves maſters of it, and kept it till the next year, when, after a long blockade, they were obliged to ſurrender. In the town are a number of ingenious artiſts, and its mineral waters are very famous.

Upon the roads in this country the traveller ſeldom fails of meeting with good proviſions in the inns, as ducks, capons, pheaſants, partridges, and hares; but the lodging is far from being anſwerable to the other entertainment, it being generally only ſome clean ſtraw ſpread on the floor, with a bolſter or pillow for the head. In the houſes of the peaſants there is a place walled in behind the ſtove, to which they aſcend by a few narrow ſtone ſteps, as into a cock-loft, and in this warm apartment ſleep away the cold winter nights very comfortably.

SECT. IV.

Of the Marquiſate of MORAVIA.

Its Situation, Extent, the Face of the Country, its Climate, Produce, and Rivers: the Manufactures and Religion of the Inhabitants; with the principal Places in this Marquiſate.

THE marquiſate of Moravia is bounded on the north by Glatz and Sileſia, on the eaſt by Sileſia and Hungary, on the ſouth by Auſtria, and on the weſt by Bohemia; and receives its name from the river Morava, or March. It is a hundred and twenty-eight miles in length from eaſt to weſt; and where broadeſt, about ninety-two from north to ſouth. Towards Hungary, Sileſia, and Bohemia, it is partly ſurrounded by mountains, and partly by woods. Above half of this country is mountainous and woody, and in the level tracts are many moraſſes, bogs, and lakes, where the water is unwholeſome.

The air on the mountains is rough and ſo cold, that in many places the inhabitants uſe a ſtove for the greateſt part of the whole ſummer. However, more corn grows here than is conſumed by the inhabitants; here is alſo plenty of flax and hemp, nor are fruit-trees and garden-plants wanted. It likewiſe produces good ſaffron, and ſome white and red wine, particularly in thoſe tracts that border on Auſtria and Hungary. Their paſture is good and feeds great numbers of cattle, and the extenſive foreſts afford great plenty of veniſon, wolves, bears, and a ſpecies of leopards of the ſize of dogs; there are alſo ſome beavers. Theſe foreſts likewiſe afford the inhabitants an opportunity of procuring a great deal of honey and wax by the breeding of bees.

In this country are quarries of marble amethyſts, a kind of baſtard diamonds, and other minerals; as alſo allum and mines of iron. This country likewiſe produces ſulphur, ſaltpetre, and vitriol: here are wholeſome mineral waters, and ſome acid ſprings.

The Oder riſes in the circle of Olmutz, in this country. The river March, or Mora, or in Latin Morava, riſes in the county of Glatz, and running from north to ſouth, at length forms the limits between Hungary and Auſtria; but this river is not navigable. Theſe and other ſmaller ſtreams, as well as the lakes, yield various kinds of fiſh.

The ſciences at preſent begin to flouriſh here. The principal commodities of the country are the cloth manufactory, iron-works, and glaſs-houſes; the making of paper, gunpowder, &c. but the commerce of the inhabitants is very inconſiderable.

Chriſtianity was ſettled here ſo early as in the eighth century; but in the fifteenth this country bore a conſiderable part in the commotions of the Huſſites in Bohemia, and many embraced their opinions and called themſelves Moravian Brethren; but in the ſixteenth century moſt of them were obliged to fly. There are here at preſent not only ſome of them, but a few Lutherans and Calviniſts, who make an external profeſſion of conformity with the Romiſh church, though they privately hold ſeparate aſſemblies, and, as opportunity offers, frequently fly to Proteſtant countries. Of late a new ſpirit of reformation appeared among the former, and a great number of converts, headed by a late count of Zinzendorf, have not only ſettled in England and ſeveral parts of Europe, but have removed for the ſake of liberty to the Britiſh American plantations.

The whole marquiſate is ſubject to the eccleſiaſtical juriſdiction of the biſhop of Olmutz, who ſtiles himſelf duke and prince of the holy Roman empire, and count of the royal Bohemian chapel, having formerly had a voice at the diets of the empire. He is at preſent immediately under the pope, and the epiſcopal conſiſtory, which is the only eccleſiaſtical judicatory in all Moravia, enjoys the ſupreme juriſdiction over eccleſiaſtical perſons.

Moravia contributes towards the maintenance of the military ſtate of the Auſtrian hereditary countries, the annual ſum of one million eight hundred and fifty-ſix thouſand four hundred and ninety florins.

The whole marquiſate is divided into ſix circles, each of which has its circle-captain, whoſe authority extends to the quartering, marching, and maintenance of the ſoldiers.

The principal towns in Moravia are,

Olmutz, the capital of the marquiſate and of the circle of the ſame name, and the reſidence of the biſhop, whoſe caſtle is a place of conſiderable ſtrength, it being wholly ſurrounded by the river March. This town is populous and well built; it contains twenty-ſix churches, among which the cathedral church of St. Wenzel is worthy of notice, with five chapels, ſeven monaſteries, and two nunneries, one college of Jeſuits, an univerſity, a riding-academy, ſeveral hoſpitals, and an orphan-houſe. The city has been frequently beſieged, and in 1741 was blocked up for ſome months by the Pruſſians.

Kremſier, a well built walled town, ſeated on the river March, and belonging to the biſhop of Olmutz. It has a collegiate church dedicated to St. Moritz, a college, ſeveral cloiſters, and a mint. The large and beautiful palace in which the biſhop uſually reſided was burnt down in the year 1752, together with the archives, the ſuburbs, and fifty-five burghers houſes.

Brunn, or Brinn, is a royal borough in the circle of the ſame name. The town is not very large, but is well built, populous, and well fortified. It has the greateſt trade of any place in Moravia, and is the ſeat of the royal courts of juſtice and the diets. The biſhop has a palace here, and within the town is alſo a college of Jeſuits; ſix cloiſters, among which is that of the Auguſtin hermits near St. Thomas's church, which is particularly famous for an image of the Virgin Mary, which they pretend was made by St. Luke. This place has ſometimes been beſieged and blocked up, but never yet taken.

Znain, or Znogma, a royal borough, ſituated in a pleaſant ſpot near the river Teya; it is well built, and has a citadel, four cloiſters, and a college of Jeſuits. There are many vineyards in its neighbourhood that afford a palatable wine. It has been ſeveral times taken and retaken during the civil wars of Germany.

Iglau is a pretty large well built and populous town in the circle of the ſame name, ſeated on the river Iglau. It contains a college of Jeſuits, with a Dominican and Franciſcan monaſtery, and carries on a trade in beer and coarſe woollen cloth. It has frequently been beſieged and taken, and in the ſixteenth century was the firſt of all the royal boroughs that embraced the opinions of Luther.

CHAP. XI.

Of the Dutchy of SILESIA and the County of GLATZ.

SECT. I.

Its Situation, Extent, Mountains, Climate, Foſſils and Minerals, Vegetables, Animals, and Rivers.

SILESIA is bounded on the eaſt by Poland, on which ſide the country is wholly level and open; to the ſouthward it is ſeparated from Hungary by a chain of mountains and a wild thicket, in ſome parts a German mile broad, and in others more or leſs: this thicket properly belongs neither to Sileſia nor Hungary, though both countries have frequently attempted to make it their own; but it ſtill remains a natural and impenetrable barrier both to Sileſia and Hungary. Towards the weſt Sileſia joins Moravia, Bohemia, Luſatia, and the county of Glatz. From the two firſt it is ſeparated by a chain of mountains, but towards Luſatia it is level and open. To the northward it borders on Brandenburg, on which ſide it is likewiſe level and open.

It extends in length from the north-weſt to the ſouth-eaſt about two hundred and twenty-eight miles, and about a hundred where broadeſt; but it is much contracted at both ends.

Sileſia is encompaſſed on the weſt and ſouth by a chain of mountains, which, with reſpect to their height and extent, are ſome of the moſt remarkable in Europe, and is called by different names in the different countries by which it extends. In theſe mountains, and all over that part of Upper Sileſia that lies towards Moravia and Hungary, the winter ſets in earlier, is much more ſevere, and of longer continuance than in the plains. At the time when the country at the foot of theſe mountains is covered with ice and ſnow, the trees at Breſlau are in full verdure.

The inhabitants of the mountains are not only confined to their houſes by the ſnow, but like the Laplanders and people of Carniola, they uſe a kind of ſkates, by the help of which they paſs over the ſnow with amazing ſwiftneſs.

In the mountains are found agate, jaſper, and even amethyſts of an uncommon hardneſs and beauty, and alſo cryſtals. They afford quarries of ſtone, and in ſome parts is pit-coal, while others afford turf for fuel. There are ſome mines of ſilver; vitriol is found in ſeveral places, and in others are mines of copper, lead, and iron.

The ſandy parts of the country in the principality of Glogau, and beyond the Oder towards Poland, with the mountains tract, which is of conſiderable extent, produce little corn; but this deficiency is compenſated by the fertility of the other and larger part of Sileſia, which affords plenty of wheat, rye, barley, and oats, and alſo Turkey wheat, ſpelt, buck-wheat, millet, linſeed, peas and beans. Several parts of the country produce excellent culinary vegetables, and afford plenty of fine fruit; even ſuch ſpots as are unfit for tillage, either make good paſture grounds, or are covered with wood; ſo that there is ſcarce any part of Sileſia that can be ſaid to be entirely uſeleſs and barren. Here is abundance of flax, and ſome hemp; but not ſo much of the latter as is ſpun, conſiderable quantities being imported from Hungary and Poland. The country produces plenty of hops, and madder is cultivated with ſuch ſucceſs, as to form one of their moſt conſiderable exports: there is alſo great plenty of a yellow dye, and likewiſe plantations of tobacco; but the ſaffron of this country is not very good.

In the mountains, and in Upper Sileſia, pitch, tar, and reſin are made from the pine, fir, and beech, and the larch tree yields turpentine. From theſe reſinous trees, the inhabitants among the mountains make a kind of lamp-black.

Their breeding of horned cattle extends no farther than is juſt neceſſary for the plough, and a ſufficiency of milk, butter, and cheeſe; and their oxen are ſtill fewer in number, on which account the markets are principally ſupplied from Hungary and Poland. The moſt famous of theſe ox markets are thoſe of Brieg, Breſlau, and Schweidnitz, where formerly at the annual fair, it was not uncommon to ſee ten, twelve, or fifteen thouſand head of Hungarian and Poliſh cattle, and ſometimes more. There are here bred many fine ſtout horſes; but not enough to ſupply the country, great numbers being bought at Francfort fair, and brought likewiſe from Lithuania. The inhabitants of the hilly country keep goats, and eſtimate the profit of two good ones to be equal to that of a cow; a great deal of cheeſe being made of their milk. The breeding of ſheep is alſo very profitable, on account of the excellency of their wool. Theſe ſheep are ſheared twice a year; but the ſummer wool is reckoned preferable to that of winter, though ſomewhat lighter. As to veniſon and game, ſome parts enjoy a tolerable plenty, while in others they are ſcarce.

The wild beaſts of this country that are only valued for their ſkins are lynxes, which frequent none but the mountainous parts, foxes, weazels, otters, and beavers, but in no great number.

The breeding of bees in this country is not ſo conſiderable as to anſwer the conſumption of honey and wax, on which account great quantities of both are imported from Poland; but their culture of ſilk is in a fair way of being carried to its utmoſt extent.

With reſpect to fiſh, in the Oder are caught ſturgeon and ſalmon, the former of which are ſometimes of prodigious ſize, ſkate, lampreys, &c. The other rivers, and eſpecially the lakes and ponds, abound with various kinds of fiſh, as pike, carp, trout, mullets, &c.

As to the rivers of Sileſia, the Oder has its ſource in Moravia; but is not of any conſiderable ſize till it reaches Sileſia, which it traverſes nearly from end to end, and at Ratibor it becomes navigable. Its banks are generally low and ſandy; ſo that it frequently overflows them to the great detriment of the adjacent country. Into it run all the leſſer ſtreams, as the Oſter, the Elſe, the Neiſs, the Ohlau, the Stober, &c. The Viſtula and Elbe have their ſource in this dutchy, the former iſſuing from three ſprings ſituated among the lofty mountains in the principality of Teſhen, on the frontiers of Poland. The ſource of the Elbe, though generally placed in Bohemia, lies in the Giant's mountain, in the principality of Jauer.

SECT. II.

The Number, Language, and Religion of the People. Their Learning, Manufactures, and Commerce.

THE number of people in Sileſia exceeds a million and a half; theſe are chiefly compoſed of Germans, Poles, and Moravians. With reſpect to the language, German is ſpoken by moſt of the inhabitants, though in Upper Sileſia, and beyond the Oder, the Sclavonic is very common, and in ſome places bears a nearer affinity to the Poliſh, and in others to the Moraviah.

The inhabitants are of different religious ſects. His majeſty king Frederic II. at the peace of Berlin in 1742, promiſed that the popiſh religion ſhould be tolerated, though without detriment to the freedom of conſcience of the proteſtant inhabitants, or to his own prerogative as ſovereign. This promiſe has accordingly taken place, and all parties enjoy a perfect liberty of conſcience. The greateſt number of papiſts are in the dioceſe of Breſlau. This dioceſe is divided into four archdeaconries, namely, thoſe of Breſlau, Glogau, Oppelen, and Lignitz, which, excluſive of the cathedral of Breſlau, comprehend under them ſeven collegiate churches, with ſeventy-ſeven archpreſbyteries, ſixteen priories, five hundred ſeventy-ſix pariſhes, and eighty-ſix convents; that is, ſixty-eight of monks, and eighteen of nuns; but ſeveral of theſe are exempt from the biſhop's juriſdiction. All eccleſiaſtical benefices here, not excepting the ſee of Breſlau, are in the king of Pruſſia's gift.

The reformation in Sileſia began to be introduced by the principality of Lignitz, in 1522, under the auſpices of Frederic II. duke of that principality, and ſoon extended from thence into the principality of Brieg. The city of Breſlau, which had before ſequeſtered ſome lands belonging to monaſteries towards charitable uſes, likewiſe embraced Lutheraniſm; and its example was followed by the city of Schweidnitz, and ſeveral other places, till by degrees the reformation became propagated all over Sileſia.

In 1609, the emperor Rodolphus II. granted to the princes, ſtates, and vaſſals who had embraced Lutheraniſm, both in Upper and Lower Sileſia, the free exerciſe of their religion; confirmed them in the poſſeſſion of their churches, ſchools, and conſiſtories, and permitted them to build others: but, on that emperor's deceaſe, violent meaſures were uſed to bring back the Lutherans to popery. The treaty of Prague in 1635, ſeemed to promiſe them quiet and ſafety; but theſe bleſſings were of ſhort duration; however, it was ſtipulated by the peace of Weſtphalia in 1648, that the princes of Sileſia, profeſſing the Augſburg confeſſion, ſhould continue poſſeſſed of their former privileges, and the free exerciſe of their religion, in the ſame manner as before the war. His imperial majeſty by that peace permitted the counts, barons, gentlemen, and vaſſals of Upper Sileſia profeſſing the Augſburg confeſſion, to perform divine worſhip in the neighbouring places, and the proteſtants of Schweidnitz, Jauer, and Glogau, were allowed to build three churches. The Lutherans, however, not only loſt the above-mentioned duchies, and the city of Breſlau, with their churches, excepting only the three they had been allowed to build; but their oppreſſions were ſoon renewed, and too many were prevailed on by perſecution to embrace popery. This fell heavieſt on the Lutherans in Upper Sileſia, who had many German miles to go to the neareſt Lutheran church, and in ſome places above eighty Engliſh miles. However, by the protection of Charles XII. the religious ſtate of the Lutherans in Sileſia was much amended; for that monarch, in a convention concluded between him and the emperor Joſeph, in 1707, obtained for them, beſides other religious liberties, licence to build ſix new churches, and the reſtitution of one hundred and eighteen more, which had been taken from them; by which means they became poſſeſſed of three hundred twenty-five churches, to which one was afterwards added under the emperor Charles VI. Theſe benefits were conferred by an act of ſtate at Breſlau in 1709; but they coſt the Lutherans four millions eighty-ſeven thouſand florins, partly as a loan to the emperor, and partly as a free gift. At length, under the government of the king of Pruſſia, they were granted a perfect liberty of conſcience, with permiſſion to build new churches under the title of houſes of prayer, which have increaſed to the number of two hundred and thirty. But when the benefices are in the hands of the popiſh clergy, the Lutherans pay ſurplice fees to the incumbents, though the miniſterial functions are performed by miniſters of their own ſect. On the other hand, in Lignitz, the papiſts pay the pariſh dues to the Lutheran miniſters, as the eſtabliſhed incumbents.

The Calviniſts had alſo formerly the free exerciſe of their religion, and were poſſeſſed of churches in different parts of the country; but the papiſts gradually ejected them. After the convention in 1707, in which no expreſs mention was made of them, they petitioned for the reſtitution of their churches; but though they did not want mediators, this proved ineffectual. Frederic II. has, however, granted them the privilege of public worſhip at Breſlau, and many other places.

The Huſſites have alſo ſome congregations in Sileſia, and ſome of theſe being Lutherans, and others Calviniſts, each ſect has its diſtinct paſtor. The Hernhuthers, or Moravian brethren, obtained a grant in 1742, from king Frederic II. to ſettle in Sileſia, with entire freedom of conſcience, and public worſhip. Their miniſters in ſpiritual and eccleſiaſtical affairs acknowledge no conſiſtory, as being under the king's immediate protection, and in religious matters ſubject only to their biſhop. At Breſlau is likewiſe a Greek church, and the Jews are permitted their ſynagogues.

Sileſia has ever been famous for producing men of learning, of whom ſome have eminently diſtinguiſhed themſelves. At preſent all kinds of learning are greatly encouraged, eſpecially among the Lutherans.

The principal manufactures in Sileſia are of flax, thread, twine, linen and damaſk. The printing of linen in water and oil colours, is in ſome places carried to great perfection; beſides which, canvas and buckrams of ſeveral kinds are made of thread and worſted. The plain ſtriped and flowered veils, with a mixture of red Turkiſh thread, are made in this country of ſuch fineneſs, as to ſell for four florins and upwards a German ell. Lace is alſo made here of tolerable fineneſs, and more paper is made in Sileſia than can be uſed by the inhabitants. Strong woollen cloths are made in many places. Here are likewiſe manufactures of linſey woolſey ſerge, druggets, plain and figured fuſtians, pluſh, callimancoes, and all other ſtuffs; as alſo cottons, ginghams, ſtockings and hats. The dreſſing of leather is likewiſe well underſtood. There are many glaſs-houſes, and in no country is glaſs more exquiſitely poliſhed and cut. In Sileſia are alſo a great number of powder-mills, iron-mills, and manufactures of that metal.

The principal exports of this dutchy are thread, yarn, linen, veils, wool, woollen cloths and ſtuffs, paper, madder, and mill-ſtones. The Sileſian merchants likewiſe deal largely in wax, honey, hides, leather, and furs, which are for the moſt part brought from Poland, Hungary, and Ruſſia.

On the other hand, they import horſes, oxen, Poliſh wheat, and rock-ſalt, with wines, chiefly from Hungary, Auſtria, the countries about the Rhine, and France; ſpices, drugs, ſeveral manufactures, and other commodities are alſo imported. Since Sileſia has fallen under the dominion of Pruſſia, ſeveral excellent regulations have been made, by which commerce has been conſiderably improved.

SECT. III.

A conciſe View of the Manner in which the greateſt Part of Sileſia became ſubject to the King of Pruſſia. Its Arms and Government.

WITH reſpect to the hiſtory of Sileſia, it ſeems only neceſſary to obſerve here, that the death of the emperor Charles VI. in 1740, produced great changes in that dutchy; Frederic II. king of Pruſſia, laying claim to the following diſtricts: firſt, to the principality of Jagerndorf, which in 1524 was purchaſed with the approbation of Lewis king of Bohemia and Hungary by George margrave of Brandenburg, from the houſe of Schellenberg, and bequeathed by him to his ſon George Frederic, from whom, by agreement, it devolved to Joachim Frederic, elector of Brandenburg, who left it to his ſon John George, whom the emperor Ferdinand II. put under the ban of the empire, in 1623, by which he loſt the principality of Jagerndorf, which the emperor conferred on the prince of Lichtenſtein. Indeed the elector Frederic William, in 1686, renounced his claim to it, in conſideration of his enjoying the circle of Schwibus; but this, in 1695, his ſon Frederic reſtored to the houſe of Auſtria, in lieu of the ſum of two hundred and fifty thouſand florins: but king Frederic II. maintained by ſeveral arguments, that theſe ceſſions were invalid. Secondly, to the principalities of Lignitz, Brieg, and Wolau, by virtue of a compact of inheritance entered into, in 1537, between Frederic, duke of Lignitz and Brieg, and Joachim II. elector of Brandenburg, by which the former was impowered to ſeize it by virtue of the privileges granted the kings of Bohemia in ſeveral diſtant periods, notwithſtanding the emperor Ferdinand I. in 1546, had declared ſuch compact of inheritance void.

Theſe principalities had therefore been unjuſtly withheld from the electoral houſe of Brandenburg, ever ſince the failure of the dukes of Lignitz. The above claims were ſo effectually ſupported by the march of an army into Sileſia, that Maria Thereſa, queen of Hungary and Bohemia, for ever ceded to the king of Pruſſia and his heirs and ſucceſſors, the countries of Upper and Lower Sileſia, together with the diſtrict of Katſcher, formerly belonging to Moravia, as alſo the county of Glatz, reſerving however to herſelf ſome parts of Upper Sileſia. On the other hand, the king of Pruſſia for himſelf and ſucceſſors renounced all demands on the queen of Hungary, and took on himſelf the diſcharge of the Sileſian debt due to the ſubjects of Great Britain, Holland, and the ſtates of Brabant. The ſame year the limits between Pruſſian and Auſtrian Sileſia were ſettled and diſtinguiſhed by fixing up a hundred and thirty-eight pillars, with plates of lead affixed to them.

This peace was, however, interrupted by a new war, which broke out in 1744; but was terminated by the treaty of Dreſden on the twenty-fifth of December, 1745, wherein thoſe of Breſlau and Berlin, with the convention of 1742, were renewed and ratified. The year 1756 produced the third Sileſian war, in which the king of Pruſſia, aſſiſted by Great Britain, oppoſed the whole power of the houſe of Auſtria, aſſiſted by France and Ruſſia; and, after giving amazing proofs of his courage and conduct in defeating the numerous armies of his powerful enemies, brought them to conclude a peace in 1763.

The king of Pruſſia ſtiles himſelf ſovereign and ſupreme duke of Sileſia; and by the treaty of Berlin the queen of Hungary and Bohemia has alſo retained to herſelf and heirs the title of ſovereign dutcheſs of Sileſia.

The arms of this dutchy are or, an eagle crowned, ſable, with a creſcent argent on its breaſt, the ends of which are ſometimes in the form of an acorn, and ſometimes reſemble little croſſes.

Sileſia was never immediately connected with the government of the empire; for it never was an imperial fief, nor obtained a ſeat or vote in the diet; and as it has never been ſubject to the ſupreme tribunals of the empire, the imperial laws are there of no force. While Sileſia was annexed to the crown of Bohemia, the commiſſioners of the ſovereign uſed to lay before the diets of the princes and ſtates demands of pecuniary ſupplies, which were taken into conſideration, and the reſolution of the diet made known to the commiſſioners, and to all the principalities and towns, by their reſpective deputies: upon which meetings were held in each principality to deliberate on the means of raiſing the quota each ſeparate principality was to pay towards the ſum agreed to at the general diet; and this, one year with another, amounted to at leaſt two millions twenty thouſand florins. The collectors of the princes and ſtates remitted the proportions paid by each principality to the general ſubſidy-office at Breſlau, which was dependent on thoſe princes, and paid the money ſo received to the ſovereign's treaſury or war-office, or to the treaſurer of the houſhold.

This method of taxation, together with the ſubſidy-office, and the diets, were, however, abrogated by king Frederic II. and two war and domain treaſuries are erected at Breſlau and Glogau, for the management of the ſeveral branches of the public revenue. The exciſe is on the ſame footing with that in the more ancient dominions of Pruſſia, and is limited to the walled towns; but the contributions of the open towns, villages, and ſeats, are fixed, and continue at the ſame height both in peace and war. Every principality, and every circle into which it is divided, receives notice of its annual and monthly contingents payable to the contribution. The two war and domain-offices, each of which has its preſident, directors, counſellors, and other officers, ſuperintend the contributions; cauſe them to be duly received and accounted for by the office of the receiver-general, and in the particular receivers offices of the principalities; take care that ſuch regularity be obſerved, as that the contributional and ſubſidial aſſeſſments may be laid and reviſed in the ſame preciſe manner; and that the ſeveral ſums notified for collection, and duly paid every month into the offices of the provincial receivers, be from thence remitted to the receiver-general's offices at Breſlau and Glogau.

Lower Sileſia annually pays one million one hundred eighty-one thouſand and forty-four rixdollars, according to fixed and invariable regulations; but we have no exact account of the amount of the contributions in Upper Sileſia. It is, however, generally ſuppoſed, that all Pruſſian Sileſia, in conjunction with the county of Glatz, the produce of the domains, regalia, exciſe, contributions, ſalt-works, the duty on ſtamped paper, which is much eaſier now than formerly, and the rights of the ſovereignty all included, bring in annually above four millions of rixdollars. As to that part of Sileſia which belongs to the houſe of Auſtria, it was in 1743 obliged to raiſe a hundred and eighty-ſix thouſand rixdollars.

With reſpect to the laws and courts of juſtice, it is proper to obſerve, that the king of Pruſſia, in his part of Sileſia, has erected three ſupreme courts, which are thoſe of Breſlau, Glogau, and Brieg, each of which has a particular diſtrict. They take cognizance of all civil and criminal cauſes, hear appeals from the inferior courts, and from the judgments of the magiſtrates of particular towns.

The principal rules of proceeding in theſe courts, are contained in the *Codex Fredericianus*, the royal ordinances and reſcripts, and Brachvogel's Collection of the imperial pragmatic ſanctions; beſides which there are certain particular

particular conſtitutions in every principality and lordſhip, and even in every town.

The princes, ſtates, and the city of Breſlau, have their own regencies and courts, both in civil and penal cauſes, from which an appeal lies to the above ſupreme courts. The deputies of the princes and ſtates aſſemble twice a year at Breſlau, and, together with the ſupreme court of that city, decide all conteſts that have ariſen among the princes and ſtates concerning a principality, ſtate, or any tract of land belonging to them; but a party who thinks himſelf aggrieved may apply to the king in perſon. The princes when ſued on account of the rights and properties of others, or in diſputes between themſelves and their vaſſals, muſt ſtand trial before the ſupreme court. As to the inferior lordſhips, and other country corporations, with the upper and lower courts, they are held without any moleſtation, except that in capital or penal caſes, they require the royal confirmation.

The Lutheran churches and ſchools are under the inſpection of the upper-conſiſtories at Breſlau, Glogau, and Brieg, with right of appeal to the tribunal at Berlin. The members of theſe conſiſtories are the preſidents and counſellors of the above ſupreme court, with an eccleſiaſtic to each; but the principality of Oels and the city of Breſlau have their own diſtinct conſiſtories: but church affairs among the papiſts are cognizable by the biſhop's court at Breſlau; from whence alſo appeals lie to the tribunal of Berlin.

Sileſia is divided into Upper and Lower; and, according to Mr. Buſching, contains, excluſive of the county of Glatz, a hundred and ſixty-nine cities, and four hundred and ſeventy-ſix villages. We ſhall begin with Lower Sileſia, the greateſt part of which is ſubject to the king of Pruſſia, and contains thirteen principalities.

SECT. IV.

Of the principality of Breſlau, with a particular Deſcription of its Capital.

THE principality of Breſlau, or Breſlaw, excluſive of the circle of Namſlau, which, though belonging to it, lies ſeparate, is bounded on the north by the principalities of Oels and Wolau, on the weſtward by thoſe of Lignitz and Schweidnitz, on the ſouthward by the principalities of Schweidnitz and Brieg, and on the eaſtward by Brieg and Oels.

This principality is every where flat and level, and the parts near the Oder and other rivers either ſandy or ſwampy. It is, however, an excellent corn country, and not deſtitute of rich paſtures, the Namſlau circle alone excepted; but this abounds in timber and wood for fuel, which are ſo ſcarce in the other circles, that the country people uſe ſtraw, with the ſtalks of thiſtles and burdoc, as alſo thoſe of ſun-flowers and potatoes, and in many places willows are planted merely for burning.

In moſt parts they have good cattle and ſheep, and particularly cows of a very extraordinary ſize. The neighbourhood of Breſlau produces great quantities of madder, and the rivers are well ſupplied with fiſh. The roads, however, are very bad, and, where the ſoil is black, are ſcarce paſſable in wet weather, and for want of timber and quarries of ſtone cannot be repaired without great difficulty and expence. The city of Breſlau, in order to facilitate its intercourſe with other places, has cauſed ditches to be dug along the ſides of the roads, and the roads themſelves to be paved with ſtones; a work of ſeveral years labour. Some of theſe ditches are not leſs than a mile in length, and the keeping them in repair is an annual charge of ſome thouſands of dollars.

The principality of Breſlau is divided into four circles; of theſe the circle of Breſlau contains nine cities and two market-towns; and if the villages are not very large the deficiency is made up by the great number of them, they being every where placed within cannon-ſhot of each other.

The city of Breſlau, or Breſlaw, the capital of this circle, and of the whole dutchy of Sileſia, is ſituated on the Oder, which on the north ſide runs cloſe by the walls, and in that part receives the Ohlau, after its winding courſe through Old Breſlau. The preſent old city was formerly encompaſſed by this laſt river, as with a moat, all without the Ohlau to the walls of the city being additions made by the emperor Charles IV. The ſeveral parts comprehended under the name of Breſlau are collectively of great extent; for, including the ſuburbs, the whole circumference is not leſs than nine Engliſh miles. The fortifications of the city are of no great importance. It has ſeveral large and regular ſquares; the main ſtreets are broad, and, beſides many noble edifices, it contains a number of very elegant houſes and other private buildings. The part called the Dominſel, though lying without the circuit of the town, is defended by low walls ſtrengthened with baſtions, and in it ſtands the cathedral of St. John, which in 1759, together with the deanery, was deſtroyed by fire. In the ſame part is alſo the biſhop's library, which forms a particular building; the abbey of the Holy Croſs; three or four ſmall churches; the biſhop's palace, which is a very ſpacious ſtructure; the dwellings of the prebends, ſome of which have very beautiful gardens; and the electoral hoſpital for poor children of both ſexes.

In the ſuburb called the Sandinſel, which lies before the Sand gate, is St. Mary's church, a very beautiful building; a ſplendid convent, with a large library, belonging to the regular Auguſtin canons; St. James's church, which belongs to an Auguſtin nunnery; and St. Ann's, belonging to the canons of St. Mary. Near the Sand gate is the monaſtery of St. Vincent, and adjoining to it the magnificent nunnery of St. Clare. Near theſe fine ſtructures is the beautiful abbey of St. Matthias, with a pariſh church, and a valuable collection of books belonging to the prebends of the Red Star; and in the ſame ſtreet is St. Agnes's church and an Urſeline nunnery. The Jeſuits college, with its ſplendid church, ſtands on the ſite of the caſtle, which was once the reſidence of the dukes of Breſlau; but the emperor Leopold gave it to the Jeſuits.

The other popiſh churches and convents in the city are, the Franciſcan, dedicated to St. Anthony, to which is alſo annexed a regular built church; St. Hedwiga's, which belongs to a Capuchin convent that ſtands behind it; St. Dorothy's, which is in the poſſeſſion of the Minorites; the parochial church of the Holy Corps, belonging to the Johannites commandery, which faces it; the parochial church of St. Adelbert; the beautiful chapel of St. Ceſlaus; St. Joſeph's, which belongs to another Dominican convent; with the nunnery of St. Catharine. To theſe are to be added, the manſion-houſe of the ſiſters of St. Elizabeth; St. Nickel's church before St. Nickel's gate; St. Maurice's without the Ohlau gate; the ſmall hoſpital church of St. Lazarus; with the church and convent of the Good Men.

The churches belonging to the Lutherans are St. Elizabeth's, which is the principal, and St. Mary Magdalen's, both in the Old Town, and containing valuable libraries; St. Bernardine's in the New Town has alſo a good collection of books; St. Barbara's church is appointed to the uſe of the garriſon. There are alſo three hoſpital churches, and that of St. Chriſtopher's. The Lutheran ſervice is likewiſe performed in a large hall belonging to the houſe of correction. Without the town the Lutherans are poſſeſſed of the church of St. Salvator, which ſerves for the ſoldiery who are quartered without the city, and another church dedicated to the eleven thouſand virgins, without the Oder gate.

The Calviniſts aſſemble in a building on the other ſide the Oder, which was once the general tax-office. The Greek Chriſtians, moſt of whom are Armenians, have a church here, and the Jews their ſynagogues.

The popiſh univerſity, which is under the care of the Jeſuits, is a noble ſtructure. The Lutherans at St. Elizabeth's, and St. Mary Magdalen's, have two flouriſhing academies, each under the direction of eleven profeſſors, with a grammar-ſchool at St. Bernardine's in the New Town. The exchange is a very elegant ſtructure.

The city, beſides a governor, and ſeveral courts of juſtice, has a court of exchequer, a war and domain-office, with thoſe for ſalt, cuſtoms, exciſe, and trade; a college of phyſicians, a mint, &c. Frederic II. granted Breſlau the third place in rank among his capital cities,

that is, to be next to Berlin and Konigſberg. The magiſtracy and conſiſtory are both compoſed of Lutherans. This city is at preſent the center of all the trade in Sileſia, and its inhabitants carry on ſeveral manufactures. It became ſubject to the Pruſſian government in 1741, and in 1757 a ſmall Pruſſian army, commanded by Auguſtus William duke of Brunſwic Bevern, fortified themſelves in this neighbourhood; and, being attacked on the twenty-ſecond of November by a conſiderable body of the Auſtrian forces, made a moſt vigorous defence till the evening; but in the night quitted their camp, and croſſing the Oder, the city ſurrendered to the Auſtrians. However, on the twentieth of December it was retaken by the king of Pruſſia, and the Auſtrian garriſon, which amounted to near one thouſand eight hundred men, made priſoners of war. In the laſt ſiege ſeveral of its churches were damaged, and St. Mary Magdalen's library demoliſhed by the falling of a bomb. The greateſt part likewiſe of the ſuburbs ſuffered extremely, and that part without the Sand gate was entirely burnt down.

SECT. V.

Of the Principalities of Brieg, Schweidnitz, and Jauer; with the principal Places contained in each.

WE now come to the principality of Brieg, which is on all ſides ſurrounded by thoſe of Oels, Breſlau, Schweidnitz, Munſterberg, Neiſs, and Oppeln, except a detached piece which borders on Poland. This is one of the largeſt principalities in all Sileſia, and alſo one of the moſt fertile in grain.

This principality is divided into ſix circles, which contain nine cities and two market towns. The principal place in this principality is,

Brieg, in Latin Brega, the capital of a circle of the ſame name, and of the whole principality, ſtands on the river Oder, and is not only well fortified, but is one of the largeſt, handſomeſt, and moſt conſiderable cities in all Sileſia. It has four ſuburbs, and a very long, lofty, and ſtrong wooden bridge. The caſtle, which was antiently the reſidence of the dukes of Brieg, was burnt down during the ſiege of the city in 1741. On the ſouth ſide of Brieg ſtands the abbey of St. Hedwiga, which is in the poſſeſſion of the papiſts; beſides which here is alſo a Jeſuits college and a Franciſcan convent. To the Lutherans belong the parochial church of St. Nicholas, and they have alſo an academy founded by duke George II. with the church of the Holy Trinity, in which the Poliſh congregation aſſemble. In 1643 this city held out a ſiege againſt the Swedes, but in 1741 the Pruſſians made themſelves maſters of it in four days.

The principality of Schweidnitz borders to the eaſt on the principalities of Brieg and Breſlau, to the northward on thoſe of Lignitz and Jauer, to the weſtward alſo on Jauer, and to the ſouthward on Bohemia and the county of Munſterberg. It is one of the largeſt and moſt populous principalities in all Sileſia, and, in conjunction with the principality of Jauer, is ſuppoſed to form one-eighth of the dutchy.

In this principality are ſeveral very high mountains: it, however, affords a ſufficiency of grain, timber, and fruit; and abounds in game of all kinds; as alſo in cattle and pit-coal. Beſides theſe advantages, it has excellent flax and wool; and the inhabitants are remarkable for their induſtrious improvement of theſe advantages, by carrying on a variety of manufactures. This is chiefly done in the hilly parts of the principality, where its greateſt trade is carried on. It has no large rivers, the principal of them being the Werſtitz, Polſnitz, and Bober.

This principality is under the war and domain treaſuries at Breſlau, and is divided into five circles, the principal towns in which are,

Schweidnitz, the capital of the circle of the ſame name, and of the whole principality, is a ſtrong fortreſs ſituated on the little river Weiſtritz, in one of the moſt delightful ſpots in all Sileſia. Its ſtrength formerly conſiſted in a triple wall; but in 1748, Frederic II. cauſed it to be fortified with regular works of very great ſtrength. The pariſh church is in the hands of the Jeſuits, who got footing in this town in 1629, and are likewiſe poſſeſſed of a college and ſeminary adjoining to it. There are here a Dominican, Minorite and Capuchin monaſtery, with an Urſeline nunnery, all of which have their reſpective churches. St. Michael's church without the lower gate is a commendam of the Red Star prebends of St. Matthias at Breſlau. Without the town is a Lutheran church, the head miniſter of which is inſpector of the churches within the circles of Schweidnitz, Reichenback, and Strigan, and the principality of Munſterberg. The greateſt part of this city was burnt down in the year 1716; but has been ſince rebuilt with much more beauty than before, and all entirely of ſtone; in particular the new town-houſe is a moſt elegant ſtructure. However, in 1757, it was taken by the Auſtrians, after a ſiege of ſixteen days, during which it was in a great meaſure deſtroyed by the bombs, bullets, and fires occaſioned by them; and in 1758, the Pruſſians recovered it, after a ſiege of the ſame continuance.

Reichenbach, the capital of a circle of the ſame name, is ſituated on the little river Peil. In this town is a commandery of the order of St. John, to which belongs the patronage of its parochial church, which is popiſh; and there is here alſo a Lutheran oratory. Without the Frankenſtein gate is a priory dedicated to St. Barbara, and without the Schweidnitz gate, an hoſpital that has a ſmall church. In 1632, this city was pillaged by the Saxons; in 1638 by the imperialiſts, and in 1634, it ſuffered ſtill greater calamities from the Croats. In 1642, it was ſacked by the Swedes, and in 1643, its imperial garriſon demoliſhed upwards of one hundred and forty houſes for fuel. In this town are ſome conſiderable manufactures of fuſtian, linen, and canvas.

The principality of Jauer is bounded on the eaſt by the principalities of Lignitz and Schweidnitz; to the ſouthward, by Bohemia; to the weſtward by Bohemia and Upper Luſatia; and to the northward by the principalities of Glogau and Sagan.

The whole principality is in general mountainous, and is ſeparated from Bohemia to the ſouth and weſt, by a chain of mountains. The Schnee, or Rieſenkoppe, is the higheſt of all the Rieſen or Giant's chain, as well as of all Sileſia. It raiſes its head far above any of the neighbouring mountains, and for the greateſt part of the year is covered with ſnow. Thoſe who have climbed it, compute its aſcent from the foot to the higheſt ſummit, at three German miles, and the reverend Mr. Schilling, late rector of Hirſchberg, is ſaid to have diſcovered, by means of mathematical inſtruments, that its perpendicular height is no leſs than twenty-two thouſand five hundred Rheinland feet; but this account is certainly a miſtake; for was it of ſuch a height, it would be perpetually covered with ſnow, and the cold would be much more intenſe than it really is. Its loftieſt part is a ſteep ſtony rock of conſiderable circumference, upon which is built a chapel, wherein maſs is celebrated five times a year.

This principality does not produce corn ſufficient for the great number of its inhabitants; but its mountains contain various ores, with numerous mines of copper and iron; they are likewiſe covered with wood. This principality yields alſo pit coal and mill-ſtone.

The principal river which traverſes the whole length of the principality from ſouth to north, is the Bober. There are alſo ſeveral little rivers, particularly the Jauerſche water, which paſſes by the town of Jauer, with a gentle current; but is ſometimes ſo ſwelled by the ſnows and rain, as to do conſiderable damage.

This principality has twelve towns, beſides ſome villages in Sileſia, they being four miles in length, and contain many artificers, particularly weavers. The whole principality is divided into four circles. The principal towns, in which are the following.

Jauer, the capital of the circle of the ſame name, as well as of the principality, lies on the Jauerſche water. The houſes in the market-place have a range of piazzas along the front, to ſhelter paſſengers from the rain; but theſe are ſo ill contrived, as to diſguiſe the buildings, and render the fore part of the ground-floor

of little uſe. The pariſh church is popiſh, beſides which here is another ſmall church belonging to the ſame religion, with a Franciſcan convent, that has likewiſe a church, and without the Goldberg gate, the Calviniſts have a church and a grammar ſchool. In 1640, this town was taken by the Imperialiſts ſword in hand, and plundered.

Hirſchberg, the capital of the circle of the ſame name, is ſituated on the Bober, which here receives a ſmall river called the Zaken. This is one of the handſomeſt, moſt populous, and opulent towns in all Sileſia; it having large and well built ſuburbs, in which are beautiful gardens and bleaching grounds, where every year many thouſand pieces of linen, veils, and other works of the loom are whitened. The papiſts have here a parochial church, to which belongs an arch-prieſt, who is inſpector over ſix arch-preſbyteries, and a reſidence of Jeſuits. Without the town the Lutherans have a large and handſome church, and a ſchool, for the grant of both which they paid thirty thouſand ducats as a gift to the emperor, and alſo advanced him a loan of one hundred thouſand florins. This is next to Breſlau, the principal place of trade in all Sileſia, it having a very extenſive commerce for its linens and veils.

The laſt place we ſhall mention in this principality is that of Schmiedeberg, or Smith's-hill, an open free mine town of conſiderable trade, ſeated among hills, that owes its origin to the vaſt quantity of iron ore found in its neighbourhood. Among the inhabitants are many lock and gun-ſmiths, with other artificers in iron. Here is alſo a damaſk manufacture, which makes linen damaſk, with half and whole ſilk damaſks. The town likewiſe deals largely in linen. The parochial church is in the poſſeſſion of the Romans, and there is alſo one belonging to the Lutherans. Formerly few of the inhabitants were free from wens, which was imputed to the vitriolic and ferruginous quality of the water in the mine trenches; as ſince the diſuſe of that water for drinking and dreſſing of victuals, they are become much leſs frequent.

SECT. VI.

Of the Principalities of Lignitz, Wolau, Glogau, Neiſs, Sagan, Trachenberg, and Carolath.

THE principality of Lignitz is bounded by that of Jauer to the weſtward, by the two principalities of Jauer and Schweidnitz to the ſouth; by thoſe of Breſlau and Wolau to the eaſt, and by the principalities of Wolau and Glogan to the weſtward.

The only conſiderable mountains in this principality are the Spitzberge and Gratzberge. The Oder waters it for about nine miles, running along the borders of the principality of Wolau, where it is joined by the Cratzbach, the largeſt river in all the country; but is ſubject to inundations. This principality is very fertile, and contains ſome large woods. There is here a good breed of ſtrong horſes, and the country about the villages near the city of Lignitz produces madder.

This principality is divided into four circles, and contains five towns, the principal of which are,

Lignitz, the capital of a circle of the ſame name, and of the whole principality, is ſeated on the Catzbach, in the fifty-firſt degree twenty-one minutes north latitude, and the ſixteenth degree twenty minutes eaſt longitude. It is walled round, and near the gate of Glogau is the old palace of the princes, which, though within the town, is encompaſſed with a diſtinct moat and high wall. Here the ſtates of the provinces aſſemble in a very ſtately ſtone edifice. The Lutherans have two churches here, one called St. Peter's and St. Paul's, or the Upper church, is ſituated in the Lower Town near Breſlau gate. The papiſts are ſtill in poſſeſſion of the collegiate church of St. John, which in 1698, was taken from the Lutherans, and being given to the Jeſuits, was entirely rebuilt: they have alſo a magnificent college. Beſides theſe, there is a Benedictine nunnery of the Holy Croſs, with its church; the parochial church of St. Nepomuck, and a Franciſcan church and convent. Here is alſo an hoſpital, and a ſpacious academy founded by the emperor Joſeph, for the inſtruction of young gentlemen of both religions, in military exerciſes: Lignitz is one of the moſt ancient towns in all Sileſia, and carries on a good trade in cloths and madder. It has very frequently been deſtroyed by fire, and in 1741, the Pruſſians took it without oppoſition.

Goldberg, the principal town in a circle of the ſame name, is ſituated in a delightful country near the river Catzbach, and is, next to Lignitz, the beſt town in the principality. It is ſuppoſed to have been founded in the twelfth century, and is ſeated on a hill, which within the town is not every where level. The pariſh church here belongs to the Lutherans. In the ſixteenth century it had a celebrated academy kept in a building which had been formerly a Franciſcan convent, and in 1704, it was reſtored to that order; ſo that the Lutherans have only a common grammar ſchool. There is here alſo a commandery of the order of St. John. The Catzbach is a great convenience to the town, yet its overflowing its banks has frequently done it conſiderable damage. This town has alſo ſometimes ſuffered greatly by fire.

Luben, the capital of a circle of the ſame name, is ſituated in a plain, which though ſomewhat ſtony, is not unfruitful. The town is ſmall; but its ſuburbs are large. Of the ancient palace of the princes, little more is now to be ſeen than the walls. Near this palace is a ſmall popiſh chapel. The pariſh church and ſchool are in the poſſeſſion of the Lutherans.

The principality of Wolau is bounded on the ſouth by the principalities of Breſlau and Lignitz; on the weſtward, by thoſe of Lignitz and Glogau; on the northward, it is alſo bounded by the latter, and on the eaſtward by Poland, and the principalities of Trachenberg, Oels, and Breſlau.

The ſoil of this dutchy is for the moſt part either dry, marſhy, or over-run with woods and buſhes; but there are ſeveral tracts which yield good corn.

The Oder traverſes the whole principality from ſouth to north, and on the borders of Lignitz, is joined by the Catſbach, where it likewiſe receives the little rivers of Caltenbach, Juſeritz, and ſeveral other ſtreams which water this principality.

This diſtrict contains ſix circles, and the ſame number of towns, the principal of which is,

Wolau, the capital of a circle of the ſame name, and of the whole principality. It is on all ſides ſurrounded with marſhes, which in wet weather form a natural defence. It has two ſuburbs, named Breſlau and Steinau; and in it is a palace, with a Popiſh church, and a Carmelite convent; but the town church and ſchool are in the poſſeſſion of the Lutherans. In the year 1640, it was taken by the Swedes, and in 1642, ſurpriſed by the Imperialiſts; but ſoon retaken by the Swedes, and in 1644, was recovered by the Imperialiſts.

The principality of Glogau is ſurrounded by Poland, and the principalities of Wolau, Lignitz, Jauer, Sagan, and Croſſen. It produces a great deal of corn and wine, has a ſufficiency of wood, and its wool is wrought into different manufactories; it likewiſe abounds in iron. The Oder waters moſt of the circles in this principality.

It is divided into ſix circles, in which are ſixteen boroughs and four market-towns.

Great Glogau is the capital of a circle, and of the whole principality, and is called Great to diſtinguiſh it from Glogau in Upper Sileſia. It has a handſome caſtle, is well fortified on the ſide of Poland, and has a governor and commandant, who are nominated by the king of Pruſſia; it is the ſeat of ſeveral courts of juſtice, and alſo of the war and domain office, the exciſe office, the military treaſury, the ſubſidy office, and the domain office. It is ſituated on the Oder, fifty miles to the eaſt of Breſlau, and in it is a palace, a popiſh pariſh church, a college of Jeſuits, a monaſtery of Dominicans, another of Franciſcans, and a nunnery of Clariſts, with a Lutheran church and ſchool. It has been frequently almoſt conſumed by fire, and has often been beſieged and taken; but in 1741, the Pruſſians having carried it by aſſault, ſtrengthened its fortifications.

The

The principality of Neiſs, by ſome improperly called the principality of Grotkau, is environed by thoſe of Munſterberg, Brieg, Oppeln, and Jagerndorf, as alſo by Moravia and the county of Glatz. The ſouthern part of this principality is very mountainous, as through it runs the Moravian mountains; but the northern part is both more level and more fertile. Within the circles of Neiſs and Grotkau are bred good horſes, the latter alſo yields tobacco, and in the former is made a great number of iron mills. Its largeſt river is the Neiſs, which runs out of the principality of Munſterberg, and after continuing its courſe for ſome miles from weſt to eaſt, winds away northwards. Moſt of the brooks and rivulets of this country diſcharge themſelves into it. In this diſtrict alſo riſes the Ohlau; the ſource of the Oppa is likewiſe among the mountains of this country.

The whole principality of Neiſs contains under it eleven cities, and as it is within the biſhopric of Breſlau, that biſhop uſually ſtiles himſelf prince of Neiſs, and duke of Grotkau; and, by virtue of this principality, takes place of all the other princes in Sileſia. As part of this principality is ſubject to the king of Bohemia, the biſhop is under two ſovereigns.

Neiſs, in Latin Niſſa, the capital of the circle of the ſame name, and of the whole principality, is a place of great ſtrength, ſituated on the river Neiſs, on the other ſide of which is a hill where king Frederic II. at the ſiege of this city in 1741, raiſed his firſt battery; and in 1743 a Pruſſian fort was erected by order of that prince, who laid the firſt ſtone. The king appoints a governor and commandant; but the biſhop is poſſeſſed of the palace, and has a treaſury, a court of juſtice, a domain and conſtitutional-office. Here is alſo a collegiate church, which is likewiſe the parochial church, dedicated to St. James and St. Nicholas; the abbey of St. Peter and St. Paul, dedicated to the Holy Croſs; a Jeſuits college, two Franciſcan convents, a Dominican monaſtery in the new ſuburb called Frederickſtadt, a Capuchin convent, and a nunnery of the order of *St. Maria Magdalena de pœnitentia.*

The principality of Oels is ſurrounded by Poland and the principalities of Brieg, Breſlau, Wolau, and Trachenberg: its ſoil is ſandy, and not very fertile; and it contains eight cities and one town. It is divided into four circles, the principal place in which is,

Oels, in Latin Olſena, the capital of the ſame name and of the whole principality, is ſituated in a marſhy ſoil on the river Oels. It contains a palace of the prince, with two Lutheran parochial churches, a free-ſchool, endowed with ſalaries for a maſter of languages, a fencing and writing-maſter, and a popiſh church. In 1634 it was burnt by the Imperialiſts, and in 1730 the greateſt part of it was again demoliſhed by fire.

The principal city of Sagan is bounded on the eaſt by that of Glogau, on the ſouth and weſt by Luſatia and the dutchy of Croſſen, and to the northward by that dutchy. It contains large woods and chaces; and, as it abounds in iron ore, has a great number of iron mills. The Queiſz runs through the whole length of the principality, traverſing it from ſouth to north, and in its courſe receives the Bober, the Tſcherna, and the Brieſnitz. It is divided into three circles, and contains three cities and one market-town.

Sagan, the capital of a circle, and of the whole principality, is ſeated on the Bober in a pleaſant country, and has a palace of the dukes, with an abbey and a church of regular Auguſtins; a Jeſuits college, and a Lutheran church and ſchool, for which the Lutherans made the emperor a donation of ten thouſand florins, and lent him fifty thouſand. It has been ſeveral times deſtroyed by fire.

The principality of Munſterberg is environed by the principalities of Schweidnitz, Brieg, Neiſs, and the county of Glatz. It has a good ſoil, and, beſides flax, hemp, and wood, produces hops and all ſorts of grain. Here are likewiſe a large breed of horned cattle and ſheep. To the weſt and ſouth it is very mountainous, the Bohemian chain ending and the Moravian chain beginning there.

In this principality are three boroughs and one market-town; and it is divided into two circles, the principal town of which is that of Munſterberg, the capital of the whole principality, which is ſeated on the river Ohlau, and has an old caſtle of the dukes, with a parochial popiſh church, and another called St. Peter and St. Paul's belonging as a commendam to the Red Star prebendaries of St. Matthias at Breſlau. To theſe are added, a Lutheran oratory, with another of Bohemian Calviniſts. The moſt conſiderable employment of the inhabitants is the culture of hops.

The principality of Trachenberg, or Drachenberg, is bounded on the weſt by the principality of Wolau, to the ſouthward by that of Oels, to the eaſtward by the free ſeignior of Militſch and Sulau, and on the northward by Poland. Its ſoil, though ſomewhat ſandy, produces plenty of all kinds of grain; beſides which the inhabitants breed good cattle, and the country abounds in timber.

The moſt conſiderable place in this diſtrict is Trachenberg, the capital of the principality, which is ſituated on the Bartſch, and has a palace of the prince ſurrounded by a branch of that river, with a popiſh church, and a Lutheran oratory.

The principality of Corolath is on every ſide ſurrounded by three circles in the principality of Glogau, and contains two or three towns and a few villages; but as they have nothing worthy of notice, we ſhall not trouble our readers with any deſcription of them.

There are alſo in Lower Sileſia ſeveral lordſhips; but as moſt of them are very ſmall, and none of them contain any thing worthy of notice, we ſhall not trouble our readers with a repetition of their names.

SECT. VII.

Of Upper Sileſia, containing the Principalities of Oppeln, Ratibor, the Circle of Leobſchutz, and the Principality of Teſchen.

THE principality of Oppeln, in Upper Sileſia, which we ſhall now deſcribe, is bounded on the weſt by the principalities of Neiſs and Brieg; to the northward on the principalities of Breſlau, Oels, Brieg, and Poland; to the eaſtward on Poland and the lordſhip of Beuthen; and to the ſouthward on the principalities of Ratibor, Jagerndorf, and Troppau, with part of Moravia; and is the largeſt of all the principalities in Sileſia.

The ſoil is in many places ſandy, and it has alſo ſeveral large heaths and foreſts; but the country is not quite ſo bad as it is repreſented. The people find their account in tillage, the culture of wood, and the breeding of ſheep; but fiſh and game are very ſcarce in the cities, which is probably owing to the great quantities of the former conſumed in the popiſh days of abſtinence, and the latter is engroſſed by the lords of the country.

The Oder, which comes from the principality of Ratibor, runs through a conſiderable part of this country, where it receives many ſmaller ſtreams. There are alſo ſeveral lakes.

This principality conſiſts of twelve circles, in which the greateſt part of the inhabitants are Poles.

The principal place in this principality is Oppeln, the capital, which is ſeated on the Oder, over which it has a bridge. The old palace, which was ſeparated from the town by a branch of the Oder, was deſtroyed by fire in 1737. In this town is a biſhop's court, a collegiate abbey dedicated to the Holy Croſs, a college of Jeſuits, and a Dominican and Franciſcan convent. This town has ſuffered greatly by fire, and in 1741 was taken by the Pruſſians.

The principality of Ratibor terminates to the northward on the principality of Oppeln; to the weſtward on thoſe of Troppau and Jagerndorf; to the ſouthward on the lordſhips of Oderberg, Loſzlau, and Pleſz, which alſo forms its caſtern boundary. Its ſoil is better than that in the principality of Oppeln, it producing a ſufficient quantity of wheat, rye, barley, and fruit; beſides which it has good paſture grounds. The Oder is the only river in the whole country: but it is watered in all parts with brooks, ponds, and lakes.

It

It contains only three cities, and the inhabitants are univerſally Poliſh.

Ratibor, the capital of the principality, is ſeated on the Oder, which here becomes navigable, and has a bridge over it. The palace, with the church of St. John, ſtands on the oppoſite ſide of the river. Here is alſo a pariſh church, a canonry of the Holy Croſs, a convent of nuns who are called the Siſters of the Holy Ghoſt, a Dominican and a Franciſcan convent. It has been ſeveral times deſtroyed by fire, and in 1745 the Pruſſians took it by ſtorm from the Hungarians, who loſt a great number of men.

Adjoining to the laſt mentioned principality is the circle of Leobſchutz, which contains the principality of Jagerndorf and that of Troppau, which interſect each other. The principality of Jagerndorf, in Latin Principatus Carnovienſis, has a fertile ſoil, and many mineral ſprings. The larch-trees, which are very common in this country, yield a great deal of turpentine. In this principality are five towns. The principality of Troppau, in Latin Principatus Oppavienſis, is both a good corn and paſture country; it abounds in fruit, and contains ten ſmall cities, with one town.

The capital of the principality of Jagerndorf has the ſame name, and is a ſmall town ſituated on the river Oppa, but defended by a caſtle and other fortifications. The city of Troppau, or Troppaw, is alſo ſmall, but is an antient town, with a fortreſs built after the antient manner. It ſtands on a pleaſant plain, has plenty of all neceſſaries, and is noted for its good beer; but has no great trade. It is well built, and ſurrounded with a ſtrong wall, with the river Oppa on one ſide, and the Mohre on the other. Beſides its beautiful pariſh church, which is richly adorned on the inſide, there are three cloiſters, and three commanderies of Malta. The town-houſe is a large ſtructure, and the houſes in general are of free-ſtone and pretty lofty.

The principality of Teſchen joins to the principality of Troppau, and is for the moſt party hilly, though on the north it is marſhy and has ſeveral lakes; but it has many fertile ſpots, and abounds in wood. The Viſtula has its ſource in this country, and the Olſa, or Elſa, alſo riſes in the Carpathian mountains, which begin here; and, after traverſing the greateſt part of the principality, falls into the Oder.

In the whole principality are five towns, part of the inhabitants of which ſpeak German, and the other Poliſh. The mountains are inhabited by Walachians, and the people of this country are famous for making excellent fire-arms.

Teſchen, the capital of this principality, is ſeated in a very fertile country on the river Elſa. It is walled, and contains a large church, with two monaſteries and a college of Jeſuits. In the ſuburbs is a Lutheran church, in which divine ſervice is performed both in the German and Poliſh languages. To this church is alſo annexed a ſchool.

Beſides theſe principalities in Upper Sileſia, there is alſo that of Bilitz, and a conſiderable number of free lordſhips, which contain nothing worthy of notice; we ſhall therefore proceed to the county of Glatz.

SECT. VIII.

Of the County of GLATZ.

Its Situation, the Face of the Country, and Produce. Of the Inhabitants, their Religion, and Places moſt worthy of Notice.

THE county of Glatz is ſeated between Bohemia, Sileſia, and Moravia, being on all ſides environed by mountains, which render it of very difficult acceſs; the entrance to it being a long, rugged, rocky, and troubleſome road.

This county is thirty-eight miles in length, and about twenty-three miles in breadth. It is every where mountainous, and moſt delightfully variegated with hills and dales, meadows and woods, fields and ſtreams, interſperſed with towns and villages. In a good year it produces more wheat than is ſufficient for home conſumption, and in bad ſeaſons is ſupplied at a moderate rate from the adjacent countries. What fruits and culinary herbs it wants are imported from Sileſia, Bohemia, and Moravia. It alſo yields rich paſtures, and graziery turns to good account. It has great plenty of wood, as well as game of all kinds; and its fiſh, particularly its trout, are very large and well taſted. Here are likewiſe quarries of mill-ſtones, and ſtone fit for building, which are exported to other countries; and it affords good marble, with jaſper, topazes, and cornelians. In this county are alſo coal pits and a copper mine; but the ſilver mine works of Wilhelmſthal, or Neuſtadtel, and Merzberg, are at preſent diſcontinued.

This county has alſo mineral ſprings and warm baths. Here riſes the river Neiſs, which, after watering this country, paſſes into the principality of Munſterberg, in Sileſia; and at the diſtance of about two miles from its ſource, riſes the Morel, on the borders of Moravia, and is the chief river in that dutchy. Here likewiſe iſſues the Erlitz, which divides this county from Bohemia.

There are in the whole county nine towns, with upwards of one hundred villages that are generally large and populous. The uſual language ſpoken here is the German. The inhabitants live moſtly by tillage, graziery, ſpinning thread, and the linen trade.

In the ſixteenth century the opinions of John Huſs prevailed conſiderably; and, from the year 1560 to 1623, Lutheraniſm maintained its ground againſt the moſt violent oppoſition; but, after the laſt mentioned year, all the Lutheran paſtors and ſchool-maſters, to the number of above a hundred and twenty, were driven out of the country, and the reſt of the Lutheran inhabitants, by compulſion and blandiſhments, were prevailed on to embrace popery, though numbers preferred exile to apoſtacy. Thus popery became the public religion of the whole country; but ſince its being ceded to the king of Pruſſia, the Lutherans are again permitted the free exerciſe of their religion.

This county makes but one circle, and is divided into ſix diſtricts; in which the places moſt worthy of notice are,

Glatz, called by the Bohemians Kladzko, by the Poles Klodzko, and in Latin Glacium, is the capital of the county, and is ſituated on the declivity of a hill by the river Neiſs, in the fiftieth degree thirty-ſix minutes north latitude, and the ſixteenth degree twenty-one minutes eaſt longitude. Moſt of the houſes command a fine and extenſive proſpect of the country, and on the top of the hill is built the old caſtle, which was formerly divided into three parts, called the Lower, Middle, and Upper palace. The buildings of the firſt lie lower towards the city; in it is a ſpacious area, ſurrounded with buildings, and in them are vaults ſecured from fire, in which things of value and conſequence may be ſafely lodged, and water is conveyed through pipes from the water tower near the Lower mills, quite up into this Lower palace. In it is alſo a popiſh church. From this Lower palace you aſcend to the Upper, which ſtands much higher on the top of the rock, and has three courts, with a very deep well hewn quite through the rock, that yields plenty of excellent water.

Since Glatz has belonged to Pruſſia, the old citadel has been greatly improved and ſtrengthened, particularly by the addition of very commodious barracks, capable of quartering a numerous garriſon; and as it ſtands within ſight of the whole county, at the firing of a gun, or the lighting up of a beacon, the approach of an enemy may be made known to every part in a quarter of an hour's time.

The new citadel, which is a Pruſſian work, ſtands directly fronting the old one, with the river Neiſs running between them, and by means of ſpeaking trumpets advices may be mutually communicated. This new citadel is very advantageouſly ſituated, and is a ſtrong and regular building, that is alſo provided with a good well, which at a great expence is cut through the rock. Between theſe two citadels is alſo a ſluice, by which the intermediate country may be laid under water.

The town itſelf is now ſtrongly fortified, and in beauty, cleanlineſs, and order, has been greatly improved under the Pruſſian government. It has ſeveral ſuburbs, and has a pariſh church, with a college and ſeminary belonging to the Jeſuits. A new church was built here in 1742, for the uſe of the garriſon and other Lutherans. In the horſe-market without the town, is a Minorite convent with a church, a Franciſcan church and convent, and an alms-houſe in which is a chapel. Here are likewiſe two large mills belonging to the king, with magazines of corn and meal.

Glatz enjoys a good trade, but has been frequently pillaged and burnt; but its ſevereſt ſiege was that in 1622, when it held out againſt the united forces of the emperor Ferdinand II. and his allies. In 1742, the Pruſſians took it by capitulation.

In the diſtrict of Landec, is a little open town of the ſame name, ſituated on the Biela, the inhabitants of which live chiefly by tillage, graziery, and the ſale of their beer and brandy. It has ſuffered greatly by war, and has been frequently ſacked and burnt; but it is moſt remarkable for the warm baths that lie near it. The village of Upper Thalheim joins the town, and from thence a long wooden bridge leads to a ſmall elegant ſeat and an eminence planted with lime trees, on which is a church, and from thence to the New Bath. On proceeding two or three hundred paces to the left, you arrive at St. George's Bath, which ſtands ſomewhat higher than the other, and iſſues from a hard rocky ſoil, on an eminence eaſt of the Biela, and about a hundred paces from a wood; the water there guſhes through the fiſſures of the rock, which were formerly ſeventy in number; and in ſeveral of theſe fiſſures, the ſtream is equal in thickneſs to a man's arm. Nothing can be more pellucid than this water, though it is impregnated with a ſtrong ſulphureous ſmell, and its degree of warmth ſomewhat exceeds that of milk as it comes from the cow. The largeſt ſpring, which is in the middle, is nearly boiling hot; but others are only tepid, and others again quite cold; ſo that the water collected from all theſe ſeveral ſprings, muſt naturally be no more than luke-warm. The New, or, as it is called, our Lady's Bath, which has been already mentioned, is tepid, clear, and in taſte and ſmell perfectly like the capital ſpring. On a hill about two thouſand paces diſtant, is what is called the White Well, the water of which, beſides its being tranſparent, has a moſt grateful taſte, and is extremely cold, though it is never known to freeze.

CHAP. XII.

Of SAXONY.

SECT. I.

Of Saxony in general, and particularly of Upper Saxony; its Limits, Extent, Produce, and Rivers.

THE limits of Saxony are differently deſcribed. It formerly extended over both the circles of Upper and Lower Saxony; but for ſome time the name has been confined to the electoral dominions of Saxony. In the extenſive ſenſe, as including the circles of Upper and and Lower Saxony, it is bounded on the north by the Baltic Sea, Denmark, and the German Ocean; on the eaſt by Poland and Sileſia; on the ſouth by Bohemia, Franconia, and Heſſe-Caſſel; and on the weſt by Weſtphalia, extending between the fiftieth and fifty-fifth degree north latitude, and between the eighth and eighteenth degree eaſt longitude from London.

The circle of Upper Saxony, which lies to the eaſt, includes in it not only the dutchy of Saxony, but the principality of Anhalt, the landgravate of Thuringia, the margravate of Miſnia, Luſatia, the marquiſate and electorate of Brandenburg, and the dutchy of Pomerania, which are divided into many leſſer diſtricts.

The twenty-two ſtates which compoſe this circle, taken in their proper order, are the elector of Saxony, the elector of Brandenburgh, Saxe-Weimar, Saxe-Eiſenach, Saxe-Coburg, Saxe-Gotha, Saxe-Altenburg, Saxe-Querfurt, the Hither and Farther Pomerania, Camin, Anhalt, Quedlinburg, Gernrodo, Walkenried, and Schwartzburg-Sonderſhauſſen, Schwartzburg-Rupolſtadt, Mansfeld, Stolberg, Barby, the counts of Reuſſen, and the counts of Schonberg.

In this circle the elector of Saxony has always been the ſole ſummoning prince and director; but ever ſince the electoral houſe of Saxony embraced the Romiſh religion, in order to qualify the princes of that houſe to wear the crown of Poland, it appeared dangerous to the electoral houſe of Brandenburg, that the direction of this circle, which is of the proteſtant religion, ſhould remain on the former footing.

Saxony, in general, is one of the moſt fertile countries in all Germany; it in many places yields a rich increaſe of all kinds of grain and fruit; the inhabitants likewiſe cultivate hops, flax, hemp, tobacco, aniſe, wild-ſaffron, and woad. The minerals of this country are of great importance, and the ſearching after, working, and exportation of them, employ a very great number of people. The porcelain earth near Aue is excellent. The terra ſigillata and fullers earth found in ſeveral places are extremely good. There is alſo a variety of fine coloured earth; beſides which, Saxony yields various ſorts of beautiful marble and good free-ſtone, ſerpentine ſtone, cryſtals, topazes, hyacinths, rubies, granates, amethyſts, ſaphires, and opals; different ſpecies of agates, chalcedonies, cornelians, and jaſper. Vitriol and allum are likewiſe prepared here, and Saxony alſo yields an earth of great uſe in the preparation of borax. Near Groſwich has been dug a tranſparent and opaque amber of different colours. Coal is dug here, and Saxony prepares a very beautiful ſulphur: it alſo produces cinnabar and quickſilver, with antimony, biſmuth, and arſenic. The mines of ſilver are extremely valuable, as are thoſe of copper, tin, lead, and iron.

In many parts of Saxony is a good breed of horſes, horned cattle, and ſheep. Wild boars and veniſon are alſo extremely plentiful; but theſe muſt be hunted by none but the great.

The Elbe is the principal river of this country, and greatly promotes its trade. This river flows out of Bohemia, and, having traverſed the whole circle of Miſnia and a part of the electoral circle, enters the principality of Anhalt, and at laſt runs into the dutchy of Magdeburg.

The Black Elſter, which flows out of Luſatia, paſſes through the circle of Miſnia and the electoral circles, and diſcharges itſelf into the Elbe.

The Mulde, divides itſelf into two branches; but theſe uniting in the circle of Leipſic, falls in one ſtream into the Elbe, in the principality of Anhalt.

The Saale, riſing in the principality of Culmbach, paſſes through a part of the dutchy of Magdeburg and the principality of Anhalt, and falls into the Elbe.

The other rivers are the Unſtrut, which riſes in the Eichsfeld, the White Elſter, and the Pleiſſe.

Theſe rivers, as well as the lakes and rivulets, yield a variety of fiſh; and in the White Elſter are found pearl muſcles that have beautiful pearls, ſome of them as large as a cherry-ſtone.

SECT.

A MAP of the SOUTHERN PART of LOWER SAXONY from the best Authorities

SECT. II.

Of the Electorate of Saxony: the Diſpoſition, Manners, and Religion of the People; with a conciſe Account of their Learning, Arts, and Manufactures.

THE Saxons, ſays the Baron de Polnitz, have capacities equal to any nation in the world, and are naturally magnanimous and averſe to ſlavery. The men are well made, robuſt, agile, laborious, good ſoldiers, and artful courtiers: they are addicted to pleaſure, more eſpecially to gaming and the bottle: they love pomp and expence, are ceremonious, and affect, more than any other Germans, to imitate the French, eſpecially in their fondneſs for new faſhions and new acquaintance.

The women are extremely fair, and ſome of them have the fineſt faces in the world. They are generally well ſhaped, tall and ſlender, dance well, have a moſt genteel air, which they ſet off by a rich dreſs, and are extremely fond of ornaments; but ſeem ſomewhat affected, and talk with too much action. They are good-natured, gay and lively, paſſionately fond of dancing and merriment; and when they love, ſays our author, it is with all the heroic ſentiments and conſtancy of a Cleopatra or a Clelia. Though they are fond of gallantry, they are averſe to idleneſs; and, as they are very ingenious, amuſe themſelves with all ſorts of work belonging to the needle, the ſhuttle, and the diſtaff.

According to the marquis d'Argens, the Saxons appear to be the moſt polite and moſt ingenious of all the Germans; at leaſt they have the moſt happy way of expreſſing themſelves; and all the Germans agree, that their language is ſpoke in Saxony with the greateſt purity. The univerſities of this country abound with illuſtrious ſcholars, whoſe merit is allowed throughout Europe, and almoſt every town in Saxony is famous for politeneſs and the cultivation of the arts and ſciences. Cranach, the famous Saxon painter, ſays our author, was not inferior to the great maſters of Italy; and Handel, the prince of muſicians, was born at Dreſden. In ſhort, the numerous and well-regulated inſtitutions for the promoting of learning in the different parts of Saxony, facilitate the taſk of education, and promote the reception of the ſciences.

The people have, however, been much oppreſſed, both by the ravages of foreign troops, and the oppreſſions of the late princes who filled the throne of Poland. Hence Mr. Hanway, on his paſſing through this electorate before the late war, obſerves, that the richneſs of the ſoil did not ſeem to diminiſh the poverty of the inhabitants. Hunting, ſays he, is the favourite diverſion of the Saxon court; but by this diverſion the induſtrious inhabitants are more diſtreſſed than the brutes. Above thirty thouſand head of deer, ſays he, are ſaid to range in the open lands and foreſts; and though they break into the corn-fields of the farmer, he dare not kill one, under the penalty of being condemned to the galleys. Theſe, with the wild boars, are ſo great a nuiſance, that the Saxons would gladly compound to ſupport a body of eight thouſand ſoldiers extraordinary, on condition of having theſe animals reduced to half their preſent number. In every town of any note fifty of the inhabitants keep watch, five every night, by rotation, with bells to frighten the deer, and defend their corn from theſe devouring enemies.

Among the other calamitis, under which this country labours, the jealouſy ariſing from religion, ſays Mr. Hanway, is none of the leaſt. The eſtabliſhed Lutheran clergy oppreſs the Calviniſts, who are obliged to have not only their marriages and burials, but even their chriſtenings performed by Lutherans; while both think themſelves highly injured by the countenance given at court to the Roman catholics, imagining it a groſs abſurdity for a Proteſtant people to be governed by a Romiſh prince: for, according to the eſtabliſhed conſtitution of Saxony, the Roman catholics can no more have a church in Dreſden than their elector, without being of the Romiſh church, can be king of Poland. A chapel, however, is connived at, by which is underſtood a private, or at leaſt a plain and modeſt place of worſhip; but what is called the Romiſh chapel at Dreſden, is a pompous ſtructure, ſo richly adorned with ſtatues and architecture, that art and expence ſeem to contend for the ſuperiority.

The peaſants of this country carry proviſions a great diſtance to market in wheel-barrows, which are well adapted for that purpoſe both in height and other dimenſions. The wheel is bound with iron, and is both larger and lighter than thoſe uſed in England.

The uſeful and fine manufactures are very numerous in the electorate. Great quantities of yarn are ſpun, thread bleached, coarſe and fine linen wove, together with ticking; and there are a variety of cotton, woollen, and ſilk manufactures; tapeſtries are wove, fine lace, edgings, ribbons, and paper are made. The porcelain of Meiſſen is famous throughout all Europe. Fine glaſſes and mirrors are made here, and out of the ſerpent-ſtone they form a variety of things. Iron is wrought into black and white plates in the greateſt quantity; ſteel and braſs are alſo made and worked here. Saxony has likewiſe its manufactures of gold and ſilver. A fine blue colour is made of cobalt with a mixture of arſenic. A great trade is carried on in wood and timber at Grimma, from whence a vaſt quantity of boards, cheſts, boxes, &c. are exported down the Elbe to Hamburg.

Salt is the only neceſſary commodity wanting in Saxony, and with this it is chiefly ſupplied from Halle, a city belonging to the king of Pruſſia. Poſſibly this inconvenience might be removed, if proper care was taken of the ſalt-ſprings, of which there are ſeveral that, under the management of ſkilful perſons, would doubtleſs yield a ſufficient quantity, both as good and as cheap as that imported from Halle.

SECT. III.

The Titles and Arms of the Elector of Saxony; the Taxes laid on the People; and the Diviſions of that Electorate.

THE court of Saxony has always been diſtinguiſhed by its ſplendor, in which it ſeems little inferior to any court in Europe; but the reader will form a better idea of the pomp and grandeur of this prince, when we come to treat of his palaces, the curioſities depoſited in them, and their ſplendid furniture. We ſhall here therefore content ourſelves with giving the titles and arms of that prince, and the taxes raiſed for the ſupport of the government.

The elector of Saxony ſtiles himſelf duke of Saxony, Juliers, Cleve, and Berg, as alſo of Engern and Weſtphalia; arch-marſhal and elector of the holy Roman empire; landgrave in Thuringia; margrave of Miſnia, and likewiſe of Upper and Lower Luſatia; burgrave of Magdeburg; princely count of Kenneberg; count of the Mark, Ravenſberg, Barby, and Hanau; and lord of Ravenſtein.

The arms of Saxony are a garland of rue, or according to Zollman, an ornamental filateé for the head and hair, placed obliquely from right to left over eight, or, according to others, over ten feſſes ſable and or, ranged alternately above each other. On account of Thuringia, a lion marked with four tranſverſe ſtrokes argent and gules, drawn alternately, open jaws, an exerted tongue gules, and gripes projected or, and on the head a crown of the ſame, in a field azure. On account of Miſnia, a lion ſable, with an exerted tongue gules, gripes projected of the ſame, and a double inverted tail in a field or. On account of Juliers, a lion armed ſable and argent, with a tongue exerted gules in a field or. On account of Cleves, in a field gules, an eſcutcheon argent, in the center of which are eight ſcepters conjoined or. On account of the Berg, a lion gules, crowned azure, in a field argent. On account of Engern and Weſtphalia, an eagle crowned or, in a field azure, with three hornets horns gules, in a field argent. On account of the palatine of Saxony, an eagle diſplayed or, and crowned with the ſame, in a field azure, as alſo an eagle uncrowned or, in a field ſable. On account of Lower Luſatia, an

ox gules and courant, with a belly argent, in a field of the ſame. On account of Upper Luſatia, part of a wall or, trowelled ſable, and built battlement faſhion, in a field azure. On account of the mark of Landſberg, two erect feſſes in a field or. On account of the ſeigniory of Pleſſein, a lion divided or and argent, in a field azure. For the county of Orlamunde, a lion ſable crowned gules, and cloathed with roſe-leaves of the ſame, in a field or. On account of the burgravate of Magdeburg, an eſcutcheon divided longitudinally downwards, in whoſe fore-field gules appears a ſemi-argent eagle crowned or, and in the hinder-field argent, four bars gules. For the county of Brene, three ſemi-circles gules, or the hornets horns cantoned argent, in a field of the ſame. On account of the burgravate of Altenburg, a roſe gules with ſeeds or, and painted vert, in a field argent. For the county of Eiſenberg, three feſſes azure, in a field argent. For the county of Ravenſberg, three chevrons gules, placed above each other, and from below to the top fixed or conjoined to each other, in a field argent. For the county of the Mark, a feſſe conſiſting of three chequers gules and argent, in a field or. On account of the Regalia, an eſcutcheon modelled or. For the county of Hanau, three chevrons gules, in a field or. For the princely county of Henneberg, a hen placed on a mount verte, and in the poſition to take wing, in a field or. For the county of Barby, two barbles crowned or, placed back to back, and beſet on the ſides with four ſmall roſes, in a field azure. On account of Munzenberg, a field divided croſs-wiſe, in its upper part or, and in its lower argent. On account of Lichtenberg, a lion ſable, in a field argent: and on account of the office of arch-marſhal of the holy Roman empire, an eſcutcheon divided croſs-wiſe, whoſe upper part is ſable, and its under argent, the two electoral ſwords gules lying croſs-wiſe over each other.

The cuſtomary taxes of Saxony are partly ordinary and partly extraordinary. The ordinary taxes are thoſe which are granted every ſix years by the country: to this head belongs the land-tax; and the taxes upon liquors which ariſe from the imports upon white and brown beer, that is, two rixdollars for each veſſel of the former, and one and a half for each of the latter; but the nobility and poſſeſſors of noble eſtates, and alſo the eccleſiaſtics, are, for themſelves and families, freed from any impoſts upon the liquor they conſume at their tables. And alſo the fleſh-penny, or fleſh-tax, from which the nobility and clergy are alſo exempted.

The extraordinary taxes are uſually the penny-tax, which riſes and falls in proportion to the damage done by fires and ſtorms; the ember-tax, and the exciſe, which is two-fold. The land-exciſe amounts to three-pence in the dollar out of the price of certain goods ſold. The general conſumption exciſe has been introduced into ſuch towns and villages as are inhabited by handicraft tradeſmen. Beſides this laſt there are the poll and eſtate-taxes, ſtamped duties levied upon paper, cards, ſhoes, &c. alſo on the marriage of a new ſovereign; and on other occaſions it is cuſtomary to make a donation in money.

The mines alſo bring in a conſiderable revenue to the ſovereign, which is paid in kind, or certain proportions of ſilver, tin, lead, copper, iron, and ſeveral ſorts of minerals. Mr. Hanway obſerves, that the electors revenues amount to near one million five hundred ſeventy-five thouſand pounds ſterling; and adds, that the expences of the court are ſo great, that ſix thouſand five hundred ducats are annually allowed for ſweet-meats, &c. which is near twice as much as the king of Pruſſia allows for his table. Yet Saxony is ſaid to owe forty millions of dollars; but his late majeſty was ſo fond of curioſities, and particularly paintings, that our author was told, he gave half a million of dollars, intended for part of a payment due to the king of Pruſſia, for the duke of Modena's pictures.

As to the military force of this country, it is ſufficient to obſerve, that there are uſually maintained about twenty thouſand regular troops, beſides well regulated militia.

The whole electorate of Saxony is divided into circles, which according to their order of rank, are the electoral circle or dutchy of Saxony, the circle of Thuringia, that of Miſnia, that of Leipſic, that of Erzebirg, that of Vogtland, and the circle of Neuſtadt, with the two diſtricts of Merſeburg, and Naumburg-zeitz.

SECT. IV.

Of the Electoral Circle, or the Dutchy of Saxony, and the Circle of Thuringia.

THE electoral circle borders on thoſe of Miſnia, Leipſic, Thuringia, the principality of Anhault, the mark of Brandenburg, and on Luſatia. Its greateſt length as well as its greateſt breadth, is eſtimated at about forty-ſeven miles. The country is not remarkable for its fruitfulneſs, a great part of it being ſandy. The Elbe runs through a part of it, and between Gorſdorf and Elſter receives the Black Elſter. Some tracts of this country are watered by the Mulde.

This circle contains in it twenty-four towns, three boroughs, four hundred and twenty villages, one hundred ſixty-four noblemen's eſtates, and eleven prefecturates, in which the moſt conſiderable town is the following.

Wittenberg, in Latin Witteberga, or Leucorea, is a fortified town in the prefecturate of the ſame name, ſituated near the Elbe, and famous for the manufacture of coarſe cloth, the wool of this country being remarkably good. Cloths are ſent hither from all parts to be dyed, and the blues and greens, commonly called Saxon, are beſt dyed here. In this place is an univerſity, in which are about ſeven hundred ſtudents; and here is the Sokoloff church, a building of about three hundred years ſtanding, where Luther firſt preached the doctrines of the reformation; and in this church that great reformer was alſo interred, but has no other monument beſides a braſs plate with an inſcription, except his original portrait at length, painted on wood, and well preſerved ſince the year 1540.

The people here have a ſtrong tincture of Romiſh ſuperſtition; among other inſtances of which the credulous ſay the devil viſited Luther in the library which now belongs to the univerſity, but that the reformer was ſo unpolite as to throw his ink-ſtand at him.

This town is not large, but fortified; the old citadel was formerly the electoral reſidence. In a large round tower, which ſtands by the univerſity church, are kept the common archives of the electoral family. In the pariſh church belonging to the town, is held the general ſuperintendency: there is here alſo a Latin ſchool, which has ſix teachers. In 1547, this town was taken by the emperor Charles V. In 1640 it ſuffered greatly by fire, and in 1756 was taken by the Pruſſians, who broke down a baſtion of the fortifications.

We come now to the circle of Thuringia, which forms the north part of the landgravate of that name. The country, which is well watered, yields good paſturage, and abundance of corn, particularly wheat, which is excellent, as alſo fine woods, and produces woad, ſaflor, and aniſe. It has a conſiderable breed of horſes, horned cattle and ſheep.

In ſome parts of the country ſwarms of field mice commit great ravages among the corn; for they not only devour a great quantity in autumn, but lay up large winter ſtores in their holes; ſo that the government, in order to extirpate theſe noxious animals, gives for every full grown mouſe ſix pfennings, and three for a young one.

The foreſt of Thuringia, which is pretty extenſive, affords no other grain but a few oats, ſo that the inhabitants are obliged to buy corn from their neighbours; however, they have great plenty of wood, which is ſold at a very low rate.

In Thuringia are forty-ſeven towns, fourteen boroughs, ſix hundred ſeventy-four villages, three hundred noble eſtates, and thirteen prefecturates, belonging to the electoral houſe of Saxony, the principal places of which are the following.

Weiſſenfels, in Latin Leucopetra, is a well built town, ſeated on the river Saale. On a white rock above

above the town is a fine citadel called Auguſtuſburg, which was the ordinary reſidence of the dukes of Saxe-Weiſſenfels; as alſo an arſenal, which was ſtripped by the Pruſſians in 1756; a town church, another church near what was formerly called the cloiſter of St. Clara; an hoſpital containing a ſmall church; an academy erected out of the above-mentioned nunnery, and, from duke Auguſtus its founder, named Auguſteum; a Latin ſchool, and manufactures of ſilk and velvet. At the royal hunting houſe, which lies before Niekels gate, reſides the provincial huntſmaſter of the circle of Thuringia. In 1757, a conſiderable number of the troops belonging to this circle had poſted themſelves in the town; but were driven from thence by the Pruſſians; when, in order to facilitate their flight, they burnt down the large and ſpacious wooden bridge built over the Saale.

Langenſalza, the capital of all the electoral Saxon Thuringia, is ſeated in the Salza, in a ſpot very fruitful in corn, and contains an ancient citadel, about nine hundred houſes, two pariſh churches, one ſuperintendency, whoſe ſpiritual juriſdiction is divided into the Upper and Lower circle; a Latin ſchool, and ſome manufactures of ſtuffs. It carries on a good trade in corn, half ſilks, ſerges, and other commodities.

SECT. V.

Of the Margravate of Meiſſen or Miſnia, containing a Deſcription of Meiſſen and Dreſden, with the ſeveral Palaces, and moſt remarkable Curioſities, and an Account of the Fort of Konigſtein, and its extraordinary Tun.

THE margravate of Miſnia, or Meiſſen, is bounded on the north by the dutchy of Saxony; on the eaſt by Luſatia; on the ſouth by Bohemia; and on the weſt by Thuringia; and is about a hundred miles in length, and eighty in breadth. It is divided into fourteen prefectures, and contains forty boroughs, four market towns, one thouſand three hundred ninety-three villages, and twenty ſovereign palaces, the principal places in which are the following.

Meiſſen, in Latin Miſena, is ſituated on the Elbe, where the rivulets of Triebiſch and Meiſne pour themſelves into it; and from the laſt it takes its name. It ſtands partly on eminences, and partly in a valley. The biſhopric, which was firſt founded in the year 948, belongs to the Lutheran church, and the chapter conſiſts of a provoſt, a dean, a ſenior, a chanter, and five canons. In the cathedral are the monuments of ſeveral biſhops, and on the high altar ſtand the ſtatues of three margraves of Meiſſen, repreſented in the character of the Eaſtern magi bringing gifts to the infant Jeſus. Of the old citadel, which ſtands on a mountain, the fore part, which belonged to the burgraves, and the hind part, which belonged to the biſhops, are now become ruinous, and the center only remains, in which is carried on the celebrated manufacture of the excellent Miſnian porcelain. This, however, is a large building, capable of ſome defence. Mr. Hanway tells us, that he had an opportunity of being convinced of the ſecrecy with which this manufactory is conducted; for there is no admittance into the works without an order from the governor of Dreſden; nor are the workmen ever ſeen without the gates; they being all confined as priſoners, and ſubject to be arreſted if they go without the gates: for this reaſon a chapel and every thing neceſſary is provided within. The workmen amount to about ſeven hundred, moſt of whom have not above ten German crowns a month, and the higheſt wages are forty, ſo that the annual expence is ſaid not to exceed eighty thouſand crowns. This manufacture being entirely on the king's account, he ſells annually to the value of one hundred and fifty thouſand, and ſometimes two hundred thouſand crowns, or thirty-five thouſand pounds.

The churches in and near the town, beſides the cathedral already mentioned, and in which is the burying vault of the princes, is a pariſh church, the cloiſter, or Franciſcan church, the church of St. Afra, near the provincial ſchool, and three burying churches belonging to the head church of St. Afra, which is near the provincial ſchool, and has many others united with it, both in the town and country, and together with the provincial ſchool, is immediately under the upper conſiſtory of Dreſden, and the ſchool called the Afraneum, which was formerly the Benedictine cloiſter of St. Afra; the number of ſcholars taught and maintained gratis, amount to one hundred and eighteen. There is alſo a town ſchool. The bridge, which extends over the Elbe, is ſupported by ſtone piers; but the upper part is of wood, and it is obſerved, as a maſter-piece of art, that the middle arch, which is ſeventy-five paces wide, is kept together by a ſingle wooden peg. The country in the neighbourhood of this town, produces a good ſort of wine.

The country between Meiſſen and Dreſden is extremely beautiful, conſiſting of a delightful mixture of corn-fields, gardens, meadow-lands, and paſture. The banks of the Elbe are adorned with a great number of vineyards, and the induſtry of the people have made them form the ſteepeſt hills into a number of terraſſes covered with vines. Near Meiſſen the valley grows narrow, and ſome of the houſes ſcattered along the banks of the Elbe are built on rocks, which riſe perpendicular from the river, and form a very agreeable and romantic ſcene.

Dreſden, the metropolis of this electorate, and one of the fineſt cities in Germany, is agreeably ſituated on the river Elbe, in the fifty-firſt degree twelve minutes north latitude, and in the thirteenth degree forty minutes eaſt longitude from London, ſeventy miles north-weſt of Prague, and ninety ſouth of Berlin, in the midſt of a plain ſurrounded by lofty hills about two leagues diſtant, the neareſt of which are converted into vineyards. As the city ſtands on both ſides the Elbe, it is united by a ſtone-bridge ſix hundred and eighty-five common paces in length, and about ſeventeen in breadth, containing eighteen arches; but Mr. Hanway obſerves, that the paſſage over it being horizontal, takes off from that grand effect which a curve produces in theſe ſtructures. There are ſeveral round projections with ſeats in them on each ſide of the bridge, and a fine iron baluſtrade all along. On the fifth pilaſter on the right hand in going from the new city, the arms of Poland and Saxony are neatly cut in ſtone, ſupported by two ſtatues repreſenting Poland and Saxony, and on the oppoſite ſide is a brazen crucifix of curious workmanſhip, For the more convenient intercourſe between the towns, a new bridge has been built conſiſting of nineteen arches, and over every pier are four pedeſtals with a ſtone urn upon each.

In this city are ſeveral ſquares and lofty ſtone buildings ſix or ſeven ſtories high, which make an elegant appearance, but are inferior in beauty to thoſe of Berlin; beſides, many of the ſtreets are narrow. Near the entrance of the new city is an equeſtrian ſtatue of king Auguſtus, erected on a lofty pedeſtal, and is ſaid to be made by a common ſmith, and on that account is worthy of being admired, though it has many capital defects, particularly in the horſe's head.

The place which affords the greateſt entertainment to a curious traveller is what is called the green room, or the muſeum. This collection was begun by the elector Auguſtus, and placed in a green room of the royal palace, which name it ſtill retains, though there are now ſeveral apartments painted green, and filled with theſe curioſities. The fee for ſeeing this muſeum is generally diſcharged with five or ſix guldens, or about fourteen ſhillings given the attendant who opens the doors; but the greateſt part of it goes to the ſuperintendant, or keeper of the muſeum. At the entrance, the ſhoes of all who are admitted are carefully wiped, in order to keep the place as free from dirt or duſt as poſſible. All the apartments are floored with marble of different colours, of the produce of Saxony.

In the firſt apartment is to be ſeen a great number of ſmall braſs models of moſt of the famous ſtatues and monuments that are extant, both antient and modern. Among theſe are an equeſtrian ſtatue of Auguſtus II. king of Poland, of Frederic William the Great, after the famous ſtatue in Berlin, of Lewis XIV. and the models of the moſt celebrated ſtatues in Italy.

The ſecond room is filled with curious clocks and clock-work, adorned with gold and ſilver. Among theſe is the repreſentation of the Virgin Mary and Joſeph, with the infant Jeſus in the manger, and the ſhepherds with the Eaſtern magi performing their adorations to the Meſſiah, while the heavens ſeem to open with a ſurpriſing effulgence. Here is alſo a ſhip which ſails round a table, while ſome of the ſailors in it weigh anchor, and the reſt are in continual action; and at the ſame time it performs a piece of muſic. The Japan work on the wall of this apartment is an exact imitation of inlaid work of jaſper and other precious ſtones.

In the third room is a numerous collection of drinking-veſſels and other curioſities in ivory, particularly a ſhip with all its ſails, maſts, and rigging.

In the fourth apartment the eye is dazzled with a multitude of gold and ſilver utenſils, moſt of which are large goblets and other drinking-veſſels. The pannels of this room are of looking-glaſs.

The fifth is a ſpacious room, in which are a great variety of precious ſtones, and curious veſſels made of them. Here is a large table of jaſper cut in relievo of onyx, chalcedony, and other gems, repreſenting a young prince on horſeback, preceded by the Virtues, pointing out to him the way to true glory; while the Vices, with looks full of rage and confuſion, are flying from him. This is an antient piece which coſt eighty thouſand dollars. Here is a ſtatue of Charles II. king of England; a large goblet ſet round with the moſt curious and coſtly antiques; the angel Michael vanquiſhing the devil admirably performed in wood, and coſt in England, where it was made, two thouſand five hundred pounds ſterling. Here are likewiſe ſeveral figures conſiſting of gems and pearls naturally adapted to conſtitute the different parts, and ſo curiouſly arranged, that they appear to have been deſigned by nature for the places they occupy. Among theſe, what more particularly ſtrikes the eye is the ſtory of the prophet Jonah; the whale, the ſhip, the prophet, and the ſea-ſhore being made of pearls properly arranged, and the rocks in the ſea repreſented by very large gems. Another curious piece repreſents two perſons carrying in a baſon before them a number of ſmall pearls: the baſon and pearls are the work of nature, with very little aſſiſtance from art. Two other perſons are carrying on a pole a large bunch of grapes, imitated to the greateſt perfection with oriental emeralds.

The ſixth apartment is ſurrounded with cloſets, in which are placed the electors of Saxony as big as the life in their proper habits. In the middle of this room is a clock in the form of a woman, which moves the head every minute from one ſide to the other.

The firſt object ſhewn in the ſeventh apartment is a tea-equipage, with a table, &c. all of gold enamelled, and ſet with diamonds, and coſt forty-ſix thouſand dollars. On a table an ell broad, and an ell and a quarter long, is repreſented the celebration of the Great Mogul's birth-day. The monarch is exhibited ſitting on a throne, the grandees of his empire lie proſtrate before him with their reſpective gifts, and the portico is crowded with his guards, elephants, and every thing belonging to the ſplendor of an eaſtern court. Dinglinger, jeweller to the court, and fifteen other ingenious artiſts under him, were ten years and eight months employed on this piece; for which he was paid eighty-five thouſand dollars. The pillar in the middle of the room is adorned with beautiful baſſo relievos of Arabian agate, and on it is an oriental onyx of an oval figure near a quarter of a Dreſden ell in its longeſt diameter. In the golden fleece belonging to the order of knighthood is a diamond for which the king of Poland paid two hundred thouſand dollars; it weighs a hundred and ninety-four grains and a half, and is placed between two diamonds, each of which is equal in ſize to a large nutmeg.

In the laſt apartment are, among other things, a clock of gold ſet with gems, and a jaſper table with veins of cryſtal and amethyſts. This jaſper comes from Frieberg, only four miles from Dreſden, and it is but a few years ſince the real value of the Saxon jaſper was known, for the peaſants formerly uſed this ſort of ſtone, together with others, to incloſe their fields; yet it is very beautiful, but extremely difficult to poliſh. The number of curioſities in the above apartments is exceeding great; but ſome idea may be formed of this collection by the few that have been mentioned, and it is obſervable that the judicious arrangement of the ſeveral pieces adds a ſurpriſing beauty to the whole.

The palace is furniſhed in a moſt ſuperb manner; the drawing-rooms are particularly worth ſeeing, on account of twelve pictures by Lewis Silveſter, repreſenting the rape of Proſerpine, the metamorphoſis of Acteon, with other fables from Ovid; and a piece repreſenting the late elector taking leave of his father, at his ſetting out on his travels. The latter recommends his ſon to Pallas and Mercury. Behind the prince ſtands his governor; by his ſide is Prudence with a teleſcope in her hand, and ſeveral genii hold up maps of the countries which the prince was going to viſit. The cieling of the audience-room was alſo painted by the ſame hand. The looking-glaſſes in ſome of the apartments are between eight and nine feet high, and ſix and ſeven broad. The aſſembly-room for the royal family is hung with rich tapeſtry, repreſenting the atchievements of Alexander the Great.

Among the ſurpriſing quantity of plate kept in the plate-cabinet are four ſtands, each weighing four hundred and ſeventy-one marks, and twelve others that weigh nearly as much; two ſilver vaſes, each above five feet high, ſcarce to be fathomed by two men, weighing ſix hundred marks each; two pieces of the ſame faſhion little inferior in weight; and eight ciſterns with the veſſels ſtanding in them, each weighing eight hundred marks. The mark is eight ounces.

The common aſſembly-room is adorned with tapeſtry repreſenting the battle of Hochſtet. In the ſeveral apartments are many curious clocks, beautiful tables, rich cabinets, and other furniture; among which a foreigner ſhould not omit ſeeing the confidents-table, a curious piece of mechaniſm, on which the elector dines privately with his confidents; for this table, with all its appurtenances, riſes from the lower apartments into the upper, without one ſervant being ſeen.

There is another muſeum in the palace which contains a vaſt variety of curioſities. In the firſt chamber is a collection of prints, from the commencement of the art of engraving to the preſent time.

The ſecond is the mineral-gallery, in which is the earth of the different countries in the world, and ores of every denomination.

The third contains petrifactions, particularly of wood, animals, &c.

In the fourth chamber, which is a very large one, are different kinds of wood and vegetables; in particular there is a cabinet with three hundred and fifty ſquares as big as the palm of a large hand, run in flat as drawers, of ſo many different kinds of wood. In this apartment are alſo the pictures of a man and his wife, who lived near Tameſwar; the man was a hundred and eighty-five years of age, and his wife a hundred and ſeventy-two.

In the fifth chamber is a ſmall cabinet of ſkeletons, and other anatomical curioſities. The ſixth contains the ſkins of a variety of animals ſtuffed. The ſeventh has the ſkins of fiſhes ſtuffed. The eighth has a great quantity of different kinds of ſhells. In the ninth is a cabinet of about ſix feet high, and four broad, every drawer of which has ſome natural curioſity in amber. In the tenth is a grotto with ſprings of water. In the eleventh are many curioſities in coral. The twelfth contains the ſkeletons of lions, bears, &c. of a prodigious ſize, and the ſtuffed ſkins of ſome extraordinary beaſts, particularly of a horſe, whoſe mane is ſaid to be three ells and a half long, and his tail twelve ells and a half.

In another apartment at ſome diſtance is a model of Solomon's temple cut in cedar, as deſcribed in the Old Teſtament, with all its furniture.

The gallery of pictures is one of the fineſt in the world; part of the collection conſiſts of a hundred capital pieces, which are ſaid to be all originals, and to have coſt half a million of crowns. Among theſe are the capital works of Raphael, Corregio, Rubens, and all the great maſters. The whole collection conſiſts of above two thouſand pieces, and are valued at between two and three million of crowns.

The

The elector's gardens, though agreeable, are too level, and void of thoſe natural beauties that are capable of being afforded by an equality of ground. A ſmall palace is ſituated in them, which is approached by a grand avenue of a conſiderable length. A field for tournaments is in the front, and behind is a fine piece of water. The gardens which are on the ſides, are adorned with a profuſion of marble ſtatues, many of them larger than the life. Theſe ſhew the genius of Auguſtus I. the late king's father, who being entirely devoted to his amours, left them to after-ages, as monuments of his laſciviouſneſs. The orangery, which is in another part of the city, has four hundred orange-trees of a very large ſize, and many exotics.

The Chineſe palace, thus called from the taſte of the building and the furniture, is ſituated on the Elbe, and commands a view of the bridge and the Romiſh chapel. The ornaments of the architecture, and the relievo of the frontiſpiece, are in the Chineſe taſte; but after all, it is far from being an elegant ſtructure. It has fourteen rooms, in which are a great number of leopards, wolves, bears, monkeys, and other animals, as large as the life, made of porcelain, with elephants and rhinoceroſes of the ſize of a great dog, and a prodigious variety of birds and fowl, with a curious collection of flowers, all of porcelain made at Meiſſen. The apoſtles near three feet high, are in white porcelain. There is alſo a repreſentation of the crucifixion four or five feet high, with many other curious pieces; but what is more ſurpriſing, there are forty-eight China vaſes that appear to be of no uſe, and to be extraordinary only on account of their great ſize, and yet the elector's father was ſo charmed with them, that he purchaſed them of the late king of Pruſſia at the price of a whole regiment of dragoons.

The Turkiſh gardens and palace are ſituated in Plauſtreet. The firſt floor of the palace is adorned with many pieces of painting, repreſenting the ceremonies uſed in the Turkiſh ſeraglio, with the baths, audiences, &c. in which all the great officers of ſtate are dreſſed in their proper habits. In the ſecond ſtory are the pictures of ſeveral celebrated beauties that have made no little noiſe at the court of Dreſden, all in Turkiſh dreſſes. The tapeſtry hangings and other furniture of this palace, are either the manufacture of Turky or Perſia, and ſeveral tables are ſet off with oriental curioſities; as knives made in Tartary, a Perſian enamelled tea-equipage, and a large bowl of *lapis nephriticus*, which is called the *welcome*; and this bowl full of wine is to be drank off by the ladies on their arrival here; as a large bowl made of a Maldivia nut, is ſaid to have been preſented to the gentlemen by the cham of Tartary on ſuch occaſions. Here are alſo ſhewn ſilver cymbals, to which the Turkiſh women generally dance, and ſeveral other curioſities of the ſame kind.

The menagery is in old Dreſden, and contains lions, tygers, leopards, lynxes, and ſeveral other animals; and at the elector's palace at Neuſtadt-oſtra, near Dreſden, there are kept a number of tame ſtags, which draw in a carriage, and when Mr. Keyſler was there, one of them was uſed for the ſaddle. Theſe generally ſet out with great ſpirit, but ſoon flag.

The palace of count Bruhl has been built at ſeveral times, and the apartments are elegant and richly furniſhed. They are adorned with luſtres of porcelain in beautiful figures; the tables have a variety of tea equipages, and the figures of men and women, birds and beaſts of porcelain. The drawing-room is pannelled with looking-glaſs, and his cabinet furniſhed with enamels and crayons. The houſe and gardens belonging to it are ſituated on the Elbe, near the bridge, and command a pleaſant proſpect. His library, which is in the garden, is two hundred twenty feet long, and well furniſhed with books: but what is moſt ſtriking is the gallery of pictures, which, though it does not contain a fourth part ſo many as the royal gallery, is incomparably more magnificent. It is one hundred fifty-ſix ells long, and the paintings are ſhewn to great advantage, by being ranged only on one ſide, and fronted by lofty windows, that afford ſufficient light to ſhew the minuteſt beauties of this excellent collection. The pannels between the windows are of looking-glaſs, againſt which are placed ſtatues and buſts that have a grand effect.

The other remarkable buildings at Dreſden are the opera-houſe; the aſſembly-houſe, and the royal ſtables, the outſide of which is very grand; the arſenal, which was ſtripped by the Pruſſians in 1756, under which is the electoral cellar; the palaces of the electoral prince, and the other princes of that family; the electoral chancery office, the mint office, the foundery, the court diſpenſary, the royal foundation for Roman catholic boys and girls, the academy for painting, the palace of prince Lubomirſki, the hotel de Saxe, and other magnificent palaces and buildings.

The places of religious worſhip are the church of the Holy Croſs, which is the principal; St. Mary's, St. Sophia's, the garriſon church, and the Roman catholic chapel, which is a curious piece of architecture. In the ſuburbs are the churches of St. John, St. Anne, St. James, St. Bartholomew, and the Lazar church.

About the year 1730, the number of houſes in Dreſden, including the ſuburbs, were computed to amount only to two thouſand five hundred, and that of the inhabitants to little more than forty thouſand, including the garriſon; but in 1755, there were reckoned here about eighty or ninety thouſand men.

In the city and its neighbourhood, many ingenious manufactures are carried on. The trade of Dreſden is, however, very inconſiderable; the moſt important article is the ſilver brought in ingots every fifteen days from the mines near Friedburg, to the amount of about twenty thouſand dollars, or three thouſand five hundred pounds ſterling. This ſilver is immediately coined into florins of ſixteen groſch, which with reſpect to the current money of bats, driers, &c. is worth ſeven per cent advance, and is therefore, ſays Mr. Hanway, ſo ſpeedily conveyed into the neighbouring territories to be coined again, that it is next to impoſſible to obtain, in the ordinary commerce of the people, change in this money for a ſingle Louis d'or.

About four miles from Dreſden, on the other ſide of the Elbe, is the royal palace of Pillnitz, which ſtands in a pleaſant country, and is adorned with a great number of portraits of the moſt celebrated beauties of Saxony.

Five miles from Dreſden is fort Konigſtein, which ſtands on a rock, cut ſo ſteep, that it appears quite perpendicular, and in many places has projections in the manner of baſtions, from whence the ſides of the rock may be raked and defended. The aſcent towards it is the leaſt difficult, for which reaſon it is ſecured on that part by good works, and a triple row of cannon ranged one above another. Wood and other neceſſaries are drawn up by the help of cranes. The garriſon conſiſts of one hundred and fifty men; but on the firſt alarm from the governor, the neighbouring villages are obliged to furniſh ſome hundreds more. This fort is always ſtocked with proviſions ſufficient to laſt many years. On the top is a large green area, a wood, and ſeveral gardens, in which are thirty-eight different kinds of foreſt and fruit trees, with paſtures and land fit for agriculture. The fortreſs is provided with fine ciſterns, or ſmall ponds, as reſervoirs for ſnow and rain water, in which are ſeveral kinds of fiſh for the governor's uſe; but the water drank by the garriſon, is drawn up by a wheel from a well nine hundred Dreſden ells deep.

One of the greateſt curioſities to be ſeen at this fort is the tun which general Kyaw cauſed to be made here. Its length is ſeventeen Dreſden ells, and its diameter at the bung twelve ells. It conſiſts of one hundred fifty-ſeven ſtaves, eight inches thick, and fifty-four boards for the heads. It holds three thouſand ſeven hundred and nine hogſheads, and upon one head of the caſk is a Latin inſcription to the following purpoſe:

"Welcome, traveller, and admire this monument,
"dedicated to feſtivity, in order to exhilarate the mind
"with a chearful glaſs, in the year 1725, by Frederic
"Auguſtus king of Poland, and elector of Saxony,
"the father of his country, the Titus of his age, the
"delight of mankind. Therefore drink to the health
"of the ſovereign, the country, the electoral family,
"and baron Kyaw, governor of Konigſtein; and if

"thou

" thou art able, according to the dignity of this caſk,
" the moſt capacious of all caſks, drink to the proſpe-
" rity of the whole univerſe: and ſo farewel."

The top of the caſk is railed in, and affords room for fifteen or twenty people to regale themſelves. There are alſo ſeveral kinds of welcome cups, which are offered to ſtrangers.

This fortreſs is a place of confinement for ſtate priſoners. It has an arſenal, and in a room called the hero's apartment, beſides the old Saxon warriors, which the painter has drawn according to his own fancy, are the portraits of all the generals employed by the elector.

SECT. VI.

Of the Circle of Leipſic, with the Diſtrict of Wurzen, and the principal places in each.

THE circle of Leipſic, including the diſtrict of Wurzen, is bounded by the Miſnian and Ertzgebirg circles, by a part of the dutchy of Altenburg, the biſhoprics of Merſeburg and Naumburg-Zeitz, and by the Thuringian and electoral circles. It contains thirty-two towns, nine hundred forty-ſeven villages, and conſiſts of fourteen prefecturates.

The principal city of this circle is Leipſic, which ſignifies the place of lime-trees, and is one of the fineſt and moſt celebrated towns in all Germany. It is ſituated in a pleaſant and fertile plain on the Bleiſſe, in the fifty-firſt degree twenty-two minutes latitude, and in the twelfth degree thirty-four minutes eaſt longitude, forty-ſix miles to the north-weſt of Dreſden. It has ſeveral other rivulets in its neighbourhood, as the Barde, the Elſter, and the Luppe. It is indeed ſaid to be only eight thouſand nine hundred fifty-four paces in circumference; but it has large and well built ſuburbs, with fine gardens. Between theſe ſuburbs and the town is a fine walk of lime-trees, which was laid out in the year 1702, and encompaſſes the city. Mulberry-trees are alſo planted in the town ditches; but the fortifications ſeem rather calculated for the uſe of the inhabitants to walk on than for defence. The walls have four magnificent ſtone gates, and the citizens maintain two hundred ſoldiers. The houſes are very lofty, and have elegant fronts. The ſtreets are clean, commodious, and agreeable; they are lighted in the night with ſeven hundred lamps, and the inhabitants amount to about forty thouſand within the walls.

Leipſic has been diſtinguiſhed during ſeveral ages for the liberty of conſcience granted to all people. Hence the inhabitants have been induſtrious in the cultivation of knowledge and moral improvement. Here is an univerſity which is ſtill very conſiderable, with ſix churches for the Lutherans, theirs being the eſtabliſhed religion, one for the Calviniſts, and a chapel in the caſtle for thoſe of the Romiſh church. The univerſity library conſiſts of about twelve thouſand volumes, ſix thouſand of which are folios. This library is open for the uſe of the public, from ten to twelve, on Wedneſdays and Saturdays; and on the ſame days, but in the afternoon, free acceſs is allowed to the magiſtrates library, which conſiſts of about twenty-five thouſand volumes, and contains cabinets of urns, antiques, and medals, with many curioſities of art and nature. The exchange is an elegant ſtructure, and the cieling of the great hall is well painted. The Appel gardens are planted with a great number of yew trees, and adorned with canals, water-works, and ſtatues. In a ſtructure erected in this garden is carried on a manufactory of gold and ſilver tiſſue, velvet, &c. The Boſen gardens are very large, but want that ſymmetry and beauty which appear in the Appel gardens; however, here is a fine orangery, and in a pavilion adorned with ſome paintings are to be ſeen a numerous collection of curioſities in the animal and vegetable kingdoms. In an incloſure within the garden are kept ſome white ſtags, of a different ſpecies from the common deer. The aſparagus of Leipſic is large and delicious, the gardens here being reckoned the beſt in Germany.

All ſorts of manufactures are carried on in this city, gold ſilver, ſilk, wool, and linen yarn being worked here into all kinds of ſtuffs, velvets, ſtockings, cloths, and linens. There are alſo houſes for the dying of ſilk, the printing of cottons, the making of tapeſtry, and the preparation of Pruſſian blue. The orphan-houſe is appropriated to the culture of ſilk. The people here are much famed for their painted cloths in imitation of tapeſtry.

Leipſic has three fairs, viz. on New-year's-day, Eaſter, and Michaelmas; but that of Eaſter is moſt conſiderable. To theſe fairs reſort the Poles, Hungarians, Bohemians, Pruſſians, and indeed people from all parts of Germany; and likewiſe the Engliſh, French, Italians, and even Ruſſians, who all bring the produce of their reſpective countries, which are bought up there and diſperſed, by means of the rivers, to the moſt diſtant parts of the empire.

In the years 1631 and 1632 this city was taken by the Imperialiſts; in 1642 it was taken by the Swedes, and in 1745 and 1756 was garriſoned by the Pruſſians, to whom it was obliged to pay very conſiderable ſums of money by way of contribution.

The neighbouring country being very pleaſant and well cultivated, its fertility draws hither multitudes of larks, which are ſo very fat, and have ſo delicate a flavour, that the Leipſic larks are famous all over Germany; and what muſt appear very extraordinary is, that the exciſe on theſe birds produces ſix hundred thouſand dollars, or about nine hundred pounds a year to the city, at a groſch or two-pence ſterling for every ſixty of thoſe birds. The revenue accruing to the ſovereign from the city of Leipſic is computed at four hundred thouſand rixdollars, or ſeventy thouſand pounds ſterling a year.

The next town we ſhall mention is Grimma, which has an old ruinous citadel, and is divided into the Upper and Lower town, in each of which is a church with another for interments, and the hoſpital church of St. George, which lies before the bridge-gate. The prince's, or provincial ſchool, has alſo a church of its own; beſides which there is a town ſchool. The inhabitants procure ſubſiſtence chiefly by their wood, cloth, and thread; the dealers in the latter frequent the fairs of Leipſic, their thread being exported far and near. This town was the firſt in all Saxony that imitated the Engliſh flannel.

Rochlitz is ſeated on the Mulde, in the prefecturate of the ſame name with the town, and contains about four hundred houſes. To the weſt it has a citadel, which ſtands on a high grey rock. It has three churches, and a good Latin ſchool. In this town cloths, ſtuffs, and linen are made; and in a mountain near the town are ſome excellent ſtone quarries, the red ſtone in which is exported to a great diſtance. Marble, jaſper, chalcedony, and other beautiful ſtones are alſo found here.

The diſtrict of Wurzen, though united to the circle of Leipſic, has its own regency, and ſeveral towns, the principal of which is Wurzen, which is ſeated on the river Mulde. The town is but ſmall, but the ſuburbs, which are much larger, contain in them the old citadel, a cathedral church, that of St. Wenzeſlaus, an hoſpital, and a Latin ſchool. The beer of this town is reckoned equal to any in Saxony, and is exported in great quantities. Here are alſo many houſes for the dying of cloth, ſeveral bleaching grounds for linen, and many of the inhabitants get their living by knitting.

SECT. VII.

Of the Circles of Ertzgebirg, Voigtland, Neuſtadt, Merſeburg, and the Biſhopric of Naumburg; with their principal Towns.

THE circle of Ertzgebirg is bounded by the circles of Leipſic and Miſnia, as alſo by Bohemia, the Voigtland and Neuſtadt circles, and has its name from the mountains, which are rich in ore. On the ſearching and working of this ore and other minerals, and on ſome manufactures, the inhabitants depend for their ſubſiſtence, which they cannot here receive from agriculture. This circle, including the ſeigniories of the count of Schonburg, contains fifty-four towns, ten mine and market-towns,

towns, and ſeven hundred and ſixty-one villages; and is divided into fifteen prefecturates, the principal places in which are,

Freyberg, or Fridberg, the capital of the prefecturate of the ſame name, and the principal mine-town belonging to the elector of Saxony, is ſeated on the Mulde, into which the river of Luſitz falls, after it has run through the town. Freyberg conſiſts of about two thouſand houſes, and the number of its inhabitants, in 1725, was computed to amount to ſixty thouſand. It is ſurrounded with a double wall, each of which is defended by towers and out-works; but the inner wall has the greateſt number. Round it alſo runs a lined ditch. The tract about the town is pretty mountainous, and yet is eſteemed fertile. It has an upper mine-office, which has the direction of all the mines in the country. The citadel lies at a ſmall diſtance from one of the gates, and is encompaſſed with a ditch remarkably deep, and has a church of its own. The other churches are the cathedral, near which is the electoral burying-chapel, St. Peter's church, St. Nicholas's, St. James, St. John's, and St. Bartholomew's. Each of the two laſt has an hoſpital belonging to it; here is alſo an academy, which has eight teachers, and in it is kept the public library. Freyberg has alſo a cannon and bell-foundery, and the inhabitants are employed in making fine Lyons lace and lace of Tombac; and near the town is a ſulphur and vitriol-houſe. Its excellent beer is exported to a great diſtance. In 1318 it obtained the privilege, that all the carriers that go to Bohemia ſhould be obliged to expoſe their wares to public ſale for three whole days to the inhabitants of this town. The ſilver mine works in this neighbourhood are of great importance, and the moſt profitable in all Miſnia. There are likewiſe mines of copper, tin, and lead; all which are ſaid to bring in the elector a clear annual profit of a hundred and thirty thouſand pounds ſterling. In 1632 it was taken by the emperor, when the elector gave eighty thouſand rixdollars to ſave unrifled the family monuments in St. Peter's church, the German princes being antiently buried in their robes, jewels, &c.

Zoblitz is a ſmall town, where the inhabitants principally ſubſiſt by working the ſerpent-ſtone, which is found here, into pitchers, mortars, bowls, tea and coffee-cups, writing implements, boxes, pipes, caſkets, candleſticks, ſnuffers, tobacco-boxes, and alſo by trading in lace, yarn, and linen. The ſerpent-ſtone is dug juſt above the town; and farther to the eaſt is found a red ſpecies, which is eſteemed the fineſt, and is therefore conſidered by the ſovereign as his property; together with a yellow, green, brown, grey, and black ſort. In the electoral red quarry are found granates, and alſo aſbeſtos of various colours.

Zwickau, one of the largeſt towns in this country, is ſituated on the river Mulde, and has a citadel ſeparated from the town by a ditch. It has a church in the upper part of the town, another in the lower part, and a third in the lower ſuburbs. It has a good Latin ſchool, in which is a library that contains above twenty thouſand volumes; there is here alſo a ſuperintendency, whoſe ſpiritual juriſdiction is divided into three circles, in which are fifteen boroughs and nine towns, with ſixty-ſix churches in the country. This town has a manufacture of cloth, and a great nnmber of cards are made here for the manufacturers who work in wool, cotton, &c. The trade carried on here conſiſts in theſe articles, and alſo in leather, deals, iron, coals, marble, and corn.

The circle of Voigtland is bounded by that of Ertzgebirg, Bohemia, and the principality of Culmbach, and contains fifteen towns and three hundred and twenty-three villages, the principal place in which is,

Plauen, the capital of a prefecturate of the ſame name, and of the electoral Saxon ſhare in Voigtland; it is ſeated on the river Elſter, and contains an old citadel, with one pariſh church, and another for interments; as alſo a Latin ſchool and a ſuperintendency, which has a ſpiritual juriſdiction over ten towns and thirty-nine churches. Here is a manufacture of cotton and cloth.

The circle of Neuſtadt is bounded by a part of the circle of Ertzgebirg, and the principalities of Altenburg and Saalfeld. It conſiſts of three prefecturates, in which are ſeven boroughs, two market-towns, and two hundred and twenty-two villages; but the places in this circle are too inconſiderable to deſerve notice.

The dutchy of Merſeburg is environed by the circles of Leipſic, Thuringia, the county of Mansfeld, and the dutchy of Magdeburg.

The country is fertile, and produces a conſiderable quantity of corn, millet, and flax. It was formerly a biſhopric ſubject to Magdeburg; but was ſecularized by the treaty of Paſſaw in favour of the houſe of Saxony. One of the dukes, who was adminiſtrator of it, having introduced Lutheraniſm here about the year 1562, it has been ſince granted as a portion to one of the younger ſons, to whom it gives the title of duke, who, with the revenues of other diſtricts added to this noble biſhopric, is enabled to keep a very genteel court.

The chapter conſiſts of Lutheran proteſtants of antient genuine nobility, theſe are ſixteen canons major, among whom are ſix prelates and four minor canons.

The dutchy has its own regency, together with a peculiar chamber, college, and conſiſtory.

It is divided into five prefecturates, in which are one borough, ſeven towns, and two hundred and twelve villages.

The principal place of this dutchy is Merſburg, where the duke reſides. It ſtands in a fine ſituation, amidſt meadows and gardens, on the banks of the Sala, or Saal, ten miles to the ſouth-eaſt of Halle, and ſeventeen to the north-weſt of Leipſic. It is thought to derive its name from Mars, who was worſhipped here by the pagan Saxons: within the liberties of the chapter ſtands the epiſcopal palace, together with the cathedral, a Gothic ſtructure, in which is to be ſeen the magnificent tomb of the emperor Rodolphus of Swabia, who died after loſing his hand in a battle fought with Henry IV. his competitor, and the burying-vault of the duke of Saxe-Merſeburg. Near the cathedral is a library of very antient manuſcripts. The town is well built, though not in the modern taſte, and its walls and ſeven towers are of ſtone. Among the other buildings are the palace, an academy, the chancery, the chapter-houſe, the abodes of the canons, and the pariſh-church. It has two ſuburbs, in each of which is a church, and in one of them is an orphan-houſe, and a water-engine, by means of which water is conveyed from the Saale into the palace, the town, and ſuburbs.

The laſt diſtrict we ſhall mention in the electorate of Saxony is the ſecularized biſhopric of Naumburg, which lies partly on the Saale and partly on the Elſter. The former part is entirely ſurrounded by the circle of Thuringia, and the latter by Thuringia, the circle of Leipſic, and the principality of Altenburg.

The proteſtant chapter of Naumburg conſiſts of twelve capitulars, ſix major prebends, and four minor; and the collegiate foundation of Zeits, which is alſo proteſtant, has ſeven canons. This biſhopric has its own regency, together with a peculiar college and conſiſtory; the latter of which is filled up by the counſellors of the regency, in whom is likewiſe veſted the choice of the ſuperintendency of the foundation.

This biſhopric contains three prefecturates, in which are five towns, and about a hundred and forty villages: but the only places worthy of notice are,

Naumburg, the capital of the diſtrict. This city lies in a fertile tract near the Saale. It is under the juriſdiction of its council, and contains a ſmall citadel, with three churches and a ſchool. In the liberty is the cathedral, and the cathedral ſchool. Its yearly fair, which begins on the twenty-ninth of July, enjoys conſiderable privileges.

Zeitz is a town ſeated on the Elſter, and contains a citadel, which, from its founder duke Moritz, or Maurice, is named Moritzburg. It contains four churches, with a ſchool, and is the ſeat of the regency and conſiſtory. In this town is likewiſe a manufacture of cloth.

We here conclude our account of the electorate of Saxony, which compoſes only one of the twenty-two ſtates into which Upper Saxony is divided, and ſhall now proceed with the reſt.

SECT. VIII.

Of the Mark or Marquiſate of BRANDENBURG.

Its Situation, Produce, Rivers, and Canals. The Religion of the Inhabitants, and their Learning, Arts, and Manufactures.

THE mark of Brandenburg is bounded on the north by Mecklenburg and Pomerania; on the eaſt by Poland; on the ſouth by Sileſia, Luſatia, the electorate of Saxony, the principality of Anhalt, and the dutchy of Magdeburg; and on the weſt by the dutchies of Magdeburg and Lunenburg.

This country is not every where fertile, ſome tracts being very ſandy; notwithſtanding which theſe lands, when properly cultivated, yield rye, ſmall barley, and oats in abundance, and the corn is thinner ſhelled than that which grows in a fatter ſoil. The inhabitants alſo turn their ſandy grounds to advantage by laying it out in vineyards and gardens, or planting it with pine-trees, which thrive well in theſe parts; but ſome of the circles are very fruitful, producing wheat, ſpelt, and large barley in plenty.

This country, under the government of king Frederic William and his ſon Frederic II. has acquired a very different form from that in which it antiently appeared. Agriculture is univerſally improved, large tracts of waſte land have been cultivated, ſuperfluous woods grubbed up, deep and large moraſſes rendered dry and fruitful, and a prodigious number of villages erected. In ſome of the circles millet, buck-wheat, and flax are cultivated; in others great quantities of tobacco, and in others again herbs uſed for dying. The woods furniſh the inhabitants not only with fuel fit for domeſtic uſes, but with great quantities of timber for houſe and ſhip-building, a great deal of which is exported to Hamburg, Holland, France, and other places. The woods are alſo of great advantage for carrying on their glaſs and iron-works; the making of charcoal, tar, and pot-aſhes. Hence great care is taken to preſerve thoſe woods in a good condition, for the benefit of poſterity.

The inhabitants alſo employ themſelves in breeding of cattle, and particularly ſheep, on account of the great advantage they receive from their wool, which enables them to carry on ſome profitable woollen manufactories; and therefore for the improvement of their breed of ſheep, king Frederic II. has cauſed rams to be imported from Spain and England. The culture of ſilk is likewiſe carried on with good ſucceſs, and is continually increaſing; for notwithſtanding the climate is in winter much colder than ours, ſilk-worms thrive, and produce a great deal of ſilk.

The principal minerals in the Mark are a fine porcelain earth, and all manner of colour-earths, together with allum, ſalt-petre, amber, and iron ſtone.

Of the rivers in this country are the Elbe, and the Oder, which may be eſteemed the capital rivers of Germany. Beſides theſe there are leſſer ſtreams, and many uſeful canals for the advantage of navigation. One of theſe canals, named Plauen, ſhortens the water-paſſage between Berlin and Magdeburgh about one half; it is eight thouſand ſix hundred fifty-five perches in length, and at the bottom is twenty-two, at the ſurface of the water twenty-ſix, and in ſome places between forty and fifty feet broad, with bridges laid over it, at nine different places. There are alſo ſeveral inland lakes, ſome of which, in the middle Mark, have a communication by means of canals and ſluices. The Elbe and the Oder abound leſs in fiſh than the Havel, the Spree, and ſeveral ſmaller ſtreams.

The greateſt part of the inhabitants are of the Lutheran church; the preachers belonging to which are ranged under ſixty-nine ſpiritual inſpections and their head, partly ſtiled inſpectors, and partly alſo provoſts. The royal and electoral houſe alſo now profeſs themſelves of this church. The refugee Bohemians who are ſettled here are Roman catholics, but the French refugees are Calviniſts; however, every inhabitant enjoys an unreſtrained liberty of conſcience.

The ſciences are in high eſteem, and greatly cultivated: for their improvement there are Latin ſchools, ſeveral ſeminaries, the univerſity of Francfort on the Oder, and the academy of ſciences at Berlin. The ſovereign himſelf is the patron of learned and ingenious men; and he himſelf is a philoſopher and a poet.

Numerous manufactures are carried on here, the greateſt part of which were introduced by the French refugees. The inhabitants make cloths, and ſeveral ſorts of woollen ſtuffs, as camblets, calimancoes, flannels, ſilk ſtuffs, velvets and tapeſtries, gold and ſilver lace, and leather. They prepare all manner of purified earths for colours, allum, ſalt-petre, gun-powder; and ſeveral ſorts of wares are made of wrought and caſt iron, ſteel, and braſs. They likewiſe make large and excellent mirrors, and a very fine ſort of porcelain. At Berlin are alſo excellent painters, ſtatuaries, and engravers. Admirable things are alſo performed in the jewelling, goldſmiths, and enamelling way; fine mathematical inſtruments are alſo made; and the Berlin coaches are every where famous. By means of theſe arts and manufactures, a ſaving of large ſums is made, and the money kept in the country; while the goods exported bring in return a prodigious quantity of gold and ſilver.

SECT. IX.

The Royal and Electoral Titles, and Arms; the various Offices by which the Government is adminiſtred; the Revenues, and Power of the Elector; and the Number of his Forces.

THE royal and electoral titles run thus: viz. Frederic king of Pruſſia, margrave of Brandenburg, of the holy Roman empire arch-chamberlain and elector, ſovereign and ſupreme duke of Sileſia, ſovereign prince of Orange, Neufchatel and Valengin; of the county of Glatz, Guelders, Magdeburg, Cleve, Juliers, the Berg, Stettin, Pomerania, the Caſſubi and Wends, Mecklenburg and Croſſen, duke; burgrave of Nurenberg, prince of Halberſtadt, Minden, Camin, Wenden, Schwerin, Ratzeburg, Eaſt-Frieſeland and Mors; count of Hohenzollern, Rappin, the Mark, Ravenſberg, Hohenſtein, Tecklenburg, Lingen, Buren, and Leerdam; lord of Ravenſtein, the countries of Roſtock, Stargard, Lauenburg, Butow, Arlay, and Breda, &c.

The arms on account of Pruſſia are a crowned eagle ſable, with trefoil-ſtalks or, on the wings, and the letters F. R. on the breaſt, in a field argent. On account of the mark of Brandenburg an eagle gules, weaponed or, with trefoil-ſtalks of the ſame on the wings, in a field argent. On account of the arch-chamberlain's office, a ſcepter placed palewiſe in a field azure. On account of the dutchy of Geneva, a cheſs-table divided into five fields or, and four azure. On account of Orange, a belt or, with a blue hunting-horn. On account of Neufchatel, a pale gules beſet with three chevrons argent, in a field or. On account of Magdeburg, a ſhield divided gules and argent. On account of Cleve, eight ſceptres or, in a field purple; or according to others, united in a ſmall ſhield argent, in which is ſeen a round ring. On account of Juliers, a lion ſable in a field or. On account of the Berg, a lion gules crowned azure, in a field argent. On account of Stettin, a griffin gules, crowned or, and weaponed in a field azure. On account of Pomerania, a griffin gules, weaponed or, in a field argent. On account of Caſſuben, a griffin ſable, turned to the ſiniſter ſide and weaponed or, in a field of the ſame. On account of Wenden, a griffin tranſverſely marked gules and verte, in a field argent. On account of Mecklenburg, a buffalo's head ſable, having horns argent and crowned gules, with a ring argent paſſed through the noſe. On account of Croſſen, in a field or, an eagle ſable, with wings, tail and weapons diſplayed, and having on his breaſt a creſcent argent, over which is ſeen a ſmall croſs of the ſame. On account of Jagerndorf, an eagle ſable with a hunting-horn argent, placed on the breaſt, in a field of the ſame. On account of the burgravate of Nurenberg, a lion ſable, with open jaws prepared for battle, a tongue exerted gules, weaponed and crowned, in a field or. On account

account of Halberſtadt, a ſhield divided argent and gules. On account of Minden, two keys argent, placed in form of a St. Andrew's croſs, in a field gules. On account of Camin, an anchor croſs argent, in a field gules. On account of Schwerin, a ſhield divided, in whoſe upper part is a griffin or, in a field azure, the under part verte, with an incloſure argent. On account of Ratzeburg, a croſs waving and argent, in a field gules. On account of Eaſt Frieſland, a crowned harpy or, with wings diſplayed, in a field ſable, and four ſtars or, in the four corners of the field. On account of Mors, a feſſe ſable, in a field or. On account of Hohenzollern, a ſhield quarterly argent and ſable. On account of Ruppin, an eagle argent, in a field gules. On account of the Mark, a feſſe chequered gules and argent, in a field or. On account of Ravenſberg, three chevrons gules and argent, placed over each other. For Hohenſtein, a ſhield chequered gules and argent. For Tecklenburg, three hearts gules, in a field of the ſame. On account of Lingen, an anchor or, in a field azure. On account of Schwerin, an arm ornamented argent, projecting out of a cloud, and holding in its hand a ring, in a field gules. For Clettenberg, a hart ſable, in a field argent. For Regenſtein, a hart's attire gules, in a field argent. For Buren, a feſſe argent pinnacled alternately on both ſides, in a field gules. On account of Leerdam, two feſſes gules, alternately pinnacled on each ſide, in a field argent. On account of the marquiſate of Ter Veer, a feſſe argent in a field ſable. For Roſtock, a buffalo's head gules and crowned, a tongue exerted gules, and horns argent, in a field or. On account of Stargard, a ſhield divided gules and or; and on account of Breda, three ſmall St. Andrew's croſſes argent.

With reſpect to the orders of knighthood, we have already given an account of them in treating of Pruſſia.

With reſpect to the ſeveral offices by which the government is adminiſtered, they conſiſt of the following, which are kept at Berlin.

I. The privy ſtate-council, which aſſembles once a week. In this council all the privy miniſters of ſtate and war, as well as thoſe who are in the provinces, have a ſeat and voice when they come to Berlin. In it are propoſed matters of grace, important juſticiary affairs are decided, and the vacant inveſtitures conferred, thoſe of the Sileſian princes excepted, who are inveſted by the king himſelf from the throne.

II. The cabinet miniſtry, which take care of foreign ſtate affairs, and conſiſt of the privy miniſters of ſtate, war, and the cabinet, who are divided into two departments, of which one attends only to German ſtate-affairs, or the concerns of the empire.

III. The general ſupreme directory of the finances, war, and domains, throughout the whole of the royal and electoral countries; under which are all the war and domain chambers. The king himſelf is preſident, and the heads of the ſix departments into which it is divided have certain privy finance counſellors under them; they are miniſters of ſtate and war, and act as vice-preſidents, and directing miniſters at the general ſupreme directory of the finances, war, and domains. Under four of theſe departments are divided the ſeveral parts of the king of Pruſſia's German dominions; the fifth takes cognizance of affairs relating to commerce, arts, and manufactures; and the ſixth of the magazines, proviſions, marching, quartering, ſalt-petre, and other affairs relating to the ſervice.

IV. The ſpiritual department, which takes care of the church, the univerſity, ſchools, and affairs relating to the poor, and has at its head a miniſter of ſtate and war.

V. The general poſt-office, which provides every thing relating to the poſt throughout the whole of the royal and electoral countries, Sileſia excepted.

VI. The ſupreme court, or tribunal of appeals, the higheſt juſticiary college in all the royal and electoral countries, and to which appeals lie from the ſeveral regencies or governments.

VII. The chamber court, which decides all proceſſes throughout the electoral Mark, and conſiſts of two ſenates, the chief preſident of which, and likewiſe of the tribunal, is the great chancellor for the time being.

VIII. The war and domain chamber of the electoral Mark, which has the management of the farming out of the royal prefecturates and mills, the care of the finances and domains, and in general of every thing that relates to the royal revenues ariſing from the electoral Mark of Brandenburg.

IX. The ſupreme war and domain chamber of accompts, which inſpects the accompts of the ſeveral caſh officers in the royal and electoral countries.

X. The ſupreme Lutheran conſiſtory, which is employed in filling up the places of preachers and ſchoolmaſters, and in examining candidates. This conſiſtory is likewiſe conſulted on the filling up of the theological chairs at the royal univerſities.

XI. The directory of the Calviniſt church, which takes cognizance of the concerns of the ſeveral Calviniſt churches in the royal countries.

XII. The war conſiſtory.

XIII. The pupil college of the electoral Mark, which being appointed for the tutelage of minors, audits their accounts, and provides for the ſecure lodgment of their capitals.

XIV. The ſupreme mine-office.

XV. The general proviſion-office.

XVI. The general ſalt-cheſt and ſalt-factory.

XVII. The ſupreme medicinal college.

The French have an upper and under judicatory of their own, as alſo their own reviſion, tribunal, ſupreme conſiſtory, and ſupreme directory, which is ſtiled the *Conſeil François*.

The ſources of the royal revenues ariſing from the marquiſate of Brandenburg are the royal domain, with the foreſts, poſts, mines, mints, duties on ſalt, ſtamped paper and cards, exciſe, impoſts upon beer, and grinding, the buſhel-tax, tolls, protection-money paid by the Jews, the contribution or tax on hides, land, and houſes, &c. Theſe ſeveral revenues are collected into different cheſts, and the ſum total of the yearly revenues ariſing from the mark alone are eſtimated at about two millions and a half of crowns.

The power of the royal Pruſſian and electoral houſe of Brandenburg has riſen under king Frederic II. to a height that has attracted the attention and aſtoniſhment of all Europe. This power is not ſo much founded on its extent of territory, which is much leſs than that belonging to ſome other European ſtates, but on its excellent internal conſtitution, as well as on the great inſight of its governor into the connection of the different parts of the body politic, and likewiſe on his own wiſe and indefatigable attention to the government of his people.

All the countries and ſtates of this royal and electoral houſe do not exceed three thouſand ſquare German miles, and contain in them nearly five hundred towns. From the year 1750 to 1756 there were, one year with another, one hundred and ſixty-ſix thouſand five hundred and ſixty-ſeven perſons baptized, and about a hundred and twenty-five thouſand three hundred and forty-eight deaths; whence, in order to find out the number of inhabitants, we need only to multiply the laſt of theſe ſums by thirty-eight, which brings the number to four million ſeven hundred and ſixty-three thouſand two hundred and twenty-four. The whole of the royal revenues are rated at near twenty millions of dollars. The contributions of the ſubjects are invariably fixed, and at no time, not even in the moſt difficult conjunctures of war, are afterwards raiſed or renewed.

According to a compleat liſt of the royal Pruſſian army in 1753, it conſiſted at that time of one hundred and forty-ſix thouſand two hundred and fifty-ſeven men, which in time of peace requires the ſum of ten million nine hundred and thirty-two thouſand nine hundred and ſixty dollars for their yearly maintenance, excluſive of the charges of mounting and remounting, levying and quartering, which may ariſe to about one-fourth more: ſo that the ſum total of the money required for their maintenance one year amounts to nearly fourteen millions of dollars.

The diſcipline of theſe troops, as well as their expertneſs at their exerciſe, is not to be equalled. For their ſubſiſtence the ſeveral royal and electoral countries are divided

divided into cantons or ſmaller circles, out of which each regiment, and even each company, has a ſeparate one to itſelf, out of which its recruits are to be drawn; for which reaſon the ſeveral regiments are always quartered in or near thoſe cantons out of which they draw their recruits. In times of peace theſe troops have every year nine or ten months furlow granted them, in order to enable them to carry on their buſineſs as burghers or peaſants.

The above-mentioned army has conſiſted of ten thouſand three hundred and forty cuiraſſiers, eleven thouſand nine hundred and thirty-eight dragoons, ten thouſand one hundred and ſixteen huſſars, and one hundred and thirteen thouſand eight hundred and fifty-ſix foot; among which were four thouſand four hundred and twenty-three ſuperior officers, and ten thouſand and forty inferior ones. A regiment of cuiraſſiers conſiſts of five ſquadrons, a regiment of dragoons of ten, and a regiment of huſſars of the like number. A ſquadron of the two firſt contains one hundred and ſixty-ſix men, and a ſquadron of the laſt one hundred and fourteen complete. A regiment of foot uſually conſiſts of two battalions, each of which is compoſed of ſix companies, that is one of grenadiers, and five of muſketeers. However, two of the Pruſſian regiments conſiſt of three battalions; theſe are the regiment of guards and that of Anhalt Deſſau. A field battalion conſiſts of eight hundred and ſixty-four men, and a garriſon battalion of ſeven hundred and twenty.

The Pruſſian ſoldiers are in general remarkable for the ſhortneſs of their coats, which ſeems at firſt view to proceed from a ridiculous frugality, yet is calculated for very wiſe ends. Their cloaths ſit extremely cloſe to their bodies, and are ſtrengthened at the elbows with leather in the form of a heart, which prevents the neceſſity of patching an old garment. A Pruſſian ſoldier is never ſeen in rags; but all of them, with reſpect to neatneſs and the cleanlineſs of their perſons, appear as gentlemen. The king's guards, and ſome other regiments, have new cloaths every year, but the reſt of the army in general have new regimentals only twice in three years. The laſt king obliged the ſoldiers to wear white ſpatterdaſhes both in winter and ſummer; but his preſent majeſty, obſerving the inconvenience with which it was attended, gave his men black for the winter. In the ſame ſeaſon their breeches are of woollen cloth, but in ſummer they are of white dimity, or linen, which are very light and clean. They all wear their hair queued, which is by this means eaſily kept in order; and they are always powdered when on duty. This not only ſerves to preſerve the natural hair or wig, but gives the ſoldier a reſpect for his own perſon, and the rank in which he conſiders himſelf in ſome meaſure compenſates for the ſmallneſs of his pay.

The Mark of Brandenburg is in general divided into the Electoral and New Marks. The Electoral Mark compriſes in it the Old Mark, the Prignitz, the Middle Mark, and the Ucker Mark. Theſe marks, or provinces, are again divided into circles, and over each is placed a land council. We ſhall begin with the Middle Mark, on account of its lying next the countries laſt deſcribed, and its containing the capital city, the ſeat of government.

SECT. X.

Of the Middle Mark of Brandenburg; with a particular Deſcription of the Cities of Berlin, Brandenburg, and Potſdam; the Palace of Sans Souci, and other Places worthy of Notice.

THE Middle Mark is bounded by the Prignitz, the dutchy of Magdeburg, the Saxon Electoral circle, Lower Luſatia, the New Mark, the Ucker Mark, and the dutchy of Mecklenburg. This country has been greatly improved by the laſt and preſent king of Pruſſia, who have cauſed many marſhy and unſerviceable tracts to be drained and rendered fertile.

In ſeveral parts of this Mark the inhabitants apply themſelves to the cultivation of vines; in others millet and buck-wheat are produced in great quantities; woad, clary, and ſaw-wort are here cultivated, and in many places it ſucceeds well in the culture of ſilk. In ſome parts are conſiderable heaths and woods. This diſtrict has the advantage of having ſeveral fine canals dug for the benefit of commerce.

The Middle Mark is divided into eight circles, the principal places in which are,

Berlin, the capital of all the king of Pruſſia's dominions, and one of the largeſt, fineſt, and moſt populous cities in all Germany, conſiſting properly of five towns united under one town-council. In Berlin are ſeveral fine palaces, with other magnificent and ſuperb buildings. The ſtreets are for the moſt part broad, regular, ſtraight, and ſome of them very long and elegant. There are alſo ſeveral large and beautiful ſquares, together with pleaſant walks. There are twenty-five churches, fourteen of which are Lutheran, eleven Calviniſt, and one Roman catholic; an academy of ſciences, another of arts and painting, a college of anatomy and ſurgery, five ſeminaries, and two public libraries. In 1755 it was computed to contain five thouſand eight hundred and twenty-ſix houſes, and one hundred and twenty-ſix thouſand ſix hundred and ſixty-one perſons, among which were ſix thouſand five hundred and forty-one French, one thouſand two hundred and fifty-three Bohemians, two thouſand five hundred and ninety-five Jews, and twenty-ſix thouſand three hundred and twenty-five ſoldiers who had wives and children.

This city is ſeated on the Spree, which paſſes through it in two principal branches, and is in the fifty-ſecond degree twenty-eight minutes north latitude, and the thirteenth degree forty-four minutes eaſt longitude, a hundred and fifty miles to the north-weſt of Prague, and is encompaſſed with agreeable gardens and vineyards. The entrance into Berlin is airy and elegant. In going towards the palace, on the new bridge, which is of ſtone, over the Spree, is an equeſtrian ſtatue of Frederic William the Great, which is eſteemed a piece of exquiſite workmanſhip, and was erected by Frederic I. king of Pruſſia. Both the man and horſe are of one entire piece caſt at the ſame time, and coſt forty thouſand crowns. The elector is repreſented in a Roman habit, ſomewhat above the common ſize, on a pedeſtal of white marble, adorned with baſſo relievo, repreſenting four ſlaves bound in chains to the corners of the baſe.

The king's palace is a magnificent ſtructure of free-ſtone, begun by Frederic I. in 1699, and conſiſts of four ſtories, with fine ceilings, large apartments, and ſuperb furniture, in particular the quantity of ſilver every where ſeen is amazing, for the tables, ſtands, luſtres, chandeliers, looking-glaſs frames, couches, &c. are ſaid to be all of that metal. Mr. Hanway obſerves, that the apartments in the palace are adorned with ſilver in every ſhape; but theſe ornaments are ſo maſſy, that the faſhion does not exceed ſeven per cent. ſo that four millions of dollars might with great eaſe be realized, if the exigencies of the ſtate required it. Here are the pictures of Charles V. and his empreſs, the frames of which are of ſilver, each weighing ſix centners, or ſix hundred and ſixty pounds; and there is a ſuperb crown luſtre of ſeventeen centners. There are alſo pieces of three, four, and five centners, and a grand muſic-gallery finely ornamented, all of ſilver; beſides, one end of a large apartment, for about twenty feet high and as many broad, is richly furniſhed with gilt plate: yet all this is merely for ſhew, the court having other ſervices of plate for uſe. This account of the treaſures in this palace was written juſt before the late war, and it is not improbable that might induce his Pruſſian majeſty to melt down ſome of it into ſpecie.

The king's particular apartments are elegant; but have nothing extraordinary, the prevailing taſte is white ſtucco and gilding. Several of the private apartments have tables, with pens, ink, and looſe papers, which indicate the diſpatch of buſineſs, more than the regularity and elegance one naturally expects to find in a royal palace. The hall has ſeveral good paintings, and the grand ſaloon is adorned with four pieces of tapeſtry, repreſenting our Saviour driving out the money-changers, his waſhing the diſciples feet, the miraculous draught of fiſhes, and

and his laſt ſupper. The throne in the audience-chamber is of velvet, embroidered with gold in a grand taſte; but not loaded with ornaments. There is nothing extraordinary in the old quarter of the palace, except a bed of crimſon velvet, which has above two hundred cyphers with electoral crowns, all ſet with pearls, and the chairs in this room are in the ſame taſte. It is uſual for perſons of the royal blood to lie in this bed on the firſt night of their marriage.

The library is far from having a beautiful appearance; but all gentlemen have the liberty of reading there, from ten in the morning till two in the afternoon.

The king's ſtables are a ſpacious building, divided into two courts, and nine pavilions, at an equal diſtance from each other. The architecture on the outſide is Gothic; but the inſide is more magnificent, and very lofty and lightſome. The mangers are of ſtone, and the pillars of the ſtands of iron, adorned with his majeſty's cypher gilt. Over the mangers are ſeveral large pictures of the fineſt horſes bred in the king's ſtuds. The back ſide of theſe ſtables projects towards the river, a ſlope being formed inſtead of a ſtair-caſe, by which they deſcend. Here are noble apartments for the maſter of the horſe and the inferior officers, with large rooms over the ſtables, in which are depoſited a great deal of rich furniture and harneſs; among which are the accoutrements of the horſe on which Frederic I. rode at his public entry; all the ornaments of the bridles, the breaſt-leather, and crupper, as well as the bits and ſtirrups, being of gold, adorned with brilliants. Theſe ſtables are ſaid to have room for four hundred horſes.

The arſenal is one of the nobleſt ſtructures of the kind in Europe, and conſiſts of four grand buildings, that form a ſpacious ſquare, with four fronts almoſt exactly alike, and a handſome portico at the entrance of each. The lower ſtory is of ruſtic architecture, with arched windows. Over the principal gate, which is in the middle, is the model of the king's grand-father in braſs gilt, encloſed in an oval frame; the four cardinal virtues, of a gigantic ſize, are placed on pedeſtals on each ſide of the portico, and ſeem to look towards the picture, and over it is his majeſty's cypher, ſupported by two men, and above it a large pediment covered with a beautiful baſſo relievo repreſenting Mars, reſting on a trophy, and looking at a couple of ſlaves chained at his feet. The firſt ſtory is of the Corinthian order, and a baluſtrade runs round the top, with noble decorations of trophies and ſtatues.

The inſide of the arſenal is not leſs magnificent, the rooms of the upper ſtory being full of arms ranged in great order; the lower rooms are ſtored with braſs guns, and the walls and pillars that ſupport the roof covered with cuiraſſes and helmets.

Behind the arſenal ſtands the houſe of the general of the ordnance, in which is contained the foundery, where a number of men are continually employed. There are ſeveral other arſenals in this city, where they keep field pieces, iron cannon, and every thing belonging to the train of artillery.

The opera houſe is an elegant modern edifice, the front of which is adorned with a noble portico, ſupported by ſix Corinthian columns, and in the architrave is wrote FREDRICUS REX APOLLINI ET MUSIS; above which is a pediment adorned with baſſo relievo and ſtatues. The ſcenes are ſplendid, and in an elegant taſte. It has three galleries, and is ſaid to contain two thouſand perſons. The columns that ſupport the roof are calculated to throw the whole into a grand ſaloon, and the orcheſtra conſiſts of about fifty muſicians. The opera is entirely ſupported at the king's expence, and rendered in ſome degree ſubſervient to the ends of government. The extreme delight the king takes in muſic, and his great knowledge in that ſcience, have carried this entertainment to a very high degree of perfection. In the upper galleries on each ſide of the ſtage are ſeated ſix trumpeters, who ſalute the queen conſort when ſhe enters the houſe or retires; but the king himſelf, who is ſuperior to the rules of ceremony, will not allow this ſalutation to his own perſon.

In the ſuburbs the houſes are generally of timber; but ſo well plaiſtered, that they ſeem to be of ſtone, and the ſtreets are broad, ſtraight, and lightſome. Here was the reſidence of the queen mother, who was ſiſter to king George I. of England. This palace is named Mon Bijou, or My Jewel; it is a ſmall elegant ſtructure, beautifully furniſhed, and has very fine gardens that lie open to the river.

About five miles from the city of Berlin, is the palace of Charlottenburg, which was founded by the king's grandfather, and his preſent majeſty has finiſhed it according to his own taſte, which is extremely elegant. There is a range of about ten apartments well diſpoſed, adorned with white ſtucco and gilding. The ball-room is worthy of the king who is ſaid to have deſigned it: it has ten windows on each ſide, and beſides the ſtucco and gilding, which are here richer than in the other rooms, it is adorned with buſts, ſtatues and large pier glaſſes. The gardens are laid out with taſte, and the ſtatues well diſpoſed.

We ſhall now give ſome account of Brandenburg, a city from which the whole electorate takes its name; it is ſeated on the Havel, which not only divides the Old and New Town from each other, but ſeparates the fort from them both, and likewiſe environs the New Town with a particular trench, on which a ſluice has been erected. The Old Town contains about four hundred inhabitants, and the New Town about twice that number. They are both under one magiſtracy, and each contains two churches. The fort reſembles a ſuburb, and in it is the cathedral church; the houſes of the greateſt part of the members of the chapter; and a riding ſchool, in which young noblemen are inſtructed. The biſhopric is ſecularized; but the chapter is ſtill kept up, and conſiſts of ſeven perſons, who are the provoſt, the dean, the ſenior, the ſubſenior, and three other canons. In 1755 king Frederic II. conferred upon it a peculiar diſtinction, and conſiſting of a chapter croſs of gold enamelled with violet, terminating in eight points. There is here a ſmall colony of French Calviniſts, with a manufacture of cloth, fuſtian and canvas; and in this town a pretty good trade is carried on by means of the Havel.

Potſdam, which lies four miles to the ſouth-weſt of Berlin, is agreeably ſituated on a branch of the Spree; it is of conſiderable extent, and the buildings neat and regular. The elector Frederic-William made this his ſeat, and in 1662 built the caſtle, which was afterwards enlarged by king Frederic I. and adorned with a fine portal. King Frederic William began to erect ſome coſtly additions to the town, for which purpoſe he cauſed ſeveral moraſſes to be filled up and built upon, with a canal fifty paces wide and two thouſand in length, to be carried on from the Havel, through the center of the town, to a branch of the ſame river. This canal is planted on both ſides with trees, and environed with well-built houſes. King Frederic II. has raiſed the caſtle one ſtory, enlarged it with two wings, and adorned it with magnificent apartments. The old houſes in the neighbourhood of the caſtle are pulled down, and, inſtead of them, new, regular, and grand buildings have been raiſed for the owners at the king's expence. The apartments are remarkable for their elegance, particularly his majeſty's writing-chamber and ſtudy: the laſt is partitioned off by baluſtrades of ſilver. The frames of the looking-glaſſes and the embelliſhments of the tables are of the ſame metal. The officers dine every day in a large apartment at the king's expence. His majeſty here avoids the empty ceremonies of a court. The allowance of his table is but thirty crowns a day, fiſh and wine excepted, in which he is at no great expence. The king entertains at his table twelve perſons: thoſe of his miniſters moſt in favour are firſt invited, with thoſe of foreign princes, who happen to be at Potſdam, and his officers, even to an enſign, fill up the vacant places. The throne in the audience-chamber is richly embroidered with the arms of the houſe of Brandenburg, ſupported by two Herculeſes. In one of the apartments are two curious figures in copper of a Chineſe man ſitting, and a woman of the ſame country holding an umbrella over his head. Theſe figures, which are richly gilt, ſtand in an oval niche, lined with marble, and form a very convenient ſtove.

Before the caſtle is a large ſquare adorned with Roman columns, in which the ſoldiers that lie here in garriſon are daily exerciſed. The garden adjoining to the caſtle is beautifully adorned with water-works, gilding, and ſtatues, which are large and elegant, particularly a Neptune and Amphitrite ſeated in a ſea-car, in a large baſon, oppoſite the eaſt front of the palace. The ſtables are contiguous, and furniſhed with good Engliſh hunters.

In the market-place is a pyramidal obeliſk of four ſides, compoſed of variegated Sileſian marble, ſeventy feet high, fixed on a pedeſtal of white Italian marble, at each corner of which is a ſmall ſtatue of the ſame; and on the center of each ſide ſtands a marble buſt of the kings, from Frederic I. to Frederic II.

The town church, which is at a ſmall diſtance from the caſtle, is a fine ſtructure. The garriſon church is large, and has a marble pulpit, under which is the monument of king Frederic William: it has a lofty and beautiful tower, in which is placed a fine ſet of chimes. The French church is a neat building, adorned with a cupola, and the church of the Holy Ghoſt has alſo a lofty tower. The council-houſe is a new building that has an elegant cupola. In a large orphan-houſe, founded in 1724, are maintained, cloathed, and educated above two thouſand ſoldiers children of both ſexes; and belonging to it is one Lutheran and one Calviniſt preacher. In this town is a foundery for arms, and a velvet and ſilk manufactory.

Near the town are a great number of vineyards, for the planting of which the elector Frederic William cauſed layers to be brought out of the beſt wine countries. In the park, which is adorned with viſtas in the form of a ſtar, ſtands a royal hunting-houſe, called the Star.

At a ſmall diſtance from Potſdam is Sans Souci, or Without Care, a royal palace devoted to retirement. King Frederic II. ſoon after his acceſſion to the throne, cauſed this palace to be erected on a deſolate eminence, in a fine and grand taſte, both within and without. This eminence is cut into ſix terraſſes, to each of which is an aſcent of twelve ſteps, and againſt the walls upon each terraſs are planted the beſt vine ſtocks, which are kept under glaſs-caſes. On the upper part of this hill, which affords a view of the town, and its adjacent territories, ſtands the palace, which is but ſmall, and only one ſtory high; yet, on account of its regularity, elegance, and ornaments of ſculpture and painting, is much admired: among theſe is to be ſeen the ſtatues, from the cabinet of antiques, formerly in the poſſeſſion of cardinal Polignac. In the center of the palace is a round hall lined with marble, adorned with magnificent columns and excellent paintings; but is particularly admired for the beauty of its floor, the marble of which is diſpoſed in the form of flowers, after the Florentine manner, and ſtrikes the eye very agreeably. On its top is a cupola, which ſupplies it with ſufficient light. One of the apartments in this palace is wainſcotted with cedar, ornamented with foliage of gold; and in this apartment is kept a ſmall library. Behind the palace is a covered ſemi-circular paſſage, adorned on each ſide with columns. The palace is encompaſſed on three ſides with gardens, which have ſeveral fine ſtatues, particularly of a Venus drawing a net, and Diana with game; the pedeſtals of which are adorned with relievo. Theſe gardens, which do not extend above half an Engliſh mile in length, are terminated on the eaſt end by an Egyptian pyramid embelliſhed with hieroglyphics. They have, however, no gravel, and their ſandy walks, in our author's opinion, rob them of half the beauty they might otherwiſe have.

Francfort on the Oder is finely ſituated on that river, in the fifty-ſecond degree twenty minutes north latitude, and in the fourteenth degree fifty-three minutes eaſt longitude from London. The Oder, over which there is a large bridge of timber, divides it into two parts. The ſtreets are wide, the houſes well built, and the market-place ſpacious. There is here a cathedral and two churches, one of which belongs to the Calviniſts; and an univerſity, the profeſſors in which are partly Calviniſts and partly Lutherans. There is here alſo an academy for martial exerciſes, a Lutheran free-ſchool, and another for the Calviniſts called Frederic's ſchool. This city was formerly one of the Hanſe-towns, and had a very conſiderable trade, which is at preſent much decayed. The inhabitants deal chiefly in linen cloths and fells, which they ſend to diſtant parts of Germany by the Oder, and the canal between that river and the Elbe. However, it has annually three great fairs. This city has ſuffered various revolutions: it was put under the ban of the empire by the emperor Charles IV. and, to pacify him, the inhabitants were forced to pay him twelve thouſand marks of ſilver. In 1631 the Swedes took it by ſtorm, when they had the cruelty to put all the inhabitants to the ſword, to revenge the maſſacre of two thouſand Swedes, whom count Tilly, the emperor's general, had inhumanly put to death in the city of Brandenburg; but the place was reſtored to the elector by the peace of Weſtphalia.

SECT. XI.

Of the New Mark, the Ucker Mark, the Old Mark, and the Prignitz; with the moſt remarkable Places in each.

WE ſhall now proceed to the New Mark, which lies to the eaſt of the country laſt deſcribed, and is a long tract of land, which to the weſt is ſeparated from the Middle and Ucker Mark by the river Oder; to the north it terminates on Pomerania; and to the eaſtward on Pomerania, Poland, Sileſia, and Lower Luſatia; being in its greateſt length about a hundred and ſixty-nine miles, and in its greateſt breadth forty-ſeven.

The ſoil is for the moſt part ſandy; but the circles of Konigſberg, Soldin, Frideberg, and Arnſwalde have good corn-lands. Near the rivers are luxuriant paſtures; but the graſs in many of them is coarſe and ruſhy. It abounds in wood, but has a ſufficiency of fruit, garden-plants, game, and fiſh. Some of the circles produce wine, and likewiſe yield great quantities of iron.

The New Mark contains thirty-eight towns, and, as the burials amount one year with another to about five thouſand ſeven hundred, the number of the inhabitants may be eſtimated at two hundred and ſixteen thouſand. The Lutheran churches are divided into twelve inſpections, and thoſe of the Calviniſts conſiſt of five congregations. The New Mark has a regency of its own, which conſiſts of a preſident, and four counſellors, two of whom are nobles, two commoners, one prothonotary, and four clerks. It has alſo its own particular conſiſtory and criminal court of juſtice; as likewiſe a board of war, and a chamber of domains. Reviſals and appeals indeed lie from it to the exchequer at Berlin; but it has been agreed, that it ſhould determine in caſes relating to the New Mark only by way of commiſſion, and not as a ſuperior court.

The New Mark conſiſts of the town of Kuſtrin, of ſeven original circles, and of four incorporated circles.

Kuſtrin, the capital of the New Mark, is ſituated in the fifty-ſecond degree thirty-five minutes latitude, fifteen miles to the eaſt of Berlin. Its proper name is Koztryn, that is a Ruſh Baſket, which is the name of a large lake that abounds with ruſhes, between this city and Sonnenburg, and from which it received this denomination. It is ſeated on the river Oder, which, a little above this city, receives it into the Warte. The adjacent country is marſhy, on which account the approach to it on the ſide of the Middle Mark is by means of a cauſeway, that extends above three miles in length, and has no leſs than thirty-ſix large and ſmall bridges: the approach alſo to one of the ſuburbs is over a cauſeway of ſeven bridges. Its ſituation therefore is very ſtrong, and it is defended by good fortifications. Though the city is ſmall, its ſuburbs are very extenſive. Before the year 1758, there were in the town and fort about two hundred houſes, an old manſion houſe, and a church, in which the Calviniſts uſed to perform divine ſervice; together with a Lutheran pariſh church, the garriſon church, three arſenals, one ſalt houſe, and three magazines. There were alſo a church and two hoſpitals in the ſuburbs; but in the above year, the Ruſſians ſetting the town on fire by

means of bombs and red-hot bullets, it was reduced to a heap of ruins. The fortifications, however, held out againſt all their attempts, and on the approach of the king of Pruſſia, the Ruſſians precipitately raiſed the ſiege.

The other towns in the circles juſt mentioned are inconſiderable, and we ſhall not trouble our readers with deſcribing a number of places, none of which have any thing remarkable.

We ſhall now proceed to the Ucker Mark, which to the north and eaſt is bounded by Pomerania, and the New Mark, being for the moſt part ſeparated from the former by the Welſe and the Rando, and from the latter by the river Oder; to the ſouth and weſt it is bounded by the Middle Mark, and the dutchy of Mecklenburg. Its greateſt extent is about ſixty-one miles in length, and fifty-two in breadth. This province was anciently called Uckerland, or ſimply the Ucker, which name is doubtleſs received from the lake and river Ucker. This lake, which is the largeſt in all the electoral Mark, extends about nine miles in length, and the river of the ſame name iſſues from it at Prenzlo.

The greateſt part of this province is very fertile; for the inhabitants have ſo improved the ſoil, as to be able almoſt every year to export ſeveral thouſand laſts of all kinds of grain, with which it particularly ſupplies Berlin. The parts adjoining to the rivers have good meadow grounds; but in other places the graziery is ſo inconſiderable, that a great number of horſes and black cattle are bought up by the inhabitants in Pomerania and Poland. The country, however, abounds in ſheep, which turn to good account. It alſo produces fruit, hops, and honey, with plenty of tobacco; but in ſome places the inhabitants are in great want of fuel, with which they are partly ſupplied from the neighbouring diſtricts; but other parts abound in fine woods of oak, beach, and pine.

The principal court of judicature in the Ucker Mark, to which appeals lie from the towns and courts of the nobility, is held at Prenzlo. This court conſiſts of a preſident and four aſſeſſors, two of whom are noblemen, and two commoners. The three firſt are conſtantly choſen out of the ancient families of the Ucker Mark, and of the two latter, one is always firſt burgomaſter of Prenzlo.

The Ucker Mark is divided into two circles, in which are nineteen cities, beſides caſtles and market-towns, and the villages are computed at three hundred ſeventy-five.

The principal place in this Mark is Prenzlo, the capital of the country, which is ſeated in a very fruitful plain, on the lake and river Ucker, and is large, well built, with ſtraight broad ſtreets, and is divided into the Old and New Town. The revenues ariſing to the corporation from the city mills, its ſeveral farms, and large woods, are conſiderable. There is a numerous French colony ſettled here, whoſe judge is inveſted with power over all the French colonies in the Ucker Mark. This city formerly contained three convents, two of which have been given to noblemen, and the third converted into an alms-houſe. It has at preſent ſix churches, that is, three parochial churches, in the Old City, one in the New City, a church of German Calviniſts, and one of French proteſtants. Here is alſo a good Latin ſchool, and the city carries on a very conſiderable trade in cattle, corn, and tobacco; for the laſt of which it is particularly famous, as it is alſo for its manufacture of cloth.

The next town we ſhall mention is Templin, which is ſituated on the lake Dolgen, and contains an eccleſiaſtical inſpection. In 1735, it was totally conſumed by fire, but has been re-built to very great advantage: its ſtreets being now broad and ſtraight, and its houſes uniform. It has a ſpacious market-place, which forms a regular ſquare, and it is one of the moſt beautiful towns in all the Mark. It carries on a large trade in timber, which is greatly promoted by means of a canal newly made, to form a communication with ſeveral bodies of water, particularly with the lake of Fahr, which is about ſeven Engliſh miles in length.

The Old Mark is bounded towards the eaſt by the Elbe, which ſeparates it from Prignitz, and the dutchy of Magdeburg; on the ſouth, and part of the weſt, by the latter; and on the other part by the dutchy of Lunenburg, extending nine German miles from eaſt to weſt, and eleven from north to ſouth.

This country has in many parts a fat clay ſoil; but in ſome places is ſandy or ſtony; yet in general it may be ſtiled a fertile country; indeed conſiderable moraſſes and waſte grounds have been rendered fruitful, by forming of ditches and canals, by which means their paſturage and breed of cattle have been conſiderably improved. This Mark is computed to have at preſent fourteen ſmall towns, five hundred ſixty-four villages, and ten manors.

The ſupreme tribunal of the Old Mark is ſeated at Stendal, and the provincial captain is preſident of that court. The principal towns in this diſtrict are,

Standal, the capital of this mark, which is ſeated on the Uchte, in a plain ſurrounded on all ſides by mountains. It is divided into four pariſhes, which have four principal churches, among which is the cathedral of St. Nicholas. The town-ſchool is in a building that was once a Franciſcan monaſtery. The cloiſter of St. Catharine was formerly ſupplied with Benedictine nuns, and that of St. Anne with nuns of the order of St. Francis. After the reformation theſe cloiſters were preſerved, but came over to the Proteſtant religion, and over each of them was ſet a Domina. This place was formerly one of the Hanſe towns, and carried on a great manufacture of woollen cloth. The French refugees who have ſettled here, have ſince the loſs of that trade, introduced ſeveral manufactures, and have a tribunal of their own.

Saltzwedel, is a town ſeated on the Jeeze, in a low and marſhy ſoil, and conſiſts of the Old and New Town, each of which has its ſeparate limits, gates, churches, ſchools, and magiſtracy. In the Old Town is the church of St. Mary, in which was formerly a provoſtſhip; but it is at preſent the ſuperintendency of the ſpiritual inſpection of Saltzwedel. Two churches, both of which belonged to cloiſters that formerly ſtood here, are in a good condition. The principal ſubſiſtence of the inhabitants conſiſts in the brewing of beer, the making of linen cloth of various ſorts, and the manufactures of ſerge, frieze, and ſtockings, and a briſk trade is carried on here.

The laſt diviſion we have to mention in the marquiſate of Brandenburg is the Prignitz, which terminates on the Elbe and Havel, the dutchy of Mecklenburg and the Middle Mark, and is ten German miles and a half in length, and ſeven and a half in breadth, and contains ſeven circles, in which are eleven towns, and two hundred forty-ſix villages. The principal places in this diſtrict are,

Perlberg, the capital of the province, is ſituated on the Stepenitz, which here divides itſelf into two branches, one of which paſſes by the town; but the other dividing itſelf again runs in two ſtreams through the center of the town. Perlberg contains about three hundred and ſeventy dwelling houſes. At the principal church reſides the inſpector of the ſpiritual inſpection of Perlberg. Near the hoſpital of the Holy Ghoſt is a ſmall church, with a peculiar preacher and catechiſt. The inhabitants draw their principal ſubſiſtence from agriculture and the arts.

The Havelberg is ſeated on the Havel, by which it is ſurrounded, and rendered an iſland, to which there is no other paſſage than by three draw-bridges. A long bridge leads to the cathedral, and the hills ſituated beyond the Havel. Here was an antient biſhopric founded in the year 946, and the laſt of the biſhops was the elector Joachim Frederic, no biſhop being ever elected to ſucceed in his place; but the chapter ſtill continues, and on the members of it king Frederic II. conferred, in the year 1755, a peculiar diſtinction and chapter croſs of gold enamelled with purple, terminating in eight points. On the right ſide of it is ſeen the Pruſſian eagle, and on the four corners the letters F. R; but on the other ſide is a repreſentation of the virgin Mary, the patroneſs of the chapter, with the infant Jeſus. This croſs is worn pendant at a white watered ribbon terminated with purple.

purple. To this foundation belong three manors. A great quantity of brandy is diſtilled in this town, and many ſtockings knit. Here are alſo many fiſhermen, and boats for the Elbe are built at this place.

SECT. XII.

Of the Dutchy of POMERANIA.

Its Situation, Produce, Rivers, and Lakes. The Number of the Inhabitants, their Religion and Government; with the Diviſion of the Country.

POMERANIA is bounded on the eaſt by Poliſh Pruſſia; on the ſouth by Poland, the New Mark and Ucker Mark; on the weſt by the Dutchy of Mecklenburg; and on the north by the Baltic. Its length along that ſea is about two hundred eighty-five miles, and its breadth from thirty-eighth to ſixty-one. It was formerly of a much greater extent, reaching eaſtward as far as the Viſtula, and ſouthward including part of the New and Ucker Mark; while to the weſt it took in a part of the preſent dutchy of Mecklenburg.

The country is level, and of the few hills in it, that of Chollenberg is the principal. The ſoil is, indeed, in ſome parts ſandy, but in moſt places it is pretty cloſe and good; ſo that the inhabitants not only raiſe a ſufficient quantity of wheat, rye, barley, and oats, but export a great deal. They likewiſe cultivate buckwheat, vetches, turnips, peas and beans, to great advantage, and in ſome parts millet, flax, and hemp. It alſo produces a ſufficient quantity of fruit, and foreign eſculent plants would likewiſe thrive here. In ſeveral parts of the country are fine heaths and foreſts, and among the latter, ſeveral are covered with oaks. The wood of theſe foreſts is not only uſed for fuel and the building of houſes and veſſels, but alſo ſerves for making tar and charcoal.

Thoſe parts of the country that are improper for tillage, are made uſe of for grazing, which is here very conſiderable. The geeſe of this country are famous for their largeneſs, and in general the dried Pomeranian geeſe, hams, ſauſages, and ſalmon, are eſteemed the beſt in all Germany.

In Hither Pomerania are ſome mineral and ſalt ſprings. The largeſt river in Pomerania is the Oder, which the Pomeranians call the Ader. This river forms three lakes below Stettin, after which it diſcharges itſelf into the Friſchen Haff.

The other rivers of note are the Reckenitz, which is the boundary of Pomerania towards Mecklenburg. The Peene, which comes from the dutchy of Mecklenburg, and at laſt, after forming two lakes, falls into the Baltic. The Ucker has its ſource in the Ucker Mark, and, being joined by the Rando, purſues its courſe into the Friſchen-haff. The Ihna riſes in the borders of the New Mark, and dividing into two branches, which are again united near Stargard, becomes navigable, and at laſt diſcharges itſelf into the lake of Dam. The Rega, likewiſe riſes in the New Mark, and after becoming navigable, and receiving the Mulſo, enters the Baltic. The Perſante iſſues out of the lake of Pakuvet, becomes navigable at Belgard, and being joined by the Raduye, forms a pretty good harbour: it is remarkable that an iſland in the midſt of this river affords rich ſalt ſprings. The Wipper riſes out of the Gewipp, receives the Grabo, and then becoming navigable, diſcharges itſelf into the Baltic. The Lebe riſes near Lauenburg, and near Lebe forms the lake of that name, which is about three German miles in length, and diſcharges itſelf thro' a narrow outlet into the Baltic.

Beſides the above lakes there are many others, eſpecially in Hither Pomerania, ſeveral of which are pretty large. Theſe lakes, as well as the rivers, abound in fiſh, and particularly great quantities of ſalmon, which are dried and exported to diſtant parts.

The ſituation of this country on the Baltic is very advantageous for navigation, though the coaſt of Pomerania, eſpecially about the Oder, is very dangerous. Amber is found on the coaſts of Hither Pomerania, but not in ſuch quantities as on thoſe of Pruſſia.

With reſpect to the number of the inhabitants, a judgment may be formed by that of the burials, which, taken one year with another, have amounted to about twelve thouſand; whence the number of the living may be computed at about four hundred and ſixty thouſand. The greateſt part of the inhabitants are of the Lutheran religion, tho' in ſome parts there are Calviniſts, and in others Papiſts. The Lutheran churches are under the inſpection of provoſts, who are ſubordinate to the general ſuperintendants.

The whole dutchy of Pomerania conſiſt of ſixty-eight towns, which are divided into immediate and mediate. The former of theſe are immediately under the ſupreme tribunals of the country, chooſe their own magiſtrates, and the governing burgomaſters of the three capital towns of every province ſit in the diets of the country. On the other hand, the mediate cities are either under the king's agents or noblemen, take the oath of fidelity and allegiance to their lords and patrons, attend their courts, and have the proceſſes of their townſmen on an appeal moved from their magiſtracy to the courts held by thoſe agents, or the noblemen. Their magiſtrates are likewiſe appointed by their lords, and confirmed by the regency.

Mr. Buſching obſerves, that the electoral-houſe of Brandenburg had the neareſt claim to Pomerania, when the family of the dukes became extinct, in 1637; but, at the treaty of Weſtphalia, all the Hither Pomerania, with the principality of Rugen and Farther Pomerania, Stettin, Garz, Dam, Golnau, the iſland of Wollin, the Oder, and the Friſchen-hoff, were aſſigned to Sweden; all the elector of Brandenburg had was the remainder of Hither Pomerania, with the dioceſe of Cammin, which was changed into a temporal principality. Sweden likewiſe obtained the reverſion of the Brandenburg part of Pomerania, on the failure of the male line of that houſe. But the crown of Sweden by the northern war, and the peace of Stockholm in 1720, loſt the greateſt part of Hither Pomerania, ceding for ever to Frederic William king of Pruſſia the city of Stettin, with the whole country between the Oder and the Peene; as alſo the iſlands of Wollin and Uſedom.

The crown of Sweden appoints a governor general, who reſides at Stralſund, over Swediſh Pomerania; and in that city is kept the regency, war-office, and court of appeals; but the higheſt court of appeals in Swediſh Anterior Pomerania is held at Wiſmar.

The Pruſſian regency has its ſeat at Old Stettin, where are likewiſe kept the war and domain-offices, with the civil and criminal court of juſtice for both the Pomeranias. The whole revenue of both the Swediſh Pomeranias amounted in the year 1753 only to one hundred and twenty-four thouſand rixdollars, though Pruſſian Pomerania annually brings in the ſum of eight hundred thouſand.

With reſpect to the diviſion of Pomerania into Anterior and Ulterior, or Hither and Farther Pomerania, it has not always been the ſame; but at preſent the country ſituated between the Reckenitz and the Oder is uſually ſtiled Anterior; as the country between the Oder and Poliſh Pruſſia bears the name of Pomerania Ulteror, and conſequently the Oder muſt be conſidered as the boundary between them. We ſhall begin with Pomerania Ulterior, on account of its being ſituated to the eaſt, and its being ſubject to the prince part of whoſe dominions we have laſt deſcribed.

SECT. XIII.

Of Pomerania Ulterior, and that Part of Pomerania Anterior which is ſubject to the King of Pruſſia; with a conciſe Account of the principal Towns contained in each; and of the Iſlands Uſedom and Wollin.

THE Farther Pomerania, including the principality of Cammin, belongs entirely to Pruſſia, and contains a conſiderable number of towns, the principal of which are the following:

Stargard, alſo called New Stargard, the capital of all Farther Pomerania, is ſeated on the Ihna, by means of which it has a free communication with the Baltic, in

in the midſt of a country that produces plenty of corn; is an immediate town, large and well built. The church of St. Mary is thought to have the higheſt roof in all Germany; beſides this, there are ſeveral other churches belonging to the Lutherans, and the German and French Calviniſts. There is here a college founded in 1631, and a free-ſchool kept in a ſuppreſſed convent; and it has ſeveral good manufactures. This town was taken by the Ruſſians in the year 1758.

Cammin, a ſea-port town, ſeated on the eaſtern mouth of the river Oder, oppoſite to the iſle of Wollin, in the fifty-fourth degree ten minutes latitude, and the fifteenth degree two minutes eaſt longitude. This place was always in mean circumſtances, till it became ſubject to the Pruſſian government, when it roſe to ſuch proſperity as to make a very good figure, and to have handſome ſuburbs. This is chiefly owing to its navigation, fiſhery, and agriculture. The biſhopric of Cammin was, by the treaty of Weſtphalia, changed into a temporal principality, and given to the electoral houſe of Brandenburg; it was at the ſame time agreed, that on the deceaſe of the canons then living, the electoral family ſhould be at liberty to aboliſh the chapter; but this chapter ſtill ſubſiſts, and is kept at the town. Near the cathedral ſtands a ſchool, beſides which Cammin contains a provoſtſhip and a foundation for ladies.

The principality of Cammin derives its origin from the ſuppreſſed biſhopric of that city; for at the peace of Weſtphalia the biſhopric was converted into a temporal principality of the empire, and this intitled the electoral houſe of Brandenburg to a ſeat and vote for this principality both in the circular and imperial diets. The moſt remarkable places in this principality are,

Colberg, an immediate and well fortified town, ſeated on the Perſante, which, at a ſmall diſtance, falls into the Baltic, and forms the convenient harbour of Munde. This town is the metropolis of the principality; it is pretty large, and, from its woollen and linen manufactures, its trade with Poland, and its numerous ſhipping, is in a flouriſhing condition. It has a collegiate church, to which belongs a provoſt, a dean, a chanter, and rector; with a religious foundation for young ladies in the building that was formerly the ducal palace: it has alſo three other churches, and a Latin ſchool. In the neighbourhood are caught a great number of ſalmon and young lampreys, and in a meadow ſurrounded by the Perſante are ſome ſalt ſprings: little ſalt, however, is made on account of the ſcarcity of fuel, which the inhabitants convey hither by means of the Perſante, at a very great expence. In 1758 this town was bombarded by the Ruſſians, but without effect.

The laſt town we ſhall mention in Farther Pomerania is Coſlin, which is ſeated ten miles to the eaſt of Colberg, on the river Niſebec. In the times of popery here was an image of the Virgin Mary, which drew hither many pilgrims. In 1504 Coſlin was entirely deſtroyed by fire, and in 1718 the greateſt part of it was again conſumed; but ſince this calamity it has been rebuilt to advantage, particularly the large ſquare market-place, which is very handſome, the houſes being all two ſtories, and of an equal height. In the center ſtands a ſtone ſtatue of Frederic-William, erected in 1724, according to the inſcription, in grateful remembrance of the royal munificence diſplayed in rebuilding the town.

The principal places in Anterior Pomerania ſubject to the king of Pruſſia are the following:

Stettin, Stetin, or Old Stettin, is ſeated on an eminence near the river Oder, which is here divided into four branches, and ſtands in the fifty-third degree thirty-ſix minutes latitude, and in the fourteenth degree ninety-ſix minutes eaſt longitude. This city is large, handſome, well fortified, and the capital of the Pruſſian Anterior Pomerania; as alſo the reſidence of the regency, both for the Anterior and Ulterior Pomerania. It has a college of phyſicians, with a board of health, a chamber of commerce inſtituted in 1755, a royal ſeminary, and a general ſuperintendency of the Hither and Farther Pomerania. It has a caſtle, in which the above colleges meet, and an arſenal; together with the church of St. Otten, which was formerly collegiate; the cathedral of St. Mary, to which belong very conſiderable eſtates; five pariſh churches, a French Calviniſt meeting, and a maſs-houſe. It has alſo a dock for the building of ſhips, with a court of admiralty, and has not only various manufactures, but the inhabitants carry on a very great foreign trade. It exports ſalt and freſh fiſh, naval ſtores, as planks, maſts, and other wood, for building and fuel; pipe-ſtaves, clap-boards, canvas, dimity, flannel, linen yarn, and cloth; ſtarch, arſenic, glaſs, antimony, lapis caliminaris, madder, pot-aſh, ſoap, tobacco, honey, wax, roſin, corn, and many other articles to England, Holland, France, Spain, Denmark, Norway, Sweden, Pruſſia, Dantzic, Mecklenburg, Lubec, and Hamburg. It is, in ſhort, the centre for exchanging the commodities of Poland and Germany with thoſe of the Baltic.

Anclam is ſeated in a fertile country on the river Peene, having on the one ſide of it marſhes and meadows, with a dyke of ſtone above a mile in length, and on the other deep moats and walls. This town contains two pariſh churches, enjoys a good trade both by land and water, and has proſpered greatly under the Pruſſian government. In 1757 and 1758, it fell ſeveral times into the hands of the Swedes: for the other ſide of the river being within the Swediſh territories, the centinels of that nation are poſted very near it. It is the capital of a circle to which it gives name, that is near three German miles in length, and contains ſeventeen villages. To it belongs Anclam ferry, on the Friſchen Haff, where is a fort, to which all the ſhips that paſs by pay a toll.

The iſland of Uſedom, which commands the navigation of the Peene, the Ucker, and the Oder, is bounded on the north by the Baltic; on the eaſt by the ſtreight called the Swin, which ſeparates it from the iſland of Wollin; on the ſouth by the Friſchen Haff; and on the weſt by the Achter water, which is famous for its plenty of fiſh. This iſland is about five German miles in length; but in ſome parts is very narrow, and where wideſt is only between three or four miles broad. It is ſeated in the fifty-fourth degree north latitude; and contains the following places. Uſedom, a ſmall immediate town, that has an old caſtle. Penemunder-Schanze, ſituated on the north point of the iſland, which it entirely commands. The Swin-Schanze, on the ſouth eaſt part of the iſland, which was deſtroyed by the Swedes in the year 1757; but a new town has ſince been built. The iſland alſo contains ſeveral villages.

The iſland of Wollin, is bounded by the Baltic Sea on the north; by a ſtreight called Wollin-Water, or Diveno to the eaſt; by the Friſchen-Haff to the ſouth; and by the paſſage of the Swin on the weſt. This iſland is frequently in danger of being overflowed, and the ſea winds are continually throwing up againſt it drifts of ſand. It is about twenty Engliſh miles in circumference, and produces excellent cattle, with plenty of game and fiſh. On this iſland ſtands Wollin, an immediate town, ſituated on the waters to which it gives name, and has a bridge over it leading to Anterior Pomerania. There are alſo ten or twelve villages on the iſland.

SECT. XIV.

Of the iſland of Rugen, and the reſt of that part of Anterior Pomerania ſubject to Sweden, with the principal Places contained in each.

THE iſland of Rugen is ſeated in the Baltic, about two miles and a half from the continent, and was antiently celebrated for the courage of the Rugii its antient inhabitants, from whom it takes its name. It formerly extended as far to the eaſt as Ruden, which is now at three leagues diſtance; it being parted from it by a violent tempeſt in the beginning of the fourteenth century, when the ſea drowned a great part of the iſland. It is, however, ſtill thirty miles long, and nearly the ſame broad; but ſo full of creeks and peninſulas, that ſcarce any part of it is above three miles from the ſea; and one creek on the eaſt, runs almoſt through to the weſt ſide: but the peninſulas are ſo guarded by rocks, as to be no longer in danger from inundations.

The ſoil here is ſo fruitful in corn, that this iſland is called the granary of Stralſund, ſome thouſand laſts being annually ſhipped from hence for that city. There are likewiſe bred abundance of cattle in the iſland, which likewiſe yields prodigious plenty of fiſh; but is ſupplied with fuel from Pomerania, though ſome places afford turf.

Rugen contains twenty-ſeven pariſhes, which are divided into four provoſtſhips. The principal town in the iſland is Burgen, which is ſituated in the middle of it, and is the ſeat of the provincial court of juſtice, a prefecturate, and a provoſtſhip: it is likewiſe the reſidence of a governor, and the place where the nobles hold their aſſemblies. In it is a proteſtant convent for young ladies, conſiſting of a prioreſs and eleven ſiſters. This convent has likewiſe two curators belonging to it, who are nobles, one of whom is always the governor. This town has frequently ſuffered by fire, particularly in the years 1715, and 1726.

Near this iſland there are ſeveral others, particularly Ruden, which is ſituated amidſt ſhoals and ſand banks, and has a caſtle. The iſland of Unmanz, which lies to the weſt of Rugen, and the iſland of Hiddenſee or Hiddenſo, which alſo lies to the weſt of Rugen, and is about ten miles in length, though in moſt places it is not above two miles broad. The ſoil is ſandy, and affords little corn.

We ſhall now return to the continent of Swediſh Pomerania, the principal place in which is,

Stralſund, the capital, which is a free city, that lies on a ſtreight of the ſea oppoſite to the iſland of Rugen, in the fifty-fourth degree twenty-ſix minutes latitude, and the thirteenth degree twenty-two minutes eaſt longitude. It derives its name from the narrow Sund or Streight that lies between it and the little iſland of Danholm, and is very ſtrong, it having very good fortifications. On the land-ſide are bulwarks and fiſh-ponds two muſquet-ſhot in breadth, beſides large ditches and marſhes, only paſſable by four cauſeways, from four gates all fortified. It has an excellent haven, where ſhips come up into the very heart of the town; ſo that it has had a conſiderable trade both by ſea and land. Here are great quantities of honey, wax, tar, pitch, roſin, hides, tallow, linen, and a good ſort of canvas, which is made here. The ſtreets are broad, and the houſes pretty uniform. This city is the reſidence of the king's governor general of the regency, and is the place where the ſtates of Swediſh Pomerania hold their meetings. It has alſo its own conſiſtory and a ſeminary. Among its citizens, who form a numerous body, are many ſubſtantial merchants. In 1714 Charles XII. king of Sweden, ennobled its magiſtracy, and in 1720 king Frederic I. extended this honour even to the members of the council. It was formerly one of the principal Hanſe-towns; but it has ſuffered greatly by the ravages of war. In 1628, it held out a ſiege againſt the Imperialiſts under general Wallenſtein; but in 1678, was ſo furiouſly bombarded by Frederic William elector of Brandenburg, that it ſurrendered on the third day of the ſiege, after the deſtruction of about eighteen hundred houſes; and in 1715 was taken by a combined army of Ruſſians, Danes, and Brandenburghers.

SECT. XV.

Of the Principality of ANHALT.

Its Situation, Extent, Climate, Produce, and Rivers: the Religion of the Inhabitants; the States of the Country: with a conciſe Account of the Princes of Anhalt, their Titles, and Arms.

THIS principality is bounded on the north-eaſt by the mark of Brandenburg; on the eaſt by the electorate of Saxony; on the ſouth by Miſnia; on the ſouth-weſt by the county of Mansfeld; and on the north-weſt and north by the dutchy of Brunſwic, the principality of Halberſtadt, and the dutchy of Magdeburg. It is remarkable that at Haderholz, near Heidelberg, the territories of Brunſwic, Anhalt, and Stolberg meet in ſuch a manner, that the three ſovereigns may ſit at the ſame table, and each be in his own dominions. This principality is ſixty-ſix miles in length, and in breadth about eighteen, though in ſome places more.

On the foreſt of Hartz the air is freſh and healthy, but rather too cold. The harveſt is later than in other places, but the plains enjoy a milder air, though in ſome places they are not ſo healthy as in the high lands. The ſoil is various: for in the diſtricts of Cothen and Bernburg the earth is compact and fat, and particularly fertile in wheat and barley; while the light and ſandy countries of Deſſau and Zerbſt are adapted to rye; but they have ſome tracts of a firmer texture. Tobacco is alſo planted in the country of Deſſau; the land every where produces not only plenty of culinary and other herbs, but alſo fruits; though on the Hartz the latter never arrive to their proper ripeneſs. Here are likewiſe hop-grounds and vineyards; but the former anſwer better than the latter. In Cothen and Bernburg fuel is ſcarce; but Zerbſt and Deſſau are plentifully provided with it, particularly the Hartz, where are fine woods of oak, beech, poplars, elms, limes, &c. and in general it is a fine ſporting country. The mines in the Hartz yield ſilver, copper, lead, iron, ſulphur, vitriol, coals, allum, ſalt-petre, and other minerals.

The graziery in this principality alſo varies according to the difference of the ſoil, and the rivers yield excellent fiſh.

The rivers of Anhalt are the Elbe, which traverſes the center of this principality; the Milde, or Mulde, which runs into the Elbe; the Saale, into which the Wipper diſcharges itſelf; the Seike, which falls into the Bude, while the laſt diſcharges itſelf into the Saale and ſome others. The lake of Gaterſleben, which was nine miles in length, and in ſome places about four broad, has been drained, and converted into corn land and paſtures.

Chriſtianity was introduced into this country in the ninth century, and the Reformation began to take place in the dioceſe of Gernrode in the year 1521, and ſpread itſelf with a ſwift progreſs over the whole country. The poſſeſſions belonging to the monaſteries were employed in augmenting the revenues of the alms-houſes and churches, in the founding of ſchools, and the eſtabliſhment of ſtipends and exhibitions. The whole country profeſſed Lutheraniſm till the year 1596, when the Calviniſt religion was introduced, and the ſeveral churches, both in the towns and villages, in the patronage of the ſovereign, were filled with Calviniſt miniſters. The pariſhioners, however, were allowed to enjoy their own opinion, and both the nobles and their vaſſals were permitted the free exerciſe of the Lutheran worſhip. By virtue of a compact made in 1679, the Lutherans are allowed to erect new churches. The Zerbſt line, with the greateſt part of its ſubjects, profeſs Lutheraniſm; but the three other lines are of the church of Calvin, which is the eſtabliſhed religion in their reſpective territories.

In the whole principality are nineteen towns, and two boroughs. For the inſtruction of youth in literature, the towns are endowed with Latin ſchools, and there is an univerſity at Zerbſt which belongs in common to all the princes of Anhalt.

The ſtates of the country are compoſed of the nobility, who are very numerous, and likewiſe of the towns: out of the former are choſen a ſub-director and three provincial counſellors, who, with the four ſenior burgomaſters of the four reſidentiary towns, form the leſſer committee. The great committee conſiſts of twenty perſons, that is twelve noblemen and eight burgomaſters, two out of every reſidentiary town. Beſides theſe there is a commiſſioner of the revenue, who is aſſiſted by a ſecretary and ſyndic. The diets are aſſembled in the name of the four ſeveral princes of the houſe of Anhalt, who alſo direct the proceedings. They generally meet in the reſidentiary town, where the ſenior of the princely houſe reſides, though upon occaſion another place may be choſen.

The four reigning princes of Anhalt are all deſcended from the ſame family, who conſider Joachim Erneſt II. as the founder of the preſent houſe of Anhalt, who dying in 1586 left ſeven ſons, of whom the third and fourth died without heirs, and Auguſtus IV. lived in retirement at Plotzkau, without requiring any part of his father's lands; but the four other brothers divided their father's territories into four parts, prince John George I. obtaining Deſſau, prince Chriſtian I. Bernburg, prince Rodolphus Zerbſt, and prince Lewis Cothen. The ſon of the laſt of theſe princes dying in 1665 without heirs, his ſhare of the country was by the other three lines conferred upon Leberecht and Immanuel, ſons to the abovementioned prince of Plotzkau, who, on their ſide, ceded Plotzkau to Bernburg. The right of primogeniture takes place in all theſe four lines.

The titles of theſe ſovereigns are, princes of Anhalt; dukes of Saxony, Engern, and Weſtphalia; counts of Aſcania;

Aſcania; lords of Bernburg and Zerbſt. The Deſſau line likewiſe inſerts in its titles the lordſhip of Gropzigk, and the Zerbſt line thoſe of Zever and Kniphauſen.

The arms for Anhalt conſiſt of nine fields: in the dexter chief point is argent, a bear, with a collar, ſable and or, and a crown or, placed paſſant, on four turrets gules, on a wall with a gate, ſignifying the antient bearings. In the ſecond are five pales ſable, for the lordſhip of Barenſtadt. In the third checquée argent and ſable. In the fourth chequée or and gules, denoting the county of Walderſee. The fifth argent an eagle counter-changed, the claws and bill or, winged with a ſemi-circle of the ſame in a field argent; as likewiſe five pales and a wreath of rue, in a field or, and in this field the Saxon and Brandenburg arms are mutually quartered, to expreſs their common origin. In the ſixth azure, are two bendlets from the left to the right for the county of Warmſdorf. In the ſeventh an eagle argent, in a field azure for the county of Mulingen. The eighth is pure gules, and termed the bloody banner, or bloody ſhield, with the regalia coat. In the ninth is a bear ſable, with a collar argent, ſtanding on a wall gules, with a gate ſable, and three battlements gules, to denote the lordſhip of Bernburg.

Since the year 1689, when the dutchy of Saxe Lauenberg became vacant, the houſe of Anhalt having a claim to it, have quartered three other ſhields with their arms: firſt the arms of Saxony, conſiſting of five pales, with a wreath of rue, to denote the dutchy of Saxony. The ſecond an eagle diſplayed and crowned or, in a field azure, for the palatinate of Saxony. The third three beetles horns or, a ſemi-circle gules, in a field argent, for the antient county of Bree. The Zerbſt line alſo bears three particular ſhields, a lion or, for the lordſhip of Zever; a lion ſable, in a field or, for the lordſhip of Kniphauſen; and a hound's head, with a collar or, placed between two wings argent, in a field azure, for the bailiwic of Walter-Nienburg.

All the four reigning lines enjoy collectively for the principality of Anhalt, both in the college of princes at the diet of the empire, and in the diets of Upper Saxony, only one vote; but the antient abbey of Gernrode intitles them to another in both thoſe aſſemblies.

Each of the reigning lines has its regency, exchequer, and conſiſtory. The annual revenue of the whole principality of Anhalt to the four reigning lines, is eſtimated at between five and ſix hundred thouſand rixdollars.

We ſhall now give a particular deſcription of the principal places in the ſeveral parts belonging to each line: and ſhall only firſt obſerve, that, according to a very good author, the people of theſe four little independent ſovereignties, in the opinion of the Saxons, live in the land of milk and honey; the princes poſſeſs lands ſufficient for their expences, and the taxes laid on the people are very inconſiderable. The ſecurity with which a perſon travels in this part of the world is very extraordinary. The people are ſober, and the duties of morality are taught not only by the miniſters, but by parents; whence theſts and robberies, in time of peace, are hardly known.

SECT. XVI.

The principal Places in the Principalities of Deſſau, Bernburg, Cothen, and Zerbſt.

AS we have already deſcribed the country of Anhalt in general, and given ſome account of the conſtitution, nothing remains but to take notice of the principal places in the four ſeveral diviſions ſubject to its four princes, and we ſhall begin with Anhalt-Deſſau, which is divided into ſix bailiwics; the principal places in which are,

Deſſau, the reſidence of the prince, which is ſituated in a delightful plain on the river Hulde, which, at a ſmall diſtance from the town, runs into the Elbe. It conſiſts of the town particularly called Deſſau, the New Town on the north ſide, the ſuburb called the Sand, another before the Mulde gate, and the Water Town on the other ſide of the Mulde. Beſides the prince's palace, which is a ſtately building, it has two Calviniſt churches, and one belonging to the Lutherans, with a grammar-ſchool, an orphan houſe, and two alms-houſes. There are here ſome good manufactures of cloth, ſtockings, and hats. In 1467 this town was entirely deſtroyed by fire.

Oranienbaum, a regular and pretty little town agreeably ſeated on the ſpot where formerly ſtood a village. Henrietta-Catharine, princeſs of Orange, and conſort to John-George II. in 1686, built a ſuperb villa of ſtone at this place, and named it Oranienbaum, which, with the other buildings belonging to it, is ſurrounded with a moat. Its garden is extremely beautiful. She afterwards raiſed the village to a town, and permitted new houſes to be built on a regular plan with the former.

To the houſe of Anhalt-Deſſau belongs alſo a conſiderable tract of land in the kingdom of Pruſſia.

Anhalt-Bernburg contains eight bailiwics, the principal places in which are,

Bernburg, the capital and reſidence of the prince. This city is ſeated on the river Saale, or Sala, over which it has a handſome bridge of free-ſtone. This is a place of great antiquity, and conſiſts properly of three diſtinct towns. On the land ſide it is encompaſſed with walls and moats, and, beſides its magiſtracy, has a governor appointed by the prince, who preſides in the ſupreme court of juſtice. In the Old Town ſtands two churches, with a ſchool, the town-houſe, and the prince's ſecretary-office. A part of Bernburg, called Vordenburg, ſtands on a hill on the other ſide of the Saale, and is reckoned the third part of it, though it is under a diſtinct magiſtracy, conſtitution, and privileges. The church in this part ſerves both for the caſtle and court. The caſtle is one of the moſt antient, and at the ſame time the moſt celebrated fortreſs in the principality of Anhalt. It ſtands on a high rock, and is ſurrounded with a deep and lined moat; and below it runs the Saale, on which ſtands the noble ſtone ſluice erected in 1696 by prince Victor Amadeus. The Auguſtine convent in this place was, at the Reformation, converted into an hoſpital and poor-houſe. To the north of the New Town lies the ſuburb of Waldau, in which is one church.

Hartzgerode derived its name from its being ſituated at the entrance of the foreſt of Hartz. Both the walls and houſes are built of a motley kind of marble, in which this country abounds. On its eaſt ſide prince William, in 1601, erected a new town, which, in 1705, was called Auguſtenſtadt; and oppoſite to it is a ſuburb called the Liberty, which has an hoſpital at the end of it. On the north ſide is the New Mine Town called Wilhelmſtadt.

Wilhelmſhof, a houſe and farm belonging to the prince, lies in the foreſt not far from Hartzgerode: it is an elegant ſtructure, moſt delightfully ſituated. The building was compleated in 1582, and conſiſts of two ſtories. Farther in the foreſt, on a high and ſteep mountain, are to be ſeen ſome ruins of the antient caſtle of Anhalt, which are now overgrown with buſhes.

The abbey of Gernrode was originally a free temporal convent for ladies, founded in the year 960, and richly endowed: but the houſe of Anhalt reſuming it in 1624, it was confirmed in its poſſeſſions by the treaty of Weſtphalia; and by virtue of it, is intitled to a ſeat and voice among the prelates of the Rhine, both in the imperial diet, and that of the circle of Upper Saxony. The abbey itſelf is converted into a manſion-houſe. The town of Gernrode was at firſt only a village; but, on the additions made to the wealth of the abbey, the inhabitants, whoſe number increaſed, obtained ſeveral immunities and privileges. Divine worſhip is performed in the abbey church, that belonging to the town being for the moſt part uſed only at funerals.

The prince reſides in the palace of Schaumburg, which is ſituated in the circle of the Upper Rhine.

The principality of Anhalt-Cothen conſiſts of four bailiwics, the principal town in which is,

Cothen, the reſidence of the prince, is ſituated on the little river Zitau, and conſiſts of the Old and New Town, which were incorporated in 1620. It is a conſiderable place, the inhabitants amounting to about fifteen thouſand. They have three churches, a Calviniſt and Lutheran orphan-houſe, and each has a free-ſchool; among the other public buildings is an hoſpital. In this town the prince of Anhalt-Cothen has a palace. He keeps a body of two hundred and fifty men, who are well cloathed; and

and his revenues, according to Mr. Hanway, are computed at one hundred and ſixty thouſand dollars.

We now come to the principality of Anhalt-Zerbſt, which contains ſeven bailiwics, the principal places in which are,

Zerbſt, the reſidence of the prince, and the largeſt and handſomeſt town in all Anhalt. The prince's palace is very magnificent. In the town are two Lutheran churches, one belonging to the Calviniſts, and an univerſity common to all the princes of Anhalt, which has three Calviniſt and one Lutheran profeſſor; beſides which here is alſo a Lutheran and Calviniſt ſchool. The beer brewed here, with its manufactures of gold and ſilver lace, are very profitable articles, though the firſt was formerly more eſteemed than it is at preſent.

The prince of Anhalt Zerbſt is alſo proprietor of the lordſhip of Zevee, in the circle of Weſtphalia.

We ſhall conclude this ſection with a conciſe account of the abbey and town of Quedlinburg, and the abbey of Walkenried.

The abbey of Quedlinburg was founded between the years 932 and 936, by king Henry I. and enriched by his couſin Matilda; but in 1539 embraced Lutheraniſm. It at preſent conſiſts of four dignitaries, viz. the lady abbeſs and three others, diſtinguiſhed by the titles of provoſt, dean, and canon. The abbeſs is a princeſs of the empire, and at the diet enjoys both a ſeat and voice on the bench of the prelates of the Rhine, as ſhe likewiſe does in the diets of Upper Saxony.

The arms of the abbey are two carving knives or, placed in a ſaltire croſs, with handles of the ſame in a field gules.

Antiently the houſe of Anhalt held the patronage or government of Quedlinburg as a fief from the abbey; and it afterwards continued a long time hereditary in the houſe of Saxony, by which it was at length transferred to the houſe of Brandenburg for the ſum of three hundred thouſand rixdollars; and, by virtue of an agreement concluded in 1574, between the elector Auguſtus and the abbeſs Elizabeth, no abbeſs, nor any other dignitary, is to be choſen without the knowledge of the patron.

The town of Quedlinburg, which belongs to the abbey, is ſituated on both ſides the Bode, and has a court of juſtice dependent on the abbey, with a particular magiſtracy divided into two councils. The abbeſs, with the chapter, lives on a hill at the cathedral of St. Servatius. In the town are ſix churches, and the hoſpital of the Holy Ghoſt; and without the town is the hoſpital of St. Anne, and a college that was formerly a Franciſcan monaſtery; and near the town ſtands alſo the church of St. Wipert.

Here is alſo the free abbey of Walkenried, which was of the Ciſtercian order, and poſſeſſed of ſeveral eſtates; but in 1546 the abbot introduced the Lutheran doctrine and ſervice; but, at the peace of Weſtphalia, the patronage of the abbey was aboliſhed, and it was rendered an hereditary fief, which is now ſubject to the prince of Brunſwic Wolfenbuttle.

SECT. XVII.

The Principalities of Saxe Weimar, Eiſenach, and Gotha; with the principal Places in each.

SAXE WEIMAR, which lies in Thuringia, extends along the Ilm, which, after traverſing the whole length of this principality, loſes itſelf in the Saale. Its length, taken in its utmoſt extent, is about twenty-ſix miles, and its greateſt breadth twenty-three; but conſiderable parts of this principality are detached from the main body.

The duke of Saxe Weimar has two votes, both in the diet of the empire, and in that of Upper Saxony.

The principality is divided into thirteen bailiwics, the principal towns in which are the following:

Weimar, or Weymar, the capital, and the reſidence of the prince, is ſeated in a valley by the river Ilm. The new palace, called Wilhelmſburg, is a very noble building, and contains the duke's valuable library, a cabinet of medals, and a gallery of painting; and in it is a whiſpering-gallery, like that of St. Paul's, in London. The old caſtle, which has a bridge before it, is called the Red Palace. The town church has always for its miniſter the ſuperintendant-general of the principality, and contains the hereditary vault of the princes. The ſecond pariſh church is that of St. James; and here is a ſeminary founded by duke William Erneſt.

In the neighbourhood of this city is Belvedere, a ſeat of the princes, built by duke Erneſt Auguſtus, which has very beautiful gardens, and a very fine greenhouſe.

The principality of Eiſenach, which is ſubject to the duke of Saxe Weimar, alſo lies in Thuringia, extending chiefly along the Worra and the frontiers of Heſſe. The face of the country is mountainous and woody, and it bears ſo little grain, that the inhabitants are obliged to be ſupplied with a great deal of it from other places. However, the neighbourhood of Jena and ſome other tracts yield wine; it has alſo mines of copper, iron, vitriol and allum, and ſome ſalt-ſprings.

The inhabitants are Lutherans, and the duke of Saxe Weimar ſits and votes in the diets of the empire and Upper Saxony as prince of Eiſenach.

This principality is divided into nine diſtricts, the principal towns in which are the following:

Eiſenach, the capital of the principality, is ſeated on the Neſſe, which here receives into it the Horſel. The prince's palace is a noble building. Here are the various colleges for the different branches of the government; beſides an academy, a ſeminary for divans, and an orphan-houſe.

Jena, a town, ſituated on the Saale, or Sala, which waſhes it on the eaſt and ſouth ſides. It lies in a pleaſant vale, among hills that produce a great quantity of wine. The town forms an oblong ſquare, and is ſurrounded with moats, walls, and high towers. There is here a celebrated univerſity, in which is a very valuable library, an obſervatory, and phyſic-garden. There are ſeveral churches, and without the town are four ſuburbs: to the weſt lies a ſuburb before St. John's-gate, in which is a church and an orphan-houſe; eaſtward is a ſuburb before the Sala-gate; and northward is a ſuburb before the port, in which are the prince's gardens, ball-room, and other edifices; and to the ſouthward lies a ſuburb without the Lober-gate. A delightful row of trees has been planted round the moats from the Lober to the Sala-gate, and from thence to the port.

The principality of Saxe Gotha, which lies to the ſouthweſt of that of Eiſenach, abounds in grain and fruit; and in the ſouthern diviſion, which takes in a part of the foreſt of Thuringia, are ſeveral mine-works.

The rivers that riſe in this principality are the Leina, which falls into the Neſſe; the Apfelſtatt, which runs into the Gera; the Neſſe, which has its ſource in the territory of Erfurt, and traverſing the principality of Gotha from eaſt to weſt, diſcharges itſelf into the Werra, after it has received the Horſel, which alſo riſes in this principality.

Gotha contains ſeven cities, five towns, and two hundred churches.

The eſtabliſhed religion is that of Lutheraniſm, with reſpect to which, and the inſtruction of youth, there are ſome excellent regulations; particularly an inſpector travels through the country, and makes enquiry into the ſtate of the churches and ſchools.

The duke maintains two regiments, conſiſting of eight hundred men: of theſe one is quartered in the principality of Gotha, and the other in that of Altenburg. He alſo keeps a guard of a hundred and ſixty ſoldiers, with a body of artillery.

The principality of Gotha is divided into twelve bailiwics, the principal places in which are the following:

Gotha, the capital of the principality, is ſeated in a vale near the Leina, in the fifty-firſt degree twelve minutes latitude, and the tenth degree forty-one minutes eaſt longitude. Canals, lined with ſtone, are drawn from that river through all the ſtreets of the city, which is one of the beſt and handſomeſt towns in all Thuringia. Within the walls are nine hundred and ſix houſes, beſides many others

others which ſtand on the ramparts; and there are large ſuburbs. It has an hoſpital for the ſoldiers, with two ſchools for their children, and in the largeſt of the barracks the cadets are inſtructed in the ſeveral branches of the military art. Here is likewiſe a foundery for cannon and bells. Within the town is the bailiwic houſe, with two churches, a ſeminary, an alms-houſe for widows, and an orphan-houſe. The inhabitants carry on a conſiderable trade in woollen manufactures, as alſo in wood and beer, and beſides the profits ariſing from agriculture, receive conſiderable advantage from its being the thoroughfare from Leipſic to Upper Germany.

On a hill above the town ſtands a fortified caſtle or palace, which affords an extenſive proſpect over the fertile plain. Here the ſovereign, who is brother to the preſent princeſs dowager of Wales, and is one of our knights of the garter, keeps a ſplendid court. In this palace is a well provided armoury, with a very valuable library, which conſiſts of about thirty thouſand printed volumes, and two thouſand manuſcripts, and in the apartments belonging to it are the portraits of ſeveral perſons eminent for their birth, high ſtation, or learning. The cabinet of medals is ſaid to be, next to thoſe of the emperor, the king of France, the dukes of Florence and Parma, one of the moſt valuable in the whole world. The muſeum at Gotha is far from being contemptible. It contains a number of onyxes ſet in different kinds of work, which are valued at ſixty thouſand dollars, among which is one of admirable beauty, repreſenting a man ſitting with a ſpear in his hand, and a woman ſtanding by him. The image of Lewis XIV. is to be ſeen here, cut out of a ſingle amethyſt. Here is a ſilver elephant on a pedeſtal of agate, with the capariſons of gold ſet with emeralds and diamonds; and among a multitude of other curioſities, are two or three earthen vaſes painted by Raphael, and a large copper bowl enamelled with black and white, aſcribed to the ſame artiſt, which coſt the duke ten thouſand dollars. Here is alſo a good collection of pictures, the moſt remarkable of which are Paul Rubens, his miſtreſs, and his diſciple Vandyk, all painted in one piece by Rubens himſelf, a book in which Brugel the elder has exquiſitely painted ſixty-one portraits of perſons of diſtinction, and a ſcreen of ſeven large leaves, on which is painted by the ſame Brugel the moſt remarkable paſſages in the New Teſtament. Here is alſo a ring, in which is ſet a moſt curious watch. Among the works in ivory, are Auguſtus king of Poland on horſeback, and fourteen hollow balls turned one within another. Here is a marſhal's ſtaff and a flageolet made of the cinnamon-tree; and a ſtaff on which the paſſion of Chriſt is engraved with ſurpriſing minuteneſs; a landſcape made entirely of corolines; the elevation of a palace, all of garden ſeeds, arranged with the niceſt art; a gondola and crown both made of cloves.

There are alſo in the palace a church, in which is a very fine chapel, a mint, a laboratory for fire-works, and adjoining to it is a beautiful garden.

Without the gates is alſo Fredericſthal, a kind of banqueting-houſe, which is well worth ſeeing. Among the paintings in this laſt palace, is a large piece, repreſenting the czar Peter on horſeback, conducted by Mercury, Neptune, Fame, Courage and Plenty, with ſeveral other figures offering him gifts; and alſo a family hiſtory piece in four compartments, the firſt repreſenting the carrying off the Saxon princes Erneſt and Albert; the ſecond, their reſcue; the third, their magnificent reception at their return; and the fourth, the execution of the robbers.

The garden of the palace is ſmall; but well laid out in walks, water-works, and parterres, adorned with buſtoes and ſtatues; among which are ſome good copies of the moſt celebrated pieces of antiquity. At the end of the garden is a delightful grotto, the pavement of which is variegated marble dug near Coburg; and the cielings and walls are embelliſhed with ſhells, ores, and figures in glaſs work. In the apartment of the ſecond ſtory are ſome curious paintings of flowers and vegetables. On one ſide of the grotto among ſeveral ſmall jetteaus is the image of Neptune, and on the other that of Thetis.

Between Fredericſthal and the caſtle is a fine orangery, or green-houſe, kept in excellent order, where among a number of exotics are to be ſeen coffee and ſtrawberry-trees.

SECT. XVIII.

Of the Principalities of Saxe-Coburg, Altenburg, and Querfurt, with the moſt conſiderable Places in each.

THIS principality lies to the ſouth-eaſt of the foreſt of Thuringia, but belongs to Upper Saxony; to the north it terminates on the county of Schwartzburg, to the eaſtward on the dioceſe of Bamberg, to the ſouthward on that of Wurtzburg, and to the weſtward on that of Henneberg. It is forty-three miles long, and ſixteen where broadeſt.

The ſoil is moſtly fertile; in the valleys along the rivers are fine paſture grounds, and the principal employment of the inhabitants conſiſts in grazing and the breeding of cattle; it alſo produces a great deal of flax, and in the neighbourhood of Koningſberg are vineyards. The foreſts afford timber and wood for fewel. There are alſo mines of ſilver, copper, and iron; and there are here found pit-coal, gypſium, alabaſter, and marble.

The river Itz or Itſch, which riſes in the foreſt of Thuringia, traverſes the country from north to ſouth, and after receiving ſeveral little rivers, diſcharges itſelf into the Mayn. The Steinach, which has alſo its ſource here, and falls into the ſame river; and the Werra, which likewiſe riſes in this principality, and flows into the county of Henneberg.

The inhabitants are almoſt all Lutherans, except a few Calviniſts at Hildburghauſen, where they have the free exerciſe of their religion. The people are employed in agriculture and trade, and the country produces ſuch plenty of corn, that it has more than ſufficient for home conſumption. Its moſt uſual exports, however, are black cattle, fatted ſheep, and wool. The inhabitants of Sonnenberg deal in ſlates, hones, and gun-flints, wooden ware, pitch and pot-aſh. The other towns purſue different occupations, and the whole country is provided with all manner of neceſſary artificers.

The principality of Coburg formerly belonged to the counts of Henneberg; but by marriage became annexed to the houſe of Saxony, and at length devolved to duke Erneſt the Pious, the founder of the preſent line of the family of Gotha, who divided it among his ſons; whence it comes at preſent to be divided between the houſes of Saxe-Saalfeld, Saxe-Meinungen, Saxe-Hildburghauſen, and Saxe-Gotha.

In the whole principality are ten cities and ſix towns, the principal of which are the following:

Coburg, the capital of the whole principality, and the reſidence of the duke of Coburg-Saalfeld, is ſituated in a valley on the Itſch, in the fiftieth degree thirty-two minutes north latitude, and the eleventh degree twenty minutes eaſt longitude. It is defended by a ſtrong caſtle on a neighbouring hill, where Luther chiefly reſided during the diet at Augſburg in 1530. Both the town and ſuburbs are walled in, and the latter are larger than the former. The prince's palace called Ehrenburg is in the town, and contains the archives of the principality. The town is likewiſe the ſeat of the ſeveral offices of the government belonging to the houſe of Saxe Coburg-Saalfeld, as the privy-council, the regency, the treaſury, and the conſiſtory, and in the market-place ſtands the chancery. Here are four churches with a ſeminary called *Caſimirianum*, from its founder duke John Caſimir; a town ſchool, a gold and ſilver manufactory, and one of porcelain. Without the town is an hoſpital, in which is a ſmall church.

Hildburghauſen, the reſidence of the duke of that diſtrict, is ſituated on the Werra, and contains many handſome houſes, moſt of which are not only regular, and of an equal height, but the ſtreets are broad and ſtraight. In the market-place ſtands the town-houſe, in which the regency, treaſury, and conſiſtory have their meetings. Here is alſo a Lutheran church, to which is

annexed the ſuperintendency of the principality of Hildburghauſen, and the Latin ſchool. In the old town is alſo the duke's palace, which is a large regular building, begun by duke Erneſt in 1685, and in its church is a burial vault belonging to the family. In the New Town is a Lutheran and Calviniſt church.

The principality of Altenburg borders to the weſt on the upper principality of Schwartzburg, and the principality of Weimar; to the north on the circles of Thuringia and Leipſic; to the eaſt, on the circle of Leipſic and the lordſhip of Schonberg; and to the ſouth on the circles of Ertzgebirg and Neuſtadt.

The ſoil is very fertile in corn, and alſo abounds in good paſtures, whence grazing is carried on, and there is a large breed of horſes. The country likewiſe produces plenty of wood, and the mines yield copper, cobalt, vitriol, and other minerals. The principal river is the Pleiſſe.

The religion of the country is Lutheraniſm, and the churches and ſchools are ranged under ſeveral ſuperintendencies, over which is placed a general ſuperintendent, who reſides at Altenburg. The ſtates of this principality are divided into thoſe in the Altenburg, Saalfeld, and Eiſenberg circles, and conſiſt of the nobility and towns of theſe three diſtricts, who have their principal meetings at Altenburg.

The chief towns in this principality are the following.

Altenburg, antiently named Pleiſs, the capital of the principality, is ſubject to the duke of Saxe Gotha. It ſtands high on an uneven ſpot of ground, and the caſtle, which is ſeated on a rock, is famous in hiſtory for being the reſidence of the former electors and dukes, and from hence the young princes Erneſt and Albert, who were afterwards the founders of the two principal lines of the Saxon houſe, were carried off in the year 1455; but the princes were recovered, and thoſe who had taken them executed. In the town is a ſtately building, in which the ſecretary's office is kept, and where the regency and conſiſtory hold their meetings; two churches, one of which is a ſuperintendency. Here is alſo a houſe for the education of young ladies of decayed families, a public ſeminary, a houſe belonging to the knights of the Teutonic order, a muſeum and library, and an orphan houſe.

Saalfeld, a pretty handſome town, ſeated on the river Sala, in a beautiful ſituation, amidſt hills and meadows. This town and its diſtrict is ſubject to the dutchy of Coburg Saalfeld. The palace here was begun by duke Albert, and for ſome time honoured by being the reſidence of the Saalfeld line, till on their acquiring a ſhare of the principality of Coburg, they removed thither. In this town are three churches, and a good grammar ſchool, with ſome manufactures of cloth of gold, and ſilk ſtuffs, and a ſmelting and vitriol houſe. On an eminence near the town ſtands the once celebrated and rich Benedictine abbey of St. Peter, whoſe abbot was a prince of the empire, and had both a vote and ſeat in the diets, and the privilege of coinage. The lands belonging to this abbey are converted into bailiwics, and belong to the family of Altenburg.

We ſhall now give a conciſe account of the principality of Querfurt, which belongs to the duke of Saxe-Weiſſenfels, and is ſurrounded by the county of Mansfeld, the dioceſe of Merſeburg, the diſtricts of Freyburg, Wendelſtein in the circle of Thuringia, and by part of the territories of Eiſenach. The principal places in this principality are,

Querfurt, a charter town, ſeated on the little river Weite. It is very ſmall, it having only about five hundred houſes; but it has large ſuburbs, and is defended by a caſtle ſeated on a hill.

Heldrungen, a ſmall town ſeated near the Unſtrut, which is the ſeat of a ſuperintendency, and had formerly a ſtrong caſtle. But it is to little purpoſe to enumerate towns that have nothing worthy of notice.

SECT. XIX.

Of the Principality of SCHWARTZBURG.

The Situation of its two ſeparate Parts; their Produce, Rivers, Government, Arms, and the principal Places belonging to each of the reigning Princes.

THE principality of Schwartzburg has its ſouthern, or upper part, ſeparated from the north, or lower part, by an intermediate ſpace of ſix German miles; the former being ſurrounded by the principalities of Coburg, Altenburg, and Eiſenach, with the territory of Erfurt; and the latter by the circle of Thuringia, the electorate of Saxony, and the counties of Stollberg, Hohenſtein, Eichsfelde, and the territory of Mulhauſen.

This principality has ſeveral beautiful and fertile parts, remarkably fruitful in all kinds of grain, eſculent vegetables, and fruit; other places afford tolerable wine; and the foreſts of Thuringia and the Hartz are of conſiderable advantage to the country, from the great quantity of timber annually cut down and exported. Theſe foreſts likewiſe abound in deer, wild boars, and other game; and the rivers and ponds yield a great variety of fiſh. There are here likewiſe mines of ſilver and copper, and in ſome places are dug a very beautiful red and white alabaſter.

The principal rivers in the upper principality are the Schwartze, which iſſues out of the foreſt of Thuringia, beyond the caſtle of Schwartzburg, and at length falls into the Sala. The Ilm riſes in the foreſt of Thuringia, as does alſo the Gera. In the lower principality are the following rivers: the Helme, which diſcharges itſelf into the Unſtrut; the Wipper, which riſes at Eichsfelde, and alſo falls into the Unſtrut; and the Helbe, which diſcharges itſelf into the ſame river.

In the whole principality are twelve boroughs, ten market-towns, fifteen caſtles, and about a hundred thouſand perſons. The princely houſes and their ſubjects are of the Lutheran religion.

The princes of Schwartzburg are inveſted by the emperor with the office of grand maſter of the horſe to the empire, and they are alſo huntſmen of the empire; but this title is enjoyed by other German princes. Their full titles run thus: Princes of Schwartzburg, and of the four counts of the empire; counts of Hohenſtein; lords of Arnſtadt, Sonderſhauſen, Leutenberg, Lohra, and Clettenberg.

Their arms are quarterly per pale four tranſverſe beams or, and azure, containing for Schwartzburgh a lion; for Arnſtadt an eagle ſable, in a field or; for Hohenſtein checquée argent and gules; for Leutenberg a lion paſſant or. The middle ſhield is argent a ſtag gules, or ſable, for Lohra; beneath it argent a pitch-fork, and a curry-comb gules, in token of the office of maſter of the horſe. In the center of the whole, on a particular ſhield, is the imperial ſpread eagle, with the ſceptre and monde, and on a ſmall ſhell on its breaſt is the imperial crown, denoting that in the fourteenth century Gunther, count of Schwartzburg, was elected king of Germany.

In 1713 the two principal lines entered into a perpetual compact and union, by which the diviſion of the princely houſe into that of Sonderſhauſen and Rudolſtadt was confirmed, and the reigning princes of both lines were, in 1754, introduced to ſit and vote in the college of princes.

Each reigning prince has an actual privy-council, and by the diviſion of the Schwartzburg lands between the two ruling lines, each of them is to maintain two courts of regency; that is, the prince of Schwartzburg-Sonderſhauſen one at Sonderſhauſen, the other at Arnſtadt; and the prince of Schwartzburg-Rudolſtadt one at Rudolſtadt, and another at Frankenhauſen. Each has alſo its counſellors at law and regency, who are abſolutely independent of each other, and only ſubordinate to their own prince; but, by agreement, appeals, though with ſome limitations, are carried from the Schwartzburg regencies at Sonderſhauſen and Frankenhauſen, to the elector of Saxony's

Saxony's regency at Dreſden, and thoſe from the regency of Arnſtadt to that of Saxe Weimar.

Each prince has likewiſe his colonel, captain, and lieutenants for the management of military affairs; and when the empire is engaged in a war, the houſe of Schwartzburg, together with the count of Reuſſen, furniſhes a regiment of ſix companies, amounting to a thouſand men.

The territories of Schwartzburg-Sonderſhauſen are divided into thirteen bailiwics, the principal places in which are the following:

Arnſtadt on the Gera, a river which a little above divides itſelf into two branches. This town has a handſome ſtone bridge of ſix arches over the river, and of late the buildings in the town, both public and private, are much improved. Here is likewiſe an antient reſidentiary caſtle, with a church, and near it a palace for the princeſs dowager, erected in 1732, with three churches, a provincial ſchool of eight claſſes, a regency, a conſiſtory, and exchequer. On the Gera are erected ſome braſs and iron works, beſides ſeveral mills; and near the town is a houſe for the making of ſaltpetre.

Sonderſhauſen is a town ſeated on the Wipper, which at this place is joined by the Beber. On an eminence without the town ſtands the palace, where the ruling prince of the houſe of Sonderſhauſen uſually reſides. The front of this palace is new, and beſides many other fine apartments, ſplendidly furniſhed, is a moſt ſuperb ſaloon called the Giant's-hall. The garden here is laid out in a moſt beautiful manner. In the armoury ſtands an image of Puſtrich, one of the Wendiſh idols, caſt in a black ſhining metal, and hollow within. The body, which is every where large, is towards the belly an ell and a quarter round, and capable of containing above a common pail of water. Its head is alſo of a diſproportionate ſize, with a round hole inſtead of the mouth, and another on the crown. The right hand reſts on the head, and the left in his lap; but the middle of the left arm is broken off, and the legs are mutilated. Sonderſhauſen is the ſeat of the regency, aud has a conſiſtory and a court of juſtice.

The territories of Schwartzburg-Rudolſtadt are divided into fifteen diſtricts; but ſome of them the prince of this family holds jointly with the count of Stollberg. The principal places belonging to the former are the two following:

Rudolſtadt is ſeated on the Sala, and has near it a caſtle, which ſtands on an eminence, in which the princes of Schwartzburg-Rudolſtadt uſually reſide. This caſtle was deſtroyed by fire in 1735, but has been ſince rebuilt. Here are held the regency, conſiſtory, and exchequer courts; and in the town church is to be ſeen the burial-place of the princes. Here is alſo a ſuperintendency, and a ſeminary of divines founded in 1745 by prince John Frederic, and in honour of him called *Fredericianum*.

Frankenhauſen is ſeated on a branch of the Wipper, which paſſes through the town, and ſtands in a fine fertile country, on the ſide of a mountain that forms a part of the Hartz, and to the north ſeparates its diſtrict from a tract called the Golden Vale; indeed the town is on all ſides environed with woods and mountains. It has a regency, and among the public buildings are the prince's palace, in which is a chapel. There are alſo two churches within the town, and two more without the gates. The ſchool is within the remains of a Ciſtercian nunnery. The ſalt-works of this place are ſome of the moſt antient and famous in all Germany, and ſo conſiderable, that the town owes its proſperity entirely to them. There are a great number of ſalt-houſes: the ſalt is drawn up in leathern buckets by means of large wheels, which are turned by the river Wipper; and in the Upper Town ſtands a fort originally built for the protection of theſe works.

SECT. XX.

Of the County of MANSFELD.

Its Situation, Produce, Rivers, Lakes, and principal Towns.

THE county of Mansfeld borders on the dutchy of Magdeburg, and the principalities of Anhalt and Halberſtadt; and extends thirty-three miles in length, and fifteen in breadth.

It is in general very mountainous, yet affords not only paſturage, but good corn-land, and has large woods, chaſes, vineyards, and fiſheries. There are here mines of a kind of a blackiſh glittering ſort of ſlate, which when ſmelted, yields much copper and ſilver, a quintal of the beſt ſort containing five pounds of pure copper; but a quintal of the worſt yields only two pounds. From this copper a great deal of ſilver was formerly extracted, and a great number of dollars coined. This ſlate is alſo remarkable for having the impreſſions of various animals, eſpecially of fiſhes, as herrings, perches, and pikes.

In this country are likewiſe two conſiderable lakes, which, though they ſtand near each other, and have even a communication, the water of the largeſt is quite ſalt, while that in the other is perfectly freſh and ſweet. They both abound in fiſh, on which account the inhabitants of the villages along their banks ſubſiſt by fiſhing; and they alſo afford an inexhauſtible number of ſnipes, wild geeſe, and other water fowl, ſome of which are ſhot and others taken by the net. The Sala is the northern boundary of this country, where it receives the Salze, which iſſues from the above ſalt lake, together with the Schlenze and other ſmaller ſtreams. The other rivers are the Wipper, the Eine, and the Weite.

Part of this country is under the ſovereignty of Saxony, and part ſubject to the king of Pruſſia, who enjoys the title of count of Mansfeld.

The number of towns in the whole county amounts to ſeven. The prevailing religion is that of Lutheraniſm, and there are ſixty-ſix parochial villages; the clergy belonging to them are divided into eight deaneries, the adminiſtration of which and the ſeveral pariſhes is lodged in the general ſuperintendent of the county.

The titles of the count of Mansfeld are, prince of the holy Roman empire, Mansfeld, and Fondi; noble lord of Heldrungen, Seeburg, and Schraplau; and lord of the lordſhips of Dobrziſch, Neuhaus, and Arnſtein.

The arms for Querfurt are argent party per feſſe gules; for Mansfeld, ſix lozenges, diſpoſed in two rows gules; for Arnſtein, ſable, an eagle diſplayed, with the bill, legs, and claws or; and for Heldrungen, azure, a lion rampant or, with a crown of the ſame, a tongue exerted gules, and a reverſed tail, gules and argent checquée in a bend.

The principal towns in this county are thoſe which follow:

Eiſleben, the capital of the county, is ſeated in the fifty-firſt degree thirty-nine minutes north latitude, and in the eleventh degree fifty-ſix minutes eaſt longitude. It is remarkable for the great number of its brew-houſes, and for the copper-mines in its neighbourhood, which were formerly in ſuch good condition, that between the towns of Eiſleben and Mansfeld there were at leaſt thirty ſmelting-houſes, which generally produced above a thouſand tons of copper in a year; and every ton contained near two hundred ounces of ſilver; and though at preſent ſeveral good ſhafts are overflowed with water, and the ore is neither ſo rich in copper, nor yields ſo much ſilver as formerly, yet theſe mines turn to good account. In the town is a caſtle, with three pariſh churches, a grammar-ſchool, a mine-office, a conſiſtory, a general ſuperintendency, and about a thouſand houſes. It is very populous, and the center of all the trade and buſineſs of the whole county, every thing deſigned for ſale being brought hither; whence its exports to the Hartz and into Thuringia are very conſiderable.

This place is famous for having given birth to Martin Luther, who alſo died here. Among other relics of that great reformer is ſhewn in the great church of St. Thomas, his pulpit, which, from the extreme veneration entertained for it, is only preached in three times a year; that is, on the anniverſary of Luther's birth-day, the day in which he died, and the opening of the catechetical lectures. There is here alſo ſhewn the wooden bedſtead on which Luther lay, which is here pretended to be of ſuch extraordinary virtue, that whoever carries a bit of it about him will never be troubled with the head-ach, and a tooth-picker made of it infallibly ſecures a perſon from the tooth ach. "The Swedes, ſays Mr. Keyſler, who

" are very fond of being thought the genuine ſons of " Luther, carried away as many pieces, ſaid to be cut " from this bedſtead, and a table that belonged to Luther, " as would have made ſeveral tables and bedſteads. As " this afforded great ſatisfaction, ſo it yielded no ſmall " profit to thoſe who ſhewed theſe relics; for a very ſmall " part of the gratuities they got on this occaſion, was " ſufficient to buy ſuch another lucrative bedſtead." Our impartiality would not permit our ſuppreſſing ſo extraordinary a circumſtance, though we are ſorry to find any of the followers of that reformer ſo weak and ſo wicked as to countenance ſuch groſs ſuperſtition, which every rational proteſtant muſt condemn, and which Luther himſelf, were he living, would cenſure with the utmoſt warmth and indignation.

The city of Mansfeld is ſituated five miles to the north-weſt of Eiſleben, and is very ſmall. Its caſtle, which is ſeated on a high rock, was formerly both a fortreſs and the reſidence of the counts of Mansfeld; but the fore-part of it only remains, the reſt, together with the walls and baſtions, being blown up in the year 1674.

SECT. XXI.

Of the County of WERNIGERODE.

Its Situation, Extent, Produce, Rivers, Government, and principal Towns.

THE county of Wernigerode is ſituated partly on the Hartz, and borders on the principalities of Blankenburg, Brunſwic, and Hildeſheim; and is only about fifteen miles in length and ten in breadth.

One part of the country is mountainous, and the other level. The hills form a kind of amphitheatre, riſing gradually behind each other. The moſt diſtinguiſhed of theſe is Great Brocken, which ſome eſteem the higheſt mountain in all Germany. No trees, or ſcarce any ſmall ſhrubs, are to be found on its ſummit, which frequently remains covered with ſnow till Midſummer, and in ſome of the northern parts even longer. Out of this mountain iſſues the Ilſe, with the Great and Little Bude, and alſo the Ecker. The mountains afford very valuable plants, with berries of all kinds, particularly cranberries, great quantities of which are preſerved by the inhabitants. Oak and beech are leſs common here than firs and pines, though great care is taken in planting and keeping up the foreſts.

The plains are very fertile in all kinds of grain, pulſe, turnips, flax, culinary herbs, fruit, and other vegetables. As the meadows and paſtures are very rich, great numbers of cattle are bred here, and the country likewiſe abounds in all manner of beaſts of chace and wild fowl.

This county alſo abounds in iron, lead, cobalt, free-ſtone, lime-ſtone, marl, and clay for bricks and pots.

The county is very populous, and the language of the inhabitants, who are of the Lutheran religion, is Low German. They export corn, oatmeal, all kinds of berries, timber, and bruſh-wood; as alſo deals, oil, fine oxen, veniſon, hogs, fiſh, chalk, ſaltpetre, gunpowder, caſt and wrought iron, wrought copper, which is imported rough, paper, cloth, ſtuffs, and brandy.

This county is a fief of the king of Pruſſia, though a part of it belongs to the count of Stollberg. The king, as ſovereign of the country, levies the exciſe in the town of Wernigerode, though one-tenth of it goes to the count. His majeſty alſo taxes the country, and raiſes ſoldiers. Appeals lie from the count's regency to the revenue court at Berlin; and yet the count has the juriſdiction of the mines, chaces, ſtores, and coinage; as alſo in criminal, civil, and church affairs. His regency, to which appeals are brought from the inferior courts in the town and country, conſiſts of a ſecretary, a director, and counſellors. Theſe, with the addition of three eccleſiaſtical counſellors, form the conſiſtory. The revenue court conſiſts of a director, counſellors, aſſeſſors, and other officers, who, with the addition of foreſt and mine officers, form the foreſt and mine courts. The revenue of this county is computed at the annual ſum of fifty thouſand rixdollars.

The principal towns in this county are the following:

Wernigerode is ſituated at a ſmall diſtance from the Ecker, which receives into it a rivulet that runs through the town. It has a caſtle ſeated above the town on a mountain, which has been ſo greatly improved by count Chriſtian Erneſt, that it has not one waſte ſpot. This caſtle he has adorned with a large and valuable library; and here likewiſe are kept the archives of the family. About this ſtately ſeat lies a park, which was walled in by the above count, and finely planted both with fruit and foreſt trees. In it, near the caſtle gate, is a row of houſes for the count's domeſtics, together with a well-built orphan-houſe and new ſtables, with many ſingle houſes for the count's attendants. In the park is a ſummer-houſe called the hermitage, which ſtands higher than the caſtle itſelf. Near the park is a moſt beautiful parterre, with a fine green-houſe, in which is a large ſaloon; and juſt by is a magnificent palace, in which lives the counteſs Frederica Charlotte of Hohenlohe-Ingelfingen. A viſta of limes leads from the park to the count's kitchen-garden and orchard, which lie near the town, and both the road and foot-way to the caſtle are planted with rows of trees.

The town itſelf conſiſts of three parts, the Old and New Town, and the ſuburb of Noſchenrode. In the Old Town are only four hundred and thirty houſes, three churches, two alms houſes, a palace belonging to the count, the offices belonging to the government, a Latin ſchool of five claſſes, and ſeveral manſion houſes belonging to the nobility. The New Town contains only about two hundred houſes, a pariſh church, and an alms-houſe, while the ſuburb contains about one hundred and fifty houſes, one church and a ſchool.

Several great fires have happened here, particularly in the year 1751; but the greateſt part of the houſes have been rebuilt with ſtone.

To the corporation belong very large woods, out of which the burghers are allowed timber for building, with a certain quantity of wood for fuel. The trade of the townſmen chiefly conſiſts in manufactures of cloth and woollen ſtuffs, brewing, diſtilling, and agriculture.

Drubec is a large and beautiful village, the inhabitants of which are eſteemed the richeſt farmers in all the country, and are fond of being called the men of Drubec. At this place is an antient foundation, conſiſting of an abbeſs and five canoneſſes, who may be either of noble or trading families. To this foundation belongs a church, beſides which there is another in the village.

Iſenburg is a large open town, which was antiently walled. It has a caſtle ſeated on an eminence, which was formerly the reſidence of the counts of Stollburg, and near the caſtle is a large park, in which is the manſion-houſe of Leiningen, thus named from the conſort of count Chriſtian Erneſt of the houſe of Leiningen. The chief trade of the place ariſes from the iron works and ſlatting mills belonging to the count.

SECT. XXII.

Of the Dutchy of MAGDEBURG.

Its Situation, Extent, Produce, and Rivers; the Religion of the Inhabitants; the ſeveral Offices of the Government; the Revenues of the Prince, and the principal Cities of this Dutchy.

WE now come to the circle of Lower Saxony, which is bounded on the north by the dutchy of Sleſwic and the Baltic; on the eaſt by the circle of Upper Saxony; on the ſouth by the ſame circle, and a part of the circle of the Upper Rhine, and on the weſtward by the circle of Weſtphalia and the German ocean.

The ſtates belonging to it are thoſe of Magdeburg and Bremen, Zell, Grubenhagen, Calenberg, Wolfenbuttle, Halberſtadt, Mecklenburg-Schwerin, Mecklenburg-Guſtrow, Holſtein-Gluckſtadt, Holſtein-Gottorp, Hildeſheim, Saxe-Lauenburg, the archbiſhopric of Lubec, Ratzeburg, Blankenburg, Ranzau, Lubec an imperial city, Goſlar, Mulhauſen, Nordhauſen, and Hamburg.

We

We ſhall begin with the dutchy of Magdeburg, which is ſurrounded by the Mark of Brandenburg, the dutchy of Brunſwic, the principalities of Halberſtadt and Anhalt, the county of Mansfeld, and the electorate of Saxony, extending ſixty miles from eaſt to weſt; but its breadth is very unequal.

The country belonging to this dutchy is for the moſt part level. It has ſome good corn lands, and produces fine cattle; but ſeveral circles are ſandy, marſhy, and over-grown with woods. In ſome parts there are pit-coal, while in others fuel is ſcarce. The ſalt ſprings are here ſo rich, as to be able to ſupply all Germany with ſalt.

The Elbe paſſes through a conſiderable part of the country, and the river Havel forms its eaſtern boundaries between Brandenburg and this dutchy. Here riſes the Aller, which diſcharges itſelf into the Elbe. The other rivers are the Saale, or Sala, which here receives the Elſter, and afterwards diſcharges itſelf into the Elbe, the Ohre, and the Bode.

The eſtabliſhed religion of the inhabitants is Lutheraniſm; but a great number of French and German Calviniſts have ſettled here, and the popiſh religion is tolerated at Magdeburg and Hall. The Lutheran pariſhes amount to three hundred fourteen, and the paſtors to three hundred and fifty-three. Theſe pariſhes are divided into ſixteen inſpections, under the direction of as many inſpectors, ſubordinate to a general ſuperintendent. The German Calviniſts are poſſeſſed of ſeven churches, and have eleven miniſters; the French have ſix congregations, to five of which are ten miniſters; but thoſe at Calbe are ſubject to a German paſtor; and at Hall is a ſynagogue of Jews.

Magdeburg contains manufactures of woollen cloth, linen, ſtuffs, ſtockings, oil-ſkin, leather, parchment; and particularly exports large quantities of ſtarch, flour, and all ſorts of grain.

In the diet of the empire the king of Pruſſia, as duke of Magdeburg, ſits and votes between the elector of Bavaria and the elector Palatine.

The arms of the dutchy are party per pale, gules and argent.

The dutchy has its own regency, who in 1714, were removed from Hall to Magdeburg, and conſiſt of two ſenates. The war and domain chamber manage all the concerns of the domain and finances, with the exciſe, contributions, &c. but each cheſt is kept ſeparate, under its diſtinct office. In the towns the exciſe and other branches of the revenue are under the direction of perſons ſtiled tax counſellors. The conſiſtory is compoſed of the members of the regency, the general ſuperintendent, and ſome lay and eccleſiaſtical counſellors. Its power is limited to the Lutheran churches, while the Calviniſts are ſubject to their ſupreme directory, and the French are under the direction of the French ſupreme conſiſtory at Berlin.

The princes revenues ariſe chiefly from the domains, taxes, and military cheſt. In the domains are included the king's profits ariſing from the ſalt-works at Hall, and other places, with the duties on ſalt; the neat profit and tythes of mines, confiſcations, fines, farms belonging to bailiwics, navigation-farms, ſluice money, tolls by land and water, foreſt rents, payments for maſtage, and the like. Out of theſe taxes are paid the king's officers in the dutchy, the expences of the royal buildings, ſluices, tillage, repairs of highways, and other diſburſements. The ſurplus is paid into the general domain cheſt. The tax and military cheſt receive the country contributions, with the forage and ſubſiſtence money for the country cavalry, the exciſe laid upon goods conſumed, the provincial exciſe, and other incomes, all which are afterwards paid into the general military cheſt, or remitted to the ſeveral regiments in the country for their ſubſiſtence. The contributions, and other revenues belonging to the tax cheſt, are collected in every circle by circular receivers, to whom they are remitted every month by the under receivers in the ſmall towns and villages, of which every provincial counſellor has the controul in his reſpective circle. The annual revenues of the ſovereign from this dutchy, amount to above eight hundred thouſand rixdollars.

The dutchy is divided into four circles, the moſt conſiderable places in which are,

The city of Magdeburg, which is the capital of the dutchy, the ſeat of the provincial regency, the conſiſtory, the war and domain office, and one of the principal trading towns in all Germany, is ſeated on the Elbe in the fifty-ſecond degree ſixteen minutes latitude, and the twelfth degree nine minutes eaſt longitude. It is ſtrongly fortified, and has among other works a citadel, ſeated on an iſland in the river Elbe, which is joined to the city and the country by two bridges. The city is well built, particularly the broad ſtreet, which has a grand appearance; but the principal beauty of the town conſiſts in its cathedral ſquare, which is adorned with large elegant houſes, and the area of it well paved. The Lutheran cathedral, dedicated to St. Maurice, is a ſuperb ſtructure in the antique taſte; it is two hundred and eight German ells in length, and of the ſame height; its breadth is fifty-five ells, and the whole building, which conſiſts entirely of free-ſtone, is richly adorned with ſculpture, particularly there is a baſſo relievo of the wiſe and fooliſh virgins, a fine porphyry font, an altar in the choir of different kinds of marble, and in the front of the choir is a fine marble ſtatue of St. Maurice.

Among the other public edifices are the king's palace, which was antiently the reſidence of the biſhops, the armoury, the governor's houſe, and the guild-hall. Here is alſo a Lutheran convent, which was formerly a monaſtery of Premonſtratenſian monks, dedicated to Our Lady, and has a ſchool or ſeminary. The Lutherans have alſo ſix parochial churches, and the Calviniſts conſiſt of three congregations, German, French, and Walloon. To the ſeminary, which belongs to the town, are ten profeſſors, and the Calviniſts have a Latin ſchool. Here is alſo an alms-houſe, an hoſpital, and an orphan-houſe, all maintained at the king's expence.

In this town is a variety of manufactures, particularly of all ſorts of woollen cloths and ſtuffs, half and whole ſilk ſtuffs, cottons, linen, ſtockings, leather gloves, black and yellow tobacco, roll tobacco, ſnuff, &c. The city is alſo remarkable for its large magazines of merchandize brought from Hamburg, on the Elbe, which is very rapid, in flat-bottomed boats, and from hence ſent by land to Leipſic, and other parts. Indeed its ſituation on the Elbe, and its being on the road between Upper and Lower Germany, is of great advantage to its trade.

This city has frequently ſuffered by the ravages of war. Charles V. put it under the ban of the empire for rejecting the *Interim*, and charged Maurice elector of Saxony, with the execution of it, who after a ſiege which laſted from the ſixteenth of September 1550, to the ninth of November 1551, took it by capitulation, in which it was ſtipulated, that the emperor ſhould be reconciled, and the ban revoked. In 1629, it was blockaded by the Imperialiſts for the ſpace of twenty weeks. But the moſt dreadful calamity of this kind, was in the year 1631, when the Imperialiſts under count Tilly beſieging it in form, and taking it by ſtorm, it was ſacked and burnt, except the cathedral, ſome adjacent houſes, and a few ſmall cottages of fiſhermen; ſo that, according to ſome authors, ſixteen churches and chapels, many of them covered with lead, and one with copper, were reduced to aſhes. Tilly had the infernal barbarity to order his ſoldiers to ſpare neither age nor ſex; and they too well obeyed the commands of their inhuman general, by ripping up women with child, murdering infants in the ſight of their parents, and raviſhing the helpleſs virgins in the very ſtreets, while many of theſe, to eſcape violation, ran into the Elbe, and others into the fire; in ſhort, the ſlaughter was ſo great, that though the number of the burghers was before computed to amount by the loweſt computation to twenty thouſand, not above four hundred eſcaped. In the beginning of the year 1632, the Imperialiſts withdrew, and the Swedes taking poſſeſſion of the city, began to

rebuild it; but when it was reduced to ſome order, it was again blockaded in 1635, by the troops of Brandenburg and Weimar, and in 1636, beſieged and taken by capitulation by the Imperialiſts and Saxons, on which the Swediſh garriſon withdrew.

The city of Hall is ſeated on the Saale or Sala, and contains a thouſand and ſixty-three houſes that pay taxes, beſides its public edifices; and the inhabitants of the town and ſuburbs are computed at thirteen or fourteen thouſand, without including the ſtudents and the garriſon. The town is divided into four parts, named the Maria, the Ulrich, the Nicholas, and Maurice quarters. Mauriceburg was antiently a caſtle; but the greateſt part of it now lies in ruins; however, the chapel is in the poſſeſſion of the French Calviniſts. The Lutherans have three pariſh churches, and the German Calviniſts have the cathedral and another church; the Papiſts are likewiſe permitted a chapel for the private exerciſe of their religion, and the Jews have a ſynagogue. The celebrated Frederician univerſity was formed out of an academy of martial exerciſes. The public hall belonging to this laſt building is in the weigh-houſe, as is alſo its library, which conſiſts of upwards of ten thouſand volumes, and on the parade is an anatomical theatre. The nunnery for ladies was founded in 1702, for the reception of one abbeſs and nine ladies of the Calviniſt religion, by Godfrey Zena, ſecretary to the regency of Magdeburg. The Calviniſts are poſſeſſed of two hoſpitals, excluſive of an almshouſe for the French Calviniſts.

The vale of Hall, which conſiſts of the loweſt part of the town, and lies on the Saale, has four rich ſalt-ſprings, with ninety-ſix boiling houſes. Beſides the common trades, there are here carried on various manufactures, as thoſe of fine brown and white leather gloves, worſted and ſilk ſtockings wove, flannel, frieze, light ſtuffs, fuſtian, printed flannel and linen, tobacco-pipes, porcelain, great quantities of ſtarch, powder, gold, ſilver, and ſilk ribbons after French and other patterns, and beautiful red and yellow Turky leather.

Cloſe to the north ſide of Hall is the town of Neumarkt, which ſeems one of its ſuburbs, though in reality it is not. It conſiſts of about two hundred eighty-three houſes, has its own magiſtrate, a pariſh church, and a ſmall ſchool.

Glauche, another town, lies alſo ſo near the walls as to ſeem a ſuburb to the city, and contains about three hundred and thirteen houſes, with ſeveral vineyards: it has its own magiſtrates, and contains one pariſh church, with a ſchool. But the moſt remarkable public buildings here are the orphan-houſe, which is eſteemed one of the moſt noble and uſeful foundations in all the Pruſſian dominions, with the royal pædagogium, and the widows-houſe. In the above orphan-houſe is a valuable diſpenſatory, a laboratory, and a conſiderable trade is carried on in books. To the orphan-houſe alſo belongs a ſpacious library, a muſeum, and an excellent printing-office, the latter founded by the baron Canſtein, in which the whole Bible, the New Teſtament, and Pſalter are always kept ſtanding; and theſe books, of all ſizes, are ſold at this printing-office at very low prices.

SECT. XXIII.

Of MECKLENBURG.

Its Situation, Extent, Produce, and Rivers. The Religion of the Inhabitants, their Trades, Exports, Government, the Diviſions of the Country, and the Places moſt worthy of Notice.

MECKLENBURG is bounded on the north by the Baltic; on the eaſt by Pomerania; on the ſouth by Brandenburg; and on the weſt by the dioceſe of Lubec, the principality of Lunenburg, and alſo by Lauenburg and Ratzburg: but geographers differ greatly in their accounts of its extent; which is, however, about a hundred and thirty miles in length from eaſt to weſt, and in ſome places eighty in breadth from north to ſouth.

With reſpect to the nature and goodneſs of the country, the Mecklenburghers themſelves diſagree. It, however, contains many large and ſmall lakes from four to ten miles in length, and from four to ſeven in breadth. There are here likewiſe ſome large and deſolate heaths, moors, and fens; a great part of the country conſiſts of a ſandy ſoil, but, according to Cluverius, the very worſt of theſe ſandy tracts produces excellent rye; when they lie fallow there cannot be better ſheep-walks; and when they are well tilled and dunged, they yield wheat and barley. The country is interſperſed with delightful eminences; pleaſant and profitable woods. Several fens have been drained and improved into arable and paſture land. The commons and meadows are in moſt parts not at all inferior to thoſe of Holſtein and Pomerania; and grazing is ſo conſiderable, that the inhabitants export ſome thouſands of cattle. Indeed, it muſt be acknowledged, that by art and labour the face of the country is capable of being greatly improved; for the marquiſate of Brandenburg, which lies contiguous, and bears a great reſemblance to this country, ſhews that their marſhy and ſandy waſtes may be converted into a fertile and pleaſant country. The lakes and rivers abound in fiſh, more particularly in eels and craw-fiſh. The country has alſo ſome ſalt ſprings, with mines of copper, iron, and allum.

With reſpect to the rivers of Mecklenburg: the Elbe waſhes the borders of this country to the ſouth-weſt, where it is joined by the Elde, which here iſſues from the lake of Plauer; and into that river flows alſo the Stor, which proceeds from the lake of Schwerin. The Reckenitz riſes in this country, and forms the limits between Mecklenburg and Pomerania, after which it diſcharges itſelf into the Baltic. The Tollenſe iſſues out of the lake of the ſame name, and joins the Pena. The Warno riſes in the center of this country, and, after receiving the Milnitz and Nebel, forms a lake and harbour at Roſtoc, and falls into the Baltic. The Radegaſt riſes at Stellenz, and having run by ſeveral towns, is called the Stopenitz, under which name it croſſes the lake of Deſſau; and having united its ſtream with the Drave, diſcharges itſelf into the Baltic. The Havel flows from the lake of Barn, and flows into the mark of Brandenburg.

Mecklenburg has only one harbour on the Baltic, which is that of Roſtoc; but it would be eaſy to make another at Neu-Bucko, and a third at Ribnitz, the advantages attending which would abundantly over-balance the expence.

This country is divided into two dutchies, and the inhabitants of both are Lutherans, whoſe churches and ſchools are here divided into ſix rural ſuperintendencies, and under the ſuperintendents are provoſts. There are alſo ſome congregations of Calviniſts, and in Schwerin the papiſts are permitted the private exerciſe of their worſhip.

The country has woollen manufactures, tanners, leather-dreſſers, and people of other trades; but their number is not ſufficient to ſupply the country. The exports of the inhabitants conſiſt of cattle, butter, cheeſe, corn, flax, hemp, hops, ſeveral kinds of wood, and alſo honey and wax. In both dutchies are forty-five great and ſmall cities, three convents belonging to the nobility and ſtates of the country, and five hundred and ninety-four manors. In the year 1628 the number of farms belonging to the ſovereign were one thouſand and one, thoſe of the nobility amounted to ſeven hundred and twenty-ſeven, and thoſe of the convent to ſeven hundred and ſixty eight.

The peaſants are under villenage, but the nobility are free, and enjoy very conſiderable privileges.

The ſtates are compoſed of the nobility and towns. In 1523, the nobility and commons of the two dutchies of Schwerin and Guſtro entered into an indiſſoluble compact of union, which has been acknowledged and confirmed by the ſovereigns, and conſiſts both in a conjunction of the provinces, and in that of the ſtates of which each is compoſed; it being agreed, that all the free inhabitants of both dutchies, including the whole of the Stargard circle, ſhould enjoy an equality in rights, privileges, and immunites; be governed by the ſame laws,

laws, and in all caſes and exigencies ſhould daily aid and aſſiſt each other in council and action.

The government of the whole country of Mecklenburg was formerly under one prince; but duke John, who died in 1592, leaving two ſons, Adolphus Frederic and John Albert II. they divided the country between them, by which the former obtained the part belonging to Schwerin, and the latter that belonging to Guſtro; while the town of Roſtoc, with its univerſity and hoſpital, and the monaſtic lands, remained in common: but the line of Guſtro becoming extinct in 1695, duke Frederic William of the Schwerin branch laid claim to the ſole inheritance of that dutchy, but was oppoſed by Adolphus Frederic, duke of Strelitz, his father's younger brother. However, this conteſt was decided at Hamburg in 1701, by an agreement that the principality of Guſtro ſhould be added to that of Schwerin, and that duke Adolphus Frederic, beſides his dutchy of Strelitz, ſhould alſo hold the principality of Ratzeburg, with the lordſhip of Stargard, the antient commandaries of Miro and Nemero, and a yearly penſion of nine thouſand dollars. At the ſame time the right of primogeniture ſhip and the lineal ſucceſſion were eſtabliſhed in both houſes, and the agreement ratified by the emperor. Theſe two lines of the dukes of Mecklenburgh ſtill ſubſiſt, and her preſent majeſty, Charlotte queen conſort of Great Britain, is the ſiſter of Adolphus IV. the preſent duke of Mecklenburg Strelitz.

The titles aſſumed by both the dukes, are duke of Mecklenburg; prince of Wenden, Schwerin, and Ratzburg; count of Schwerin and the county of Roſtoc; and lord of Stargard.

Their arms are party per pale two bends divided into ſix fields. The firſt is or, a buffaloe's head gardant gules, crowned with horns argent, with a ring of the ſame through its noſtrils, for Mecklenburg. The ſecond is azure, a griffin or, for Wenden. The third party per feſſee barry of two azure, with a griffin argent, and a lozenge purpure. Both theſe are ſaid to be the arms of Roſtoc. The fourth is gules, a croſs wavy argent, for the principality of Ratzeburg. The fifth gules, an arm cloathed argent, and bound with a ribbon of the ſame, iſſuing from a cloud, and holding up a ring or, with a ſtone infixed, for the lordſhip of Stargard. The ſixth is or, a buffaloe's head ſable, with a crown or, and horns argent, panting and placed oblique. There is alſo an eſcutcheon, party per feſſe, gules and or, for the county of Schwerin. The electors and margraves of Brandenburg likewiſe uſe the title and arms, becauſe, on the extinction of the male ſtem of the dukes of Mecklenburg, that dutchy falls to the houſe of Brandenburg.

The annual revenues of the Schwerin line amount to three hundred thouſand rixdollars per annum, and thoſe of the duke of Mecklenburg Strelitz to about a hundred and twenty-ſix thouſand. No payment is required for the maintenance of the duke's troops, either of the nobility or ſtates, the duke defraying all the expence of the military eſtabliſhment out of the fixed annual contributions. The nobility and their vaſſals are alſo exempted from quartering and maintaining the militia, as the municipal towns are from quartering the horſe. The towns, however, quarter the foot, and pay ſervice-money.

The two dutchies are divided into three circles, that of Mecklenburg, that of Wenden, and the circle of Stargard.

The Mecklenburg circle forms the dutchy of Schwerin, which conſiſts of the antient dutchy of Mecklenburg, the county of Schwerin, the weſtern part of the principality of Wenden, and a ſmall part of the lordſhip of Roſtoc; the principal places in which are the two following towns:

Parchim, the capital of this circle, is ſeated on the river Elde, which here divides itſelf into two branches, and in ſeveral parts run eaſt and weſt through the town, which, though it has the name of a capital, is very inconſiderable, and has only two pariſh churches.

Schwerin, the uſual reſidence of the dukes of that line, is ſituated on a pleaſant lake that abounds in a variety of fiſh, and, beſides ſurrounding the greateſt part of the town, originally gave name to it. This town is nearly ſquare, and conſiſts of three parts, which are named Schwerin, the New Town, and the Moor. The duke's palace ſtands on an iſland in the lake, where it is defended by fortifications, and has a communication with the town by means of a bridge. Some parts of it command a moſt delightful proſpect. The paintings in this palace are very valuable, and the gardens are laid out in a fine taſte. The town has frequently ſuffered by dreadful fires.

The circle of Wenden contains the eaſtern, and greateſt part of the principality of Wenden, with the lordſhip of Roſtoc, and the largeſt part of the dutchy of Guſtro.

Guſtro, the capital of the circle of Wenden, is ſeated on the little river Nebel, thirty-five miles to the north-eaſt of Schwerin, and is one of the largeſt and moſt pleaſant cities in the whole country, as alſo the ſeat of the chief courts of judicature and a ſuperintendency. In this town is a good palace belonging to the prince, with a moſt elegant garden; and in the church of this palace is the vault of the ducal family. Guſtro likewiſe contains a cathedral, and a pariſh church.

Roſtoc, a free imperial city, and the largeſt in both dutchies, is ſeated on the Warna, at the mouth of which it has an harbour, and ſtands twelve miles to the north-weſt of Guſtro. It has fourteen wide and long ſtreets, beſides ſmaller, and many thouſand handſome houſes. It properly conſiſts of three parts: the Old, New, and Middle Towns. The firſt ſtands on an eminence towards the eaſt, and contains the churches of St. Catharine, St. Peter, and St. Nicholas; the two laſt of which are parochial. In 1677 moſt of this part was deſtroyed by fire, but has been ſince rebuilt with greater regularity. The Middle Town is ſeparated from the former by a branch of the Warna, and contains St. Mary's church, a ſtately ſtructure, in which are preſerved the entrails of the celebrated Grotius, who died here in 1645. Here is alſo the church of St. John, a library, and the council-houſe. In the New Town is St. James's church, which was formerly collegiate; the church of St. Michael, and that of the Holy Croſs, which has a convent for young ladies, natives of Roſtoc. In this part is alſo the univerſity, which has twenty-four profeſſors, to whom the dukes annually pay the ſum of three thouſand florins, and the town five hundred, towards their ſalaries. Here is alſo a public free-ſchool.

Among the peculiarities belonging to this city, the inhabitants are ſaid to boaſt of their having ſeven gates, ſeven large ſtreets that center in the great market, ſeven bridges over the Warna, ſeven doors to St. Mary's church, ſeven towers to the town-hall, ſeven great bells belonging to the town clocks, which chime at certain hours, and ſeven vaſt lime-trees in their common garden.

The magiſtracy conſiſts of three burgomaſters, one ſyndic, twelve aldermen, one ſecretary, and a prothonotary. This city has a mint, and the right of coining gold, ſilver, and copper. Both the civil and criminal juriſdiction are veſted in the magiſtracy, though with right of appeal to the two ſupreme courts of juſtice. This city is ſeated in the fifty-fourth degree twenty-ſix minutes north latitude, and in the twelfth degree eighteen minutes eaſt longitude; and carries on a conſiderable trade.

Wiſmar, a town ſeated on a bay of the Baltic, formerly belonged to the dutchy of Schwerin, but at the peace of Weſtphalia was ceded to the crown of Sweden. It has a good harbour, and is one of the beſt and largeſt towns in theſe countries; for it has ſix churches, a particular conſiſtory, a grammar-ſchool under the direction of eight maſters, and is likewiſe the ſeat of a Swediſh court of juſtice. It was formerly a Hanſe town, and had the privilege of coining money. This town has been frequently taken and retaken.

SECT.

SECT. XXIV.

Of the Dutchy of HOLSTEIN.

Its Situation, Extent, the Face of the Country, and its Produce. The Religion, Trade, and Commerce of the Inhabitants. Of the Dukes of Holſtein, their Titles, Arms, and Order of Knighthood: their Revenues, Courts of Juſtice, and principal Towns; with a particular Deſcription of the free Cities of Hamburgh, Altena, and Lubec.

THE dutchy of Holſtein is bounded towards the north by the dutchy of Sleſwic and the Baltic, which is alſo its eaſtern boundary; towards the ſouth by the dutchy of Lauenburg, the territories of Lubec and Hamburg; and on the weſt by the Elbe, which ſeparates it from the dutchy of Bremen, and by the German ocean. Its extent from eaſt to weſt is about ninety miles, and from north to ſouth about ſixty.

Its ſituation between the Baltic and German ocean expoſes it to frequent ſtorms, which indeed purify the air, but oblige the inhabitants to be at great expence to ſecure themſelves from inundations, by raiſing lofty and ſtrong dykes, and keeping them in conſtant repair. The diſtricts where theſe dykes are neceſſary being in the low lands near the German ocean, and the mouth of the Elbe, they conſiſt of excellent marſhes that produce wheat, barley, peas, beans, and particularly rape-ſeed; and alſo afford a fine breed of cattle, that are much larger and ſtronger than thoſe in the champaign country; and, beſides the native cattle, a great number of heifers are brought here to be fattened. The middle part of the country indeed moſtly conſiſts of ſand and heath, yet affords good paſture for ſheep. In theſe parts the fern is mowed, and in winter is ſtrewed in the cow-houſes. The diſtricts which border on the Baltic, and conſiſt of champaign land, are very fruitful. The beef, veal, mutton, and lamb, are very fat and palatable. The breed of horſes is on the decline, but this country ſtill affords ſome that are very beautiful, and are ſold for two or three hundred rixdollars. Holſtein likewiſe abounds in poultry, wild-fowl, and game of all kinds.

The German ocean, with the Baltic, the rivers, the lakes and ponds, furniſh the inhabitants with great plenty of a variety of fiſh. In this country are fiſh-ponds of a very ſingular nature, which for two or three years abound with pike, carp, lampreys, and perch; but every third or fourth year are drained, and the fiſh ſold; after which the pond is for ſome years ſown with oats, or uſed as paſture land, and then again laid under water and ſtocked with fiſh. This is ſaid to be a moſt lucrative piece of oeconomy.

Here are no hills that deſerve the name. The principal inland rivers are the Eyder, the Stor, and the Trave, the laſt of which, among other ſtreams, receives into it the Pennau, the Schivenſtin, and the Schwartau.

The inhabitants are generally fair, handſome, ſtrong and brave, and ſo juſt and true to their words and promiſes, that in the neighbouring parts of Germany the Holſtein faith is become proverbial. They are fond of good cheer, and the great affect a ſplendid equipage and retinue.

The eſtabliſhed religion is Lutheraniſm, and the churches are under the inſpection of provoſts, ſubordinate to the general ſuperintendents who preſide over the king's ſhare in the dutchies of Sleſwic and Holſtein, and over thoſe of the prince within his part of the latter; and theſe churches are viſited every year by the ſuperintendent of the ruling prince. At Gluckſtadt and Altena are churches belonging both to the Calviniſts and Papiſts, and at the latter, among other ſects, the Menonites are poſſeſſed of two churches. At Kiel is a Greek chapel for the Ruſſians, and at Altena, Rendſburg, Kiel, and Gluckſtadt, the Jews are likewiſe permitted the exerciſe of their religion.

This country has ſeveral manufactures, particularly in the towns of Altena and Gluckſtadt, but theſe might be greatly enlarged. Its advantageous ſituation for commerce, from its bordering on the Baltic ſea and the German ocean, and its having the advantage of navigable rivers, are not properly improved. Its exports are grain, malt, grots, ſtarch, buck-wheat, peas, beans, rape-ſeed, horned cattle, ſheep, ſwine, horſes, veniſon, poultry, cheeſe, butter and fiſh.

This country is divided between the duke of Holſtein Gottorp and the king of Denmark. Duke Adolphus, ſecond ſon to Frederic I. was the founder of the Gottorp line, by bequeathing his ſhare in the dutchies of Sleſwick and Holſtein to his ſons, of whom only the third duke John Adolphus had iſſue. This prince introduced the right of primogeniture ſhip, and dying in 1616, his ſon duke Frederic III. had for his ſucceſſor duke Chriſtian Albert, who was alſo ſucceeded by his ſon duke Frederic IV. whoſe ſon Charles Frederic in a ſecond marriage eſpouſed Anne the eldeſt daughter of Peter I. emperor of Ruſſia; but was ſoon after diſpoſſeſſed of all his territories. This prince dying in 1739, his ſon duke Charles Peter was in 1743 declared great duke of Ruſſia, on which he aſſumed the name of Peter Feodorowitz, and in July 1762, aſcended the throne of Ruſſia; but was ſoon after depoſed by his wife, and this was preſently followed by his death, when his young ſon, who was born in 1754, was declared great duke of Ruſſia, and alſo duke of Holſtein-Gottorp, of which country prince Frederic Auguſtus of Holſtein-Gottorp is appointed adminiſtrator during the young duke's minority.

The king of Denmark, on account of his ſhare in this country, ſtiles himſelf duke of Holſtein, Stormar, and Ditmarſh; and all the dukes of Holſtein and Sleſwick ſtile themſelves heirs of Norway, dukes of Sleſwic, Holſtein, Stormar, and Ditmarſh, and counts of Oldenburg and Delmenhorſt.

The arms of the duke of Holſtein conſiſt of five fields, and an eſcutcheon. The firſt of theſe is a lion crowned or, holding in his paws a bent halbert argent, for Norway. The ſecond or, two lions paſſant azure, for Sleſwick. The third gules, a nettle-leaf expanded and divided into three parts argent, with an eſcutcheon party per bend gules and argent, having round it three nails argent, placed between the three parts of the nettle-leaf, for Holſtein. The fourth is gules, a ſwan argent, crowned or about the neck, for Stormar. The fifth is azure, a horſeman armed or, with his ſword drawn, and a horſe argent, capariſoned ſable, for Ditmarſh. The eſcutcheon is quarterly, the firſt and fourth or, barry gules, for Oldenburg; and the third and fourth, a croſs wavy or, for Dolmenherſt.

Holſtein has an order of knighthood called that of St. Anne, which was founded in 1735, by duke Charles Frederic. The enſign of this order is a red croſs enamelled, on the right ſide of which is the word ANNE written in a cypher, and on the left the letters A. I. P. F. alſo in a cypher, which are explained by the ſubſcription: *Amantibus Juſtitiam, Pietatem, Fidem.* This croſs is worn pendant at a red ribbon edged with yellow, ſloping from the left ſhoulder down to the right ſide.

The king of Denmark from his ſhare in the dutchy of Holſtein, enjoys both a ſeat and voice in the college of the princes of the empire, and his vote is called that of Holſtein Gluckſtadt. The grand duke of Ruſſia has alſo his ſeat and voice in the ſame college, which is called that of Holſtein-Gottorp. Both under the ſame titles alſo ſit and vote in the circle of Lower Saxony, and together with Meckenburg preſent, in their turn, an aſſeſſor for this circle in the aulic chamber.

The principal revenues of the ſovereigns ariſe from their domains, and ſeveral impoſts on their ſubjects, as the contribution, which is a kind of land-tax, paid monthly by the towns, manors, bailiwics, and convents, according to the quantity of lands they poſſeſs; which alone annually brings into the military cheſt of each ſovereign a hundred thouſand rixdollars; ſtamped paper, toll on horſes, black cattle, the fiſhery, &c.

As to the military force kept up in this country, the king of Denmark uſually keeps here ſome regiments of foot, and one of horſe. With reſpect to the duke's military force it amounts, according to Mr. Buſching, to only about eight hundred men.

The king of Denmark appoints a ſtadtholder over his part of Holſtein, and every ſovereign has his colleges of ſtate.

ſtate. At Gluckſtadt is held the king's regency-office, which is compoſed of the ſtadtholder, who is always preſident, a chancellor, a vice-chancellor, five counſellors that have ſalaries, and three ſecretaries, one of whom is always keeper of the records: this court is held four times a year. The other courts are,

The ſupreme bailiwic court, which on the riſing of the chancery court, is held by the members of the regency office. This court receives appeals from the lower bailiwic courts; but from theſe ſuperior courts no appeal lies, except to the king. Ever ſince the year 1754, the regency court has had the ſupreme authority in the trial of criminals.

With reſpect to inferior courts, the ſeveral cauſes in the towns are tried by the magiſtracy, from whoſe ſentences appeals lie to the court of regency. Every town has likewiſe a petty court of its own, that takes cognizance of criminal cauſes, defamatory words, ſmall debts, and the like, and from theſe an appeal lies to the magiſtracy.

It is remarkable, that the nobility and convents in the dutchy of Holſtein, with their tenants, are ſubject to a joint government, to which every Michaelmas the king and duke alternately ſucceed. The perſon in whom the directory is lodged, after previous notification to the other ſovereign's office of regency, iſſues forth orders and citations to the provincial court in both their names; but always gives precedence to the king's. The law affairs of the ſubjects are uſually carried firſt before the joint Quartal court, which is held ſix weeks before the ſeſſion of the provincial court, and is, as it were, a preparative to the next provincial court, for the greater diſpatch of affairs which are brought to it, when thought neceſſary, by letters patent under the ſeals of both ſovereigns. This court is alternately held at Kiel and Gluckſtadt, the directory is under the ruling ſovereign for the current year. The court is compoſed of four of the king's counſellors, and the like number of the princes, who muſt all be nobles, alſo of four men of letters for each ſovereign, aſſiſted by a chancellor, who is alternately appointed by the ſovereign. Its other members are a ſecretary from each prince. In this court the cauſes of the prelates, nobility, and paſtors in the churches of the nobility, have their firſt hearing, and hither likewiſe are brought all appeals from the courts of the nobility and convents.

We ſhall now proceed to deſcribe, firſt, the principal places in the king of Denmark's ſhare in the dutchy of Holſtein.

We ſhall begin with Gluckſtadt, called in Latin Tychopolis, a town and fortreſs ſituated in the diſtrict of Stormar, on the Elbe, which here receives into it a ſmall river, called the Rhein. This town is regular and well built; and the market-place opens into the main ſtreets. This town was built in the year 1620, on a waſte ground called the Wilderneſs, by the permiſſion of Chriſtian IV. who in the patent, gave orders that it ſhould be named Gluckſtadt, or the Fortunate Town, conferring on it at the ſame time many privileges. The adjacent country being hollow and marſhy, a ſtone cauſeway of near four miles in length has been carried along it, and on the land-ſide the town may be eaſily laid under water. It has a harbour, adjoining to which is a baſon for the reception of veſſels; but there being no ſprings here, the greateſt part of the houſes have ciſterns for the receiving of rain; and thoſe which are without ſuch conveniences, are obliged to uſe the harbour water, or that of the new moat. Here is the ſeat of the king's regency, and the offices and courts connected with it. Both the palace congregation and the garriſon frequent the town church; the Calviniſts have a church of their own, the Papiſts a chapel, and the Jews a ſynagogue. The town has ſeveral times been beſieged, but has never been taken.

Itzehoa, an antient and handſome town, ſeated on the river Stor, and divided into the Old and New, the latter of which is partly ſurrounded by the main ſtream of the Stor, and partly by a canal drawn from it, which ſeparates it from the Old Town. In this part is St. Laurence's church, which is a ſtately edifice, and near it a convent for ladies of noble birth. Here is alſo an alms-houſe, which has a chapel. In the New Town is St. Nicholas's chapel, the town-houſe, and a Latin free ſchool.

Rendſburg, a fortified town on the river Eyder, ſeated on the confines of Germany. It conſiſts of three parts. The Old Town ſtands on an iſland in the Eyder, and it was formerly conteſted whether this iſland belonged to the dutchy of Sleſwic, or to Holſtein. The town conſiſts of ſix hundred houſes, and is generally well garriſoned. In it is the royal armoury, the carriage-houſe, and the granary, which are large buildings. It has two pariſh churches, one in the Old Town near a Latin free ſchool, and the other in the New Town. It has its own conſiſtory, and is the ſeat of the king's general ſuperintendents over Holſtein and the bailiwic of Rendſburg. It has a commercial college, eſtabliſhed here in 1738 by Chriſtian VI.

Ploen is a town almoſt environed by a great and ſmall lake: it is divided into the Old and New, the laſt of which belongs to the bailiwic of Ploen, and in the former is a pariſh church and a Latin ſchool. Without the Lubec gate is a ſuburb. The ducal palace here, which was rebuilt by duke Joachim Erneſt, ſtands high, and commands a beautiful proſpect. To the weſtward of this palace, and adjoining to the ſtable, a garden has lately been laid out, with a park, at the end of which is an hydraulic machine for the conveyance of water to the palace. On one ſide of it is a ſpacious kitchen garden, and in an iſland farther up the lake is a delightful pleaſure garden. This town has been four times entirely deſtroyed by fire.

The duke of Holſtein Gottorp's part of this dutchy is about half as large as that which belongs to the king, and brings in a revenue of two hundred thouſand rix-dollars.

The principal town in this territory is,

Kiel, the capital of that part of Holſtein, ſubject to the duke, which is ſituated on a bay of the Baltic, and has a convenient harbour. It is well built, and contains the prince's palace and the ſtate colleges. Beſides the town church here is one belonging to the palace, with a convent church, and a chapel at the farther end of the ſuburbs. It has alſo an univerſity, founded in 1665 by duke Chriſtian Albert.

We ſhall now give a particular deſcription of thoſe cities of Holſtein which are neither ſubject to the king of Denmark nor to the duke of Holſtein Gottorp, and ſhall begin with Hamburg, which was formerly the metropolis of all Holſtein, till it became a free imperial city. It is ſeated on the north ſide of the river Elbe, which there forms a commodious harbour, in the fifty-third degree ſixteen minutes north latitude, and in the tenth degree thirty-eight minutes eaſt longitude from London. It is ſeated partly on iſlands, and partly on the continent, and has a territory that extends twelve miles round, in which are ſeveral large villages and fine ſeats. Its ſtreets are for the moſt part pretty ſpacious, and ſome of them make a grand appearance; but ſeveral are very narrow, and there are many lanes. The houſes, which are built with brick, are very high, and thoſe in the broad ſtreets make a handſome appearance. This is the ſecond of the Hanſe towns, and one of the principal among them. It is not only naturally ſtrong, but is as well fortified by art as a place of its magnitude can well admit of. It is nearly circular, and five or ſix miles in circumference. The walls and other fortifications that lie open to view, are planted with rows of very high trees, ſo that on that ſide of the walls next Altena, none of the houſes can be ſeen. It has ſix gates, and three entrances by water, namely, two from the Elbe, and one from the Alſter. The wall is defended by twenty-three bulwarks, beſides other outworks, and a very deep ditch. A noble line with other works run from the largeſt baſon of the Alſter to the Elbe, about half a mile above the town; and on the other ſide of the baſon below the town, is the Star-ſconce, a fortification ſo ſtrong, that in 1686, the king of Denmark with all his army could not take it, after a ſix weeks ſiege.

The number of houſes in Hamburg are ſaid to amount to about thirty thouſand, and it has ſix large market-places. The churches are antient, large, and handſome

ſtructures; but are open thoroughfares all day long, and in ſome of them are bookſellers ſhops. Here are ſix lofty ſteeples, ſome of which are covered with copper, though the frames are only of timber. The great ſpire of St. Peter is the higheſt, that of St. Michael's is four hundred feet high. St Nicholas's is ſupported by large gilt globes. St. Catharine's has a noble front, adorned with ſtatues in niches, and the ſteeple is formed of ſeveral lantherns diminiſhing to the laſt, which ſupports a ſpire like that of St. Bride's in Fleet-ſtreet, London; but is much taller: round the middle of this ſteeple is a gilt crown, and its organ, which is ſaid to be the beſt in Europe, has ſix thouſand pipes. The ſpire of the cathedral, with the tower on which it is ſupported, are near three hundred and ſixty feet high; and though it is ſecularized, it has a dean and chapter, who with the cathedral and ſeveral houſes belonging to it, are under the immediate protection of his Britannic majeſty, as duke of Bremen. Beſides theſe there are five other very large churches, and eight chapels of eaſe.

Hamburg has an univerſity, well endowed and furniſhed with ſix profeſſors. The ſenate-houſe and town-hall form an antient, large, and noble ſtructure. The exchange, which is built oppoſite to it, is a fine building, but inferior to that in London. The Britiſh reſident and company have a handſome hall. The emperor and ſeveral princes of Germany have their own poſt-houſes; but that for England and Holland is the only one that can be ſaid to belong to the public. Here is alſo an opera houſe, chiefly for the reſidents and other foreigners, of whom there are ſome from moſt of the trading kingdoms in Europe. This city is celebrated for its care of the poor; for they have here an hoſpital for orphans which has a revenue of between fifty and ſixty thouſand pounds a year: they have ſometimes above three hundred infants abroad at nurſe, who, when able to dreſs themſelves, are taken into the houſe: the boys, if they ſhew extraordinary abilities, are maintained at the univerſity, the reſt are put out to trades; and the girls, after they can read, ſpin, knit, &c. are ſent to ſervice. There are alſo a large hoſpital for poor travellers that fall ſick, and another for the relief of maimed, antient, and decayed ſeamen, where care is alſo taken of the widows and children of thoſe who loſe their lives in the ſervice of the public. In another about a hundred and fourteen poor, old, blind, and dumb people are maintained. There is likewiſe St. Job's for the venereal diſeaſe; and a peſt-houſe. Beſides theſe hoſpitals there are many ſmaller for poor widowers, widows, orphans, &c. and a great number of free ſchools; with two work-houſes, where rugs and coarſe kerſeys are manufactured, with which thoſe confined are cloathed. In one of them, ſuch as have not performed their taſk are hoiſted up in a baſket over a table in the hall while the reſt are at dinner, that they may be tantalized with the ſight and ſmell of what they muſt not taſte. Here are likewiſe ſocieties for making good loſſes by fire.

Hamburg, from its ſituation, has all poſſible advantages for foreign and domeſtic trade, and therefore merchants from all the trading nations in Europe reſort thither, and their goods are ſent up the Elbe into the heart of Germany: the ſhips come up to their doors to lade and unlade, and this city has ſuch advantages from its port, its rivers, and canals, that can no where be exceeded in Europe; for, beſides the Elbe, which enters the German ocean below the town, a canal is opened into the river Trave, for the ſake of a communication with Lubec and the Baltic ſea, without going round the coaſt of Jutland, and the difficulties and expence which attend paſſing the Sound. Hence its trade is very conſiderable; for the Elbe, and the many navigable rivers that fall into it, after taking their courſe through ſome of the richeſt and moſt trading parts in Germany, furniſh this city with the produce and manufactures of Auſtria, Bohemia, and Upper and Lower Saxony. By the Havel and Spree it trades with the electorate of Brandenburg; and by a canal from the Spree to the Oder, its commerce is extended into Sileſia, Moravia, Poland, and almoſt to Hungary.

The principal merchandize exported from Hamburg, eſpecially to Great Britain, are linen of ſeveral countries, great quantities of linen yarn, tin plates, braſs, ſteel, and iron, wire, corn, kid-ſkins, pipe-ſtaves, clap-boards, and other timber.

The chief articles which the Hamburghers import from abroad are woollen manufactures from England, the value of which from Yorkſhire alone, and generally ſhipped from Hull, is computed to amount to above a hundred thouſand pounds a year; with Engliſh ſtockings, and other goods, amounting to a very great ſum. The Engliſh merchants make a very extraordinary figure here; they form a body that has ſeveral privileges, and have a church and miniſter of their own. The Hamburghers alſo trade very conſiderably into Livonia and Ruſſia; and for the goods they ſend into the north part of the empire, and into Poland, they have a return in linen yarn, fine flax, honey, wax, aniſeed, linſeed, oil, drugs, &c.

Above two hundred Engliſh ſhips enter this harbour every year, and a great number come from Spain, Portugal, and Italy. This city has a great ſhare in the Greenland whale-fiſhery, having commonly fifty or ſixty ſhips employed in this trade, whence they are able to export great quantities of oil and whale-bone; but from their great trade upon the Elbe they are obliged to buy more of theſe articles from the Dutch, than their own ſhips can ſupply them with. In time of war they fit out ſhips of force to convoy their merchantmen; and they are ſtrong at land as well as ſea, they having a conſtant garriſon of near two thouſand men, and being able to arm twelve or fourteen thouſand.

Beſides the beer brewed here, great quantities of which are exported, they have erected ſeveral manufactures, particularly weaving of damaſks, brocades, velvets, and other rich ſilks, calico-printing, and ſugar-baking.

The government of this city is veſted in the ſenate and three colleges of burghers, and is a mixture of the ariſtocratical and democratical form: the principal perſons of the republic are veſted with almoſt every act of ſovereignty, while the management of the finances is ſolely entruſted to the burghers. They are governed by their own magiſtrates, have no ſeat or vote in the general diet of the empire, and are only ſubject to the general laws of the Germanic body. They are, however, under the protection of the emperor, to whom they pay annually eighty thouſand crowns.

The common priſon in this city for malefactors is in the hangman's houſe. After ſentence is pronounced, which is always on Friday, and the execution on the Monday following, they are carried not to a dungeon, but to a handſome upper room, where they are allowed a good bed, with all reaſonable comforts ſuitable to their condition, and are conſtantly attended by one of the city clergymen, a duty which they are all obliged to perform by rotation. As no criminal can be put to death without his pleading guilty, they have five degrees of torture in order to extort a confeſſion, and theſe are applied one after another in proportion to the ſtrength of the evidence in ſupport of the charge or accuſation. The degree of the torture is lodged in the breaſt of the judges, who are always preſent with a clerk in order to take down the confeſſion, at a table with a curtain drawn round it; ſo that they can hear and ſpeak to the poor tortured wretch without being eye-witneſſes of the cruelty, and can either relax or increaſe the torture according to the ſtrength and other circumſtances of the ſufferer. It will not be improper here to obſerve, that among the ſeveral convents of this city, all of which have been ſecularized and are now Lutheran, one of them is obliged by its foundation to offer a glaſs of wine to every malefactor that is carried by it to execution.

Few or no beggars are to be ſeen in the ſtreets of this city, which is partly owing to their being picked up by the beadles, who have a reward for it, and carry them to the houſe of correction, and partly to the manufacture of knit ſtockings, worſted being carried by the pariſh officers to the habitations of the poor, and alſo wool to be carded and ſpun; theſe fetch their work from thence every Saturday, and pay them what they have earned. A curious piece of work here intitles an artificer to the freedom of his company, a benefit that can no otherwiſe be obtained but either by ſervitude, by marrying a freeman's widow or daughter, or elſe at a very great expence.

The merchants of Hamburg are courteous, but too ceremonious and full of compliments; and though very frugal in their own houſes, yet are extremely liberal when they treat ſtrangers. They are fond of having gardens at the city gates. Coaches here are very numerous, though the crookedneſs and narrowneſs of many of the ſtreets renders them inconvenient, and there is hardly a merchant or even conſiderable ſhop-keeper without one. The hackney-coaches are alſo very numerous. The common carts are only a long pulley to a ſort of truckle upon an axle-tree, between two wheels, drawn not by horſes, but by a dozen or more men, who are linked to theſe machines with ſlings acroſs their ſhoulders, and drag along a weight of two tons.

Among the other peculiarities, the ladies are attended to church not by a footman, but by a ſervant-maid, with a book hanging by a ſilver chain upon one arm, and, if the weather be very cold, with a braſs ſtove upon the other.

Both ſtrangers and natives of the beſt faſhion ſpend their time at an odd kind of tavern kept in a cellar, or vault, which has a prodigious ſtock and a great vent for old hock, &c. and brings in a conſiderable revenue to the ſtate, it being under the management of a deputy, put in by a ſelect number of the magiſtrates.

Altena is a conſiderable town ſeated in a moſt delightful country on a high ſhore of the Elbe, not above a cannon-ſhot to the weſt of Hamburg. It contains about three thouſand houſes, and upwards of thirty thouſand inhabitants, with two Lutheran churches, and the ſame number for the German and Daniſh Calviniſts, with a fifth for the French Calviniſts, a ſixth for the Papiſts, and two Menonite churches, beſides thoſe belonging to other ſects, who are allowed the free exerciſe of their religion: the Jews are alſo very numerous, and have a large ſynagogue, but pay two thouſand ducats a year as protection-money. Here is a royal ſeminary, to which the town-ſchool is united, an orphan and poor-houſe, and an anatomical theatre, with three docks for the building of ſhips. Among its ornaments is the mall, which, being planted with four rows of trees, forms an agreeable walk. This town has a variety of manufactures, and its trade is far from being inconſiderable.

The origin of its name is thus accounted for: deputies from Hamburg, in a remonſtrance to the king of Denmark againſt building it too near their city, frequently made uſe of the words *Dat is all te nae*, or That is too near; the king taking particular notice of the three laſt monoſyllables, ſaid banteringly to the deputies, he could not excuſe himſelf from going on building it; but that to oblige them he would call it by the name they had given it. This town is famous for the calamities it ſuffered in 1712, when count Steinbock, the Swediſh general, after defeating the king of Denmark, appeared before Altena, and ſending a meſſage to adviſe the inhabitants to retire with ſuch of their effects as they could carry off, the magiſtrates came out in a body, and falling at his feet, offered him fifty thouſand rixdollars to ſpare the town. Steinbock inſiſted on two hundred thouſand: this they were ready to comply with, and only begged time to go to Hamburg for the money; but the general would admit of no delay; ſo that the inhabitants were obliged to leave the place, the mothers with their infants at their breaſts, the ſons with their aged fathers on their backs, others groaned under loads of houſhold furniture; while all bewailed their fate with dreadful cries and lamentations. While they paſſed out the Swedes ſtood ready with flaming torches in their hands, and, before they were all gone out, entered the town and ſet fire to all parts of it, which burnt about two thouſand houſes, with ſeveral fine magazines, and the popiſh church; ſome old men, women, and infants alſo periſhed in the flames; but they ſpared the Lutheran and Calviniſt churches, with about eighty houſes that lay on the ſide next Hamburg. The Swedes, in juſtification of this barbarous proceeding, pretended that magazines of proviſions and ſtores were preparing here for the Ruſſians and Saxons, and that it was done by way of repriſal for the burning of Stade, and other cruelties committed by the Danes and Ruſſians in Bremen and Pomerania. But it ought to be remembered, that the Danes had beſieged Stade in form, and that its deſtruction proceeded from their bombs; while Steinbock acted the part of a cruel incendiary againſt naked walls, and a poor defenceleſs people. What compleated the ruin of Altena was the raging of the plague at the ſame time in Holſtein; ſo that the Hamburghers were forced, for their own preſervation, to ſhut the gates of the city againſt their diſtreſſed neighbours, many of whom periſhed through cold and want. The king of Denmark, however, relieved them as far as poſſible, and ſupplied them with materials for rebuilding their town, which, by the help of charities, has been done in a beautiful manner, and is at preſent a finer and more pleaſant town than ever, it being the market for the ſale of goods brought by the Daniſh Eaſt India company from the Indies.

The laſt place we ſhall mention in Holſtein is Lubec, the chief of the Hanſe towns. This city is ſeated at the confluence of ſeveral rivers, the largeſt of which is the Trave, upon which it has a harbour. It ſtands fifteen miles to the ſouth-weſt of the Baltic, and thirty-eight from Hamburg, in the fifty-fourth degree thirty-one minutes north latitude, and in the tenth degree forty-two minutes eaſt longitude.

This is a large, rich, populous, free, and imperial city, about two miles in length, and upwards of a mile in breadth. The city ſtands on the two ſides of a long hill of moderate height, the eaſtern part extending down the declivity towards the river Wackenitz, as the weſtern does towards the Trave. It is environed with walls, towers, falſe brays, wide moats, and ſtrong ramparts, which being planted with trees, form a very delightful walk. The houſes are all of ſtone, but old faſhioned, and the ſtreets, which are pretty ſtraight and lofty, are for the moſt part ſteep; but others at the bottom of the hill have a canal running through the middle, with rows of limes on the ſides. The churches are magnificent, and amount to about twenty, beſides the cathedral. It has ſeveral large market-places, and handſome public buildings, particularly the town-houſe, which is a ſuperb ſtructure, and has ſeveral towers. On the ground-floor is the hall of audience, which is well furniſhed, where the ſenate aſſembles, and in this ſtructure are the archives of the Hanſe-towns. Here is alſo a fine exchange. The collegiate church of St. Mary is a noble pile, richly adorned with images and pictures; among the laſt is one called the Dance of Death. This ſtructure is ſupported by tall pillars, each of one ſtone, and has a very lofty ſpire covered with gilt lead. The nunnery of St. John has an abbeſs or domina, a prioreſs, and twenty-two conventualiſts, and has its own church and chaplain. The convent of St. Mary Magdalen was, at the time of the reformation, converted into a poor houſe, which has alſo its particular church and chaplain. In the ſuppreſſed convent of St. Catharine has been founded a grammar ſchool of ſeven claſſes, and in that building is a public library. The convent of St. Anne has been converted into an alms-houſe, and houſe of correction, both which are handſome buildings under excellent regulations. Here is alſo an hoſpital dedicated to the Holy Ghoſt, an orphan houſe, a ſmall-pox hoſpital, and many other charitable foundations.

The corporation conſiſts of four burgomaſters and ſixteen counſellors, who may be either men of letters, patricians, or tradeſmen. The burghers conſiſt of twelve companies, each of which has a vote in the public deliberations. An alliance ſtill ſubſiſts between Lubec, Hamburg, and Bremen, and under the title of Hanſe-towns they negociate treaties of commerce with foreign powers.

The principal home commodity, beſides corn, is their beer, which is highly valued, and much of it exported.

The biſhopric of Lubec is a ſmall territory, that has been enjoyed by proteſtant princes ever ſince the year 1561, when Lutheraniſm was eſtabliſhed in this biſhopric, and it has devolved as an inheritance to a younger ſon of the duke of Holſtein Gottorp, ſtiled duke of Holſtein Eutin, from his uſual place of reſidence about five miles from the city; but he has ſince been raiſed to the throne of Sweden. This territory extends about ſixty miles in compaſs, containing ſeveral ſmall towns, and one hundred and three villages.

SECT.

SECT. XXV.

Of the Dutchies of Saxe-Lauenburg, Bremen and Verden, and the Principality of Lunenberg-Zell. Their Situation, Extent, Produce, Government, and principal Towns.

THE dutchy of Saxe-Lauenburg is environed by that of Holſtein, the dioceſe of Lubec, the principality of Ratzeburg, the dutchies of Mecklenburg and Lunenburg, and the four countries, as they are called. The face of the land of this dutchy is for the moſt part level, and the ſoil, according to its different goodneſs, is divided into wheat-land, barley-land, ſand and heath. Dr. Buſching obſerves, that in general it requires much labour to make the corn that is ſown yield five or ſix fold; it, however, produces large quantities of flax; great advantages are alſo made of its woods, and, in good ſeaſons, the maſtage of the oak and beech turns to a conſiderable account; but grazing, however, ſeems moſt adapted to the nature of the country, and conſequently to be moſt profitable.

The inhabitants are of the Lutheran religion, and in the whole dutchy there are only three boroughs and one market-town; though the inhabitants amount to about thirty-ſix thouſand ſouls, manufactures are but little known here. The exports of the country amount annually to about a thouſand laſts of rye, four hundred and fifty pound of cheeſe, ſeven thouſand ſtone of wool, timber, and wood for fuel, to the amount of twenty thouſand rixdollars, a conſiderable quantity of butter, and ſome fiſh.

The king of Great-Britain is entitled, on account of his poſſeſſing this dutchy, to a ſeat and voice in the college of the princes of the empire. But though Saxe-Lauenburg is dependent on the privy council at Hanover, it has its own particular regency, which conſiſts of the chief governor for the time being, and three regency counſellors. It has alſo its own tribunal, which is compoſed of a judge, two provincials, and two counſellors at law, with the like number of aſſeſſors, who are not in the ſovereign's ſervice. The principal places in this dutchy are Ratzeburg and Lauenburg.

Ratzeburg is a ſtrong town, nine miles to the ſouth of Lubec, ſeated on an iſland, in a large and deep lake of the ſame name, from whence a river iſſues, by means of which boats go to Lubec with goods and paſſengers. In the year 1693, the Danes bombarding this place, laid it in aſhes; but ſince that time the ſtreets have been regularly built after the Dutch manner. In the market-place ſtands the regency office, where is alſo held the chief court of juſtice and the conſiſtory. Near the lake to the north-weſt of the town, where boats go off to Lubec, is a delightful walk of limes and aſh trees, named Belvedere. One part of the town belongs to the principality of Ratzeburg in Mecklenburg Strelitz: the bridge on that ſide is above four hundred paces long, and the rebuilding of it coſt at leaſt ten thouſand rixdollars, Lubec money; but the town is to keep it in repair.

Lawenburg, or Lauenburg, a ſmall town, ſituated on a hill near the Elbe and Steckenitz, twenty-five miles to the ſouth of Lubec. Several of the houſes are built ſo low, that the upper ſtory lies level with the ſtreets, while the ground floor of others is ſome ells higher. This town ſubſiſts by ſhipping, and its trade in corn and wood. It is alſo a great thoroughfare for goods brought up the Elbe to Lubec. Here is a toll on the Elbe, the produce of which is very conſiderable, and in the town formerly ſtood the duke's palace, which was erected on an eminence. One wing of this palace ſtill remains, and in it is held the court of the bailiwic of Lawenburg.

We now come to the dutchies of Bremen and Verden; the former terminates to the eaſtward, on the principality of Lawenburg; to the ſouth-eaſtward on that of Verden; to the ſouthward on the Weſer; to the weſtward on the ſame river; and to the northward on a territory belonging to the city of Hamburg, and the river Elbe. Its dimenſions are variouſly given; but ſome authors make it ſixty miles in length, and fifty in breadth.

The country is very level. The Elbe and the Weſer, by which the greateſt part of it is environed, receive into them ſeveral other rivers; as for inſtance, the Oſte, Schwinge, and the Luke, diſcharge themſelves into the Elbe, and the Weſer receives into it the Geeſte, the Leſum, the Rodau, and the Wiedau.

The banks of the Elbe, the Oſte, and the Weſer are bordered with very rich marſh-lands, and in ſome places the country produces extraordinary plenty of grain and fruit. For the preſervation of theſe marſh-lands againſt inundations, the dykes and dams are kept in conſtant repair at a great expence, under the inſpection of officers appointed for that purpoſe. Great numbers of cattle are bred here: the heaths are alſo covered with ſheep, and the breeding of bees is much followed. In ſome places is dug a kind of free-ſtone, and in others great quantities of turf, which is exported to Bremen and Hamburg, and uſed in the brick-kilns and glaſs-houſes. Theſe countries alſo yield a great deal of flax.

The eſtabliſhed religion of the inhabitants is Lutheraniſm, and in the dutchy of Bremen are one hundred and eleven churches, with one hundred thirty-ſeven paſtors. The ſupreme inſpection of the churches of this dutchy, and of Verden, is veſted in a general ſuperintendent. As to the Calviniſts, they form ſeven congregations in the dutchy of Bremen.

The only manufactures here are the making of cordage, linen and woollen cloth, kerſeys, and other woollen ſtuffs.

The dutchy of Bremen was formed out of an archbiſhopric, which was ſubdued by the Swedes in 1644; but at the peace of Weſtphalia in 1648, they returned it as a dutchy and fief of the empire. In 1675, the duke of Brunſwic and Lunenburg, in conjunction with the biſhop of Munſter, over-run the country. The conquerors thought of ſharing the dutchies of Bremen and Verden between them; but Sweden kept the whole to herſelf, except a ſmall part, which was reſtored to the duke of Brunſwic and Lunenburg. During the northern war, theſe dutchies were reduced by the Danes; but in 1715, king Frederic IV. transferred them to the elector of Brunſwic, in lieu of the ſum of ſeven hundred thouſand rixdollars, and afterwards Sweden likewiſe ceded them to that elector; for which the king received a million of rixdollars.

The elector of Brunſwic, as duke of Bremen, bears the arms of the archbiſhopric, that is, Gules two keys in a ſaltire argent, with a ſmall croſs argent in chief.

The dutchies of Bremen and Verden are jointly under the following colleges: the regency, which conſiſts of three counſellors, and is ſubordinate to the privy council at Hanover; and the chancery, which is compoſed of three counſellors of the regency, a director, and certain judiciary counſellors, and takes cognizance of criminal and other cauſes. In the high court of juſtice ſit all the members of the chancery, with ſeven aſſeſſors, who are nominated by the ſtates of each dutchy. To this court of juſtice all civil caſes requiring a judicial deciſion are ſubject, as alſo the officers of the ſovereign in affairs in which the prince is concerned, together with the nobility and the magiſtrates of the towns. From this tribunal appeals are carried to the high-court of appeals at Zell.

The chief branches of the revenues of the elector are thoſe of the domain bailiwics, exciſe, ſtamp-duty, &c. The principal town ſubject to the king of Great-Britain, as duke of Bremen, is

Stade, which is ſeated on the Schwinge near the place where that river flows into the Elbe. This town is the ſeat of the regency of the dutchies of Bremen and Verden, as alſo of the chancery, chief court of juſtice, and conſiſtory. It contains three churches, and a Latin ſchool. Stade was formerly a place of conſiderable trade, and from the year 1586 to 1612 had an Engliſh ſtaple, which was removed to Hamburg; but by a concurrence of misfortunes it is now greatly declined. This city has been frequently taken and retaken, but in 1757 his late majeſty king George II. cauſed great improvements to be made in the fortifications.

We

We ſhall now give a particular deſcription of the imperial city of Bremen. It is ſeated on the Weſer, which divides it into the Old and New Town, but both of theſe are joined by a large bridge, and a ſmaller one that extends over a little branch of the ſame river. In the year 1744, all the buildings and inhabitants were numbered, when the Old and New Town, excluſive of the ſuburbs, contained four thouſand ſeven hundred and ſeventy-eight houſes, with five hundred and ſixty-five other edifices, as ſtore-houſes, brew-houſes, and the like, four thouſand and ninity-nine married couple, that is one thouſand five hundred and eighty-nine Calviniſts, one thouſand ſeven hundred and ſeventy-two Lutherans, eighty-one Papiſts, two hundred and eighteen widowers, one thouſand two hundred and thirty-nine widows, two hundred and thirty-three ſingle men, who were houſe-keepers, and three-hundred fifty-nine ſingle women houſe-keepers.

The Old Town, which is the largeſt and moſt populous, is divided into four pariſhes, according to the four capital churches belonging to the Calviniſts, viz. of our Lady, St. Anſgarius, St. Stephen, and St. Martin. In this part ſtands the cathedral, which belongs to the dutchy, and is frequented by the Lutherans. Under its choir is the lead-cellar, remarkable for the undecayed bodies that lie there. Here is alſo the convent of St. John with its church, the celebrated academy of the Calviniſts, with its ſpacious library, the armoury, the hoſpital, in which is an anatomical theatre, the work-houſe, and other public buildings. Under the large bridge of the Weſer is a water-wheel, which works an engine that raiſes the water by which the city is ſupplied, as in London, by pipes laid under the ſtreets; and at the other end of this bridge is an ingenious fulling-mill.

In the New Town is St. Paul's church, which belongs to the Calviniſts, and in the ſuburbs are two more. The New Town conſiſts chiefly of gardens and little pleaſure-houſes belonging to the principal merchants, and other inhabitants of the Old city; it has larger and more regular ſtreets than the latter, and moſt of them are planted with rows of limes and wild cheſnuts. The Calviniſt is the eſtabliſhed religion, it being profeſſed by the whole body of the corporation, though with reſpect to numbers they are nearly equalled by the Lutherans. The corporation is compoſed of four burgo-maſters, and twenty-four counſellors, or aldermen. The merchants and tradeſmen have their elders; but theſe have no ſhare in the government of the city. The garriſon conſiſts of about ſix hundred men. Here are ſeveral manufactures, and the inhabitants carry on a conſiderable trade.

Verden is bounded on the eaſt and ſouth by the dutchy of Lunenburg, on the weſt by the Weſer and the dutchy of Bremen, and on the north by the dutchies of Bremen and Lunenburg, extending both in length and breadth about twenty-eight miles.

This dutchy conſiſts chiefly of heaths, and high, dry land, as alſo of foreſts; but there are good marſh-lands on the rivers Weſer and Aller. The latter waters almoſt all the ſoutherly, but the Weſer only a part of the weſterly boundaries of the country, and this laſt receives alſo the Aller. The other principal river is the Wumme, which riſes on the borders of Lunenburg, traverſes the dutchy from eaſt to weſt, and receives into it the ſmaller rivers that riſe here.

The inhabitants are Lutherans, who have the ſame conſiſtory with the dutchy of Bremen, and one and the ſame general ſuperintendent.

Verden was formerly a biſhopric founded by Charlemagne; but John Frederic the laſt biſhop was of the royal houſe of Denmark, and afterwards became king of Denmark and Norway, under the name of Frederic III. At the peace of Weſtphalia in 1648, the crown of Sweden obtained the biſhopric as a dutchy, and in 1712, the Danes invading Bremen, the inhabitants of Brunſwic-Lunenburg poſſeſſed themſelves of the dutchy of Verden, on account of the plague raging in the former. In ſhort, in the year 1715, by virtue of the alliance concluded at Wiſmar, both Bremen and Verden were ceded by the king of Denmark to the electoral houſe of Brunſwic-Lunenburg; and this ceſſion was made by the crown of Sweden in the year 1719.

This dutchy has the ſame regency as that of Bremen, and contains ſeveral towns, the principal of which is

Verden, ſeated on the Aller, a river that divides itſelf into two branches, the ſmaller of which lies near the town. It is ſituated twenty-ſix miles to the ſouth-eaſt of Bremen, and has four churches, which are the cathedral, the church of St. Andrew, which lies near it, that of St. Nicholas, and that of St. John. There is here alſo a Latin ſchool.

The dutchy of Lunenburg-Zell is bounded by the river Elbe, which on the north ſeparates it from Holſtein and Lauenburg; on the eaſt by the marquiſate of Brandenburg, and on the weſt by the dutchies of Bremen and Weſtphalia, it extending about a hundred miles in length, and ſeventy in breadth.

The ſoil is various, for along the Elbe, the Aller, the Zetze, and ſome ſmaller rivers, are fruitful marſh-lands; but other parts of the country conſiſt of barren ſand, others of heaths, others of turf, and others are ſwampy. The worſt parts of the country are towards its center, through which lie the main roads; but a traveller is not from thence to form an idea of the whole country. Agreeably to the diverſity of its ſoil, it produces wheat, rye, barley, oats, buck-wheat, flax, hemp, hops, and garden plants. They have alſo oak, beach, firs, pines, birch, and elder, with other trees. Some bailiwics do not yield a ſufficiency of wheat; but others again have a ſuperfluity; in ſome, few horned cattle and horſes are bred, though in others they abound. The heaths are covered with numerous flocks of a ſmall kind of ſheep, that have long and coarſe wool; and the culture of bees is ſo great, as to afford conſiderable quantities of honey and wax. Lunenburg abounds in excellent lime-ſtone and valuable ſalt ſprings, and the rivers yield plenty of fiſh.

With reſpect to the rivers, the Elbe, which traverſes the eaſt and north ſide of this country, is of conſiderable advantage, from its fertilizing the adjacent marſh-lands, and its having fiſheries, navigations, and tolls. This river receives into it the Zetze, which flows from Brandenburg; the Ilmenau, another navigable river which riſes in this country; the Luhe, which alſo riſes here; the Seeve, and other ſmaller rivers. The Aller, which is alſo navigable, traverſes the whole ſouthern part of the dutchy, and being joined by ſeveral ſmall rivers, continues its courſe into the dutchy of Verden.

The inhabitants of this country are of the Lutheran religion, and there are near two hundred pariſh churches in this dutchy. Theſe are divided into fifteen ſuperintendencies, and over theſe are appointed two general ſuperintendents.

The principal manufactures made here are thoſe of linen, cotton, woollen cloths, ribbons, ſtockings, and hats; and at Zell are ſome ingenious artificers in gold and ſilver.

The exports chiefly conſiſt of corn, meal, garden-ſtuff, hops, flax, ſtarch, timber, beams, maſts, all kinds of wooden ware, ſhips, barges, boats, horſes, black cattle, fatted calves, milk, butter, cheeſe, poultry, wool, wax, honey, ſalt, ſugar, thread, linen, knit and wove ſtockings, ſtuffs, works in gold and ſilver, &c. The conveyance of merchandize from this place to and from Hamburg, Lubec, and Altena, affords a conſiderable branch of commerce; many of the inhabitants procuring ſubſiſtance by navigating the rivers.

The principal towns in this dutchy are the following:

Lunenburg, the capital, is ſeated on a navigable river called the Elmen, or Ilmenau, which runs through a part of the town. This city is fourteen miles to the ſouth-weſt of Lawenburg; it is ſurrounded with moats and walls, ſtrengthened with towers, and is two miles and a half in compaſs. It conſiſts of thirteen hundred houſes, with between eight and nine thouſand inhabitants. Here are three pariſh churches, that of St. John, to which is annexed the ſuperintendency, with a Latin ſchool conſiſting of five claſſes; and thoſe of St. Nicholas and St. Lambert. In the church of St. Mary was formerly a convent of Minims, which at preſent ſerves for the town armoury, a library, and a houſe of correc-

tion. It has alſo three hoſpitals, two of which have each a church. In the market-place ſtands the prince's palace, with the guild-hall, and fronting them is the Præmonſtratenſian abbey of Heiligenthal, which was ſequeſtered by the magiſtracy in 1530, and its church now ſerves for a magazine of ſalt. In 1753 an anatomical theatre was built here. The convent of St. Michael, which was formerly of the Benedictine order, and conſiſted of monks of noble families, embraced the ſentiments of Luther in the year 1532; and in 1655 duke Chriſtian Lewis, with the approbation of the nobility, ſuppreſſed the monaſtery, and founded within it a ſchool for martial exerciſes, which is ſtiled the academy. The director, like the antient ſuperior of this houſe, is the head of the ſtates of this principality; he is alſo preſident of the provincial college, and next in rank to the privy counſellors. This perſon is even ſtiled excellency, and in public inſtruments makes uſe of the following title: By the grace of God, landſchaft, director, and lord of the manſion of St. Michael, in Lunenburg. He is alſo chancellor of the academy, where young gentlemen, natives of the principality of Lunenburg, are maintained gratis; but foreigners are educated at a certain price, and taught French, fencing, riding, and dancing. The members of this academy live in a ſpacious ſtone edifice, built in the year 1711, and counts and even princes have been of their number. Within the conventual church of St. Michael is the antient burial-place of the dukes, and on its great altar ſtands a celebrated golden table, which is a board formerly plaited over with gold; but which, in 1698, was ſtripped by a famous robber named Nickel Liſt; ſo that at preſent only a ſmall quantity of the gold remains. In the convent is alſo a Latin ſchool of four claſſes, to which belongs the hoſpital of St. Benedict, with its chapel, and ſeveral country churches and conſiderable eſtates.

In a part of the city, within the walls, ſalt ſprings ariſe; this quarter, which is called the Sulze, is walled in, and has its own ſeparate magiſtrates. It conſiſts of fifty-four ſmall houſes built deep in the earth, and in each are four large leaden ciſterns, which are new caſt every month for receiving the ſalt water, which is left to exhale in them in order to form the ſalt. Theſe ſprings are very copious, and four of them are in this place, three in one of the town moats, and one near the building that once ſerved for a Minorite convent. From theſe ſeveral ſprings the ſalt-water is conveyed by pipes into a reſervoir in the Sulze, and there diſtributed among the houſes. The ſalt-houſes are fifty-four in number, and contain two hundred and ſixteen ciſterns of ſalt, which are daily boiled; and of theſe ſalt-works a fifth part belongs to the ſovereign.

To the weſt of the city are two rocks, known by the names of Schildſtein and Kalkberg. The latter is near the New-gate, and even within its walls. This is a ſteep rock, in which are ſpacious caverns that contain a great number of terraſſes. Towards the city it is ſurrounded by a crown-work, which joins the town wall; on the other ſide is erected a horn-work; and round its ſummit, which is level, runs a breaſt-work, on which are planted ſome cannon.

The exports of this city conſiſt of ſalt, lime, and beer, wax, honey, wool, flax, linen, and frieze. Goods are alſo brought here from all parts of Germany, and forwarded down the Ilmenau to Hamburg, and by means of the Achſe to Lubec; their returns coming the ſame way. The warehouſes for theſe imports and exports ſtand on the Ilmenau, and the commerce carried on here is ſuperintended by a particular commiſſion.

Ultzen is a town ſeated on the Ilmenau, by two branches of which it is ſurrounded. Here that river firſt receives its name, it being formed by the conflux of eleven rivulets. It was once navigable at this place; ſhips from England even traded here, and the antient harbour belonging to it is ſtill to be ſeen. In the great church is alſo ſhewn a ſhip of gilt copper, which was a preſent to the corporation from the Engliſh. The town contains about three hundred and twenty-nine houſes, three hundred and four of which belong to the burghers, and the others are inhabited by the gentry, eccleſiaſtics, and men of letters. The firſt miniſter of the great church is provoſt, and ſuperintendent of ſeventeen country miniſters. In the town are two alms-houſes, with a church to one of them; and without the town is another alms-houſe, with a church. The adjacent country produces a very fine ſort of flax, and the neighbouring villages weave great quantities of linen. The town had formerly a very flouriſhing trade in thread, linen, woollen, wax, beer, and brandy, and received great advantage from its being a conſiderable thorough-fare for goods and perſons; but its trade is at preſent greatly declined.

Zell is a fortified and well built city, ſeated on the Aller, which is here navigable, and, in conjunction with the ſuburb of Fritzenwieſe, conſiſts of five hundred and ſixty-four houſes; but, including the other ſuburbs, ſummer-houſes, and buildings without the gates, their number amounts to about fourteen hundred. At this place are held the high court of appeals for the ſeveral territories of the electoral houſe of Brunſwic-Lunenburg, with the chancery, and chief tribunal of the principality of Lunenburg. The other public edifices are the guild-hall, the riding-houſe, the mews, and the armoury. The remarkable buildings in the ſuburbs are the Neuſtadt church, that of the Calviniſts, the prince's mews and garden, St. George's alms-houſe, the Alumlager church, the alms-houſe of St. Anne, the hoſpital for diſabled ſoldiers, and the orphan-houſe. This town principally ſubſiſts by its being a great thorough-fare, and the ſeat of the high court of appeals. It has manufacturers and artificers in various branches, particularly in gold and ſilver, whoſe performances are much admired even in other countries.

Haarburg, a town ſeated on the Seeve, which runs through it, and, after being joined by the Engelbach, diſcharges itſelf, near this place, into the Elbe. It conſiſts of four hundred and ſeventy-two houſes, beſides thoſe belonging to noblemen, and is the ſeat of the two general ſuperintendences of this principality; as likewiſe of a ſpecial ſuperintendency under the direction of the general ſuperintendent, who is always the head miniſter of the pariſh church. Here are manufactures of cotton, ſtockings, hats, ribbons, wax-bleachery, ſtarch, and the refining of ſugar. As Haarburg is commodiouſly ſituated for commerce and navigation, it carries on a conſiderable trade to Holland in knee-timber, beams, maſts, and floats.

SECT. XXV.

Of the Dutchy of Brunſwic-Lunenburg, or the Electorate of Hanover, with the Principality of Grabenhagen, and the Counties of Blackenburg and Rheinſtein; their Situation, Extent, Produce, Manufactures, Government, and principal Cities and Towns.

THE dutchy of Brunſwic, taken at large, includes the dutchy of Hanover, the principality of Grabenhagen, and the counties of Blackenburg and Rheinſtein; and is bounded on the ſouth by Thuringia and Heſſe Caſſel; on the weſt by the river Weſer, which divides it from the principality of Minden, and the counties of Lippe and Hoye; on the north by Lunenburg; and on the eaſt by Magdeburg, and the principalities of Halberſtadt and Anhalt.

But within this compaſs is included not only the dutchy of Brunſwic-Lunenburg, which belongs to the king of Great Britain, but Brunſwic-Wolfembuttle, which is governed by its own ſovereign, and will be hereafter deſcribed: we are now to treat only of the former.

The dutchy of Hanover, alſo called Calenberg, from a caſtle that was formerly the reſidence of the prince, is bounded on the north by Lunenburg-Zell; on the eaſt by the dutchy of Brunſwic-Wolfenbuttle, and the biſhopric of Hildeſheim; on the ſouth by Grubenhagen, which Moll calls Brunſwic-Lunenburg; and on the weſt by the county of Schawenburg; extending thirty-three miles from north to ſouth, and eighteen from eaſt to weſt.

All

All the rivers, ſtreams, and brooks in this principality diſcharge themſelves either into the Weſer, or the Leina. The former of theſe waſhes it on the weſt, and the latter on the eaſt. The principal mountains are the Deiſter and the Suntel in the north, and the Solingerwald in the ſouth; but the mountainous and ſtony parts, with the moraſſes, heaths, and ſands, yield very little: this country has, however, many marſhy, clayey, and loamy tracts, mixed with earth and ſand, where all kinds of fruit and vegetables thrive, as wheat, rye, barley, oats, lentils, peas, beans, vetches, buck-wheat, plenty of good fruit, excellent garden plants and roots, hops, flax, and tobacco. It has alſo fine woods of oak, beech, pine, aſp, birch, alder, &c. which afford timber for the building of ſhips and houſes; as alſo wood for fuel and other uſes. The maſtage from the oaks and beech are likewiſe of great advantage.

This country alſo abounds in a large breed of horſes, black cattle, and ſheep; and there is here no want of veniſon, game, and fiſh. At ſeveral places in this principality are marl-pits, quarries of free-ſtone and mill-ſtones, coal-pits, and mines of rich iron ore.

In this country there is no want of manufactures, great quantities of linen yarn are ſpun here, and linen wove not only ſufficient for home conſumption, but likewiſe for exportation, particularly a moſt beautiful damaſk. The printing of linen is here brought to ſuch perfection, that it begins to take place of the uſe of India chintz and calicoes. Cotton is likewiſe ſpun here, and knit or wove into ſtockings, gloves, and caps. The oil-ſkins and carpets printed and painted here are of the beſt ſort. Various branches of the woollen manufacture are made in this principality, more particularly at Gottingen; among theſe are light and ſubſtantial fine cloths, which, for their beauty and the brightneſs and durableneſs of the colours, equal the beſt cloths made in Holland. The worſted ſtockings made at Gottingen are alſo diſtinguiſhed for their fineneſs. At Hanover are two celebrated gold and ſilver manufactures for galloons and laces; as alſo for fringes, toſſils, embroidery, and other works. Among the other manufactures are ſilks, ſtuffs, ſtockings, and ribbons. In different parts are iron-works, mills for the flatting of copper, powder mills, paper and fulling mills, braſs founderies, glaſs-houſes, &c. Large quantities of goods manufactured here are ſent abroad, particularly linen, linen-yarn, Gottingen camblets, baraguins, and other ſtuffs, in which a great trade is carried on to Hamburg, Bremen, Holland, Francfort, and even to Italy.

In this principality are nineteen cities and ſeventeen towns. The four following are ſtiled the great cities: Gottingen, Hanover, Nordheim, and Hamelen, the others being called the ſmall; and in the whole principality are three abbeys and ſix convents, which laſt are all inhabited, one by men, and five by women. There are here alſo two hundred and ten Lutheran pariſh churches, five churches belonging to the Calviniſts, and ſix churches and chapels of the Roman catholics.

There are few ſovereign princes whoſe finances are ſaid to be in ſo good a condition as thoſe of this elector's, owing to the œconomy of the two preceding princes, who have yet kept up a ſplendour ſuitable to their rank: the government here being ſaid to be the leaſt deſpotic of any in the empire; for the elector can neither make laws, nor raiſe taxes, without the conſent of the ſtates, conſiſting of the nobility, clergy, gentry, and towns, who meet regularly every year.

The princes of the two illuſtrious houſes of Brunſwic are deſcended from Erneſt duke of Lunenburg, who died in 1546; the Wolfenbuttle and Bevern branches, (the former of which is now extinct) from Henry the eldeſt ſon, and the electoral houſe of Hanover from William the youngeſt. The electorate attached to the dutchies of Hanover and Zell was concerted at the congreſs held at the Hague in the year 1692, by king William III. and effected by his influence, in conjunction with that of moſt of the proteſtant princes of the empire. Accordingly the ſame year, the emperor Leopold conferred the dignity of elector on prince Erneſt, grandfather of his late majeſty king George II. and his heirs, with the title of ſtandard-bearer to the empire. This, however, met with oppoſition from the college of princes, and particularly from the pope and his adherents However, in 1708, after the death of Erneſt, the firſt elector, the three colleges of the empire agreed to the eſtabliſhment of this new electorate in the perſon of his eldeſt ſon, afterwards George I. king of Great Britain, who then took his ſeat in the diet: but the office of ſtandard-bearer being claimed by the duke of Wurtemburg, the title of arch-treaſurer of the empire was the next year given inſtead of it to the elector of Hanover.

The revenues of the elector from all his German dominions riſing from ſalt-pits or ſprings, taxes, and cattle, merchandize and inns, eſpecially from rich mines of ſilver, iron and copper, are computed to amount to at leaſt four hundred thouſand pounds per annum; or, according to Mr. Hanway's computation, at four millions of dollars, or ſeven hundred thouſand pounds; and it is ſaid, that from theſe dominions alone he may raiſe an army of between thirty and forty thouſand men, without greatly burdening his ſubjects. His majeſty, the preſent elector, has here ſome troops of life-guards, and two regiments of foot guards, of one battalion each, with an uniform of red, lined with blue, and at the court of Hanover are the officers of ſtate uſually found in the courts of crowned heads.

The government here is under the management of the ſix following councils. I. The council of ſtate, to which all Hanover is ſubject, which receives orders immediately from the elector, counterſigned by a German envoy from that electorate, who always attends the Britiſh court.

II. The war-office.

III. The treaſury.

IV. The chancery.

V. The juſtice court, and

VI. The conſiſtory, which is compoſed of the miniſters or preſbytery of the city of Hanover, aſſiſted by lay-elders, who are generally perſons diſtinguiſhed for their learning and piety as well as rank. It is obſervable, that every proteſtant prince and ſtate in Germany has this kind of ſpiritual courts; but theſe have no power in civil affairs, divorces only excepted; and the prince, or ſtate, has always a deputy preſent at all their meetings, to be a check upon their power, and to keep it within due bounds.

This principality is divided into three quarters or departments; the firſt of which is the Hanover quarter, in which are eight cities, three towns, two abbies, ſix convents, and two hundred and twelve villages.

The city of Hanover, the capital of his Britannic majeſty's German dominions, and the ſeat of the electors before their acceſſion to the crown of Great Britain, is pleaſantly ſituated on a ſandy hill upon the Leina, which is only navigable for ſmall boats, in the fifty-ſecond degree twenty-nine minutes north latitude, and in the ninth degree forty-five minutes eaſt longitude, that is three hundred and ſixty-five miles eaſt of London, and forty miles to the weſt of Brunſwic. It is walled round, regularly fortified, and the ravelins before the gates well provided with cannon; but does not ſeem remarkable for its ſtrength. The houſes are moſtly of timber and clay, though many are of ſtone and brick; but the ſtreets are broad, and in winter well lighted with lantherns. It contains about twelve hundred houſes, ſome of which are very large and handſome ſtructures. The Neue Graben, as it is the neweſt, makes the beſt appearance of any part of the city. The elector's palace, is ſituated on the banks of the Leina, and as it ſuffered greatly by fire in the year 1741, a conſiderable part of it has been ſince rebuilt with great magnificence. It has ſeveral courts, and the rooms which are grand and commodious, are chiefly hung with very rich tapeſtry. In apartments in this ſtructure the privy-council and commiſſioners of war hold their meetings. The opera houſe, and the theatre for the French comedians are both within the palace, and though antient are commodious; but the whole is rather rich, decent, and elegant, than very ſplendid.

ſplendid. The guard is always mounted, and an open table kept, even when the king is not in his electoral dominions, at which time the adminiſtration is conducted with the utmoſt dignity. During the whole winter a play is exhibited, and a concert performed twice a week, at his majeſty's expence, when the courtiers without exception take place according to their rank. In the church belonging to the palace, which is very ſplendid, is kept a treaſure of great value, conſiſting of reliques, gold and ſilver plate and gems, collected by duke Henry the Lion, in his journey to the Eaſt in 1171, and the ſucceeding years. The elector's armoury and fine ſtables ſtand in a row along the Leina. The ſtates houſe in Eaſt-ſtreet is a very noble ſtructure, and within it are held the diets and high court of juſtice. In the ſame ſtreet is alſo the Lockumer Hof, where the abbot of the convent of Lockum reſides, and near St. Giles's church is the chancery. In the Old Town there are only three pariſh churches, and one for the garriſon. Beſides theſe ſtructures, there is an orphan houſe, the hoſpital of the Holy Ghoſt, the poor houſe belonging to the magiſtracy, a ſpinning-houſe, and a houſe of correction.

The New Town, which lies on the other bank of the river, has a communication with that already deſcribed by means of bridges. This part is fortified, and though it conſiſts of only three hundred and ſeventy-ſix houſes, is populous, and makes a good appearance. It is the ſeat of the conſiſtory for the electoral territories, and likewiſe of the general and ſpecial ſuperintendency. In the market-place is a curious grotto, but the waterworks belonging to it are fallen to decay. In the ſame part is alſo the church of St. John, and on the parade is a large edifice of ſtone, in which are kept the electoral archives and library; the latter of which is one of the moſt copious and ſplendid in all Germany. There are here alſo ſeveral palaces, a German and a French Calviniſt church, another for the Roman catholics, a Jewiſh ſynagogue, and a Latin free-ſchool.

In ſhort, Hanover is in many reſpects a pleaſant city, and, though it does not equal Berlin and Dreſden, may be eſteemed elegant; but it has no trade worth mentioning.

The neighbouring country makes an agreeable appearance, and the number of kitchen and pleaſure-gardens before the gates, with the elegant buildings belonging to them, appear very extraordinary; particularly there is a delightful viſta which extends to Monbrillant and Herrenhauſen, two electoral palaces; but the former is now falling to decay.

The palace of Herrenhauſen is ſeated about two miles to the north of the city. But Mr. Hanway obſerves, that he does not know whether he was more mortified or more ſurprized to find that the building fell vaſtly ſhort of his expectations; for though in England, it is ſaid, our hoſpitals are palaces, and our palaces more proper for hoſpitals, yet he had conceived the opinion that this palace, ſo much talked of, was indeed grand, and worthy of his majeſty. It was built in the year 1670, by Erneſt Auguſtus, the late king's grandfather: the greateſt part of it is of wood, and the apartments in general rather give the idea of a large antient manſion-houſe belonging to a private gentleman in England, than of the palace of a great monarch: but it has rich furniture, and ſome good pictures. The garden, however, is juſtly worthy of admiration. Our author had ſeen none in Germany comparable to it, though it wants thoſe exquiſite charms, and that enchanting variety, capable of being produced by an inequality of ground, of which we have numerous proofs in Great Britain. One ſide of the garden has a narrow piece of water above a quarter of a mile in length. The walks, which are wide and ſpacious, are moſtly laid with gravel. The garden is divided into large ſquares and baſons, and in the intermediate ſpaces are lofty groves and one of the fineſt orangeries in Europe. Here are beautiful caſcades, and noble fountains, with very large baſons; among theſe the jet d'eau, erected in 1716 by Mr. Benſon, perhaps exceeds any thing of the kind in the whole world: it throws the water ſeventy feet high. Here alſo, according to the German taſte, is a ſylvan theatre, cut out in green ſeats, with arbours and ſummer-houſes for the actors to dreſs in; and here are ſometimes exhibited plays and maſquerades: this theatre is adorned with ſtatues, and occaſionally illuminated in a grand taſte.

The next diviſion in this country is called the Hamelen and Lauenau quarter, which contains three cities, ten boroughs, and a hundred and twenty-eight villages. The moſt conſiderable place in this diviſion is

Hamelen, a fortified city, twenty-three miles ſouth-weſt of Hanover, ſeated in a fine country on the banks of the Weſer, which waſhes it to the weſt, and over it is a bridge of nine wooden arches ſupported by ſtone piers. The Weſer alſo forms at this place a ſmall iſland, and for the farther convenience of ſhipping here is an admirable ſluice, finiſhed in 1734, at the expence of eighty thouſand rixdollars. The river Hamel, whence the town obtains its name, runs into the town moats, and continuing its courſe round the walls, diſcharges itſelf into the Weſer. In this city are ſix hundred houſes belonging to the burghers, and fifty eccleſiaſtical and other edifices. Though the town conſiſts of but one pariſh, it has two churches, an abbey, now ſecularized, beſides a church belonging to the French Calviniſts, and once a quarter the Roman catholics perform divine worſhip in a houſe hired for that purpoſe. Here is alſo a Latin free-ſchool, an hoſpital, and a poor-houſe. Here are woollen, ſilk, and ſtocking manufactures; and from hence great quantities of thread and linen are exported.

The Gottingen quarter is ſituated apart from the others, and once conſtituted a diſtinct principality. It contains eight towns, with the ſame number of ſecularized convents, fifteen royal bailiwics, and eleven noblemen's juriſdictions, under which are four market-towns and a hundred and ſeventy-nine villages. The principal places in this diſtrict are the following:

Gottingen, a city ſeated in the fifty-firſt degree forty-ſix minutes north latitude, and in the ninth degree fifty-ſix minutes eaſt longitude, in a fertile, ſpacious, and pleaſant vale, along the water called the New Leina, which is a canal drawn from the river of that name. This canal ſeparates the Old from the New Town, and the marſh. The ramparts which encompaſs the town command a delightful proſpect of gardens, with meadows, fields, and eminences. Theſe are about ſix hundred and ninety-ſeven rods in circuit, and would form a fine walk were the uſeleſs breaſt-works on it removed. The town conſiſts of above a thouſand houſes; and, ſince the univerſity has been built, is ſo embelliſhed with new buildings, that it is at preſent one of the beſt built towns in all Lower Saxony, and the fine free-ſtone pavement on both ſides of the ſtreets have few equals. In winter the ſtreets are illuminated with lamps. In the town are five pariſh churches, the principal of which is that of St. John, together with an alms-houſe, that has a church and particular preacher of its own; as alſo another for the Calviniſts. The Papiſts here ſay maſs in a private houſe. The church of the bare-footed friars is converted into an armoury.

The principal ornament and advantage of this city is the univerſity, named Georgia Auguſta, founded in the year 1734, by king George II. in the room of the antient Gymnaſium in the Dominican convent founded in 1586. This univerſity has acquired a diſtinguiſhed reputation. It has a large ſplendid church, which was that belonging to the Dominicans, and to it belongs a new and ſtately ſtructure of ſtone, the ground floor of which ſerves as a hall for public lectures, and in that above it is the library, with the council chamber, and other apartments. This library, to which conſiderable additions are every year made, is called the Bulowan, from its receiving its original from a collection of about ten thouſand volumes, bequeathed by baron Bulow, for the public uſe, and by his heirs given to the univerſity. A royal ſociety of ſciences founded in 1751, and a royal German ſociety alſo form a part of the univerſity; it has likewiſe a fine obſervatory, erected on a tower that ſtands on one of the ramparts, together with a noble phyſic garden, near which is a handſome anatomical theatre, a ſchool for teaching midwifry, a *ſeminarium philologicum*, under the direction of the profeſſor of eloquence,

quence, and an academy of exerciſes. The Latin free-ſchool here is under excellent regulations, and governed by eight maſters.

Along the marſh, from the New Leina to the town wall, runs a beautiful viſta of lime-trees. Many curious manufactures are carried on in this city, which has a great trade. The adminiſtration of juſtice for the town-courts is veſted in a judge, nominated by the ſovereign himſelf and the magiſtracy. In the year 1757 and 1758 this city was for ſome time in the hands of the French.

Nordheim is ſituated on the Ruhme, which here divides itſelf into two branches, over each of which is a ſtone bridge. This is the third in order of the great towns of Hanover; it contains five hundred houſes, and has an antient abbey now ſecularized; but has only one pariſh church, and a grammar-ſchool; yet carries on ſome manufactures. The governor of the town examines cauſes, and manages trials; but the ſentence is pronounced by the burgomaſter and council, without his concurrence.

Munden, a town ſituated in a vale by the Fulda, which a little below this place joins the Werra, from which conflux the river is called the Weſer. Theſe ſtreams, with the meadows along the Weſer, the neighbouring gardens, woods, and hills, form on all ſides delightful proſpects; but the town frequently ſuffers by inundations. It conſiſts of ſix hundred and ſeven houſes, and in it are two Lutheran pariſh churches, with a Latin free-ſchool and an alms-houſe. The Calviniſts perform their worſhip in an elegant building, in which is an organ. In the town is a double garriſon, that is, one of four companies maintained by the town, and a regiment belonging to the ſovereign that is quartered in barracks. Theſe barracks are ſituated in a large ſtone edifice, that was originally a palace built by duke Eric the younger. The burghers of Munden are free of Brunſwic and Oſterade, and thoſe of Oſterade and Brunſwic free of Munden. The town has above two hundred gardens belonging to it, but has little corn-land. The inhabitants chiefly conſiſt of ſilk and damaſk-weavers, vinegar-brewers, tobacco-ſpinners, and neceſſary artificers; but the principal ſupport of the town is derived from its traffic and navigation.

We now come to the principality of Grubenhagen, ſo called from its formerly belonging to the family of the Grubes; it is ſurrounded by thoſe of Hanover and Wolfenbuttle, the county of Wernigerode, the principality of Blankenburg, the county of Hohenſtein, the lordſhip of Klellenberg, and Eichfeld; and one diſtinct part of it is entirely encompaſſed by Hanover, Wolfenbuttle, and a part of the dioceſe of Hildeſheim. This tract of country, which includes a part of the Hartz foreſt, is about forty miles long, and the ſame in breadth; but is almoſt overrun with woods.

This country has ſome fertile tracts that produce wheat, rye, barley, oats, peas, beans, and buck-wheat; but the greateſt part of it being mountainous, and little corn growing in the lands bordering on the Hartz, and none at all within that foreſt, agriculture is far from being the principal employment of the inhabitants, who are obliged to be ſupplied with corn from other countries. They have, however, great quantities of flax, the cultivation of which, and making it into thread and linen, are among the principal occupations of the inhabitants. In ſome bailiwics the breeding of horned cattle and ſheep turns to a pretty good account; but their principal advantages ariſe from the large foreſts, quarries, and mines of this country. Theſe foreſts conſiſt of oak, beech, pines, birch, and alder: its minerals and foſſils are chiefly free-ſtone, marble, ſlate, lime, gypſum, alabaſter, jaſper, ſalt, zink, ſulphur, and cobalt; its metals are ſome gold, with a great deal of ſilver, copper, iron, and lead.

The principal rivers that run through this principality are the Leina, the Oder, and the Ocker.

The exports of this country are flax, thread, linen, timber, ſand, ſtone, ſlate, marble-works, iron, copper, lead, ſalt, vitriol, ſulphur, lapis calaminaris, zink, powder-blue, ſtarch, various woollen manufactures, and fatted ſheep.

Lutheraniſm is the only religion of this country, which has forty-one pariſh churches, beſides thoſe in Einbec and Oſterode, all ranged under four ſuperintendents; but the miniſters of thoſe cities are not ſubordinate to them; but have ſeniors of their own. The principal towns in this country are

Einbec, which is ſeated on the Ilne, one branch of which runs through the town, and the other above it; but both meeting ſoon after, run into the Leina. The town of Einbec is encompaſſed with ramparts, bulwarks, towers, moats, and ſeveral out-works, and contains about ſeven hundred and ſixty houſes belonging to the citizens, ſeventy-ſeven public edifices, and eight hundred fourteen granaries, ſtables, and other out-houſes. The city is divided into three parts, called the Markt, the Neuſtadt, and the Munſter. In the two firſt are pariſh churches; but the laſt has been incorporated with the cathedral of St. Alexander. Among the other public buildings are a grammar ſchool belonging to the corporation, which has ſeven maſters, an orphan-houſe, in which forty or fifty children are educated, under the immediate direction of the royal regency, they being maintained out of the provincial revenues. The hoſpital of the Holy Ghoſt, the great poor-houſe of St. Bartholomew, and a leſſer poor-houſe. In this city are made cloth, flannels, baize, ſhalloons, ſerges, crapes, calamancos, druggets, dimity, and other ſtuffs, and at the orphan-houſe they carry on the printing of linen and cotton.

Oſterode is ſituated near the Hartz, by a little river called Apenke, and conſiſts of five hundred and eighty-two houſes, with a caſtle, in which ſeveral of the dukes of Brunſwic-Lunenburg have reſided. In the town is a ſuperintendency, with three pariſh churches, a Latin ſchool, and a granary erected for the uſe of the miners and other labourers on the Brunſwic part of the Hartz, and from whence they are always ſupplied with rye at a moderate price.

Scharzfels is a remarkable caſtle, which ſtands on a high mountain, or rather a vaſt rock, on the borders of the Hartz. The only acceſs to it is by means of high ſtone-ſteps, at the ſummit of which is a round free-ſtone tower of a conſiderable height and thickneſs, but without any roof. In the lower part of the caſtle are barracks erected along the wall. This fortreſs is defended by a few cannon; it has a ſmall garriſon under the direction of a commandant, and here ſtate-priſoners are ſometimes confined. In it is a very deep well, the water of which is drawn up by means of a large wheel. On deſcending northwards from the mountains, after paſſing through a narrow valley, and then aſcending a hill, you come to the famous Scharzfel cave, which properly conſiſts of five caverns, all lying in a row. The firſt of theſe is very large and clear, the ground being ſunk in towards the center, and thus admits the light; but the others are quite dark.

Before we take leave of this country, it is proper to take notice of that part of the Hartz which is included in it, and ſubject to Brunſwic-Lunenburg.

It is obſervable, that the air is here ſo cold, that the winters uſually laſt one-half of the year. The rains, ſnows, and fogs are here more frequent than in the level countries round it; yet thoſe who live above ground, and not among the mines, and forges, arrive to as great an age as the inhabitants of the plains. Tillage and the cultivation of fruits turn to no account; ſo that the whole harveſt conſiſts of good hay. The trees which cover the mountains conſiſt of oak, beech, aſh, aſpin, alder, birch, &c. but two-thirds of them are firs, pines, and other ſoft wood. The abundance of timber is here the more valuable, as without it the mines and forges could not ſubſiſt. The minerals found here are yellow oker, vitriol, ſulphur, lapis calaminaris, borax, cobalt, lead, iron, copper, ſilver, and ſome gold.

The Brunſwic-Lunenburg Hartz being divided into the Upper and Lower, the mine-workers are diſtinguiſhed by the ſame diviſions. The Upper Hartz, with its mine-works, is termed particular, or belonging only to the electoral houſe of Brunſwic; or elſe common. The produce of the particular mine-works about the year

1724, reckoning ſilver, copper, iron, lead, and borax, amounted to no leſs than ſeven hundred and ſix thouſand one hundred and twenty-five rixdollars; and on deducting the expence out of this ſum, the ſurplus accruing to the ſovereign amounted to about a hundred and thirty-ſix thouſand rixdollars, and that ariſing to the other proprietors to a hundred and twenty thouſand five hundred and ſixty-ſeven. The common mine-works in the Upper Hartz uſed to yield annually in the above-mentioned ores about two hundred and eighty-ſix thouſand rixdollars, of which the ſurplus ariſing to the ſovereign amounted to about fifty-three thouſand rixdollars, and that of the ſharers to nineteen thouſand ſeven hundred and ſeven. The common mine-works of the Lower Hartz have produced annually in gold, ſilver, copper, lead, borax, ſulphur, green and white vitriol, zink, and pot-aſh, about a hundred and eighty thouſand ſix hundred and eight rixdollars, of which near ninety-ſix thouſand are its neat produce. Thus the whole Hartz yield annually about one million one hundred and ſeventy-two thouſand ſeven hundred and thirty-three rixdollars, of which, to the value of two thouſand eight hundred and eighty are gold, which is coined into ducats, and eight hundred and two thouſand eight hundred and ſixty ſilver, which, after a deduction of all charges, the neat profit amounts to four hundred and twenty-five thouſand two hundred and ſeventy-four rixdollars.

The ſilver is coined immediately in the Hartz, and the other products the mine-offices at Hanover and Wolfenbuttle take at a ſtipulated price, making their returns in tallow, leather, and other neceſſaries for the mine-works, which are alſo furniſhed at a certain rate.

The inhabitants of the Hartz are compoſed of miners, labourers in the ſmelting-houſes, wood-heavers, carriers, and the ſovereign's officers and ſervants; together with miniſters, ſchool-maſters, artificers, and tradeſmen, who have there no other taxes but one rixdollar on every houſe, and a lodger and mine-officer only half a rixdollar, with a ſmall exciſe on the beer carried thither; and even this is applied to the benefit of the miners and labourers in the ſmelting-houſes.

The principal places in the Hartz are,

Clauſthal, a conſiderable mine-town, which has broad ſtreets, and upwards of nine hundred houſes; it contains about ten thouſand inhabitants, two churches, a grammar-ſchool, which has nine maſters, and an orphan-houſe. This is the ſeat of the mine-office, which belongs particularly to the elector of Brunſwic-Lunenburg, and has a mint, in which between four and five hundred rixdollars are annually coined. There is here alſo a houſe for the ſmelting of ſilver.

Cellerfeld is an open mine-town, ſeparated from Clauſthal only by a ſmall rivulet. This is the ſeat of the mine bailiwic-office of the common Upper Hartz; as alſo of a common mint, in which between two hundred and fifty thouſand and three hundred thouſand rixdollars are annually coined in ſilver ſpecie. The town contains about five hundred and ſixty houſes, a good library at the pariſh church, and a Latin ſchool. This town ſuffered greatly by fire in 1737 and 1753.

What is here particularly called the Lower Hartz, is a ſteep high mountain of pretty large extent, alſo named Rammelſberg, which is poſſeſſed in common by the electoral and princely houſes. The ores found in it are of a very ſolid texture, and make ſuch reſiſtance againſt the hammer and wedge, that for the eaſier diſſolution of them, the workmen are obliged to make uſe of fire. On this mountain are twelve mines, of which the magiſtracy of Goſlar work four, though to a diſadvantage, they being obliged to deliver a certain part of the ore gratis to the ſovereign, and to ſell the remainder to him at the price formerly ſtipulated to them, which it at preſent too low; but on default of this the town forfeits its foreſt-right, which it holds on theſe conditions.

Goſlar, a free imperial city at the foot of Rammelſberg, is ſeated on the river Goſe, which at a ſmall diſtance from the town diſcharges itſelf into the Ocker. The buildings are in the old taſte, except in that part of the town that was burnt down in 1728, and has been rebuilt in the modern manner. The eſtabliſhed religion is Lutheraniſm, and in the city are four pariſh churches and two Lutheran foundations, which are that of St. Simon and St. Jude, that was founded as a canonry of Auguſtins in the year 1040, by the emperor Henry III. and the imperial foundation of Peterſburg, which received its riſe from the munificence of the ſame prince and his conſort Agnes, in honour of St. Peter. The building has been pulled down by the burghers, and, ſince the year 1603, the chapel of St. Catherine has been aſſigned for the canons, who are Lutherans, and their principal officer, who is a dean. Here are two other Lutheran convents, that of Frankenberg, which conſiſts of a domina and three conventualiſts, which belongs to the principality of Wolfenbuttle; and the nunnery at Neuenwerk, which is dependent on the magiſtracy, and has a church of its own. The city derives its principal ſubſiſtence from the neighbouring mines, the inhabitants being chiefly employed either in digging, cleanſing, tempering, and vending the metals and minerals, or making and ſelling the hard-ware formed of them. They alſo have breweries of beer, and trade in proviſions, which they ſell into the Hartz. This city is under the protection of the king of Great Britain, as elector of Hanover, alternately with the duke of Brunſwic-Wolfenbuttle. Here Bartold Schwartz, a Benedictine monk, is ſaid to have diſcovered the art of making gunpowder.

SECT. XXVI.

Of the Dutchy of BRUNSWIC-WOLFENBUTTLE.

Its Situation, Produce, and Rivers: the Religion and Commerce of the Inhabitants: the Title, Arms, Offices, Revenues, and Forces of the Prince; with the principal Places in this Dutchy.

WOLFENBUTTLE forms a part of the dutchy of Brunſwic, and is divided into two parts by Halberſtadt and the dioceſe of Hildeſheim. The north part is environed by Lunenburg, Brandenburg, Magdeburg, Halberſtadt, and Hildeſheim. The ſouth part lies between the two laſt, the county of Wernigerode, Grubenhagen, Hanover, Cowey, and the county of Lippe.

The eaſtern half of the ſouth part, which lies between the Leina and the Ecker, contains under it a part of the Hartz, with the mine ſalt-works, which the prince holds in common, as hath been already obſerved, with the elector of Brunſwic-Lunenburg. The ſouthern part of this principality conſiſts chiefly of hills and woods, with little arable land; but, on the other hand, has great plenty of timber, iron, and glaſs-houſes, the manufactures of which are greatly admired, particularly thoſe of looking-glaſſes; with a fine porcelain manufacture. The north part of the principality is more level, and produces corn, flax, and hemp, with all kinds of pulſe and fine fruit; grazing alſo turns to good account; the breeding of ſilk-worms is now followed here, and premiums are aſſigned by the prince for the encouragement of the production of ſilk.

The Weſer and the Leina are the principal rivers in the ſouth part of the principality; and here alſo, as well as in the Hartz, flow the Innerſte and Ocker: there are here likewiſe the Aller, and a canal drawn between Querum and Gliſſenrode, which is of ſingular advantage, and was opened in the year 1750.

The eſtabliſhed religion is Lutheraniſm, and both the paſtors and congregations are at preſent under five general ſuperintendents. At Brunſwic both the Calviniſts and Papiſts are permitted the uſe of a church.

The manufactures of Wolfenbuttle conſiſt in the ſpinning of thread, and the weaving of linen; the making of woollen cloth, and ſilk ſtuffs, Turkey, and other ſorts of dreſſed leather; the bleaching of wax, and making of porcelain; in lead, iron, and ſteel founderies. The trade of the country conſiſts in theſe and other articles; as in minerals, turnery, and cabinet-makers work, with Brunſwic mum, and the beer of Konigſlutter.

The prince's title is only that of duke of Brunſwic and Lunenburg, which he enjoys in common with the king of Great Britain; both, as hath been already obſerved

ſerved in treating of Hanover, being deſcended from the ſame family.

His arms are, however, very extenſive, and conſiſt of thirteen fields: the firſt gules, a ſemée of hearts or, and a lion azure, for the dutchy of Lunenburg. The ſecond is gules, with two leopards or, for the dutchy of Brunſwic. The third is azure, with a lion argent crowned or, for the county of Eberſtein. The fourth gules chequée argent and azure with a lion or, for the lordſhip of Homburg. The fifth or, a lion gules crowned azure, for the county of Diepholz. The ſixth gules with a lion or, in chief, and four feſſes of the ſame; but through miſtake only three are marked, and theſe in the tenth field. The ſeventh is or, two bears paws expanded, for the county of Hoya. The eighth is quarterly party per feſſe chequée gules and argent; underneath argent and azure girony, for the county of Bruchauſen. The ninth azure, an eagle argent, which forms the lower half of the Diepholz ſhield. The tenth is chequée gules and argent, for the county of Hohenſtein. The eleventh argent, a ſtag's horn gules, for the county of Reinſtein. The twelfth argent, a ſtag ſable, for the lordſhip of Klettenberg. The thirteenth is alſo argent, a ſtag's horn ſable, for the county of Lauterberg. Among the five crowned helmets, the chief, or that in the center, has a pillar argent, crowned and ſurmounted with a peacock's tail, in which is a ſtar or, and in the middle a horſe argent, between two ſickles reverſed, and decorated in five places with peacocks feathers.

The principality of Wolfenbuttle is poſſeſſed of a vote among the princes, both in the college of the princes of the empire, and in the diets of Lower Saxony; in each of which, by virtue of an agreement concluded in 1706, when the ſeniority lies in the houſe of Brunſwic Wolfenbuttle, it precedes thoſe of the elector of Brunſwic and Lunenburg for Zell, Grubenhagen, and Hanover; but otherwiſe comes after them.

The ſupreme college of the princes is the privy council, which has the direction of all ſtate affairs, as alſo the general government of the country, laws, and ordinances, with the polity, grant of privileges, nomination of magiſtrates and officers of the law in the towns, and other important concerns, and here the reigning duke aſſiſts as preſident. The prince's revenue, and all affairs relating to it, are either under the inſpection of the treaſury, in which alſo the ſovereign preſides, or of the convent-office. Brunſwic is the ſeat of the two firſt colleges; but the laſt, together with the chancery, the high court of juſtice, and the conſiſtory, are held at Wolfenbuttle.

The prince's immediate revenues ariſe from the treaſury, bailiwics, the regalia, the conventual eſtates, the impoſts of the circle and empire, contributions, legation and fortification money, ſervice and quotas of proviſions. The leſſer committee of the ſtates, or the tax college, ſuperintends the town-tax, land-tax, convent-tax, ſheep-tax, meaſure-tax, tithe-tax, and mill-tax, with the exciſe on malt, beer, wine, brandy and ſtamped paper; as alſo the licence.

The military force maintained by the duke generally conſiſts of four regiments of foot, each of two battalions, a body of horſe-guards, a regiment of dragoons, and a militia regiment of five companies, each company containing one hundred and eighty men, with a corps of engineers and matroſſes. There is alſo one regiment of invalids. Theſe troops are clean, and cloathed much after the Pruſſian manner; but their arms are lighter, and their exerciſe not ſo exact. Mr. Hanway obſerves, that people of diſtinction ſeldom leave this court without being extremely well ſatisfied with their reception, and, in particular, Engliſh noblemen are well received, when they occaſionally paſs that way. The duke, that gentleman obſerves, ſeems more fond of eaſe and happineſs, than of the parade of life. He generally appears in his coach with three other perſons of his family. His livery is yellow laced with a blue ſilk and ſilver galoon; behind his coach are uſually four footmen; two pages in blue cloth laced with ſilver run by its ſides, and a ſingle ſervant in livery rides before to clear the way.

In this principality are ten boroughs, eight market-towns, three hundred and eighty-ſix villages, and ſeventeen ſees and convents. The ſtates are compoſed of the deans of the ſees, and the priors of the convents; of the nobility who are poſſeſſed of manors within the country; and laſtly, of the deputies of the eight oldeſt towns. The diets are held at the provincial houſe at Brunſwic, and meet four times a year. The whole country is divided into four diſtricts, viz. into thoſe of Wolfenbuttle, Schening, the Hartz, and the Weſer.

The diſtrict of Wolfenbuttle is ſituated on both ſides the Ocker, and contains under it the following towns.

Brunſwic, the capital of the dutchy, is ſituated in a plain on the banks of the Ocker, which runs through it, entering the town by two branches; but within it dividing into a great number, all which unite again in one ſtream at the iſſue of the Ocker out of the town. It ſtands in the fifty-ſecond degree thirty minutes north latitude, and in the tenth degree thirty minutes eaſt longitude. It is well fortified with a double wall and ditches, and on the ramparts is a braſs mortar piece made in 1411, which is ten feet ſix inches long, and nine feet two inches in diameter. It requires fifty-two pounds of powder, and will carry a ball of ſeven hundred and thirty pounds weight to the diſtance of thirty-three thouſand paces, and throw a bomb of a thouſand pounds weight. In the arſenal of the city are about ſixty pieces of braſs cannon, ſeveral cohorns and mortars, ten pieces of large battering cannon of an enormous ſize, and a great quantity of ſmall arms. The city is two miles in compaſs, and the ramparts planted with mulberry-trees. The buildings are for the moſt part in the old taſte; but of late the city has been beautified with many new ſtructures, and its ſtreets are better paved than formerly. The prince's palace, called the Grauehof, was in 1731, the court of Elizabeth Sophia Maria, widow to duke Auguſtus William. That learned and pious princeſs erected a ſplendid library here, the principal curioſity of which conſiſts in a very valuable collection of ſcarce and curious Bibles, or parts of Bibles, in ſeveral languages, to the number of above a thouſand volumes. In this palace the reigning duke uſually reſides. It has rich and elegant furniture, very fine pictures, and a cabinet of curioſities. The gardens belonging to this palace are laid out in an elegant taſte. In the ſame ſtreet with the palace is the academy for martial exerciſes, the cavaliers houſe and armoury, all new and handſome buildings.

In the Hagen market is the *Collegium Carolinum*, a noble ſtructure, built in 1745, and founded by duke Charles, from whom it takes its name. The ſtudents, particularly thoſe of good families, are taught all the neceſſary arts, ſciences, languages, and exerciſes. In it is a good library. In the ſame market-place ſtands the opera houſe, which makes a very handſome figure.

The Oldburg, at preſent called the Moſthaus, or Moſhof, is ſeated on the Ocker, and before it on a high and broad pillar of free-ſtone ſtands a braſs lion, which, it is ſaid, repreſents one which duke Henry ſurnamed the Lion made ſo tame, that he followed him wherever he went, and after that prince's death died with grief. On the burg-platz is the new play-houſe. At the packhoſe all goods imported or exported are rated and taxed, and this is ſaid to produce about two hundred thouſand rixdollars per annum.

In the new town is the council-houſe, where the magiſtrates meet, as the treaſury board does in the council houſe of the old; and during the fair the paſſages round it are crowded with toy-ſhops. Near it is a chapel dedicated to a ſaint named Autor; but in 1681, it was aſſigned to the foreign dealers at the fair, for the ſecurity and more convenient ſale of their goods. In Heyden-ſtreet is the mint. The work-houſe was rebuilt by duke Charles, it being firſt formed out of an hoſpital, originally dedicated to the Virgin Mary. The orphan-houſe is an excellent foundation, and ſince the year 1753, has had a Latin ſchool annexed to it, with a printing-houſe, and a bookſeller's ſhop.

The Lutherans are poſſeſſed of ten churches. The cathedral of St. Blaſius, which ſtands in the Burg-ſquare, was erected in 1172 by Henry the Lion, on his return from the Holy Land, inſtead of the church of St. Peter and St. Paul, which was then falling to ruins, and annexed

nexed to it a chapter. This is an antient Gothic ſtructure, the cieling of which is adorned with twenty large paintings, repreſenting the prophets of the Old Teſtament in the clouds of heaven, which give the edifice a very ſolemn air. The high altar is of marble, adorned with the ſtatues of the four Evangeliſts, and ſupported below by Moſes and Aaron. In this cathedral are two fine monuments of that duke and his ſecond conſort, and here are kept the records of the electoral family and the vault of the dukes of the Bevern line. The Dutch and French Calviniſts poſſeſs in common St. Bartholomew's church, but each have their reſpective paſtor, and to the Roman catholics is aſſigned the church of St. Nicholas at the ſtone gate. The Tempelhof is an antique building that formerly belonged to the Knights Templars; but, on their ſuppreſſion, paſſed to thoſe of St. John, and particularly to the commandery of Supplingenburg, which in 1367 diſpoſed of it to Kaland St. Jurgen. The dean and *camerarius* are eccleſiaſtics, and the two lay-members are uſually magiſtrates: theſe four compoſe the ſociety.

In the town are two ſeminaries, that of St. Martin and St. Catharine, with a ſchool for anatomy and ſurgery. Here is alſo a college for the ſtudy of phyſic, inſtituted in 1747, and depending only on the duke and his privy-council. The lazaretto, as well as the above ſchool and college, were built by the ſame munificent prince duke Charles. Here is alſo St. Leonard's hoſpital, which ſtands without the ſtone gate.

This city is well provided with a variety of ingenious artiſts, and has ſeveral manufactures. The firſt ſpinning-wheels were invented here in 1530 by one Jurgen, a ſtone-cutter and ſtatuary. The ſtrong beer invented by Chriſtian Mummen, and from his name called mum, is exported to all parts, even as far as Aſia. Brunſwic has two annual fairs, which are very conſiderable ones. This city has been frequently beſieged, and ſometimes taken. In 1757 it was poſſeſſed by the French, who quitted it again in 1758.

At the diſtance of about five miles from Brunſwic is the palace of Saltzdahlen, which is ſituated in a mean village of the ſame name, thus called from a conſiderable ſalt-work in its neighbourhood. The greateſt part of this palace is of timber, and the rooms moſtly lined with painted cloth. The great gallery of pictures is a noble apartment two hundred feet long, fifty broad, and forty high, containing above a thouſand excellent pictures, ſeveral of them curious originals, by the beſt maſters. The leſſer gallery, which is a hundred and ſixty feet long, and twenty broad, is likewiſe full of maſterly paintings. Mr. Hanway, on viewing theſe galleries, ſays he was particularly ſtruck with the following pieces: Adam and Eve viewing Abel after his death, and pulling open his eyes, by Strudel. Abraham embracing his ſon after the trial which God had made of his faith; piety and joy here ſeem to contend with each other, while his looks expreſs a ſeraphic adoration: this piece is by Liebens. Peter delivered from priſon by the angel, by Steinbeck. Judith and her attendant, an old woman, holding Holofernes's head juſt cut off, the face appearing with ſome ſigns of life. Rembrandt, his wife, and three children, in one piece, by himſelf. Cephalus and Procris, a very fine piece. The Aſcenſion, which is much eſteemed. Lewis XIV. and his two miſtreſſes. Prince Eugene. The marriage of two Hollanders, the young man and woman looking tenderly at each other, while the parents are attentive to the notary who draws up the articles.

At the end of the leſſer gallery to the right is a large cabinet, in which are above a thouſand pieces, as plates, bottles, ſaltſellers, of incomparable beauty, many of them being enamels performed by Raphael Urbino, when he was enamoured with the potter's daughter. Facing the above cabinet is a large one of China porcelain, containing above eight thouſand pieces, beautifully arranged. Adjoining to the large gallery are ſix ſmall cabinets filled with curioſities of art and nature. The chapel here is very grand. The garden is a very fine one; but ſome of the ſtatues are but poorly executed.

Near the chapel, and contiguous to the orangery, is a convent dedicated to the Virgin Mary, founded by duke Anthony Ulric and his conſort, for a domina and fifteen ſiſters of noble families, who perform divine ſervice twice a day in the chapel belonging to the palace. It has alſo a provoſt, and ſends a repreſentative to the ſtates.

Wolfenbuttle, a fortified city, ſeated in a low and marſhy country on the banks of the Ocker. It is a pleaſant place, and contains many handſome houſes; beſides which it is the ſeat of ſome of the head colleges of the dutchy of Wolfenbuttle, as the chancery, the chief court of juſtice, the bailiwic-office, the convent-chamber, the conſiſtory, and general ſuperintendency. Here is an antient armoury, and the caſtle was for the moſt part the uſual reſidence of the dukes, and their library is one of the beſt in all Germany; it is in a particular building, finiſhed in 1723, in the lower part of which is a riding-ſchool. The ſeminary here is ſtiled the ducal great ſchool. It contains ſeveral churches and other public buildings. In 1757 it was in the hands of the French, who abandoned it the next year.

Ganderſheim, a ſmall mean town ſeated in a valley by the ſide of the little river Gande, and containing a ducal ſeat, erected by John Julius, with a bailiwic-houſe, and a Latin free-ſchool. But it is moſt famous for the imperial, ducal, free, and ſecular foundation of St. Anaſtaſius and St. Innocent, founded in the ninth century. This abbey is at preſent Lutheran, and compoſed of an abbeſs, a dean, and eleven canoneſſes. Theſe have no particular dreſs, but wear a croſs of the order enamelled black and red, on which is repreſented the inſtruments uſed at our Saviour's crucifixion. On the top of it is a cluſter of diamonds, and at the bottom a death's head enamelled white. This croſs is faſtened to a broad watered ribbon of a pale blue, diverſified on the edges with narrow black ſtripes, and hanging from the right ſhoulder down below the waiſt to the left. To this celebrated foundation alſo belong eight canons and capitulars. The dukes are patrons and protectors of the abbey, though the abbeſs has both a ſeat and voice in the diet of the empire and among the prelates of the Rhine. The abbey is poſſeſſed of four hereditary bailiwics, and to it belong the adjacent convents of Brunſhauſen and Claus.

SECT. XXVII.

Of the Principality of HALBERSTADT.

Its Situation, Extent, Produce, Rivers, and Towns: the Religion and Trade of the Inhabitants: their Government, the Revenues of the Sovereign, and a Deſcription of Halberſtadt its Capital.

THE principality of Halberſtadt is ſurrounded towards the eaſt by the principality of Anhalt and the dutchy of Magdeburg, and towards the weſt by the dutchy of Brunſwic and the biſhopric of Hildeſheim, extending from eaſt to weſt about forty-two miles, and from north to ſouth thirty-three.

The country is for the moſt part level, but contains ſome eminences. The ſoil is extremely fertile, both in grain and flax, and has rich paſtures and meadows, whence the inhabitants ſubſiſt by grazing, and their large breed of ſheep affords plenty of wool. But, on the other hand, the woods are continually leſſening, and the want of fuel is ſo great, that they are obliged to import turf for the uſe of the poor. The country has not a ſufficiency of game and fiſh; nor is there a river of a conſiderable ſize in the whole country: the principal is the Bode, or Bud, the Selke, and the Ilſe.

In this country, including the county of Regenſtein and the lordſhip of Derenburg, are ten towns, and ninety-nine ſmall country towns and villages. The inhabitants are ſaid to amount to upwards of two hundred thouſand.

The greateſt part of the inhabitants are Lutherans, and their churches are divided into eleven inſpections, over which is a general ſuperintendency. The Calviniſts and Papiſts are pretty nearly of an equal number, and the Jews are tolerated, but are not to exceed a fixed number of families.

The woollen manufactures eſtabliſhed in this country are in a thriving condition, and its exports principally conſiſt of grain.

It enjoys a vote among the princes, both in the diet of the empire and that of the circle. On its devolving to the houſe of Brandenburg, it was placed both in title and arms before any of the other principalities. Its arms are party per pale gules and argent.

The annual revenue ariſing to the ſovereign from this principality, and the incorporated counties and lordſhips, including likewiſe the county of Wernigerode, amounts to about five hundred thouſand rixdollars. For the more convenient levying the imports and aſſeſſments, the principality is divided into ſix circles: the principal town is

Halberſtadt, the capital of the principality, is ſeated on the river Hotheim, in the fifty-ſecond degree ſeven minutes north latitude, and in the eleventh degree fifteen minutes eaſt longitude. It is a well built town, the ſtreets are pretty ſtraight and uniform, and many of the buildings are handſome, though they are generally old-faſhioned. In the year 1752 the walls which ſurround near half the city were pulled down, and the moats filled up ſo as to form a level, which has been converted into a plantation of mulberry-trees. The inhabitants do not much exceed thirteen hundred, though within and about the town are ſixteen churches. The cathedral of St. Peter is an old but ſtately building, conſiſting of a very hard free-ſtone. The chapter is compoſed of a provoſt, a dean, a ſenior, ſub-ſeniors, and ſixteen canons, four of whom are of the Romiſh religion, and all the others Lutherans. In 1754 the king of Pruſſia conferred on the chapter a croſs of gold, enamelled with white, and divided into eight points: in the center on one ſide is the Pruſſian black eagle, and on the other the image of St. Stephen. This croſs is faſtened to a deep ſcarlet ribbon, bordered with black. On St. Peter's-ſquare, which is very ſpacious, ſtands the priory and a monaſtery, the latter of which was rebuilt in 1754, with ſome handſome houſes for the canons and prebendaries. Fronting the cathedral is the Lutheran collegiate church of our Lady: to them alſo belong the collegiate churches of St. Boniface and Maurice, and St. Peter and Paul; St. Martin's, to which the general ſuperintendency of the principality is annexed; St. John's, the hoſpital or church of the Holy Ghoſt; and St. Elizabeth's. The German Calviniſts are poſſeſſed of St. Peter's chapel, and the French Calviniſts have a church. The Papiſts are poſſeſſed of three convents of monks and two nunneries, to which muſt be added the chapel of the voluntary poor; the Jews are alſo allowed a ſynagogue. This town is the ſeat of all the ſtate courts and offices; it has three public Lutheran ſchools, which are thoſe of the cathedral, St. Martin's and St. John's, and an orphan-houſe. In 1758 Halberſtadt was very ſeverely treated by the French, who demoliſhed its gates, and alſo its remaining walls for eight hundred rods in length.

Before we conclude this account of Halberſtadt, it will be neceſſary to obſerve, that the county of Ragenſtein, or Reinſtein, antiently formed but one county in conjunction with Blankenburg, the counts of Reinſtein and Blankenburg being derived from the ſame ſtem. The former at preſent, however, belongs to the elector of Brandenburg, who retains it as a fortified fief of Halberſtadt, notwithſtanding the demands of the houſe of Brunſwic-Lunenburg relative to a reſtitution of a part of the county which the counts of Tattenbach had held as its fiefs; and this has given riſe to a proceſs ſaid to be ſtill depending before the aulic council. Blankenburg was, in 1707, erected by the emperor Joſeph into a principality, and ſince the year 1731 has belonged to the reigning houſe of Brunſwic-Wolfenbuttle.

SECT. XXVIII.

Of the Biſhopric of HILDESHEIM.

Its Situation, Extent, Produce, and Rivers; the Religion of the Inhabitants, their Manufactures, Government, and principal Towns.

THE dioceſe of Hildeſheim is encompaſſed by Hanover, Wolfenbuttle, Grubenhagen, Halberſtadt, and Lunenburg, terminating alſo on the county of Wernigerode. Its greateſt extent from eaſt to weſt is about forty-ſeven miles, and from north to ſouth ſomewhat above thirty-eight.

The greateſt part of this dioceſe conſiſts of a good ſoil fit for tillage, and that yields a great quantity of flax and hops, with garden plants and roots; but it affords only a ſufficiency of horſes, cows, ſheep, and hogs, the ſouth part is hilly, and for the moſt part covered with fine woods of oak, beach, aſh, and birch. Such mountains as are bare contain valuable quarries, and alſo iron ore; in conſequence of which ſome iron founderies have been built. There are likewiſe ſome good ſalt-works in this part; but theſe are not ſufficient to ſupply the dioceſe.

The Leina traverſes the weſtern part, and at Ruhte is joined by the Innerſte. The Fuſe riſes here, and runs into the principality of Lunenburg. The Ocker traverſes the eaſtern part of the dioceſe, and, after receiving the Ecker, enters the principality of Wolfenbuttle: but, notwithſtanding their having theſe rivers, fiſh is ſcarce.

At the time of the Reformation the greateſt part of the dioceſe belonged to the duke of Brunſwic-Lunenburg, who after taking it from biſhop John, when under the ban of the empire, obtained the inveſtiture of it. Theſe dukes were indeed ſo far from promoting the reformation in theſe parts, that they obſtructed it to the utmoſt of their power; yet almoſt the whole country ſoon made an open profeſſion of Lutheraniſm. The leſſer ſee did the like, and the biſhops granted the vaſſals freedom of religion; but, in the beginning of the thirty years war, the Lutheran miniſters were driven out of the leſſer biſhopric of Hildeſheim, and the Lutheran churches in the greater as much oppreſſed; but the dukes of Brunſwick and Lunenburg having, by a convention in 1643, ceded the latter to the biſhop, it was ſtipulated that the Lutherans ſhould at certain times, and under certain limitations, enjoy the free exerciſe of their religion; but at length religious liberty was ſettled on a ſolid and laſting foundation. Of the Lutheran religion are all the towns, with the greateſt part of the nobility, and moſt of the villages; but the ſovereign, with the cathedral chapter, the convent, almoſt all the epiſcopal officers, a part of the nobility, and many perſons both in the towns and country, are Roman catholics. The leſſer biſhopric, as it is called, has no Lutheran ſuperintendency; but in the greater there are no leſs than four.

This dioceſe has but few manufactures, and theſe are of good linen, ordinary woollen cloth, worſted ſtockings, a coarſe porcelain, with all kinds of iron-wares. Its exports conſiſt of corn, ſheep, wool, hops, ſalt, thread, and linen.

The arms of this ſee are party per pale gules and argent.

The biſhop of Hildeſheim ſits in the diet between the biſhops of Augſburg and Paderborn, and votes among the princes in the diet of Lower Saxony. The cathedral chapter conſiſts of forty-two members, who elect the biſhop, and on a vacancy of the ſee take the reins of government into their own hands. The chapter is alſo the firſt ſtate of the dioceſe, and is poſſeſſed of very conſiderable revenues.

The biſhop, who is generally abſent, leaves the government of the country to a ſtadtholder and privy council. The adminiſtration of juſtice is committed to the chancery of the regency, and the chief tribunal; but the former alone takes cognizance of criminal cauſes. From both theſe courts, an appeal lies to the Aulic council: in like manner cauſes are carried from the towns to them.

The ſpiritual juriſdiction over thoſe of the Popiſh religion belongs to the biſhop's official, and the Lutheran ſubjects, by the peace of Weſtphalia, have alſo their conſiſtory, which is compoſed of two eccleſiaſtical, and and two lay counſellors, who muſt be Lutherans, and to theſe are added a ſecretary and clerk of the ſame religion. The chancellor of the regency, or, in his abſence, a ſtate counſellor, repreſents the ſovereign, and is poſſeſſed of the firſt ſeat and voice; but his vote does not extend to certain caſes, in which, on account of the difference of religion, he cannot act as judge. The conſiſtory isuſually held but eight times a year.

The epiſcopal revenues are under the direction of the treaſury, and ariſe from the domains and regalia, exclu-

ſive of the ſums annually granted by the diet. Here is alſo a tax-office for this country, into which are paid the contributions, with the land-tax, meaſure-tax, village and ſheep-taxes.

The whole military force of this ſee conſiſts only of one company of foot, as a garriſon to the town of Peina, and a few troopers. In the dioceſe are eight boroughs, with four market-towns, and two hundred and forty-eight villages. In 1731, the nobility were reckoned to have ſeventy-five manors, the proprietors of which are admitted into the aſſemblies of the nobility, and qualified for the diet.

The ſtates of the country conſiſt firſt of the cathedral chapter; ſecondly, of the ſeven abbies; thirdly, of the nobility; and fourthly, of the towns of Hildeſheim, Peina, Elze, and Alel. The ſovereign alone convenes the diets, which are generally held in the beginning of the new year, in the nobles hall at Hildeſheim. They are opened by the biſhop's chancellor, and a ſecretary reads over his propoſals, on which each claſs returns thanks in the perſon of its ſyndic, with aſſurances that the propoſals ſhall be taken into conſideration, and a proper anſwer returned.

The principal places in this dioceſe are the following:

Hildeſheim, in Latin Hildeſia, is the capital of the dioceſe, and ſtands on a rugged declivity, near the Innerſte, in the fifty-ſecond degree twenty-ſix minutes north latitude, and the ninth degree fifty-one minutes eaſt longitude. It is pretty large, but old and irregularly built. The magiſtracy, with the greateſt part of the burghers, are Lutherans; but the reſt of the popiſh religion. The cathedral, which belongs to the latter, is richly ornamented, particularly with fine paintings, and among its antiquities is the idol Irmenſul, which ſtands fronting the grand choir. Over the croſs-way is the nobility hall, which is finely painted in freſco; here is alſo the place where the diet is opened, together with the chapter-room, the treaſury, and a library. Near the cathedral ſtands the chancery, which was once the reſidence of the biſhop; but at preſent of the ſtadtholder. The cathedral yard, in which ſeveral of the canons have their dwellings, is planted with rows of trees. In the ſame place alſo ſtands the Jeſuits college, which beſides its other ornaments, is remarkable for its fine hall. The ſeminary, which belongs to it, conſiſts of nine claſſes. Holy Croſs abbey is alſo a noble edifice, that has a ſplendid church. Here are two convents of Benedictine monks, a Carthuſian monaſtery, with another for Capuchins, and two nunneries. The Lutherans are poſſeſſed of eight pariſh churches, the principal of which is that of St. Andrew, in the Old Town. There the ſuperintendent reſides, and in that alſo is the *Gymnaſium Andreanum*, a large elegant ſtructure, which contains a good library. The church was once collegiate, but on its being ceded to the Lutherans in 1542, the deans and canons were removed to the Liberty, where they ſtill reſide, and hold their meetings every year. The Latin ſchool of St. Lambert is under the direction of four maſters. The Jews have a ſynagogue here. This was antiently one of the Hanſe towns; but the calamities it ſuffered by war in 1632 and 1634, in both which years it was beſieged and taken, have been of irreparable prejudice to it.

Peina is ſituated in a marſhy country on the Fuſe, and was formerly reckoned among the fortreſſes. The greateſt part of the inhabitants are Lutherans; but the patronage of the Lutheran town and pariſh church, is lodged in the biſhop. This garriſon conſiſts of one company of foot, who are in the biſhop's pay. In a corner of the town, ſtands the epiſcopal palace, with a Capuchin convent, and near them is a ſuburb called the Dam, chiefly inhabited by ſhop-keepers and Jews.

CHAP. XIII.

Of LUSATIA.

SECT. I.

Of the Situation, Extent, Produce and Rivers of Luſatia in general; with the Religion, Learning, Manufactures and Commerce of the Inhabitants.

LUSATIA, which ſome authors place in Auſtrian Sileſia, and others in Saxony, extends in length from the north-weſt to the ſouth-eaſt, and is bounded on the eaſt by Sileſia, on the ſouth by Bohemia, on the weſt by Miſnia, and on the north by Brandenburg. It is five hundred and ſeventy miles in compaſs, and is divided into the marquiſates of Upper and Lower Luſatia. The former abounds more in mountains and hills, and enjoys a purer air than the latter, in which are found many boggy and mooriſh tracts; but has a great number of woods, and thoſe finer ones than are to be met with in Upper Luſatia, where the fertile tracts of that country have a great ſcarcity of timber. In the mountainous tracts of Upper Luſatia, on the borders of Bohemia and Sileſia, is but little room for agriculture. The heaths on the confines of Lower Luſatia conſiſt of a poor ſoil, which are of but little uſe except for hunting.

In each of theſe marquiſates wheat, rye, barley, and oats are cultivated; as alſo much buck-wheat, together with peas, beans, millet, lentils and flax. With reſpect to orchard and garden fruits, as alſo to the culture of hops, tobacco, and wine, Lower Luſatia has greatly the preference. The inhabitants alſo make ſome white and red wine. However, the produce of this country is not ſufficient for the ſupply of the people, and therefore corn, fruit, hops, garden ſtuff and wine, are imported into the Luſatias. The breeding of cattle is very conſiderable; there is alſo no want of veniſon, and the rivers, lakes, and ponds yield a variety of fiſh.

Here are quarries of ſtone, and in the mountains are dug cryſtals, agates, and jaſpers. This country has alſo an allum-work, and a vitriolic and copper water, and in ſeveral places is found very good iron-ſtone.

In the Luſatias riſe the river Spree, the Schwartze-Elſter, and the Pulſnitz; and the Neiſſe, which riſes in Bohemia, has its courſe chiefly in Luſatia, where it receives ſeveral ſmall rivers, and below Guben diſcharges itſelf into the Oder.

Some ſparks of the Chriſtian religion were ſcattered here in the ſeventh century; but ſeveral hundred years paſſed before the people could be brought under the Romiſh church, and the compulſion employed on that occaſion muſt neceſſarily have exaſperated them, while it rendered numbers of them hypocrites. However, from the eleventh century, many convents and churches became erected in the country. The doctrines of Luther were here received ſo early as the year 1521, and ſpreading by degrees, became the prevailing church, as it continues even to this day. There are, however, ſeveral popiſh convents, churches, market towns, and villages, ſcattered through the country.

Learning is much eſteemed in both marquiſates, which have produced many perſons who rendered themſelves illuſtrious by their literature. In the thirteenth century the groſs ignorance in which this country was involved began to vaniſh, and from the year 1450 to the Reformation, it ſtill increaſed, men of learning arriving from foreign countries, who brought books and the ſciences along with them, and by theſe the ſchools were improved. Learning, however, was not thoroughly eſtabliſhed till after the Reformation.

Luſatia would be unable to ſupport its inhabitants without the aſſiſtance of the arts; but the numerous woollen and linen manufactures afford the inhabitants all the neceſſaries of life. Theſe flouriſh principally in Upper Luſatia, and in ſeveral towns cloth manufactures have been carried on ſo early as the thirteenth century, and by this means have raiſed thoſe towns to a flouriſhing ſtate. The cloths of Luſatia are of different kinds, and the beſt of them little inferior to thoſe made in Holland. Prodigious quantities of ſtockings, ſpatterdaſhes, caps and gloves are alſo made here. The conduct of the emperors Ferdinand the Second and Third, together with that of Leopold towards the Proteſtants in Bohemia and Sileſia, cauſed vaſt numbers to retire to Upper Luſatia, where they erected villages chiefly in the mountains, and generally employed themſelves in the weaving of linen. Hence there are made here all ſorts of linen from unbleached and bleached yarn common and fine, as alſo fine white damaſk and white ticking. Various ſorts of coloured and printed linens are made here, and there are likewiſe in Luſatia good manufactories of hats, leather, paper, gun-powder, iron, glaſs, and the bleaching of wax.

By means of theſe manufactories a conſiderable trade is carried on, which though not ſo great as formerly, exceeds the value of the importation in ſilk, wool, and yarn, employed for their manufactures, and of the foreign ſilks, gold and ſilver lace, wines, ſpices, corn, fruit, garden-ſtuff, and hops, brought into the country.

The marquiſates of Upper and Lower Luſatia are remarkably different with reſpect to their arms, conſtitution, and government.

SECT. II.

Of the Conſtitution, Government, Arms, and principal Places in Upper and Lower Luſatia.

THIS marquiſate contains two ſorts of ſtates, viz. thoſe of lands and towns. The land-ſtates are divided into, firſt, the ſtate-lords, who have all their vaſſals and proper judicatories; ſecondly, the prelates, as the dean of Budiſſin, the abbeſs of Marienſtern and Marienthal, and the prioreſs of Lauban. The king of Bohemia has the ſupreme right of protection over the catholic foundations, cloiſters and clergy, in both marquiſates; but this extends only to religious affairs; they being in every thing elſe ſubject to the government of the country; and the dean of Budiſſin with the cloyſters of Marienſtern and Marienthal perform homage to the elector of Saxony. The third diviſion of the land-ſtates conſiſts of the gentry and commonalty, as counts, barons, nobles and burgeſſes, poſſeſſors of knights fees and fiefs.

The ſecond claſs of the ſtate conſiſts of the immediate ſeignioral towns, called by way of eminence The Six Towns, which are ranked in the following order, Budiſſin, Gorlitz, Zittau, Lauban, Camenz, and Lobaw.

Theſe two ſtates, in all conſultations relating to the common concerns of the country, form two voices, viz. the ſtates of the country one, and the united ſix towns the ſecond. They alſo aſſiſt in drawing up all ſuch reſolutions and regulations as have a relation to the common benefit and welfare of the country; and without firſt obtaining their opinion and free conſent, no taxes can be laid, nor any thing done that claſhes with the conſtitution of the marquiſate.

Theſe ſtates aſſemble at the land diets, which are either ordinary or extraordinary; the firſt are held three times a year at Budiſſin, and the laſt only upon extraordinary occaſions.

The arms of the marquiſate of Upper Luſatia are a wall or, ſtreaked with black, and erected in the manner of battlements in a field azure. In the ſhield it bears an helmet crowned, on which ſtands the wall or, with two eagles wings azure.

The arms of the marquiſate of Lower Luſatia are, an ox gules in a field argent, which ſtands from the left to the right.

All Luſatia was formerly a part of Bohemia; but rebelling againſt the emperor in 1620, John George elector of Saxony reduced it; for which ſervice, by the treaty of Prague in 1635, it was ſettled on the elector of Saxony, except ſome parts of Lower Luſatia, which were left to Brandenburg.

The marquiſate of Upper Luſatia is divided into two circles, and to each of theſe belong inferior circles; the principal towns in which are the following,

Budiſſin, or Bautzen, is the capital of the whole marquiſate, and is reckoned the firſt of the ſix towns. It ſtands in a mountainous ſituation, on the banks of the Spree, and is fortified in the antient manner. It is conſiderably large, well built and populous. The caſtle of Ortenburg, which ſtands on a high rock, is ſeparated from the town by a ditch and rampart, and yet is within the town walls. There is here a cathedral church dedicated to St. Peter, half of which belongs to the Lutherans, and the other half to thoſe of the inhabitants, who are of the Romiſh church. Budiſſin has likewiſe a ſeparate church belonging to the Lutherans, and another to the Papiſts; beſides which there are three hoſpitals, with a church belonging to each. The other buildings are a council-houſe and the council library, a celebrated academy, and an orphan-houſe. This town carries on a conſiderable trade in linen, hats, ſtockings, gloves, manufactures of Turky and glazed leather, cloth, fuſtian, &c. It has frequently ſuffered by fire, and has been ſometimes entirely burnt down.

Gorlitz, the principal town of the circle of the ſame name, and the ſecond of the ſix towns, is ſituated on the Neiſſe, in the fifteenth degree ſeven minutes eaſt long. and the fifty-firſt degree ten minutes north lat. 20 miles to the eaſt of Budiſſin, and is built and fortified in the antient manner. Within its walls are three churches, a celebrated academy, an orphan-houſe, and the bailiff's ſeat, in which the knights of this circle meet once a year. Without the walls are three churches, an hoſpital, and what is called the Holy Sepulchre, built after the model of the Holy Sepulchre at Jeruſalem. The cloths made in this place are beautiful, but the trade in this article is not near ſo conſiderable as formerly.

Zittaw is one of the beſt towns in Luſatia; it is fortified in the antient taſte, but finely built, and carries on a conſiderable trade in cloths, linen, and blue paper. It contains within its walls two churches, an hoſpital, a library, a good academy, and an orphan-houſe; but without there are three churches, which are only uſed for funeral ſermons, and three hoſpitals, in one of which is a chapel.

Herrenhuth, a famous place in the circle of Zittaw, firſt founded in the year 1722, by ſome Moravian brethren, who ſettled there in the fields of the village of Berthelſdorf, belonging to the late count Zinzendorf; but were afterwards greatly encreaſed, and this place became the chief nurſery of the Herrenhuthers, who conſidered count Zinzendorf as their biſhop and father.

The ſtates of Lower Luſatia are alſo divided into land and town-ſtates. The former conſiſts of the prelates, the lords who are poſſeſſors of ſeigniories, and the knights, to which claſs belong the counts, barons, and nobles, poſſeſſors of knights fees and fiefs. The town eſtates are compoſed of the deputies of the four circle towns Luckaw, Guben, Lubben, and Kalaw.

Each circle holds in its circle town a circle aſſembly, under the inſpection of the land-elders. The ſtates of the country conſtitute the leſſer and greater ban, who, in weighty affairs, and caſes requiring diſpatch, aſſemble with the privity and approbation of the upper office. The land-diet here hold two annual voluntary diets. But when the ſuperior cauſes the ſtates to be ſummoned together at his diſcretion, and propoſals to be laid before them by commiſſaries deputed for that purpoſe, ſuch convention is called a great land-diet.

The principal towns in Lower Luſatia are,

Soraw, or Zarow, one of the moſt antient towns in all Luſatia, has a pretty ſtrong caſtle, to which belongs a church, a pleaſure-garden, and alſo a good ſchool. It has five other churches, and is the ſeat of the chancery and conſiſtory. The town has been ſeveral times almoſt deſtroyed by fire; and near it is a hunting ſeat and a park.

Luc-

Luckaw, which is eſteemed the capital of Lower Luſatia, is ſeated on the rivulet of Geila, and contains a Latin ſchool, a pariſh church, a cloyſter-church, a houſe of correction and poor-houſe founded in the year 1744, with another church, and two hoſpitals. In 1644 and 1652 it was demoliſhed by fire.

Guben lies on the Neiſſe, which below it falls into the Oder. It is a pretty large town, and, beſides two pariſh-churches, has an hoſpital, which has likewiſe a church, a burying-church, a Latin ſchool, and a ſalt-office. Four villages which belong to it have ſome good manufactures of cloth, and there is here made a pretty deal of good wine.

CHAP. XIV.

Of the Circle of BAVARIA, including the Electorate of BAVARIA, the UPPER PALATINATE, and the Archbiſhopic of SALTZBRUG.

SECT. I.

Of the Circle of Bavaria in general, and more particularly of the Electorate of Bavaria; its Extent, Produce, and Manners of the Inhabitants, their Religion, and Government; with the Title and Arms of that Electorate; and the Bavarian Order of St. George.

THE circle of Bavaria is ſurrounded by the circles of Swabia, Auſtria, and Franconia, and by the kingdom of Bohemia, and derives its name from the dutchy of Bavaria, which is the largeſt and moſt conſiderable part of it.

Of this circle the elector of Bavaria and the archbiſhop of Saltzburg are joint ſummoning princes and directors, the convocatory being likewiſe held jointly by them; but the *directorium* is alternate. The diet of the circle is moſt uſually held at Ratiſbon, or Waſſerburg, though it is ſometimes convened at Landſhut, or Muldorf. The elector of Bavaria is hereditary commander in chief of the circle, by virtue of which office he has the direction of all military affairs.

We ſhall begin with the electorate of Bavaria, which contains the principal part of the circle, but it is not eaſy to aſcertain with any degree of exactneſs the proper extent of this electorate; for maps themſelves differ with reſpect to its greateſt length and breadth. Bavaria is, however, according to The Preſent State of Germany, a hundred and thirty miles long, and one hundred broad.

Upper Bavaria is partly mountainous and woody, and partly marſhy, abounding alſo in large and ſmall lakes, and is in general fitter for paſturage than tillage; but Lower Bavaria, which is for the moſt part level, is more fruitful: however, this electorate in general abounds in grain, paſture, fruits, woods, and foreſts; producing alſo a great number of cattle, and plenty of game and wild-fowl. It has ſome ſalt-works, and a mine of ſilver, another of copper, and one of lead; and in ſeveral places are quarries of very fine marble. The Upper Palatinate is extremely mountainous; but it is covered with woods, and has plenty of graſs, and, where cultivated, produces corn. The country is able to ſupport its inhabitants, particularly by means of the great number of its iron and lead-mines, its large woods and paſtures.

The principal river in this country is the Danube, which iſſuing out of Swabia waters the electorate from weſt to eaſt. The large inland lakes are ſaid to be ſixteen in number, and the ſmall ones a hundred and ſixty. The rivers, lakes, and ponds abound in fiſh, particularly the numerous ponds in the Upper Palatinate, which have an uncommon plenty.

In all Bavaria are reckoned thirty-five towns, and ninety five open and encloſed market-towns. In the ſeveral bailiwics are upwards of a thouſand caſtles and ſeats, and there are ſaid to be in Bavaria eleven thouſand ſeven hundred and four villages and hamlets.

Though the Bavarians are eſteemed rude, and are called by the other Germans Hog-drivers, they are found to be as hoſpitable and courteous as their neighbours. The people are in general poor, and their clergy ſuffer them to continue in the moſt deplorable ignorance with reſpect to religion, their adorations being principally paid to ſaints and images. They are ſaid to be far more ſuperſtitious than the Swabians; for in almoſt every town ſome bone or relic is held in higher veneration than the welfare and honour of their country: yet they are more polite and ingenious than the people of Swabia; and though they cultivate the ſciences, they are more addicted to arms than to arts, and make good ſoldiers.

The ſtates of Bavaria conſiſt of three claſſes, the prelates, the knights, and nobility; to which alſo belong the counts and lords, and the burghers of the ſeveral boroughs and market-towns. Provincial diets are here very rare, but a committee of the ſtates aſſemble annually at Munich, or as often as the ſtate of affairs requires.

No other religion is tolerated here but that of popery. The Lutheran and Calviniſt doctrines had indeed obtained a ſuperiority in the Upper Palatinate; but that country falling into the hands of the elector of Bavaria, popery was reſtored by force. There are, however, a great number of Lutherans ſtill. The pariſhes in the electorate amount to about fifteen hundred. The vicarages, chapels of eaſe, and other chapels, are near two thouſand in number, and the churches are ſaid to amount to twenty-eight thouſand ſeven hundred and nine. Theſe churches are ſubject to ſeventy-one rural deans. There are likewiſe eighty-ſix remarkable convents, and twelve collegiate foundations. Manufactures are here greatly increaſed and improved, particularly thoſe of ſilk ſtuffs, velvets, tapeſtry, coarſe cloth, woollen ſtuffs, and ſtockings, very good clocks, and watches; but its chief exports conſiſt of cattle, grain, wood, ſalt, and iron.

The titles of the elector are, By the grace of God duke of Upper and Lower Bavaria, as alſo of the Upper Palatinate; palſgrave of the Rhine, arch-ſteward of the holy Roman empire, and elector and landgrave of Leuchtenberg.

The arms of the elector are quarterly, an eſcutcheon of pretence. In the laſt of theſe quarters is the imperial monde or, in a field gules, denoting the office of arch-ſteward of the empire: in the upper dexter and lower ſiniſter quarter are lozenges azure, and argent for the dutchy of Bavaria; and in the upper ſiniſter and lower dexter is a lion gules crowned or, for the palatinate of the Rhine. During an interregnum, when the elector of Bavaria exerciſes the vicariate of the empire, he is allowed to bear the imperial ſpread-eagle, with his family ſhield on the breaſt.

The Bavarian order of St. George was revived in 1729 by the elector Albert. The knights of this order are ſtiled Defenders of the immaculate conception of the bleſſed Virgin Mary, and muſt produce unqueſtionable proofs of the nobility of their anceſtry for eight generations in both lines. The elector is grand maſter, and its enſign is a croſs enamelled blue, with St. George in the middle; on the reverſe of which is the name of the reſtorer of the order in a cypher, ſurrounded with the electoral cap, and at the four angles theſe letters I. V. P. F. ſignifying *Juſtus velut palma florebit*, that is, "The righ-" teous ſhall flouriſh, like a palm tree." This croſs is wore pendant to a broad ſky-blue ribbon with a black and white border.

In the electoral college the elector of Bavaria has only the fifth ſeat, though he is the ſecond of the lay electors; he

he is not only a member of the college of princes, but has even the firſt ſeat and vote in it.

The revenues of the elector ariſe out of ſalt, beer, wine, brandy, oak-maſt, veniſon, wood, mines, exciſe, coinage, tolls, contributions, and other ordinary ſources; beſides the impoſts raiſed on extraordinary occaſions. His ordinary annual revenue is eſtimated at between five and ſix millions of guldens.

The elector's military force conſiſts of regulars and militia; the former of theſe in times of peace uſually amount to about twelve thouſand; but in war they have been augmented to twenty-five, and even to thirty thouſand.

SECT. II.

A Deſcription of the principal Places in the Electorate of Bavaria, particularly of Munich the Capital, with a Deſcription of the Palaces of the Elector, and of whatever is moſt worthy of Notice.

WE ſhall now deſcribe the moſt remarkable places in Bavaria, in which we ſhall mention whatever deſerves the notice of the curious.

Munich, in Latin Monachium, is a fortified city ſeated on the Iſer, in the forty-eighth degree twenty two minutes north latitude, and in the eleventh degree forty-one minutes eaſt longitude. It is the capital and reſidence of the elector, and has broad ſtreets extending in a direct line, adorned with a multitude of noble edifices of all kinds. The palace and other buildings belonging to the elector, together with the churches, ſixteen monaſteries, and other religious ſtructures, take up near half the city. The precinct of the Auguſtines alone conſiſts of ſeveral ſtreets, which bring them in an annual rent of three thouſand guilders.

The elector of Bavaria's palace is an elegant ſtructure, conſiſting of four courts, the two fineſt of which are called the Prince's and Emperor's Court; the former is adorned with ſeveral braſs ſtatues: in the latter a broad flight of ſteps of beautiful red marble leads to the emperor's hall, which is a hundred and eighteen feet in length, and fifty-two in breadth; and in it is, among other things, a ſtatue of Virtue of one ſingle piece of porphyry. In the chamber of antiquities are two hundred marble ſtatues and buſts of Roman emperors, with five hundred antiques, as lamps, inſcriptions, baſſo relievos, &c. moſt of which were brought from Italy.

Among the valuable curioſities in the treaſury is a cabinet of many large pieces of work in cryſtal, among which is a ſhip ſome ſpans long, with a pilot, and all the tackling of the fineſt gold. A hill, with a caſtle upon it, all of oriental pearls. St. George on horſeback of red agate, with his armour of diamonds ſet in gold; and the Bavarian family, each perſon cut out of a piece of blue chalcedony. A double brilliant diamond of the ſize of a middling nutmeg. A larger, which coſt a hundred thouſand guilders. A ſet of buttons and loops of diamonds and rubies ſet between. A ſet only of diamonds, the buttons of extraordinary beauty, not inferior to thoſe worn by Lewis XIV. when he gave public audience to the Perſian ambaſſador, and of a ſuperior luſtre to the French; the late elector having been twenty years, with great difficulty and incredible expence, in compleating the collection. An ivory cloſet, with figures in relievo of moſt curious workmanſhip, in which are preſerved eleven hundred and forty-four gold Roman medals. In the year 1729 the palace, and particularly the chamber of rich curioſities, ſuffered greatly by fire, and in 1750 a whole wing of it was burnt down. Towards the eaſt ſtands the elector's arſenal, and to the northward lie the park and pleaſure-gardens, near which is a large edifice for tournaments.

On the weſt ſide of the palace, and oppoſite to it, ſtands the fine houſe built by count Preiſing, maſter of the horſe, which is a great ornament to the city, its four ſides anſwering to ſo many ſtreets. The pillars of the ſtable are of red marble, and every horſe feeds out of a marble manger, that coſt twenty-five guilders.

In this part is another palace built by duke William. In the largeſt market-place is a lofty marble pillar, upon which ſtands a braſs ſtatue of the Virgin Mary: there are here alſo two large fountains, and on the ſides of the market-place is the town-houſe, in which the ſtates hold their meetings; together with ſeveral lofty houſes ornamented with decorations of paintings on the front.

The principal eccleſiaſtical buildings are the collegiate church dedicated to the Virgin Mary, in which is the magnificent monument of black marble of the emperor Lewis IV. of Bavaria, adorned with ſix large and ſeveral ſmaller ſtatues of braſs. About ten or twelve paces from the entrance of the great door; one of the ſtones of the pavement is marked with a double croſs, and a perſon ſtanding upon this ſtone finds the pillars of the church ſo placed as to intercept the view of all the windows.

Among the other eccleſiaſtical buildings, the moſt remarkable is the church of St. Peter, with the convents of the Auguſtines, Capuchins, Carmelites, Franciſcans, and Theatines; as alſo the Jeſuits college, in which is a valuable library: both their convents and church are exceeding fine, and the laſt very large, light, and lofty. The veſtry is very rich, and among their relics they ſhew a joint as big as that of an elephant, which they pretend was one of the joints of St. Chriſtopher's backbone. The other buildings worthy of notice are the nunneries of St. Clara, Bridget, and Ridler; the reſidence of the Engliſh ſociety; the hoſpital of the Holy Ghoſt, of St. Elizabeth, or the Duke's, and St. Joſeph.

They have no religion but that of the Roman, to which they are ſo bigotted, that they look upon thoſe of another perſuaſion as monſters rather than men; and among the feſtivals performed here, the proceſſion at that of *Corpus Chriſti* appears very extraordinary. Here march the deputies of all the trades and manual arts, with coſtly flags carried before them. Every member of all the religious orders join in the proceſſion; and a great number of religious hiſtories are exhibited on triumphal cars, by children richly dreſſed. At the head of their reſpective orders ride St. George and St. Maurice, in Roman habits; while St. Margaret is repreſented by a young lady, dreſſed like a veſtal, leading after her a large dragon, in which two men are uſually encloſed to give it the neceſſary movements. The four mendicant orders precede the hoſt, which is carried under a ſplendid canopy; after which come the elector and his conſort, both holding a lighted taper. They are followed by the maſter of the houſhold, ſome court ladies, and after them the whole court. The proceſſion is cloſed by the garriſon, burghers, and peaſants; and, while the clergy ſtop at four different places to give the benediction, they are anſwered by ſalutes of eight guns from the ramparts.

On the other ſide of the river Iſer lies Au, the remarkable places in which are the houſe of duke Albert, with its chapel, and the elector's manufactory. Above this place ſtands a convent belonging to the order of St. Paul. In Munich are manufactures of velvets, ſilk, wool, and tapeſtry.

At the diſtance of nine miles from Munich is Sleiſheim, an elegant palace belonging to the elector. The entrance is very grand, both the pavement and the columns being of red and grey marble; and the ſtairs are adorned with columns of green marble, brought from Brixen. In the firſt hall are two large paintings of the raiſing of the ſiege of Vienna, and the battle of Hagaz; and in the victory hall, which is contiguous to it, are the battles of Belgrade, Peſt, and ſeveral others. On the ſide of the palace towards Munich is a noble gallery of pictures, among which are two pieces of Annibal Caracci, for each of which Maximilian, the firſt elector of the Bavarian; family paid forty thouſand guilders, and ſeveral large hunting-pieces by Rubens. In another chamber is the ſlaughter of the innocents at Bethlehem, finely painted by Peter Paul Rubens; in which the various agitations of the mothers ſupplicating, lamenting, ſtruggling, and fainting, are incomparably expreſſed. But the grandeſt collection is in a particular apartment, covered with ſmall pictures; nothing has a place there, but what is eſteemed among the nobleſt productions of that art. In another chamber is Alexander's

firſt battle againſt Darius; a moſt admirable piece, painted by Albert Durer, who has beſtowed incredible labour on it: it contains ſeveral thouſand men, yet the hair of their heads and beards, with the ſmalleſt joints of their armour, and other minutiæ, are all diſtinctly expreſſed.

At the diſtance of half a league from Munich is the palace of Nymphenburg; which has not the grandeur of Sleiſheim; but its fine gardens and water-works render it a more agreeable ſummer reſidence. In ſome of the apartments are portraits of the beauties of the French court, views of ſeveral palaces of this dutchy, likewiſe a chimney-piece and two tables of white marble inlaid with gold, and colours, in imitation of enamel. In the garden is a grand caſcade and baſon, with ſeveral figures of braſs gilt. Among the fine walks and trees of this garden ſtands Bademburg, a delightful ſtructure, conſiſting of elegant grottos and a large bath, into which both cold and warm water may be conveyed. The floor is overlaid with copper, and the wall decorated with porcelain and conduits. Along the roof is an iron lattice, partly gilt, and of very curious workmanſhip.

Oppoſite to this place is the mall, and the bowling-green, by which ſtands a ſtructure called Pagodenburg, the chief uſe of which is for the elector, after violent exerciſe at thoſe games, to change his linen, and other apparel. Here are alſo ſeveral little cabinets in the Chineſe taſte, and other contrivances equally ornamental and convenient.

Nearer the palace ſtands a pretty hermitage, which is ſo natural an imitation of a ruinous building, that it never fails to raiſe the beholder's admiration. In ſome places it ſeems as if endeavours had been uſed to repair it with lime and ſtone; in another part you are afraid that the cracked walls and the bricks, which ſcarce hang together, will immediately give way and cruſh you in the ruins. In this ſtructure, which ſtands in a kind of deſart, is a large grotto, in which is a conſecrated altar, and on it a crucifix, and two candleſticks. The other rooms have no other ornament but a ſmall library of books of devotion in French bindings. Underneath is a kitchen and cellar, where the utenſils are only a neat ſort of earthen ware.

At the diſtance of nine miles from Munich alſo lies another electoral ſeat, called Starenberg, where the court ſometimes takes the diverſion of water-hunting A ſtag is forced into a neighbouring lake, the hounds purſuing him, followed by the huntſmen in boats, and their highneſſes in a ſplendid barge, which carries twenty-four braſs guns.

The court here alſo often take the diverſion of hunting the heron, and every year at the concluſion of this ſport, an heron that has the good fortune to be taken alive, is ſet at liberty, with a ſilver ring put on its leg, on which is engraved the name of the reigning elector. Mr. Keyſler mentions one of theſe birds being taken a ſecond time, that had on its ring the name of duke Ferdinand the preſent elector's grandfather; ſo that it had ſurvived its former adventure above ſixty years: they put a ring with the preſent elector's name on its leg, and reſtored the bird to liberty a ſecond time. Upon this occaſion the ſame author mentions an eagle that died at Vienna in 1719, after a confinement of one hundred and four years; and adds, that it is probable that theſe and the like birds in the enjoyment of their natural freedom reach to a much greater longevity.

Ingolſtadt is a fortified town, pleaſantly ſeated on the Danube. It is of an indifferent ſize and ſtrength, with broad, ſtraight, and well paved ſtreets. The houſes are moſtly painted white on the outſide; but the town is poor and ill peopled. It contains an upper and lower pariſh church, together with three others, a college of Jeſuits, two convents of monks, and one of nuns, and an univerſity founded in 1472, and enlarged in 1746, in which is a good library, and a cabinet of antiquities. This town was beſieged by the Swedes in 1632, without ſucceſs; but was taken by the Auſtrians in 1743.

Reichenhall, a town ſeated on the Sala, with a rich ſalt ſpring in it, the water of which is partly boiled here, and partly by means of a wheel, thirty-ſix feet in diameter, thrown up to the higher parts of a lofty houſe, and from thence conveyed by means of leaden pipes to the diſtance of three German miles to Trauenſtein, and there boiled; the latter of theſe places abounding much more in wood, and having greater conveniences for exportation. On the mountains over which theſe pipes run are ſmall houſes and water-works at proper diſtances, in order to throw the water higher. Near the ſalt ſpring is a ſtream of freſh water, by the ſwift current of which their wheels and water-engines are worked; but as both ſprings are ſurrounded with hills, and the place in danger of being overflowed by the conflux of theſe waters, an aqueduct was undertaken above three hundred years ago, and compleated at a prodigious expence. This is, indeed, a work that cannot be beheld without amazement; its channel runs under the town of Reichenhall, and under ſeveral gardens and fields at the depth of twelve fathoms in ſurface, and is a mile and a half in length to the place where the water breaks out to day-light, with great impetuoſity. One paſſes through this aqueduct, ſays Mr Keyſler, within a quarter of an hour in boats by candle-light, and the motion is ſo rapid, that the boat muſt often be checked. The water is uſually between three and four feet deep; but is frequently ſwelled by the rains, ſo as not to leave room for the paſſengers in the boat to ſit upright. This canal is five feet broad, and every eight or ten years the bottom is cleared of the ſtones carried thither by the floods or freſh water, or wantonly thrown down the ſpiracles or openings, which in the form of towers riſe into the open air, and through ſome of which one may ſpeak from the walls of the city with thoſe who are going along the aqueduct. The roof with reſpect to duration, appears to be an everlaſting work, it being not only of free ſtone; but in many places over-laid with a very hard kind of roſin, as with a varniſh, ſo that it looks like one entire ſolid piece. The deſcent to this ſubterraneous canal is by the ſteps of the tower near the ſpring of the Sala, whoſe water overflowing, runs about fifty paces before it diſcharges itſelf into the freſh-water ſtream, and then does not immediately mingle with it.

SECT. III.

Of the principal Places in Lower Bavaria, particularly of Landſhut, the imperial City of Ratiſbon, &c.

THE principal town in Lower Bavaria is Landſhut, which is ſeated on the Iſer, in the forty-eighth degree forty-one minutes north latitude, and in the twelfth degree twenty-five minutes eaſt longitude, forty-ſix miles to the north of Munich. It is not only well built and ſtrongly fortified; but ſtands in the richeſt and moſt pleaſant part of all Bavaria, and is the ſeat of the elector's lieutenant for Lower Bavaria, who has a court here and ſeveral offices. It has a bridge over the Iſer, and on the other ſide a ſuburb called Saldenthal, in which is an abbey of Ciſtercian nuns. The town contains an electoral palace ſeated on a hill, with another which ſtands in the midſt of the town. Its principal church, dedicated to St. Martin, has a tower, which is eſteemed the higheſt in the empire, and hence it obtained the name of Lands-hut, which ſignifies The hat of the country. The new buildings, added to the duke's palace, conſiſt of a neat piece of architecture in the Italian ſtile. There is here alſo a pariſh-church dedicated to St Job, a college of Jeſuits, three convents of monks, and the ſame number of nuns.

The imperial city of Ratiſbon, called by the Germans Regenſburg, is a large fortified and populous town, ſeated on the Danube, in the forty-ninth degree ten minutes north latitude, and in the twelfth degree eaſt longitude. This city is the capital of the popiſh biſhopric of Ratiſbon, yet both the magiſtracy and burghers are of the Lutheran religion. The river Regen runs through the town, and then falls into the Danube. The city is well fortified with a double wall, ditches, and ramparts,

parts, and ſtands in a ſoil abounding in corn, paſture, and vineyards, whoſe grapes produce a ſtrong and palatable wine. The largeſt church belonging to the Lutherans is that of the Trinity, and they have alſo an academy, in which are eight teachers. There are here four immediate ſtates of the empire, which conſiſt of the biſhopric, and the imperial foundations of St. Emmeran, with the abbies of Upper and Lower Munſter. There are here alſo a college of Jeſuits, a cloiſter of St. James, inſtituted by Scotſmen of the popiſh religion; the collegiate church of Altkapell, the nunneries of St. Clara and St. Paul, and the hoſpital of the Holy Croſs. Here the imperial diet often meet in a large upper room hung with tapeſtry, in which is the emperor's throne of cloth of gold. The elector Palatine has alſo two fine palaces in the city, and there are ſeveral others belonging to the neighbouring prelates. Among the other public buildings is a ſtone bridge of fifteen arches over the Danube, the moſt ſubſtantial ſtructure of the kind either on this river, or on the Rhine: it is twenty-three feet broad, and about one thouſand and ninety-one in length. It is ſupported by ſquare piers, and defended by buttreſſes againſt the force of the ſtream and ſhoals of ice.

The biſhop of Ratiſbon is a prince of the empire, and ſits on the bench of eccleſiaſtical princes between the biſhops of Freyſing and Paſſau, and on that of the circle of Bavaria, between the ſame prelates. The limits of this biſhopric comprehend two collegiate churches, twenty-eight abbies and prelacies, and twenty-nine rural deaneries, to which belong one thouſand three hundred and eighty-three pariſhes, chapels of eaſe, and chaplainries. This biſhop, who is a ſovereign prince, has his conſiſtory, his council, and treaſury; but the elector of Bavaria holds the biſhop's court in the city of Ratiſbon.

The abbey of St. Emmeran, which conſiſts of Benedictine monks, is under the government of an abbot, who has his ſeat at the diet of the empire on the Rheniſh bench of prelates, and has alſo a ſeat and voice in the diet of Bavaria. The church of this cloiſter boaſts of keeping the compleat body of St. Denis the Areopagite, which they ſay was ſtolen out of the abbey of St. Denis in France, though the latter maintain that they are ſtill in the poſſeſſion of it; yet in the palace chapel of Munich is one of his hands, and both in the cathedral church at Bamberg, and in that of St. Vitus, in the cathedral at Prague, the head of this ſaint is ſhewn.

The two princely abbies of Upper and Lower Munſter are under the government of two abbeſſes, who have the title of princeſſes, and have likewiſe a vote at the diets of the empire, and the circle of Bavaria; but the ladies of theſe foundations may marry out of them.

Within the circle of Bavaria is alſo the city of Freyſing, the capital and reſidence of the biſhop, who is a ſovereign prince. It ſtands on two hills on the little river Moſach, not far from the Iſer, and commands a moſt delightful proſpect into the electorate of Bavaria, the archbiſhopric of Saltzburg and Tirol. One of theſe hills is within the city walls, and upon it ſtands the biſhop's palace, with a cathedral, a Benedictine church, and the collegiate churches of St. John and St. Andrew, St. Peter's chapel, and other public edifices. In the other part of the city is a large market-place, in the center of which ſtands a beautiful marble ſtatue of the virgin Mary, with the church of St. George, a ſeminary of Benedictines, a Franciſcan convent, an orphan-houſe, and an hoſpital. Without the city are the biſhop's gardens, and a convent of Præmonſtratenſes. On the other hill, which lies to the weſt of the city, is a Benedictine abbey, and below it the collegiate church of St. Vitus.

SECT. IV.

Of the Upper Palatinate, or Palatinate of Bavaria, the Dutchies of Neuburg and Saltzbach, and the Biſhopric of Paſſau, with the principal Places in each.

THE Upper Palatinate, which lies on the Danube, belongs to the duke of Bavaria, and is ſometimes called the Nordgaw, from its lying to the north of the elector's other dominions. It is bounded on the north by Voigtland in Upper Saxony; on the eaſt by Bohemia and Auſtria; on the ſouth by the Danube, which ſeparates it from the dutchy of Bavaria, and by Swabia and part of Franconia on the weſt.

It is a mountainous, rocky country, but rich in mines of ſilver, copper, and iron; ſome of its valleys, however, produce corn and good paſture; and they have likewiſe ſome vineyards. But this dutchy does not entitle the elector to a particular ſeat, either in the college of princes, or the circle of Bavaria.

The capital of the Upper or Bavarian Palatinate is Amberg, which is ſituated on the little river Ilz, or Ils, which runs through it; and is ſo well fortified, that it is reckoned one of the ſtrongeſt towns in Upper Germany. Its principal ornaments are the caſtle and armoury, both which are handſome ſtructures, as are alſo the electoral palace, the cathedral dedicated to St. Martin, and the college of Jeſuits, which has a beautiful church. This city, which is ſeated in the forty-ninth degree twenty-ſix minutes north latitude, and in the twelfth degree four minutes eaſt longitude, is conveniently ſituated for traffic, it being almoſt in the centre between Ratiſbon, Ingolſtadt, and Nuremberg. Its greateſt trade ariſes from its iron-mines and manufactures, which are ſent down the Nabe to Ratiſbon and other cities.

In the year 1703, the Imperialiſts took this city from the elector, who was put under the ban of the empire, for joining with France in the war then carrying on againſt the emperor Leopold and his confederates. In the war of 1743, between the late elector, the emperor Charles VII. and the queen of Hungary, Amberg, with all the Upper Palatinate, was taken by the Auſtrians in the ſervice of that princeſs.

The principalities or dutchies of Neuburg and Sultzbach form the northern part of the Upper Palatinate, and are reckoned in Bavaria, though they are ſubject to the elector Palatine, who on account of Neuburg has a ſeat and voice both in the diet of the empire, and the circle of Bavaria.

Neuburg enjoys a government of its own, together with a chamber of juſtice, and a prefecturate-office. It has ſtill ſome Lutheran fiefs; but the prevailing religion is the popiſh. The bailiwics belonging to it lie diſperſed. The moſt remarkable places it contains are the following:

Neuburg, or Newburg, the capital of the whole dutchy, and the ſeat of the government, ſtands on a hill, in a good ſituation by the Danube. It is well built and fortified, and has a palace, with a college of Jeſuits, which was formerly a convent of ladies, and other public buildings.

Hochſtet, or Hochſtadt, is a ſmall town ſeated on the Danube; but is well provided with all ſorts of neceſſaries, and has rich corn-fields and good paſtures in its neighbourhood. In 1634, during the civil wars in Germany, the Croats barbarouſly cut off many of the inhabitants, and ruined moſt of the town; but it has been ſince pretty well rebuilt, and defended by a ſtrong caſtle on the Danube, over which is a wooden bridge, a little below the town. This place is moſt famous for the glorious victory gained near it on the ſecond of Auguſt 1704, by the united forces of the Imperialiſts, Engliſh, and Dutch, under the command of the duke of Marlborough and prince Eugene, over one of the compleateſt armies of French and Bavarians that ever took the field, commanded by the elector of Bavaria, and the French marſhals Tallard and Marſin, who were entirely defeated, about twenty thouſand being killed on the ſpot, or drowned in the Danube, and about thirteen thouſand taken priſoners; among whom was marſhal Tallard, who with many officers of rank were brought to England, and remained at Nottingham, where they were allowed their parole, till the year 1712. In remembrance of this victory a pillar was erected with a Latin inſcription; and in acknowledgement of the ſignal ſervices here performed by the duke of Marlborough, the emperor Leopold created him a prince of the empire, under the title of Mindelheim, a place in Bavaria, which in the year 1714, was reſtored to the elector by the treaty of Baden.

Blenheim,

Blenheim, a village ſeated on the Danube, not far from Hochſtet, and which alſo gives name to the above battle.

The principality of Sultzbach has alſo a particular government of its own, together with a tribunal. The inhabitants and churches are partly Lutheran and partly of the Romiſh religion, and the affairs of the Lutheran conſiſtory are managed by the government, in which two Proteſtant counſellors preſide.

The principal town in this diſtrict is Sultzbach, the capital of the principality, and the reſidence of the regency and tribunal, though the number of the inhabitants does not much exceed three hundred. It is, however, divided into two parts, and the upper, which ſtands on a hill, is ſeparated from the lower by a wall. The prince's palace ſtands on a rock oppoſite the upper town. The Lutherans have a church and a grammar ſchool, and the Roman catholics a Latin ſchool and a Capuchin convent.

The biſhopric or principality of Paſſau lies between Bavaria, Bohemia, and Auſtria, and is ſeated on the river Danube. The biſhops were formerly ſuffragans to the archbiſhops of Saltzburg; but are now made independent, and the biſhop of Paſſau in the college of imperial princes ſits on the eccleſiaſtical bench between the biſhops of Ratiſbon and Trent; but in the circle of Bavaria is the laſt among the prelates. To the epiſcopal cathedral, ſo far as its juriſdiction extends over Bavaria, belong two collegiate churches, with thirteen abbies and priories, and ten rural deaneries, containing three hundred and twenty-eight places of worſhip; it alſo extends a great way into Auſtria. The revenues of this biſhopric are ſaid to amount to eighty thouſand crowns a year.

Paſſau, the capital of this biſhopric, is ſeated on the Danube, which at this place receives into it the Inn, and on the other ſide the Ilz, a river famous for its beautiful pearls. It conſiſts of three towns, that properly called Paſſau, lying between the rivers Danube and Inn; the Inſtadt, which ſtands on the other ſide of the Inn, and is joined to the former by means of a bridge; and the Ilzſtadt, which is on the north ſide of the Danube, where it receives the Ilz. The laſt of theſe rivers runs between Ilzſtadt and the mountain of St. George, on which ſtands a caſtle. The city on thoſe ſides that are ſurrounded by the water is without walls; but towards the land ſide is fortified both with ramparts and ditches. The cathedral, which is dedicated to St. Stephen, was, together with the city, burnt down in the year 1662, but has been rebuilt with great ſplendor, and on an eminence near it ſtands the biſhop's palace. Beſides ſeveral pariſh-churches there is in this city a convent of Benedictines, a Franciſcan and a Capuchin convent, with a college of Jeſuits. On the hill, at the foot of which Inſtadt is ſeated, is the Pilgrim church, called Mariahulf, and near the town of Paſſau, properly ſo called, is the convent of St. Nicholas, in which are regular canons of the order of St. Auguſtine: Paſſau enjoys a very good ſituation for trade.

SECT. V.

The Archbiſhopric of SALTZBURG.

Its Situation, Extent, Produce, and Rivers. The Religion and Government of the Inhabitants; with the Power, Titles, Arms, Revenues, and Forces of the Archbiſhop.

THE archbiſhopric of Saltzburg, which is in the ſouthern part of Bavaria, is bounded on the eaſt by Auſtria and Stiria, on the ſouth by Carinthia and Tyrol, on the weſt by Upper Bavaria, and northward by the ſame part of that electorate. Its length and breadth are very differently repreſented by different authors; but by the loweſt computation it is a hundred and fourteen miles in length and breadth.

This country is on all ſides defended by mountains and narrow paſſes, or rather entirely conſiſts of mountains and valleys. No kind of grain is ſowed here, whence it is ſupplied with all its corn from Bavaria; but every part of it produces excellent hay, and a great number of fine cattle. The horſes in particular are eſteemed for their beauty, hardineſs, and vigour, being able to travel full ſpeed up the higheſt mountains with no other food than hay and graſs, without any oats.

At Hallein, which is about two hours diſtance from the city of Saltzburg, are ſalt-works belonging to the ſovereign, in which ſalt of all colours, as yellow, red, blue, and white, is hewn out from along the ſubterraneous caverns, and then diſſolved in freſh water; which being conveyed into pits, the fineſt ſalt is made of the brine: but theſe works are only carried on in ſummer, when a ſufficient quantity is made not only for home-conſumption, but to anſwer all the demands from Bavaria, where it is exchanged for corn. In this archbiſhopric are alſo conſiderable mines of ſilver, copper, lead, iron, and lapis calaminaris. A great deal of ſteel and braſs is alſo made here, and the plenty of theſe metals remarkably appears in the aſtoniſhing number of ſwords, ſabres, bayonets, muſkets, cannon, and mortars, to be ſeen in the armouries all over the country. In this biſhopric is alſo found a very good marble.

The principal river in this country is the Salza, or Salzach, which riſes in the valley of Crumbler, towards the county of Tirol, watering a great part of it; and, after receiving into it the little rivers of Saal and Gaſtein, which riſe in this country, continues its courſe into Upper Bavaria, where it falls into the Inn, which waſhes a ſmall part of the weſtern ſide of the archbiſhopric. Here alſo riſe the Ens and Muer, with many other little ſtreams, rivulets, and lakes; all which abound in fiſh.

Though the popiſh doctrines and worſhip are alone tolerated in this archbiſhopric; yet, at the time of the Reformation, Lutheraniſm was embraced by great numbers, whom archbiſhop Matthew Langins harraſſed and ſtrove to extirpate by oppreſſion and violence. But archbiſhop John James proceeded with greater mildneſs, and, in order to reconcile all tempers, obtained the pope's licence to adminiſter the ſacrament in both kinds. Archbiſhop Wolfgang Theodoric, in the year 1588, drove great numbers of his Lutheran ſubjects out of the country, and his ſucceſſor, Marcus Sittich, count of Hohenimbs, neglected neither fair means, menaces, nor violence, particularly by quartering troops on the Proteſtants, to bring them again to the church of Rome, inſomuch that it was ſuppoſed the whole country was become Roman. But ſucceeding times ſhewed that this was a miſtake, great numbers openly profeſſing Lutheraniſm. On this archbiſhop Maximilian Gandolph left them no other alternative than either to fly their country, or abjure their faith. But the moſt violent flame of perſecution blazed out under archbiſhop Leopold Anthony Eleutherius, baron of Firmian, whoſe cruel zeal for ſuppreſſing Lutheraniſm in his province was ſo great, that the oppreſſed party were obliged to apply for redreſs to the ſtates of that religion in the diet, who prevailed ſo far, that, in the year 1732, permiſſion was granted to the Lutheran Saltzburghers to withdraw quietly with their effects; on which above thirty thouſand perſons embraced this opportunity, diſperſing themſelves into the other proteſtant countries of Germany, Pruſſia, and even the Engliſh colonies in America: in all which places they were received with all that benevolence and encouragement which their magnanimity deſerved; and theſe emigrations have continued ever ſince.

In the archbiſhopric are ſix cities and twenty-five market-towns. The eſtates of the nobility enjoy a juriſdiction over the vaſſals. All peaſants are, however, allowed the uſe of fire-arms; and, being from their early years trained up at ſhooting at a mark, would on occaſion prove a very ſerviceable body. The nobility were here formerly very numerous; but the policy of the princes ſet ſo many ſprings at work to oppreſs and extirpate them, that not even one at preſent remains, and all their eſtates are in the hands of the church. With reſpect to the few nobles at court, or belonging to the cathedral, they are all foreigners, eſpecially Auſtrians, Bohemians, and ſome Bavarians. The nobility being therefore extinct, the prelates and commons form the ſtates of the country: the former of theſe are the biſhop of Chiemſee, the prior of the cathedral, the abbot of St. Peter at Saltzburg, the prince of Berchtolſgader, the abbot

abbot of St. Michael in Bavaria, the prior of Haglwerth, and the abbeſs of Nunnberg; the latter are compoſed of the cities and twenty-two market towns.

The titles of the archbiſhop are, By the grace of God prince of the holy Roman empire, and archbiſhop of Saltzburg, Legatus Natus of the apoſtolic chair of Rome, and primate of Germany.

His arms are in the dexter half or, party per pale a lion ſable; but the ſiniſter is damaſquined. His ſupporters are a ſword and a croſier ſurmounted, as it were, behind with a croſs.

Beſides his being the born and perpetual legate of the apoſtolic ſee, and primate of Germany, he alſo enjoys ſeveral other important honours. He wears a cardinal's habit, and all appeals from him lie to the pope alone in perſon, by whoſe permiſſion he diſpoſes of canonſhips. The emperor ſtiles him well-beloved; but all other eccleſiaſtics who are not of princely blood, have only the title of honourable, and your reverence. This archbiſhop has the following ſuffragan biſhops under him; thoſe of Freyſing, Ratiſbon, Brixen, Gurk, Chiemſee, Seckau, and Lavant. The four laſt are even nominated, conſecrated, and confirmed by his own power, without ſtanding in need of the pope's confirmation; and, indeed, he is the only archbiſhop who enjoys this privilege. His temporal pre-eminences are, that except the electoral archbiſhops, he is the only archbiſhop in all Germany who ſits and votes in the diet of the empire; and in the college of princes, he enjoys alternately with Auſtria, the firſt ſeat on the eccleſiaſtical bench, and likewiſe in the directory.

The principal colleges of the archbiſhop are the privy, or ſtate council, the conſiſtory, the court of juſtice, the treaſury, and the council of war.

His revenues, according to Keyſler, amount to eight hundred thouſand rixdollars a year. The military force of this archbiſhopric conſiſts of only one regiment of foot, containing a thouſand men, whoſe uniform is generally white faced with red. His fifty halberdeers and fifty horſe-guards are rather inſtituted for the ſplendor of the court than for the military eſtabliſhment; theſe, who are the life-guards, and the other officers, wear black with red facings and gold lace. A great number of ſoldiers, in a country ſo well defended from invaſions, by its mountains and narrow paſſes, would be needleſs and inconvenient, on account of the ſcarcity of corn, and the bravery and expertneſs of the peaſants. Every bailiwic has its rendezvous, to which on a ſignal being given, by means of cannon planted on the mountains and towers, they repair completely armed, and there wait the command for marching. There are ſaid to be twenty-five thouſand peaſants, who never fail to hit a mark of a hand's breadth.

SECT. VI.

Of the City of Saltzburg, and the ſeveral Palaces belonging to the Archbiſhop in that City and its Neighbourhood.

THE principal place in this archbiſhopric is the city of Saltzburg, in Latin Saliſburgum, the capital of the archbiſhopric, and the reſidence of the archbiſhop, which is ſituated in the forty-ſeventh degree forty-five minutes north latitude, and in the thirteenth degree five minutes eaſt longitude, ſeventy-one miles to the ſouth-eaſt of Munich. It is ſurrounded by three mountains called Imberg, Schloſberg, and Munchberg; but on one ſide is open to a large plain, through the midſt of which runs the Salza. It is computed to be five thouſand geometrical paces in circuit, and is well fortified: that part of the city which lies to the right of the river, is ſurrounded with eight baſtions; that on the left ſide with three: the mountain-caſtle which ſtands in the former is very ſtrong, both from its ſituation and its works, and in it is the principal arſenal. It is provided for a whole year with neceſſary proviſions, and the garriſon is never changed.

Saltzburg is a fine city, and the greateſt part of the houſes are five ſtories high; but the ſtreets are narrow, and being paved after the old faſhion, the courſe of the water and filth is in the middle, and the ſpouts conſequently project to ſome diſtance from the houſes. The roofs from the ſtreets appear entirely flat; but only conſiſt of ſeveral ſmall low ridges that are hid by the four main walls of the houſes. One part of the city ſtands on a ſteep rock. Before the palace fronting the new apartments is a fountain, eſteemed the largeſt and fineſt in all Germany; the figures are all of white marble; but in the groteſque taſte. The reſervoir is one hundred and ſeven feet in circumference, excluſive of the ſteps; four large horſes ſpout the water out of their mouths and noſtrils, though not in ſuch quantities as the ſtatues above them. The height of the whole work exceeds fifty feet, and is ſurmounted by a column of water eighteen feet high.

The palace, which is a magnificent ſtructure, contains one hundred and ſeventy-three rooms. The archbiſhop's apartment is very noble, the aſcent to it is by a large marble ſtair-caſe, and the ceilings are finely painted and gilt. The furniture is ſurpriſingly rich. Another apartment ſtill more magnificent, if poſſible, is uſed on days of ceremony. Indeed, the whole palace abounds with fine pictures, tables of inlaid marble, and ſuperb ſtoves of all colours, ornamented with ſtatues. But though the tapeſtries are valuable on account of the gold and ſilver they contain, yet age has deprived them of the greateſt part of their beauty. From the roof of the palace, which you may go quite round upon boards laid over the ſmall ridges, is a delightful proſpect. The new apartments, though not in the exact rules of ſymmetry, are a conſiderable ornament to the place, and contain all the offices of the archbiſhop. The ſtables are in three long and arched diviſions; the horſes, which amount to one hundred and fifty, eat out of white marble mangers; and twice a week a running water being turned in through both ſides of the ſtalls, carries away any filth that may have gathered there. Over this ſtable is the fencing ſchool, and before it a pond for watering the horſes ninety-three feet in length, in the midſt of which ſtands a very large horſe made of one piece of marble, with water guſhing out of its mouth.

The winter riding ſchool is very lofty, with ſeats placed between the windows on both ſides of the walls, for the accommodation of ſpectators of diſtinction, that the riders may not be incommoded in their exerciſe. The ſummer riding ſchool, which alſo ſerves for baiting wild beaſts, is in the open air, and has three galleries, one ſide of which are all cut out of the rock.

The cathedral of St. Rupert is built of free-ſtone, and has a ſtately front, adorned with four marble ſtatues of St. Peter, St. Paul, St. Rupert, and St. Virgilius; the two latter being formerly its biſhops, and the inſide of the building is adorned with pilaſters of the Corinthian order. It is built in the form of a croſs. Its high altar is of marble, which on grand feſtivals bears a ſun of gold, adorned with precious ſtones to the value of one hundred thouſand crowns, with a large croſs of gold, and four candleſticks of the ſame metal. All the other altars are of beautiful marble of different kinds, and under the cupola are four of them, with an organ over each; but the fifth and fineſt organ, which is over the chief entrance, conſiſts of three thouſand two hundred and ſixty-ſix pipes, the longeſt of which is thirty-three feet. To this organ belong four keys, and forty-two regiſters, of which ſeventeen are of clock-work. The roof of this church is covered with copper, and the gallery between the cathedral and palace is of white marble.

The new univerſity church of the immaculate conception of the Bleſſed Virgin is a noble building, and the inſide ornamented with very fine ſtucco-work. Before the Theatine convent ſtands a marble pillar of one ſingle ſtone twenty-four feet high.

A covered bridge leads from the lower part of the city to the archbiſhop's palace of Mirabella, whoſe fine chapel conſtitutes the middle part of the principal front: facing it is a mount Parnaſſus, with a Pegaſus on the top, from which the water falls in caſcades. In the palace is a grand marble ſtair-caſe finely painted, and the great hall is adorned with curious tables, and many beautiful landſcapes. The floors, as in the city-palace, are inlaid with

red and white marble, and the hangings are moſtly red embroidered with gold and ſilver. The garden is very beautiful, and the Salza, which runs cloſe by it, adds to the agreeableneſs of the proſpect. Within the garden is a large aviary, where, during the ſummer heats, the archbiſhop frequently takes a repaſt. The theatre decorated with green turf is very beautiful, and has four large marble groupes, the rape of Proſerpine, the rape of Helen, Hercules wreſtling with Antheus, and Æneas carrying his father out of Troy.

About a quarter of a league from Saltzburg is Hellbrun, another of the archbiſhop's ſeats. The building contains nothing remarkable; but the garden is extremely pleaſant, it being laid out in the manner of a wilderneſs, and abounding with the fineſt water-works, reſervoirs, ponds, and baſons, all ſo clear that you ſee the trouts and other fiſh ſporting in them. Among other beautiful grottos is one with an old decayed brick roof of curious workmanſhip. Over one of the many ſprings in this garden is the ſtatue of a monſter, which may be taken for a wild man, had it not a cock's comb, and the feet of an eagle. Under it is the following inſcription:

"The original of this monſtrous figure, called a "foreſt devil, was caught in hunting near Havenſburg, "Matthew Lang being then cardinal and archbiſhop. "His ſkin was yelloviſh, he had all the marks of a ſa- "vage diſpoſition, yet never looked at any one, but "hid himſelf in corners. He had the face of a man "with a beard, eagle's feet with lion's claws, the tail "of a dog, and on his head grew a large comb like that "of a cock. He ſoon died with hunger, as neither "allurements nor violence could bring him to eat or "drink."

CHAP. XV.

Of the Circle of FRANCONIA.

SECT. I.

Of Franconia in general, and firſt of the Biſhopric of Bamberg; its Situation, Extent, Produce, and principal Rivers. The State, Privileges, and Arms of the Biſhop; the Offices of the Government: with a particular Deſcription of the City of Bamberg, and the Palace of Pomersfeldt.

FRANCONIA, called by the Germans Frankenland, is bounded on the north by Thuringia, Saxony, and Heſſe; on the eaſt by the palatinate of Bavaria, and part of Bohemia; on the ſouth by Swabia; and on the weſt by the circle of the Rhine, part of Heſſe, and the Wetteraw; extending from eaſt to weſt about a hundred and thirty miles, and from north to ſouth a hundred and thirty-five; but is in both ways much indented.

The ſtates of this circle are divided into four benches: to the ſpiritual bench of princes belong the biſhoprics of Bamberg, Wurtzburg, and Eichſtadt, with the Teutonic order; to the ſecular bench of princes, Brandenburg-Bareith, Brandenburg-Anſpach, Henneberg-Schleuſingen, Henneberg-Romhild, Henneberg-Schmalkalden, Schwartzenberg, Lowenſtein-Wertheim, and Hohenlohe-Waldenburg; to the bench of counts and lords, Hohenlohe-Neuenſtein, Caſtell, Wertheim, Rieneck, Erbach, Limburg-Geildorf, Limburg-Speckfeld, Seinſheim, Reigelſberg, Wieſentheid, Welzheim, and Hauſen; and to the bench of imperial cities, Nurenberg, Rothenburg, Windſheim, Schweinfurt, and Weiſenburg.

The ſummoning princes for this circle are the biſhop of Bamberg, and the margraves of Brandenburg-Bareith and Anſpach, who take their turn in ſummoning every three years.

With reſpect to religion, this circle, which is one of the mixed, preſents one Roman catholic and one proteſtant aſſeſſor to the chamber-judicatory of the empire. The death of the former is notified by the chamber to the popiſh, and that of the latter to the proteſtant ſummoning-office of the circle.

The firſt country we ſhall deſcribe in this circle is the biſhopric of Bamberg, which terminates to the north on the principality of Coburg and the Voightland; to the eaſt on Brandenburg-Bareith and the territory of Nurenburg; to the ſouth on the territory of Nurenburg, Brandenburg, and the principality of Schwartzenberg; and to the weſt on the biſhopric of Wurtzburg. Its greateſt extent is about ſeventy-one miles in length, and its greateſt breadth above forty-eight miles.

The ſoil of this biſhopric produces all ſorts of grain, vegetables, and fruit, in abundance; particularly grapes, of which good wine is made. It likewiſe yields ſaffron, and an excellent ſort of liquorice, of which great quantities are exported; and near the city of Bamberg are ſuch numbers of laurel, fig, orange, and lemon-trees, that this ſpot has been ſtiled the Little Italy of Germany. It has alſo good woods, and a great number of cattle.

The Maine, which iſſues out of this country, traverſes the north part of it, and receives the Rotach, the Itz, or Its, and the Rednitz; the latter of which alſo riſes here, after which the Maine receives ſeveral ſmaller ſtreams.

Bamberg contains eighteen boroughs and fifteen market-towns, and the inhabitants are zealous papiſts.

The biſhop of Bamberg ſtands immediately under the papal ſee, and may act within his own dioceſe as an archbiſhop. King Henry, the founder of this biſhopric, appointed the king of Bohemia upper cup-bearer, the elector palatine upper ſewer, the elector of Saxony upper martial, and the elector of Brandenburg upper chamberlain of the biſhopric. Theſe electors inveſt four antient families of the nobility of Franconia with theſe offices, which they perform as their deputies.

The arms of this biſhopric are a lion ſable, in a field or, over which is a band argent traverſing the whole.

The biſhop has his ſeat and voice at the diet of the empire, and has the fourth place on the ſpiritual bench.

The epiſcopal vicar reſides among the clergy and determines their diſputes, and all appeals lie to him from the conſiſtory, which decides in matrimonial caſes; but from the vicariate appeals lie to Rome. The regency conſiſts of a preſident, a chancellor, and about twenty aulic counſellors. Under the regency are the inferior courts of St. Stephen, St. Gangolph, and St. James; with the provincial-court at Bamberg, the pupil-court, and police-court, the penal or criminal-court, and the office of under-bailiff.

The aulic chamber and upper receipt-office have the care of the biſhop's revenues. Each of theſe offices has a preſident, and the latter alſo repreſents the aulic military council, who have the management of military affairs.

The principal place in this biſhopric is Bamberg, antiently called Babenberg, which is ſeated upon hills near the river Rednitz in a fertile and delightful country, in the 50th degree 15 minutes north latitude, and the 10th degree 15 minutes eaſt longitude. The town itſelf, which is in moſt parts ſurrounded with a wall and ditch, is not large, but has extenſive ſuburbs, and is, in general, well built and populous. In the upper part, which ſtands upon a hill, is the princely reſidence of Peterſburg; and alſo the great cathedral church of St. George, a vaſt Gothic edifice, with a lofty ſteeple and four noble ſpires. In this church is the monument of Henry II. the founder of the biſhopric, and his conſort Cunigunda. The marble

ble image of the empreſs lies on the right ſide of her huſband, and the tomb is adorned with baſſo relievos repreſenting the moſt remarkable paſſages of Henry II's life, among which the circumſtance alledged in the bull for Cunigunda's canonization is not omitted, namely, that the emperor, on his death-bed, ſolemnly declared before ſeveral princes and other witneſſes, that he left Cunigunda a virgin, as he received her. In the treaſury belonging to this cathedral are a great number of jewels and relics; but what is moſt curious are the four Goſpels written on parchment in beautiful letters of gold, finely bound, and ſet with precious ſtones. There is here the bull of pope Boniface VIII. in which the credulous vulgar are aſſured, that the holy nail kept here is unqueſtionably one of thoſe that faſtened our Saviour to the croſs. Among the other public buildings are the cathedral of St. Stephen and St. James, with a Benedictine convent on the Monchſberg, which is a magnificent edifice, and the church belonging to it has an admirable frontiſpiece, a ſuperb arched roof, and three fine organs: it is alſo embelliſhed with ſculpture and paintings; among the latter, the altar-piece, which is adorned with the repreſentation of the aſſumption of the Virgin Mary, is moſt remarkable. Here is alſo the nunnery of St. Theodore. In the middle part of the town, which has a communication with the upper part, by means of a lofty ſtone-bridge, are many fine houſes; as alſo the antient palace of Geyerſwerth, which has a noble orangery; a fine church of the Jeſuits, who have the inſpection of the univerſity; the pariſh-church of St. Martin, that of St. Mary, three monaſteries, two nunneries, and an hoſpital. A long and broad bridge leads from the middle part of the town to the ſuburbs of Treuerſtadt, in which is the Dominican nunnery of the holy ſepulchre.

About three hours journey from Bamberg is the caſtle or palace of Pomersfeldt, which belongs to the biſhop, and ſtands in a delightful country. This is a magnificent ſtructure; but, inſtead of a grand entrance, or portico, it has three ſmall doors, and two more in the wings. Oppoſite the front of the palace are the menagery and ſtables, which are built in an oval form, with a colonade. On one ſide of the middle door ſtands the ſtatue of Julius Cæſar, and on the other that of Alexander the Great, with the Gordian knot at his feet. At the entrance of the biſhop's apartments, which are in the front, are on one ſide the ſtatues of Faith and Charity, and on the other Juſtice and Fortitude. The grand double ſtair-caſe has few equals; it is indeed but one ſtory high; but the roof is as high as the palace itſelf, and the cieling is finely painted by Bies, one of the gentlemen of the bed-chamber, and Marchini, an Italian. The ſtairs, with the ſculpture on each ſide, are of free-ſtone.

From the court at the foot of the ſtair-caſe you deſcend down ſome ſteps into a beautiful grotto, covered with ſtucco-work, ſo finely poliſhed that it reſembles marble. In this grotto are eight ſtatues, repreſenting the ſeaſons and the four elements; and between theſe are ſeveral elegant figures of ſhell-work, repreſenting ſea-animals. The luſtres are of glaſs of various colours; and on each ſide of the grotto is a ſmall colonade, where in ſummer orange-trees, &c. are ſet, which, by their verdure and fragrance, add to the agreeableneſs of this cool retreat.

In the ſtory where the grand ſtair-caſe ends, and exactly over the grotto, is a hall well worth ſeeing. It is adorned with capital pictures and family portraits, the cieling is curiouſly painted and adorned with gilt cornices, and it yields a charming view of the gardens, and a delightful proſpect of the adjacent country.

Moſt of the other apartments are ſmall; but the tapeſtry hangings and other furniture are very ſplendid. One room exhibits ten battles in which prince Eugene ſignalized himſelf by his conduct and courage; and in the biſhop's drawing-rooom is a copy of Corregio's night-piece, in which is repreſented the birth of Chriſt. Over the fire-place in the bed-chamber is a very fine picture of an old man praying to a crucifix, and in the ſame room is the birth of Chriſt in Moſaic work. Adjoining to this room is a looking-glaſs cloſet, in which is a great quantity of valuable China-ware, and ſome of the fineſt Dreſden porcelain. On the tables are placed cryſtal vaſes, cups made of precious ſtones, and other curioſities; among which is an exquiſite piece of workmanſhip in amber, repreſenting our Saviour in his agony in the garden, ſupported by an angel. The dining-parlour is hung with gilt leather, on which is repreſented David's triumphant entry, after he had killed Goliah. In this piece, which is very old, the figures are as big as the life, and well executed. The chapel is not anſwerable to the magnificence that appears in every other part of this palace. Before the altar are depoſited the bowels of the late elector of Mentz, whoſe heart lies buried at Bamberg, and his body at the city of Mentz. On the top of the palace ſtands an image of Atlas, with an armillary ſphere on his ſhoulders.

The garden is on a ſlope or gentle declivity, and on each ſide is a ſmall wood of linden-trees planted in viſtas.

SECT. II.

Of the Biſhopric of WURTZBURG.

Its Situation, Extent, and Produce; the Religion of the Inhabitants; the Titles, Arms, and Officers under the Biſhop; with a particular Deſcription of the City of Wurtzburg.

THE biſhopric of Wurtzburg is bounded on the eaſt by the biſhopric of Bamberg, the principalities of Schwartzenberg, Brandenberg, Onalzbach, and the ſigniory of Rothenburg; on the ſouth by the county of Hohenlohe; on the weſt by the archbiſhopric of Mentz, and the abbey of Fuld; and on the north by the county of Henneberg, and the principality of Coburg; extending about ſixty-five miles in length, and fifty in breadth.

The ſoil is very fruitful, and produces more corn and wine than the inhabitants conſume. The principal river in this country is the Maine.

The eſtabliſhed religion is that of popery, but there are alſo Lutheran and Calviniſt churches within the territory of Wurtzburg; but theſe frequently make the moſt grievous complaints of oppreſſion and injuſtice to the diets of the empire, from which they ſeek redreſs.

The title of the biſhop is, Of the holy Roman empire, prince, biſhop of Wurtzburg, and duke of Eaſt Frankenland.

His arms on account of the biſhopric are, an enſign gules and argent, obliquely waving, quartered, and ſupported on a lance or, in a field verte; and on account of the dutchy of Frankenland, a croſs ſtriped quarterly gules and argent, with three points terminating gules. Behind the ſhield armorial project a croſier and a ſword.

The biſhops of Wurtzburg cauſe a naked ſword to be carried before them, and in 1752 pope Benedict XIV. granted them the privilege of bearing the archiepiſcopal pall and croſs; but in other reſpects they are ſuffragans to the archbiſhop of Mentz. At the diet of the empire this biſhop is poſſeſſed of the fifth place on the ſpiritual bench in the council of the princes; but in that of Franconia he has the firſt voice.

The epiſcopal high colleges are the following: The ſpiritual regency, which has the management of ſuch affairs as relate to the epiſcopal juriſdiction; the vicariate, which determines all diſputes relating to religion; and the conſiſtory, which has the management of matrimonial affairs. From theſe two laſt an appeal lies to the metropolitan.

The temporal colleges are the privy council: the regency and Aulic council, which judge in all criminal and civil affairs: the Aulic tribunal, to which an appeal lies from the provincial: the provincial tribunal, which judges matters of inheritance, guardianſhip, and the like: the upper council, to which belong matters of police, and the town council.

The epiſcopal revenues are eſtimated at four or five hundred thouſand guldens. This prince and biſhop maintains five regiments of foot and horſe, and all military affairs are ſubject to the Aulic council of war.

In this principality are thirty-three boroughs, and about ten market towns, the principal of which is the following.

Wurtzburg, in Latin Wireeburgum, was antiently called Herbipolis, and is ſeated on the river Maine, in the

the forty-ninth degree thirty-nine minutes north latitude, and in the ninth degree forty-eight minutes eaſt longitude. It is the capital of the biſhopric, and is well fortified and defended by a caſtle that ſtands on a high and rocky mountain, and in which is an epiſcopal palace, and a well provided magazine. The above citadel is called Marienberg. The firſt gate is defended by two baſtions paved with hewn ſtone, and a deep broad moat. Over it are the arms of Philip of Schonborn, elector of Mentz and biſhop of Wurtzburg, who built it in 1652. It is adorned with eight ſtatues of ſtone, three without, in Roman armour, and five within, one in the middle repreſenting Hercules leaning on his club. The fortifications are all lined with hewn ſtone; but are irregular on account of the ſituation. The apartments in this caſtle are very commodious, and well furniſhed, and the tapeſtry, in particular, is very magnificent. The chapel is built in a fine taſte, and has a handſome dome, with four beautiful altars covered with ſtucco; two in imitation of porphyry, and two that reſemble jaſper. In the cellar belonging to this caſtle is an avenue, bordered on each ſide with fifty lofty tons, holding each about fifty hogſheads of wine, French meaſure. This avenue is ſo extenſive, that you can hardly ſee the end of it, though it is well lighted; for each ton has a great iron candleſtic that holds a flambeau of yellow wax. Theſe enormous tons are neatly adorned with grapes, glaſſes, and goblets in baſſo relievo.

The town is divided into four quarters and four ſuburbs, which lie on both ſides the Maine, over which is a ſtone bridge of eight arches, at the entrance upon which is a triumphal arch of hewn ſtone, adorned with two ſtatues of Pallas in niches on the outſide, and two of Mars in niches within. The city has a very gay aſpect: its public ſquares and ſtreets are very neat and agreeable; the houſes very commodious, the ſituation and air pleaſant and wholeſome, and enjoying every thing in plenty that human life requires.

Among the other public buildings the moſt remarkable are the new palace, the churches and convents; the former, in which the biſhop reſides, is a very noble building, the firſt ſtone of which was laid by biſhop John Philip Francis, count of Schonborn, in 1720.

The cathedral, dedicated to St. Kilian, is an antient Gothic ſtructure, with no other ornament on the outſide but four lofty ſpires, two to each front. The roof is ſupported by twenty pillars, which form two porticos, the cielings of which are ornamented with ſtucco divided into compartments. At each pillar is a ſculptured altar adorned with pictures, gilt columns, and ſtatues; each altar dedicated to ſome ſaint. The pulpit is of white marble, embelliſhed with the hiſtory of our Lord's ſufferings in baſſo relievo gilt, and the pedeſtal which ſupports it, is adorned with eight ſtatues of the four evangeliſts, and the four doctors of the church, incloſed within an iron baluſtrade very neatly wrought. At the two corners of the choir are two magnificent altars, with pillars of black marble, and much gilding: one is dedicated to St. Joſeph, ſpouſe to the virgin Mary, and to St. John Nepomuc; the other to St. Philip and St. Cunibert. The ſtatues of theſe ſaints, with thoſe of two angels, are all richly gilt. The pictures on one of theſe altars repreſents an Ecce Homo, and the other old Simeon holding the infant Jeſus in his arms. The principal altar in the middle is a magnificent dome, richly adorned with ſculpture and gilding, and ſupported by four large columns of black marble with white veins, the baſes, capitals, cornice and feſtoons richly gilt. Between theſe columns are five grand buſts gilt; one of the virgin Mary, another of St. Andrew, and the three others St. Kilian, St. Colonat, and St. Totnam, who are here called the apoſtles of Franconia. Among the treaſures in the ſacriſty are ſhewn, a large croſs of gold, enriched with a multitude of diamonds; another croſs of maſſy gold adorned with large ſaphires, rubies, and emeralds; a large chalice of ſolid gold, ſet with diamonds; five buſts of ſolid ſilver, repreſenting the virgin Mary, St. Andrew, and the three apoſtles of Franconia; and it is pretended that the heads of the three laſt are incloſed within their buſts.

To this cathedral belongs a chapter, conſiſting of fifty-four canons, twenty-four of whom are called capitulars, and the other thirty domiciliars; but the income is equal, each having three thouſand crowns a year; but no perſon is admitted who cannot give proof to his nobility for four generations, both on his father's and mother's ſide.

The collegiate church dedicated to St. John the Baptiſt is pretty, but ſmall. It is built of hewn-ſtone, and has a handſome front, with a high and well enlightened dome, under which are the ſtatues of our Saviour, the Virgin Mary, and the four Evangeliſts. Every part of this church is covered with carved work and gilding, as the pulpit, the organs, thirteen altars, including the principal one, of which the large fluted columns and paliſadoes are gilt from top to bottom, as well as the ſtatues of the twelve apoſtles as big as the life, which are placed between theſe columns. The painting of the altar-piece repreſents the aſſumption of the Virgin; and, in ſhort, the benches of the canons are alſo gilt, it having as many canons as St. Kilian's.

Here are alſo the pariſh-church, and foundation of St. Burchard, inſtituted for noblemen; the pariſh-church of St. Peter and St. Gertrude; the foundation of St. Anne; an abbey of Benedictine monks of the order of St. Stephen, and another of the order of St. James; a college of Jeſuits; a houſe and church of the Teutonic order; with a houſe and church of the order of St. John; a ſeminary dedicated to St. Kilian; and ſeveral other religious ſtructures. The great hoſpital of St. Julian, which is a vaſt edifice of hewn-ſtone, is ſaid to be built with greater magnificence than even the palace itſelf, and the gardens adorned with fountains and ſtatues; with the Aulic, the Theodorian, and the Burgher hoſpitals.

SECT. III.

Of the Principality of CULMBACH, *or* BRANDENBURG-BAREITH.

Its Situation, Produce, and Rivers: the Religion and Manufactures of the Inhabitants; the Titles and Arms of the Margrave, with the Orders of Knighthood; the Offices of the Government, and the Revenues and Forces of that Prince.

THE principality of Culmbach projects eaſtward from the circle of Franconia, to which it is in a manner only joined on the weſt. It is bounded on the north by Upper Saxony, on the eaſt by Bohemia, and on the ſouth by Bavaria, and a very ſmall part of the territory of Nurenburg; and on the weſt, by Bamberg.

Part of this country is very mountainous, and the reſt, which is ſandy, with good cultivation produces various ſorts of herbs and fruits; and in general this country affords every thing neceſſary for the ſupport of man, wine alone excepted.

With reſpect to its minerals, the principal of theſe are copper, lead, and iron; for its antient gold and ſilver mines are gone to decay. It has plenty of marble of all colours, together with cryſtals.

The principal of its mountains is the Fichtelberg, which extends nineteen miles from eaſt to weſt, and about the ſame diſtance from north to ſouth. It receives its name from the great number of pines with which it is covered, fichte ſignifying a pine, and berg a mountain; but it alſo produces fir and beech, and in ſome places oak, elm, and lime trees. From theſe woods the peaſants that live about the mountain derive moſt of their ſubſiſtence by making charcoal, and in winter bringing the timber down in ſledges to ſell. It is one of the higheſt mountains in all Germany, and contains many lofty rocks and deſarts, and a number of bogs and moraſſes.

The rivers of this country are the White and Red Maine, both of which riſe here, and having united their ſtreams, obtain the ſingle name of Maine, which, under that denomination, enters the biſhopric of Bamberg.

The other rivers are the Nabe, the Eger, the Roſlaw, the Thuringian Saale or Sala, and the Pegnitz, which all riſe in this country.

This

This principality contains ſix head towns, as they are called, with ten others, and twenty-ſix market towns.

The Lutheran church, which is the eſtabliſhed religion of this country, is under the inſpection of a general ſuperintendent, who reſides at Bareith; beſides whom there are nine other ſuperintendents, beſides the inſpector of Rednitz. There are alſo Calviniſts and Roman catholics, who are in ſome places permitted the exerciſe of divine worſhip.

With reſpect to the manufactures of this country, the principal of theſe are woollen cloth, ſtockings, and hats; a brown and white porcelain, into which ſilver and gold are very ingeniouſly and durably annealed; and the marble of this country is poliſhed and worked into a variety of forms. Of theſe articles large quantities are exported.

The princes of this country and that of Anſpach are of the family of Brandenburg, and hence the name of Brandenburg has been prefixed to Bareith and Anſpach. The electors of Brandenburg, ſeveral centuries ago, gave theſe countries to two of their younger ſons; but in length of time the want of iſſue made them more than once revert to the electoral line. This was the caſe for the laſt time in the year 1603, when Chriſtian, the ſecond ſon of the elector John George, obtained the principality of Bareith, and Joachim Erneſt, his third ſon, that of Anſpach; the lines founded by both of whom are ſtill in being. Erdman Auguſtus, ſon to the margrave Chriſtian, propagated the Bareith reigning line, which at preſent ſubſiſts in the margrave Frederic Chriſtian. On the other hand, Frederic and Albrecht, the ſons of the above margrave Joachim Erneſt, obtained ſucceſſively the regency of Anſpach; and in like manner three grandſons of the latter, of whom only the youngeſt had ſucceſſion.

The margraves of both lines bear the following titles: Margraves of Brandenburg in Pruſſia, of Sileſia, Magdeburg, Cleves, Juliers, the Berg, Stettin, and Pomerania; of the Caſſuben and Wenden, of Mecklenburg and Croſſen, dukes; burgraves of Nurenburg; princes of Halberſtadt, Minden, Camin, Wenden, Schwerin, Ratzeburg, and Mors; counts of Hohenzollern, the Mark, Ravenſberg, and Schwerin; and lords of Ravenſtein and the countries of Roſtock, Stargard, &c.

Their arms on account of the margravate of Brandenburg, are an eagle gules, together with trefoil-ſtalks of the ſame in the wings, all placed in a field argent. For Magdeburg, a ſhield quartered gules and argent. For Cleves, eight lilies or, ranged in form of a St. Andrew's croſs, and bordered in the middle by a ſhield argent in a field gules. For Juliers they bear a lion ſable in a field or. For the Berg, a lion crowned gules and azure, in a field argent. For Stettin, a griffin gules, crowned or, and weaponed, in a field azure. For Pomerania, a griffin gules, weaponed or, in a field argent. For Caſſuben, a griffin ſable turned to the ſiniſter ſide, weaponed or, in a field of the ſame. For Wenden, a griffin tranſverſely ſtriped, gules and verte, in a field argent. For Mecklenburg, a buffalo's head ſable, having horns argent, and crowned gules, with a ring argent running through his noſe. For Croſſen, an eagle ſable, with wings, tail, and weapons expanded in a field or, on whoſe breaſt is a creſcent argent, and over it a ſmall croſs of the ſame. For Jagerndorf, an eagle ſable, with a ſilver hunting-horn on his breaſt, in a field argent. For the burgravate of Nurenberg, a lion ſable, prepared for combat, with a red tongue exerted, weaponed and crowned in a field or, placed on another ſhield, which is interſected five times to the dexter point, gules and argent. For Halberſtadt, a ſhield divided, argent and gules. For Minden, two keys argent, placed in form of a St. Andrew's croſs, in a field gules. For Camin, an anchor-croſs argent, in a field gules. For Wenden in Mecklenburg, a griffin or, in a field azure. For Schwerin, a divided ſhield, in the upper part of which is a griffin or, in a field azure; but the under part green, with a ſilver border. For Ratzeburg, a croſs waving and argent, in a field gules. For Mors, a feſs ſable, in a field or. For Hohenzollern, a ſhield quartered ſable and argent. For the Mark, a feſs chequered, gules and argent, in a field or. For Ravenſberg, three chevrons gules, in a field argent. For Schwerin, an arm iſſuing out of a cloud bearing a ring. For Roſtock, a buffalo's head placed obliquely to the dexter ſide and crowned gules, with an exerted red tongue, and ſilver horns, in a field or: and for Stargard, a ſhield divided gules and or.

The margrave of Bareith has an order of knighthood termed the order of Sincerity, but commonly called the order of the Red Eagle; the ſymbol of which is a ſquare white enamelled croſs of gold worn pendant at a ſcarlet watered ribbon, reaching from the neck to the breaſt. In the ſtar which the knights of this order bear on their breaſt is ſeen the Brandenburg red eagle, and round it the words SINCERE ET CONSTANTER. The maſter of this order is always the reigning margrave.

The reigning prince has on account of the principality of Bareith a ſeat and voice in the council of the princes of the empire, and is alſo co-ſummoning prince of the circle of Franconia.

The princely colleges here are the privy-council, in which the margrave himſelf preſides, and under which are the privy-expedition and the privy-chancery; the regency-college, and regency-chancery; the aulic tribunal; the tribunal for noble fiefs; the chamber-college; the feudal-court; the conſiſtory, and the matrimonial-tribunal.

The prince's revenues, according to Keyſler, in the year 1730, ſcarce amounted to five hundred and fifty thouſand guldens; but he obſerves, that they might be improved to a much greater ſum.

This margravate always keeps up a guard of horſe, a ſmall body of huſſars, and two regiments of foot; beſides which a militia is maintained.

The principal places in this country are the following:

Bareith, the reſidence of the margrave, and the capital of the principality, is the ſeat of the above offices, and of the mint. It is ſurrounded with three ſtreams, the Red Maine, the Miſtelbach, and the Sendelbach; and is ſeated in the fiftieth degree of latitude. The prince's palace was burnt down in the year 1753; but has been rebuilt in a grand and beautiful taſte. The places of worſhip in this town are a Lutheran church, that of the Spital, a Calviniſt church, and a popiſh chapel. Here is a ſeminary founded by the margrave Chriſtian Erneſt in the year 1664, and alſo another ſeminary and an orphan-houſe.

St. George on the Lake, a town ſituated by the ſide of a lake, at the diſtance of two miles from Bareith. It was founded in the beginning of the preſent century by the margrave George William, and endowed with ſeveral important privileges. St. Sophia's church, which was dedicated in 1715, is called The chapel of the order and knights, that margrave allotting it for the meeting-place of the order of Sincerity, which he had inſtituted. The palace of the margrave is a noble edifice, and has a very fine pleaſure-garden belonging to it. In this town is alſo an orphan-houſe, and a manufacture of white and brown porcelain; in the latter of which gold and ſilver are very durably annealed. Mr. Keyſler obſerves, that a ſet, conſiſting of half a dozen cups and ſaucers, a ſmall tea-pot, a ſlop-baſon, a ſugar-diſh, and tea-caniſter, is ſold for twenty dollars. The art of poliſhing marble, which this country abounds with of all colours, is carried on here by an engine moved by horſes, or criminals taken out of the houſe of correction; and ſo well contrived, as to poliſh nineteen or twenty marble veſſels of different ſhapes at the ſame time. They alſo here make very beautiful ſnuff-boxes of yellow and white plaſter.

Culmbach, the ſecond of the ſix head towns, as they are called, and formerly the reſidence of the margraves, is ſeated in a fertile and beautiful valley on the banks of the White Maine; and is alſo the ſeat of the prefecturate captainſhip of Culmbach, of a ſuperintendent, revenue and cloiſter-office. This town has frequently ſuffered greatly by fire.

Erlang is ſeated near the Rednitz, which at this place receives into it the Schwabach, and conſiſts of two towns, the Old and the New; the latter of which is alſo called Chriſtian Erlang. Old Erlang is very antient, and about four hundred paces in length, but not near ſo wide; it has a peculiar magiſtracy of its own, and a Lutheran church. New or Chriſtian Erlang began to be erected

in the year 1686, by the margrave Chriſtian Erneſt, from whom it received its name: it lies cloſe to Old Erlang, and is diſtinguiſhed from it only by the ſtraitneſs of its ſtreets. This is one of the fineſt towns in all Germany. The houſes in the principal ſtreets are all of them two ſtories high, except thoſe at the corners, which are three ſtories. It has a ſquare eight hundred paces each way, and a market-place a hundred and ten paces in length and breadth, the eaſt ſide of which is taken up with the palace of the margrave, which is built of free-ſtone, and is three ſtories high. Behind it is a large and beautiful garden, planted with rows of cheſnut and lime-trees, ever-green hedges, fountains, and ſtatues. Here is a Lutheran church, which is a very handſome building, together with one for the French Calviniſts, and another for the German Calviniſts. Here is an univerſity, which has a church of its own. The French refugees have ſet up ſome conſiderable manufactories in this town, among which thoſe of ſtockings and hats are the moſt profitable.

Round the town are vaſt numbers of firs, and inſtead of vineyards and corn-fields are plantations of hops and tobacco.

SECT. IV.

Of BRANDENBURG-ANSPACH.

Its Situation, Produce, and Rivers: the Trade and Religion of the Inhabitants: the Offices of the Government: the Revenues and Forces of the Prince; with the principal Towns.

THE principality of Anſpach, Anſbach, or Onolzbach, is bounded on the north by the country of Schwartzenburg and the biſhopric of Bamberg; on the eaſt by the territories of Nurenburg, and a part of Bavaria; on the ſouth by the biſhopric of Aichſtadt, and a part of the circle of Swabia; and on the weſt by the counties of Hohenlohe and Limburg, the territory of the imperial city of Swabian Hall, the domain of the Teutonic order, and the biſhopric of Wurtzburg.

This country has ſome ſandy and mountainous tracts; but is in general more fertile than Bareith, it abounding in corn, fruit, and tobacco; and all along the Maine are vineyards that produce good wine. The richneſs of the paſtures render the breed of cattle excellent. There are likewiſe plenty of game and fiſh. In the earth are quarries of marble and iron mines.

The principal river in this country is at firſt called the Retzat, and riſes partly in this country, where it is termed the Under, or Franconian Retzat, and partly in Swabia, where it is termed the Upper or Swabian. Both theſe rivers here unite their ſtreams, and then obtain the name of Rednitz, which afterwards receives the Pegnitz; after which ſome give it the name of Regnitz, while others ſtill call it the Rednitz. The Altmuhl riſes in Brandenburg-Bareith, and paſſes into this country. The other rivers are the Jagſt, or Jaxt, the Wornitz, or Wernitz, the Sulz, and the Tauber.

The inhabitants ſubſiſt by the breeding of cattle, by tillage, and by the culture of their vineyards and plantations of tobacco. In the towns various branches of mechanic arts and manufactures are carried on, as the weaving of tapeſtry, cloth, ſtuffs, gold and ſilver lace, and ſtockings. The making of porcelain, looking-glaſſes, leather, wire, needles, &c.

The inhabitants are of the Lutheran religion, and their clergy are divided into nine decanates; but at the city of Schwabach is a colony of French Calviniſts, who have a church.

Of the family, title, and arms of the reigning margrave of Anſpach, we have given an account in treating of Bareith; and we have only to add, that he, as well as the margrave of Bareith, has, on account of this principality, a ſeat and voice in the council of the princes of the empire, and is alſo co-ſummoning prince of the circle of Franconia.

The princely colleges or offices of ſtate are the privy-council, the aulic and regency-college, as alſo that of the council of juſtice, the court of appeals, the chamber and provincial council-college, the war council-college, the fief-court, and the conſiſtory and matrimonial courts.

The yearly revenues of the prince are eſtimated at near a million of guldens, and his military force conſiſts of a life-guard of horſe, and one regiment of foot of ſeven companies.

This principality contains ſixteen boroughs and ſeventeen market towns, the principal places in which are,

Anſpach, or Onolzbach, in Latin Onoldum and Onoldinum, the princely reſidence and capital city, is ſituated on the Under Retzat, and is the ſeat of the abovementioned colleges, of the Aulic revenue office, and of a mint. The palace of the prince was chiefly built by the margrave George Frederic in 1587, and 1588; but ſuffering conſiderably by fire in 1710, was partly rebuilt in a much more beautiful manner than before, and alſo enlarged by the addition of ſome new and grand edifices. The public library was founded by the margrave Charles William Frederic in 1738. The princely chancery and regency-chamber are fixed in the old buildings belonging to the foundation of St. Gumbrecht, which have been repaired. This foundation was erected by one Gumbrecht in the eighth century, as a Benedictine monaſtery; but in the middle of the eleventh century was converted into a foundation of canons, and in 1563 ſecularized. In St. John's church is to be ſeen the new burying vault of the princes; this, with the new building of the Gymnaſium Illuſtre Carolinum opened in 1737, the Jews ſchool, and other public buildings, are to be ſeen in what is properly called the city. Without it are the porcelain manufacture, with the prince's garden and pleaſure-houſe. Behind Jager-ſtreet, which is well laid out, lies a large and beautiful garden belonging to the court, in which is a fine green-houſe and orangery. In one of the ſuburbs is the church-yard of the Holy Croſs, and in another the ſpital, the orphan-houſe, and the widows-houſe.

Schwabach is ſituated on a fruitful ſpot by a river of that name, and, though not large, is very populous. It has a Lutheran pariſh church, an hoſpital with a church in it, and a Latin ſchool. The French Calviniſts have alſo a church here, and the Jews a ſchool. In the market-place is a fine fountain adorned with caſcades and jets of water. The mint is commodiouſly laid out. The new ſuburb before the Zollner-gate is built with great regularity. There was formerly a letter foundery here, in which were caſt the Schwabach letters, which in the German tongue anſwers to our Italic; theſe were invented and took their name from this place. Here are artificers in gold and ſilver lace, workers in Leon or Spaniſh ſteel, iron wire-drawers, braſs turners, model cutters, needle-makers, who make above thirty different ſorts of needles, which are much admired, and exported to a great diſtance, ſtocking-weavers, tapeſtry-weavers, and cloth manufactories.

The Hofmark Furth is a large commercial and populous town, ſituated on the river Rednitz. It is built irregularly, except the new ſtreets; but contains many grand and fine houſes. In this town reſide an uncommon number of mechanics and artiſts: thoſe who cannot be received into the fraternities at Nurenburg, ſettling here, where every one is ſure of being well received. The Jews, who are very numerous, conſtitute one third of the inhabitants, and have a great ſchool in the printing-houſe. The inhabitants are partly ſubjects of Brandenburgh Anſpach, partly of Nurenburg, and partly of the chapter of Bamberg.

SECT. V.

Of the Imperial City of Nurenberg, its Government and Territories.

NURENBERG, or Nuremberg, a large and beautiful city, ſituated on the river Pegnitz, in the forty-ninth degree forty-one minutes latitude, and in the eleventh degree twelve minutes eaſt longitude, is the capital of the republic of the ſame name, and beſides four other towns, namely, Altdorf, Herſbruc, Lauff, and Graffen-

Graffenberg in the Upper Palatinate contains under its juriſdiction five hundred villages. This city contains one hundred and twenty-eight large ſtreets, forty lanes, and is adorned with twelve large and one hundred and thirty-three ſmall fountains. It has alſo ſixteen churches, forty-four religious houſes, twelve bridges, ſix of which are of ſtone; ten market-places, three hundred and ſixty-five towers, and about twenty-one thouſand houſes, ſaid to be inhabited by ſeventy-five thouſand families; and the Pegnitz, which runs through the city, puts in motion about one hundred and ſixty mills of different ſorts within the territory of Nurenburg.

The houſes are generally very lofty, built of hewn ſtone, and adorned with pictures on the outſide. The ſtreets are broad, clean, and well paved, but not ſtraight. The caſtle is ſeated on a high rock; but all the reſt of the city lies upon a level, and in one of the halls of this caſtle are to be ſeen four Corinthian columns forty-five feet high, which it is pretended were brought from Rome by the devil, upon a challenge made him by a monk.

The ornaments uſed at the anointing of the emperors are preſerved in the church of the hoſpital, among which is the diadem of Charlemagne, termed the inſula, which is of pure gold, weighing fourteen pounds, and is covered with precious ſtones. It is not cloſed on the top, as the imperial crowns are generally repreſented. The ſceptre and globe are of gold, and the ſword is ſaid to have been brought from heaven. The robe of Charlemagne is of a violet colour, adorned with pearls, and the imperial cloak is edged with them, ſcattered over with eagles of gold, and a great number of precious ſtones. Here are alſo the cope, the ſtole, and the breeches adorned with jewels, the ſtockings and the buſkins covered with plates of gold.

Among ſeveral other relics, they keep in the church of the hoſpital the iron head of St Longinus's lance; and as they are ſenſible that it is ſhewn in above ten other places, they maintain that all thoſe are counterfeits, and that their's was found by St. Andrew, and brought from Antioch to this city: indeed, they have the bulls of five popes to vouch for its authenticity.

The arſenal here is one of the moſt famous in Germany. In the two great halls, each of which is two hundred and fifty paces long, are three hundred pieces of cannon, among which are many of a very large bore, the biggeſt of them carrying a ball of three hundred pounds weight; but moſt of theſe arms ſerve only for ſhew, they being of greater antiquity than uſe.

The public library is in a cloiſter that formerly belonged to the Dominicans, and is ſaid to contain twenty thouſand volumes. The moſt antient manuſcript is nine hundred years old; this is a copy of the Goſpels, with the prayers and hymns uſed in the Greek church.

The town-houſe is a very large edifice of hewn ſtone; the front is very fine, and has a noble portal in the middle, adorned with ſeveral ſtatues; and the architecture of the whole is regular, and in a good taſte. There are two other very grand gates at equal diſtances, that are no leſs ſplendidly ornamented; but this building is too much crowded, it has no court before it, and that behind is ſo narrow, that it ſcarcely deſerves to be called one. There is an aſcent up a very indifferent ſtair-caſe to a long gallery, upon the cieling of which is repreſented in relievo a famous tournament held in this city about three hundred years ago. In one of the chambers deputies from the circle of Franconia meet every day on the affairs of the province. Over the door of this chamber is a picture, which contains the portraits of the three brothers John George, Frederic, and John Chriſtian, princes of Saxony, who ſupported Luther in promoting the reformation. The tapeſtry of this chamber contains the hiſtory of Nebuchadnezzar, in ſix pieces. Among the ſeveral pictures in the many chambers of this building are, a large painting which repreſents the homage rendered by the magiſtracy of Nurenburg to the emperor Leopold; a very antient Madona, given by Frederic elector of Saxony; a St. Luke painting the virgin Mary; Adam and Eve by Albert Durer, which is highly eſteemed: here Eve preſents the apple with a very arch inſinuating ſmile; another picture by Albert Durer, in which are the ſaints Peter, Paul, John, and Mark; the murder of Abel by Preiſler, where Cain kills his brother with a large flint ſtone; the hiſtory piece of Eſther and Ahaſuerus, a fine picture much eſteemed; but Ahaſuerus has the face and dreſs of king Francis I. and the queen is dreſſed like the ladies at Nurenburg. In the council-chamber, which is very ſmall, is a picture of the laſt judgment, ſaid to be ſix hundred years old, in which Joſeph is painted in the habit of a Carmelite.

The city of Nurenburg is divided into eight parts, and one hundred and thirty-one captainſhips: I. The quarter at the wine-market, which is divided into thirteen captainſhips. Here is the pariſh church of St. Sebald; in which the principal things to be ſeen are the braſs monument of St. Sebald, with the creation of the world by the celebrated Albert Durer, who was a native of Nurenburg. The Latin ſchool near it is ſupplied with eight teachers.

II. The quarter at the milk-market, which contains fourteen captainſhips. In this quarter is the imperial fortreſs, ſeated on a mountain. What is moſt remarkable here is the emperor's chapel, with the old tower belonging to it, as alſo the chapels of St. Walburg and St. Margaret, together with the obſervatory. The church of St. Mary, which is alſo called the Predicant, or Dominican church, in which is kept the great library belonging to the town. In this part alſo ſtands the chapel of St. Maurice.

III. The quarter at the Gilben-hof, which conſiſts of fourteen captainſhips; there is here St. Giles's church, which is built in the modern taſte, and is the fineſt in the whole city. In an old cloiſter near it is a ſeminary, in which the upper claſſes are under the care of a certain number of profeſſors, and the lower under one rector and four preceptors.

IV. The quarter at the ſalt-market, which contains twenty-two captainſhips. Here is the council-houſe juſt deſcribed, with the church of our Lady. Near the Spital, in which four hundred people are conſtantly maintained, is the church of the Holy Ghoſt.

V. The quarter near the Bare-footed Fryars contains in it twenty-one captainſhips, in which is the pariſh-church of St. Laurence, near which is a Latin ſchool under the direction of eight teachers. In this quarter is the church of the Bare-footed Fryars, an hoſpital for foundlings, the church of St. Catharine, that of St. Martha, with a ſmall hoſpital, the church of St. Clare, and the building belonging to the academy of painting.

VI. The quarter at the corn-market conſiſts of ſeventeen captainſhips, containing the church of St. Salvator and the arſenal, which contains two hundred and ſeventy-four braſs cannon, and two of iron, with ſmall-arms ſufficient for eighteen thouſand men; the largeſt cannons are forty-eight pounders, except two pieces of ordnance that carry balls weighing eighty pounds. One of the cannons is charged at the breech, and may be fired eight times in a minute. Here are alſo fifty field-pieces that are called by the names of the twenty-four letters of the alphabet, the twelve months, the twelve ſigns of the zodiac, and of Mars and Pallas. The ſmall-arms are very beautifully diſpoſed in columns, ſhields, trophies, ſuns, and the arms of the city; being curiouſly arranged, like thoſe in the Tower of London. All theſe implements of war are kept in two large halls, one of which is a hundred and ſeventy, and the other two hundred and twenty common paces in length.

VII. The quarter near the Carthuſians conſiſts of fifteen captainſhips, and contains the church of Marienzell and the chapel of the twelve apoſtles.

VIII. The quarter near St. Elizabeth conſiſts of fifteen captainſhips. Here is the church of St. James, a Latin ſchool, which has three maſters, and the Teutonic-houſe, which is the reſidence of the commandery of Nurenburg. In the church of St. Elizabeth in this quarter the Teutonic order celebrate their form of worſhip, and the deacons of St. Jacob have their maſs or hours of prayer there every day early in the morning.

One of the greateſt beauties of this city is its fountains; theſe we have juſt mentioned; but it will be proper to give a more particular account of them. In the new ſquare are three fountains, the moſt remarkable of which

which is that in the middle. In a large oval baſon is a rock, on the top of which four large dolphins ſpout water, and ſupport a large ſhell, out of which riſes a triton, which jets a plentiful ſtream into the air, through his marine trumpet, and from the bottom of the baſon riſe four ſmaller water-ſpouts, which throw their water into the triton's ſhell, through the hollow ſlopings of which it returns into the baſon. The whole is incloſed within a fine iron baluſtrade.

Our author mentions another magnificent fountain, which when he was at Nurenburg was nearly finiſhed, but not erected. In the middle of a vaſt marble baſon, ſays he, will be placed a large rock, in which are two caverns oppoſite to each other. From theſe grottos ſpring with great fury two ſea-horſes, of braſs, with riders, who manage them with large ſea-reeds. Above theſe grottos are little infants of the ſame metal, each ſounding a marine trumpet. Upon the rock ſit two naiads, with oars in their hands, in large baſons, and four dragons mounted by little children. All the figures are of braſs, as big as the life, and the attitudes admirable. Out of the middle of this rock riſes a pedeſtal, adorned with feſtoons compoſed of coral and various ſhells, with cartouches, &c. and with all theſe ornaments are intermixed ſome dolphins heads. The fineſt figure in the whole is a Neptune ſtanding on the pedeſtal. This beautiful ſtatue is nearly ten feet high, and weighs two thouſand two hundred pounds. This fountain will throw out two hundred hogſheads of water in an hour, and is valued at between thirty and thirty-five thouſand crowns.

Among the ſtone bridges is one of a ſingle arch, fifty paces in length, over the river Pegnitz. At one extremity is a large fleſh-market, built of hewn-ſtone, and on its gate is a vaſt ox of ſtone lying on its belly, with gilt horns and hoofs; under which is a Latin couplet in gold letters, "that every thing has its beginning and increaſe; "but the ox you ſee here never was a calf."

On the new bridge, which is ſaid to have coſt the city a hundred thouſand guldens, are two pyramids, on the apex of one of which is the imperial black eagle, and on the other a dove with an olive branch in its beak, with a diſtich in Latin to the following purpoſe:

"In paſſing over this bridge, dedicated to Charles, "pray that his imperial race may flouriſh while the "waters flow under it."

Here are many noble muſeums belonging to private perſons, and which are viſited by all travellers of taſte and learning. There is alſo an anatomical theatre founded at the expence of the city, in which are about a hundred ſkeletons of different animals, eſpecially of the winged ſpecies. This anatomical theatre, Mr. Keyſler obſerves, is under the management of Dr. Treu, whoſe houſe is near it; and in his cabinet is a collection of about ſix thouſand kinds of plants, ſeveral petrifactions, a ſet of all kinds of ſeeds, ſome delicate and curious ſkeletons of leaves and fruit, and ſeveral pieces ſhewing the curious mechaniſm of the human body. In this muſeum is ſet up an elegant Latin inſcription, which may be thus tranſlated:

"Mortal, if ignorant of the ſtructure of thine own "body, and of that of the animals, &c. created for thy "uſe, if thy ſight be good, and thy mind inclined to "knowledge, ſtop here a while. Hither, for thine, and "his own benefit, an abſtracted mind and curious hand "has collected the ſkeletons of men, animals, and ve"getables; with the various kinds and forms of mine"rals. Every particle of theſe is a kind of natural "hieroglyphic, which delineates the infinite goodneſs, "bounty, and glory of the Creator much more diſtinctly "than thoſe invented by the Egyptians; and at the ſame "time teaches thee to celebrate the unſearchable power "of the Deity, to admire the inimitable and wonder"ful formation of all things, to confute the abſurdity "and obſtinacy of the wicked atheiſt, to obſerve the ſud"den change of vain beauty into loathſomeneſs, and "from thence, and the frailty of human life, to learn "true wiſdom."

It is remarkable that the principal clocks in this city ſtrike the hours from one to twelve progreſſively from the riſing of the ſun, and begin again after ſun-ſet, which at firſt puzzles ſtrangers; but by the table of the equation of time publiſhed here, this may be eaſily reduced to the common method of calculation.

There are ſeveral other cuſtoms which ſeem very extraordinary, particularly the manner of celebrating marriage: the bridegroom, attended by his relations and friends, walks to the church, and is ſoon after followed by the intended bride and her friends. Mr. Miſſon, who was preſent upon one of theſe occaſions, ſays, that on their entering the church the bridegroom ſat down with his relations on one ſide, and the bride on the other oppoſite to him; and over each of their heads againſt the wall was painted the figure of Death. From thence they both walked up to the miniſter, who ſtood in the midſt of the choir; and he had no ſooner performed the ceremony, than four or five trumpets ſounded from the top of the ſteeple. Upon this the new-married couple returned in the ſame manner to the place from whence they came.

The bridegroom appeared all in black, with a cloak trimmed with lace, with a large ruff, and a little crown of gold plate lace upon his periwig. But the bride's dreſs is not ſo eaſily deſcribed: the beſt way to form an idea of it is, to fancy a head-tire compoſed of gilt wire like a bob periwig half a foot higher than the forehead, and frizzled out on the ſides; theſe threads or wires are ſo cloſe together, that there is no more diſtance between them, than is juſt ſufficient to faſten to them an infinite number of very ſmall, thin, round plates of gold, which hanging both within and without waved with the leaſt motion. Her habit was a kind of black veſt with long ſkirts; but the body was very ſhort, and had the ſeams covered with gold lace, as the ſkirts were with ſmall knots of black ſattin ribbon. She had ſtraight ſleeves and cuffs that reached down below her wriſts. About her neck ſhe wore a handkerchief of very fine lace ſhaped before like a clergyman's band, but reaching down to the middle of her back, ended in a point. She had alſo a gold chain about her ſhoulders, and another about her waiſt, inſtead of a girdle. The petticoat was pretty ſhort, and trimmed towards the bottom with black bone-lace and gold fringe. This bride danced at the wedding with one of the ſenators, who wore a great ruff. Indeed the cuſtoms I obſerved, ſays our author, at this feaſt were ſo very different from any I had ſeen before, that I rather fancied myſelf in China than in Europe.

Nurenburg boaſts of having better artizans, and in greater numbers, than moſt cities in Europe: particularly the curious works made here in wood, ivory, alabaſter, and even of paper and ſtarch, are very famous; and thoſe who are fond of mechanical arts and manufactures, may here abundantly gratify their curioſity. The toys of Nurenburg are indeed exported all over the world; but their trade is not now ſo conſiderable as it was formerly.

The few Calviniſts here have a preacher of their own, and perform divine ſervice out of the town, in a houſe ſeated in a garden, and fitted for that purpoſe. The papiſts are allowed the public exerciſe of their religion in the Teutonic-houſe: but the Jews are obliged to live in a village near the city, from whence they have the liberty of coming daily into the town, on paying a ſmall piece of money; but they are not ſuffered to ſtay all night, and muſt therefore return before the gates are ſhut.

The nobility here took their riſe in 1198, when the emperor Henry VI. aſſiſting at a tournament, raiſed thirty-eight burghers families to the degree of nobility. The council of Nurenburg conſiſts of thirty-four noble and eight handicraft counſellors. The former are divided into twenty-ſix burgomaſters, and eight old ſenators, called Alt Genanten. Theſe twenty-ſix burgomaſters conſiſt of thirteen old and thirteen young ones, and every four weeks an old and a young one preſide. Out of the thirteen old burgomaſters are choſen the ſeven firſt counſellors, who are ſtiled the ſeptemvirate, and manage the moſt important and ſecret affairs of the city; together with the ſix next to them, who compoſe the council of appeal. Of the former the three firſt are ſtiled the ſupreme head people, and are always imperial counſellors:

and

A Nuremburg Marriage.

and the first of these is also imperial bailiff; he resides at the imperial fort, and is stiled the castellan. Out of the thirteen younger burgomasters, as well as out of the older ones, all the offices of the government are filled up. The eight counsellors chosen out of the tradesmen go annually at certain times to council; and these are selected from the goldsmiths, the brewers, the tanners, the taylors, the cutlers, the clothiers, the bakers, and the furriers, who are nominated the lesser council. The great council, which must consist of two hundred persons, is composed of those elected by the burghers.

The judicatories in Nurenburg are the appeal and upper court, together with that of the town and marriage-court; the country peasant-court; the under-court, instituted for the recovery of small debts; the quinquevirate-court, for the reparation of injuries; the forest-court, belonging to the wood of Sebald; the forest-court of Laurence wood; and the wild honey-court in the latter.

The jurisdictions here are the bailiff-office, the tax-office, the administratory-office for the county, the war-office, the supreme guardian and ecclesiastical-office, the building-office, the toll-office, the brewery-office, the office for levying of toll upon wine, the pawn-office, or lending-house, the corn-office, the censor-office, established for the government of the artizans, the tallow-office, the rent-master's-office, the sheriff's or inquisition-office, the office belonging to the town charity, the arsenal-office, the chest-office, the mint-office, and several others.

The military force of this town consists of seven companies of foot, each of which in time of peace contains a hundred men, but in time of war a hundred and eighty-five; of two troops of cuiraffiers, each consisting of eighty-five men; and two companies of invalids, amounting to two hundred and twenty-six. Besides these, which are regular troops, the burghers form themselves into twenty-four companies of about three hundred and fifty men each, who are all well disciplined, and go through the several evolutions and manual exercise with great exactness and activity. Two hundred men also belong to the train of artillery; and the city selects two troops of horse out of such of the burghers as are remarkable for their height and comeliness. The latter, on the breaking out of a fire in the city, have their particular stations assigned them, to which they immediately repair; and the men belonging to the artillery secure the arsenal. They have here an excellent regulation with respect to fires, in order to excite the people to activity and vigilance; a ducat is given as a reward to that person who brings the first pail of water, two guldens to the second, one gulden to the third, eight groschs to the fourth, and to every one of the rest fifteen crutzers.

The tract called the Nurenberg circle is surrounded by the rivers Schwartzbach, Pegnitz, and Schwabach, to which the Nurenbergers give the title of the border-waters. It comprizes within it two considerable imperial forests, called the Sebald and Laurence forests, which are covered with pines; and in this compass are a considerable number of towns subject to Nurenburg, one of the principal of which is

Altorf, or Altdorf, a small town that consists principally of one large street, and several little ones. At the parish-church a professor of divinity always preaches, and the two deacons belonging to it are likewise professors of divinity. The citadel is an antient stone building, that has twelve large courts, in which the administrator of Altorf resides. Here is also an university; the building consists of three stories, and has two wings; and contains in it a valuable library, an anatomical theatre, a chemical laboratory, and an observatory. Without the town is a large botanical garden, which is kept in good order.

SECT. VI.

Of the Bishopric of Aichstadt; its Situation, and Rivers. The Arms of the Bishop, and the Offices by which the Government is administered; with a Description of the City of Aichstadt. Of the Teutonic Order, and particularly the Masterdom of Mergentheim; with an Account of that Town.

THE bishopric of Aichstadt, or Eichstett, terminates on the Upper Palatinate, Upper Bavaria, the dutchy of Neuburg, the county of Pappenheim, and the principality of Anspach, by which also several detached parts of it are surrounded.

The principal rivers by which this country is watered are the Altmuhl, which flows out of the principality of Anspach, and here receives the little rivers of Anlauter, Schwartzach, and Sulz; after which it enters Bavaria. The Upper and Under Retzat also runs through some parts of this bishopric.

The episcopal title is, By the grace of God, bishop and prince of Aichstadt.

The episcopal arms are a crosier argent, in a field gules. A bishop's mitre crowns the shield, and behind it appears a sword and crosier.

These bishops formerly stiled themselves arch-chancellors of the holy see of Mentz, and maintained that, in virtue of this dignity, they had several privileges during the vacancy of that archbishopric. The bishop of Aichstadt is perpetual chancellor of the university of Ingolstadt. He sits in the council of the princes of the empire, on the spiritual bench, between the bishops of Worms and Spire, and at the diets of the circle of Franconia between the reigning margraves of Brandenburg-Bareith and Anspach.

The chapter consists of fourteen capitulars and fourteen domicelli, who must be all of a nobility suitable to the foundation, and swear to sixteen degrees of descent.

The principal offices here are the spiritual council, the regency, the aulic council, and the aulic chamber.

The inhabitants are of the popish religion. The episcopal territories are divided into eleven upper prefecturates, the principal place in which is

Aichstadt, or Eichstett, the episcopal residence, which lies in a valley on the banks of the Altmul, in the forty-eighth degree fifty-six minutes north latitude, and in the eleventh degree ten minutes east longitude. It has an antient cathedral, to which one of its bishops presented a fine pyx for the host, which is of pure gold, in the form of a sun, and weighs forty marks; it is adorned with several diamonds, rubies, and other precious stones; the whole being valued at sixty thousand guilders. Besides the great choir, there is the choir of St. Willibald, in which it is pretended the bones of that saint were found in the year 1744, in honour of whom John Anthony II. caused a new and expensive high altar to be raised, which was dedicated in 1745. At St. Walburg's church is an high altar as broad as the church itself, and above it is a small cavity, the sides and bottom of which are lined with gold, and covered with a stone. This is called the coffin, and is said to contain the breast-bones of St. Walburg, out of which an oil is said to flow and force itself through the stone, where it is collected in drops, which are received into a golden trough, and from thence conveyed into a golden bowl, and deposited in small vials for the use of pilgrims and benefactors resorting thither, and employed in miraculous cures. This holy flux happens twice a year, that is in the spring and fall; but it frequently appears at different seasons. To this church belongs a Benedictine nunnery. In this town is also a college of Jesuits, a parochial and collegiate church of our Lady, in which is a foundation consisting of a provost, a dean, a cathedral and town minister, and some canons. Here is also a Dominican convent, a cloister of regular canonists of the congregation of our Lady, a Capuchin cloister and church in the east suburbs, and another church dedicated to the Holy Ghost.

We shall now give an account of the Teutonic order in general, and in particular of the masterdom of Mergentheim.

The Teutonic order was founded in Palestine in the year 1190, and those who entered into it were called knights of the virgin Mary, or brothers of the Teutonic house of our Lady of Jerusalem. They bound themselves by a vow to defend the Christian religion and the Holy Land, and to serve the poor and sick; to be all of

them Germans, and of true antient nobility. The knights of this order were driven from Jeruſalem by the Saracens, and afterwards gradually ſubdued all Pruſſia, Courland, Semigallia, and Livonia; but again loſt thoſe countries.

The ſuperior of this order, or the grand and Teutonic maſter, ſtiles himſelf adminiſtrator of the grand maſterdom of Pruſſia, maſter of the Teutonic order in Germany and Italy, and lord of Freudenthal and Eulenberg. He is a ſpiritual prince of the empire, and enjoys a high rank in the council of the princes, ſitting on the ſpiritual bench next after the archbiſhops, and preceding all the prelates; but in the circle of Franconia, he is the laſt of the ſpiritual princes.

The arms and enſigns of this order are an erect croſs ſable in a field argent, granted by pope Celeſtine III. In the field is a croſs or, conferred by king Henry of Jeruſalem, and in its center is ſeen the imperial eagle beſtowed by the emperor Frederic II. On each of the four corners is a lilly or, which was added to theſe arms by St. Lewis of France.

Theſe knights muſt be of old German nobility, and prove their deſcent. Both the proteſtants and papiſts may be inveſted with the order, and the proteſtant knights are permitted to marry. On ſolemn occaſions the knights wear a white mantle with a black croſs upon it, edged with ſilver; but their dreſs in other reſpects reſembles that of other ſeculars, though it is not ornamented, or of the gayeſt colours.

Did the ſigniories and eſtates which the Teutonic order ſtill poſſeſs in Germany lie contiguous, they would form a conſiderable principality. Theſe eſtates conſiſt, in general, of what is properly called the maſterdom of Mergentheim and twelve bailiwics.

The regency at Mergentheim is compoſed of a vice-ſtadtholder, preſidents, houſe commendaries, and purveyors, with a certain number of privy, regency, ſpiritual, and chamber counſellors.

To the circle of Franconia belongs only the proper maſterdom of Mergentheim, and the bailiwic of Franconia, the principal place in which is,

Mergentheim, Mergenthal, or Marienthall, a ſmall city ſeated on the Tauber, twenty-five miles to the ſouth-weſt of Wurtzburg; the reſidence of the grand maſter of the Teutonic order, and alſo the ſeat of the regency. In this town is an academy, and a ſeminary. Here is alſo a rural deanery belonging to the eccleſtical juriſdiction of Wurtzburg, and on a mountain near the town ſtands a citadel, in which the grand maſter uſually reſides. It was taken by the Swedes under the command of general Horn in 1681; but was ſoon after retaken by the French and the duke of Saxe-Weymar; but has been ſince reſtored to its antient proprietor, the grand maſter.

SECT. VII.

Of the Counties of Hohenlohe, Wertheim, and Erbach. Their Situation, Extent, Produce, and Rivers; with a conciſe Account of the Princes of each, their Arms, Government, and principal Towns.

THIS country borders on the maſterdom of Mergentheim, the biſhopric of Wurtzburg, the principality of Anſpach, the territories of the imperial cities of Rotenburg and Swabian-Hall, the dutchy of Wurtemburg, and a part of the electorate of Mentz. Its greateſt extent from eaſt to weſt is about eight and twenty miles, and from north to ſouth about thirty. It was antiently much larger, and formed nearly one third of all Franconia.

The ſouth ſide of the country furniſhes the traveller with a proſpect of fine vineyards, which, in ſome places, join to each other for ſeveral miles together. The north ſide is proper for agriculture, and on the tops of the mountains are commonly found valuable woods of oak, fir, pine, beech, and birch, in which a variety of game find ſhelter; and in the valleys is good meadow ground, which feeds an excellent breed of cattle.

The principal rivers are the Kocher, which iſſuing out of the territory of the imperial city of Swabian-Hall, enters the county of Hohenlohe, and runs into the dutchy of Wurtemburg. The Jagſt, which flows into this country from the principality of Anſpach. The Tauber, and the Wernitz, both which riſe in this country.

With reſpect to the religion of this country, it is neceſſary to obſerve, that the reformation which was begun here in 1540, was thoroughly completed in 1556, and ever ſince the whole country has been of the Lutheran church. But in 1667, count Lewis Guſtavus embracing the Romiſh religion, and his elder brother count Chriſtian of Hohenlohe-Bartenſtein, ſoon after following his example, the proteſtants were oppreſſed, and ſuffered various grievances, which have been in a great meaſure removed by the interpoſition of the empire.

The counts of Hohenlohe are of a very antient family, and are divided into the principal branches of Neuinſtein and Waldenburg; the former is alſo ſubdivided into thoſe of Weckerſheim, and Lagenburg, and the latter into thoſe of Pfedelbach and Schillingsfurſt. The whole of this capital line was raiſed in the year 1744, to the dignity of princes of the empire; but tho' the princely dignity was at the ſame time offered to the collateral branches of the line of Neuinſtein, they have as yet ſcrupled to accept of it.

The princes of the younger Waldenburg capital line, ſtile themſelves princes of the holy Roman empire, counts of Hohenlohe and Waldenburg, lords of Langenburg, &c. but the counts of the elder Neuinſtein line, ſtile themſelves counts of Hohenlohe and Gleichen, and lords of Langenburg Cranichfield, &c.

The arms of the princely capital line of Waldenburg are, for Hohenlohe, a ſhield quarterly, in whoſe firſt and fourth quarters argent, are two leopards ſable, running directly againſt each other: and in the ſecond and third upper quarters, a lion advancing and crowned or, with an open throat, a red exerted tongue, and a double rolled up tail, in a field ſable; and in the lower ones, on account of Langenburg eight ruſtres ſable, in a field or.

The arms of the Neuinſtein capital line, are alſo a ſhield quarterly, in whoſe firſt and fourth quarters are to be ſeen in a field argent two leopards ſable running at each other; and in the ſecond and third, above, a lion crowned or, in a field ſable, and below it eight ruſtres ſable in a field or. In a middle ſhield is a lion crowned or, in a field verte.

At the diet of the empire the princes and counts of Hohenlohe belong to the Franconian college of counts; and at the diet of counts are poſſeſſed of ſix voices with the right of precedency in the Franconian college; but at the Franconian diets they have only two voices, which follow directly after thoſe of the princes.

This county contains in it ten cities, three market-towns, and twelve citadels, the principal place in which is,

Oringen, the capital of the country, ſeated on the rivulet of Ohrn, which runs between the old and new town. One half of this place belongs to the Oringen line, and the other to the whole princely line of Waldenburg. The former reſides at a magnificent caſtle in this city, to which adjoins a beautiful pleaſure garden. The building called the ſtone houſe is a grand ſtructure encloſed by a wall, with a ſpacious court before it, and belongs to the princely line of Waldenburg. At this place is alſo a building allotted for the reſidence of the counteſs dowager. The churches and preachers are alſo in common. Of the former there are two, the principal church, and that of the Spital. The Lazar-houſe has a chapel, and the burial-place without the town has alſo a church. The ſeminary here was in the year 1735 formed on the plan of a Gymnaſium Illuſtre. In this town are alſo kept the common archives. In the neighbourhood of this city are ſeveral eminences that yield excellent fruit, and fine wine.

The county of Wertheim, which we ſhall next deſcribe, lies between the archbiſhopric of Mentz, and the biſhopric of Wurtzburg, a part of it being alſo bounded by

by the county of Erbach. The Maine runs through it, and in this county receives the Tauber. It produces a variety of fruit, and of the grapes a good wine is made.

At the diet of the empire the princes and counts of Lowenſtein Wertheim, are poſſeſſed, on account of this county, of two voices in the Franconian college of counts, and at the circle of Franconia, they enjoy a ſeat and voice between Caſtell and Rieneck.

The capital of this county is Wertheim, which is ſeated on the Maine, where it is joined by the Tauber. It contains two reſidentiary palaces, and alſo a pariſh church, which both the Lutherans and Roman catholics make uſe of in common, and alſo a Latin ſchool. The magiſtracy here are, however, all Proteſtants.

The county of Erbach is ſeated on the Odenwalde, and is ſurrounded by the archbiſhopric of Mentz, the electoral palatinate, and a part of the county of Wertheim, extending about twenty-four miles in length, and about nineteen in breadth.

It is a mountainous country; but well cultivated and pretty fruitful. The more barren lands are ſometimes ſuffered to reſt between five and ten years, after which the buſhes, heath, and whatever elſe they are over-run with, are cut down in time of harveſt, dug up by the roots, and theſe, with a part of the turf, being laid together on heaps, as ſoon as they become dry, are ſet on fire, and the aſhes being ſpread abroad, the land is ploughed up and ſown; by this means the land is rendered fruitful, and the inhabitants procure a ſufficient quantity of corn for their ſubſiſtance; they cultivate abundance of potatoes, and alſo prepare a great deal of pot-aſh. The foreſts, however, become thin, and many pieces of ground which were formerly covered with woods, have been converted into arable land; but at preſent they begin again to plant trees. The beſt paſtures and meadows lie in the valleys, and the breeding of cattle is here pretty conſiderable.

This country has ſome good quarries of ſtone and marble, and it has alſo ſome good mines of iron.

The rivulets which riſe in this country, among which the Mumling is the principal, all diſcharge themſelves into the Maine, the Rhine, and the Neckar, and abound in fiſh.

The inhabitants amount to near twenty-four thouſand ſouls; they are of the Lutheran church, and export fine meal made of ſpelt, with oats, buck-wheat, wood, coals, pot-aſh, cattle, iron, nuts, honey, and wax. The wool produced here is manufactured into cloth.

The county of Erbach is for the moſt part a fief of the elector Palatine, and on the raiſing of the houſe of Erbach to the dignity of counts, the feodal rites were expreſly reſerved to that of the elector. Theſe counts are poſſeſſed of two voices at the diet of the empire in the college of the counts of Franconia.

Within this county are nine prefecturates, one of the principal places in which is,

Erbach, an old citadel, and a ſmall town ſituated on the Mumling, in a narrow valley amidſt high mountains, and contains only a few houſes which ſtand by the citadel, and are ſurrounded with a wall; but other houſes have been built on the out-ſide of this wall, which have the appearance of a ſuburb; but the place is ſo inconſiderable as to have only one church. At a ſmall diſtance from the town is the village of Erbach; through this place runs a rivulet, which in a meadow near the town, ſinks into the earth, and paſſes through a mountain, on the other ſide of which it iſſues out again, and at length runs into the Mumling.

SECT. VIII.

Of the Counties of Henneberg and Schwartzenberg, with a conciſe Account of the free imperial City of Rottenburg.

THE county of Henneberg is bounded on the eaſt by Coburg, and Schwartzenburg; on the north by Gotha and Eiſenach; on the weſt by the landgravate of Heſſe, and the biſhopric of Fulda; and on the ſouth by the biſhopric of Wurtzburg, extending from north to ſouth near twenty-eight miles, and from eaſt to weſt about twenty-five.

In moſt of its diſtricts the inhabitants apply themſelves to agriculture, with tolerable ſucceſs, and in ſome places cultivate tobacco. It has mines of ſilver and copper; but thoſe of iron are by far the moſt numerous. In ſome parts of this county ſalt is made, and it has alſo ſome medicinal ſprings.

The principal river is the Werra, which after its entering into this county, divides itſelf into two parts, and receives into it ſeveral ſmall ſtreams.

No other religion than that of the Lutherans is tolerated here, except at Schmalkalden, where is a church belonging to the Calviniſts.

The manufactures of this county chiefly conſiſt of fuſtian, and the making of arms and hard-ware.

At preſent the princely county of Henneberg has the following lords for its poſſeſſors, namely, the elector of Saxony, the dukes of Saxe-Weimar, Meinungen, Gotha, Coburg Saalfeld, and Hilburghauſen, and the landgrave of Heſſe-Caſſel.

The principal places in this county are the following:

Schleuſingen, formerly the reſidence of the princes of Henneberg, and at preſent the ſeat of the electoral Saxon ſuperintendency, is ſeated on the little river Schleuſz, forty miles to the north-weſt of Bamberg, at the foot of a hill, upon which are the ruins of a caſtle or palace. The town is not large, and on account of the adjoining Thuringian wood, has but little land fit for tillage; it has, however, a ſeminary, which belongs in common to all the dukes of Saxony, who are poſſeſſed of any ſhare in this county. Schleuſingen alſo contains a commandery belonging to the order of St. John, founded in the year 1291.

Meinungen, or Meiningen, a town ſeated on the river Werra, amidſt high mountains, which duke Bernhard of Saxony, on his obtaining it in 1681, choſe for his reſidence, and cauſed a new palace, with a chapel to be built, naming it from his conſort Elizabethenburg. In this palace are the princely library, a cabinet of medals, and the archives of Henneberg, which belong in common to the princely and electoral houſes of Saxony. In this town is one pariſh church, a Latin ſchool, an orphan-houſe, a houſe of correction, and a ſpinning-houſe. It had formerly a very conſiderable manufacture of fuſtian, which is now leſs flouriſhing, and the burghers chiefly apply themſelves to the culture of tobacco.

Smalkald, a town ſituated at the foot of the Thuringian wood, on a rivulet of the ſame name, which here receives into it the Stille. It is a pretty large, thriving, and populous town. On a hill near it ſtands the citadel of Wilhelmſburg, thus called from its being rebuilt by the landgrave William IV. In the center of the town ſtands an old palace of the prince of Heſſe-Caſſel, called the Heſſenhof. In this town is alſo a collegiate church, in which were formerly twelve canons, with a town-church poſſeſſed in common by the Lutherans and Calviniſts, and a Latin ſchool. The ſalt-pits here, in conjunction with the neighbouring mines of iron and the forges, are of great advantage to the town, which has a conſiderable trade in hardware. The numerous meetings held by the proteſtant princes in this town, with the league they concluded here in 1531, and the theological articles drawn up by Luther, which they cauſed to be confirmed by their teachers, have rendered this town famous in the German hiſtory.

The county of Schwartzenberg is for the moſt part ſurrounded by the biſhopric of Bamberg, the county of Caſtell, the ſignory of Speckfeld, the principalities of Bareith and Anſpach, and the biſhopric of Wurtzburg. This county in its greateſt extent is about nineteen miles long; but in ſome parts it is only two miles, tho' in others about three miles broad. The inhabitants of this narrow ſlip of country are partly of the Lutheran and partly of the Romiſh church.

The prince of Schwartzenberg is poſſeſſed of ſeveral other diſtricts in Bohemia and Stiria. His title is prince of Schwartzenberg, of the holy Roman empire princely landgrave in the Klettgau, count of Sulz, duke of Crumau, and lord of Gimborn, of the holy Roman empire

pire hereditary aulic judge of Rothweil, and lord of the ſigniories of Murau, Wittingau, Frauenberg, Poſtelberg, Wildſchutz, Worlic, &c.

His arms are a ſhield quarterly, the firſt and fourth fields of which are argent and azure, divided eight-fold lengthways for Schwartzenberg; and in the third and fourth quarter is a black raven picking out the eyes of a Turk's head, in memory of the fortreſs of Raab in Hungary, which was taken from the Turks by count Adolphus in 1598.

In this little diſtrict are ſix prefecturates; but no town worthy of notice, moſt of them being villages, and the reſt only little market-towns, with only one pariſh-church.

There are ſome other little diſtricts in the circle of Franconia, as the counties of Caſtell and Reinec; the ſeigniories of Limburg, Seiſheim, Reichelberg, Weiſſentheid, Welzheim, and Hauſen, which, though their poſſeſſors have a ſeat and voice in the diet of the empire, are too inconſiderable to merit any farther notice.

There are alſo ſeveral free imperial cities in the circle of Franconia that have a voice in the diet of the empire, the principal of theſe, next to Nurenburg, which has been particularly deſcribed, is

Rothenburg, or Rotenburg, which is ſeated on an eminence by the Tauber, in the forty-ninth degree twenty-ſix minutes latitude, and in the tenth degree eleven minutes eaſt longitude, thirty-five miles to the weſt of Nurenburg. It receives the water for its neceſſary uſes out of the river Tauber, by means of an engine, by which it is forced up the mountain, and from thence aſcends in a direct line to what is called the Klingenthurn, from which it falls down again, and produces three fountains in the town. Rotenburg is ſurrounded with walls that are fortified with towers, and defended by ditches. The inhabitants who are Lutherans have five churches in the city; but there is generally no preaching but in two of them, that is, in the pariſh-church of St. James, and in the church near the hoſpital. The academy here conſiſts of ſeven claſſes, and the like number of teachers.

At the diet of the empire this city poſſeſſes the eighth place in the college of the imperial cities on the Swabian bench, and the ſecond at the circle of Franconia on the bench of the imperial cities. To this city belong ſeveral villages.

CHAP. XVI.

The ELECTORAL RHENISH Circle, or the Circle of the LOWER RHINE.

SECT. I.

Of the electoral Rheniſh Circle in general; and firſt of the Electorate of Mentz: its Situation, Extent, and Produce. The Religion of the Inhabitants; their Arts, Manufactures, and Commerce. The Dignity, Titles, Arms, and Prerogatives of the Archbiſhop, and of the high Chapter of Mentz. The Offices by which the Government is adminiſtered; with the electoral Revenues and Forces.

THIS circle extends from the circle of Swabia, which bounds it on the ſouth, to that of Weſtphalia, which lies to the north; to the eaſt it is bounded by Franconia, and the lower part of the circle of the Upper Rhine; and to the weſt by the upper part of the circle of the Upper Rhine, Lorrain, and Luxemburg. It divides the circle of the Upper Rhine; but its extent is difficult to determine.

It includes the three archbiſhoprics and electorates of Mentz, Triers, or Treves, and Cologne, with the Palatinate.

The elector of Mentz is the ſummoning prince and director of the circle, the diets of which have ever ſince the middle of the ſeventeenth century been held at Francfort on the Maine. This is one of thoſe called the anterior circles, which, in the years 1697 and 1702, entered into a mutual compact with each other for their defence againſt the attacks of an enemy.

With reſpect to religion, this circle is reckoned among the mixed.

The archbiſhopric of Mentz is ſeated on the Rhine, and is bounded on the north by Wetteravia and Heſſe, on the ſouth and eaſt by Franconia and the palatinate of the Rhine, and on the weſt by the electorate of Triers; extending about fifty miles in length, and twenty in breadth.

This country affords ſufficient ſubſiſtence for the inhabitants; for, beſides corn and excellent wine, it produces fine garden-fruit, and plenty of cattle; in ſome parts are raiſed large quantities of flax and tobacco, and in others are iron mines.

The principal rivers with which this electorate is watered are, the Rhine, the Maine, the Jaxt, and the Lahn.

The countries ſeated on the Rhine and Maine, which, ever ſince the Reformation, have been in the power of the elector of Mentz, have invariably adhered to the Romiſh church; but on the Eichsfeld, as alſo at Erfurt, Cronberg, and ſome other places, there are many Proteſtants; and at Bonnigheim the proteſtant worſhip is alone uſed. In ſeveral places the Jews are alſo tolerated.

In this archbiſhopric are ſome woollen and other manufactures, in ſome places looking-glaſſes, and in others fine porcelain is made; while in other parts the inhabitants apply themſelves with great diligence to the cultivation of flax and tobacco. With reſpect to commerce, they carry on an important trade in wines, ſerge, linen, tobacco, almonds, cheſnuts, nuts, &c. The late elector, John Frederic Charles, has not only eſtabliſhed two annual fairs at Mentz; but has endeavoured to make commerce flouriſh both in that city, and in all the archiepiſcopal countries; for which purpoſe commiſſioners of commerce are appointed there. The electoral exchequer of Lohnec expedites all mercantile affairs, and examines into complaints relating to exchange and all commercial ſubjects of diſpute. The electoral magazine here has a preſident, four magazine maſters, and two brokers.

The archbiſhop obtains his dignity by the free choice of the chapter, and muſt ſwear to an election-capitulation. The papal confirmation is very expenſive; the pallium is alſo obtained at a high price, and the annalis, which each new archbiſhop is obliged to pay to the pope, amounts to ten thouſand florins. This prelate is, however, the firſt archbiſhop in Germany, and the archiepiſcopal dignity is inſeparably connected with that of elector; and indeed he is eſteemed the firſt among all the ſpiritual and ſecular electors.

His title is J. F. by the grace of God of the holy ſee of Mentz archbiſhop, of the holy Roman empire throughout all Germany arch-chancellor and elector, &c.

The archiepiſcopal arms are a wheel argent, in a field gules, to which each elector alſo adds his family arms.

The elector of Mentz has great prerogatives with reſpect to the ſupreme judicatory of the empire. At the imperial aulic council the vice-chancellor of the empire, who is nominated by him, follows immediately after the imperial preſident. He has alſo the nomination of all the ſecretaries; and the imperial aulic chancery, which is appointed by him, expedites all matters of which cognizance has been taken. He likewiſe collects, and has the direction of the money received for all diſpatches; keeps

the acts of the imperial aulic council, and the aſſeſſors of the elector are poſſeſſed of the firſt place among all thoſe of their order. The chancery of the chamber-court is likewiſe appointed and regulated by him alone.

The high chapter of Mentz conſiſts of twenty-four perſons; that is, of five prelates, and nineteen capitulars. The former have the privilege of wearing a mitre; but the latter need not be prieſts, though they generally are. This chapter has ſeveral ſyndics and other officers. The electoral ſtadtholder, together with the preſidents of the aulic council, with the chamber and town juriſdiction, are always choſen from among the capitulars; and in all ſtipulations with the neighbouring ſtates, and other important affairs in which the privileges of the archbiſhopric are concerned, the conſent of the chapter is alſo mentioned. A capitular is always vicar-general to the archbiſhop in ſpiritual matters. Theſe capitulars muſt be born in the Rheniſh province, and prove by oath their being deſcended from noble anceſtors for ſix deſcents. At the electoral court of Mentz is held no regular privy-council; but important affairs of ſtate are propoſed in what is called the privy-conference. The privy-chancery conſiſts of the aulic-chancellor, the privy-ſecretary, the ſecretaries, privy-regiſters, and privy-clerks of the chancery. The aulic council, or the electoral regency-council college, is under the direction of a preſident, a great ſteward, an aulic chancellor, a chancery, director, privy-aulic, and regency counſellors, &c. The reviſion-judicatory has a director, reviſion-counſellors, a ſecretary, and proctors. At this court a perſon may ſue, within thirty days, for reviſion of the ſentences of the aulic-judicatory, the offices of appeal, commiſſion, and works. The other colleges are, the aulic-judicatory, whoſe ſentences are notified in four general aulic-judicatory days, the aulic-chamber, the military conference, the chamber-office, and town judicatory at Mentz, the poor-houſe commiſſion, and the office of works.

The electoral revenues are eſtimated at about one million two hundred thouſand florins. The military forces conſiſt of the elector's life-guard of horſe, and a number of dragoons, with three regiments of foot, and the like number of provincial regiments, eſtabliſhed on a regular footing. The city of Mentz being reckoned a barrier fortreſs of the empire, the circle of the Upper Rhine conſiders it as one of its fortreſſes, and frequently keeps in it, under certain reſtrictions, a number of troops belonging to the circle.

In the electorate of Mentz are forty-one cities and twenty-one boroughs.

SECT. II.

A particular Deſcription of Mentz, Cronberg, and Aſchaffenburg, in that Electorate.

WE ſhall begin the deſcription of the cities of this electorate with Mentz, or Mayence, called in Latin Moguntia and Moguntiacum, which is ſeated at the confluence of the Rhine and Maine, in the forty-ninth degree ſixteen minutes north latitude, and in the eighth degree ſixteen minutes eaſt longitude from London. The city is pretty large and populous; but conſiſts for the moſt part of narrow ſtreets and old faſhioned houſes belonging to the burghers. In the year 1735 two Roman months were granted for the better fortifying of this city; but though the fortifications that were afterwards begun are excellent, they are ſtill unfiniſhed.

The archbiſhop's palace is built of a kind of red marble, in a very magnificent manner. It is only two ſtories high; but the apartments are very fine, the ceilings richly adorned, and the furniture very ſplendid. The ceiling of the hall where the elector dines, contains in different apartments the hiſtory of St. Martin, the patron of Mentz; and the tapeſtry with which it is hung repreſents the ſtory of Æneas and queen Dido. At the end of this firſt apartment is a large and ſumptuous cabinet of looking-glaſſes, enchaſed in little gilt ſquares; the baſes are adorned with cartouches, upon which are painted fine landſcapes, which are amazingly multiplied by the reflection of theſe mirrors. From hence you have a proſpect of the Rhine, the Maine, and all the adjacent country, which is extremely delightful.

The ſecond ſtory has nothing remarkable, except the elector's bed-chamber, which is a very ſmall one for a prince, but magnificently furniſhed. The tapeſtry is exquiſitely fine, and repreſents in ſix pieces the whole fable of Perſeus and Andromeda. The bed is of crimſon brocade with a gold ground, and the canopy is covered with pearls. The chairs are carved, gilt, and covered with embroidered crimſon velvet and gilt fringe; even the frame of the looking-glaſs, which is eight feet high, is covered with crimſon velvet laced with gold.

The arſenal kept in the palace is no more than a large cloſet lined with fuſils, muſkets, carabines, and piſtols, made by the moſt famous gunſmiths in Europe, and many of them are of exquiſite workmanſhip. Here are alſo ſome air-guns. This palace, in the year 1750, received the addition of a beautiful new wing, and has the advantage of fine gardens.

The cathedral is a vaſt pile of reddiſh marble: immediately on entering it you ſee the ſepulchral monuments of ſix antient archbiſhops of Mentz, whoſe ſtatues ſtand leaning againſt the pillars that ſupport the arched roof. On the other ſide are thoſe of the two laſt electors; the ſtatue of one of them ſtands in his epiſcopal robes, and is as large as the life: the tomb of the laſt elector is of black marble, and his ſtatue, which is of white marble, is ſitting: two little angels of white marble ſtand, one before him, preſenting him an open book, which he ſeems to read; the other at his feet, playing with the archiepiſcopal mitre. On each ſide of him is a croſs of white marble, on one of which is an inſcription. This work is eſteemed here a finiſhed piece; but there is nothing in it very extraordinary. In the choir are two other monuments, one of George Chriſtian landgrave of Heſſe, the other of a count of Lamberg, who was killed the ſame day that the marquis d'Uxelles, who defended Mentz againſt the allies, cauſed a parley to be beaten, and capitulated, which was on the ninth of September 1689. The ſtatue of this count has ſomething very particular, it being of white marble, and covered with armour, except a helmet and gantlets. He is in the attitude of one uſing all his efforts to get out of his coffin, which is of black marble, and puſhes up the lid with one hand, while he ſupports himſelf with the other againſt the bottom of the coffin. The ſculptor, beſides making a man in a coffin with his armour on, has alſo ridiculouſly given him a full bottomed peruke, quite in buckle. The high altar of this cathedral is ſo contrived, that the prieſt faces the people, and need not turn about at mentioning the words *Dominus vobiſcum*. The principal thing worth ſeeing here is the treaſury, which is ſhewn for a ducat or two, by two officers nominated by the dean, and conſiſts of jewels, rich veſtments, and other church furniture, particularly an oſtenſorium valued at twenty-four thouſand dollars.

The Auguſtine nuns of St. Agnes have a very elegant church, and the Carthuſian monaſtery without the city is worth ſeeing, on account of the beauty of the church; in which are thirty-two ſtalls of a fine ſort of wood, curiouſly inlaid with ivory. Theſe ſeats were made by a Hamburgher, and the monks value them at no leſs than a thouſand dollars each.

There is a bridge of boats over the Rhine at Mentz, which is ſeven hundred and ſixty-ſix paces in length, and leads to a little town on the other ſide, named Caſſel.

The religious foundations here are, that of St. Alban's, the *eccleſiæ collegiatæ inſignes B. M. V. ad gradus*, with thoſe of St. Peter, St. Stephen, St. Victor, the Holy Croſs, St. Gangolph, St. John, and St. Maurice. It has an archiepiſcopal ſeminary, dedicated to St. Boniface, with ſeven pariſh churches, and a Benedictine prelature, ſeated on Jacob's mount; as alſo a college of Jeſuits, ſix monaſteries and five nunneries; with a chartreuſe, and two other nunneries near the city. There is alſo an univerſity, and ſix hoſpitals.

About a mile from the city is the elector's palace, called la Favorita, which is a modern edifice, and is a moſt elegant and delightful place, both on account of its ſituation and proſpect over the Rhine and Maine, the architecture, and the diſpoſition of the garden, which

is adorned with pyramids, ſtatues, caſcades, and other water-works. The building deſigned for the orangery belongs to the main body of the palace, and the three pavilions on each ſide, ſerve for lodgings for the gentlemen of the court, officers and domeſtics, when the elector is here; but the apartments in which he reſides, are void of all ſymmetry and elegance, and except one hall, have nothing to recommend them.

This city was beſieged and taken by Guſtavus Adolphus king of Sweden in 1631. Among the other booty which this prince found here, was a maſſy crucifix of gold, as large as the life. Frederic V. elector Palatine, and king of Bohemia, died here the year following of grief for the death of that prince, who was killed at the battle of Lutzen; being perſuaded that had he lived a year longer, he would have reinſtated him in his dominions. Prince Charles of Lorrain, with the electors of Saxony and Bavaria, laid ſiege to the city in 1689, and took it forty days after their opening the trenches.

Cronberg, or Kronberg, a ſmall town ſeated on a mountain. About the year 1528, the Proteſtant doctrine was introduced here by the landgrave of Heſſe, who then poſſeſſed the place; but in the year 1541, the landgrave ceding the town to the lords of Cronberg, they promiſed to leave religious worſhip in the ſtate in which they found it. A part, however, of the inhabitants embraced the doctrines of the Romiſh religion, while the reſt continued Proteſtants. After the peace of Weſtphalia the proteſtant religious worſhip was alone reſtored; but it afterwards falling to the elector of Mentz, the immunities which the Proteſtants alone enjoyed, were ſhared with the Roman catholics; and in 1738 the antient citadel, which ſtood in the middle of the mountain, was in a great meaſure pulled down, and the ſtones belonging to it uſed for the new popiſh church. In this diſtrict are ſome fine woods, a variety of fruit, and a vaſt quantity of cheſnuts.

Aſchaffenburg, one of the beſt towns in the archbiſhopric, is ſeated on the Maine, in the fiftieth degree fifteen minutes north latitude, and in the ninth degree five minutes eaſt longitude, and takes its name from the rivulet of Aſchaff, which in its neighbourhood falls into the Maine. The citadel, in which the elector frequently reſides during harveſt, as long as the hunting ſeaſon laſts, is grand and beautiful. It is a vaſt ſquare building of red ſtone flanked by four large towers, with a platform in the middle; over the firſt gate is an equeſtrian ſtatue of St. Martin, patron of the archbiſhopric of Mentz, and quite at the top the ſtatue of Chriſt. On paſſing through the ſecond gate you enter a ſpacious ſquare court, ſurrounded with buildings three ſtories high. To the left is a portico of twelve columns, upon which reſts a terrace railed breaſt high, and from hence you enter a chapel, the altar of which is of white marble, adorned with columns of jaſper, and baſſo relievos, repreſenting the hiſtory of our Saviour's paſſion, in ſeveral compartments, with a large crucifix of white marble at the top. On each ſide of the altar is a fine ſtatue of the ſame marble, as large as the life; one of St. Martin cutting off a part of his cloak, in order to cover the nakedneſs of a poor beggar: the other of St. Wichard, archbiſhop of Mentz. The pulpit is alſo of white marble, and is adorned with ſtatues of Jeſus Chriſt, St. Peter, St. Paul, the four evangeliſts, and the four doctors of the church, St. Jerom, St. Ambroſe, St. Gregory, and St. Auguſtine, all finely executed. In four niches of the pedeſtal ſupporting the pulpit are ſtatues of Moſes, David, Iſaiah, and Daniel.

The apartments in the caſtle are ſpacious and richly furniſhed. In the great church dedicated to St. Peter are two altars adorned with excellent ſculptures; one repreſenting the crucifixion, and the other the adoration of the wiſe-men. The author of this piece, though well ſkilled in his profeſſion, has given the king, who uſually preſents a large gold cup to the infant, nothing but a little box, into which the infant is going to put through a chink, a ſmall piece of ſilver, which he holds between his finger and thumb.

In this town is alſo a college of Jeſuits and a Capuchin cloiſter. The town is walled, and has a fine bridge of nine arches.

In the above caſtle, or palace, king George II. took up his quarters the night before the battle of Dettingen, in the year 1743, when being attacked the next day by the French, who croſſed the Maine, they were repulſed, and the king continued his march to Hanau.

Aſchaffenburg ſtands in a fine ſporting country, about a league from the entrance of the Black Foreſt; and near it is a pleaſant vale planted with vines and tobacco, beſides ſome corn.

SECT. III.

Of the other Territories ſubject to the Elector of Mentz, namely, the Eichsfeld, and the City of Erfurt, with the Country belonging to it.

THE Eichsfeld, frequently called Eisfeld, antiently belonged to Thuringia, and is environed by Heſſe, Thuringia, and the principalities of Grubenhagen and Calenberg, it being in its greateſt extent from north to ſouth about thirty-ſix miles, and from eaſt to weſt about twenty-four.

This country, agreeably to its natural ſituation, is divided into Upper and Lower Eichsfeld; both which are in a manner ſeparated by the mountains of Duhn. The Lower Eichsfeld conſtitutes the northern part of the country, and is ſmaller than the Upper, but more level, warm, and fertile. It affords a ſufficient quantity of corn, together with a good breed of cattle, and a great deal of flax and tobacco. The Upper Eichsfeld, which lies to the ſouth, is for the moſt part mountainous, and has a cold, though wholeſome air; but as it does not produce a ſufficient quantity of corn, the inhabitants are ſupplied with what they want from Thuringia. This diviſion is, however, very populous; and there are made here great quantities of ſerge and linen.

The high ſituation of this country is the reaſon that no river enters the Eichsfeld; though ſome run out of it, as the Leina, the Lutter, which on leaving this country ſoon falls into the Weſel, the Unſtrut, the Wipper, and the Rume.

In the ſixteenth century there were many Proteſtants in the Eichsfeld; but their number has gradually decreaſed, and the prevailing religion is the Popiſh. Such of the inhabitants as devote themſelves to the ſtudy of the ſciences, are inſtructed either at Heiligenſtadt by the Jeſuits, or at Duderſtadt by the clergy; after which they viſit foreign univerſities. In the Lower Eichsfeld the Lower Saxon language is ſpoken, and in the Upper the Thuringian.

The provincial ſtates conſiſt of the prelates, with the abbeſſes of the nunneries, whoſe places are filled by the provoſts; of the nobility, and of the towns of Heiligenſtadt, Duderſtadt, Stadt-Worbis, and Treffurt. Their provincial diets are held in the open air, about four miles from Heiligenſtadt; or, when the weather is very unfavourable, in the council-houſe at Heiligenſtadt, in the preſence of an electoral envoy and two commiſſioners.

The elector governs the Eichsfeld by a lieutenant, whoſe place is ſupplied by an adminiſtrator. At Heiligenſtadt are the ſupreme temporal courts, namely, the provincial regency, which manages matters political, public, and criminal; the upper land-court, to which appeals lie from the prefecturates of the noble and clauſtral-courts, in both which the lieutenant, or his adminiſtrator, preſides; together with the electoral provincial tax-office, and the electoral foreſt-office. In this country are alſo ſix clauſtral and fifteen noble judicatories.

Heiligenſtadt, the capital of the country, is ſeated at the confluence of the Leina and the Geiſled; it is the ſeat of the lieutenancy and the ſupreme temporal judicatory, and contains in it a caſtle finely built of free-ſtone, where the regency and provincial judicatory hold their meetings; together with an electoral town-judicatory, a town-council, and a collegiate foundation dedicated to St. Martin. It has alſo a Jeſuit's college, a ſchool, and three churches. In 1739 this town was almoſt wholly deſtroyed by fire, but has been again rebuilt.

We now come to the city and territory of Erfurt. This city is ſituated in Thuringia, of which it is eſteemed the capital, though it was never owned by the circle

of Upper Saxony as a ſtate of that circle. It was founded in the beginning of the fifth century, and much diſpute has ariſen concerning the right of the elector of Mentz to that city; but thoſe electors maintain, that from antient times they have had the ſovereignty over it, and that they have granted the inhabitants all their immunities and privileges. However, in virtue of the ſtipulations between thoſe electors and the houſe of Saxony, the proteſtant doctrine and worſhip has been agreed to be maintained in the ſtate they were in when thoſe ſtipulations were made; and this has been confirmed by the elector and chapter. Hence the greateſt part of the inhabitants, both of the city of Erfurt and of the whole country, are Proteſtants.

The city of Erfurt is ſeated on the Gera, in the fiftieth degree forty-nine minutes north latitude, and in the eleventh degree fourteen minutes eaſt longitude. It is large but not ſufficiently populous, and is for the moſt part built in the old faſhioned taſte. It is fortified and defended by the citadels of Peterſburg and Cyriacburg, and has a garriſon of two battalions of imperial and electoral troops; and a number of noblemen reſide in the town, on whom ſeveral privileges have been conferred by an ordinance publiſhed in 1755. It has a large cathedral, which is a ſecular foundation, conſiſting of a provoſt, a dean, ſix canons, and ſix vicars, which was founded as a cloiſter by St. Boniface in the year 752. The whole of this large ſtructure reſts on vaults, without any pillars to ſupport the roof. The celebrated great bell in this church weighs two hundred and ſeventy-five centners, or thirty thouſand two hundred and fifty pounds. The towers of this church have been demoliſhed by fire. Here is alſo a collegiate church dedicated to St. Severus, which has ſix canons and four vicars. Here are likewiſe a college of Jeſuits, and a rich monaſtery of Benedictines, under the direction of a mitred abbot; with ſeven other cloiſters, four popiſh churches, and three chapels. The Lutherans perform their worſhip in ſix churches, and have five others which they make no uſe of. They have alſo a ſeminary in a building which was formerly an Auguſtine cloiſter. Here is likewiſe a celebrated univerſity, which has five colleges. The theological faculty is entirely Roman catholic, but the ſenior of the Lutheran clergy is profeſſor of the Augſburg confeſſion, and receives a yearly ſalary of two hundred rix-dollars from the elector. The other faculties are filled up equally with the Lutheran and popiſh profeſſors. To this univerſity belong a botanical garden, an anatomical theatre, an aſtronomical obſervatory, and a riding academy. In the year 1754 an academy of the uſeful ſciences was alſo founded at Erfurt.

The territory belonging to the city is for the moſt part fertile, and abounds with corn-fields and vineyards; but wood is ſcarce. This territory includes in it two towns and ſeventy-three villages.

SECT. IV.

Of the Electorate of TRIERS, *or* TREVES.

Its Situation, Extent, Produce, and Rivers. Of the Archbiſhop, his Election, Titles, Arms, and Power: the Offices by which the Government is adminiſtered; his Revenues and Forces; with a Deſcription of the Cities of Treves and Coblentz.

TRIERS, or Treves, is bounded on the weſt by the dutchy of Luxemburg, on the ſouth by the dutchy of Lorrain, on the eaſt by certain territories which belong to the elector Palatine in the circle of the Upper Rhine, and on the north by the archbiſhopric of Cologne; extending in length about ninety-five miles, but its breadth is very different.

The country is pretty mountainous and woody, yet contains good paſtures for cattle, and in many places fruitful arable land; but does not produce corn ſufficient for the inhabitants: however, the growth of wine on the Moſelle is very conſiderable. The country alſo abounds with game, and has mines of ſilver, tin, copper, lead, iron, calamy, and coal.

The Moſelle is the principal river of this country, where it receives the Saar and the Kyll, after which it runs through the greateſt part of the country of Triers, with ſeveral windings, particularly between the mountains, and at length, having received the Lahn, falls into the Rhine.

The people of this archbiſhopric are of the Romiſh church, and the whole of the archiepiſcopal juriſdiction is divided into five archidiaconates, to which belong twenty decanates or provincial deaneries.

The archbiſhop of Treves is elected by the chapter, and ſwears to a capitulation, which the canons of that chapter propoſe to him; and the pope confirms ſuch election in the uſual manner, impowering one of the new elected biſhops, allotted for that purpoſe, to conſecrate him.

The archiepiſcopal titles are, By the grace of God archbiſhop of Treves, of the holy Roman empire throughout Gaul and the kingdom of Arles arch-chancellor and elector, and alſo adminiſtrator of Prum.

The arms of the archbiſhop are, on account of Treves, a ſhield quartered, bearing in the upper dexter field and alſo in the lower field ſiniſter a croſs gules in a field argent; and, on account of Prum, in the upper field ſiniſter and the lower field dexter, a lamb argent, bearing a ſmall trophy, on which is depicted a croſs on a mount verte in a field gules.

This archbiſhop is in rank the ſecond ſpiritual elector. At the election of an emperor he delivers the formula of the election-oath to the elector of Mentz, to be ſworn to by him; and he has the firſt voice at the election of the emperor. As elector he enjoys both a ſeat and voice in the electoral council at the diets of the empire, and, as archbiſhop of Treves, obtains the ſecond place in the electoral Rheniſh circle. The ſuffragans of this archbiſhop are the biſhops of Metz, Tull, and Verdun.

The chapter of Treves conſiſts of forty canons, among whom are ſixteen capitulars, and twenty-four domicelli. All theſe canons muſt, at leaſt, be deſcended from antient noble families, and have it in their power to exhibit ſixteen anceſtors capable of being admitted to tournaments. The regency of this country conſiſts of a chancellor, a privy and regency counſellors. The court of reviſion conſiſts of a director, four reviſion counſellors, and one actuary: before this court proceſſes are brought from both the aulic judicatories, one of which is at Treves in the upper archbiſhopric, and the other at Coblentz; and to theſe aulic-courts appeals lie from the ſeveral courts in the towns and prefecturates.

The revenues of the elector are ſaid to amount annually to about ſeventy thouſand pounds ſterling. The taxes raiſed are agreed to at the land diets by the land ſtates. In the year 1714 theſe ſtates mutually agreed in what manner and proportion the aids to be granted yearly to the ſovereign ſhould be levied from each ſtate: namely, that there ſhould be annually paid by each married couple one Rheniſh florin; but by widowed perſons only half a florin: and that a certain ſum ſhould be annually paid by perſons of every occupation; as for inſtance, by haberdaſhers, manufacturers, innkeepers, &c.

The archbiſhop has regular forces and a militia: the former generally conſiſt of the circle troops, which the elector of Treves is bound to maintain, and which amount to between eleven and twelve hundred men. The elector has alſo a life-guard of forty perſons.

The principal places in this electorate are the following:

Treves, or Triers, the capital of the upper archbiſhopric, is ſeated between two mountains on the river Moſelle, over which it has a coſtly ſtone bridge. This city is ſituated in the forty-ninth degree fifty-eight minutes north latitude, and in the ſixth degree ten minutes eaſt longitude, and is ſo antient, that it was inhabited by the Treveri long before the birth of Chriſt. The antient Roman emperors afterwards reſided here; and in the days of Conſtantine the Great, it was the capital of all Gaul. Here are ſome remains of an antient Roman theatre. The archiepiſcopal court or palace was rebuilt by the elector Francis George, and ſtands near the cathedral

thedral church of St. Peter, which is ſeated on a hill, and is a large building. There are alſo three collegiate and five pariſh churches, with three colleges of Jeſuits, and thirteen monaſteries and nunneries; a houſe of the Teutonic order, and a manſion belonging to the order of St. John. Here is alſo an univerſity.

Coblentz, in Latin Confluentia, the capital of the lower archbiſhopric, is ſeated near the influx of the Moſelle into the Rhine, in latitude fifty-ſix degrees thirty-nine minutes, and in longitude ſeven degrees twenty-three minutes. Here was a citadel in the time of the Romans, and the kings of the Franks kept their court here. The Rhine on the one ſide, and the Moſelle on the other, render the ſpot on which the city ſtands a ſort of peninſula, and ſerve it for ditches. Over the latter is a ſtone-bridge of fourteen arches; but it is ſo narrow, that two coaches can hardly go a-breaſt. At its extremities are double gates, towers, and port-culliſes, with ſome pieces of cannon to command the paſſage. The fortifications of the city conſiſt of ſtrong baſtions, provided with cavaliers, ravelins, half-moons, large and deep ditches, a good counterſcarp and covered way, all well paved, paliſadoed, and mounted with braſs guns. The Moſelle is very rapid, as well as the Rhine, and when the two rivers meet, you may eaſily diſtinguiſh the water of the one from the other; that of the Rhine being yellowiſh, and the Moſelle ſo clear, that you may diſtinctly ſee the bottom; but what is ſurpriſing is, that they have ſuch ſcarcity of fiſh in this place, that there is hardly enough for the elector's table on faſt days.

Beſides the principal church, here are two collegiate churches, an epiſcopal ſeminary, a college of Jeſuits, and a ſeminary, with ſeven monaſteries and nunneries.

The citadel, which is named Ehrenbreitſtein, is an important fortreſs, ſeated on a mountain oppoſite to Coblentz; the aſcent to which is pretty difficult, it being by a winding road cut out of the rock. There are three gates to be paſſed before you can enter the citadel, and upon the outermoſt is a ſtatue of braſs repreſenting the Virgin Mary with the infant Jeſus in her arms, and holding a lily in her hand: this figure is about fifteen feet high. On paſſing through this gate, you come to a ſquare, on one ſide of which is the governor's houſe, and the magazines and barracks occupy the three others. Here among other curioſities is a cannon of a prodigious magnitude, it being eighteen feet and a half long, its bore a foot and a half in diameter, and its breech three feet four inches: it carries a ball of one hundred and eighty pounds weight, and conſequently its charge is ninety-four pounds of powder. From this ſquare you proceed to another, in which is a fine fountain. In the middle of a large ſtone baſon ſtands a marble pillar upon a braſs pedeſtal, adorned with the elector's arms, and ſurrounded with four dolphins of the ſame metal. On the top of this column is a ſtatue of the Virgin Mary bruiſing the ſerpent, which is alſo of braſs, about twelve feet in height. The well of this fortreſs is ſaid to be five hundred and fifty feet deep, and to have coſt great ſums, they being obliged to dig it out of the ſolid rock.

The fortifications of this citadel are good; but irregular, from the inequality of the rocks on which they are built, and indeed it may be eſteemed impregnable; for in it is all that art can add to nature. The gate is covered by a vaſt horn-work, with a ditch before it, beyond which is a large half moon. There is no advanced work, or ſally port, but what is flanked. On the ſide toward the river, there are lines of communication to the right and left, worked through the ſteepeſt parts of the mountain; and where the ſituation would admit of it, they have built well-faced redoubts, which render the acceſs to it very difficult. The fort below is on a ſtraight line, and conſiſts of three baſtions, with their curtains commanding the river.

From this citadel is the moſt delightful proſpect in all Germany. Firſt, one ſees at the foot of the mountain the elector's palace, which ſtands on the brink of the Rhine, this river and the Moſelle, with the whole city of Coblentz from one end to the other built upon a neck of land at the confluence of theſe two rivers. You ſee in the middle of the Rhine two little iſlands, one about half a league above the town, ſhaped like a heart, about a quarter of a league long, and in it is a very fine convent of Benedictines: the other, about a league below the town, is twice as long as the former, and upon it ſtands a pretty conſiderable village, and a convent of Bernardines: the chartreuſe, ſeated on a riſing ground, adds greatly to the beauty of the proſpect; and the farther part of the landſcape preſents a pleaſing variety of little hills, vineyards, plains, valleys, villages, caſtles, convents, and pleaſure-houſes. In ſhort, this fortreſs commands all the adjacent country, and is juſtly reckoned one of the ſtrongeſt places in Germany, and called the key of the Rhine and Moſelle.

The apartments of the elector's palace are not very large; but they are adorned with beautiful tapeſtries. There is, however, a hall above one hundred feet in length, on the ceiling of which are painted in ſeveral compartments, ſeveral events in the hiſtory of Marcus Aurelius and Ælius Verus. It is alſo adorned with many good portraits: among others are thoſe of the emperor Leopold, and Charles VI. with Frederic the Great, elector of Brandenburg. Among the principal tapeſtry hangings, are the hiſtory of Joſeph and his brethren, in twelve pieces: that of Beliſarius, in eight pieces; but the fineſt of all repreſents the ſtory of Meleager and Atalanta, in ſix large pieces. His highneſs's chamber is hung with red damaſk, the bed and arm-chairs are of the ſame, and the whole adorned with gold fringe.

The chapel is ſmall, but very elegant, and beautified with paintings in ſeparate compartments, repreſenting the moſt remarkable paſſages in our Saviour's life, ſome of them by Baptiſta, an Italian maſter, and the reſt by Hector, a famous German painter. The ceiling is adorned with gilt ſculptures.

The garden is of no great extent, there being but little earth between the rock and the Rhine; it is, however, embelliſhed with ſtatues, fountains, and a fine orangery. A large harbour which extends along the river, is one of its moſt conſiderable ornaments, it being above three hundred feet in length; and from the openings of this bower you ſee the Rhine, the Moſelle, the town of Coblentz, the bridge acroſs the Moſelle, the chartreuſe, and a very fine country to the diſtance of three or four leagues.

The chartreuſe is delightfully ſituated, about the diſtance of three quarters of a league from the town: in the way to it you continually meet with chapels in the manner of oratories, adorned with ſtatues repreſenting the principal actions of Jeſus Chriſt from his birth to his reſurrection.

SECT. V.

Of the Electorate of COLOGNE.

Its Situation, Extent, and Produce. The Prerogatives, Titles, Arms, Revenues, and Forces of the Elector; with a particular Deſcription of the Imperial City of Cologne, and the other remakable Places in that Electorate.

COLOGNE, the laſt of the three ſpiritual electorates we have to mention, extends along the weſtern bank of the Rhine, between the dutchy of Cleves on the north, the electorate of Treves on the ſouth, the dutchy of Juliers and the Netherlands on the weſt, and the dutchy of Berg, from which it is ſeparated by the Rhine, on the eaſt, extending above ninety miles in length, but hardly any where above ſeven or eight in breadth. The archiepiſcopal countries, however, do not lie together; but many of them are ſeparated by other countries. The longeſt connected part is that juſt mentioned; but another portion of it lies chiefly between the dutchy of Juliers and the archbiſhopric of Treves; and another is in Weſtphalia, and terminates to the eaſt on the biſhopric of Paderborn, Waldec, and Heſſe; to the ſouth on the counties of Witgenſtein and Naſſau, and on the dutchy of Berg; to the weſt on the ſame, and the county of Mark; to the north on the biſhopric of Munſter and the county of Lippe; extending from north to ſouth forty-ſeven miles, and from eaſt to weſt thirty-eight.

The

The countries ſubject to the archbiſhopric are of a very different nature and goodneſs: one part of them is very mountainous and woody, another ſandy, and another fruitful. The woody tracts afford much game, the country ſituated on the Rhine abounds with vineyards, and the rivers with fiſh.

In this archbiſhopric none but thoſe of the Romiſh church enjoy the public exerciſe of their religion; but, notwithſtanding this, there are many Proteſtants in it.

This country was a biſhopric in the year 314, and was made an archbiſhopric in the eighth century. The archbiſhops early obtained the honour of the *pallium*, and that of bearing the croſs, and in the tenth century they were deemed equal to the archbiſhops of Mentz and Triers, and they ſtill bear the title of arch-chancellor throughout all Italy, though they have no opportunity of exerciſing their office. Beſides the prerogatives which this prelate enjoys in common with all the other electors, he is poſſeſſed of ſome peculiar to himſelf. Thus, at the election of the king of the Romans, and of the emperor, he has the next voice after the elector of Treves; and ſits at public aſſemblies, when held within his eccleſiaſtical juriſdiction, or out of it in Italy and Gaul, at the emperor's right hand; and both he and the elector of Treves, ſhare the honour of precedence alternately.

The conſtant title of the elector of Cologne runs thus, By the grace of God, archbiſhop of Cologne, and arch-chancellor of the holy Roman empire throughout all Italy, as alſo elector and *legatus natus* of the holy apoſtolic ſee, duke of Engern and Weſtphalia, &c.

His arms on account of the archbiſhopric of Cologne are, a croſs ſable in a field argent; for the dutchy of Weſtphalia, a white horſe ſaliant in a field gules; for the dutchy of Engern three hearts or, in a field gules; and for the county of Arenſberg, an eagle argent in a field azure.

The chapter has its reſidence at the archiepiſcopal cathedral in the imperial city of Cologne, and conſiſts of twenty-five canories, and a number of domicelli.

The elector of Cologne has the following offices, the privy-conference, the aulic council, or regency-college, and the aulic judicatory.

The electoral revenues ariſing from the archiepiſcopal countries, according to Mr. Buſching, are not very conſiderable; but others ſay, that in time of peace thoſe of Cologne amount to one hundred and thirty thouſand pounds ſterling per annum, and that of his other territories to nearly as much more; but he cannot commence a war without the conſent of the chapter, who may convene the ſtates in order to oppoſe him. The elector maintains a life-guard of halberdiers and yeomen, together with a regiment of foot guards.

The land-ſtates here conſiſt of the prelates, nobility, and towns; and the land-diets in the proper archbiſhopric are uſually held at Bonne.

In the archiepiſcopal countries are fifty-two towns and above ſeventeen boroughs, the principal places in which are the following:

Bonne, a ſmall, but well inhabited city, in which the elector reſides, is ſituated on the weſt ſide of the Rhine, in the fiftieth degree thirty-five minutes north latitude, and in the ſeventh degree five minutes eaſt longitude, twelve miles to the ſouthward of Cologne. It ſtands in a fruitful country that produces good wine, and the woods with a ridge of mountains abound with game. The fine palace in this city was begun in the year 1718. Beſides the principal church, which is a ſtately building, there is a collegiate and pariſh church. The Jeſuits have likewiſe a college, and ſeveral orders have their convents. In the years 1673, 1689, and 1703, this city was beſieged and taken by the Imperialiſts and their allies: in the laſt mentioned year it was taken by the duke of Marlborough, and upon its reſtitution by the treaty of Utrecht, its fortifications were to be demoliſhed.

The imperial city of Cologne, by the Germans called Keulen, in Latin Colonia Agrippina, is one of the oldeſt and largeſt cities of Germany, and is ſeated on the Rhine, in the fiftieth degree fifty minutes north latitude, and in the ſixth degree forty-five minutes eaſt longitude. It was originally built by the Ubii, who were taken into the protection of the Romans, and removed to the weſt of the Rhine, where they founded a town, to which, by order of the empreſs Agrippina, conſort to Claudius, who was born there, a Roman colony was ſent; whence aroſe the name of Colonia Agrippina, from the firſt word of which the appellation of Cologne received its origin. It was the chief town of Germania Secunda, and continued under the power of the Romans till the Franks put an end to their dominion in the fifth century. At preſent it is the reſidence of the chapter of the archbiſhopric of Cologne, as alſo of a pope's nuncio.

This city affords a very agreeable proſpect at a diſtance, and being ſituated in a plain and level country, the vaſt number of its ſteeples make a fine appearance. It is built in the form of a half moon, and has one ſtrong wall on the ſide next the Rhine, with out-works, half-moons, and ravelins; the walls of the city have alſo eighty-three towers, and three deep ditches round them; they are planted with rows of fine trees, and the roofs of the houſes are ſlated. A flying bridge extends over the Rhine to the town of Duits, which is on the oppoſite ſide of the river. This flying bridge, as it is called, is well contrived; it is built on large flat boats, ſo well belayed with ropes and iron chains, that it is impoſſible they can be looſened, and there are five or ſix boats of a ſmaller ſize, that lie at anchor in a ſtraight line, in the middle of the river, at equal diſtances from each other, and two muſket-ſhot above the bridge. To theſe boats are faſtened two ſtrong cables, the ends of which paſs through pullies fixed at the top of poſts within the bridge, and make it when looſened tack and veer merely by the current of the water, without any need of rowing, or any other working, except ſteering. It is ſaid that the continual paſſage by this bridge brings into the chapter of the cathedral a revenue of above ten thouſand crowns a year.

Among the buildings of this city, the cathedral of St. Peter deſerves particular notice, and it would be very magnificent were it quite finiſhed; for a part of it is extremely fine. The ſteeple is two hundred and fifty feet high, and affords a fine view of the city. The choir is ſaid to be the higheſt in Germany, and the chancel is ſupported by four rows of large pillars. Upon the principal altar in the choir, lies in a ſilver coffin the corpſe of St. Englebert, archbiſhop of Cologne, who ſuffered martyrdom under Diocleſian and Maximian. His ſtatue of white marble, in his pontificals, lies upon a table of black marble, leaning his head upon his hand, and at his feet ſtand two angels of white marble, the one holding a crown, the other a branch of palm gilt. There are ſeveral other antient tombs; but the moſt celebrated of them all are thoſe of the three kings, or eaſtern magi, who came to offer preſents to the infant Jeſus; for it is pretended that their remains were removed hither from Milan in the year 1162, when Frederic Barbaroſſa laid waſte that city. Theſe bodies are depoſited in a large purple ſhrine ſpotted with gold, upon a pedeſtal of braſs, in the midſt of a ſquare mauſoleum of marble. This mauſoleum is in a ſmall chapel behind the choir, and the ſhrine is opened every morning at nine o'clock, when theſe kings are ſhewn lying at full length; but two of the canons muſt always be preſent. They here report abundance of miracles wrought by them, and among the reſt, that there being a great drought in Hungary, many people came from thence to implore the aſſiſtance of theſe three magi, who are ſaid to have promiſed them rain, which falling ſoon after in great plenty, a body of the Hungarians, in remembrance of this miracle, come every ſeven years in pilgrimage to Cologne, where they are entertained by the magiſtrates for a fortnight in a handſome houſe built for that purpoſe. The heads of theſe pretended kings have each a crown of gold adorned with precious ſtones of various kinds, and their names Gaſpar, Melchior, and Balthazar, are in purple characters upon a little grate before the ſhrine; which is immenſely rich, it being adorned with an infinite number of large and valuable pearls, beſides other precious ſtones of all colours, among which is an oriental topaz, as big as a pigeon's egg. A little above the ſhrine hang two large golden cups, and

a man on horſeback of the ſame metal, votive pieces offered to the three kings. Oppoſite to them are ſix large ſilver branches, with tapers of virgin wax, which burn day and night. Under a vermillion grate before the ſhrine are two Latin verſes cut on marble, that "here "three bodies of the magi lie entire, and no part of them "any where elſe." At the top of the front of the mauſoleum the hiſtory of their adoration is repreſented in baſſo relievo upon white marble; over the ſculpture is a large ſtar gilt, and in another part of the mauſoleum are ſix Latin lines, alluding to their three offerings, and the three devotional uſes to be made of them; namely tears, a pure heart, and prayers offered to Chriſt from an humble ſoul. Upon the back of the mauſoleum is repreſented in baſſo relievo, upon white marble, the hiſtory of the tranſlation of the three magi from Milan to Cologne, with the proceſſion made on that occaſion.

In the church of St. Urſula are ſhewn the tombs of the eleven thouſand virgins maſſacred by the Huns at Cologne. This idle ſtory has been fully refuted by archbiſhop Uſher, and even by learned men of the church of Rome, who all agree, that it is founded on a miſtake with relation to the antient manner of ſetting down the names and titles of the ſaints. The above learned proteſtant divine ſuppoſes that St. Urſula's companion was named Undecimilla, and that her name was miſtaken for Undecim millia, or eleven thouſand, a conjecture which is ſupported by an antient Miſſal in the Sorbonne, where the feaſt of St. Urſula, patroneſs of the Sorbonne, is thus expreſſed, *Feſtum S. S. Urſula Undecimillæ & ſociarum Virginum & Martyrum.*

But to return, it is pretended that the earth is here rendered ſo holy by theſe virgins, that it will not receive any other corpſe; as a confirmation of which they ſhew the tomb of the daughter of a certain duke of Brabant, who, on their going to bury her, they ſay, raiſed herſelf up, and remained ſuſpended in the air; this obliged them to put her into this tomb, which is fixed upon iron ſupporters two or three feet from the ground, againſt one of the pillars of the church. In a large chapel on one ſide of the ſame church are to be ſeen the bones of thoſe eleven thouſand legendary ſaints; the walls are adorned with rows of buſts gilt, in which they pretend the heads of many of theſe virgins are preſerved; and ſome of them have caſes of cloth of gold, velvets, and rich ſilks. Beſides, their bones are hung up in as decent a manner as the ſwords and piſtols are ranged in an armoury; and among theſe ſome appear to have belonged to children five or ſix years old: but a celebrated phyſician of this place was treated as a heretic for ſaying there were among them two or three bones of large maſtiff-dogs, and boaſting he could inconteſtibly prove it; for which he was condemned to pay a conſiderable fine, and baniſhed the dioceſe of Cologne. The church is full of the tombs erected for theſe virgins: that of St. Urſula is of black and white marble, about two palms long and ſix in breadth; her ſtatue of white marble lies at full length crowned with a garland of flowers, and at her feet is a dove. The revenue of this church, which muſt be very conſiderable from the offerings made by pilgrims, and other devout perſons, belongs entirely to an abbeſs and ſix canoneſſes, who, to do honour to St. Urſula, muſt be all counteſſes.

The collegiate church of St. Gerion has ten canons, and a great number of chaplains, all of whom enjoy a very handſome revenue. The choir of this church is covered with tapeſtry, and with nine hundred heads of Mooriſh cavaliers, the companions of Gregory, an Ethiopian prince. Theſe were all Chriſtians, and going to the emperor Conſtantine's army, when they were taken and ſlain. They are ranged in little niches, between every two of which is a gilt foliage of carved work; and a cap of ſcarlet, adorned with pearls, upon every head. In a corner of this church is ſhewn one of the pillars of the ſcaffold on which all theſe holy martyrs were beheaded; and this pillar of a ſcaffold is of fine jaſper ſpotted with blood, and about a foot in diameter.

The church belonging to the Jeſuits-college is a very lofty and elegant building, and againſt the pillars which ſupport the ceiling are ſtatues of the twelve apoſtles, and of many other ſaints, as large as the life. The pulpit deſerves attention on account of the ſculptures with which it is adorned. Before the principal altar hangs a ſilver lamp of exquiſite workmanſhip, ſix feet in height: the figures of Chriſt, with the five wiſe and five fooliſh virgins in the parable, are repreſented in relievo with great delicacy. This church has few good pictures; but its wealth is immenſe; one altar is upon occaſion entirely covered with a kind of embroidery with gold wire and pearls; another is enriched with a vaſt number of rubies, ſome of them very large; another is of maſſy ſilver, and contains in baſſo relievo the hiſtory of the aſſumption of the holy Virgin, with St. Ignatius upon one ſide, and St. Francis Xavier on the other. There is alſo one of maſſy ſilver, with a border of gold embelliſhed with pearls; another of gold brocade, with pearls and emeralds, among which are many of great value; another of crimſon embroidered with gold, and decorated with carved figures of Jeſus Chriſt, St. Joſeph, the Virgin, Ignatius, and Xavier. The laſt is of exquiſite workmanſhip, and of a very extraordinary magnitude; theſe ornaments being only uſed to adorn the great altar on certain ſolemn feſtivals, and are therefore kept in the veſtry, where is an innumerable quantity of branches, candleſticks, luſtres, buſts, vaſes, as well as rich chalices, pattens, cups, plates, and other utenſils for maſs; and all the latter are of gold enriched with precious ſtones.

The refectory belonging to this college is very large and well wainſcotted, the ceiling is adorned with ſculpture, and is hung all round with pictures repreſenting the principal events of our Saviour's life.

The church of the Maccabees has on the outſide of the gate a picture repreſenting Salomone, the mother of thoſe martyrs, trampling Antiochus Epiphanes under her feet. She holds her ſeven ſons crowned with laurel under her gown, four on one ſide and three on the other. Their hiſtory is painted on the wall in the corner of the church, in eight different pieces. The heads of the Maccabees are kept in the tabernacle of the principal altar, which is of purple embroidered with gold; and each of theſe heads has a crown richly adorned with pearls, rubies, and emeralds. They likewiſe ſhew here the pretended head of St. Joachim, the father of the Virgin Mary, and that of St. Anne her mother, with numberleſs other relics. The hiſtory of the martyrdom of the eleven thouſand virgins is alſo painted on ſeveral parts of the walls, and near the church is a well into which they pretend their blood was poured. The Benedictines, to whom this church belongs, pretend, contrary to a tradition among the Urſulines, that the princeſs Urſula was maſſacred on the ſpot where the principal altar ſtands.

The church of St. Pantaleon is adorned with pictures of the hiſtory of that ſaint, who was a phyſician in Nicomedia, and is repreſented in eighteen pieces. The emperor Galerius Armentarius ordered him to be put to a variety of torments, on account of his adherence to his religion. In the tenth piece he is plunged into a cauldron of melted lead, which one would have thought would have burnt him to the very bone; but the legend ſays he came out unhurt. In the two laſt paintings he is precipitated from a high rock into the ſea, with a mill-ſtone tied about his neck; but he does not ſink. After all this they were obliged to cut off his head, which was no ſooner done than they pretend there ſprung out two fountains, the one of blood and the other of milk. They alſo ſhew here a gold box, which they ſay contains the aſhes of St. Pantaleon, his body having been burnt at Nicomedia. In this church is alſo the hiſtory of St. Alban, in twelve capital paintings; and behind the great altar they pretend to ſhew his bones depoſited in a fine ſilver ſhrine.

The entrance of the church of the Apoſtles is particularly remarkable for the ſtory it repreſents, which is that of a burgomaſter's wife of this city, who being buried here in 1571, with a valuable ring on her finger, the ſexton, reſolving to ſteal the ring, paid a viſit to the grave; but was ſo extremely frightened when he found the ſuppoſed deceaſed lady graſp him by the hand, that he made a precipitate retreat. The lady, however, roſe from her tomb, and returning home, knocked at the door, and calling to a ſervant, told him the whole adventure; but the fellow, taking her for a ghoſt, ran in a great fright to his

his master, and informed him of what had happened; when the gentleman immediately cried, that he would as soon believe his horses were in the garret. These words were no sooner uttered, but a great noise being heard in the garret, the servant ran up, and to his great amazement found six coach-horses there. By this time the lady had made a shift to get in, and by the care of her servants was soon so well recovered, that there was no great appearance of her returning to the grave for that time, and the next day the horses were let down out of the garret by certain machines prepared for that purpose. Absurd as this story is, it is here firmly believed, and to this day there are shewn in the same garret several wooden horses, said to be covered with the skins of those that were seen there; and in the church of the twelve Apostles is a large piece of linen cloth spun by the lady after her being released from the grave, which she survived seven years. We find some authentic testimonies of the truth of this memorable story; but in these no notice is taken of the horses, as being an evident, and very ridiculous fiction, invented to heighten the wonder.

The town-house is a vast Gothic structure, which those who shew it say was built after the model of the antient capitol at Rome. In the front is a basso relievo representing a man fighting a lion; and in the great hall are five pictures, with several Latin inscriptions in verse on each, to perpetuate the memory of the celebrated battle of Hochstet, gained by the bravery and conduct of the duke of Marlborough and prince Eugene over the French and Bavarians; with elogiums both on queen Anne, those generals, and the English and Dutch. The entrance of the chamber where the city-council meet is a vestibule of inlaid work, after the antique taste, and on each side is a Latin distich, advising the counsellors to leave all partiality behind them, and declare their judgment freely, and, at their going out, to observe fidelity in execution, and a prudent taciturnity. Upon the inside of the chamber-door are six verses, intimating the duties which belong to the office of a ruler. In this apartment is a picture of the last judgment, sixteen feet in breadth, and eight in height. On the chimney-piece is a very fine crucifixion by Van Dyke; on one side of it is the portrait of the emperor Leopold, and on the other that of the empress his consort. In this structure are several rooms, in which are deposited a vast number of bows, arrows, cross-bows, bucklers, and other antique arms. One of these cross-bows is of whalebone, and is said to be twelve feet long, eight inches broad, and four inches thick. From the tower of this building is a very fine prospect of the whole city and the adjacent country.

In short, there are in this city ten collegiate and nineteen parish churches, with four abbeys, seventeen monasteries, thirty-nine nunneries, sixteen hospitals, and about fifty chapels. The numerous protestants who dwell in the city resort to Mulheim, where they publicly perform their religious worship. The Jews live chiefly at Duits, a mean borough entirely dependent on the elector; its houses are of wood plaistered with white clay, and its few streets extremely filthy and ill paved. In the town, says our author, one sees more swine than men, three fourths and upwards of the inhabitants being Jews, who, for the sake of profit, fatten whole herds of those animals, which their law forbids them to eat, in order to sell them at a high price to the Christians. The Jews are indeed not permitted to lie one night at Cologne, nor so much as to enter the city about their affairs, without paying a gold florin for every hour they stay, and being escorted by one of the town guards, whom they are obliged to pay for his trouble. This is done as a punishment, their ancestors having, it is said, intended to kill the inhabitants by poisoning the wells and fountains. This, however, serves for a pretence, which the magistrates probably make use of to prevent the Jews undermining them in their trade.

Cologne is one of the Hanse towns, and pretends to have preserved its liberty without interruption for many centuries; but the calamities of war have often occasioned great disorders in its government and commerce. The Dutch make use of it as a magazine for their trade upon the Rhine, and this has engaged that state to defend Cologne on all occasions against the pretensions of the elector. Cologne is governed by the chapter and magistrates, the latter consisting of two burgomasters and forty-nine counsellors. The elector has also some power, and nominates a magistrate who is judge in criminal causes; and the city swears allegiance and homage to the new elector, so long as he continues to protect them in their just rights and privileges, and confirms their immunities. As a free imperial city, it has a seat and voice at the diets of the circle of Westphalia, and at those of the empire in the college of the imperial cities, and enjoys the first place on the Rhenish bench. Cologne maintains four companies of soldiers, but in time of war the emperor, or an ally, usually places a garrison in the city.

Near Rense, a small town seated on the Rhine, is to be seen a remarkable piece of antiquity, called the Konigstuhl, or Regal throne, consisting of a round vault built of free-stone, resting upon nine stone pillars, one of which stands in the middle. This vault is eight German ells and a quarter high, above forty in compass, twelve and a quarter in diameter, and furnished with seven seats, agreeable to the antient number of electors. The ascent to it is by twenty-eight stone steps, and it has two strong doors. In this place the electors formerly held previous consultations on the election of a king and emperor, and whenever the election, on account of any impediments, could not be performed at Franckfort, it was done here; the electors here also consulted on the weighty affairs of the empire, and here the emperors confirmed their privileges. At this place was established the electoral league concluded in 1338. It was particularly chosen by the electors, because the four electors of the Rhine have places belonging to each of them lying near it; the elector of Cologne being possessed of Rense, the elector of Mentz of Upper Lahnstein, the elector of Treves of Capelle, and the elector Palatine of Brauhach.

SECT. VI.

Of the PALATINATE OF THE RHINE.

Its Situation, Extent, Produce, and Rivers. The Revolutions the Palatinate has undergone with respect to Religion. The Titles and Arms of the Elector; the public Offices of the Government, with the Elector's Revenues and Forces, and a Description of the Cities of Manheim and Heidelberg.

THE country of the elector Palatine, also called the Palatinate of the Rhine, and the Lower Palatinate, to distinguish it from the Upper Palatinate, in the circle of Bavaria, is bounded on the east by the archbishopric of Mentz, the bishopric of Worms, and a part of the territory of the Teutonic order in Franconia; to the south by the dutchy of Wurtemberg and the bishopric of Spire; on the west by Alsace, the dutchy of Deuxponts, and certain districts belonging to the elector of Mentz; and on the north by a part of that archbishopric and Triers; extending about a hundred miles in length, and seventy in breadth.

This country is indeed partly mountainous, but yet uncommonly fertile, producing in abundance all sorts of corn, pulse, fruit, chesnuts, and walnuts; with fine pastures, and a good breed of cattle; together with plantations of tobacco, and vineyards which produce Neckar and Rhenish wine. The Bergstrasse is an agreeable highway between Heidelberg and Darmstadt, which is planted with walnut-trees, and on both sides has fruitful fields and meadows, intermixed with hills and mountains, which on the right side of the road, in travelling from Heidelberg to Darmstadt, extends to a considerable length, and are covered on their summits with woods; but towards the plain with vineyards. The numerous walnut-trees on the Bergstrasse and the Odenwalde, as well on account of their fruit as wood, are of great advantage to the country. On all parts of the Bergstrasse grow almonds in great plenty, and in the vineyards are chesnut-trees.

With respect to the rivers of this country, the Rhine runs partly through its borders, and partly through its center. Near Germersheim and Selz, out of the sands

of

of this river is washed the best Rhenish gold, to which the Rhenish gold florins owe their original. The gold thus washed is looked upon by the elector as a royalty, and accordingly farmed out by him. There are several rivers which here fall into the Rhine, particularly the Neckar and the Nahe. These rivers, as well as the smaller ones, abound in fish.

The state of religion has been here subject to alterations unheard of in other nations. The people were prepared for the reformation when, in the year 1518, Luther held his disputation with much approbation in an assembly of Augustine monks at Hiedelberg, and the pacific measures of the elector Lewis contributed to promote it. The reformation was carried on by his brother and successor Frederic II. but under Frederic III. some French and Swiss divines coming into the palatinate, a warm dispute arose between the Protestants concerning the Lord's Supper, which gave occasion to the electors joining the Calvinists in 1560, and he was the first German prince who introduced the religion of Calvin into his country. But, notwithstanding the zeal he shewed for the doctrine of the Calvinists, Lewis VI. his son and successor, with equal zeal brought in again Lutheranism, dismissed the Calvinist preachers, and appointed Lutherans in their stead. After his death John Casimir, guardian to his son Frederic IV. reversed all he had done, and with such zeal introduced the Calvinist doctrines, that only a few churches remained to the Lutherans; and in the following reigns Calvinism still more prevailed: the popish doctrines and worship were afterwards introduced in several places, and the Protestants oppressed by the Bavarian troops, till affairs were settled by the peace of Westphalia. At length the Calvinist line of princes becoming extinct, and the succession falling to the Roman catholic line of Neuburg, the popish doctrines and worship were gradually more and more introduced, and the Protestants deprived of the power they had hitherto enjoyed. The French afterwards ravaged the Palatinate, and oppressed the Protestants.

In the year 1705 the elector John William tolerated the three religions, and declared that they should enjoy full liberty of conscience; and, in particular, that the Calvinists and the Lutherans should be permitted the public and private exercise of their religion, together with the spiritual jurisdiction. To the Lutherans were confirmed their peculiar consistory, erected in 1698, independent of the Calvinist church-council. To their use alone were left all the churches, which belonged to them in the year 1624, as also those which since that time had been built or should be built by them for the future; and that they should likewise have whatever they could prove belonged to them in spiritualities, schools, rents, and incomes in 1624. To the Calvinists all churches and schools were confirmed in the manner they enjoyed them in 1685; except only that in the towns where they had two or more churches, and the Roman catholics none, they were to give up one of them to the latter: in such towns where there was only one church they were to give up to them the choir, and two out of every seven country churches, and also two-sevenths out of their revenues. The estates and incomes arising from the suppressed foundations, provostships, cloisters, &c. were to be administered by a spiritual administration, consisting of two popish and the like number of Calvinist counsellors, with other necessary officers. Something certain was also settled with respect to the popish holidays, mixed marriages, and other affairs which till then had been subjects of dispute. But, notwithstanding this agreement, and the small number of the Papists, alterations have been continually made, and the grievances of the Protestants greatly increased. To the disgrace of the Reformation the two Protestant churches have themselves been for a long time the zealous enemies of each other, to their mutual detriment, and the no less advantage of the Roman catholics. The Lutherans, according to their own computation, amount to about fifty thousand, and are possessed of eighty-five parishes; but one-half of their preachers and school-masters still want a competant maintenance. The number of Calvinist clergy is estimated at five hundred, and those of the Roman catholic at four hundred.

The titles of the elector are as follow: Palsgrave of the Rhine; arch-treasurer and elector of the holy Roman empire; duke in Bavaria, Juliers, Cleves, and the Berg; prince of Mors; marquis of Bergen-op-Zoom; count of Veldens, Sponheim, the Mark, and Ravensberg; and lord of Ravenstein.

The arms on account of the Palatinate on the Rhine are, a lion or, in a field sable: on account of Bavaria, lozenges or fusils: on account of Juliers, a lion sable, in a field or: on account of Cleves, eight regal sceptres conjoined in one small shield, in a field purple: on account of Berg, a lion gules, crowned verte, in a field argent: on account of Mors, a fesse sable, in a field or: on account of Bergen-op-Zoom, a shield damaskeened: on account of Veldenz, a lion verte, in a field argent: on account of the Mark, a fesse consisting of three checquers gules and argent, in a field or: on account of Ravensberg, three chevrons gules in a field argent; and on account of Ravenstein, a red deer's attire in a field argent.

The elector has an order of knighthood of St. Hubert, first founded in the fifteenth century; but revived by the elector John William in 1709. The badge of this order, is a quadrangular cross worn pendant at a red ribbon, and on the breast a star. The elector is supreme master of this order, and the knights consist of princes, counts, and barons.

The high colleges here are the privy state-conference, and the privy-chancery, the regency, the upper court of appeals, the aulic-jurisdiction, the aulic-chamber, and the war-council.

The annual revenues of the elector arising from the countries of the electoral and Upper Rhenish circle are estimated at nine hundred thousand guldens, exclusive of the large sums received from the administration of the spiritualities. The revenues of the dutchies of Juliers and Berg, together with those of the signiory of Ravenstein, also amount annually to about the same sum, to which is to be added the revenue arising from the dutchies of Neuburg and Sultzbach.

The elector maintains two regiments of horse-guards, and another of Swiss, with a body of horse and foot, amounting in the whole to about six thousand men.

The Palatinate contains forty-one towns, and several boroughs, the principal places in which are,

Manheim, the electoral residence, and the second town in the electorate, is a strong fortress seated in a low plain near the influx of the Neckar into the Rhine, in the forty-ninth degree thirty-six minutes north latitude, and in the seventh degree thirty-two minutes east longitude. In the year 1606, the elector Frederic IV. began to convert the old village and citadel of Manheim into a town, receiving into it some of the inhabitants of the Netherlands who had quitted their country, in order to enjoy liberty of conscience. And though it was dreadfully laid waste in 1622, when besieged and taken by the Bavarians, and in 1688, entirely demolished by the French, yet the electors John William and Charles Philip caused it to be rebuilt and fortified in such a manner, that it is now become one of the finest towns in Germany, and a place of great strength; but requires ten thousand men to defend it.

It has three fine gates, of which that of the Neckar is the most magnificent, and best adorned, it having basso relievos very beautifully executed. This gate opens into a long and spacious street, at the end of which is the elector's palace. The streets here intersect each other at right angles; so that at each corner the spectator has a view of four streets. Before the palace is a large square, in which is a considerable number of lodging-rooms, with a great and high pavilion in the middle, and two advanced wings, with ample pavilions at the ends, where two other very extensive wings rise on both sides, which are also terminated by pavilions, behind which are other lodging-rooms; and before the palace is an equestrian statue of metal, of the elector John William.

Within the palace are two great courts separated by an open gallery, very much adorned with architecture. The apartments are beautified with noble cielings and floors, and have the finest prospect imaginable to Spires,

Frankendahl, Worms, and over all the country, as far as the mountains of Alſace. The collection of paintings in this palace is very grand, and, in what is called the treaſury, is a conſiderable number of antiquities relative to the Palatine-houſe, and among others the golden crown of Frederic the unhappy elector and king of Bohemia.

In the great market is the popiſh church, and the council-houſe, between which ſtands a tower, that is a great ornament to this ſquare, as is alſo a fine fountain, which has four pillars, on which ſtands a lion. The Lutherans and Calviniſts have alſo each a church, and the Jeſuits a fine college, with a very beautiful church. There are here alſo a Capuchin and a Carmelite convent, and alſo a Jewiſh ſynagogue. The Jews indeed are very numerous, and two thirds of the houſes are ſaid to be theirs, either from their building them, or on account of mortgages; for ſome of them are very rich, and drive a great trade with thoſe of their own nation at Mentz, Francfort, and Amſterdam.

The people of both ſexes are here of a very amiable character, being extremely ſocial and civil to ſtrangers. The nobility here maintain a company of French comedians, who act in a very ſmall theatre; but both the townſmen and foreigners pay for admittance. Mainheim has ſome manufactures, and carries on a conſiderable trade.

Heidelberg, the principal town of the electorate, is ſeated in a pleaſant ſpot on the river of the Geiſberg near the Neckar, in the forty-ninth degree thirty-ſix minutes north latitude, and in the eighth degree fifty-five minutes eaſt longitude, enjoying a wholeſome air, and very good water. It is ſurrounded with hills covered with vines; except on the weſt, where is a large and fruitful plain, through which the Neckar runs. The town at preſent is but ſmall, though finely built. It is adorned with an univerſity, managed by an academical ſenate, conſiſting of three divinity profeſſors, four for law, three for phyſic, and ſix for philoſophy. They have a rector magnificentiſſimus, who is a kind of chancellor, and is commonly the elector himſelf; and likewiſe a rector magnificus, like the vice-chancellor of Oxford or Cambridge, who is preſident of the ſenate, and choſen annually out of the profeſſors. The firſt chair inſtituted for publicly teaching the law of nature and nations, was founded here for the famous Puffendorf, who here began his ſyſtem, which he finiſhed in Sweden.

This city has ſuffered much by wars, eſpecially from the French; ſo that ſince the diſgrace of Frederic elector Palatine, it has been taken, plundered, and burnt four times. The elector's library, which was kept in the church of the Holy Ghoſt, was, according to Scaliger, better filled with valuable books than even the Vatican at Rome, and exceeded all in the empire for the number of its curious manuſcripts; but when count Tilly, the imperial general, took this city in the year 1622, and put five hundred Palatines in it to the ſword, great part of this library was ſent to the Vatican. In 1688 the French again ſeized this city; but upon the approach of the imperial army, they, contrary to the capitulation with the Dauphin, blew up the caſtle, and laid the town in aſhes, together with the elector's noble palace, the churches, and other public buildings. The French, to add to their brutality, would not ſuffer the citizens to leave the city; but ſhut them up in the great church till they burnt the city; and then alſo conſumed that. Heidelberg was afterwards rebuilt, and had a conſiderable garriſon; but the French under marſhal de Lorge attacked it again in 1693, and by the treachery of the governor, the city was ſoon taken, and the people brutiſhly murdered, except thoſe who could get into the caſtle. Upon the firſt entrance of the French, the ladies and others ſent to ſollicit the general to ſpare their honour. This he promiſed, and ordered them all to retire into the great church, where, contrary to his promiſe, they were brutally raviſhed and ſtripped. The French at this time laid the city in aſhes, broke up the electoral tombs, and turned the inhabitants, who amounted to about fifteen thouſand out of the town by night, when being deprived of all they had, many died of want, particularly women with child, who fell in labour with the fright.

After this the elector encouraged the people to rebuild the city, promiſing them exemption from taxes for thirty years, with full liberty of conſcience; but being of the Romiſh religion, he was ſoon prevailed on by the Jeſuits to make one of their ſociety a profeſſor in the univerſity, and oppreſſed his proteſtant ſubjects, till the elector of Brandenburg and other proteſtant princes, interpoſed in their behalf.

In 1709 the French again ſeized Heidelberg, and laying the neighbouring country under contribution, the inhabitants were ſo impoveriſhed, that ſeveral thouſands of them fled to foreign countries, particularly England, from whence they were ſent to Ireland and the Britiſh colonies in America. This city, however, began to recover itſelf, when the elector being diſguſted at the Calviniſts, for refuſing to deliver up to him the body of the great church, which had been allotted them by the peace of Weſtphalia, the choir being in the poſſeſſion of the Roman catholics, quitted Heidelberg, and went to reſide at Manheim, ſince which this city has ever ſince been decaying.

The principal beauty of Heidelberg conſiſts in one large handſome ſtreet, with a ſpacious ſquare, and uniform market. The elector's caſtle, or palace, on the aſcent of a neighbouring hill called Conigſtahl, which overlooks the whole city, was remarkable for its ſtrength, and was beautified with fine gardens and grottos. Near it is a ſtrong tower, which ſince the peace of Weſtphalia was called the Star-fort. This palace is encloſed with a wall hewn out of the rock.

Several towns have been already mentioned as famous for their having tons of an uncommon magnitude, which proceeds not only from the fondneſs of the Germans for drinking; but to ſhew that wine is one of the moſt profitable branches of their trade in the provinces near the Rhine and the Danube, and none of theſe tons is more famous than that of Heidelberg. In a cellar under one of the towers of the elector's palace ſtood one of an extraordinary ſize, it being capable of holding five hundred and twenty-eight hogſheads, or twenty-ſix thouſand two hundred and fifty gallons Paris meaſure. This was rebuilt, and made to hold ſix hundred hogſheads Engliſh meaſure. The old one had iron hoops; but the new one had large ones of knee timbers, like the ribs of a ſhip, with ſeveral inſcriptions, and was very neatly adorned with carved work and gilding. On one ſide was a handſome ſtair-caſe of forty-three ſteps leading to the top, on which was a gallery encompaſſed with baluſtrades, and on this platform the electors have had frequent carouſals. This ton having been firſt emptied, was knocked in pieces by the French in 1688; but the elector has had a new one made which is larger; this is alſo decorated with variety of ornaments; but is inferior in ſize to that of Konigſtein in Saxony.

The palace bears the marks of the ravages committed there by the French, a great part of it being ſo ruinous, that of four conſiderable manſions, of which it conſiſted, only one eſcaped undamaged. The remains of the palace are in a ſtile neither Gothic nor modern; but all the orders are jumbled together, without either fancy or judgment. It has a magnificent terrace towards the town, whence there is a proſpect of the plain, and of the country for ſeveral leagues round. The inſide is ſcarcely more regular than the outſide, and the elector's apartment conſiſts of a long ſuite of rooms, without beauty or proportion.

The Calviniſts are in the poſſeſſion of St. Peter's church, which ſtands in the ſuburbs, and the Lutherans of the church of Providence. The Jeſuits have a fine college and a church; and there are alſo ſix convents in the town, with churches in them. The univerſity of Heidelberg was founded in the year 1346, and entertains fourteen profeſſors in ordinary, among which ſix Jeſuits teach divinity, natural philoſophy, mathematics, and moral philoſophy. Mr. Keyſler obſerves, that the number of proteſtant ſtudents amount to about a hundred and eighty; but the popiſh ſtudents do not exceed a hundred. The *collegium ſapientiæ* was formerly an Auguſtine cloiſter,

which, in 1553, was appointed for the reſidence of poor ſtudents: it at preſent belongs to the Calviniſts, and in it are twelve ſtudents, who are provided with lodging and board.

One of the moſt remarkable ſtructures in the city is the town-houſe, once famous for its curious clock, which had a variety of movements, with ſeveral figures of men fighting, and a cock which crowed when the hour ſtruck.

The city is divided into five juriſdictions, and the inhabitants ranked under ſo many claſſes, the members of each not being obliged to appear before any court but their own. It is alſo divided into four wards under a burgomaſter. The generality of the inhabitants being Calviniſts, church affairs are uſually managed by a preſbytery, conſiſting of twenty-one deputies.

About a mile from Heidelberg are three ſtreams, which ſpring from a hill, down which they flow; and, after filling five ponds, and paſſing three water-falls, run with ſo ſtrong a current through the adjacent plain, as to turn ſeveral mills.

Among the principal places in the Palatinate of the Rhine are generally reckoned Worms and Spire; but as both theſe are in the Upper Circle of the Rhine, and neither of them ſubject to the elector Palatine, we ſhall defer treating of them till the beginning of the next chapter.

The moſt conſiderable towns in this electorate, next to thoſe that have been deſcribed, are Frankenthal and Oppenheim.

CHAP. XVII.

The Circle of the UPPER RHINE.

SECT. I.

Of this Circle in general; and firſt of the Biſhopric of Worms: Its Situation, Extent, and Produce. The Religion of the Inhabitants; with the Dignity, Titles, Arms, and Prerogatives of the Biſhop; and a particular Deſcription of Worms, the Capital of the Biſhopric.

FROM this circle moſt of the lands and ſtates ſituated on the other ſide of the Rhine, have been gradually taken away by France; as the greateſt part of the biſhoprics of Straſburg, Mentz, Tull, and Verdun, with the archbiſhopric of Beſançon, the dutchy of Lorrain, &c.

This circle is at preſent terminated by the electoral circle of the Rhine, by which it is alſo interſected: it is likewiſe bounded by the Weſtphalian, the Lower Saxon, the Upper Saxon, the Franconian, and Swabian circles; together with Alſace and Lorrain.

The circle of the Upper Rhine at preſent comprehends the biſhoprics of Worms, Spire, Straſburg, Baſil, and Fulda; the dutchy of Deux-Ponts, the landgravate of Heſſe, Hersfeld, Sponheim; as alſo the margravates of Naſſau-Weilburg, Naſſau-Uſingen, Naſſau-Ideſtein, Waldec, Hanau, &c. with the imperial cities of Worms, Spire, Francfort, Friedberg, and Wetzlar. Heſſe-Caſſel and Hanau-Munzenberg have been for ſome time ſeparated from the circle.

The diets of the circle of the Upper Rhine were formerly held at Worms; but during the preſent century they have been conſtantly held at Frankfort, yet the chancery-circle of the archives belonging to it are kept at the directory at Worms. This circle, with reſpect to its religion, is reckoned among the mixed.

After this ſhort introduction we ſhall begin with the biſhopric of Worms, which is about twelve miles long, and is, for the greateſt part, ſurrounded by the Lower Palatinate, and the reſt by the territory of Mentz.

This country is for the moſt part mountainous and woody, but has ſome fruitful arable lands, meadows, and vineyards. It is likewiſe plentifully watered; for the Rhine running through it, receives ſeveral ſmaller rivers in its courſe.

The Proteſtant churches in this biſhopric retired in 1705 from the Palatinate of the Rhine to the biſhopric of Worms, where they are at preſent in an oppreſſed ſtate. They have no longer any particular church-government of their own; but are ſubject in eccleſiaſtical and matrimonial affairs to the regency of Worms, and that regency nominates the paſtors and ſchool-maſters. However, one of the Proteſtant preachers is inſpector over the reſt.

The arms of this biſhopric are a ſilver key, with the wards turned upwards, having on each ſide four golden ſtars in a black field.

The biſhop of Worms is ſubject to the archbiſhopric of Mentz. In the circle of the Upper Rhine, he is the ſummoning prince and director; and in the council of the princes of the empire, he exchanges place on the ſpiritual-bench with the elector of Wurtzburg. The chapter is ſeated in the imperial city of Worms, and conſiſts of thirteen capitulars and nine domicelli.

The princely regency here conſiſts of a preſident, a chancellor, aulic and regency-counſellors, and ſecretaries; the aulic-judicatory, of a preſident, an aulic-judge, commiſſaries, and counſellors, who are all members of the regency, together with the ſecretary; the aulic-chamber, of a preſident, provincial-clerk, counſellors, ſecretary, and fiſcal-general; and the epiſcopal vicarſhip, of a vicar-general, official and ſpiritual counſellors.

The principal places in this biſhopric are the following:

The imperial city of Worms, which is the capital of the biſhopric of the ſame name, is ſeated on the weſt ſide of the Rhine, within the limits of the Palatinate, in the forty-fourth degree thirty-ſix minutes north latitude, and in the eighth degree ten minutes eaſt longitude.

The magiſtracy here is Lutheran, the city being accounted one of the free Lutheran imperial cities, with toleration and freedom of worſhip to the Catholics. The Lutherans have a church which they have rebuilt in a handſome manner, in which Luther is repreſented as appearing at the diet in 1521. They are alſo in poſſeſſion of the old church, as it is called, St. Magnus's now in ruins, and St. Leonard's a little way out of the town. Thoſe of the Romiſh church are very numerous, and are in poſſeſſion of all the reſt. The Calviniſts have a church at Neuhauſel, about half a league out of the town, where the Lutherans ſometimes bring their children to be baptized. The Roman catholics do not here carry the Hoſt in public, nor make any proceſſion except on the day after Eaſter.

The antient cathedral which was a long, lofty, and ſtrong building erected in the Gothic taſte, had a tower at each of the four corners. Over one of the doors was a figure of the ſize of an aſs, with four heads, thoſe of a man, an ox, an eagle, and a lion: the right foot was alſo that of a man, the left that of an ox, and the two hinder feet reſembled thoſe of an eagle and a lion. Upon the back of this figure ſat a woman. The people here related very odd ſtories of this animal, which the learned ſuppoſed to be an hieroglyphic, compoſed of the four beaſts in the viſion of Ezekiel, and that the woman was deſigned to repreſent the Goſpel. This cathedral, ſince its deſtruction by the French, has been rebuilt with great magnificence.

Near the entrance of St. Martin's church is a picture, juſt over a moveable altar, which, from the oddneſs of the conceit, and the low and profane idea of the painter, has not eſcaped the notice of travellers. It is about five

feet ſquare, and at one of the corners on the top is repreſented the Almighty, whom the heaven of heavens cannot contain, in the figure of an old man, who ſeems to addreſs himſelf to the Virgin Mary, who is placed on her knees in the midſt of the picture, holding the infant Jeſus by the feet, and ridiculouſly putting the head of the Redeemer into the hopper of a mill, which is turned by the twelve apoſtles, by the help of a wheel, aſſiſted by the four beaſts of Ezekiel, who are on the other ſide; while the pope is drawn upon his knees, receiving the hoſts that fall from the mill into a golden chalice, one of which he preſents to a cardinal, who gives it to a biſhop, the biſhop to a prieſt, and the prieſt to a layman.

In ſhort, the Romans have, beſides the cathedral, four collegiate, and the ſame number of pariſh-churches, in or near the city, a Jeſuits college and ſeminary, three monaſteries, and three nunneries.

Here are two public halls, in one of which the magiſtrates aſſemble twice a week upon matters of ſtate, and in the other for the adminiſtration of juſtice. In the firſt of theſe Luther made his ſolemn appeal, in relation to which the people here ſay, that the doctor being much heated by the eagerneſs with which he diſcourſed, and alſo by a fire that was near him, deſired a glaſs of wine, which being brought, he forgot to drink it; but being ſtill eager in purſuing his diſcourſe, ſet it down upon a bench, when it ſoon after broke without being touched by any body; whence it currently paſſed, that ſome poiſon was mixed with the wine, of which the Lutherans were ſo fully perſuaded, that they broke the bench on which the glaſs ſtood into ſhivers, and kept ſome pieces of it, which are ſtill preſerved in memory of Luther's deliverance.

The biſhop's palace was rebuilt in the year 1719, at the expence of Francis Lewis, the biſhop.

The mint is a noble ſtructure, with a ſpacious portico, where vaſt numbers of bones and horns hang between the arches; the former are ſaid to be thoſe of giants, and the latter the horns of the oxen that drew the ſtones of which the antient cathedral was built.

Since this city has been laid in aſhes by the French, it has little left beſides the ſhadow of its former beauty. The richeſt traders, conſidering how much both they and their anceſtors had ſuffered on account of their lying ſo open to France, retired to Frankfort and Holland; ſo that the principal trade of the city, and the ſupport of the inhabitants, depends on the biſhop and his chapter. The citizens are, however, very complaiſant to ſtrangers. It is ſaid that there is ſo much vacant ground in the city as, by being planted with vines, annually yields fifteen hundred fodders of wine, each containing two hundred and fifty Engliſh gallons; and it is ſo much eſteemed, that the magiſtrates make preſents of it, with ſome fiſh, to princes and other travellers of quality. The fine plain in which the city ſtands abounds with corn, vineyards, and fruit-trees; and here grows that Rheniſh wine, which, from its delicious taſte, is called our lady's milk.

The ſenate, or ſupreme council of Worms, is compoſed of twenty-five members, thirteen of which are for life. The city has the fourth ſeat on the bench of the imperial cities of the Rhine, and likewiſe votes in the diet of the circle of the Upper Rhine. The biſhops of Worms have often conteſted its independence, and both by hoſtilities and excommunication have extorted conventions, among which that of 1519 is particularly remarkable, it being agreed, that in ſuits exceeding fifty guilders, an appeal lies from the city-court to that of the biſhop; but if, before the appeal be entered upon, the appellant petitions for the removal of his cauſe to the emperor, or the aulic-council, the biſhop muſt not only comply, but tranſmit the papers.

There is ſcarce any place ſo famous for interviews of ſovereigns, the nuptials of kings and princes, and other ſolemnities; ſeveral diets have alſo been held here. This was the place where the reformation began in 1525, and in the year 1743 king George II. took up his quarters in this city, and lodged at the biſhop's palace after the battle of Dettingen.

SECT. II.

Of the Biſhopric of SPIRES.

Its Situation, Extent, and Fertility. The Arms, Privileges, and Colleges of the Biſhop; with a conciſe Hiſtory and Deſcription of the Cities of Spires and Philipſburg.

THE biſhopric of Spires, or Spire, is ſeated on the banks of the Rhine, and is for the moſt part environed by the electoral Palatinate; but is in ſome places bounded by the margravate of Baden Durlach, extending thirty-two miles in its greateſt length, and twelve in breadth.

It is partly woody and partly mountainous, but enjoys good arable lands, and has groves of cheſnuts, almonds, and vineyards. It is a pleaſant country; but the natives wanting a vent for their commodities, the Palatinate by which it is encloſed being equally fertile, are very poor; beſides, the people have frequently ſuffered the calamities of war.

The arms of the biſhopric are a croſs argent in a field azure.

The biſhop of Spires is ſubject to the archbiſhop of Mentz, notwithſtanding which he is a prince of the empire, and in the council of the princes has a ſeat and voice on the ſpiritual-bench between the biſhops of Aichſtadt and Straſburg, and takes the ſecond place at the diets of the circle of the Upper Rhine.

The ſeat of the cathedral and chapter is in the imperial city of Spire. The chapter conſiſts of fourteen capitulars and thirteen domicelli.

The colleges here are the regency, the epiſcopal vicarſhip, the aulic-juriſdiction, and the aulic-chamber.

The principal places in this biſhopric are the following:

The city of Spire, or Spires, is ſeated in a delightful plain, on the eaſt ſide of the Rhine, where it receives the ſmall river of Spirebach, in the forty-ninth degree twenty minutes north latitude, and in the eighth degree twenty minutes eaſt longitude, ſixteen miles to the ſouth-weſt of Heidelberg. Its German name is Speir, and in Latin it is called Spira, Noviomagus, or Numetum, and is thought to have been built by the Belgæ. The Romans after its falling into their hands augmented and walled it, on account of the convenience of the paſſage into Germany; but it was taken and plundered by Attila in 451, and never recovered this diſaſter till the time of Charlemagne, who built here a royal palace. The emperor Henry IV. encloſed it with walls and ditches, kept his treaſure here, made it an imperial city, and built many noble ſtructures, particularly the cathedral, in which he and ſeveral biſhops were buried. At length the Spaniards took this city; but ſoon abandoned it on the approach of the Swedes, and carried off the artillery, gun-powder, and ſalt-petre, after having exacted eight thouſand rixdollars from the inhabitants. The Swedes took poſſeſſion of it; but not being able to ſpare troops for garriſoning the place, they demoliſhed it. In 1688 it was taken by the French, who the next year, upon the approach of the Germans, burnt moſt of the city, with the cathedral, ſince which diſaſter it has not recovered its priſtine ſplendor; for after its total deſtruction by the French in 1689, and lying waſte ten years, on the peace of Ryſwic it was rebuilt, but with leſs beauty.

The choir of the cathedral is beautifully repaired; but the ſuperb marble monuments of eight emperors and three empreſſes were broken in pieces by the French, who alſo opened and pillaged the vaults, and threw about the bones of the illuſtrious dead. This church has a large revenue; but its expences are alſo large. Beſides three other foundations, among which is a college of Jeſuits, there are ſeveral popiſh pariſh churches, convents, and nunneries. The Lutherans, indeed, out-number the other inhabitants; but have only two churches and an academy; and the Calviniſts, whoſe number is not conſiderable, have only one church. The magiſtrates of the city are of the Lutheran perſuaſion.

This

This city has the fifth ſeat among the imperial cities of the circle of the Rhine, and votes in the diet of the Upper Rhine.

The burghers are divided into fifteen companies, out of which a certain number is choſen, who have the executive power.

A new biſhop, before his entrance into the city, is obliged to redreſs the complaints of the inhabitants; and afterwards ſitting on horſeback in the open air, between the two outermoſt gates, which during the ceremony are ſhut, with one hand in his left breaſt, he pronounces a bleſſing on the city; then binds himſelf not to infringe its privileges; but rather to vindicate and increaſe them, and to live in harmony with the inhabitants. He then makes his public entry, and the citizens pay him homage.

Before the deſtruction of this city by the French, the imperial chamber was held here; and in 1529, a diet was held in this city that was peculiarly remarkable, as having given riſe to the name of Proteſtants.

Philipſburg was at firſt a ſmall town called Undenheim; but lying conveniently for commanding the adjacent country, Philip, biſhop of Spires, choſe it for his reſidence, fortified it with ſeven royal baſtions, and at length gave it his own name. But the combined electors and princes, particularly Frederic V. elector Palatine, as ſuperior, with the margrave of Baden-Durlach, ſuſpecting the biſhop's deſign in fortifying this place, ordered him to deſiſt; but he refuſed, alledging, that he had the emperor's placart to warrant what he had done. Upon which theſe princes agreed at an aſſembly ſummoned at Heilbrun, to ſend thither four thouſand horſe and foot, with twelve hundred pioniers, and the neceſſary artillery, who on the fifteenth of June 1618, demanded and took poſſeſſion of the place, and upon this razed all its fortifications; for which the emperor ſummoned theſe princes before the chamber of Spires, and deſigned to proceed againſt them with the utmoſt ſeverity. This was one of the cauſes of the thirty years civil war in Germany.

This city has ſuffered ſeven memorable ſieges in the ſpace of an hundred years, and its works have at different times been greatly increaſed; particularly Lewis XIV. of France in 1666, extended its fortifications to the Rhine, which lies a quarter of a league from the town, and over the great gate cauſed an inſcription to be put up, "That this fortreſs he ſtrengthened as a "monument of his own valour, and of the recovery of "the liberty of the Germans, for the terror of his ene-"mies, the ſupport of his allies, and the ſecurity of the "French;" concluding with theſe words, "What he "ſhuts no man opens, and what he opens no man "ſhuts." But in 1678, it was retaken by the Imperialiſts, when the emperor ordered that inſcription to be erazed, and another to be put up, "That Leopold, the "emperor, having undertaken a neceſſary war, took "this fortreſs by ſiege, that it might be a monument "to poſterity of his breaking off the yoke of ſlavery "from the neck of Libery," concluding with "What "the French ſhut, the Germans open." The Germans having thus regained it after a ſiege of four months, it was granted them by the peace of Nimeguen. But in 1688, the French retook it, and it was reſtored to the empire by the treaty of Ryſwic in 1697, with its fortications on the right ſide; but thoſe on the left, together with the bridge, were demoliſhed. This place was taken again by the French in 1734, after a long and bloody ſiege, in which the famous duke of Berwick, natural ſon to king James II. was killed by a cannon ball, between his two grandſons, as he went to take a view of the trenches; but it was reſtored in 1739.

The town belongs to the biſhop of Spires, who has an office here; but it is conſidered as a fortreſs of the empire, and has a governor and commandant appointed by it. The caſtle, which is the reſidence of the biſhop of Spires, is ſaid to be a noble pile which ſtands in a plain ſurrounded with marſhes; but the town is much fallen to decay.

SECT. III.

The Biſhopric of FULDA.

Its Situation, Extent, and Rivers. The Religion of the Inhabitants. The Titles, Arms, and Prerogatives of the Biſhop; with a Deſcription of the City of Fulda.

FULDA is ſurrounded by Heſſe, the counties of Iſenburg and Hanau, the biſhopric of Wurtzburg, and the princely county of Henneburg, extending in its greateſt length ſixty-two miles, and in its greateſt breadth upwards of forty-ſeven miles.

It is a mountainous and woody country; but has rich arable lands, and ſalt ſprings. Its principal rivers are the Fulda, which riſes here, and the Sala, which iſſues out of the territory of Wurtzburg.

It contains ſixty pariſh, and ninety-four filial churches, among which nine of the pariſh, and a few of the filial churches are Lutheran; but the reſt popiſh.

The title of the biſhop of Fulda runs thus, Biſhop and abbot of Fulda, prince of the holy Roman empire, arch-chancellor of the reigning Roman empreſs, primate of all Germany and Gaul.

The arms of Fulda are a black croſs, in a field argent.

The biſhop and abbot has a ſeat and voice in the council of the princes of the empire, and is alſo a member of the circle of the Upper Rhine. The high chapter conſiſts of fifteen perſons, and the high college is compoſed of the regency and the feudal court, the ſpiritual vicarſhip, and the aulic chamber.

The biſhop, who is ſubordinate to the pope alone, has four great officers of ſtate, rich equipages, a magnificent houſhold, a company of horſe guards well cloathed and mounted, and a regiment of foot guards.

This biſhopric is divided into twenty little bailiwics, the principal place in which is,

Fulda, the capital and reſidentiary town of the biſhopric, is ſeated on the river Fulda, and owes its original to the abbey, near which was at firſt a village, which being enlarged, was about the year 1162, ſurrounded with walls, and erected into a town. It has a royal palace built with free-ſtone, and the principal church is dedicated to Chriſt. The collegiate church of St. Boniface was antiently called the pariſh church of St. Blaiſe; but in the year 1650, the chapter of St. Boniface, which till that time had continued at Great Borſla, was tranſlated to Fulda; it has alſo a college of Jeſuits, with a gymnaſium and papal ſeminary, a nunnery of Benedictines, and an univerſity founded by the biſhop in the year 1734.

SECT. IV.

The Landgravate of HESSE.

Its Situation, Extent, Produce, and Rivers. Of the Diets of the Country, the Prerogatives of the Houſes of Heſſe-Caſſel and Heſſe-Darmſtadt; their Titles, Arms, public Offices, and Courts, Revenues, Forces, and principal Towns.

THE landgravate of Heſſe terminates on the biſhopric of Fulda, the principality of Hersfeld, Thuringia, and Eichsfeld, as alſo on that of Calenberg, the biſhoprics of Paderborn and Waldec, and the dutchy of Weſtphalia. This landgravate is above ninety-five miles in length.

The country is for the moſt part hilly and woody; but has pleaſant valleys, and is interſperſed with good corn and paſture-lands. It alſo produces plenty of excellent wine, and particularly abounds in cattle. With reſpect to minerals, ſilver, copper, lead, and iron are at preſent found in great quantities in this country; as alſo allum, vitriol, pit-coal, ſulphur, boles, a porcelain earth, marble, and alabaſter. It has likewiſe ſalt ſprings, baths, and mineral waters, with an uncommon plenty of game and fiſh.

With

With reſpect to the rivers, the principal are the Rhine and the Maine, with the Lan, or Lahn, which after being joined by many ſmaller ſtreams, falls into the Rhine: the Fulda, which proceeds from the biſhopric of that name, and falls into the Werra; and the Diemel, which runs into the Weſer.

The ſtates of Heſſe-Caſſel conſiſt firſt of the prelates, theſe are compoſed of the commandery of the Teutonic order for Heſſe, at Marburg: of the rector and ſenate of the univerſity of Marburg: of the four provoſts of the canonries of Kunffungen and Wetter, and the governors of ſeveral hoſpitals. The other parts of which the ſtates are compoſed, are the nobility, who are diſtinguiſhed by the five rivers Lahn, Schwalm, Fulda, Werra, and Diemel: and laſtly, the towns, which are alſo divided according to the countries lying on theſe five rivers, in each of which is a ſummoning town that ſends two repreſentatives to the general and particular diets; but the other towns aſſiſt at them only in turns, according to a ſettled rotation.

In the diets of Heſſe Caſſel and Heſſe-Darmſtadt preſides the hereditary marſhal. The ſovereign of both houſes may aſſemble at pleaſure any particular diet, and then the landgrave of Heſſe-Caſſel ſends orders throughout his whole country for them to appear by their deputies. Caſſel is generally the place of aſſembly for thoſe of Heſſe-Caſſel; but they ſometimes meet at Treyſa. The diets of Heſſe-Darmſtadt are invariably held at Gieſſen, and in both the ſovereign is repreſented by a commiſſioner.

The houſe of Heſſe-Caſſel forms one of the ſtates of the Calviniſt religion, and that of Heſſe-Darmſtadt of the Lutheran; of the collateral lines Rothenburg is Popiſh, and Homburg and Philipſdale Proteſtants. It being known in the year 1754, that Frederic the hereditary prince of Heſſe-Caſſel had, in 1749, embraced the Romiſh religion, that prince voluntarily drew up and confirmed by oath an inſtrument declaring, that his preſent and future children ſhould be brought up and inſtructed only in the Proteſtant religion; and that on his acceſſion to the government, no manner of alteration ſhould be made with reſpect to religion; but that he would preſerve it in every particular as it then ſtood unmoleſted and entire.

In Heſſe are two ſovereign families, between whom all the Heſſian territories are divided, namely, thoſe of Caſſel and Darmſtadt; but many articles have continued in common, as, 1. The feudal power and inveſtiture of the princes of Waldec, which has ever been performed in the name of both landgraves. 2. The joint court of juſtice at Marburg, which has its judge and aſſeſſors, from whom, in proceſſes of above a thouſand guldens of gold, an appeal lies to the aulic-council; but if it exceeds only one hundred, to the court of reviſions. 3. The court of reviſion, or appeals, held alternately ſix years at Marburg, and ſix at Gieſſen. 4. The portioning of the princeſſes, to which the ſubjects of both ſovereigns contribute. 5. Both ſovereigns have arbitrators, which are choſen in diſputes betweeen them, and to whoſe verdicts they ſubmit.

Their titles are alſo nearly the ſame; as landgrave of Heſſe, prince of Hersfeld, count Katzenellenbogen, Dietz, Ziegenhayn, Nidda, and Schomberg; to which Heſſe Caſſel adds Hanau and Heſſe-Darmſtadt, Iſenburg, and Budingen.

The arms of Heſſe are a ſhield twice longitudinally divided, and three times tranſverſely, with a ſcutcheon of pretence azure, the Heſſian lion argent, and three diadems gules. In the firſt dexter ſhield argent, is a patriarchal croſs gules, for the principality of Hersfeld. In the ſecond ſhield, party per feſſe, ſable and or, with a ſtar argent, for the county of Ziegenhayn. The third field has a lion rampant gules, crowned azure, for Katzenellenbogen. The fourth field gules, two lions paſſant or, for the county of Dietz. The fifth field party per feſſe, or and ſable, two ſtars with eight points argent, for the county of Nidda. The ſixth field party per bend, gules and argent, within a nettle leaf on three ſegments, in each of which is a carnation argent, for Schomberg.

The landgrave William added the Hanau ſhield, which is quarterly; in the firſt and fourth fields or, three chevrons gules, for the county of Hanau; but in the ſecond and third field or, three bends gules, for the county of Reinec; likewiſe a ſcutcheon of pretence party per feſſe, or and argent, for the lordſhip of Munzenberg. The landgraves of Heſſe-Darmſtadt alſo add to the arms of Iſenburg and Budingen a ſhield argent, two bendlets ſable. The two collateral princes of Heſſe-Caſſel bear the Heſſian ſhield alone; but thoſe of the line of Darmſtadt add to it the arms of Iſenburg.

Both Heſſe-Caſſel and Heſſe-Darmſtadt have a privy-council. In the former are two regencies, viz. one at Caſſel for Lower Heſſe, and the other at Marburg. In Heſſe-Darmſtadt are alſo the ſame number, one at Gieſſen and one at Darmſtadt.

With reſpect to the courts at law, there are the joint-court of juſtice held at Marburg; beſides which eccleſiaſtical and matrimonial caſes come before the two conſiſtories of Heſſe-Caſſel, held at Caſſel and Marburg; and thoſe for Heſſe-Darmſtadt at Gieſſen and Darmſtadt. For the trial of noblemen, or perſons of eminence guilty of any geat crime, a particular criminal court, if deſired, is erected.

With reſpect to the taxes, ordinary and extraordinary; the country ſeats of the nobility, with the lands and effects belonging to the clergy and the ſchools, are exempt from the ordinary taxes; but with regard to the extraordinary ones, the four hoſpitals, with the tenants and lands of the prieſts and ſchools, are excepted. The provincial cheſt is under the management of four receivers-general, who enjoy their office for life, and theſe nominate the collectors. The annual revenue of the landgrave of Heſſe-Caſſel is computed by ſome authors at a hundred and twenty thouſand pounds a year, and that of Heſſe-Darmſtadt at about half this ſum.

Caſſel and Darmſtadt have each their war-office, and the landgrave of Heſſe-Caſſel conſtantly keeps on foot twelve battalions and eight ſquadrons, with a troop of huſſars and three hundred matroſſes. Heſſe-Darmſtadt maintains a body of horſe guards, two ſquadrons of dragoons, and four battalions of regular militia.

The principal city belonging to the ſovereign-houſe of Heſſe-Caſſel is the city of Caſſel, which is ſeated on the river Fulda, and flows between the Old and New Town, in the fifty-firſt degree eighteen minutes north latitude, and in the ninth degree thirty-eight minutes eaſt longitude, and has a ſtone-bridge erected over the river. The Old Town, which is the largeſt and moſt conſiderable, forms a ſemicircle on a hill, and, like the Lower New Town, is old-faſhioned; but the French, or Upper New Town, is very regular and handſome; and between it and the Old Town lies the eſplanade, which is delightfully planted with rows of trees. The palace of the prince is of free-ſtone and very handſome both within and without; it ſtands in the Old Town, on the banks of the Fulda, but is a diſtinct fortification. In the Lyceum is an anatomical theatre, a muſeum, a *collegium Carolinum*, a cabinet of antiques and natural curioſities, and an obſervatory well furniſhed with inſtruments. Over the ſtable is the ſovereign's library. As all the public offices meet here, the building deſigned for their uſe is a noble piece of architecture. The arſenal is of free-ſtone, and contains arms for twenty-five thouſand men, and in the room under it are two hundred cannon; it has a foundery, which ſtands at a ſmall diſtance. In the French New Town the landgrave William VIII. has added to the houſe in which he formerly lived, a fine gallery of paintings. In this Upper New Town is alſo a beautiful church; but the principal church in Caſſel is that of St. Martin's abbey in the Old Town, in which lies the burial-place of the princes, and near it is a public Latin ſchool. In the Old Town are likewiſe two churches, one of which belongs to the garriſon; and on the ramparts a third belonging to the Lutherans, the firſt ſtone of which was laid in the year 1734. The way from the palace-bridge over the leſſer Fulda leads to the prince's flower-garden, near which is a large green-houſe, and an elegant marble bath. In the center of the garden is a ſpacious baſon, in the midſt of which is a beautiful mount. This delightful place is ſurrounded by the Great and Little Fulda.

At Caſſel are manufactures of cloth, ſtuffs, gold-lace, hats, ſilk and worſted ſtockings, and other commodities.

The pleaſure-houſes belonging to the prince are Freyenhagen, which lies at the end of a road leading from Caſſel, planted on each ſide with trees: Weiſſenſtein-houſe, alſo near Caſſel; and at a ſmall diſtance from it is Carlſberg, where is an admirable caſcade, begun by the landgrave Charles. On each ſide are eight hundred ſteps leading up a hill, and at the top is a grand pyramid of huge ſtones arranged in a tranſverſe and vertical poſition, and ſurmounted by a Hercules of copper thirty feet high. The proſpect here is inexpreſſibly fine. The caſcade has four platforms, with a ſpacious baſon in each. Near the upper baſon is a ſplendid grotto of large rough hewn-ſtones, that look as if only placed upon each other without cement. In the ſecond is a rock conſiſting of heaps of ſtones diſpoſed in a muſt beautiful confuſion, and under it a giant lying on his back, and ejecting a ſtream of water ſix inches in diameter, to the height of forty feet; while the cryſtalline water falling nearly perpendicular, winds through apertures which are almoſt imperceptible in innumerable meanders. The deſcent of the caſcade on each ſide the baſon conſiſts entirely of large ſquare ſtones, over which the water runs about an inch in depth, and a little way forward over a thin ſheet of lead about three inches broad, precipitating itſelf from one platform-ſtone to another, and having the appearance of cryſtalline mirrors; but by a ſpectator ſtanding at the bottom, the brilliancy, when the ſun plays his beams upon it, cannot be viewed without admiration. The water for this work is brought from ſeveral ſtreams up the mountain, and collected in a reſervoir one hundred feet deep, and of conſiderable extent.

Marpurg, or Marburg, the capital of Upper Heſſe, is ſeated on a hill near the river Lahn, in the fiftieth degree forty-four minutes north latitude, and in the eighth degree fifty-three minutes eaſt longitude; and above it is a fortified caſtle that was once the reſidence of the landgrave of Heſſe. Beſides the ſovereign courts and public offices, it has an academy for claſſical learning, with three churches, one of which is French, and the Lutheran church of St. Elizabeth, in which it is pretended that ſaint lies interred. Her monument is plated over with ſilver gilt, adorned with a profuſion of pearls. In this church have alſo been buried ſeveral of the landgraves of Heſſe. The German-houſe is the reſidence of the provincial commander of the Teutonic order for Heſſe, and the commander of Marburg; and near it ſtands Elizabeth's hoſpital, the care of which St. Elizabeth, they ſay, recommended to the above order. The provincial commander, by the convention of Caſſel, is choſen alternately from each of the three religions. The prince of Heſſe has a fine ſtud of horſes here.

Marburg has been twice deſtroyed by fire, and in 1529 a ſolemn but fruitleſs conference was held here between Luther and Melancthon on the one ſide, and Zuinglius and Œcolampadius on the other. Towards the cloſe of the year 1645, and the beginning of 1646, this town and caſtle were taken, after a furious cannonading, by the troops of Caſſel, which the princeſs Amelia Elizabeth, at that time regent of Caſſel, ſent againſt it.

Gieſſen is a fortified town on the river Lahn, and has an old caſtle and arſenal. In this town, alternately with Marburg, is held the joint court of appeals: it is likewiſe the ſeat of the regency, a conſiſtory and ſuperintendency, and has alſo a Lutheran univerſity founded here in 1607, a claſſical academy, and two churches. It is ſubject to the houſe of Heſſe-Darmſtadt, and is defended by a ſtrong wall and regular fortifications.

Darmſtadt is ſeated on a river of the ſame name, in a fruitful and pleaſant country, and has a very ſtately palace belonging to that branch of the Heſſian houſe to which it gives name. It has alſo a regency, a court of appeals, a conſiſtory, and a grammar ſchool, and in the church are the vaults of the princely family. It is encompaſſed with a wall, and has ſeveral ſuburbs, near which is an orphan-houſe.

Homburg, a town ſubject to the houſe of Heſſe-Homburg, by whom it was built, and inhabited by two French colonies, contains a palace in which that prince reſides. Both the Lutherans and Calviniſts here enjoy the public exerciſe of their religion. The landgrave Frederic II. has added a handſome new town, in which an orphan-houſe and alms-houſe have been erected by the prince, who is proprietor of three prefecturates in the territories of Magdeburg and the Halberſtadt, excluſive of other perſonal rights and revenues.

SECT. V.

The County of WALDEC.

Its Situation, Extent, and Produce. The Religion and Manufactures of the Country. The Titles and Offices of the Prince, and a Deſcription of the principal Towns.

THE county of Waldec is bounded on the north by the dioceſe of Paderborn; to the eaſtward by Heſſe, and the electorate of Mentz; to the ſouthward alſo by Heſſe; and to the weſtward by the dutchy of Weſtphalia; extending, according to Dr. Buſching, about twenty-eight miles in length, and twenty-three in breadth.

This country abounds in grain and cattle. It has alſo large woods, and the mountains contain iron, lead, copper, and even ſome gold, which is eſteemed equal in value to that of Hungary. Of the gold gathered out of the Eder the prince has cauſed medals to be ſtruck, and a magnificent ſide-board of plate to be made. Some parts alſo afford alabaſter, marble, and ſlate.

This country contains thirteen towns and a market village. The ſtates are compoſed of the nobility and towns. It is only on extraordinary occaſions that the whole body of the ſtates are convened; for on ordinary occaſions, none meet but the nobility and the repreſentatives of the three deputy towns.

The greateſt part of the inhabitants are Lutherans, and the reſt Calviniſts, except a few who are of the popiſh religion.

The manufactures of this country are coarſe cloth, barragons, calamancos, dimity, ratine, and other ſtuffs; paper, and great quantities of hard-ware.

The titles of the Waldec family are, Prince of the ſacred Roman empire, count of Pyrmont and Rappoltſtein, lord of Hoheneck and Gerolſeck, &c.

The prince of Waldec has not yet obtained a ſeat and vote in the college of princes; but enjoys a ſeat at the diet of the circle of the Upper Rhine.

The prince has a privy-council and court of fiefs, a regency, a chamber of finances, a foreſt court, and a court of law. The two laſt courts are compoſed of the ſame members, who alſo, in conjunction with the general, and one ſuperintendant, form the conſiſtory. From the court of law an appeal lies to the chancery. Over the prefecturates preſide four judges, who are ſubordinate to a rural chief juſtice.

The principal places in this county are the following:

Corbach, the capital, and the firſt of the three deputy towns, is alſo the ſeat of the high court of juſtice, and conſiſts of the Old and New Town, each of which has its church. In that belonging to the New Town is a moſt ſtately monument of marble and alabaſter, that takes up one ſide of the choir, and was erected by the republic of the United Provinces to George Frederic of Waldec, who was field-marſhal of their forces. In the New Town is alſo a gymnaſium of ſix claſſes, and ſeven maſters.

Wildungen, a town ſeated on a hill, and the ſecond deputy town, is both larger and better built than Old Wildungen; it has a Latin ſchool, containing five claſſes, and an orphan-houſe. In the choir belonging to the church, the republic of Venice here erected a fine monument of alabaſter to the memory of Joſias prince of Waldec, who commanded their armies with great reputation.

Arolſen, a regular built, thriving town, ſeated near the river Aars. The prince's palace, of which prince Frederic Anthony Ulric was himſelf architect, makes a grand appearance. All the above-mentioned offices and colleges, except the chief court of juſtice, are held here. Beſides the Lutheran church, the Calviniſts and Romans have alſo theirs. This town ſtands at the end of a noble

ble avenue, formed by ſix rows of trees, two thouſand paces in length.

SECT. VI.

Of the County of HANAU.

Its Situation, Extent, Produce, and principal Rivers; the Religion of the Inhabitants; with a Deſcription of the City of Hanau.

HANAU is encompaſſed by the electorate of Mentz, the dioceſe of Fulda, with the territories of Heſſe and Francfort; extending about forty-two miles in length; but ſome parts of it lie ſeparate.

The ſoil is remarkably fertile in corn, wine, fruit, and vegetables, all which are excellent in their ſeveral kinds. It has alſo a ſilver and a copper mine, both of which are very rich, and likewiſe ſome cobalt-works and ſalt-pans. Great advantage is likewiſe made of the woods.

This country lies chiefly on the Maine, into which run all the ſmaller rivers by which it is watered. Among theſe the chief are the Kinzig and the Nidda, the latter of which is joined by the Nidder.

In the ſixteenth century the inhabitants embraced Lutheraniſm; but in 1594, count Philip Lewis introduced the opinions of Calvin, which have prevailed, though there are ſtill ſome Lutherans and perſons of the Romiſh church, who are permitted the free exerciſe of their religion. Trade and manufactures flouriſh here, particularly in the city of Hanau.

The ruling count of Hanau-Munzenberg was a member of the college of the imperial counts of the Wetterau; but the landgrave William VI. ſeparated himſelf from them, and in 1741 alſo from the circle of the Upper Rhine. The income ariſing to the laſt count of Hanau from his ſeveral territories, is ſaid to have amounted to above five hundred thouſand florins.

In this county are five towns and ninety-ſix villages, the principal place in which is the following.

Hanau, the capital of the county, is ſeated in a large plain on the river Kinzig, near the place where it runs into the Maine, and is compoſed of the Old and New Town, both of which are fortified. The Old Town which from time immemorial has belonged to the Hanau family, is ill built; but the palace called the Burg makes a good appearance, and has a fine flower-garden. Both the Lutherans and Calviniſts have their particular church, and here is an univerſity built by count Philip Lewis. The Jews dwell in a particular quarter, and are allowed ſchools. To this Old Town belongs a large ſuburb.

The New Town is not only of greater extent, but the ſtreets are ſtraight, broad, and clean; moſt of the houſes on both ſides are very regularly built; and it comes very near the Dutch towns in neatneſs. The ſtreets terminate in a grand ſquare in the centre of the town, where the public markets are kept. At each of the four corners of this ſquare is a well of tolerable depth, walled round with marble, and adorned with ſome foliage and iron-work, on the top of which is a large lamp, that is lighted every evening. The church in which they preach both in Flemiſh and French is but one edifice, divided by a wall from top to bottom into two ſeparate apartments. The gallery in the French part is very ſpacious, and is an amphitheatre ſupported by twelve columns of red ſtone upon which the roof reſts, and the cieling is of ſtucco, very well adorned. The Catholics have no church here; but perform their devotions at a village ſeated about a mile from Hanau.

The New Town was built in the year 1597, by the Walloons, or Flemiſh refugees, who enjoy extraordinary privileges; they have their own magiſtrates, and the diſpoſal of all the town offices, which the members of the French and Dutch congregations can alone poſſeſs, though at preſent the German Calviniſts conſtitute one half of the inhabitants, and the Lutherans a fourth. Here are ſeveral woollen manufactures, particularly of grograms, ſtockings, both ſilk and worſted, linen and porcelain. Hanau is more particularly famous for the great quantities of roll tobacco made up here; wax-bleaching is alſo carried on in this city; but the greateſt article in its imports is timber, which is brought down the Maine to this city, as is alſo rough and caſt iron, corn, and meal.

In the neighbourhood of Hanau is Philipſruhe, a beautiful ſeat near the village of Keſſelſtadt on the Maine. It was built by count Philip Reinhard; but received very great improvements from count John Reinhard, his brother and ſucceſſor.

SECT. VII.

Of the free Imperial Cities of Francfort, Friedberg, and Wetzlar.

FRANCFORT, or Frankfort on the Maine, the uſual place of the election and coronation of the kings of the Romans; alſo the place where the ſtates of the Rheniſh circles meet, and a celebrated Hans-town, is ſituated in the fiftieth degree ſixteen minutes north latitude, and in the ſeventh degree thirty-ſix minutes caſt longitude, ſeventeen miles to the weſtward of Hanau, in a delightful, healthy, and fertile country along the Maine, by which it is divided into two parts, diſtinguiſhed by the names of Francfort and Saxenhauſen. The former of theſe being the largeſt, is divided into twelve wards, and the latter into two, and both are reckoned to contain about three thouſand houſes. The fortifications, which are both regular and ſolid, form a decagon, or figure conſiſting of ten baſtions, faced with hewn ſtone, the ditches are deep and filled with freſh water, and all the out-works are placed before the gates. There are, however, few cannon on the works. At Saxenhauſen there is little worth notice, except its fortifications, which are tolerably good. There is in particular a large horn-work, a ditch full of water, and a covert-way very judiciouſly contrived, ranging on the head of the ditch, which muſt be paſſed in order to go to Saxenhauſen on the land ſide. There are ſix baſtions in all; but they are very irregular.

The town-houſe of Francfort is a vaſt building worth ſeeing. The hall where the emperor is choſen is not very large; but it is adorned with pictures, among which are one of Eſther and Ahaſuerus: the figures are clothed according to the mode about one hundred and fifty years ago; that is, with fardingales, ruffs, doublets, &c. Here is likewiſe the hiſtory of Suſannah and the two Elders; that of Dionyſius the tyrant and his favourite Damocles, with a noble repaſt before him, which he does not touch for fear of a ſword that hangs by a ſlender thread directly over his head; Seſoſtris king of Egypt, with his chariot drawn by captive kings; Eghinard, ſecretary to Charlemagne, and Emma his ſpouſe, that emperor's daughter; Scipio Africanus reſtoring a young captive princeſs inviolate to her bridegroom; and Bathſheba in the bath.

The fore part of this ſtructure is ſupported by arches, under which during the fair of Francfort are toy-ſhops of all kinds and over theſe arches is a hall, where the emperor uſually dines after his coronation, and into which opens the chamber where the election of the new emperor is canvaſſed. In the above hall the emperor eats at a table by himſelf, and the electors have alſo their ſeparate tables. The floor is covered with black and yellow cloth, the livery of the houſe of Auſtria, and upon the cieling is painted the ſtory of Ganymede carried away by Jupiter's eagle; and the hiſtory of a falſe witneſs who had accuſed a perſon of murder; but when he had confirmed his evidence by an oath, a large raven, it is ſaid, having forced his way through one of the windows of this hall, perched on the villain's head, and tore out his eyes with his beak; on which the miſcreant being touched with remorſe, confeſſed his crime, and had his head ſtruck off.

In the back part of this ſtructure are the city offices, and the diet chamber of the circle of the Upper Rhine, as likewiſe that of the dictature of the circle. Among the archives of the town-houſe is kept the celebrated golden bull of the emperor Charles IV. which is a parchment book of forty-three quarto leaves, containing the funda-

fundamental inſtitutes of the empire written in Latin with capital letters. This famous piece is, according to ſome authors, kept in a gold caſket: but Mr. Keyſler ſays, it is in a tortoiſe-ſhell ſnuff-box ſet with mother of pearl, and lined with yellow velvet; and that the book is very much ſoiled.

The cathedral of St. Bartholomew is a large building, but there are only two or three things that render it worthy of notice. The firſt is a ſmall, long, and narrow chapel, which is dark and without any ornaments, except the red cloth with which it is hung near the altar in that part where the electors or their repreſentative ſit. This altar is very mean for ſo celebrated a place, and the ſeats on which the electors ſit, when they chooſe an emperor, are benches of very common wood placed againſt the walls. The other thing that deſerves notice is a chapel, to which the elected emperor is conducted, in order to be crowned by the elector of Mentz, and is nothing more than an iron cloiſter, without any ornament, joined to the baluſtrade of the choir, and has ſome reſemblance to a parrot's cage. The altar in it has no other ornament than a braſs crucifix of very indifferent workmanſhip.

The above places attract the attention of travellers on account of the important buſineſs performed in them; but the curious clock in this cathedral, which conſiſts of three parts or diviſions, is perhaps more worthy of notice. In the loweſt, which reſembles a calendar, are ſeveral circles, the firſt of which ſhews the day and month; the ſecond the golden number, with the age and change of the moon; and the third the dominical letter. The fourth and fifth circles repreſent the antient Roman calendar. On the ſixth are the names of the apoſtles and martyrs, the length of the days and nights, and the entrance of the ſun into the twelve ſigns of the zodiac. The ſeventh and eighth circles exhibit the hours and minutes when the ſun riſes and ſets. In the other circles within theſe are the diviſions of the twelve ſigns of the zodiac, the four ſeaſons, the moveable feaſts, &c. The figures which ſtrike the hours repreſent two ſmiths with hammers in their hands. This curious piece of clock-work was put up in the year 1605, and repaired for the firſt time in 1704.

This cathedral belongs to the Catholics, though moſt of the inhabitants are Lutherans. It is ſaid to have been built by Pepin, king of France, and greatly enriched by his ſon Charlemagne; but the emperor Lewis of Bavaria took away the greateſt part of its revenues, to puniſh the chapter, who had ſided with the pope againſt him.

The churches of St. Leonard and Our Lady are both collegiate. In the church of the Predicants are two altars, ſtanding oppoſite to each other, which are decorated with two pieces of painting by Albert Durer. One of them repreſents our Saviour's Aſcenſion, and the other the Aſſumption of the Virgin Mary: but the latter is only a copy, the original having fallen into the elector of Bavaria's hands. There is here alſo a convent, with a church of the order of St. John; together with others belonging to the Carmelites, Dominicans, Capuchins, and two Romiſh chapels.

The Lutheran churches and convents are the Great church; that of St. Catharine, where, in 1522, the firſt Lutheran ſermon was preached, and to which is annexed a nunnery of ladies of noble birth; the church of the White Women, ſo called from the convent belonging to it inſtituted for ladies, and other young women of high birth; St. Peter's church; together with the chapel of the Glauburg; the hoſpital church; St. Nicholas's church; as alſo the church in Saxenhauſen.

Here is likewiſe a ſeminary of divines founded by Dr. Pridius, and completed by Dr. Munden; and a Lutheran gymnaſium, which conſiſts of ſeven claſſes, and ſtands contiguous to the church of the Bare-footed friars, and in it is the city library. The alms, orphan, and work-houſe is a well contrived building under good regulations, that are ſtrictly executed. The hoſpital of the Holy Ghoſt is one of the wealthieſt foundations in the whole city.

Francfort is of a circular form, without any ſuburbs; but the ſtreets are generally narrow, and the houſes are moſtly built of timber and plaiſter, and covered with ſlate; but there are ſome handſome private ſtructures of a kind of red marble that juſtly deſerve the name of palaces; as the buildings called the Compeſtel and Fronhof, the Trierſhof, the Cullenhof, the German-houſe, an auguſt edifice ſituated near the bridge over the Maine, the Heſſe-Darmſtadthof, the palace of the prince de la Tours, and the houſes of the counts of Solms, Schauenberg, and Schonborn; and there are three principal ſquares.
